We have many papers, abstracts and abbreviations from the Birmingham Meeting, in the hands of our printers, which shall be published in due course, and as fast as our bounds admit, without sacrificing the literary interest of our journal. Every attention will be paid to similar communications with which the authors may be pleased to favour us; and we are the more desirous of such supplies from observing, in many instances, how much, even the best Reports taken at the Sections, are liable to error, and how imperfectly they record the proceedings of the Association.

"The Polytechnic Journal," No. L, demands our notice, and thanks to its Editor. We find some very interesting matter among its various articles, and are well pleased to hail it as a monthly contemporary well calculated to be of advantage to science and the fine arts.

ERRATA.—Page 533, middle column, for "Macquerel" read "Bequerel."

Connected with Literature and the Arts.

KING'S COLLEGE, LONDON.—Medical School, 1839-40. The Winter Session will commence on Tuesday, the 1st of October, 1839, with an Introductory Lecture, by Professor Arnet, at Two o'clock.

Descriptive and Surgical Anatomy—Richard Potts, F.R.S. Physiology, General and Morbid Anatomy—R. B. Todd, M.D. F.R.S. Chemistry—J. F. Daniell, F.R.S. Materia Medica and Therapeutics—J. F. Royle, M.D. V.P.R.S. Medicine—Thomas Watson, M.D. Surgery—J. M. Arnet.

Middle-aged and Diseases of Women and Children—Robert Ferguson, M.D. Comparative Anatomy—T. Rymer Jones.

The King's College Hospital will be opened early in the ensuing Session, so that the Medical Students can now complete their Education at King's College.

August 27, 1839. J. LONSDALE, B.D. Principal.

RETREAT near LEEDS, for the RECEPTION and RECOVERY OF PERSONS AFFLICTED WITH DISORDERS OF THE MIND.—Mr. Hare begs to announce to the Profession and the Public that the above Establishment is under his particular superintendence, and that the most strict attention is paid to the Medical as well as Moral Treatment of the Individuals who are committed to his care. The Retreat is delightfully situated on a rising ground at the opening of Air Dale, little more than a mile from the town of Leeds. The Situation is healthy, cheerful, and also sufficiently retired: the Gardens and Plantations are extensive; the Premises combine proper accommodations for the exercise and amusement of the patients; and the Apartments are spacious, lofty, well ventilated, and fitted up in the most commodious manner. The Establishment is to be considered more in the light of a temporary residence in the country, where the Patient is placed while he undergoes such a plan of treatment as may be necessary to restore the functions of the Brain, than as an Asylum in the common acceptance of the term; hence it is well suited for persons of weak mind, or who may be subject to fits of temporary insanity—for whom confinement is necessary. In recent cases a perfect and speedy recovery may generally be expected. Mr. Hare also receives Patients under his care attended by experienced persons in Lodgings or Private Houses according to the provision of 2d and 3d of William IV., c. 100, sec. 47.—Applications, either personal or by letter (postage free), addressed 36 East Parade, Leeds, will meet with immediate attention, and have the most satisfactory references, if required, to Patients already discharged, or their Friends; also to Physicians resident in London, Dublin, Birmingham, Leeds, Sheffield, Scarborough, Wakefield, Bradford, &c., who have had occasion to visit patients at the Retreat.

This day is published, in royal 8vo. dedicated, by permission, to Sir Benjamin Collins Bredie, Bart. V.P.R.S., and Charles Aston Key, Esq., Senior Surgeon to Guy's Hospital.

Practical Observations on the Causes and Treatment of Curvatures of the Spine, with Hygienic Directions for the Physical Culture of Youth, as a means of preventing the Diseases; an Etching and Description of an Apparatus for the Correction of the Curvature, and Engravings illustrative of the Cases. By Samuel Hare, Surgeon.

London: Simpkin, Marshall, and Co.; Edinburgh, Oliver and Boyd; Dublin, W. Curry, Jun., and Co.; Leeds, W. Bean and Son; and all Booksellers.

Many, Hare and Copperthwaite, Surgeons, &c., are in want of a well-educated Youth as a Pupil.

BOOKS IN THE PRESS.

NEW AND SPLENDID EDITION OF GULLIVER'S TRAVELS.

To be completed in Eight Monthly Parts. On the 1st of October will be published, beautifully printed in large 8vo. price 2s. 6d.

PART I. of a New Standard Edition of GULLIVER'S TRAVELS, illustrated by upwards of Four Hundred Woodcuts after David Grevelin. With Notes and elucidations from various Original and Manuscript sources; an Essay on Philosophy and Satirical Fictions; and a New Life of Swift.

By W. G. TAYLOR, LL.D. M.R.A.S., &c.

London: Hayward and Moore, 53 Paternoster Row.

NEW WORKS JUST READY FOR PUBLICATION.

THE CONCLUDING VOLUMES OF THE Memoirs of Charles Mathews, Comedian.

By Mrs. Mathews. (Vols. III. and IV.), with numerous characteristic illustrations and Portraits.

The Duke and the Cousin; a Novel.

By Mrs. Grey. 3 vols.

Memoirs of His Own Time;

Including the Revolution, the Empire, and the Restoration. By Lieut.-Gen. Count Mathieu Dumas, Private Secretary to Napoleon.

3 vols. 8vo. Richard Bentley, New Burlington Street, Publisher in Ordinary to Her Majesty.

BOOKS PUBLISHED THIS DAY.

4th edition, corrected and much improved, small 8vo. 10s. 6d.
ON THE CONNEXION OF THE SCIENCES.

By MARY SOMERVILLE.

"Mrs. Somerville's delightful volume on the 'Connexion of the Sciences.' The style of this astonishing production is so clear and unaffected, and conveys, with so much simplicity, so great a mass of profound knowledge, that it should be placed in the hands of every youth, the moment he has mastered the general rudiments of education."—*Quarterly Review*.

London: John Murray, Albemarle Street.

In 12mo. price 6s. in boards, a new edition of
MEMORIALS OF A DEPARTED FRIEND.

"She being dead, yet speaketh."—Feb. 21. A. J. G. F., and J. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

THE MONTHLY MAGAZINE

for SEPTEMBER.

Edited by JOHN A. HERAUD, Esq.

Mr. Heraud's Reply to Professor Wilson. Providence Divine (Ghazal). By John A. Heraud. Festus: a Remarkable Poem. Edited by John A. Heraud. Going the Whole Hog—A Scene in a Blackwood's Court Room. The Sorcerer; Memory. A Fable of Nonsense, with a Specimen. By Cornelius Webb. Sherwood, Gilbert, and Piper; Longman and Co.; Simpkin and Co., Paternoster Row; J. W. Southgate, &c.

THE NEW NOVEL.

New ready at all the Libraries, in 3 vols.

MORTON OF MORTON'S HOPE.

An Autobiography.

"A work of great talent, variety, spirit, thought, and originality."—*Literary Gazette*.
"These volumes display considerable talent."—*Standard*.
"An extremely clever work, written with great force and spirit."—*Atlas*.
"A work extremely well written. The author is happy at the ludicrous, and acute in satirical scenes, whilst in pathos he takes a high and noble tone."—*British Critic*.
Henry Colburn, Publisher, 15 Great Marlborough Street.

In 1 vol. fcap 8vo. with Portrait of T. Chatterton. Pp. 328. Price 6s. cloth bound.

THE LIFE OF THOMAS CHATTERTON,

including his unpublished Poems and Correspondence.

By JOHN DIX.

Author of the "Lays of Hamme," "Local Legends," &c. &c.
Critical Notices of the Work.
"Mr. Dix has most completely carried forward as the biographer of Chatterton. Himself a poet, he has successfully endeavoured to renew an interest in the fate of one of England's greatest, though most unfortunate bards."—*Lit. Gaz.*, Sept. 1837.
"We hail with unaffected pleasure this interesting biography."—*Athenaeum*, August 1837.
"This volume contains all that can be desired to be known respecting Chatterton."—*Eclectic Review*.
"By far the best account that has yet appeared of his (Chatterton's) eventful life."—*National Magazine*, December 1836.
"The author's work seems to have been 'a Labour of Love.'"—*Northampton*, October 1836.
"The best Life of Chatterton."—*The Sympsonist*.
"Mr. Dix has, in addition to what was before known, gathered up 'all the fragments.' His biography is heart-touching."—*Leigh Hunt*, in the *Monthly Repository*.

In 8vo. price 10s. 6d. boards, Vol. I. of
THE CLOUD OF WITNESSES: a Series

of Discourses on the Eleventh and Part of the Twelfth Chapters of the Epistle to the Hebrews.
By the Rev. JAMES S. M. ANDERSON, M.A.
Chaplain in Ordinary to the Queen, Chaplain to the Queen Dowager, and Perpetual Curate of St. George's Chapel, Brighton.

J. G. F., and J. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; sold by J. H. Parker, Oxford; and the Booksellers in Brighton.

THE BRITISH and FOREIGN REVIEW, NO. XVII.

Contents.

1. Waagen on Art in England: Pictures and Picture-Cleaners.
2. A Rural Palace.
3. The Corn-Laws. Hungary and the Baltic.
4. Wheaton on the Law of Nations.
5. Lamartine's Poems. La Chute d'un Ange.
6. England, Austria, and Turkey.
7. The State of the Nation. The Chartists.
8. Church and State. The Russo-Greek Church.

B. and J. E. Taylor, Red Lion Court, Fleet Street.

Fcap 8vo. 6s. the Second and Concluding Volume of
LIVES OF EMINENT LITERARY and SCIENTIFIC MEN OF FRANCE.

By MRS. SHELLY, &c. &c.

Being Vol. 117 of Lardner's Cyclopædia.

"A detailed Catalogue of the entire Contents of the Cabinet Cyclopædia, from its commencement in 1829 to its completion in March 1841, may be had gratis."

London: Longman, Orme, and Co.; and John Taylor.

CARY'S BRITISH PORTS.

Complete in 1 vol. price 14s. cloth.

THE POETICAL WORKS OF WILLIAM COWPER; forming part of a Complete Series of the Poets.

Edited by the Rev. H. F. CARY, A.M.

London: William Smith, 118 Fleet Street; Fraser and Co. Edinburgh; Curry and Co. Dublin.

WELSH LITERATURE.

THE SECOND PART OF THE POEMS OF LEWIS GLYN COETH, a Bard who flourished in the Fifteenth Century, with a Preface in English by the Rev. J. JONES, Chris Church, Oxford, giving a Historical Account of the Wars between the rival Roes, and much other matter which cannot fail to prove highly interesting to the antiquarian.

Edited by the Rev. WALTER DAVIES, and the Rev. J. JONES.

London: H. Hughes, 15 St. Martin's le Grand; T. Geo. Dunbigh; and E. Parry, Chester.

WELSH LITERATURE.

AN ESSAY on the Means of Promoting the Literature of Wales, and an Inquiry into the Causes which have contributed to the better success which has attended the cultivation of Letters in England and Scotland.

By the Rev. JAMES BRAY, B.A.

Of St. John's, Cambridge.

The above was awarded the prize offered by the London Cymro-yddion Society, the Adjudicators being Sir E. Hall, Bart., M.P., and A. J. Johns, Esq., Barrister.

London: H. Hughes, 15 St. Martin's le Grand, and may be had by order of any Bookseller.

In 8vo. price 6s. in boards, the 4th edition, of
PRIMITIVE TRADITION RECOGNISED IN HOLY SCRIPTURE: a Sermon, preached in the Cathedral Church of Winchester, at the Visitation of the

Worshipful and Rev. William Dealtry, D.D., Chancellor of the Diocese, Sept. 27, 1838. With a Postscript, illustrative of some Points in the Argument of the Sermon: to which is subjoined, Cætera Patrum, No. 3 (being No. 78 of the "Tracts for the Times").

By the Rev. JOHN KEBLE, M.A.

Vicar of Hursley, and Professor of Poetry in the University of Oxford.

J. G. F., and J. Rivington, St. Paul's Church Yard, and Waterloo Place, Pall Mall; J. H. Parker, Oxford; Jacob and Johnson, and Robbins, Winchester.

5s. The Postscript may be had separately, price 4s.

New ready, Part III. of
MAXWELL'S LIFE of his Grace the DUKE OF WELLINGTON, &c. &c.

Part III. will contain a splendid full-length Portrait of the Marquess of Anglesey, from the Picture of Sir Thomas Lawrence; the Battle of Waterloo, from an original Painting by A. Cooper, R.A.; two beautifully coloured Plans of Battles, and numerous highly finished Woodcuts.

London: A. B. Reilly and Co. 65 Cornhill.

8vo. price 1s.
THE SPEECH OF LORD BROUGHAM

at the DOVER FESTIVAL, on proposing the health of the DUKE OF WELLINGTON. Corrected by Himself.

London: Simpkin, Marshall, and Co.

In 1 vol. fcap 8vo. the 2d edition of
ESSAYS ON NATURAL HISTORY,

chiefly ORNITHOLOGY.

By CHARLES WATERTON, Esq.

With an Autobiography of the Author, and a view of Watson Hall.
2d edition with three additional Essays not before published, viz.—On the Phœnix, or Tropic Bird; on the Wren; and on the An Wrenwail.

London: Longman, Orme, and Co.

SIR WALTER SCOTT'S HISTORY OF SCOTLAND. (From Dr. Lardner's Cabinet Cyclopædia.)

12 vols. fcap 8vo. with Vignettes, price 12s. cloth, bound.

THE HISTORY OF SCOTLAND.

By SIR WALTER SCOTT.

"A beautiful illustration of the grace and effect which sober reality assumes when treated by the pencil of genius. In no work with which we are acquainted is the progress of manners painted with more historic fidelity, or with half so much vivacity of coloring."—*Gentleman's Magazine*.

London: Longman, Orme, and Co.; and John Taylor.

GERMAN LITERATURE.

In extra boards,
W. KLAUER-KLATTOWSKI'S GERMAN ANTHOLOGY.

1. Popular Songs, price 6s.
2. Select Lyrical Poems, price 8s.
3. Romances, Ballads, Poetical Tales, &c. 8s.

London: Simpkin, Marshall, and Co., and P. Rastbach, Paris and Leipzig: Brockhaus and Avenarius. New York: Biss and White.

Printed by HANNAH PAGE MOYES, of Brook Green, Hammer-smith, and GEORGE MARCLAY, of Number 2 Pall Mall, Place, Islington, both in the County of Middlesex, Printers at the Printing Office, Number 55 Castle Street, Leicester Square, in the said County; and published by WILLIAM ARMIGER SCRIPPS, of Number 13 South Molton Street, in the Parish of Saint George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, September 7th, 1839.

THE ANTARCTIC EXPEDITION.

By the time this paper meets the public eye, this very interesting Expedition will have left, or be leaving, the British shores. Had it been possible to complete the extensive philosophical and other equipments in a shorter space of time, it would have been better, perhaps, had it been able to sail six weeks or two months earlier; but still its course is open, and the delay will lead to no other consequence than some slight alteration in the projected plan of operations.

On Tuesday, the *Terror*, Captain Crozier, dropped down from off the dock-yard, at Chatham, to Gillingham, with all her white canvass spread, and looking like a bird of passage preparing to wing its way to another clime; and on Thursday, or as soon after as possible, her companion, the *Erebus*, Captain James Clark Ross, was appointed to follow, and then proceeded on their voyage together. Having gone to take our farewell, a short description of the vessels, &c., cannot be unacceptable to our readers.

The *Erebus* and *Terror* seem to be twin ships, alike in build, in colours, in masts and rigging, and, indeed, in every external appearance. An inexperienced eye could not tell the one from the other. The *Erebus* is about 370 tons; the *Terror*, 340. In each the full complement of officers and men is sixty-four: a hundred and twenty-eight in all.* Nothing that the art of the shipwright could accomplish has been omitted to fit them for their perilous undertaking. Below, not only have the ribs been strengthened by transverse timbers, but these again have been interlaced by cross beams at certain angles, so as to offer resistance to any invading body, such as ice, which would require a mighty force to overcome. Thus, internally powerful beyond any former example, the outward hull has also been so shaped (curving from near the centre, something like the turning-off edge of a glass or tea-cup) as to throw the converging ice from the chain-plates, and thus protect the rigging from being crushed or invaded. The deck, too, is double; and the whole has a compactness and firmness which gives assurance of security from the worst elements to which their gallant crews can ever be exposed. A spare rudder, which could be shipped immediately in case of accident to the other, is safely stowed amidships: each vessel is provided with eight boats, two of them whalers, and framed to encounter rough seas and weather in separate expeditions, to explore passages and lands where the ships cannot penetrate. Six guns are borne in each; viz. four six-pounders, and two salute-guns. The apparatus for keeping the vessels at an equable temperature is admirable, and consists of a square iron tube, above a foot in diameter, running all round the sides, and distributing a comfortable warmth to every berth in the ship. The ventilation is not less attended to. There

are also stoves in the captains' cabins, and the gunroom messes* which adjoin; and the cooking conveniences are as ample and fit for every purpose as they could be on shore. There is a large kettle to dissolve ice into fresh water; another for dressing salt meat; another for fish; another for fresh meat; and ovens for baking. The mates' cabins are well constructed, and those for the officers to sleep in, though small, are arranged with all a seaman's skill and dexterity in making much of a little. The sick-berths are forward, and so contrived that the invalids may be kept apart from the healthy, for their own sake as well as for the general safety. Immense ice-saws are ranged along the lower deck; some of them thirty, or more, feet long, and looking like the jaws of sharks, competent to cut through any besetting adversary.

They are victualled with fresh provisions for three years; and pemmican and prepared meats in cases are stowed away in the least possible compass.

The provision of scientific instruments, under the superintendence of the Royal Society, is very complete; and double sets, to supply the loss of any which may be broken or rendered useless, seem almost to furnish the commander's cabin. In this respect, the Admiralty has been most liberal; and, indeed, we may say, that after the first official difficulties were got over, the government has taken up the expedition with the most commendable spirit, and done every thing that can contribute to its successful issue. The phenomena of terrestrial magnetism will be independently observed throughout the voyage; and also in connexion with the new observatories about to be established, as already stated in the *Literary Gazette*, at St. Helena, the Cape, Van Diemen's Land, &c. The declination, inclination, and intensity of the magnet, will thus form tables of the utmost importance towards solving this great problem. The declination instrument, the horizontal and the vertical force magnetometers, are constructed under the direction of Professor Lloyd, of Dublin; and there are, besides, dip circles, transits with azimuth circles, and chronometers of the most approved construction. There are also pendulums for ascertaining the true figure of the earth, thermometers for determining the temperature of the sea at given depths; other blackened thermometers to measure the atmospheric temperature in different latitudes; photometric sensitive paper for experiments on light; barometers to be observed during storms, white squalls, &c.; glasses for sidereal observations (particularly on the variable stars, a Hydræ and a Argus); drawing utensils; repositories for geological, botanical, and natural history specimens; actinometers for finding the forces of solar and terrestrial radiation; hygrometers, Osler's anemometers, rain gauges, electrometers, skeleton registers of every useful kind; and, in short, such means to employ, and so much to be done, that there will be no great leisure for our enterprising countrymen when all these instruments are put in requisition.

* In these, four officers will be accommodated; the fifth keeping the deck.

and their results are regularly chronicled for the information of the world.

In looking over the vessels about to depart on so deeply interesting an occasion, many slight matters and incidents touch the feelings. In almost every cabin and berth were tolerable collections of books; and Captain Ross's amounted to a fair library of the most useful description. In some were sweet remembrances of native land, in prints, and pictures; and one engraving, conspicuous in the gallant commander's cabin, affected us much—it was of *our Saviour Walking on the Waters*!! Faith and Hope could not have chosen a more beautiful illustration of the Sailor's mind: the Instruments of the Soul, without the possession of which, what were all that the philosophy and science of man could provide? In that engraving alone, we read a more certain index of the success of this great work, than in the multitude of ingenious machines, and the volumes of wise instructions, by which our most estimable friend was surrounded.

Some kind heart had supplied a twelfth-cake, to be opened on the 6th of January, 1840! The diameter of the globe will then be between the giver and the receiver.

Another pleasant circumstance to record is the friendship subsisting between Captains Ross and Crozier. They have been messmates, and intimate together. Crozier was a midshipman in the ship where Ross was a lieutenant; he was a lieutenant where Ross was captain; and now he is captain where Ross is commodore of the Expedition. They have served together, know and regard each other, and this is an auspicious promise for their mutual good understanding and cordial co-operation to the end; when bound together in their brave barks,—

“To reside
In thrilling regions of thick-ribbed ice,
To be imprisoned in the viewless winds,
And blown [we trust not] with restless violence round
about
The pendent world”

The earlier proceedings of the voyage will lend them to St. Helena, where Lieutenant Eardley Wilmot, of the Royal Engineers, who goes out in the *Erebus*, will be left in charge of the new Observatory. Next, at the Cape, another officer will be landed for the like purpose. The vessels then make their way across the Ocean, touching at, and examining, Kerguelen's Land, Amsterdam, and other islands, either known, or imperfectly reported, in that vast expanse of water. Arrived at Van Diemen's land, the instruments, &c. for the observatory will be sent ashore; and, whilst it is erecting, they will cruise to various points where the scientific pursuits of the Expedition are most likely to be advanced. On their return, they will start *de novo* in a direct southern course, between 120° and 160° east longitude, towards the Antarctic Pole: and it is a singular and fortunate thing that in this direction, during the present season, a ship of Mr. Enderby's has discovered land on both sides of the longitudes we have indicated, in about 65° and 68° of south latitude.* These

* *Erebus*.—Captain, J. C. Ross. Lieutenants, E. T. Bird, J. F. L. Wood, J. Sibbald. Master, H. Mapleton. Surgeon, R. M' Cormick. Purser, T. R. Hallett. Assistant-Surgeon, J. D. Hooker.

Terror.—Captain, F. R. M. Crozier. Lieutenants, A. M'Murdo, J. H. Kay. Master, P. P. Cotter. Surgeon, J. Robertson. Assistant-Surgeon, D. Lyall.

* Of these recent discoveries in the southern hemisphere, Mr. Bates, of the *Poultry*, has just published an excellent chart, under the superintendence of Captain Beaufort. They appear like the pillars of a gateway, between which the Expedition should pass.—Ed. L. G.

shores have been named Sabrina Land, seen March 1839, and Balleny Isle, seen February 1839; and between them, as well as upon them, the efforts of the Erebus and Terror will, in the first instance, be employed. How far they may penetrate is in the hands of Providence. They will afterwards circumnavigate the Pole, and try in every quarter to reach the highest point, whether near Enderby's Land, discovered in 1832, or by Captain Weddell's furthest reach, about 73°, in 1823.

It is between Sabrina Land and Balleny Isle, to the northward, in about lat. 50°, and E. long. 140°, that it is expected the South Magnetic Pole will be found. Strange if he who discovered either that of the North, or so near an approach to it as Captain James Ross did, should also ascertain this long-sought phenomenon. We had forgotten to mention, that the vessels are constructed on the plan which divides them into three compartments; so that either extremity or the middle might be stove in, and yet the remainder be a safe hold for the crew.

Wherever the voyagers go, we have only to add, May God bless and prosper them, and return them in safety to a grateful country and their anxious relatives and friends!

REVIEW OF NEW BOOKS.

Report on the Magnetic, Isoclinic, and Isodynamic Lines in the British Islands. From Observations by Professors Humphry Lloyd and John Phillips; Robert W. Fox, Esq.; Captain James Clark Ross; and Major Edward Sabine. By Major E. Sabine, R.A., F.R.S. 8vo. pp. 196. London, 1839.

THIS Report, of which two sections are written by Professor Lloyd, appears in the seventh vol. of the "Transactions of the British Association," recently published; but it has been deemed advisable, also, to issue it as a separate volume, of which a copy is now before us. And when we look at the national character of the work, its observations carried over the whole extent of England, Ireland, and Scotland, and presenting the actual state of the phenomena of the magnetic dip and intensity in the British Islands; we cannot but rejoice in a determination which is likely to place it in so many more hands, than where it is connected with fifty other subjects in a more costly publication. But we desire chiefly to notice it in this number of the *Literary Gazette*, because it affords another and a striking proof of the valuable services rendered to science by the British Association. It is a fair example of a work which, in extent and scientific importance, might well have been executed at the expense of the Nation; and yet it originated in a suggestion thrown out at the Cambridge Meeting in 1833, and has been carried into effect by the united exertions and private means of the five distinguished individuals (Members of the Association) whose names adorn the title-page. We may state, of our own knowledge, that these gentlemen were previously personally unacquainted with each other, and might probably have remained so to this day, but for such opportunities as these meetings afford. It is all most deserving of notice, as

* The "Kentish Gazette" states that, "The walls are doubled with 8-inch oak-plank, and the bottom with plank of 3 inches; the holds, the ceilings of which are doubled with two thicknesses of 1½ inch African teak, crossing each other at right angles; the bulkheads in the holds are built in like manner, and made water-tight; so that, should the bottom be stove in at any part by the sheets of ice, the safety of the ships will not be endangered. The pumps fitted are those of Maslin's patent. The weather-deck is also doubled with 3-inch fir-plank, with fernnought, slipped in tallow, laid between them."

demonstrating the *moral* good derivable from the Association, that the bond of co-operation in this laudable work has been the means of ripening a warm friendship amongst all the parties concerned in it. And this is not simply a subject of private gratulation—it must have a very beneficial effect upon the general interests and cultivation of science, as the exhibition of petty jealousies and angry contentions on the contrary is sure to contribute to its decline. May we have many similar instances to record; and vain and pointless will be all the railing launched against the British Association.

To the suggestions and exertions of Major Sabine we are mainly indebted for the expedition, the outfit and description of which form the subject of our preceding article.

The Spas of Germany. By Dr. Granville. 8vo. pp. 524. London, 1839. Colburn.

WE rejoice to see a second edition of a volume at once so full of entertainment, general information, and sound medical advice, upon the question so interesting to invalids.—Whither shall I go to seek health among the salubrious fountains of Germany? Having compressed his excellent production into one volume instead of two volumes, is a great improvement upon a publication of its class; and he has done this not only without impairing the former, but by adding much that is most agreeable and useful. Necessary alterations and corrections have also been made; and at a season when such a multitude of our countrymen and women seek amusement, solace, and restoration at such places of resort, we cannot do them a greater service than by cordially recommending Dr. Granville as a valuable guide and delightful companion.

Journal of the Persian Princes.

[Second Notice: conclusion.]

WE have great pleasure in returning to our task of illustrating the conceptions of England formed by its royal Persian visitors. The mixture of wisdom and simplicity, of just information and misconception, is both instructive and amusing; and, as we have observed, a lesson of caution when we may read travels in Persia, or other strange lands, by European authors.

*Windsor Castle.**—"The girdle of its cupola makes that of Kasrow sink into insignificance and shame. The first geometrician of the age would be unable to find out the ratio which the corner bears to the entire roof, and the most learned architect would cut his finger,† from his inability to discover the principles of its construction. Art thou a garden and a palace, residence of victory? or a paradise that God hath planted in the earth? In truth, thou appearest as an everlasting Paradise. O azure four-springed fountain! whence did thy colour first come? Thou must be a stream from Kauthâr!‡ In every room that we entered, our astonishment increased, and our minds were surprised. In every apartment we observed imperial splendour. All the furniture was of gold and precious stones. Even in the smallest room there appeared to be an assemblage of all the jewels in the world. The brilliancy of each article of gold and jewellery surpassed that of the sun and moon. Each of the kings, for 200

* Mr. Wyatt's monument to the Princess Charlotte touched their feelings. "On one of the tombs we observed some magnificent statues. A royal princess lies buried here, who died when she was in the bloom of her age. She having been extremely beautiful, they carved for her a most splendid statue."

† "Cyrus."

‡ "An expression of great despair."

§ The immense large river of Paradise, detailed in the Koran."

years past, has had a separate palace in this castle, with distinct majestic splendour of sovereignty, as may be now seen, just as they were when these sovereigns occupied them. And whatever unique jewels each sovereign obtained during his reign, are placed in his palace, with his statue, either of marble, jasper, or porphyry, seated on a jewelled throne; so beautifully made, that you might say, It is alive and can speak. One statue of a former king cost more than 12,000 tomans. Thus you may imagine what is the value of all the statues, pictures, and figures in this castle. In the same manner, every one of the shahs of England has his coat of arms, together with the arms of such foreign kings as he may have conquered. All his ministers and officers of state during his reign, have also statues placed by him in the room, each with arms of the age, and appearing as if they were alive. In the royal rooms of the late kings, all are seated on their thrones and chairs of gold, embroidered with precious stones which cost millions of minted gold; each has his crown on his head of a hundred mauns of solid pure gold, and adorned with precious stones, so magnificent as to take the senses away. These crowns are supported by chains of gold, and suspended over the heads of the sovereigns. In short, the majestic splendour of every sovereign who has died still exists. All the royal furniture in the palace is deposited in the different apartments, and every thing which indicates the greatness of majesty is still now in the same order as formerly, and attendants are actually waiting just as if the departed sovereign was alive. Their libraries are filled with myriads of volumes, a thousandth part of which cannot be described. One of the libraries, belonging to one of the former sovereigns, is lined with fifty thousand volumes. We also noticed several rooms, three hundred feet long, and a hundred broad, all adorned with beautiful pictures. These are for balls, where the king and queen invite their noble guests; the king himself dances, and the queen also with whom she pleases. When such balls take place, the sounds of the musical instruments in these rooms are heard at a distance of twenty miles. The wonderful articles which we observed are so numerous, that it is impossible to describe them. After we had minutely examined the palaces of the former sovereigns, they conducted us to the palace of his majesty William the Fourth, the sight of which made us forget the former ones. Imagine what must be the splendour of a king whose revenue is four hundred and eighty millions per annum! Indeed, we were filled with amazement at what we beheld. No sovereign ever possessed such splendour, not even Solomon (peace be upon him!), who had power over the gin,‡ whom he commanded to find for him all the treasures of the world, even he did not possess so much as his present majesty. Although we had not the opportunity to see one thousandth part, yet, of what we saw and estimated, we could easily imagine what was asserted of Alexander of the Two Horns, that he blocked up the wall of Gog and Magog with gold, since the gold that we observed here, in this palace, is four times the quantity that would be required to block up any wall of Gog and Magog."

Vaushali is represented as "a garden—a heaven—large, adorned with roses of different colours in every direction; the water was running on the beautiful green; pictures were drawn on every wall. Here and there were

* "Gin, i.e. the well-known fiery spirits of the 'Koran' and the 'Arabian Nights.'"

young, moonly faces, selling refreshments. There were burning in this place about two millions of lights, each giving a different colour; the lanterns and lights are so arranged as to make poetry, in such a manner that they have no end. On every side there appeared the moon, and the sun, with the planets, each moving in its orbit; and in every walk there were about 10,000 Frank moons,* walking and gazing about, where the roses and their tribes were admiring their beautiful cheeks. Each was taken by the hand: such a company in such a place says to the soul, Behold thy paradise!—pleasure and joy appear; woes and sorrows are banished;—every hand asked for a glass of refreshment to present to the possessors of jasmine hands. Thus we were happy to have in each hand a paradisaean companion, and to point out the beauties of the place, in order to draw forth the sweet music of their replies. We left the rose and met a pink!—are we awake or in a dream? We walked in this garden from one place to another, till we came to a place where we saw crowds of people gazing at a boy elegantly clad, who was playing on a rope; now we were as though we had lost our mind. This rope was made fast high above in the garden, on which this boy was dancing; indeed he was like a bird with wings in the air. Afterwards a young and beautiful girl, handsomely dressed, increased our surprise; she joined the boy, and they played together in a most wonderful manner, enough to take away the senses to look at them. When the boy and girl had finished their manœuvres, the people in the garden went to another place, where there was a wheel which was set on fire: as soon as it was lighted it began to ascend, throwing out fire of red, green, blue, yellow, and other colours wonderfully, as if all the world had taken fire, and continued to ascend till it reached the sky. All this was done without giving any unpleasant smell of powder. The people that make such fireworks derive a large income from it; also the Treasury receives a great annual sum from them. We had an exceedingly interesting exhibition, and returned home perfectly satisfied with our visit."

Geography!—"Between England and Ireland is a channel fifteen miles broad. * * * Being near the north pole, England has a very cold climate; so irregular is the weather, that in four hours you may experience the four seasons of the year. It is generally cloudy, and the four seasons have no separate ranks. Even in summer it is cloudy and rainy. Owing to the constant rains in all seasons, the whole country is green as a garden of emerald colours. Thus all the quadrupeds here enjoy the green which they eat all the year long. Sometimes it happens, that for a month or forty days they they do not see the sun, and the air becomes damp. * * * Most of the public affairs are decided at night. These islands are 3000 miles round. Their population is 27,000,000, which is equal to fifty-four kerrors of Persia. The revenue to government, the whole of which is spent, is 60,000,000, or 120 kerrors of ours. But when government goes to war, they raise much more money. This took place during the war with Buonaparte, when the people gave the wonderful sum of 840 millions, which was spent during the said war!"

Durow and his horses, at Astley's Amphitheatre, were, like the Italian Opera, highly appreciated.

"On Thursday, the 24th, four hours before sunset, we visited a large edifice, which we

* "English ladies."

may call the opera of the horse. It is the same in form as the opera house or theatre, and in the same manner it contains boxes and seats for the spectators. *There were on this day about 10,000 ladies with charming faces like the moon, and the ray of their beauty gave a most powerful splendour to the place.* The principal parts in this theatre are performed by horses, including other wonderful exercises. In the first part, an Asiatic emperor in eastern splendour came out upon the stage, where a fire was lighted up, the light of which made the whole place look as red as crimson. In the same theatre there were many elevated places, like high bridges, on which they performed on horseback. The horses ran up and down exactly like cats. Some little boys, of seven years of age and under, clad in different-coloured dresses, played by turning their bodies as if they had no bones at all. They formed, by joining their bodies in different ways, any figure they liked. For instance, they wished to form an elephant. One of them represented the proboscis, another the head, one the neck, and others the feet. Thus they form an elephant, exactly like the original; so wonderfully, that one could scarcely distinguish it from a real one. Likewise, with their bodies they form the resemblance of any other animal. About 100 men were arranged in this manner,—one stood above the other, that is, the feet of one on the head of another, till all were arranged, and then they danced in that position. In truth, it was a very wonderful, surprising performance. The most astonishing part of this exhibition was a ring of wood, which was held by a man, ten yards distance, around which were fixed some spears. Some persons, while playing on the rope, passed most wonderfully through the ring, without being hurt. Afterwards some beautiful young female performers, *with angelic faces, dressed expensively with jewels, came out.* They played in different ways, and with their beauty and exercises exceedingly delighted and astonished all of us. After the rope performance was over, then the play was carried to the lower part of the house, that is, the ground, which is a round place of soft earth. First a young boy, ten years old, rode on two horses, which stood at the distance of a yard from each other. He took the bridles of both in his hand, and placing one foot on each horse's back, and lashing them with his whip, they went with extreme rapidity. The horses ran so swiftly, that their feet did not appear to touch the ground. *It is said, that they go the distance of an hour in a minute.* In fact, the performance of this boy on the horse's back, in such a narrow place, was so quick and wonderful that we lost our senses. Afterwards a young female appeared, of beautiful complexion, brilliant as Venus. She, also, in the same manner, rode on the horses, but in a more wonderful way. She actually danced on the horses, and made these large, powerful animals themselves dance. Sometimes this young lady, with a stick in her hand, gave a sign to the horse, which he understood as well a human being, and fell down as if dead; again she gave another sign, which made him rise up and dance. In fact, nothing was wanted to this horse but speech. After this young lady had finished her wonders, then other performances were introduced. I would only add, that what we saw done here was as if by magic,—indeed, you may call it a complete necromancy. Afterwards the master of this establishment himself came out, and performed so wonderfully on horseback, that he might be called the first horseman in the world. This man, standing on a large and very powerful horse, exhibited

such distinguishing powers of horsemanship, that what I have already mentioned is nothing in comparison of it. While the horse was at full speed, he filed his pipe, struck a light, and began smoking. He also took a pen and ink in his hand, and while at full gallop wrote letters. Likewise he loaded his gun and fired. Again, two men stood and held a circular screen of paper in his way, ten yards above him, through which he jumped, though the horse was at full speed, and alighted on his back. In fine, what was exhibited here was miraculous."

Cutlery and a Cutler's Shop.—"Here we saw many curious and strange instruments, such as we had not before seen, for dentists, oculists, surgeons, and doctors. It never entered into our minds that there were so many and such various instruments as we here observed, there being upwards of two million knives of different descriptions." *Surgery and Medicine.*—"Some of them were for anatomical purposes, to remove any part of the bones with perfect facility. These instruments are so ingeniously constructed, and adapted to their purposes, as to enable even a child to practise in the medical science. Indeed, those of the medical profession in this country appear to have no difficulty in curing any disease; so that, whatever to our Persian doctors appears as incurable, to them presents no insurmountable difficulty."

Madame Tussaud's Exhibition was another marvel, and the occasion of a pretty hoax. Walli and Taymoor having seen it without their brother, resolved to play him a trick, and it is thus described:—

"About sunset we entered the carriage for the royal palace, on a visit to the queen. We arrived at the door of the house, supposing this to be the palace. I desired Fraser Sâheb to enter first, and to announce our arrival, and to obtain permission for us to enter. Fraser Sâheb went in, and came out, saying, that the king has honoured this place with his presence, and that all the royal family are present, as well as the vizirs and nobles of state, all in full uniform, in the presence of his majesty, who is holding a levee. I then entered the palace, and found it a splendid hall. The King was sitting on the imperial throne, with the crown on his head, and clad in a splendid royal robe of jewels. In the same manner the queen was seated, in her most magnificent robe of precious stones. All the members of the royal family were in their full uniform, making a circle round the king. Dukes, princes, vizirs, and nobles, all standing before him. The royal hall was beautifully lighted up with magnificent chandeliers. When I beheld all this splendour, I said within myself, 'I ought to approach the king just as I should my sovereign, the Badishah of Persia, and offer him the same dutiful obedience.' Thus I approached nearer to the king, bowing down my head, after our custom, and my brothers stood behind me. The king, much to my surprise, did not appear to acknowledge my presence. I then asked Fraser Sâheb why the king was uncivil. He said, 'I do not know. Perhaps,' said he, 'the reason is, that it was not the king, but the queen, who invited you, so that the king has nothing to say to you; let us go to the queen.' I was exceedingly vexed and ashamed of what took place, bowed my head to the ground, and followed Fraser Sâheb to the queen. Here I observed a throne of marble, inlaid with precious stones and valuable jewels. On this splendid and magnificent throne was seated a young lady, with a face like the moon, dressed in royal robes, worth more than the revenues of Europe. A precious crown was on

her head, and she was surrounded by a company of ladies with angelic faces, whose splendour was like the sun at mid-day, all seated upon chairs of gold. I drew near, offering the due respects; all were silent, and nobody replied to my salutation. This was quite the reverse of what I met with at other parties. I began to be quite vexed with Fraser Sâheb, and said to him, 'Fraser Sâheb! this gives me to understand that the queen did not invite me to come, and that she did not wish to see me. It is all through your fault and intermeddling that I have to bear this shame.' One of the ministers, dressed most magnificently, without a hat on his head, was standing before the queen. I went near this minister, and desired Fraser Sâheb to tell him this, that although the queen did not invite us, yet we were already in her palace, and it would be only politeness in her to treat us as her guests. Fraser Sâheb interpreted to him what I said, but I observed that this man did not give any answer, neither uttered a word. Praise be to God! what a curious circumstance! I then took his hand, saying, 'Why do not you give an answer to my question?' When I shook his hand, he fell down. I then observed that he was dead, and I was astonished to find that all of them also were dead persons. Now my brothers and Fraser Sâheb laughed loudly, and said, 'These people are not dead, but all of them are artificial figures of white wax.' Verily, no one would ever have thought that they were manufactured by men. This establishment belongs to a rich nobleman, who inherited it from his father; and it brings him daily an income of a hundred tomans. Many people from all parts of the world come to visit this wonderful place. In short, I was not satisfied till I examined all of them; and I was perfectly astonished to find that there was not the least difference between the imitation and the imitated. So wonderful are the arts of the Franks!"

Woolwich.—At a review, "the dexterous artillerymen loaded and fired their cannons quicker than lightning and swifter than the wind. They fired many thousand balls a minute, and the ears of the heavens became deaf from the sound of the firing, and not a single ball missed its mark. So many cannons they fired, that our ears became quite deaf. Afterwards they began throwing bombshells. This most wonderful exhibition I cannot describe, and our pen is astonished, and cannot write an explanation of these miracles. Then we suggested that it was enough. The balls and powder which were fired to-day might have cost 7000 tomans. Afterwards they invited us to see the stores of ammunition, and implements of war. We were conducted to a large plain where there were many very large edifices, any one of which must have cost millions of money: they are so large that each is a quarter of a pafasang in circumference. Every one of these edifices contains about 5000 men employed in the manufacture of cannon, which look fine and bright like glass. They complete daily twenty-five of them."!!

Bedlam.—"We went out of town, and came to a large castle, about two miles in circumference, situated on the bank of the river. All its doors and windows are made of iron. We came to the large gate of entrance, which was shut. When the captain of the castle came, and was told that we were the Persian princes, he opened the gate, and we entered the place. It is four stories high, and contains innumerable rooms. There are two departments; the upper one for the women and girls, each of whom has a maid-servant; the lower one for the males, each of

whom has likewise a male servant. We were first conducted to the upper department, containing many clean, pleasant rooms, which have delightful views of the gardens around. Every room has a fine bedstead, and is elegantly furnished. Every thing desirable and necessary, and in perfect order. This delightful place, with such accommodations, gives any person an inclination to become insane.

While we were walking about these places, a fine neat-looking girl came to us, and asked us who we were. We replied, 'The Persian princes.' 'Is it true?' said she. 'Yes,' we answered. Then she said, 'I shall always be able to tell hereafter a Persian by the dress, such as you wear.' We were informed that this young woman was a celebrated poetess. Afterwards she asked us, 'Are you going to stay here, or will you go away?' We replied, 'We are not insane, of course we shall go back.' She said, 'Many foreigners come to visit this place and go back, but they come here in fine weather; but as you have come so great a distance on such a stormy day for such a useless object, I believe you are also belonging to our company, and it will be necessary that you should join us for a few days till you become sane.' Her words made us all laugh till we fainted away. Afterwards she took my hand, and invited us to her room. We entered her apartment, where she shewed us some of her needle-work, and repeated some verses of her own poetry. She then said to us, 'Notwithstanding you are royal sons and I am the daughter of a peasant, nevertheless, I would not part with my house for your palace, neither would I exchange my insanity for your sanity.' She conversed on other things which had nothing to do with her madness. We were told that sometimes she does very strange things. Afterwards she asked us, 'Do you fear God as I do?' 'Of course,' we said. 'Have you that Divine grace that I have?' We replied, 'Yes.' Then many tears came to her eyes, and she asked us to leave her apartment, saying, 'I am not inclined to converse with you any more, leave my room.' When we went out, she shut the door after us."

Industrious Fleas.—From the National Gallery, with the pictures in which they were much pleased, they went, as they inform us, "to the house of a person whose business is to take care of fleas, and tame them. The relation of what we saw of these fleas at this place, how they are tamed, and taught to act most wonderfully, will undoubtedly be taken only for a lie. No one would ever believe that these little insects could be instructed in such a manner. However, whether it be believed or not, we will write down what we saw of them for our own gratification. These fleas are kept in a damp place, where they grow. They are placed in a glass case, which magnifies them exceedingly. There are some apartments in this box where they are quartered. They are broken to draw carriages, just as our horses are taught to draw carriages of cannon. What- ever details we may give of these fleas will appear incredible; however, we are determined to mention what we observed. Four of these fleas drew a carriage of ten drachmas weight, in harness, and turned exactly like horses. Two others stood for coachmen, with a whip of hair to drive the rest. On one side of their box there is a vessel full of water, on which there is a little thing in the form of a ship, with sails, and an anchor in the water, just like a vessel in harbour. About ten or twelve fleas drew the anchor up, others went up the masts and spread the sails, their chief

or captain taking the helm; and thus this ship of fleas actually sailed on the water. In another place we observed a wheel and a rope in perfect order. In the box there was a little musical instrument, on which the fleas played; other fleas played on the rope, and some danced. We observed also a large flea, which was a soothsayer, telling fortunes and future events. This was done as follows:—A plate is figured in lines of different colours, like an astrolabe. Some of these indicate good, and others bad fortunes. There is fixed to it a kind of pointer, attached by a chain to the neck of the flea. The person who wishes to have his fortune told puts his question. The flea will then walk about, and the pointer will move. Whenever it stops, it will inform him whether he has a good or bad fortune. These fleas are fed on human blood twice a-day, once early in the morning, and again in the evening. Those that are educated, that is, such as become tame, are well fed, and those that are not tamed, are allowed but little till they become learned; and then they are sold, and purchased. The master of these fleas has one which he has kept for two years; he would not take a horse for it. In fine, we think we had better stop, as what we saw of the curious and most wonderful acts performed by these fleas would require much time to describe."

A brief notice of France, and we conclude:— "Although in regard to size and population it exceeds England, yet it has not the perfect order of that country. Paris is its capital, which is one of the seven magnificent cities of the world. Its climate is better than that of England. It is bounded on the east by the Netherlands, Switzerland, and Piedmont; westward and northward, by Spain and the West Sea. It is 650 miles long, and 560 broad. France possesses also some dominions in America and Algiers. *There is here more liberty than in England*, but their form of government and political order is nearly the same as that of London, as to parliament, and their council of commons. The present king of France is named Louis Philippe. France contains 35,000,000 of population, which is equal to seventy horrors of Persia. The standing army which is under order in this kingdom, amounts to 600,000; they have likewise a very large navy. The French during the reign of Buonaparte possessed the greatest part of the European kingdoms. *The generality of the people believe in transmigration.*"

But we trust we have done enough to sustain the character we gave of this performance, and we must leave the rest, though equally curious and amusing, to those who may procure it. From a four months' sojourn we could hardly have anticipated so much; and with all the erroneous opinions which the princes formed of us, and with which, on account of their piquancy, we have chiefly embellished our *Gazette*, we ought not to dismiss them, or our valued friend Assaad, without stating that there is also much matter to yield food for English reflection, and produce very beneficial effects in Persia and the East.*

* We are happy to find that our review of this curious work, last week, has greatly promoted the object of those who had taken its amiable translator by the hand, and interested themselves in the success of his publication. Among the foremost of these we would name that zealous friend to every thing connected with the promotion of Eastern literature and improvement, the Earl of Munster; and, after his lordship, the Hon. Captain Maude, R.N., 10 Gloucester Terrace, Regent's Park; Captain Sir Edward Parry, R.N., 22 New Street, Spring Gardens; T. Crofton Croker, Esq., Admiralty; J. Brathwaite, Esq., 64 Old Broad Street; and William Trimmer, Esq., 1 Torrington Place, Torrington Square; whose addresses we give, because we are informed they act as friendly publishers of these attractive volumes.

ARTS AND SCIENCES. THE BRITISH ASSOCIATION.

NINTH MEETING: BIRMINGHAM.

[Third Notice.]
WEDNESDAY.

SECTION A.—Mathematical and Physical Sciences.

1. Mr. Follett Osler, 'On the Indications of his Anemometer.'
2. Mr. Hopkins, 'On the Least Thickness of the Solid Crust of the Earth, consistent with the Phenomena of Precession and Nutation.'
3. Mr. Smythies, 'On the Motion of Free Points.'
4. Mr. Nasmyth, 'On a Plate-glass Pneumatic Spectrum.'
5. Professor Powell, 'Report on Refractive Indices.'
6. Professor Powell, 'On a New Case of Interference of Light.'
7. Dr. Ure, 'On Photometry.'
8. Dr. Ure, 'On the Fluidity and Viscidity of Certain Fluids.'
9. Professor Powell, 'Explanations of Certain Optical Phenomena.'
10. Mr. Frodsham, 'On a New Compensating Pendulum.'

THE first paper was read by Mr. Follett Osler, and brings us better acquainted with this very ingenious instrument, a model of which was in the Model-room; but a much more interesting example, in actual operation, on the roof of the Philosophical Institution.

"An anemometer and rain-gauge, similar to the one that has been at work at the Birmingham Philosophical Institution, was put up at Plymouth last year by order of the British Association, and placed under the superintendence of Mr. Snow Harris, whose indefatigable exertions in forwarding the science of meteorology are too well known to require comment from me. Having just received the registers from this instrument, I shall take a cursory review of a few of them in comparison with those made at Birmingham. I do this, not so much for the purpose of giving information that is in itself of so much value, as with the hope of exciting a desire for obtaining observations of a similar nature on a more extensive scale, feeling strongly convinced that a correct general knowledge of the main currents of the atmosphere is of paramount importance in studying meteorology. I shall confine my remarks entirely to the direction of the wind as registered, and not attempt, on the present occasion, to connect any barometric or thermometric observations with these. As it would not be possible to illustrate more than a few of these observations,* I have selected those only in which the wind has been tolerably steady and strong, as being the best mode of giving a correct idea of the nature and value of these observations:—On the 17th of November, 1838, a steady current set in at Plymouth, about 8 o'clock A.M., from the S. by E., and continued until 8 o'clock on the following evening, a period of thirty-six hours. The steadiness of this current at Plymouth was very remarkable: during the first part of this time there was almost a perfect calm at Birmingham; however, by 10 o'clock in the evening, that is to say, fourteen hours after this current from the S. by E. had set in at Plymouth, a slight wind was felt at Birmingham from the north; in three hours more, that is, by 1 A.M., on the 18th of November, it became E.N.E., and finally set in a strong gale from N.E. by N., which lasted the remainder of the day. It is a singular fact, that as this gale increased in force at Birmingham it declined at Plymouth; this was towards the middle of the day; in the evening, the contrary to this took place. The rush of air from the S. by E. at Plymouth continuing for such a length of time previous to any wind being felt at Birmingham, clearly

* "These observations have been rather hastily drawn up, and whether they will be verified by future experiments we have yet to learn."

shews that this must have been the main current; and it seems highly probable that the atmosphere for some distance north and south of it was gradually affected, and eventually drawn into it. The state of the wind on the next day very much confirms this view of the subject: the current by that time became due E. at Plymouth, and N.E. at Birmingham. On the 20th, there was but little wind at either place, and the directions then became the same in both places. During a considerable portion of this time much rain fell; about .76 of an inch in Birmingham, and 1.32 at Plymouth; the two principal falls in Plymouth preceding those in Birmingham by about four hours. On March 28th, a strong wind set in from the west at Plymouth, which continued the whole day. At Birmingham the wind was S.S.W. when this gale commenced; but after continuing in that direction about twelve hours, it moved gradually round to the west, and finally to the W.N.W. During the time of this change, the strength of the wind at Plymouth increased considerably, though it did not alter in direction. A deflection in the wind, in the opposite direction to what is here illustrated, sometimes takes place, but not so frequently. Whether the deviations here exemplified are in regular curves, and are segments of large circles, or merely deflections in the course of the currents, caused by some peculiarity in the situation of the places, or whether it be our insular position that modifies the currents, I cannot venture an opinion. The course of the currents is, as might have been expected, much more steady at Plymouth than at Birmingham. Thus, on the 29th, 30th, and 31st of January last, the wind commenced at due west, and veered at a perfectly even rate round to the north; while in Birmingham the course of the current was exceedingly unsteady, and veered round one half the compass, while in Plymouth it only moved one quarter: this, among many other instances which I could bring forward, shews that great care should be taken in the selection of stations for making observations concerning the course of the main currents of the atmosphere, which ought to be our object in the first instance; for we must not hope for a long time to come to lay down the minor fluctuations to which the greater ones are subject. I shall conclude with a few remarks on the great storm of the 6th and 7th of January last, that committed such dreadful ravages in this country, and trace its probable course and action. In addition to the records obtained by the anemometer at this place and at Plymouth, I have collected what information I could concerning the nature and extent of this storm from many parts of the British Isles. A careful analysis of these strongly leads me to the opinion that this was a small but violent rotatory storm, moving forward at the rate of about thirty to thirty-five miles per hour. The diameter of the rotating portion I am not prepared to give, nor do I consider it at all certain that it could be ascertained, as it seems likely that the revolutions were not in contact with the earth. The tendency of this eddy, or violent whirling of the air, would, of course, be to produce a vacuum in the centres. The air that forms the eddy being constantly thrown off in a slight degree spirally upwards, and dispersed on the upper portion of the atmosphere, the effect of this would therefore be to produce a strong current upwards. Now, supposing this large eddy to be perfectly stationary, there would be a rapid rush of air towards it from all sides, which would be drawn up and thrown off through this rotating circle, and dispersed with amazing rapidity

above; but as it is moving on with great velocity, the air that is in the advance of the storm is not sensibly affected until the whirl is close to it; while in the rear the motion of the air is greatly increased: first, by the tendency of the air to rush into the great vortex of the storm; and, secondly, by the motion onward of the vortex itself. This vortex, or revolving column, would increase in size upwards, so as somewhat to resemble a funnel; it would, in fact, be similar in its shape and action to an immense water-spout; whether it was vertical or not is entirely a matter of conjecture, but I should consider it probable that it would incline in the direction that the storm was moving, namely, to the N.E., and that it was an upper current that carried it in that direction. The greatest intensity of the storm in England was evidently across Lancashire and Yorkshire. I therefore conceive that the nucleus of the hurricane passed in a N.E. direction over these two counties. Towards the sides, however, a little current set in a S. and even slightly in a S.E. direction, on the S. side of the vortex, and in a N.W. and westerly direction on the N. side; but the main rush is behind. Our anemometer shews that we first felt a fresh S. wind with a slight bearing of E. in it, which very shortly became more westerly, increasing considerably in violence; and it then moved round to the S.W. and became quite a hurricane, and continued so, very violent at first, but decreasing in strength during the remainder of the day: at Plymouth it commenced as a S.W., and then very gradually moved round a little more westward. It was by careful examination of the records of these two instruments that I arrived at the view I have ventured to take of this storm, and the evidence that I have collected from various parts of the country concerning it, strongly confirms me in the view now taken of it. Many violent storms followed in the wake of this extraordinary hurricane, but I have not attempted to investigate these, as the main storm would have thrown the atmosphere into so disturbed a state, that it would be very likely to produce minor eddies, gusts, &c. Had more complete and systematic observations been made years ago, the rotatory hurricanes first remarked by Mr. Redfield, and then so ably set forth by Colonel Reid, and also the storms on D'Espy's theory, which I believe the one that has just been described most nearly resembles, would instantly have been rendered palpable; whereas now we only wonder how, out of such an unconnected and crude a mode of obtaining evidence as they were compelled to adopt, so beautiful a theory could by possibility have received birth at all. Other laws no doubt exist, which, let us hope, no great length of time will be required to develop."

Prof. Stevelly referred to his meteorological observations at the Edinburgh meeting, and thought them confirmatory of Col. Reid's theory of storms, and other phenomena of thunderstorms, either with or without rain.*

* We rejoice to see government taking up this inquiry: the following "Memorandum respecting the Records to be kept of the State of the Weather in the British Colonies," has been issued from the Colonial Office:—

"The captains of ports, harbour-masters, and keepers of lighthouses, or, where those officers do not exist, some other competent public functionary, should be required to keep journals of the weather, on the principle of the logbooks of ships. A column should be specially reserved for inserting the height of the barometer. Under the head of 'remarks' should be entered all meteorological observations considered worthy of particular notice. When the keeper of a journal may hear that a vessel has encountered a storm, he will enter in it any information on the subject which he can rely on, together with the name of the ship, of her owner, and of the port to which she may belong. With the view of tracing the cause of storms, the Trinity Board of London have given directions for the

Mr. W. Hopkins read a paper in favour of the greater Solidity of the Earth, supposing it to have been originally fluid: the matter and conclusions were similar to those in his communications to the Royal Society, and need not be repeated.

Mr. Smythies proposed a method for Solving Dynamical Problems relating to the motion of free bodies; accompanied by algebraical tables, terms, and equations, which forbid a report.

Professor Baden Powell read a continuation of his 'Observations for Determining the Refractive Indices, &c., of the Solar Spectrum.' His tables shewed the mean results in experiments on various media.

Mr. Nasmyth exhibited his Plate-glass Speculum, which we have already described. (Page 550, *Lit. Gaz.* No. 1180.)

Professor Powell, 'On a new Case of Interference of Light,' arising from a prism of a certain dispersive power being opposed to another of a different power, and producing dark bands round the usually coloured edges of the image.

Dr. Ure read a paper 'On Photometry.'

The usual method of ascertaining the intensities of different lights, by a comparison of the relative shadows they project, having failed Dr. Ure in two recent inquiries; or rather the results with regard to the illuminative powers of the Bude light, in an investigation conducted with reference to the lighting the House of Commons, and with regard to the darkening effect of a high wooden wall, or hoard, erected behind two houses in George Street, Hanover Square, London, being unsatisfactory, Dr. Ure employed other photometric means. He placed, when following out the latter investigation, several pieces of paper, prepared with the salts of silver usually employed for photogenic drawings, in the rooms which were considered to be darkened by the hoard; and also in those of a neighbouring house not so circumstanced. In a certain time those exposed to the action of free daylight acquired a certain depth of tint; and by observing the time required to produce the same tint on those papers placed in the rooms under the influence of the hoard, Dr. Ure was enabled to determine the amount of daylight diminished by that erection. For instance, if those exposed to free daylight, as in the first case, assumed the particular hue in half an hour, and those in the second, or in a third case, in one hour and a half and three hours respectively; the only relative difference being the greater or lesser obscurity to which the windows may have subjected: then the light would have been diminished threefold and sixfold by the hoard, or by any other experimental obscuring cause.

adoption of measures to obtain a more accurate record of the weather than has hitherto been kept at the lighthouses of Great Britain and Ireland. The keepers of these lights having the opportunity of taking their observations by night as well as by day, great advantage may be derived from employing them in this manner. Officers in charge of colonial lighthouses should be instructed to keep similar journals. In noting the wind's force, both in the harbour-masters' journals and in the lighthouse reports, it is desirable that the officers should adopt the numbers for noting the strength of the wind now in use at Greenwich Observatory, and about to be introduced at the lighthouse under the Trinity Board. In the cases of St. Helena and Ascension, it is desirable that more precise information should be obtained by observation respecting the 'Rollers' at those islands. As the object of her majesty's government in instituting those inquiries is the advancement of knowledge in science generally, the governors of the several British colonies will consider how far it may be in their power to obtain useful information bearing on the subject from countries adjoining to their governments in the possession of foreign powers, or how far it may be useful to the study of meteorology to exchange the observations made within their governments for those of other countries in the neighbourhood. If at any time desired, there would be no objection to the publication in the colonial newspapers of extracts from the journals."

By photogenic impressions, Dr. Ure considers the relative degrees of diurnal illumination in different rooms in any house, in different countries, or on different days in the same house or country, also the extent or strength of daylight in any part of the world, may be correctly measured and registered.

Dr. Ure, after alluding to a memoir of his, which will appear in the "Transactions of the Society of Civil Engineers," and which contains the results of experiments on the fluidity of liquids, gave a brief account of those of similar experiments with a different form of apparatus. Because he imagined in the former there were certain numerical errors, caused by variations in the position of the syphon employed, but which did not affect the general results. The following are the *modus operandi* and the data of the recently repeated experiments. The liquid was put into a glass funnel, terminated at its beak with a glass tube of uniform bore, about one-eighth of an inch in diameter, and three inches long. The funnel was supported in a chemical stand, and discharged its contents, on withdrawing a wooden pin from the beak, into a glass goblet placed beneath, by the side of which a chronometer was placed, to indicate, in seconds, the time of efflux. The volume of liquid used in each case was the same, viz. 2000 grain measures, at 65° Fahr. The times of efflux with liquids of the same specific gravity and bulk, in the same vessel, vary with the viscosity of the liquids, and serve to measure it.

Professor Powell then explained his views with reference to certain Optical Phenomena; and Mr. Frodsham exhibited a new Compound Pendulum of his manufacturing, and explained its advantages.

SECTION B.—Chemistry and Mineralogy.

1. Mr. G. Wilson, 'On the Detection of Haloid Salts in Solution.'
2. Dr. Brown, 'On the Crystallisation of Carburets.'
3. Dr. Clark, 'On the Limitation of Equivalent Proportions.'
4. Mr. Phillips, 'On the White Prussiate of Iron.'
5. Dr. Rees, 'On the Existence of Fluoric Acid in Animal Substances.'
6. Dr. Thompson, 'On the Presence of Free Muriatic Acid in the Stomach.'

'Experimental Demonstration of the actual Existence of Haloid Salts in Solution,' by George Wilson, M.D. In this paper, the author attempted to apply experimental evidence to the resolution of the very important question of the state in which haloid salts exist in solution; chemists being, as is well known, divided on this point, some supposing that chlorides, bromides, iodides, and cyanides, remain unchanged after solution in water; whilst others suppose them to be converted into hydrochlorates, hydrobromates, hydriodates, and hydrocyanates of the oxides of the bases. Dr. Wilson preferred for his *experimentum crucis* the use of the terchloride of gold ($au. + 3 cl.$) as a type of an haloid salt. On dissolving this in water, it ought not to undergo decomposition by hydrobromic acid: becomes converted

into a hydrochlorate of the oxide of gold by combining with water ($au. + 3 o. + 3 cl. + 3 h.$), because the hydrochloric acid is a much more powerful acid, as far as its attraction for metallic oxides is concerned, than the hydrobromic. On the contrary, if the terchloride of gold remains as such after solution in water, it ought to be decomposed by hydrobromic acid, because here are two powerful affinities brought into play, viz. that of the hydrogen of the hydrobromic acid for the chlorine of the salt of gold, and that of the metal itself for the bromine thus deprived of its hydrogen. On testing the correctness of this reasoning by experiments, it was found that the terchloride of gold was really decomposed, a bromide of that metal and free hydrochloric acid being the results; no precipitation, of course, ensued, but the change was indicated by the yellow tint of the fluid becoming converted into a deep red colour. The author had, in substituting salts of platinum for those of gold, arrived at similar results. From the remarks made by several members present, it appeared to be severally admitted that Dr. Wilson had really proved, in a most satisfactory manner, the possibility of an haloid salt remaining in solution without being changed into a salt of a hydracid.

'Remarks on the Crystallisation of certain Insoluble Carburets,' by S. Brown, M.D. It has been long known, that when cyanides of metals are exposed to heat, black amorphous masses are left; these have been regarded by Berzelius and others as true carburets of the metals, and are remarkable for their pyrophoric properties, after spontaneously kindling by exposure to the air. In this paper, however, Dr. Brown has shewn that when these cyanides are exposed to as low a temperature as possible, capable of affecting their decomposition, and quite independent of any thing like fusion or solution, that the residual carburets cohere, molecule to molecule, and leave white well-defined crystals, often so hard as to be capable of scratching glass. Some of the specimens of the metallic carburets thus prepared and exhibited to the Section by the author, were as well-defined and as beautifully formed as possible. Reasoning from these results, Dr. Brown stated, that as there was just the same ratio between amorphous carburets and those which he has obtained in a crystallised form as between common charcoal and the diamond, it was not altogether beyond the limits of possibility to so slowly evolve the volatile elements of organic matter as to leave the fixed element or carbon, not in the state of black amorphous charcoal, but of white crystallised diamond; the only necessary theoretical condition being the evolution of the gaseous elements so slowly as to permit the molecules of carbon to cohere in a crystalline form.

The next paper read was a very important one from its theoretical bearings by Dr. Clarke of Aberdeen, and entitled 'On the Limits within which the Atomic Weights of Elementary Bodies have been ascertained.' In this communication the author adduced numerous arguments for proving the equivalent of carbon to be 75.6 on the oxygen scale, instead of 76.44, the number assumed by Berzelius. The atomic weight of carbon on the hydrogen scale, taking oxygen as 8, will thus, according to Dr. Clarke, be 6.048. On account of the great importance and value of Dr. Clarke's paper, a resolution was passed in committee, that it should be published *entire* in the next volume of the "Transactions" of the Association.

The next paper was a short one by Mr. R. Phillips, 'On the Composition of the Salt,

long known as the White Prussiate of Iron; not of potass, as stated in all the published reports. This excellent chemist, after adverting to the mystery which still shrouded the nature and composition of many of the ternary compounds of cyanogen, adduced the result of a valuable series of experiments, in which he had been engaged; and proving that the so-called white prussiate of iron was really a combination of ferrocyanide of potassium with cyanide of iron, or Prussian blue; and that this, by the action of water, became resolved into these two salts, of which the ferrocyanide of potassium, being soluble in water, was removed by washing, and the residual cyanide of iron, or Prussian blue, presented the ordinary and well-known tint of that beautiful pigment.

A paper on the 'Existence of Fluoric Acid in certain Animal Structures,' by George Owen Rees, M.D., was then read. In this communication, the author, after alluding to the statements of Berzelius and others on the presence of a fluoric in bony structures, shewed that the only satisfactory case in which it had been hitherto proved to exist was in fossil ivory; and, after a series of careful experiments, he had convinced himself that no trace of fluoric acid could be detected in those organic structures which he had examined. The great source of fallacy which, in Dr. Rees's opinion, had occurred in all preceding experiments, arose from the volatilisation of phosphoric acid, and from the development of its corroding action upon the glass of the receiver. The author had detected fluoric acid in the only specimen of fossil ivory which he had an opportunity of examining.

Dr. Golding Bird, in some remarks on this communication, directed the attention of the Section to the source of fallacy pointed out by Dr. Rees, in experiments in which the detection of fluorides was attempted, arising from the presence of phosphoric acid; this, like boracic acid, although among the most fixed of the oxy-acids, yet under the influence of a current of aqueous vapour, was capable of being carried, apparently mechanically, forwards into a receiver, and thus by a careless observer be mistaken for a really volatile acid.

The next paper was 'On the Existence of Free Muriatic Acid in the Stomach during Digestion,' by R. D. Thompson, M.D. In this paper, the author combated the correctness of the views of Dr. Prout on the necessary presence of free muriatic acid in the stomach during digestion, on several grounds, but more particularly on the following:—1. The fact of free muriatic acid not being an efficacious remedy in dyspepsia, attended with the presence of a free alkali in the gastric secretions. 2. The fact of alkaline chlorides becoming decomposed when ignited with organic matter, as with organic acids and farinaceous substances. 3. The fact of common salt being decomposed partially by aqueous vapour. From the two latter circumstances, Dr. Thompson concluded that evidence of free muriatic acid might be obtained from the decomposition of common salt during ignition, as acquired by Dr. Prout's process. An animated discussion ensued upon this paper.

Mr. Benson inquired as to the possibility of sources of fallacy in the decomposition of common salt, resulting from the action of the siliceous matter contained in the vessels in which the ignition of the saline matter was performed; and mentioned the theory of the stomach being the positive pole of a battery, as favouring the idea of the presence of a free acid—capable, however, of being neutralised by the alkaline

matter in the soaplike compound, or bile, secreted by the liver.

Dr. Golding Bird begged to differ in every point from the author of the paper, at least as far as his deductions from experiments were concerned; he thought that the fact of Leopold Gmelin and Dr. Prout making the same observations in different manners, independently of each other, and nearly simultaneously, alone ought to be considered as something like proofs of the correctness of the views of those excellent physiological chemists. Dr. Bird referred to the "Versuche ueber die Verdauung" of Gmelin and Tiedemann, in support of this statement. The fact of alkaline chlorides being decomposed under the influence of aqueous vapour, instead of being new, constituted one of the longest known facts in chemistry, and for years was the basis of a well-known process for obtaining hydrochloric acid. Dr. B. trusted that Dr. T. would continue his experiments, for he had certainly not yet adduced sufficient evidence to overthrow the generally received statements of such careful observers as Gmelin and Dr. Prout. He begged also to impress upon the meeting, that the biliary excretion was not a saponaceous compound, having nothing in common with a soap, and being quite *sui generis*. The view of the gastric secretions alluded to by Mr. Benson was by no means new, and, according to Corvisart, first originated with Napoleon; who, on seeing the large voltaic battery of the French Institute in action, turned to his physician, and said, "Voilà, mon ami, l'image de la vie: la colonne vertébrale est la pile, le foie est le pôle négatif, et la vessie le pôle positif." The fact of muriatic acid not curing indigestion could not, Dr. Bird conceived, be admitted for an instant as of any weight in support of Dr. Thomson's views.

Dr. G. O. Rees differed also from Dr. Thompson in his conclusions. He had heard nothing to make him doubt the correctness of Dr. Prout's views. The action of heat when aided by organic bodies, of decomposing alkaline chlorides, afforded no argument in favour of Dr. Thompson, as Dr. Prout's experiments might be successfully repeated at a much lower temperature. Dr. Rees believed that Dr. Prout had adopted a view like that which Dr. Bird had given Napoleon the credit of originating.

SECTION C. — *Geology.*

1. Dr. Buckland, 'On the Application of Waste Coal to Steam Navigation.'

2. Mr. Lyell, 'Remains of Mammalia in Crag and London Clay, in Suffolk.'

3. Mr. Marrett, 'On the Discovery of an Ichthyosaurus.'

4. Mr. Allies, 'On Marine Shells in Gravel, near Worcester.'

5. Dr. Wilde, 'On the Topography of Ancient Tyre.'

A drawing of a fossil macacus was exhibited in the room.

Dr. Buckland, in the chair, read a letter he had just received from M. Agassiz, expressing a deep sense of the obligations he was under to the British Association, for the aid it had afforded in proceeding with his splendid work on fossil fishes. He had dedicated it to the Association, in terms which he hoped would not be unacceptable to that body. He had also intrusted to his friend M. Schönbein, of Basle, the first part of his work on fossil fresh-water fishes, for the purpose of laying it before the meeting; and that distinguished individual would, probably in person, communicate M. Agassiz's sentiments to the Section.

M. Schönbein addressed the Section in good English, and repeated M. Agassiz's grateful acknowledgments. With regard to the fasciculus intrusted to him, he had found it two

large for his travelling portmanteau, but he had no doubt other means would soon be found to forward it to its destination.

Dr. Buckland then read extracts from M. Agassiz's letter, in which he mentioned a fact of high geological interest. In the Slate of Glaris, and in a stratum of the age of the Inferior chalk, he had found nearly the entire skeleton of a bird, of the size of a swallow. This was the first instance of the kind which had occurred, to his knowledge, on the Continent. Dr. Buckland observed, however, that instances of the kind were not rare in England; and that Mr. Mantell had discovered many animals of the same period in the weald formations of Sussex.

New and Important Fuel: for Steam Navigation, &c.—The learned President then proceeded to call the attention of the Section to a plan of cementing together small coal and coal-dust for fuel, for which a patent had been obtained by Mr. Oram. [See last Vol. of the "Transactions," Notices and Abstracts, p. 86.] For more than twenty years it had afflicted him more than aught short of a moral evil to see the wicked waste made in this substance, the most precious gift which Providence had bounteously bestowed on mankind. To this country in particular it was of inestimable value; and yet, until now when he might consider the means of saving and economising it devised, one million of tons out of three millions annually had been burnt and destroyed at the mouths of the pits. Mr. Oram had been attracted to this subject from pursuits of a different kind. In preparing picture-frames, it had occurred to him that to mould this wasted breccia into the form of bricks, cause it to cohere, and fit it for all the uses of fuel, would be a most desirable attainment. At Glasgow it was allowed to remain at the bottom of the pits; at Newcastle it was in no way brought to market by those whose competition led them to supply only superior coals. The material rescued from this "wicked waste" by Mr. Oram might consist of pieces of about the size of walnuts, and all the rest of the slack (and it should be observed, that the best coal was most liable to break in this manner); and these he composed together in a form so much less in bulk, and occupying so much less room in stowage, that the quantity requisite for a steam voyage of three months would not be more than of coals which would only last for two. How important was this at an era when coal was convertible into coach-horses; when our chariots were of iron, and drawn by steeds of fire! It should be remembered too, that coal could never more be formed; that Nature had already deposited her work for our use in this formation, and when once exhausted it could not be renewed. It was therefore the more necessary, in our island blessed with so abundant a supply, to apply economy to its expenditure. Revenue, manufactures, comforts, all depended on this precious treasure; and therefore it was that he considered this result to be of such inestimable worth. It had been said that people had a right to do what they liked with their own; and in a restricted sense this was very true: but in doing what we liked with our own, we had no right to destroy what belonged to posterity (*applause*); and this had been done to a most injurious extent with the coal-fields of England. He would now read Mr. Oram's communication, only observing that trying and confirming his experiments at Woolwich, under the inspection of Mr. P. Ewart, a year ago, he had obtained a patent,

and had since been travelling on the Continent to make arrangements accordingly. Mr. Oram stated that his experiments were made on Pontop coals of the best quality, which were compared with his rubbish in the brick form, and compounded of two-thirds of coal-dust and one-third of anthracite; which mixture possessed the greatest power, greater than if entirely of coal. By one pound of this fuel, thirteen pounds of water were evaporated, and by one pound of Pontop coal alone only seven pounds and a quarter. Nearly double! The process was a simple one, and had, indeed, been rudely practised in Wales, about Lliege, and elsewhere, where the peasantry were in the habit of baking up the coal rubbish into balls with clay, and thus supplying themselves with an indifferently burning fuel. Mr. Oram took the dry mud (it must be dry) of the Thames or any other large river, or any vegetable earth would do, and the mixture was—

Thirty or forty gallons of water.
Forty pounds of coal tar.
Thirty pounds of lime, powdered, and
One or two hundred pounds of dry mud,

to every ton of coal-dust. The compound was then pressed and desiccated, and an excellent fuel was produced. The oxygen contained in the pores and interstices supplied combustion in abundance, and the muddy ingredients, forming a skin, protected the bricks from the waste which exposure to the atmosphere caused in coal. For they were all aware that if the cook wanted to light a fire quickly, instead of taking small pieces of coal ready to her hand, she would take the trouble to break a lump into fragments for that purpose. Experience had taught her that the atmosphere had deprived the former in some degree of their igneous property, and as every one was prone to perform what they had to do with the least possible labour, she had found out that breaking up the fresh lumps was the least trouble after all. The shape of these bricks was another recommendation. They were convenient for packing; and yet another quality belonged to them of considerable importance. It was necessary in steam vessels to have the fuel near the boilers, where the heat was intense; and the bricks, shielded by their pellicle, resisted this high temperature, which would greatly deteriorate coal in the same situation. Dr. Buckland then noticed that Mr. Grant, of Portsmouth, the inventor of the admirable plan of biscuit baking, had also employed a composition of this sort. His cement was gas tar; and he had laid his method open for the public benefit, without availing himself of a patent right. It was lighter than coal; but Mr. Oram (and it was only on his authority he made the remark) had pointed out advantages which his mixture enjoyed over that of Mr. Grant.

A gentleman stated the coal of this country (about Birmingham) would not run together, in this way, like the Newcastle coal. He had for years been trying experiments with it; and had tried all those of Mr. Oram, except the lime. He had employed tar, oil, bituminous clay; and though he had succeeded to a certain extent, so as to serve hot-houses, &c.; he had never been able to obtain a fuel quite applicable to domestic uses. Could such be obtained for their fires and manufactories, it would be an immense saving.

Mr. Lyell made an interesting communication respecting fossil remains in the London clay and red crag, in Suffolk. Alluding to the fossil bird of the size of a swallow, found by M. Agassiz in the Slate of Glarie, he observed that this, like many other discoveries,

ought to be a warning to geologists never to erect hypotheses on the evidence of the non-existence of any fossil, simply because they had not happened to meet with them in particular strata or formations. This principle he had endeavoured to enforce years ago, and every year's further experience had confirmed him in the necessity of attending to it. It now appeared that mammalian remains were found in two strata, among marine deposits, where they were never before thought of;—a caution of a stronger order than they had yet received on the subject of determining the relative age of those various materials of which the crust of the earth was composed. The first specimen was in chalk of the oldest of the tertiary series, full of marine shells (eocene), of which from one to three per cent only were of known living species. In the red crag of Suffolk, on the contrary, there were thirty per cent of shells and fishes of the present day (pliocene), so that it might be fairly concluded that a large space of time had intervened between these two formations. He was inclined, however, to change the opinion he had formerly entertained, and to consider this Suffolk crag to belong to the miocene, or middle tertiary series. Hitherto no remains of mammalia had been discovered in this formation, until the first of these specimens was brought under his notice by Mr. Colchester, a well-informed geologist, by whom it was found near Woodbridge. On examining it, together with the many fishes' teeth which accompanied it, he was convinced that it belonged to a mammalian animal, and hastened to procure Professor Owen's opinion upon so interesting a point. That gentleman at once pronounced it to be one of the grinders of a beast of prey, allied to the tiger species. On further examination it was known to be the left-side jaw-tooth of a leopard; and he deeply regretted that the sudden illness of Mr. Owen prevented him from being present with them to demonstrate this fact, so beautifully and certainly ascertained by his thorough acquaintance with investigations of this kind. Incited by this discovery, Mr. Wood proceeded to the neighbourhood, where the workmen in the crag-pit had been accustomed for more than twenty years to deliver the teeth they fell in with to an old woman of the village for sale, and who had them in such abundance that, when the inquiry was made, she asked how many ounces the gentleman wanted to buy! Among these were sharks' teeth, and all the rest were of different fishes, but none of mammalia. In another collection, however, of the same kind, made by the Rev. Mr. Moor, of Newbourn, and consisting of the teeth of fish, Mr. Owen detected the molar tooth of a bear; and another, the tooth of some unknown ruminant. These were more or less broken, but still sufficiently perfect to allow of their identification. No doubt they had been found in the large pit at Newbourn, and only one point of doubt rested on the subject. There were many rents or fissures descending from the surface; and it was possible that the teeth might have come out of these rents, which penetrated through the upper red shelly crag into the London clay below. Thus the remains of the hyena had been found among the marine deposits of the Kentish crag, which had fallen through a similar fissure. They had, therefore, to guard themselves against the possibility that these teeth might have been derived from such an accident, and not belong to the strata with marine deposits below. To guide them in this respect it would be well to see if the colour, condition, and general appearances

of the mammalian remains corresponded with those of the fishes among which they were imbedded. In the present instance the resemblance was very great. Mr. L. then referred to the Norwich crag, which held fluvial shells, fresh-water and marine, intermingled; and supposed that a river might have floated down the carcasses of the quadrupeds, and deposited them with the other remains. In the London clay, where an immense number of fishes' teeth occurred, at Kyson near Woodbridge, one of a mammifer had been found with two fangs—and no fish or reptile ever had two—which on being taken to Mr. Owen he declared it at first sight not to belong to carnivora, for they never had them of this form, and few granivora possessed them. He suspected it to be marsupial, and went to the kangaroos, where he immediately recognised it, and in the North American opossum (*Didelphis Virginiana*) its nearest likeness. The next specimen from the same site, procured by the renewed exertions of Mr. Wood and Mr. Colchester, consisted of the lower jaw of an animal, with four cusps, and containing the last tooth in the jaw and part of that nearest to it. This belonged to the monkey (the *Macacus*), and the *Macacus radiatus* was the living genus the most nearly allied to it. The geological formation where it was found was, first, superincumbent crag; below this a clay, seventeen feet in thickness; and below the clay, sand ten feet thick, and full of fishes' teeth. At the top of this sand where it was overlaid by clay, these important remains were found. Cuvier had described an opossum in the eocene gypsum near Paris, and he considered them to belong to the same period as the London clay. Mr. Fox had also made similar discoveries in the Isle of Wight; and it was most remarkable to find the quadrumanous organisation the nearest approaching to our own informations of so remote an era. He had supposed such possibilities in his published work; and it was curious that within two years they should have found in France, India, and South America, instances, proofs of their existence. First, a fossil ape, of the miocene period, had been discovered in France; probably a Gibbon, and high in organisation so near to human. Next, at the foot of the Himalaya another had been discovered; but the present was the first instance so far from the equator of quadrumana among eocene remains. In the London clay, crocodiles, creatures and plants of the torrid zone, the bread-fruit, the nautilus, and other natural productions, all showed that the climate had been much hotter than at the subsequent period when the red crag was formed. The whole illustrated the progressive development of animal life; and this single discovery had destroyed the long-maintained theory that those of a high organisation had been created just antecedent to the creation of man.

Mr. De la Beche bore testimony to the very great importance of this paper; and observed that the remains of marsupial animals were found in much older rock, of the oolite formation. The discovery of this monkey overrode all previous notions connected with the appearance of man upon the earth; and he was glad to take this opportunity of retracting his previous opinions on the subject (*applause*).

Mr. Lyell made a few remarks on MM. Spix and Von Martin's account of the floating islands which they saw descending the river of the Amazons, on which were crocodiles, tigers, and monkeys, the latter of whom made a noise and outcry as if they would gladly have been relieved from their unpleasant location. Such

islands carried down to the sea, would leave deposits for future geologists to ponder upon, with similar combinations of marine and land remains.

Mr. Darwin said the monkeys might be caught by alligators, and told an anecdote of Sir F. Chantrey humanely taking sick monkeys from the Zoological Gardens, petting them, and allowing them baths, of which they were very fond.

Mr. Turner inquired if these remains might not be those of animals which sharks had eaten—the teeth of the shark being very common in the London clay and formations of the same period.

Dr. Buckland complimented Sir F. Chantrey on his humanity to animals, and said that, besides the monkeys, the giraffes owed much of the success which attended their nurture, &c., to him.* He hoped Professor Owen would be sufficiently recovered to communicate to them on Saturday his minute and admirable observations on the teeth of animals. He would then shew them a little tubercle, about the size of a pin's head, by which he determined the questions of their genus and species, and whether they belonged to living or extinct beings. They might belong to a little Master or Miss Buckland, but for the distinctions he could so clearly point out. He believed that there were neither bone nor tooth of mammalia in the London clay in the condition of those of fishes; but they were common to the rolled remains in the crag. With regard to the opossum referred to, it might have been "Possum up the gum-tree," when Oxford was under water. The fossil remains of the gum-tree were found in the gate of Portland; and so were a class of plants allied to the palm, tree-ferns, and coniferous ones, all proving a very different climate and condition of the earth. As for the macacus of the eocene period, he remembered a story of Mrs. Siddons; when any person fell into misfortune, she used to exclaim, "Poor gentleman, how *gat* he there?" (*a laugh*). So might say of Mr. Lyell's monkey, "Poor gentleman, how *gat* he there?" He was inclined to attach credit to the opinion that carcasses of animals might be carried down by rivers, and be ages buried in the sea, till some cause again stored them to the land, where they were humed by geologists.

Mr. Bowman exhibited a number of specimens of fossil fish found in the vicinity of anchester, with a paper from Mr. Binney on them. There were scales and teeth of egalichthys from the coal shales, in the anchester coalfield, lying above the mill-me grit; and remains of diplodus, ctenopodus, polioptichus, and paleoniscus, up to the sh-water limestone formation of Ardwick. The shells of Cypris, &c., among which they were found, seemed to prove a calm and gradual exit; and the condition of the fish indicated a sudden destruction, which Mr. Binney attributed to water charged with the gas from decayed vegetation. None of the fossils had been detected in the coal, though they appeared to the very edge of it.

Mr. Strickland stated that Mr. Marrett had discovered an ichthyosaurus, near Tewkesbury; exhibited a fossil fish with cycloid scales, in lias, which was at issue with the hypothesis of M. Agassiz.

Mr. Allies wrote to say that he had found

We are rather inclined to suspect, however, that the young native giraffe cow's milk, instead of being more to nature and its own mamma, was the immediate cause of its premature decease. "Care," says a proverb, "killed the cat," and so it might the more or giraffe.—*Ed. L. G.*

in gravel, and under hard sand, turritella, cardium, and other recent marine shells, besides the tooth of a mammoth, at Bromwich Hill, near Worcester; and near the same place other marine shells, turbo, and nassa, on marl, below a gravel bed.

The Geographical division of the Section was now formed, with Mr. Greenough in the chair; Dr. Buckland being engaged to attend the medical school of Birmingham, to award some of the prizes. The paper read was a long dissertation on the geography of Tyre, in which there was little of novelty, or research, to support the claims of this division to be incorporated, or interfere with the time which can be appropriated to the geological discussions. The Sections are already numerous enough, if not too numerous, for their business to be carried on contemporaneously throughout the week, without perplexity and distraction. In some of them the subjects are too large, and too wide, for labours so limited in space, and so liable to be interrupted. To extend the sphere would, we fear, be to ruin the Association; and it is for this reason that we willingly acquiesce in the almost total exclusion of every thing of a literary character. The proposed Agricultural Section, like the Statistical already adopted, would require a meeting for itself. Then the Phrenologists want to come in; and, we dare say, the Animal Magnetisers would like to have a bit of manipulation among the rest.

SECTION D.—Zoology and Botany.

1. Mr. Felkins, 'On the Acclimation of Silk in England.'
2. Mr. Brand, 'On Botanical Statistics.'
3. Mr. Fox, 'On the Discovery of the Bones of a Whale.'

Mr. Felkin, explaining an experiment in the growth of silk, made this year at Nottingham, exhibited cocoons of the white and golden coloured products, and stated that, except in one instance near London, for which the Society of Arts had awarded its premium, in the year 1790, no one had succeeded in a similar experiment in England. The white cocoons were the work of worms fed on lettuce-leaves, and then on mulberry-leaves; and the golden coloured, of worms fed entirely on mulberry-leaves, having been hatched a fortnight later in the season, when these could be procured. Of the former, seven out of eight died; of the latter, from thirty to forty per cent, not quite half. The eggs were from Italy; and neither the situation in the heart of the town, nor the season, had been propitious for the attempt. The room was, however, kept at a temperature of between 55° and 70°; and especially from the worms fed on the mulberry-leaves, the silk was of a good quality; and from the success which attended the trial, in our uncertain climate, it was suggested that it might be introduced, with a certainty of prospering, in several of our colonies, and save us part of an expenditure, increased from three to four millions sterling per annum. General Briggs observed, that in India the worms were fed on the zizippus, jujube; and some other remarks were made, as to the best food for supporting the worm and producing the best material. The white mulberry seemed to be preferred.

A paper from Mr. Brand, 'On the Statistics of British Botany,' was chiefly a catalogue of plants, connected with a plan for their geographical arrangement.

Mr. G. T. Fox communicated a paper 'On the Bones of a Spermaceti Whale,' discovered a few months ago (as stated in the newspapers) among the rubbish in an old tower at Durham Castle.

From an ancient letter of June 20, 1661, in the Surtees' collection, it is shewn to have been cast ashore at that time, and skeletonized in order to ornament this old tower.

The writer threw an amusing coup d'œil over the history of the whale, as far as known from old writers; the first account of it being that of Ctesius, 1606, of one thrown ashore seven years before near Scheveling, where Cuvier supposes its head is still preserved,—for there is an antiquity of the kind still shewn there. Since then only a few instances have occurred of the spermaceti whale having been cast ashore on the British coasts.

SECTION E.—Medical Science.

1. Dr. G. Bird, 'On the Physiological and Toxicological Action of Carbonaceous Vapour.'
2. Dr. Ingle, 'On the Increase of Small Pox, and the Origin of Vaccination.'
3. Mr. Estlin, 'On Vaccination.'
4. Dr. Macartney, 'On the Guides for finding the Exact Position of the Principal Arteries and Veins, in relation to the External Forms of the Body.'
5. Sir J. Murray, 'On the Effects of Magnesian Solution.'

SECTION F.—Statistics.

1. Conclusion of Mr. Rawson's paper, 'On the Comparative View of the State of Crime, in the various Districts of England and Wales.'
2. Report by the Manchester Statistical Society, 'On the Borough of Kingston-upon-Hull.'

The papers still very long,—too long to be finished at one sitting—and consequently postponed by us. Indeed, as in the proceedings of the Statistical Society of London, we find that the masses of data, without connexion or system, though separately valuable, are far too voluminous to have justice done to them in a publication like ours. Not that we could not find room for one, two, half-a-dozen, or a dozen of such reports in the course of a year; but, after all, we must ask ourselves, *Cui bono?* The returns of one city, or one parish, would overwhelm us; and, unless upon general data, all inferences must be worse than useless. Fifty volumes of carefully collected and well-authenticated details may serve as a foundation for national legislation, in ameliorating the condition of the poorer classes: in the meantime, local investigations may lead to the beneficial administration of the local powers; but we fear that no partial effort of ours could conduce to the same desirable end. It is not, therefore, that we undervalue statistics; but that we think it must have other organs than the British Association, where volumes take little or no notice of the Section, to propagate any of its useful ends.

SECTION G.—Mechanics.

1. Dr. Ure, 'On the Density and Elastic Force of Steam.'
2. Mr. Cottam, 'On Railway Wheels.'
3. Mr. Russell, 'On the Forms of Vessels.'
4. Mr. Hodgkinson, 'On the Power of different Species of Wood to Resist a Force tending to Crush them.'

Dr. Ure, 'On the Specific Gravity of Steam' (given in our last No., p. 567), was the first paper read; the conclusion of Dr. Lardner's paper respecting the Railroad Experiments is deferred, in consequence of the indisposition of that gentleman.

The Tile Machine of the Marquess of Tweeddale (fully known to our readers by the account of it at the Royal Institution, a few months ago) was exhibited in model, and described by Mr. Cottam.

Some unfinished experiments on the breakage of iron bars, by pressure, were described; and a similarly incomplete notice of the best forms for vessels (from the committee appointed to investigate that important desideratum) was also brought forward, with the expression of a hope that it would be completed against the next meeting. A discussion ensued between

two candidates; one for iron, and the other for wood wheels, as an improvement* in those used for rail carriages. This was one of the mechanical questions in which property and interests are so much embarked, that we would not venture to decide which, if either, were preferable. Indeed, upon one or two other railroad businesses, which occupied much of the time and attention of this Section, we would rather not offer an opinion; because, if we did, we should be favouring arguments manifestly unjust as regards the Association: but we must in honesty confess, as we think, not untenable as regards the control of this Section, and the facilities it is permitted to offer for the conflict or benefit of individual interests. It is difficult to see how this can be avoided. Men engaged in high scientific pursuits look on and care not to interfere. They laugh at steam-vessel or railroad constants as a funny chimera. But the person who has ten or thirty thousand pounds embarked in "The Birmingham" or "Great Western"—the engineer who has planned and estimated the cost—the furnisher of locomotives, all the most superior—the coal or the coke-man—the piston-inventor—the wheel-improver—the iron-master—the wood-contractor,—all have so much at stake in the preference of their articles and schemes, that the Section must of necessity be a struggle for notoriety and public approval. A fortune is on one hand, a defeat on the other. This is no abstraction of philosophy or science, but a much more English quere—profit or loss? In this Section, the discussions are accordingly. Still there is good in it. A practical fellow, from an adjacent factory or mill, upsets a theorist by a few terse questions; and in the weakest and most negative of its movements, the British Association exercises a very salutary influence.

Mr. Eaton Hodgkinson read a paper "On Experiments to ascertain the Power of different Species of Wood to resist a Force tending to crush them." All the specimens were formed into short cylinders, about one inch diameter and usually two inches long, the ends being perfectly flat and at right angles to the sides. The apparatus used to crush the specimens was that described by the writer in his experiments on cast-iron ("Seventh Report of the British Association," page 3461). The crushing surfaces were perfectly parallel, and the body to be crushed had its end bedded firmly against them. The force was applied in the direction of the fibres. These experiments were made, like many others acknowledged before, at the expense of Mr. H's liberal friend, W. Fairburne, Esq. They are the commencement of a research in which the writer has other objects in view. The accompanying calculations will show how far Mr. Hodgkinson has, as yet, carried his experiments, and the results he has obtained. The great interest attached to the subject induces us to append this table, though we are somewhat fearful it is not altogether without inaccuracies:—

* One of these combatants sent us his pretensions in a printed form, from which we copy the following:—"Mr. Parkins has invented a wheel which, it is hoped, will tend much to the security of railway travelling. Wood being a much less rigid substance than iron, and a nonconductor of vibration, wheels properly formed chiefly of wood, will be much more secure than those made of iron. Indeed, the specimen wheel herewith cannot be broken, let the service to which it may be applied be ever so severe. When the spokes or the naves of the ordinary railway wheels are entirely broken, or otherwise rendered unfit for service, the value of the wheel is entirely lost; whereas the whole of Mr. Parkins's wheels, except that part of the wood which forms the tire, will last an indefinite time."

[There are many other good and sufficient Parkins's reasons, which we need not advert to.—Ed. L. G.]

The Botanic Gardens, this afternoon, were made a recreative promenade, and being the only occasion at this Meeting more especially intended for the amusement of "the ladies," the attendance was numerous and pleasant. Many of the townspeople entertained visitors, there being no evening engagements.

Thursday was a good deal occupied with the meeting of the General Committee; and we have already anticipated the most important paper of the day, that of Mr. Schönshein (see our last No.). We now add such others as our convenience permits:—

SECTION A.—Mathematics and Physics.

'On the Progress of the Meteorological Observations at Plymouth, with the Barometer and Thermometer,' by Mr. Snow Harris.—The pressure of our atmosphere is indicated by the barometer being affected in these altitudes by many accidental circumstances; it is not without difficulty we are enabled to trace the great periodical variations, and exhibit them as they would appear in an undisturbed state. It is only by a careful and extensive series of observations, such as those now in progress in various places, under the direction of the British Association, that we can hope to examine successively great periodical variations in atmospheric pressure, and bring them under the dominion of general laws. The great periodical variation, as shewn by the horary oscillation, observed by Humboldt in the tropics, and by other philosophers in different parts of Europe, is undoubtedly a phenomenon of high interest in meteorology. In discussing the hourly observations with the barometer at Plymouth, Mr. Harris has shewn that this phenomenon is distinctly traceable amidst a vast mass of accidental fluctuation. He exhibited the mean hourly pressures for the years 1837 and 1838, and the mean of the two years, and shewed that a double wave was apparent when these points were connected by a continuous line. The points in the waving line thus produced, had been each determined from 730 observations; the whole number of observations from which the mean pressure had been

* After 2 months' drying, 8807.

deduced being 17,500. The following general results were then mentioned:—The mean height of the barometer at the Plymouth dock-yard, 60 feet above the level of the sea, and at a mean temperature of 60° of Fahrenheit's scale, was, from the latest results, 29.8967. It occurred in the mean hourly progression four times in the day, viz. at 2, 20, and 8, 10, A.M.; 12, 30, and 6, 15, P.M.—at which times the waves crossed the mean-pressure line. The difference on oscillation, from 5 to 10 A.M., amounted to .0113 of an inch; between 10 A.M. and 3, 30 P.M., amounted to .0118. The hours of greatest pressure were 10 A.M. and 9 P.M. The hours of least pressure, 5 A.M. and 3 P.M. Of the diurnal semi-waves, the ascent in the morning is the least, and the ascent in the evening the greatest. Of the descending branches of the curves, that during the day is less than that during the night. The times of the oscillations differ. The wave by day, viz. that between 5 A.M. and 3, 30, P.M., being ten hours and a half; that by night, viz. between 3, 30, and 5 A.M. being thirteen hours and a half. The size of the daily wave, therefore, so far as the observations hitherto proceeded, was less than that of the wave at night. Mr. Harris proceeded then to discuss the observations as applied to the different seasons of spring, summer, autumn, and winter, and shewed that the general hourly progress of the pressure was greatly interfered with at particular periods; the wave of autumn being that which coincided most nearly with the general curve. Of the different monthly pressures, October and December were the greatest, November and February the least, January and September the two nearest the mean.

Mr. Harris now proceeded to discuss the supposed Influence of the Moon on the Barometer, and with this view had reduced about 4000 of the observations, so as to shew the pressure at the time of the moon's southing, and for each hour before and after; but he could not discover any differences which could be supposed to arise from the moon's influence. He was, therefore, disposed to agree with the conclusion lately arrived at by Mr. Lubbock, from a discussion of the Barometric Observations at the Royal Society—viz. that no lunar irregularity is observable from this method of discussing the observations—that, if at any time established, must prove extremely small. He could not, however, avoid mentioning, as a singular coincidence in the results of the two years, that taking the mean pressures about the four periods of the lunar changes, it appeared that the pressure was less at the new moon, and that it increased up to the last quarter, when it was the greatest. The first object being to arrive at certain great periodical variations, those had been principally kept in view; hence, mere accidental disturbances remained as yet unconsidered. Mr. Harris, however, had observed, as a very general result, that when the pressure decreased at night, whilst the temperature increased, the succeeding weather was always disturbed and uncertain—in winter, gales of wind from the S.E. and S.W., with rain; whilst, on the contrary, a decreasing temperature, with an increasing pressure, was generally followed by fair weather, with winds varying from N.W. to N.E. The observations hitherto made with the dry and wet bulb thermometer had not yet been reduced. Of the ordinary thermometer, more than 60,000 hourly observations were now completed. Mr. Harris had received two very interesting communica-

tions on the Hourly Changes of Temperature, which enabled him to contrast the curves of Plymouth and Leith with those of Frankfort Arsenal, near Philadelphia, and three places in the island of Ceylon. The Association was indebted to Major Ord, of the Royal Engineers, for the latter, and, through Professor Bache, to Capt. Mordecai, of the United States Corps of Ordnance, for the former. Hourly observations had been obtained by these gentlemen, at great personal exertion, similar to those which had already appeared in the Transactions of the Association, and which very fully confirmed the results arrived at by Sir David Brewster, to whom the scientific world is indebted for the first perfect series of hourly observations of the thermometer obtained; and also the results of those arrived at by Mr. Harris in the discussion of similar observations carried on at Plymouth, at the request of the Association. Mr. Harris here exhibited, under the form of curves, the mean hourly progress of the temperature at these different places. It appeared, from these observations, that the line of mean temperature at the three stations in the island of Ceylon, between 6° and 8° N. lat., was crossed between 9 and 10 A.M., and at 9 P.M. The mean temperature at these stations being 74° at Kandy, and from 80° to 81° of Fahrenheit at the others; which did not materially differ from the times at Leith, in which the mean temperature is 48°, and the lat. about 55° N. At Frankfort Arsenal, near Philadelphia, the line of mean temperature is crossed also about 10 A.M., but differs at night, being between 7 and 8 P.M.; whilst at Plymouth, the line of mean temperature was crossed soon after 8 A.M. and 7 P.M., by the latest observations. The little comparative mean range of the thermometer at Leith and Kandy, and in Ceylon, gave great similarity to the curves indicating the march of the hourly temperature in these places. The author concluded with some general remarks on this interesting subject.

Professor Forbes and Professor Whewell pointed out the necessity of reducing the observations to 32° of Fahrenheit. Mr. Harris stated, that the temperatures at which the observations were made had not greatly differed, but that, before the Report appeared, the observations should be revised and reduced.

SECTION G.—Mechanics.

Mr. Julius Jeffreys read a paper 'On Ventilation and Warmth,' and exhibited a beautiful Model of the Pneumatic Grate. The main feature of originality in this grate, which distinguishes it from all others, is the bold manner in which it is projected into the room. Instead of the fire being immured, and three-fourths of the heat lost up the chimney, it stands so far forward as vastly to increase the field of its radiation. This important point of bringing forward the fire, without risking the entrance of smoke into the room, is effected by the peculiar arrangement of parts behind the grate. The various currents of air, flowing towards the chimney, converge in the chimney throat, and by retarding each other's passage upward, often turn the smoke into the room. To use Mr. Jeffreys's term, the air there suffers "congestion;" the plane of greatest pressure of these currents, is a horizontal one in the chimney throat. In the pneumatic grate the course of these converging currents is changed to a parallel direction, by their being made to pass through the intervals, between several flat and hollow tubes, which are ranged vertically behind the fire. In passing through

these narrow alleys, they acquire a parallel course, and make their way up the chimney without mutual interference. The pressure is here transferred to the vertical plane, formed by the front of these tubes. In addition to the advantage of bringing the grate forward, a copious body of warm fresh air is brought into the room, by making the vertical tubes communicate with an air-box below. The smoke current, passing through their intervals, warms the air inside without any danger of over-heating it, and it is discharged into the room over the chimney-piece. An animated discussion took place. One gentleman objected to the room such a fire would take up. Mr. Jeffreys replied, that the want of effect of our common fires is a constant subject of complaint, and that any other article of furniture, if thrust under a recess, would as ill perform its office. If the latter is given a place in our rooms, much more has the more important fire a right to the little space it requires. Indeed, that this apparatus renders available a tenfold larger space than it takes up, by enabling the inmates to occupy with comfort all parts of the room, instead of being crowded together, during the colder months, within the half nearest the fire. To another objection, as to the originality of warming the air introduced, Mr. Jeffreys shewed that in all other plans, where there was any considerable effect, the fire itself was robbed of heat, and the fresh air necessarily over-heated—a point of the greatest importance to be avoided. In the pneumatic grate, no heat is stolen from the fire, but drawn entirely from the smoke current. The fresh air cannot be over-heated, and enters in a vastly greater quantity than in any other provision of a like nature. The subject, which is one of great importance, appeared to excite much interest in the Section.

LITERARY AND LEARNED.

THE BRITISH EMPIRE IN THE EAST.

By COUNT BJORNSTJERNA, the Swedish Ambassador.
[Continued from Page 575.]

THE road from Cabul, over Peschawar to the Indus, has already been described.

What has been here said of the roads to India, will probably shew, that the only possible way for an army, organised in the European manner, is that which goes over *Heral, Kandahar, Ghuzni, Cabul, and Peschawar, to Attock, on the Indus.*

Every military expedition, however, undertaken on this road, presupposes the absolutely necessary co-operation of Persia,—I say co-operation, for Persia *alone* is unable to undertake any thing of importance against the British power in India. Its infantry is inconsiderable, its artillery of little consequence, its cavalry undisciplined,* and its treasury empty. Consequently, it could only be in conjunction with some greater power, and as *vanguard to it*, that Persia could possibly venture an expedition against British India: it is scarcely necessary to repeat here, that this power can be no other than Russia.

What is now to be examined, therefore, is, what prospect of success Russia and Persia would have, should they unite in an expedition against British India.

The capability of the Central Asiatic states to

* It is difficult to state, with any degree of certainty, the military force of Persia, seeing that it, as being always *varied for the occasion*, depends on the more or less quiet state of the interior of the country: 600,000 irregular infantry, with 30 or 40 cannons, is the greatest number Persia has had in arms during the last 30 years. The cavalry may amount to considerably more, but, if collected to any great number, it cannot find the necessary supplies.

withstand the incursions of a regular army, arises less from their riches than their poverty; the inhabitants' nomadic life and miserable dwellings, which it is not worth while to defend, render them inaccessible for a regular army. They bend like a reed before the storm, but do not break; they regain, or, more properly, never lose their form. It is but a trifling inconvenience to these people to be driven away from their homes; this removal incommodes only the conqueror himself, whose supplies are thereby decreased: The difficulty of forming any alliance with them, excepting such as have plundering for their object, is very great, especially when it is to be accomplished by a foreign nation, differing from them in manners, language, and religion. Consequently, no safe and rapid march can take place in these countries, where the invader, in order to secure his communications, must have behind him a whole chain of reserve troops, provide all the fortifications on the way with garrisons, and every larger defile with a corps of observation; circumstances which, in countries so extensive as those between the Indus and the Araxes, would require an immense army and an overflowing treasury.

According to what we have already said of the topographical character of Persia, it presents nothing, excepting a small branch of the Hindoo-Koosh mountain (the Paropamesian), but sand deserts, with here and there a few oases. An army can, certainly, in these, obtain the necessities of life, but cannot, without the greatest difficulty, transport them through those extensive tracts which separate them, where every thing is wanting, as well food as water.

For an army coming from the north, these difficulties of supply commence even in Georgia, where the necessities for so small a force as 20,000 men,* the greatest that has ever been collected there, must be fetched from *Odessa* and *Sebastopol*, with great expense, over the Black Sea.† The difficulties of obtaining provisions increase the further one proceeds into the interior of Asia, and are, probably, at last, on the borders of Afghanistan, almost insurmountable. An army marching through Persia might certainly prevent some part of these difficulties if it divides itself into smaller bodies, and advance *par étapes*; but then it must be perfectly sure of Persia's (often uncertain) friendship, and, at all events, join again to one body on approaching the enemy, in order to be able to perform the object in view.

* According to a report delivered to the East India Company by Sir John Macdonald, Prince Paschkevitch himself told him, that it would be impossible to support more than 20,000 men in Georgia and the neighbouring countries.

† Klapproth, so well acquainted with Persia, and particularly with Caucasus and Georgia, gives, in his work on these countries, some opinions respecting the difficulties which hinder the progress of a Russian army on the other side of the Araxes, which are worth mentioning, though I do not perfectly agree with him:—"The Russian army," he says, "which advances to the Persian territory, leaves, at least, 120,000 well-armed Caucasians behind it: the whole population of Georgia, only waiting for a good opportunity to revolt, and the Mahomedan tribes in Karabagh, Chirvan, and Daghestan, always ready to shake off the yoke of the infidel. Since Russia extended its possessions beyond the Caucasus, it has been obliged to support a numerous army in the conquered provinces. This army being unable to obtain sufficient provisions in these tracts, it is necessary to send them in great quantities over the Black Sea and Caucasian mountains, by roads generally impassable for carriages. All necessities for the arming and clothing of the troops are carried in the same way to Georgia; hence it may be judged how expensive the possession of these provinces must be to Russia. An army of 40,000 men is scarcely sufficient to check the warlike tribes of Caucasus and the inhabitants of Georgia, who seek every opportunity of plundering the country and making slaves of the inhabitants."

After having overcome the difficulties met with in marching through the sand deserts, others, not less considerable, present themselves in the passes of the Afghanian mountains—abysses, ravines, and roads rendered impassable by snow; which, for an army of European organisation, offer very serious hinderances. The change of temperature between these cold mountain tracts and the burning* plains of Persia just before crossed, would also be very injurious to the health. But the difficulties an army meets with in its march to India do not cease on its arrival at the Indus. After having crossed the river at the upper part, it encounters Punjab (the kingdom of Lahore), marshy, and intersected by five several rivers; on crossing the river at the middle part, the sand desert of Bikaner presents a formidable obstacle; and if the passage be made at the lower part, there Scind presents itself, rendered almost impracticable for an army by the nature of the country: it now first arrives at the *British dominions*, where the strife would begin to be still more serious.

From these different circumstances, it may be concluded how enormously great that army must be which, after having ensured its communications with necessary reserve-troops, along the whole of that extent of 700 farsukhs (2000 English miles), which separates Araxes from the Indus, could arrive with sufficient force at the latter to engage with the Anglo-Indian army there collected, which, richly supplied with the necessities of war, can amount to 100,000 men, besides an equal force in reserve beyond the Sutledge and the Loony (see p. 557).

With regard to the possibility of Persia's being able, when united with the above-named northern power, to gain allies on the way to India, the case seems briefly as follows:—

The Afghanian tribes† hate the Persians, as well from political as religious reasons; the former, on account of wars often carried on against each other, and the usual enmity prevailing among neighbouring states; the latter, because the Persians are schismatic Shias, while the Afghans are orthodox Sunnites. Nor is it probable that these nations will in-

* "The thermometer rises here to 50° of Reaumur in summer."—*Alex. Burnes's Travels to Bokhara*.

† The Afghans call themselves "the bees in Israel," or, the children of Israel, but consider the name "Yahoodæe," or Jew, as a nickname. According to their historical records, Nebuchadnezzar is said, after the destruction of the temple of Jerusalem, to have moved them to Bamea (the present Cabul), and they were then called Afghans, after their leader Afgham, who was a son of Asaf's (Solomon's viceroy) uncle, who was the son of Berkin. This person's pedigree is derived from a side branch, his own father being unknown, which is not at all uncommon in the East. They say that they lived as Jews, till Khaleeb (who obtained the title of Caliph), in the first century of Mahomedanism, called on them to partake in wars against the infidels. For these services the Caliph gave their commander, Kyse, the title of Abdoobrusheed, which means, the Son of the Powerful, and appointed him as "Butan" (an Arabian word), or head of his tribe (answering to a clan in Scotland). It is from this title of *Butan*, that the Afghans were called in India, Patans. After the campaign under Khaleeb, the Afghans returned to their native country, and were governed by a royal race, descended from Kyanee or Cyrus, till the eleventh century, when they were conquered by Mahomed, a Turkoman prince, who, after having first established his power in Ghuzni, conquered a great part of India, and founded the Afghanian kingdom; which continued till Baber, a descendant from Tamerlane, established the kingdom of Mongol there. The features of the Afghans very much resemble the Jews; they themselves allow that they are descended from them, although they despise the present race, and, consequently, would not acknowledge this origin, if it were in the least doubtful. They even yet follow the Mosaic law in several essential points, as where it is ordained that the younger brother, after the death of the elder, shall marry the widow.*

* See more on this subject, in "The History of the Afghans," by Neamul Ullah, translated by Dorn; as also in Alex. Burnes's travels.

considerately let a foreign military force penetrate their mountainous and easily defended country, being for Asia what Switzerland is for Europe.*

Should it, however, be possible, contrary to all expectation, that such an alliance be accomplished, by the ambition of *Dost Mahomet* in Cabul, and his brother's in (Kandahar) easiness of disposition; the decided consequence of this alliance would be, that *Ranjit Sing* in Lahore, who is already at open war with *Dost Mahomet* in Cabul, and whose people (the Seikes) consider the Afghans as their hereditary enemies, would join the British government: a circumstance which would alone be sufficient to detain an enemy marching against India, more than one campaign, if it did not completely frustrate its design.

Ranjit Sing has also more to gain by an alliance with England than by one with her enemies. An alliance with the former could possibly obtain from him the fertile provinces of Cabul and Ghuzni, agreeing so well with his former conquests, *Peschawer* and *Cashmere*; while a union with the enemies of England, even after the greatest success, could not give him more than the desert plains between the Sutledge and Delhi, which are not by any means tempting for him: it is for these reasons that the British government ought to be able to depend upon Ranjit Sing's friendship, and hope to conclude an alliance with him.

The government in Calcutta would, however, act most wisely by deciding the question beforehand, as well with Ranjit Sing as with the Emirs in Sind,† and before the army, which may possibly be approaching from the north, comes nearer its territories. Either peaceably or by force it ought to advance to the Indus, which forms the natural boundary of British India in the north-west, and the proper basis for the operations of its armies.

Besides the above-mentioned difficulties, which would meet an army coming from the north against British India, the following circumstances ought also to be taken into consideration, namely:—

1st. That the mountain-tracts, which present themselves on the way to India, are not passable during the winter (on account of lavines, falls of snow, storms, &c.); that the sand deserts (of which there are many in the way‡), cannot, without great difficulty, be passed in the summer; which, together, would render it a hard problem for the commander of an army to solve, how he should direct his march so as to arrive, at the proper season, at each of these places; and the difficulty is

* The reason why the Afghan princes in Cabul and Kandahar do not, in the present war between Persia and Herat, assist the latter, is, that the sultan in Herat (Kumram) is a son of the deposed king of Cabul (descendant from the Sudozy dynasty), while the princes in Cabul and Kandahar are sons of the viceroy who deposed the above-named king, and that Kamran murdered their brother, Futeh Khan. The princes in Cabul and Kandahar are nearly allied with each other; united, they can bring together a force of 30,000 cavalry, which, in their mountain-passes, would be as invincible as those of the Tcherkases in the Caucasus.

† It is said that a treaty of alliance has already been formed with Ranjit Sing, since the above was written, as also with the Emirs in Sind.

‡ In case the army follow the above-stated common caravan road from the north of Persia to India, namely, that which from Tabris (Taurus) goes over Teheran, Astrabad, Musched, Herat, Kandahar, &c.; the greater sand deserts are certainly avoided, but several of less extent present themselves, namely, one between Tabris and Teheran, one between Astrabad and Musched, one between Musched and Herat, and several on the other side of Herat, which together make more than thirty days' march in the desert. Besides, the road goes between Teheran and Astrabad, through the low and very unhealthy Mazanderan, where brouzas would cause the most lamentable effects on the health of the army.

increased, as the season of the monsoons must also be avoided as a time for the arrival in India, as during that period no army can keep the field.

2d. That the conformation of Central Asia, with great chains of mountains on the one side, and extensive sand deserts on the other, leaves no other opening than the road that leads from *Herat* to *Kandahar*, and thence through a deep valley to *Cabul*, *Peschawar*, and *Attock*, at the Indus. That this road, especially from *Kandahar* to *Attock*, forms one continued defile of 120 geographical miles in length*, through which an army cannot penetrate otherwise than in a single column, and consequently cannot form a basis for its operations. The danger of advancing by a single road for so great a distance, without a base of operation, is shewn, among other instances, by Napoleon's campaign to *Moscow*.†

3d. That, in those extensive sand deserts which lie on the road to India, it is impossible for horses to draw that heavy artillery, with the necessary ammunition required for the taking of the fortified towns met with on the road (among which is *Herat*), and scarcely could they bring forward the greater field-artillery, absolutely necessary for the conflict on arriving at the Indus, with the well-supplied Anglo-Indian army. That the camel is as incapable as the horse of conveying larger pieces, it being neither a draught animal, nor able to carry such pieces with their counterpoises. That, in a word, no means are to be found by which heavy cannon can be conveyed through these deserts. That the camel is useless in the Afghan mountain-passes, afterwards presenting themselves, with their hard and stony paths; the horse of but little service; and that the sand deserts, which again occur (especially that of *Bikaner*), require either camels or elephants;‡ neither of which can be had by a hostile army, coming from the north.

4th. That the financial sacrifices, brought on by an expedition on so great a scale, together with that caused by these political consequences in Europe, might possibly exceed the means.

It is also remarkable that the Anglo-Indian army's line of operation against *Persia*, and the other west and north Asiatic powers, is considerably shorter, and much more advantageous, than those powers' line of operation against India. The reason for which is, the dominion

* From *Kandahar* to *Cabul*, 75 geographical miles (15 on the degree); from *Cabul* to *Attock*, 45; making 120 geographical miles.

† Should, on the other hand, an Anglo-Indian army ever attempt a warlike expedition against *Afghanistan*, it would, no doubt, have to contend, not only on the road from *Mitlum*, or from *Schikarpur* to *Kandahar*, or from *Attock* to *Cabul*, with the same local difficulties as a Russian army marching from the north towards the Indus: there would, however, exist the following difference between the two enterprises, viz. :—

1st. The Anglo-Indian army's line of operation from the point of starting, the Indus (from whence it can easily obtain all its wants), is considerably shorter than the line of operation of a Russian army from its base of operation, which cannot be considered to be nearer than *Araxes*, or even the *Black Sea*. 2d. The Anglo-Indian army's means of conveyance (by elephants, camels, &c.) are much greater than those of a Russian army. 3d. The Anglo-Indian army not only possesses sepoy, but also native Englishmen, who all of them have lived a long while in the tropical zones, and are much more accustomed to the climate and to marching in the sandy deserts than a Russian army can be. And, 4th. The Anglo-Indian army would meet no difficulties in crossing the Indus, on account of all the different means of transport it possesses there, whereas the difficulties would be insurmountable to any other army not possessing these means. From what has been stated above, it necessarily follows that an Anglo-Indian army's operations against the *Afghanistans* would be subject to great difficulties, but not to be compared with those a Russian army would have to encounter on its march to India.

‡ Jacquemont says, that the Anglo-Indian army possesses 3000 elephants and 40,000 camels in their establishments erected for the purpose.

of the British over the Persian Gulf, by which they can send troops from *Bombay*, not only to *Busheer* (*Abuscher*), in *Persia*, but also up the *Tigris* to *Bagdad*, one of the most important provinces of *Turkey*.*

From *Busheer* and its neighbouring city *Shiraz*, a British force thus brought can easily support one of the present pretenders to the Persian crown, and by that means shake considerably the new shah's still trembling throne.

A similar army can, from *Bagdad*, either support the sultan against *Persia* or *Russia*; or also, united with any of its enemies (as the viceroy in *Egypt*, whose army is in *Syria*, not far from the *Euphrates*), extend its arms to the very heart of Asiatic *Turkey*, according to the side which England might take in the changing combinations of European politics, into the labyrinth of which I shall not here attempt to penetrate.

In the first case, if allied with the sultan, an Anglo-Turkish army at *Bagdad* might extend its operations to the not very distant *Erivan*, *Georgia*, and even to *Circassia*, now in a state of open war; an undertaking of a less eccentric nature than it at first sight appears to be, when it is recollected that the Anglo-Indian government sent an army in 1801, under the command of General *Baird*, the conqueror of *Seringapatam*, from *Calcutta* to *Cossier* on the *Red Sea*; which marched thence to *Cairo*, and, united with General *Abercomby's* army, then arrived from *England*, obliged the French to capitulate, and re-established *Egypt* under the power of the sultan. The distance between *Calcutta* and *Cairo* which was performed by this army, is three times as great as that between *Bombay* and *Bagdad*, consequently the idea is decidedly within the bounds of possibility. The history of the world mentions, however, only one single conqueror, who, by means of one great offensive movement, knew how to keep off the defensive from the boundaries of his own country; and even he found a *Capua* and a *Fabius Cunctator*.

An armed demonstration from *Bombay* to *Shiraz* would, on the contrary, be attended with little difficulty; it would not, certainly, in a direct way, hinder the shah's present warlike operations against *Herat*, for the distance is too great (150 geographical miles), and the country between *Shiraz* and *Herat* little else than a continued sand desert; but, indirectly, it might cause a considerable diversion, and oblige the shah to think rather upon his own safety than on his present distant and dangerous expedition.†

What has been here said respecting the possibility of a warlike expedition along the Persian Gulf to *Bagdad* and *Shiraz*, tends only to prove, that the Anglo-Indian army's line of operation against *Persia* and the western and northern Asiatic powers is considerably shorter, and much more advantageous, than the line of operation of these states against British India.

The views stated above as to the possibility

* English steamboats have lately, under the command of Colonel *Sheriff* and Captain *Lyons*, gone from the Persian Gulf, as well up the *Tigris* to *Bagdad*, as up the *Euphrates* to *Hil*, beyond the ruins of ancient *Babylon*; both the rivers were found navigable even for larger vessels.

† Note by the Translator.—It is evident from these and other observations, that this part of the work (as in fact the whole) was written during the latter part of the year 1838 (and not published before the beginning of 1839), consequently, before the news arrived, either of the British expedition to *Busheer*, or of the raising of the siege of *Herat*; the expedition against *Busheer*, as well as the movements towards the Indus of an Anglo-Indian force, have, however, been foreseen by the author.

of a warlike expedition against British India, may perhaps lead to the following conclusions, namely :—

1st. That no one of the separate states of Central Asia can, alone, effect any thing against British India; that a union among them is not probable, as both political and religious causes prevent it: that it is, therefore, only in the north of the states that that power (*Russia*) is to be sought which could place itself at the head of an expedition against India.

2d. That the topographical nature of Central Asia, which, on the road to India, presents on the one side the *Hindoo-Koosch*,* with its several branches,† and, on the other, extensive and wild sand deserts,‡ does not permit an army, organised in the European way, to advance by any other road than that which leads over *Herat*, *Kandahar*, *Ghumt*, *Cabul*, and *Peschawar* to *Attock*, on the Indus; that an army, so advancing by a single road, cannot form a basis for its operations against India, which is always a source of much danger.

3d. That an enemy approaching by this road must, in the first place, be perfectly sure of *Persia*; and, besides, on advancing further, be supported, as well by the *Afghans* as by *Ranjit Sing* in *Lahore*,—a union difficult to bring about, and without which every undertaking against British India must fail, and the retreat through the sand deserts lying behind, with the tremendous mountain-passes, would be attended with great danger.

4th. That the distance between the *Araxes* and the Indus§ cannot be passed by a European army in less than two campaigns (even should the resistance on the road be inconsiderable or none); a space of time sufficient to form, in Europe, such political combinations as might possibly put a speedy end to the whole expedition.

5th. That want of the necessities of life in the sand deserts lying in the route, the great natural hinderances in the mountainous tracts, the destructive effect on the health of the army, from the difference of temperature in the former and latter, the difficulty of taking sufficient heavy artillery, and the greatness of the distance, prevent the advance of a great army to India; and a small one cannot effect any thing on its arrival against the superior British force there stationed, which, richly supplied with the necessities of war, can, as well in discipline and tactics as in bravery, compete with any army in the world.

6th. That should, contrary to all expectation, so distant an expedition really take place, its failure would be more than probable, and the difficulties of the retreat be in proportion to the extent of the advance made.

Independent of the positive difficulties here briefly represented, which hinder a warlike expedition against India, the negative one ought not to be forgotten; viz. that the Anglo-Indian army's line of operation against *Persia*, and the west and north Asiatic powers, is much shorter, and considerably more advantageous, than these powers' line of operation against India.

It is, consequently, not from the inroads of

* The Indian Caucasus.

† The *Taropameian*, *Bameanian*, *Solimanian*, &c.

‡ The *Kirmanian*, *Muranian*, &c.

§ From *Erivan* on the *Araxes*, to *Attock* on the Indus, the distance is about 700 farsakhs, equal to 450 geographical miles, equal to 2100 English miles, viz. *Tabris*, *Teheran*, *Astrabad*, *Musched*, *Herat*, *Kandahar*, *Cabul*, and *Peschawar*, which one possible for a European army. From *Attock* to *Calcutta*, the distance is about 1900 English miles. The whole distance, consequently, is 4000 miles from the *Aras* to the base of a Russian operation. *Odessa*, the *Kuban*, or *Astrakan*, 1000 more, and *Sumarum*, 5000 English miles.

foreign armies that British India has any thing to fear; at least, not so long as peace can be maintained in the interior of the empire: only in case *this*, at a more or less distant period, should be shaken by any considerable eruption, would it be possible for the attack of an enemy from without to cause any real injury? *It might then succeed, but not till then.*

The way to cause such an eruption within the bosom of the British empire in India would be the following:—Either to try to conquer by degrees, one after another, those states which lie on the route; spread and exaggerate in India the reports of such conquest, and thus awaken and keep up those subjects for fermentation already existing there; or, what would be easier, merely stimulate, by political influence, their hostile feelings against British India; irritate that desire of conquest against this country which has so long prevailed amongst them; organise their armies in the European way; and, when once the opportunity presents itself, lead their expedition against India: thus, without ostensibly violating their treaties with England, lose no opportunity of injuring that power whose interests do not accord with their own.*

How long these silent hostilities (*guerre sourde*) might be borne by England, would depend on the *inward political state* of that country, and on the ministry's possessing that *moral strength*† and *resoluteness* necessary for the balancing of these properties in their adversary so highly endowed with them. It would also depend on the *majority in parliament* by which this ministry was supported, which, if not powerful, hinders the transition of what strength and resoluteness it may possibly possess, from the field of sound to that of reality.

For the *peace of Europe*, however, these enterprises in Central Asia are of the most dangerous nature, seeing that they change this ground, before almost indifferent in European politics, to a scene of war for opposing interests, to a field, where the greatest military and naval powers in the world may meet in conflict with each other; which, even should the *material* contact between them not take place, might possibly, merely from the *political*, kindle a general war throughout Europe.

Such a war would, with the combustibles there existing, be of so much the more serious nature, as it might easily, from the *material interests*, pass over to one of the principles of society, the most dangerous of all!

A general reflection may here, perhaps, be added, that the powerful empire established by England on the continent of Asia, and established principally by *force of arms*, cannot be maintained by any other means than justice and prudence supported by *force of arms*; that this *force*, through the reductions of late years, which have reduced the Anglo-Indian army from 291,000 in the year 1827, to 185,000 in 1834, is no longer in proportion to the gigantic size of the empire, the heterogeneous quality of its constituent parts, and the federative nature of its political constitution. The golden rule has therefore been too much put aside: *Si vis pacem, para bellum.*

The views here briefly stated, on one of the most important subjects in the present politics

* Russian policy, which is so well described by Rarasin, their court-historian, in the following words. He says: "Nothing changes in the character and views of our foreign policy. We seek to be at peace every where, and to make acquisitions without war, always keeping ourselves on the defensive. We place no faith in the friendship of those whose interests do not accord with our own, and we lose no opportunity of injuring them without ostensibly violating treaties."

† By this is meant the power of the will.

of Europe, cannot have a better confirmation than by the quoting of what that distinguished statesman, author, and warrior, Sir John Malcolm, has said in his report to the Court of Directors, 4th July, 1830, which finishes with the following words:—

"It is in our power to destroy the commerce and arrest the progress of this empire (Russia) in Europe; and as this power is too obvious not to be fully understood, it is impossible to believe that the Court of St. Petersburg will pursue any speculation and uncertain plans of aggrandisement in the East, that are attended with such eminent hazards to Russia, *except they are encouraged by an overcautious policy on our part.*"

(To be continued.)

PINE ARTS.

THE DAGUERROTYPE.

Academy of Science, Sitting of August 26.

M. ARAGO communicated to the Academy the result of some researches, made by M. Dumas, with the view of preserving the impression of the Daguerrotype. The varnish used by that celebrated chemist, and found to succeed better than any other, is composed of one part of *dextrine* to five of water, and is applied hot to the plate. The photogenic impression is thus free from any danger of friction, and may be copied by means of transparent paper, &c.; it, however, loses a good deal of its brilliancy. The varnish may be washed off again with hot water, without the photogenic impression receiving any damage, and the original brilliancy and distinctness of the image is thus restored to it. This statement of M. Dumas, was replied to by M. Sylvestre, who shewed that he had long ago used the same varnish himself, and he recommended in its place the following composition:—*Dextrine* two parts, water six parts, and alcohol one part. He considered it doubtful whether these varnishes, if suffered to remain for any great length of time on the photogenic image, might not in the end injure and alter the chemical combination by which it is formed. It was hinted by M. Arago, that either the copper sheet on which the plating of silver was made might be indefinitely reduced in thickness, or even that *paper* plated with silver might be employed. M. Chevalier, optician in the Palais Royal, making use of M. Daguerre's method, has succeeded in getting some very fine photogenic drawings. M. Susse, picture-dealer, Place de la Bourse, has advertised Daguerrotypes for sale. The crowd at Giroux's shop is immense, to see the photogenic apparatus and the impressions obtained by M. Daguerre himself. The unscientific are disappointed at the slate-coloured effect of the image, and many more at the price (about 400 francs) of the apparatus!!

THE DRAMA.

THE Drama during the week has been productive of several novelties, but nothing of much dramatic interest. At the *English Opera House*, a burlesque of the Eglintoun tournament, called a *Turn among the Knights of Chivalry*; but it failed to please the audience, and was roughly condemned. With another new piece, *The Lass of Gowrie*, the company have been more fortunate, though deprived of the assistance of Miss Rainforth, Mr. Balse, and Mr. Frazer, absent on provincial engagements. Mr. and Mrs. Franka, however, have done much to supply their places; and the pretty music of a Scottish character, by Mr. Leigh

Smith, procured for the *Lass of Gowrie* a favourable and hearty reception.

At the *Strand*, we have another version of the *Susanne* played at the Adelphi, in which Miss Daly sustains very cleverly the deaf and dumb show of the original Celeste. It is the production of Mr. Selby, who, with Mrs. Selby, also performs in it with good effect. On Thursday evening a most ludicrous burlesque of the tournament was produced, and was received with shouts of laughter throughout.

The *Haymarket*, rich in Macready and Miss E. Tree, is nightly filled with excellent company and their continual plaudits.

Covent Garden is announced to open on Monday the 30th.

ORIGINAL POETRY.

STANZAS.

BREEZE of Autumn! Breezes of Autumn!

Sighing through yon leafless tree;

Well with my dejected bosom

Suits thy wild, lorn melody.

The gales of Spring light hearts may please,
I love the Autumn breeze.

Like Eolian lyre my bosom

Makes with thee her plaintive moan,

While each heart-string, wildly throbbing,

Sounds with thee in unison.

The gales of Spring, &c.

Still to me thy dirgelike numbers

Tell of joys for ever fled;

Youth's bright dreams for ever vanished,

Hopes enshrined with the dead.

The gales of Spring, &c.

Breeze of Autumn! Breeze of Autumn!

When beneath the sod I lie,

O'er me sound no other requiem

Than the music of thy sigh!

The gales of Spring light hearts may please,
I love the Autumn breeze.—R.B.S.

VARIETIES.

Science in Italy.—The Scientific Congress, invited by the Grand Duke of Tuscany to meet at Pisa in the beginning of October, would be a great treat, if not too distant for any of our friends to attend. The invitation is general and liberal to all foreigners, the lovers of science; and Italy, the country of Galvani and Volta, is well entitled to offer them a philosophical reception. At this period, too, Amici of Florence, Melloni and Caponi of Naples, Marianini of Padua, Matteucci of Ravenna, Plana of Turin, and Cacciatores of Palermo, adorn it; and the letters bear the signature of MM. C. Bnaparte, Antinori, Amici, Giorgini, Savi, and Bufalini, all belonging to Tuscany.

The Daguerrotype.—A public experiment of the Daguerrotype was made by its inventor on Saturday last, in one of the halls of the hotel of the Quai d'Orsay. M. Daguerre described the mode of using his instrument to an assembly of about a hundred and twenty persons; and in the course of an hour and a few minutes produced a beautiful view of the river, the terrace, and the palace of the Tuileries.

Earthquake, &c.—On Sunday morning, about half past one o'clock, the shock of an earthquake was felt pretty generally throughout Monmouthshire and the west of England. On Tuesday, one of the finest appearances of aurora borealis ever witnessed in the southern parts of our island was visible nearly throughout the night, varying its illumination in a thousand brilliant ways. On the second of August, two severe shocks of earthquakes visited Martinique.

and greatly alarmed the inhabitants of St. Pierre, &c. Fortunately, however, the ravages of the preceding January were not repeated.

W. Wilkins, Esq., F.R.S., B.A., &c.—We notice, with regret, the death of this well-known architect, announced in the newspapers, near Cambridge, on Saturday, the 31st of August, and in his sixty-first year. He was B.A. of Gonvil and Caius Colleges, and took honours in the year 1800, after which he spent several years in Greece and Italy as travelling bachelor to the University. We have not generally been admirers of his works, but in matters of taste, such as Downing College, St. George's Hospital, the London University, the National Gallery, and his college erections at Trinity, King's, and Corpus Christi, in Cambridge, we shall leave the public to judge of his talents. In the last-mentioned building, his bones are laid to rest; and we lament to have to say that, after a life spent in the higher walks of society, and among the exalted and refined, we have reason to fear that Mr. Wilkins's latter days were clouded with misfortune.

LITERARY NOVELTIES.

In the Press.

A novel, entitled "The Fatalist; or, the Fortunes of Godolphin," by an Essayist on the Passions.

Prevailing winds, S.W.
Except the afternoons of the 1st, and two following days; cloudy, with frequent and heavy showers of rain.
Aurora Borealis. A remarkably brilliant Aurora of a deep crimson colour, with frequent coruscations, extending from N.E. to N.W.; the aurora was first observed about 9, and the coruscation, both crimson and white, continued till shortly after 10; a steady aurora, however, was observed till nearly midnight.
Rain fallen, 6 of an inch.

Edinburgh.

CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

Mr. Waldron will find a letter at our office.
We do not recollect if any, or what, motto was said to be engraved on the ring sent by Essex to Queen Elizabeth. The epigram alluded to by "A Country Gentleman" is even as bad as he describes it, and the false quantity in monies is notorious; but we have not a wheel for the butterfly, or, perhaps, as an epigram, pseudo-wasp.

Letter respecting the ruins of Palenque, &c., received, and intended for our next, or an early Number.
ERRATA. Page 246, third column, line 29 from bottom, for "elastic," read "electricity;" also, page 263, middle column, line 20, for "a place," read "Laplace."

ADVERTISEMENTS.

Connected with Literature and the Arts.

RETREAT near LEEDS, for the RECEPTION and RECOVERY of PERSONS AFFLICTED with DISORDERS of the MIND.—Mr. Hare begs to announce to the Profession and the Public that the above Establishment is under his particular superintendence, and that the most strict attention is paid to the Medical as well as Moral Treatment of the Individuals who are committed to his care. The Retreat is delightfully situated upon rising ground at the opening of Air Dale, little more than a mile from the town of Leeds. The situation is healthy, cheerful, and also sufficiently retired: the Gardens and Plantations are extensive; the Premises combine proper accommodations for the exercise and amusement of the patients; and the Apartments are spacious, lofty, well ventilated, and fitted up in the most commodious manner. The Establishment is to be considered more in the light of a temporary residence in the country, where the Patients are placed, than as a Retreat, such a plan of treatment as may be necessary to restore the functions of the brain; hence it is well suited for persons of weak mind, or who may be subject to fits of temporary insanity—for whom confinement is necessary. In recent cases a perfect and speedy recovery may generally be expected. Mr. H. also receives Patients under his care attended by experienced persons in Lounges or Private Houses, according to the provision of 2d and 3d of William IV. c. 100, sec. 47.—Applications, either personal or by letter (postpaid), addressed to East Parade, Leeds, will meet with immediate attention, and have the most satisfactory references, if required, to Patients already discharged, or their Friends; also to Physicians resident in London, Dublin, Leamington, Leeds, Sheffield, Scarborough, Wakefield, Bradford, &c., who have been successful in visiting patients at the Retreat. This day is published in royal 8vo. dedicated, by permission, to Mr. Benjamin Collins Brodie, Bart., V.P.R.S., and Charles Aston Key, Esq., Senior Surgeon to Guy's Hospital.

Practical Observations on the Causes and Treatment of Curvatures of the Spine, with Hygienic Directions for the Physical Culture of Youth, as a means of preventing the Disease; an Etching and Description of Apparatus for the Correction of Deformity, and Engravings illustrative of the Cases. By Samuel Hare, Surgeon.

London: Simpkin, Marshall, and Co.; Edinburgh: Oliver and Boyd; Dublin: W. Curry, Jun., and Co.; Leeds: W. Bean and Son; and all Booksellers.

Messrs. Hare and Coppelshaw, Surgeons, &c., are in want of a well-educated Youth as a Pupil.

KING'S COLLEGE, LONDON.—Senior

Department. The Classes in Theology, the Classics, Mathematics, English Literature, and History, under the Superintendence of the Principal, and Professors the Rev. T. G. Hall, R. W. Browne, and T. Dale, will be reopened on Tuesday, the 1st of October next.

The Classes for Private Instruction in Hebrew, the Oriental, and other Foreign Languages, will also be resumed.

Medical Section.—The Winter Session will commence on Tuesday, the 1st of October, when Professor Arnott will deliver the Introductory Lecture, at Two o'clock p.m. precisely.

Civil Engineering, &c.—The department, under the superintendence of Professors Hall, Mosley, Daniell, and Wheatstone, and Mr. Bradley, Mr. E. Cooper, and Mr. J. Tennant, will be reopened on Tuesday, the 1st of October next.

Junior Department.—The Michaelmas Classes will commence on Tuesday, the 1st of October.

August 29, 1839. J. LONSDALE, B.D., Principal.
N.B. Chambers are provided for such students in the Senior or Medical Department as are desirous of residing in the College.

MAPS of the Society for the Diffusion of

Useful Knowledge.
No. 80 of this Series, containing a General Map of Africa, and a Map of Parthia and part of Afghanistan, will be published on the 23d instant, at the Society's Office, 30 Lincoln's Inn Fields. 2d Sept. 1839.

BOOKS IN THE PRESS.

THE COUNT DE LA PASTURE'S
NEW NOVEL, REAL PEARLS IN A FALSE SETTING, will be published in a few days.

Also,
Max Wentworth, a Novel, in 3 vols.
Miss Burdon's New Novel, the Friends of Fontainebleau, is also nearly ready.
Saunders and Otley, Publishers, Conduit Street.

13 Great Marlborough Street, Sept. 14.
MR. COLBURN will publish immediately the following NEW WORKS:—

I.
Little Pedlington and the Pedlingtonians.
By John Poole, Esq.
Author of "Paul Pry," &c. 3 vols. post 8vo. (Now ready.)
II.
The Flying Dutchman.
By the Author of "Clarendon," "Gentleman Jack," &c.
3 vols.
III.
The Romance of Private Life.
By Miss Barney. 3 vols.
IV.
Morton of Morton's Hope; an Autobiography.
3 vols. (Now ready.)
"A work of great talent, variety, spirit, thought, and originality."—Literary Gazette.

BOOKS PUBLISHED THIS DAY.

3d edition, in fcap 8vo. price 6s.
THE PHYSICAL THEORY of
ANOTHER LIFE.
By the Author of "Natural History of Enthusiasm."
William Pickering, Publisher, Chancery Lane.

Published by Longman, Orme, and Co.

MEDICAL NOTES and REFLECTIONS.

By Dr. Holland. 8vo. 18s. cloth.

A TOUR IN SWEDEN. By Samuel

Leising, Esq. 8vo. 12s.
"A volume of sterling and enduring worth."—*Eclectic Review*.
"Mr. Leising is a man of acquirement, experience, knowledge of affairs, and great ability. His statistical facts are selected with judgment, and commented upon with sagacity. His disquisitions are those of a man of sense, and besides such things as these, the work contains many striking descriptions and comparisons; the result of immediate observation, or deductions from inquiries and experience."—*Spectator*.

By the same Author,
Three Years' Residence in Norway.
2d edition, 14s.

"A book which every body should read."—*Dublin Review*.

IMAGERY of FOREIGN TRAVEL; or,

Descriptive Extracts from "Scenes and Impressions in Egypt and Italy," "Sketches in India," &c. By Major Sherrin. Post 8vo. price 1s. 6d. cloth.

"Few writers possess, in so happy a degree, the faculty of putting the scenes they describe before their readers. He lifts up what others leave in outline, and familiarises us, consequently, with the emotions awakened as well as the objects seen. This volume is one of the most interesting companions which a traveller can desire, and will do more than books ordinarily accomplish to supersede the necessity for leaving home."—*Eclectic Review*.

THE SACRED HISTORY of the

WORLD. By Sharon Turner, Esq. F.R.S.A. and R.A.S.L. New edition, 3 vols. 8vo. 2l. 8s. boards.

SOUTHEY'S POETICAL WORKS, collected by Himself. 10 vols. fcap 8vo. Frontispiece and Vignettes, 3l. 10s. cloth.

"Mr. Southey's poetry is not simply innocent and pure, but directly and persuasively religious. The tendency, the very moral, of much of his greater work, is expressly favourable to faith and piety; and rarely are the highest virtues more effectively taught. . . . We are confident that Southey has not yet received the measure of reputation which is his due. We are confident that this complete collection of his poetical works will find a hearty welcome, and will increase the number of his readers."—*North American Review*.

PROGRESSIVE EDUCATION. By

Madame Necker de Saussure. 3 vols. fcap 8vo. 12s. cloth.

"We have seldom seen a work containing more just views of what education should be. It is worthy the attention and serious perusal of every teacher, every parent, every magistrate, or divine, in the kingdom."—*Educational Magazine*.

TRIALS of the HEART. By Mrs. Bray,

Author of "Trelawny," "Warleigh," &c. 3 vols. post 8vo.

"These volumes cannot be too warmly recommended."—*Naval and Military Gazette*.

"Mrs. Bray has executed her task with considerable ability. Her little stories have such an air of truth, that they may be almost accepted as transcripts from real life, as brief chronicles of actual occurrences, rather than creations of imitative fiction."—*Monthly Chronicle*.

INTRODUCTION to GEOLOGY. By

Robert Bakewell. 6th edition, with new Sections and Cuts. One Guinea, cloth.

"A work conspicuous for attractiveness, for perspicuity, for a style generally vigorous and elegant, and for a treatment both straightforward and to his object without any servile regards to previous systems. Mr. Bakewell's work has long been our favourite elementary treatise on geology."—*Albion*.

THE VEGETABLE CULTIVATOR.

By John Rogers, Author of "The Fruit Cultivator." 12mo. 7s. cloth.

"A perfect vade-mecum for any person having a kitchen garden."—*Gloucester Journal*.

HAWKER'S INSTRUCTIONS to

YOUNG SPORTSMEN. 8th edition, greatly enlarged, with 60 Plates, &c. 5s. cloth.

"From the extent and variety of its information, this work can be viewed in no other light than the critical observations of a veteran and able sportsman. Experience has been his tutor, and practice his expounder, of all the arcana of his favourite hobby, which he rides with confidence, derived from actual warfare in the field of his labours. Though addressed to the young sportsman, it must not be considered solely as the Mentor of the first greyhound and hare; for many lessons from his rudiments, and we do not scruple in adding that the most experienced will pause at their 'old familiar dog's.'"—*Sporting Magazine*.

Lately published,
Greener on the Gun. 15s.

A PRACTICAL TREATISE on

ACCOUNTS, Mercantile, Partnership, Solicitor's, Private, Steward's, Receiver's, Executor's, Trustee's, &c. &c. Exhibiting a view of the Discrepancies between the System of the Law and of Merchants; with a Plan for the Amendment of the Law of Partnership, by which such discrepancies may be reconciled, and Partnership Duplicitous and Accurate adjusted.
By ISAAC PRENTON CORY.
Fellow of Caius College, Cambridge, Barrister-at-Law.
London: Published by William Pickering, Chancery Lane, and to be had of all Booksellers.

NEW FEERS.
DEBRET'S COMPLETE PEERAGE
 of the UNITED KINGDOM.

REVIEW OF NEW BOOKS.

The Life and Times of Sir Thomas Gresham, compiled chiefly from his Correspondence preserved in Her Majesty's State-Paper Office: including Notices of many of his Contemporaries. With Illustrations. By J. W. Burgon. 2 vols. 8vo. London, 1839. Jennings.

THOUGH prolix and somewhat tedious and minute, there is a good deal of interesting matter in these two volumes, which, had they been one, would have met with our more unqualified approbation. Mere personal details and statements about relations, near and distant, or clerks or servants, could never have been of sufficient consequence to engage public interest; and now, after so long a time has elapsed, it must be confessed that they claim no regard whatever. Had the family of Gresham, like that of the Medici (whom he resembled in many points), descended in papal and princely streams through national annals—even then such microscopic inquiries would have been thrown away. We only want the main features of such a life, accompanied by those particulars which illustrate character or reflect the manners of the age, with such unknown circumstances as may attach to historical affairs hitherto less clearly represented and explained.

Having set out with all the blame we intend to cast upon Mr. Burgon's labours, we can now the better afford to praise his diligence and research, and point attention to some of the many merits of his performance. Of Gresham's birth, and parentage, and education, we shall say no more than that his father, uncles, and cousins, were of Norfolk, and among the most wealthy and eminent London merchants; and that he had the benefit of at least a partial, if not a lengthened, university upbringing at Gonvil Hall, Cambridge. He was probably born in London in the year 1519, and saw the crown on the heads of Henry VIII., Edward VI., Mary, and Elizabeth, by the three latter of whom he was much and confidentially employed in commercial, financial, and political business. At the period of his entering upon his active career, Antwerp was the great mercantile mart of Europe, and its rich traders were the bankers and loan-contractors of monarchs. This city was the scene of his most extensive operations, in connexion with the Fuggers and Schetz, the Rothschilts and Barings of the sixteenth century. We copy here a notice of one of their transactions in the year 1552, *temp. Ed. VI.* The letter is addressed by Gresham to the Duke of Northumberland:—

“It maye please your Grace to be advertised, that as the 20th of this present, I came unto this towne of Andwerpe in safetye; whereas I fownd neyther Jasper Schetz, nor the Fugger's factor (being at Brussels, and lookyd for to-morrow at the fortieest, being the 21st daye). With whome I shall treat according to soche commission as the King's Majesty haythe given me; wishing at this tyme that yt maye please God to send me soche good succes, as that the King's Majesty's honnor and credit maye be nothinge touched. For that yt shall be no small grief unto me, that in my tyme, being his

Majesty's agent, anny merchant strangers shuld be forsaide to forbear their monny agaynst their willes: wyche matter from hensforthe must be otherwayse foreseen, or else in the end the disonnestye of this matter shall hereafter be wholly layde upon my necke, yf any thinge shuld chauce of your Grace, or my Lord of Pendbrocke, otherwise than well; for that we be all mortall. Wyche matter I doo not dought, yf God send you life, you will foresee in tyme: wherein I will advertise you my poor and symple advyce at large. But ere that I doo proceed anny further in this matter, I shall most humbly requyre your Grace to pardone me of this my writing; for that this matter touchyth the King's Majesties honnor and credit, wyche I am bound by my othe to maynteyne and keep: as also the very love and obedience I doo owe unto you, puttethe me cleane out of feare to wryte unto you this my full mynd at large. What follows, explains the difficulty Gresham had experienced:—‘Fyrst, it maye please your Grace to understand that at my comyng home, I browght with me two bargaynes for to discharge the King's Majesty's dett, due the 20th of August, amownting to the sum of lvi x li. [56,000l.], as also an overplus to remayne in the King's hands for the space of a yere: and that was, I offered lii x [52,000l.] in redde monny, after the rate of xii li. upon the hundred for a whole yere. And therewith, the King's Majesty shuld have takynne Manuel Ryssis jewel, wyche I offered once to you for viii x li. [8000l.]; with another dyamownd of the vallew of one thousand poundes. Wyche jewel I showed to the counsell at Alltham,* being there my Lorde of Wiltshire, my Lorde Darsay, my Lorde Warden, Sir John Gates, and Mr. Secretarye Syssell; and they made their reckonyng the jewels to be worthe nothinge, were they never so perfette or orient. Secondly, I offeryd them a bargayne from the Fugger for the prolongacion of xxv x li. [25,000l.] and to have taken v x li. [5000l.] in fustians; wyche also dyd not lyke them; saying that there was no other remedyd, but that the Fugger and the Schetz must forbear with the King's Majesty at this tyme; and that they would have them prolongyd for another yere, withought takyng of anny merchandize or jewels. Wyche matter dyd not a littill abash me, considering how things heretofore hath been sayd. For, as your Grace dowth right well knowe, when the King's Majesty's Father dyd fyrst begynne here to take up monny upon interest, Mr. Stephen Vaghan being his agent, a took the fee-penny in merchandize—eyther in jewells, copper, gundepowder, or fustians. And soe the matter hayth passid ever since in taking of wares, when the King's Majesty made anny prolongacyone, until the charge thereof was commyttyd unto me. Wherein I travelyd to the uttermost of my power, and by the means of my friends I fownd the means to serve the King with xx x li. [20,000l.] withought takyng of anny jewels or merchandize, as your Grace best knoweth. And to be playne with your Grace in this matter, I was fayne to

give forth my owne [word] that this monny shuld be paid at the just daye, or else the King's Majesty could never have hadd yt.’ The writer proceeds to expose the great disadvantages likely to ensue from the course he had been ordered to adopt with the king's creditors; adding, ‘To be playne with your Grace in this matter according to my bowndyd dewtye, veryly if there be not some other wayes takynne for the payment of his Majesty's detts, but to force men from tyme to tyme to prolong yt. I say to you, the end thereof shall neyther be honorabill nor profitable to his Highness.’”

This is extremely illustrative of these royal and national affairs; but we pass on to quote a passage of a later date, and relating to Queen Mary:—

“The extraordinary supposition that the queen was about to become a mother, when she was in truth afflicted with dropsy, did not fail, before it reached Antwerp, to assume the serious form of an actual occurrence: nor could less have been expected, after the great pains which had been taken at home to fill the public mind with expectations of an heir to the crown. Gresham writes thus to the lords of the council on the 4th of May, 1555:—‘It maye please your most honorabill Lordships to be advertised that as the iind of this present, here came newes along the seas by men of this country, that the Queene's Majesty was brought a-bed of a yonge Prynce, the last of April; whiche newes contynued here till the iiith day. And as the thyrde day, the Regent, being in this town of Andwerpe, about 7 of the clocke at night, dyd cause the great bell to ringe, to give all men to understand that the newes was trewe. Signifying unto your honnors, that as the iind day, upon the aryvall of the fyrst newes, the Queene's highness' mere merchants, according to their most boundyd dewtye, causyd all our Inglish ships to shoote off with such joy and triumph as by man's art and pollicie could be devysed, in the presence of the Regent, with all her nobills and gentillwomen. Whereupon the Regent presently sent our Inglish mariners one hundred crowns to dryncke. Trusting in God the newes to be trewe; for as yet, I, nor none of our nacion hath no certayne wryting thereof.’ Notwithstanding a certain degree of concern which this passage in Queen Mary's history excites, there is something irresistibly ludicrous in the accounts transmitted to us of the extent to which the delusion alluded to was indulged. ‘All the court,’ says Grafton, ‘was full of midwives, nurses, and rockers; and this talk continued almost half a year, and was affirmed true by some of her physicians, and other persons about her; which seemed both grave and credible. Insomuch that divers were punished for saying the contrary.’ On the 3d of May, the Bishop of Norwich received ‘the sodeine good newes of the Queene's Highness moost joyfull deliverance of a noobill Prince: whereupon, to laude God, *Te Deum* was solemly sung in the Cathedrall Church, and other places of the cytye [of Norwich], wyth wonderfull joye and muche gladness of all people throughout the whole cytye and the countrey thereaboutes.’ The parson of Saint Anne within Aldergate,

* Waltham, where the council had sat on the 7th, 8th, and 10th of August, 1552.—Council-book of Edward VI. Ms.

says Foxe, 'after procession, and *Ts Deum* sung, took upon him to describe the proportion of the child; how faire; how beautiful, and how great a prince it was, as the like had not been seen.' But by far the most extraordinary circumstance connected with this delusion has never yet been noticed in print. There is in the State-Paper Office an original letter to Cardinal Pole, signed by Philip and Mary, announcing the birth of a prince as an event which had already occurred. 'Whereas it hath pleased Almighty God of his infinite goodness to adde vnto the great number of other his benefites bestowed vpon vs, the gladding of vs with the happy deliuerie of a prince.' The date is left blank, but the letter is endorsed '29th May, 1555.' Passages such as the foregoing, however, are comparatively of rare occurrence in Gresham's correspondence at this period. Whatever favourable disposition towards him Secretary Boxoll may have entertained, there seems to have been wanting that cordiality between them,—the fruit of intimacy and similarity of sentiment,—which alone can impart interest to a correspondence; and however honourably treated by the council, and favourably noticed by the queen, Gresham generally confined himself in addressing both, to the strictest details of business."

Of this Boxoll, by the by, we are told:—

"So little is known concerning the history of Secretary Boxoll, that the two following extracts from Queen Mary's Council-book will not be unacceptable. Under the 23d of September, 1556, we find, 'This daye was Mr. Boxoll, warder of Winchester College, sworne and admitted one of the King and Queene's Majesties' Counsell at large; and as one of the Maisters of Requests, and a counsaillor of that corte.' On the 21st of December, the following entry was made:—'This daye, Mr. Doctor Boxoll, Archidiacon of Ely, was sworne and admittyd one of the Kinge and Queene's Majesties' privie Counsell.' (MS. in the Council-Office, f. 418, and f. 478.) These minutes, besides their biographical value, lead to the important inference, that to be of the 'council at large,' and to be of the 'privy-council,' were different things; and, consequently, that a man might be Queen Mary's counsellor without belonging to the privy-council. The former phrase seems equivalent in its signification to the term 'privy-council' at present; and 'the privy-council,' as used formerly, was what we now call 'the cabinet.'"

At the death of Mary,⁴⁴ the removal from office of Bourne and Boxoll,—Queen Mary's two secretaries, who were also strong papists,—and the immediate promotion of Sir William Cecil, were indispensable acts; and, among the few exceptions to the practice wisely observed by Elizabeth, of displacing as few of the ministers of the late queen as possible. Boxoll's behaviour on this occasion sets his character in a favourable light, and commands our applause; for, instead of interposing obstacles to his successor in office, it is clear, from a few of his letters to Cecil, dated about this period, that he cherished no sentiment but that of anxiety to afford him all the assistance in his power. He subscribes them in the language of affection—'Your lovinge friend, Jo. Boxoll.' One, in particular, dated only two days after Queen Mary's death, calls for notice, from the interesting circumstances it reveals. It seems probable, from its contents, that Thomas Gresham, when that event occurred, was out of England; and we learn from the same letter the melancholy and remarkable use to which the great seals, attached to the bonds which he must

have been expecting at Antwerp, were applied. His financial occupations in Flanders were of the highest importance, or they would not form the main subject of the very first communication which the late secretary addressed to his successor in office. Boxoll's letter accompanied a number of documents essential to the conduct of public affairs:—'The commission made to my lords now beyond the sea, with their instructions, and all such letters as have been whrytten by the late Queen,' &c., 'which,' he says, 'I have put in order, in such sorte as a man coming home in a sharpe fyfte of a quarten might do. You shall receyve also herewith, Greshames doings towching borrowing of money to the use of this Realme, and the said Queenes highnes late deceased. The letters are in ii packets;—th' one of the last yere,—th' other of this presente. The two Bandes whereof I spake vnto you, cannot be founde: they were left in the bedde-chambre of the late Queenes highnes, to be signed with her hande; and at the ceringe of the corse (as Clarencieux saith) converted to that use. They import nothing. You shall fynde,' he adds, 'in Greshames lettres wrytten this last October to the Queenes highnes, my Lords of the Counsell, and me, the Marchants names, and the somes of money that are to be conteyned in theis bandes nowe to be maid presently.' This letter was written from St. James's, on the 19th of November, 1558, and was delivered to Cecil the same night.⁴⁵ Gresham may have been out of England on the day Queen Mary died; but he cannot have been far off, and certainly lost no time in repairing to Hatfield after that event. As already stated, Cecil was with the new queen on Friday the 18th, which was the day after her predecessor's decease: a single day elapses, and we learn, on the best possible authority, that on Sunday, when the first council was held, Gresham presented himself before Queen Elizabeth, and formed one of the group of statesmen who might be seen assembled at Hatfield on that interesting and memorable occasion. Some years afterwards, in a retrospective mood, he fortunately relates this portion of his history; and supplies us with a characteristic saying of Queen Elizabeth at their interview, which is worth preserving. These recollections were suggested, in 1560, by an attempt which the Marquess of Winchester made to injure him with Queen Elizabeth during his absence; and again, in 1563, by a threatened reduction of his stipend: of both which acts of injustice he complained most bitterly to his friend Cecil. 'It maye please you,' he says, 'to be a meane unto the Queene's Majestie for me; and to put her in remembrance of my servise done this fyve yeres, that she maie have some remorse upon me,—according to her Majestie's promys that she maide me, before you, at her highness' house at Hatefylde, the xxth of November, an^o 1558, when her highnes came to the crowen: and that was (upon the discouraging how I was handelyd in Quene Maryes tyme for my good servise), her highness promised me, by the fayth of a Quene, that 'she wold not onely kepe one ear shut to hear me; but also, yf I dyd her none other servise than I hadd done to King Edward, her latte brother, and Quene Marye, her latte syster, she wold geve me as much land as ever they did: wyche two promyses, I will insweare your honor, maide me

a young man agayen, and causyd me to enter upon this great charge agayen with hart and courage. And thereupon, her Majestie gave me her hand to kysse it; and I exseptid this great charge.' When Queen Elizabeth promised Gresham that whatever evil reports might at any time reach her concerning him in his absence, she would always keep one ear shute to hear him on his return, she was no doubt thinking of a passage in her own early life; when, under sentence of imprisonment, she had 'knelt with humbleness of hart, because not suffered to bow the knees of her body,' to her sister Mary; imploring her to remember her last promise, that she should never 'be condemned without answer and due profe;' adding, 'I have harde in my time of many cast away for want of comynge to the presence of ther prince.'"⁴⁶

When we said we had confined our objections to the few points mentioned at starting, we had forgotten that of which we were not reminded till we proceeded with our extracts, viz. the waste of labour upon conjectural statements and arguments founded upon them (see p. 126, vol. i., for a curious example of this); and though the *oui bono* of many of the details might be answered with some show of reasoning, we are sure that the notions of "what might have been the case," and the conclusions drawn from such suppositions, had much better have been omitted. We will copy a short instance:—

"On the 23d of August he (Gresham) started on his journey, and met on the road the post which was the bearer of Clough's long despatch, dated the 21st, given in a preceding page. This he forwarded immediately to the secretary, with a short letter of his own, from which the following is an extract, dated 'from Halling Playasse, besydes Rochester, the xxiiijth daye [of August], at one of the clocke after mydnyght.' It seems reasonable to infer from the context, that he was writing in the house of his cousin, Thomas Leveson, or Lewson, Esq., who had married Ursula, a daughter of Sir John Gresham; but neither Hasted nor any older authority notices Halling Place as a residence of the Levesons; and what is stranger, instead of one mile, that mansion is nearly five miles distant from Rochester."

Now, what does it signify from what particular house a note or letter happened to be written? But we return to August 1563, for an extract in which the great plague is alluded to:—

"Good Sir, the more haste there is maide in the writing of the bands, the sooner they will be there; by the reason the payments be at hand, and there is no reamedye but some satisfication must be presentid in tyme, for the preserving of the Queene's honor and credit: whiche hath bin, and is, all my care,—considering to what good purpose it hath bin brought, and how moche credit hath stood her in stead; as your honor dothe right well knowe.—Likewise, I shall most humble desier you as ther may be such order takin, that my billes of exchange for the ij x v c li. may be paid (which will falle out the last of this month); by the reason, this plague tyme,

⁴⁴ Domestic Correspondence, St. P. Off. Another of Boxoll's letters, in the same glorious repository, is dated 'from my howse in Canon Row.' Cecil also lived in Canon Row, Westminster, though he was now at Hatfield. How interesting does that narrow little street become in consequence!"

⁴⁵ "The original of this extraordinary letter (which has been often reprinted) is preserved among the State Papers. It is entirely in the hand-writing of the Princess Elizabeth, and must have been written on Saturday, March 14th, 1553-4, the day before she was committed to the Tower. Lord Coke has endorsed it, 'Queen Elizabeth, my dear sovereign's letter to Quene Mary, in exile.' (Dom. Corr.) See Bill's Letters, 2d Ser. vol. ii. p. 253."

there is noe money nor creadit to be had in the streat of London [Lombard Street]: for I understand by my servant Candelier, that everie man is afraide to speke one with another. Therefore, it maye please you to move the Queene's Majestie to see it presentlie paid; and hereafter, when the plague is passid, and everie man falls to his trade agayne, monny will be better to be had. Therefore I praye you, Sir, for this tyme, to consider what great moment it is unto me to run upon the Exchange, for the preserving of my poore name and credit; which is the cheefest substance that God hath sent me, as you doe right well knowe."

The state of a royal agent in those days is strangely exemplified in the following:—

Gresham's next letter is dated the 3d of October; wherein he says that, since he wrote last, 'It had pleased the Lords of the towne to licence him to come into the towne to his house, with all his servants; and that he had succeeded in contenting all the queen's creditors except Rantzowe and Brocketrope. 'I colde bye no meanes bringe the factor of the sayd men to conclude with me; by the reason his comission extendyd only to be paid, or elles to arrest me; and to proceed in justice.' He relates how he had perswaded this agent to repair to his masters, and see if he could not persuade them to agree to the prolongation of the debt, by promising to defray the expenses of his journey, and to give him on his return a chain of gold; and he insists on the indispensable necessity of the queen's getting ready by the 20th of November, 20,000*l.* in gold, to be sent over to Antwerp for the purpose of being coined there, which would be more advantageous to the queen, he said, than paying by exchange."

The erection of the Royal Exchange, however, may be looked upon as the grand event of Gresham's life, it having been suggested by his father, Sir Richard, and undertaken by him after he had the calamity to lose his only son and heir. The details are interesting, though Stowe's account is ample enough for general information. That Henryke, of Antwerp, was not only the architect, but that, except the wood, almost every article of the material was imported from the Low Countries, are strong evidence of the destitution of England, in these respects, and of her dependence upon foreigners:—

"It is (says Mr. Burgon) quite surprising to perceive, from the incidental notices contained in his correspondence, to what an extent, at this period, an English edifice was indebted to continental artificers, not merely for its decorations, but for its most material features. One cannot help regretting that one of the numerous letters which it is certain that Gresham wrote to Clough about this period, enumerating the objects of which he stood in need, and describing the progress he was making, has not been preserved to us. This, however, was not to be expected; and Clough, very naturally, confines his replies to a general expression of pleasure at the satisfactory accounts his master continued to send him, and a promise that 'the provision' ordered,—that is to say, the architectural and other materials,—should be forwarded with the least possible delay. 'And as touching your things belonging to the Bourse, according to your last, they shall be provided here, and sent away as soon as they shall be ready.' . . . In the beginning of December we meet with the following passages. 'I have also received within that your letter, a letter that the Erie

of Wormonde [Ormond] sent you; the order whereof I will follow, and wyll not fayle but to sende both the wainscot and the glass by the fyrst ship that shall depart for those parts. And for that he shall be well serryd of his wainscot, I do now send one to Amsterdam to provide wainscot for the Bourse; who shall buy so much more: and that beyng done, I will choose out his 200 out of 1200, whereof he shall have the best. And for the glass, it shall be bought out of hande. Notwithstanding, I doubt there wyll no ship depart for those parts before March; but and if there do, and that I can by any meanes gett so much freight in them, they shall be sent with the first: whereof have you no doubt. . . . And whereas you write me, so well as touching certain provisions of howseholde, as also as touching the Bourse, you shall understande that I have shipped in Cornelys Jansone's sprette all such things as you wrote for; whereof I have wrytten my fellow Candelor at large. And as touching the Bourse, we do now begyn to shippe some part thereof; and before Easter, we trust all shall be shipped from hence.' Accordingly, about the following Easter, that is to say, sometime in April 1567, John Worrall, one of Gresham's apprentices, wrote as follows to his master: 'Richard Backer, your worship's man and his fellowe . . . be here, ready to pass [in] these next ships for London; wherefore, I mean to send them in one of the shippes layden with stone for the Bourse, for the which there ys three ships readie to departe from hence, as to-morrow, yf that the wynde serve them.' Worrall appears as Gresham's correspondent, in consequence of Clough's absence from Antwerp; the latter having left that city on a matrimonial excursion, of which it will be more proper to speak hereafter: suffice it for the present to state, that although requested by Gresham to remain in Flanders, until 'he had despatched all the provision of stone for the Bourse, and hym that had taken it in hand,' Clough hastened into Wales on a more interesting errand. He returned to Antwerp, however, a married man, by the middle of May 1567. Meantime, the erection of the Bourse went forward; and in the course of a few months, sufficient progress had been made with the edifice to render it desirable to introduce the statues, which, up to the period of its destruction, formed a conspicuous part of its interior decoration. They seem, from the following passage in one of Clough's letters, to have been all made in England, with the exception of Queen Elizabeth's: some of the other statues having been sent to Antwerp, apparently for the purpose of shewing the artist in what style and of what size he was to produce the figure of her Majesty; which, by a natural act of courtiership, it was intended to make the principal object. 'I have received the pictures you wryte of,' says Clough, 'whereof I wyll cause the Queene's Majestie's to be made, and wyll sende you the rest back againe with that, so soone as yt ys done.' About a month later, the edifice began to be slated. Clough writes: 'And as touching that you wolde have sayd to Henryke, I have so done; and he wyll make his provysion thereafter, and wyll come withall along seas: for he sayeth he wyll nott go over and leve the stones behynd him. And for the slates they shall be bought and sent you with the rest of the stuff.' After a fortnight had elapsed, we read, 'I do perceive by your letters, that the slates were not come from Dort, whereof I have marvell: so that I wyll send awaye the other that you wrote for, hoping that Henryk

ys arrived with you long past, and all such stones as was lacking for the Bourse; and I do look daily for Mr. Secretary's porte; which is promised to be here by Michaelmas day.' Elsewhere we find mention of iron bought for the Bourse. In short, it is evident that nearly all the materials of which that edifice was composed were brought from Flanders; and it is worth observing, that the date of the last passage in Clough's letters, where the slates for the Bourse are mentioned, is October 1567, which corresponds very well with Stowe's narrative,—'by the month of November, in the year 1567, the same was covered with slate, and shortly after fully finished.'"

And now began the troubles in the Low Countries; which, from being the wealthiest and most prosperous land in Europe, soon sunk with its people into the lowest condition of bloodshed and misery, with its *Placcarts* for laws, and *Gueux* for Charists—a pregnant lesson to every commercial community on the face of the earth. The settlement of many of its most industrious citizens in England, the dispersion of others over the Continent, and, above all, the transfer of the British trade to Hamburg, the account of which is very curious and interesting, are all circumstances well worthy of careful perusal and consideration. The tragedies of Alva, and the destruction of property and security by civil war, are instructive; and Gresham's finance finale almost like the *dénouement* of a drama:—

"I have spoken (he writes) with the Queen's Majestie's creditors for the prolonging of the rest of the xxxij *ii* *li*, with whom I have had much ado; but (thanks be to God!) now I am at a point with them. So that I have delivered them the new bondes to consider; and upon the receipt of the old, I doo intend (with the leave of God and the Queene's Majestie) to make my repaire homewards with the olde bonds; and so to departe this town with as much honnor and credit to my sovereign as ever I did in all my life. For, with my sodden departure, I shall give the burse and all other marchants to understand that I have no more neede of monie, and that I have contented all the creditors; which is most convenient for me so to do as the time now requirith. For that I do see and feele already that here is no more monny to be had at no price; by reason I have gone through all the monnie-men by one practise or other, and specially with all them which I was wonte to deale withal,—as the Fucker, Schetz, Paulus Van Dall, Rellinger, Lixall, the heires of Lazarus Tucker, and divers other; of whom there was not a peny to be had, by the reason they be so farre ought with their Prince, and verie sore indebted in this place, and take up all they can get, themselves, to preserve their credit. So, Sir, I will no further molest your honor of the great scarcity of monnie that is here; nor also what ado I have had to come by this monnie; but therein refer me to the report of others. Being right glad, in this miserable time, that I have accomplished the things that her highness sent me over for."

So he gave the Queen's creditors, as was customary, a splendid banquet, and bade them—alas, how ineffectually!—*fare-well*.

In 1574 or 5, after his more active career had closed, and the Bourse been built ten years, Sir Thomas founded his college in London for the gratuitous instruction of all who chose to attend, and Gresham House in Bishopsgate Street (pulled down in 1768) was the result. The seven sciences to be taught were divinity, astronomy, music, geometry, law, medicine, and

rhetoric. Gresham died of apoplexy at the age of sixty years.

Little Pedlington and the Pedlingtonians. By John Poole, Esq., author of "Paul Pry," &c. 2 vols. post 8vo. London, 1839. Colburn.

MR. POOLE introduces this amusing production to us by a preface, which denounces humbug, and does not a little indulge in that quality. It declares that all the characters in *Little Pedlington* are nominally and truly what they are represented to be, or have been; and that they bear reference to no other parties whoso or whosoever. Persons who have fancied that he drew from other sources and individuals, must therefore be mistaken; i. e. if they believe this assertion, which we confess we do not. But never mind whence the writer has taken his materials. As his sketches appeared in the "New Monthly Magazine," every body acknowledged their humour, and laughed at their clever and never ill-natured satire. His theatrical squabbles, his publisher-disputes, his critical expositions—in short, all his pictures of many-coloured life, were so absurdly applicable, that whilst we were diverted by the fun, we might learn lessons of wisdom and conduct from the examples set before us. We are not aware that any personal offence has been taken at the portraiture; but we can safely aver, that if we had figured in the same manner that others appear to have done, we should have enjoyed the joke and pardoned the freedom.

Mr. Poole's style is peculiarly his own. Under the semblance of playfulness there is always an under-current of very acute observation, and application to the world around, its actors and doings. Sometimes this is caustic enough, and sometimes caricature may be called in to give point and piquancy, but it is seldom altogether unfounded or harshly unjust. There is a drollery about it which would convert a stinging into a tickling; and even if annoyed by it, we could not abstain from laughter.

At all events, we are glad to see *Little Pedlington*, and its microcosm, in a separate form. It must entertain the reader; and, if judiciously taken, it may contribute a good deal to the benefit of the drama, criticism, competition, and other pursuits in which all mankind are more or less interested and engaged.

MISCELLANEOUS.

The Modern Literature of France. By G. W. M. Reynolds, author of "Pickwick Abroad," &c. 2 vols. London, 1839. Henderson.

THE author's view of modern French literature is so essentially opposed to ours in almost all that concerns good taste, morality, and religion, that we cannot enter upon a detailed notice of his publication. It would lead us into a long argument, for which we have neither inclination nor space. All we shall say, therefore, is, that his work contains a good deal of information on the subject, and tells the reader much about recent French works and authors.

Narrative of a Visit to the Court of Sind, at Hyderabad, on the Indus. Illustrated with Plates and a Map; with a Sketch of the History of Cutch, and an Appendix. By James Burnes, K.H., LL.D., F.R.S., &c., Bombay Army. 12mo. London, 1839. Most of this little volume has appeared before in various publications, but being collected together and well arranged, we beg to notice it

as one of the most useful and appropriate works of the day, fully explaining the past and present condition of Cutch and Sind; and the best geographical and commercial information that can be obtained respecting the opening of the navigation of the Indus, and the wants, trade, resources, &c. of the inhabitants who live on the banks of that noble river.

A Series of Letters, Addressed to H. R. H. The Duke of Sussex, as President of the Royal Society, Remonstrating against the Conduct of that Learned Body. By Lieut.-Colonel Everest. 8vo. pp. 147. London, 1839. Pickering.

THIS biting and satirical pamphlet is an answer to a preceding brochure by Major Jervis, of the Bombay Engineers, with remarks, not of the most placid or complimentary kind, upon an address to the East Indian Directory, signed by thirty-eight members of the Royal Society, recommending certain scientific proceedings in regard to India, and involving the personal employment of the authors of these publications. The principal subject in dispute is the continuation of the Grand Trigonometrical Survey of India, of which geodetical operations Lieut.-Colonel Everest has been the principal superintendent since the death of his predecessor, Lieut.-Colonel Lambton, in 1827 (to whom he was chief assistant, for five years from 1818); and with which he thinks Major Jervis and his friends, in this Royal Society, have improperly interfered. For this offence he belabours them with all his might, and cuts right and left, not only upon the surveying question, but upon other suggestions, touching the languages, the religions, the geography, &c. &c., of the country, about which the advisers were wonderfully ignorant. Such is the character of these letters, and without taking any part in their *pros* and *cons*, we are bound to say that they are sufficiently seasoned to be more piquant and amusing than such matters usually are.

Smith's Standard Library. (London, Smith.)—We feel great pleasure in paying a justly deserved compliment to this series of works in a cheap form. They are printed in excellent style in large octavo form, and vary in price from sixpence to four or five shillings. The last issued are "Home," by Miss Sedgwick, Mr. Stephens' "Incidents of Travel," "The Vision of Don Roderick," and "The Life of Benvenuto Cellini."

ARTS AND SCIENCES.

THE ANTARCTIC EXPEDITION

PROCEEDS, we believe, on its voyage this day, and we take leave to add a few further particulars to the account given of it in our last *Literary Gazette*. At the Cape of Good Hope the vessels will probably not remain more than three or four days, merely to land the observatory and instruments. They will then trace their course by Marron and Prince Edward's Island, Crozet Isles, and so on to Kerguelen Land (S. lat. 49° 50', and E. long. 70°), which being in a vast expanse of ocean, and equidistant from the two great continents of Africa and Australia, is considered a most eligible site for taking observations. Had the expedition been able to sail at an earlier period, it would probably, from hence, have explored the regions ten or fifteen degrees to the south, where are laid down Bellinghausen's course and views of land in February 1820; Briscoe's course, in February and March 1831; Kemp's track and land, seen in December 1833; Enderby's Land, and other interesting points in that direction, of which we have as yet only geographical glimmerings. But as the time will not now admit of this, the voyage will be continued in lower latitudes to Van

Diemen's Land, taking the opportunity, in crossing them, to ascertain the lines of magnetism converging towards the polar circle.

At Van Diemen's Land, the observatory, &c., will be landed, and our navigators meet their old friend and associate in northern enterprise, Sir John Franklin, who, we dare to say, would rather be their companion again than governor of the colony—such is the hold which such exploits and services take upon the minds of men. Whilst the observatory is erecting, the Erebus and Terror will take a cruise along the Australian coast, Port Jackson, &c., look after Howe Island, Admiralty Rocks, Curtis Island, L'Espérance Rocks, Chatham Island, Cornwallis Isles, Antipodes' Island, Campbell Island, Emerald Island, and other very imperfectly known lands, all scattered round New Zealand. On this route they will have opportunities to ascertain the lines of magnetism converging in an opposite direction to those obtained before, and pointing from the westward as the former from the eastward to the magnetic pole.

About November 1840, it may be expected, that having revisited Van Diemen's Land, and completed their observations in the new observatory, our gallant countrymen will sail to fix the precise spot where that pole exists. In our last, we expressed an opinion that it would be found situated rather lower, to the north, than either Capt. Ross or Professor Strauss (as we are taught by more careful examination of their statements) look for it; and it is worthy of remark, that their calculations coincide most curiously on this important question. We would say, then, that the antarctic pole will be discovered somewhere between E. long. 140° and 160°, and lat. 62° and 70°—a small compass when we consider the short measure of the longitudinal degrees in that quarter of the globe.*

The summer months of December, January, February, March, and April, will be spent in this investigation; and searching for the lands mentioned in our last under the names of *Sabrina* and *Ballynny*. Of the latter, we are informed that the mate of Mr. Enderby's ship landed upon it with a boat, if landing it can be called, when he shoved in amongst the ice, leaped into the water up to his middle, and shovelled up some handfuls of stones and gravel, or sand, from the beach below.

If they can penetrate to the south, perhaps the expedition will winter here among the ices of the South Pole. All beyond is as yet utterly unknown to man.

It would be superfluous for us at this period to endeavour to trace the future operations of the expedition. The pole of intensity will probably be found between the magnetic pole and Van Diemen's Land; and the vessels, it is to be hoped, will return in safety, with all their acquired information, to the latter, in 1841. They will then circumnavigate the great polar basin, and, wherever the attempts can be made, reach the highest possible latitudes. The secondary pole should be near Weddell's furthest point. Circumstances must therefore determine the extent of their exertions, and the time they will employ. But we trust to witness their happy arrival on the English shores, after an absence of three years.

Among the excellent arrangements of the ships, we ought to have noticed the bulls' eyes,

* *Impromptu.*—The following impromptu was written at Hull, by a friend who, calling on its subject after his landing from a former voyage overcome with fatigue, found him fast asleep: it was stuck over his pillow.

"Here lies one, the first whose sole
Stood on the North Magnetic Pole:
Doomed upon frozen seas to roam,
At birth they named him—I. C. Ross."

which, instead of being fixtures, are formed to unscrew; and thus, in connexion with the warm air between decks, may, at all times, be turned to the most perfect system of ventilation. We cannot imagine any expedient so well calculated to conduce to the health of the crew. A gong has also been placed in each vessel, for signals in foggy weather, and in darkness; but, indeed, in every respect, the utmost precautions have been adopted to insure a comfortable progress and a prosperous issue. When we mentioned the engraving in Captain Ross's cabin, we overlooked its appropriate companion, *Christ Stilling the Troubled Waves*;—an omission which, as faithful chroniclers, we are bound to repair.

Once more, and again, we have only to repeat our own and the general prayer—*"Farewell! Farewell!"*

THE BRITISH ASSOCIATION.

NINTH MEETING: BIRMINGHAM.

[Fourth Notice.]

WE have to commence our Report this week with two papers (read on Thursday and Saturday) on a subject of universal interest, which were prepared for our last Number, but deferred, in spite of our teeth, for want of room.

SECTION E.—Medical Science.

Mr. Nasmyth, 'On the Structure of the Teeth.' Feeling dissatisfied with some of the results of the investigations of late years contained in the writings of Retzius, Purkinje, and Müller, on the subject of the structure of the teeth; and having completed a series of researches, which he had commenced several years ago, and which he had pursued uninterruptedly to the present time, Mr. Nasmyth briefly placed before the Section the conclusions to which he had arrived on the following subjects: 1. On the covering of the enamel; 2. On the structure of the teeth; and 3. On the structure of the pulp, and its relation to the development of the ivory. He observed that the researches of Retzius and Purkinje, so faithfully detailed to the Section last year by Professor Owen, have established, that there enters into the composition of the simple and compound teeth of man and mammalia generally, not only ivory and enamel, but a third substance, the *crusta petrosa*, which had been noticed previously on the free surface of the compound teeth of graminivorous animals. The *crusta petrosa*, as existing on simple teeth, was described after Retzius, Purkinje, and Fränkel, as a layer external to the ivory of the fang, but as not present on these simple teeth as a covering to the enamel. Purkinje and Fränkel, however, state that they had once noticed it coating partially the enamel on the tooth of an old man. Mr. Nasmyth's researches have led him to the conviction that the enamel itself possesses, in all instances, a distinct envelope or coating. On the incisor of the calf, and several other simple teeth, he had also distinctly traced in this layer of *crusta petrosa*, superimposed on the enamel, the corpuscles of Purkinje, analogous to those found in bone. Mr. Nasmyth possesses preparations of teeth of the human subject, and simple teeth of the herbivora and carnivora, shewing this structure in a clear and unequivocal form. The details of its discovery and of its anatomical description, may be found by those who feel anxious to inquire further into the subject, in his paper in the forthcoming volume of the "Transactions of the Medical and Chirurgical Society," accompanied by drawings. In a paper submitted (see p. 600) to the Geological Section of the Association, on the struc-

ture of the substance, which, in the dental ivory, occupies the space between the fibres, Mr. Nasmyth proved, by a careful examination both of fossil and recent teeth, that the inter-fibrous substance is not structureless, but that it presents a character so remarkably well defined as to furnish a most important and interesting accession to the odontographic basis for a classification of the animal kingdom. [Drawings were exhibited.] He had also made researches into the structure and composition of the fibres of different teeth, and had generally found that these present an interrupted or baccated appearance, as if they were made up of different compartments. The size and relative positions of these portions or divisions of a fibre differ in various series of animals. In the human subject, for instance, each compartment of the fibre is of an oval shape, and its long small extremity is in opposition to the one next adjoining. The long axis of the oval corresponds with the course of the fibre. In some species of the monkey tribe, the fibre appears to be composed of two rows of compartments, parallel to each other, and a trace of the same appearance is evident even in some of the principal ramifications of the fibres. In the orangutan, the fibre is composed of rhomboidal divisions; and in the baboon, they are oval, like those of the human subject, and the surfaces of the long axis are in opposition. When teeth are submitted to the action of acid for a period sufficiently long to allow the earthy matter to be all taken up, the animal residue consists of solid fibres; and if the decomposition be allowed to continue, these fibres present a peculiar baccated appearance. Diagrams exhibited the appearance of the ivory, when the earthy matter has been almost entirely removed by acid, but when the cells still retain their position;—a more advanced stage of decomposition, where there seem to be attached to each fibre minute lateral filaments, which Mr. N. presumed to be the remaining portions of the emptied cells;—and the appearances presented when decomposition has so far advanced as to have rendered the fibre interrupted or baccated. The general appearance of the fibres thus treated is exactly similar to that of the fibres of cellular tissue generally; and the diameter of each fibre corresponds exactly to the diameter of the calibre of the tube, which, according to Retzius, is pervious, although, at the same time, he says that it is always more or less filled with contents of an earthy nature. In fact, the tubes have been said to be principally visible by means of their contents; the reason of which appears obviously to be, that these contents are the only part of them which actually exist. In order to separate the animal matter from the osseous substance of the tooth, Mr. N. submitted thin slices of many different kinds of dental bone to the action of a solution of caustic potash, for a period sufficient to dissolve and remove the organic tissue; but the brittle nature of the residue, the difficulty of washing it without breaking down its structure, and the great opacity of the sections which had been thus treated, deprived this experiment of any striking results, illustrative of the internal organisation of teeth; but the appearances presented in its progress were all such as to favour the conclusion, that the structure of the ivory is essentially cellular. Having convinced himself of the existence of the peculiar cellular structure of the tooth, he entered with great interest on an examination of the organ by which it is produced, viz. the pulp. On examining the internal structure of the pulp generally, the number of minute cells present-

ing themselves in a vesicular form is very remarkable: they constitute, indeed, the principal portion of its bulk. These vesicles vary in size from the smallest perceptible microscopic appearance, probably the ten-thousandth part of an inch in diameter, to one-eighth of an inch, and are evidently disposed in different layers throughout the body of the pulp. They are of various shapes, as shewn in diagrams. When thin layers of macerated pulp are examined, they present an irregular reticular appearance, and are found to be interspersed with granules. The parenchyma is traversed by vessels, of which the direction is generally vertical. He had frequently been struck with the rapidity with which the pulp diminishes in volume, and with the extent of this diminution. Sometimes, indeed, it would appear in a short space of time to be almost annihilated; and this seems to take place more decidedly when the tooth has been in a healthy state, and more frequently in adult than in temporary teeth. This shrinking, or almost total disappearance, may be accounted for by a peculiar collapse or change in the congeries of cells of which we find the pulp to be made up. The use of this peculiar arrangement, and the purpose which it serves in the economy of the part, will furnish curious subjects for future inquiry. A subject also highly worthy of investigation is the nature of the contents of these cells. They must evidently be filled either with air or fluid; but they are so extremely minute, that he has not yet been able to ascertain which. Much diversity of opinion, Mr. Nasmyth proceeded to remark, has always existed respecting the connexion of the pulp with the ivory of the tooth; and as to whether the ivory be simply a product of the pulp, or a transformation of its substance. Although this is by far the most interesting point in dental physiology, and involves the grand question of the manner in which the tooth is formed, as well as that of its arrangement and conformation, it is, notwithstanding, less understood, has been less studied, and is, consequently, more obscure, than any other part of the subject. The vague style in which authors discuss, or rather dismiss this topic, shews how little has been really done to elucidate it. The formative surface of the pulp displays a general cellular arrangement, which Mr. N. denominated reticular, and which, he stated, may be described as resembling a series of skeletons of desiccated leaves. [Drawings illustrated the appearances.] The large compartments, or leaves, of the reticulation, were seen to be oval, and overlap one another. On insulating one of these compartments, or leaves, its structure is found to be curious and regular. These beautiful reticulations have peculiar diversities in different animals. He first observed them in the human pulp, and soon found them in all other animals which he had an opportunity of examining, varying in size and arrangement in different cases. He had next extended his observations to the capsule, and to the capsular investment of the enamel, and found in these the same reticular disposition, though with characteristic variations. These leaves of reticulation are surrounded by a well-defined scolloped border, from which, occasionally, processes are observed to project at regular intervals. Mr. N. had next proceeded to inquire how the transition into ivory is effected. The researches which he had made on this point, he stated, are, as yet, imperfect; and he approached the subject with diffidence, knowing the deceptive results to which novelties sometimes lead; and well aware of the necessity of long study and deliberation, before judgment

be positively given on a point hitherto undecided. How does the fibre of the tooth originate? and how is the interfibrous substance, which must form the main bulk of the tooth, deposited? Mr. N. stated how far his own observations allowed him to answer these difficult questions; and he hoped by a few facts, which he thought his investigations had placed beyond doubt, to pave the way for a satisfactory explanation of the formation of dental bone. On the surface of the pulp, he observed, are found innumerable detached cells, with central points. Generally, these cells form a regular and complete coating, studded with points, which are placed at intervals, corresponding in extent to those between the fibres of the teeth. These points are rendered visible, from the greater opacity of the intermediate material, and will be seen to reflect or absorb the light, according to the difference in the focal distance. A comparison between the superincumbent perfect ivory and the formative surface of the pulp beneath, is always easy; because portions of the former at an early stage, at any rate, remain adherent to the latter, and fragments of the dental bone are found strewn over it, more especially in human teeth. The cellular conformation of these fragments is always evident, and in size and appearance they are perfectly accordant with cellulæ of the pulp. At an early stage of dental development, the reticulated or cellular appearance of the pulp is particularly beautiful. When merely a thin layer of ossific matter has been deposited on its surface, it may with great facility be drawn out entire, together with the former, laid on a glass, compressed a little, and then examined with the high powers of the microscope. The different layers of cells will be seen, and the transition into ivory may be observed. It appeared to him that the framework of the reticulations, or cellulæ of the pulp, is constituted by the fibres of the tooth, which, while in this state, are spirally coiled, and fit into one another. At all events the diameter of these fibres of the reticulations is precisely that of the fibres of the ivory, the points or projections rising from the framework correspond to the centres of the cells, and may be traced to belong to their structure. The fibres of the ivory are frequently very spirally curved, like those of the pulp, as they must be from the manner of their evolution. A diagram shewed the appearances presented by a portion of a recent tooth, which has been submitted to the action of acid. Part of the pulp was visible in connexion with the ivory, and the spiral fibres were seen as they are evolved on the surface of the former. It appeared to Mr. Nasmyth, on microscopic examination, that this convoluted fibre is made up of single successive granules, which are developed one after the other from the body of the pulp, until the fibre is complete. The manner in which the osseous matter is deposited in the cells of the interfibrous substance he had not been able to discover. It would appear that these cells are subdivided into minute cellulæ, for they present the appearance of being filled with granules in certain progressive stages of development. He stated, however, that in whatever aspect, therefore, we view the formative organs of the tooth, and the dental tissues themselves, and whether we examine the latter during the process of their development, or after their formation has been completed, we are every where met by appearances which denote a cellular or reticular arrangement. He allowed that these views of the formation and structure of the teeth are both bold and novel, but he did not

claim for them infallibility; he simply submitted them to the Association as the results of actual observation. He fully recognised and respected the authorities ranged in support of very different theories, though he still ventured to think that, were not his limits confined, he could easily shew how what he held to be fallacies and incongruities have arisen. As, for instance, from want of practice in the manipulation of materials, the precise nature of which has not been attended to; want of familiarity with microscopic appearances; ocular deception; the want of a well-defined magnifying power; and imperfect light in the microscope used; have been, doubtless, also causes of many of the conflicting conclusions to which almost all inquiries in this region of anatomy have arrived. He thought that the view he had taken of the subject more satisfactorily than any other explains facts of daily experience. The laminated arrangement of the osseous cells explains the concentric fracture of the tusks of the mammoth, and of other teeth, when left to decompose spontaneously. The cells being in imbricated apposition, and held together by earthy salts, being moreover arranged in layers, conformably with the periphery of the pulp, must be regarded as concentrically laminated. The existence of this structure explains the phenomena daily noticed by ivory cutters, and also Mr. Hunter's experiments of feeding animals with madder, the result of which is incompatible with any other theory of the structure of dental bone. No view hitherto taken of the structure of dental bone has afforded a satisfactory explanation of the ordinary morbid appearances of the tooth; but many of these, he thought, may be explained, if we regard the latter as cellular. Still he did not conceive that he had in any way exhausted the subject; far from it. He was quite alive to the imperfect nature of his researches, and was prepared for correction on many points, when more extended and more varied investigations shall have been undertaken. He had found that Schwann, in a recent work, teaches, that all the primary tissues of the animal frame are cellular; and has given to the world some remarkably interesting details on this subject. He says, that he has remarked the characteristic "cellular nuclei," or elementary cells, on the enamel membrane, that they are continued in minute fibres, and that these are similar to the epithelium cylinders in mucous membranes. He notices what he calls cylindrical cells on the surface of the pulp; and he supposes that these cylindrical cells of the pulp are the fibres of the tooth in their first stage, which does not at all coincide with Mr. Nasmyth's observations. Schwann regards the dental substance as the ossified pulp, whilst Mr. Nasmyth's observations lead him to conclude that the cells of the ivory are altogether a distinct formation. Schwann acknowledges, however, that he is ignorant of the process of transition, and he regards the dental pulp as a simple cartilage. In fact, he starts with a ready-made hypothesis, and founds his opinion rather on the observations of others, and on the inferences he draws from them, than on his own actual researches: with respect to what he himself gives as his own, it accords for the most part with the details Mr. Nasmyth had first communicated. According to Purkinje and Raschkow, the pulp consists at first of nearly uniform globules, without vessels and nerves; afterwards vessels arise in it, and at last nerves also. On the surface the globules are more regularly arranged, and more longitudinally extended, and turned in an external direc-

tion under right, or very slightly acute angles. These longitudinally drawn out globules, Mr. Nasmyth observed, are plainly cylindrical cells. They contain very evidently in fresh teeth the characteristic cellular nucleus-corpuscles, and are very similar to the prisms of the enamel membrane. The interior of the pulp consists of round cells also, with a nucleus; and between these cells run vessels and nerves. If we draw the pulp of a young tooth out of its cavity, and then examine the dental substance, whether deprived or not of its calcareous salts by muriatic acid, we shall find on its internal surface, at any rate inferiorly, where the already formed dental substance is still thin and soft, a layer of the cylindrical cells of the pulp. These have about the same thickness as the solid fibres of the dental substance, and also the same course; and inasmuch as they, on the one hand, plainly belong to the pulp, on account of their conformity with the cylindrical cells adhering to the remaining surface of the pulp; and on the other hand, as they cohere more firmly with the dental substance than with the pulp, and remain attached to the former, Mr. Nasmyth presumed that here a transition takes place, and that the cylindrical cells of the pulp are only the fibres of the tooth in their first stage, and change into the latter by filling with organic substance, becoming solid and ossifying. Sometimes these cylindrical cells are not found on the dental substance; but then, in their place are found a number of cellular nuclei. These are of a very pale colour, and are intimately connected with the dental substance, so that they are easily overlooked; but when the attention is once directed to them, it is impossible not to recognise them: the spaces between them are very narrow. Against the theory that the dental substance is the ossified portion of the pulp, the facility with which the one is separated from the other has been adduced; and he allowed the force of this objection. Nevertheless, it is at any rate weakened by the circumstance that a portion of the pulp actually remains attached to the dental substance, and by the fact that in half-ossified ribs, for instance, the cartilage can be easily separated from the ossified portion; and it must be remembered, that in the tooth the separation must be easy in proportion to the differences between the consistence of the pulp and of the dental bone.

We give *verbatim* Mr. Nasmyth's next paper 'On Epithelium,' in continuation of this interesting subject:—"In a former part of this communication I have endeavoured to prove that the pulp, the formative organ of the tooth, is composed of cells. I have also shewn that the character of the teeth themselves is more or less cellular; and the observations which I have made on the structure of the epithelium have led me to the conviction that it also is composed of cells. Although some of the facts which I am about to relate have, since the prosecution of my researches, been noticed by Heule and Schwann, in Germany, I think it right, nevertheless, to state concisely all the results of my investigations. Leeuwenhoek, who did so much towards the advancement of structural anatomy, was the first to give an accurate account of the structure of the epithelium. His researches on this subject are contained in letters to the Royal Society in the years 1674, 1684-85, which will be found in the third and fourth volumes of his collected works. He there states that the human epidermis and epithelium are composed of scales; and of these he has left very accurate descriptions and delineations. He spoke of the scales of the epithe-

lium as existing upon the mucous membrane of the mouth. The researches of subsequent observers tend to prove that these scales, or cells, exist in various forms upon the surface of all mucous and serous membranes, upon the inner membrane of the vascular system, &c. With respect to the existence of these scales on those membranes, I agree with the authorities whom I have just quoted; and, having premised thus much, I shall now proceed to treat, firstly, of the structure of the epithelium generally; and, secondly, on the epithelium as existing in the cavity of the mouth. *Structure of the epithelium generally*.—The epithelium is a layer of substance destitute of vessels, which covers the vascular surface of mucous membranes. Though destitute of vessels, it cannot, however, be considered as inorganic, as I shall presently shew. If the surface of a mucous membrane (for instance, the conjunctiva, or the buccal) of a living animal be slightly rubbed, it will be found, on microscopic examination, that numerous small particles have been detached from it. At the first glance they present precisely the appearance of scales, for they are flat bodies with a thick portion, or nucleus, in their centre, and with very thin and transparent margins. It was Leewenhoek who first gave to these bodies the name of scales. They are found not unfrequently with a curved margin, and without a central spot, or nucleus, and their surface often presents numerous transparent points, with very fine lines. The nucleus of the scale generally contains a small body, which has been termed the nucleus-corpuse. But, by this simple method of observation, we do not obtain an insight into their true structure. If we remove the secretion from the surface of an irritated mucous membrane, we shall find another class of bodies, which differ from these first mentioned, in being smaller and more globular. They have a nucleus of the same size as those of the so-called scales, and also a nucleus-corpuse; but the surrounding structure is in the form of a cell, and is much smaller. Here and there may also be observed a nucleus with its accompanying corpuse, lying in substance which presents no appearance of a cell. The structures here described may also be seen on a careful examination of a section of the epithelium and mucous membrane of a young subject. On the surface of, and in immediate apposition to, the mucous membrane, are seen numerous nuclei, which, more externally, are surrounded by a cell; and, on approaching still nearer to the surface, we find this cell, from having increased considerably in size and become compressed, assuming the appearance of a scale, which retains the nucleus and its corpuse of primitive size.* In the foetus, the defined and well-formed scales of the epidermis are not unfrequently distinctly seen externally; the *rete malpighii* consists of newly formed cells; and between the two may be observed other cells in a state of progressive development. On the surface of the vascular mucous membrane, minute cells are found with a nucleus in their interior, round which the cells grow; and this, in short,

* The various stages of the development of the epithelium may be satisfactorily traced, by removing, after a short maceration, the layer of epithelium from the under surface of the tongue of a young calf, and placing it upon a piece of glass, when, if the external surface of the object be brought into focal distance, large scales only with their central nuclei are observable; but if the object be approximated to the glass, so as to bring the internal part of it into the proper focal distance, numerous small scales are brought into view; and if the object be still more approximated to the lens, so as to bring its internal surface into the proper focal distance, numerous rounded cells become apparent.

is the process of development of the minute bodies which constitute the epithelium. An interesting subject of investigation, and one which, I believe, has not been entered upon by those who have hitherto treated of this department of anatomical science, is the manner in which the component parts of the epithelium are connected. The cells on the surface of the mucous membrane are separated from each other by considerable spaces, which are occupied by a gelatinous substance, interspersed with minute granular bodies. But the scales forming superficial layers of the epithelium are separated by very minute linear spaces; but are still connected together by a translucent, gelatinous substance. This latter displays considerable elasticity, as is rendered evident by an attempt to lacerate the epithelium in a moist state, if the latter be examined at the same time by the aid of a magnifying power. Each time that the laceration is attempted, the membrane yields, and the scales separate to a certain extent, but regain their original position on the cessation of the effort to draw them apart. In some instances a fibrous structure is evident in the gelatinous substance between the scales. The scales towards the free surface are distinctly observed to overlap. The gelatinous substance, above alluded to, presents distinct granular bodies, which give to the epithelium, *en masse*, a rather dense aspect, the individual scales being sometimes covered by these granules; the latter can, however, be separated from the scales by compression: by which means, indeed, the granules themselves may be made entirely to disappear. In certain parts of the epithelium of the calf, distinct fibres are observed, which pass over the surface of the scales and connect them together, thus forming a very delicate net-work. This appearance is most evident upon compression of the thick epithelium on the anterior part of the alveolar arch of the upper jaw. In these cases where the small scales, or small clusters of scales, are being continually thrown off, as on the surface of the body and of the mucous membranes of man and animals generally, the scales composing the external layer will be found to overlap each other, and thus the gradual presence of scales below, which are increasing in size, is the cause of the throwing off of these cuticular lamellae. After these have been detached, their place is occupied by newly formed scales. But there is another form in which the external layer of cuticle is removed, viz. in a continuous layer. The cuticle of the frog is composed of minute scales, the borders of which do not overlap, but are held in direct opposition, so as to form one lamina, which has a beautiful continuous tessellated appearance. This layer, covering the whole body, is thrown off entire by frogs and efts. I am disposed to believe that it is this covering which, according to naturalists, is swallowed by the animal after having been thrown off. As soon as this layer is removed, another lamina of scales is seen on the surface of the animal's skin. If, after the death of a frog, it be immersed in water, this thin, external, translucent layer, generally separates; but, upon prolonging the maceration, another lamina is found to be gradually separating from the cutis, which is dense, and sometimes measures a quarter of a line in thickness. Internally it will be found to be composed of very numerous cells, while externally the regular series of scales is evident. The tessellated lamina, alluded to above, evidently takes its origin from this layer of cuticle. An examination of specimens, and a consideration of the facts which I have related, cannot,

I think, lead to any other conclusion, than that the cuticle and epithelium are organised tissues. It would appear that they are formed from a fluid secretion on the surface of the vascular chorion; the various stages of development being, 1st. the formation of nuclei and corpuscles; 2d. that of cells; 3d. the growth of the latter, effected by vital imbibition; 4th. their compression and gradual conversion into minute lamellae, or scales. In short, it appears a rational conclusion, that the component parts of the cuticle and epithelium have within themselves a power of growth; and it remains for pathologists to determine what share the derangement of this function has in the production of cutaneous diseases. Another argument in favour of the organic nature of the epithelium is derived from the circumstance that, under certain modifications, it presents various vital phenomena, among which may be mentioned the ciliary motions. I now proceed to describe my researches *On the structure and development of that portion of the epithelium which lines the cavity of the mouth*. In the foetal subject, previous to the extrusion of the teeth, it forms on the alveolar arch a dense projecting layer, distinguishable from the surrounding membrane by its whiteness, and by the existence on its surface of ridges and sulci, having a waving course and a variable direction. The alveolar epithelium is thicker in proportion to the youth of the subject examined. It is most prominent where it corresponds with the molar teeth; its internal surface is concave, receiving the projecting mucous membrane. This portion presents various objects for investigation. Firstly, as regards its composition:—It is made up of a mass of scales, lying one on the surface of the other. This disposition shews that the terms 'dental cartilage,' or the 'cartilage of the gum,' which have hitherto been applied to this structure, give an erroneous idea of its true nature, for cartilage always presents the corpuse discovered and described by Purkinje. As in other portions of the epithelium, the external scales here are the larger, and this holds good generally, until we come to the surface of the vascular mucous membrane, which presents simple cells with their corpuscles. In the interior of this alveolar epithelium, where it corresponds to the molar teeth, small vesicles may be frequently observed, varying in size from $\frac{1}{4}$ to $\frac{1}{2}$ of a line in diameter. They appear to the naked eye to be transparent; under the microscope their parietes are found to consist of attenuated scales, and their cavity to contain a fluid abounding in minute granules and cells.* The internal surface of the epithelium, covering the alveolar arch, frequently presents concavities or indentations, which are from a line and a half to three or four lines in circumference; they correspond to projections from the mucous membrane, formed by a larger species of vesicle. The latter is deeply implanted in the vascular mucous membrane. The parietes of these vesicles are composed of a very delicate membrane; they contain a transparent fluid, which coagulates on the application of heat, or acid, or on immersion in spirit; and in this fluid float numerous globules and scales, similar to those of the epithelium generally. The internal or attached surface of the alveolar epithelium also presents numerous fringed processes, measuring from one line to one line and a half in length, and half a line in breadth, which sink into the substance of

* The vesicles here alluded to are most probably those which Serres describes as glands for the secretion of tartar: they are very numerous, even after the extrusion of the incisor teeth of the calf, and are seen with great facility internally.

the subjacent mucous membrane. Under the microscope these fringes are found to be composed of elongated scales connected together, forming masses, which divide and subdivide until they attain such an extreme tenuity that the most minute terminations consist but of two scales in marginal apposition. If the epithelium be carefully separated from the surface of the mucous membrane, corresponding to the unextruded molar teeth, and placed in water, or in diluted spirit of wine, for some little time, its internal or attached surface presents these fringes much enlarged, and forming a mass more considerable in size than the dense epithelium itself. The epithelium covering the mucous membrane of the palate presents transverse rugæ, corresponding to those of the mucous membrane. If these palatal rugæ of the epithelium of the calf be carefully examined from the internal surface, with a magnifying power of one-inch focal distance, each will be found to consist, or to be composed of, numerous depressions, or *cul de sacs*, which receive prolongations or pointed processes of the subjacent mucous membrane. They are of extreme tenuity, and when viewed by the aid of high magnifying powers, are observed to consist of distinct scales. A question of much interest, and one to which I have paid considerable attention, is, Whether recent investigators are warranted in considering mucus and epithelium as identical? I am disposed to think that they are formations quite independent of each other; but my reasons for arriving at this conclusion are numerous, and the details of my investigations upon this part of the subject I propose to treat of at length elsewhere."

THURSDAY.

SECTION A.—*Mathematics and Physics.*

1. Sir John Herschel's 'Report of the Committee appointed to represent to Government the Recommendations of the British Association relative to the Extension of Magnetic Observations.'
2. Professor Powell, 'On certain Points on the Wave-Theory.'
3. Mr. Hodgkinson, 'On the Temperature of the Earth in the Deep Mines of Lancashire and Cheshire.'
4. Professor Forbes, 'Two Years' Observations of Thermometers sunk to various Depths near Edinburgh.'
5. Mr. Snow Harris, 'Report on Meteorological Observations.'
6. Dr. Ure, 'On a New Calorimeter for the Measurement of Heat dissipated in Combustion.'
7. Professor Stevally, 'On filling a Barometer without the Aid of the Air-Pump, and obtaining an Invariable Surface in the Cistern.'

The first of these papers related to the measures adopted for sending out the Antarctic Expedition, and establishing observatories, &c. &c., of all which our readers are well informed.

The second was one of high theoretical interest, in which the learned professor endeavoured to reconcile the differences of opinion and contradictions of phenomena connected with the dispersion of the wave surface, and elliptical polarisation of light, *sed adhuc sub judice lis est*.

Mr. Hodgkinson had carried on a series of experiments, as recommended by the Association, and with instruments supplied by it, on the temperature of the earth at certain depths in Lancashire and Cheshire mines. The results were rather anomalous, and the experiments were being continued to obtain further data. Professor Stevally and Professor Forbes noticed that coal mines, from their development of heat under particular conditions, were unfit localities for solving this problem.

Professor Forbes then brought forward his own weekly observations on the subject during two years, and gave the results of twelve thermometers sunk at three different stations in trap tufa, loose sand, and compact sandstone. The measurement of their depth was in French feet; why, we do not know. The practical

advance in this class of investigation is most laudable.

Mr. Snow Harris's paper in our last. (See pp. 586-7.)

The researches of Dr. Ure are still in progress. They have reference principally, in their present stage, to the heating powers of Welsh anthracite, Llangennech, Lambton's End, and other coals. They will, however, be extended to every variety of fuel, natural and artificial. In experiments with former water calorimeters, the estimate of a portion of the heat could not be depended upon, in consequence of the combustion being kept up by the current of a chimney through which a quantity of the heat passed away. This defect by his present apparatus (a copper bath traversed with zig-zag flat pipes, and an enclosed furnace) Dr. Ure has entirely removed. The results, in a complete form, will be highly interesting and important.

The business closed with a description of Professor Stevally's method of filling a barometer without the aid of an air-pump; which consisted of using the vacuum in the tube itself as a substitute for the air-pump usually employed, and so difficult to be employed with perfect success by ordinary workmen.

SECTION B.—*Chemistry and Mineralogy.*

1. Mr. L. Playfair, 'On the True Constitution of Chlorochromic Acid; a new Compound called Iodo-sulphuric Acid; and the Chromates of the Magnesian Family.'
2. Professor Schönbein, 'On the Theory of Electro-Chemistry, in relation to the Protection of Metals from Corrosion.'
3. Professor Shepard, 'On Meteoric Iron.'
4. Mr. Richardson, 'On the Composition of the Silicates.'
5. Dr. Ure, 'On Microscopic Chemistry (Experiments on Fermentation).'

The first and second papers were given at length in No. 1181, pp. 566-7. There was, however, an error in the title of Mr. Playfair's, which this opportunity enables us to correct: for "Chlorochromic," read, as above, "Chlorochromic."

Professor Shepard, of the Medical College, South Carolina, gave an account of an analysis of meteoric iron, in which he had detected new elements, which he thought would be regarded with some interest, viz. chlorine and silicon. Several specimens of meteoric iron were exhibited, some of them remarkable for the extraordinary manner they had exfoliated. Also specimens of native terrestrial iron, the existence of which had been doubted. One had been found in Connecticut, and another in Pennsylvania. The latter was arseniuretted native iron. No traces of nickel or cobalt could be detected in either.

Mr. Richardson gave the results of his analysis of several specimens of Idocrase, and observed that greater exactitude in the representation of analytical results in the formula would tend to remove the apparent contradictions of the beautiful law of Isomorphism. The constitution of minerals is not correctly conveyed by many of the received formulas. He instanced especially Petalite and Idocrase. The formula of the latter, according to Mr. Richardson, should be

Dr. Ure gave a summary of his paper. It related to the formation of alcohol in the vats, without yeast, by spontaneous fermentation, and to other matters more interesting to the commissioners of excise and to distillers, than to the general reader. The microscopic character of the experiments was derived from observations as to the nature of the particles composing yeast.

SECTION C.—*Geology.*

1. Mr. Bowman, 'On Microscopic Vegetable Skeletons found in Peat.'
2. Mr. Murchison, 'Exhibition of a Geological Map of Europe, by M. Von Dechen.'
3. Mr. Murchison, 'On the Carboniferous and Devonian Systems in Westphalia and Nassau.'
4. Dr. Lloyd, 'On Saurian Remains in the New Red Sandstone of Warwickshire.'
5. Dr. Ward, 'On Impressions of Steps in the New Red Sandstone of Greenhill.'
6. Mr. Knype, 'On a Trap Dyke in Cumberland.'
7. Mr. A. Nasmyth, 'On the Structure of Fossil Teeth.'
8. Dr. Adams, 'On Peat Bogs.'
9. Mr. Yates, 'On the Estuary of the Mersey.'

Mr. J. E. Bowman read a paper 'On some Microscopic Fossil Vegetable Skeletons found at the bottom of a peat bog in Warwickshire.' The stratum was from four to six inches thick, and covered several acres in extent, in the form of a white impalpable powder. On testing this powder with chemical agents, and submitting it to high microscopic inspection, Mr. Bowman came to the conclusion that it was the remains of parasitic plants of the order of *Confervee*. Thus they appeared to occupy the same position in the vegetable, which Ehrenberg's *In-fusoria* occupied in the animal, world.

Sir C. Lemon reported the steps taken towards establishing a museum for the preservation of mining records. (See preceding numbers of the *Literary Gazette*.)

Mr. Murchison exhibited a 'Geological Map of Europe,' and Part I. of a work by Von Humboldt on the geology of America. From this it would appear that the oolitic strata do not exist in South America, nor probably in North America. The great development of this continent is of the tertiary formation; and in the south the cretaceous series is immense. Mr. Greenough expressed his opinion that a great coal-field might be found under the morasses of northern Germany, as exhibited in the map before them.

Mr. Murchison's important paper on the systems in Nassau, &c., we anticipated in our first Report. (See p. 550.)

Fossil Flora.—Dr. Buckland stated that Messrs. Hutton and Henslow had undertaken to continue the fossil flora of Great Britain, and solicited specimens (sent to the Geological Society), which should be carefully returned to their owners.

Dr. Lloyd offered 'Remarks on the Geology of Warwickshire,' and noticed the discovery of Saurian remains in the sandstone, such as occurs at Leamington, and contains the salt springs, and consisting of the *Megalosaurus*, *Dolichacanthus*, and *Platygnaethus*, mixed up with *Ceprolites*.

Dr. T. O. Ward exhibited specimens, &c., and described the impressions of footprints of animals on the new red sandstone of Grinsile, in Shropshire. These phenomena, and the marks of rain, much resemble Dr. Buckland's examples, only that the marks were of three toes, with long nails, pointed forwards; and except, in few instances, where they resembled the dog, there were no footballs visible. Dr. Buckland had some similar sandstone from Dumfriesshire.

Mr. J. A. Knype read a paper 'On a Trap-dyke Formation in Cumberland,' twenty-two miles long, and from twenty to thirty yards in breadth. In its course it coincides with the great Cleveland dyke, and may be a continuation of it; the whole thus crossing from the Solway Firth to the German Ocean.

Mr. Nasmyth read a paper 'On the Structure of Fossil Teeth,' which he commenced by some excellent observations on the value of the fossil remains of these organs to the inquirer in the vast and grand domain of geology. The

interfibrous substance of the teeth, he said, had been improperly described by modern anatomists as presenting no traces of peculiar conformation. But his researches, he continued, had led him to the conviction that it is not only organised, but so differently and characteristically so in different animals, as to be capable of affording valuable aid to the naturalist in classifying the animal kingdom. This organisation he proceeded to describe as cellular, and he exhibited various diagrams of its appearance. The fibres of the teeth, he said, presented an interrupted, or baccated appearance, as if made up of different compartments. In the human subject, each of these compartments is oval. In the oran-utan the divisions of the fibre are of a rhomboidal form: in fact, each class of animals seems to have a distinct characteristic appearance, but all are similar in respect to the general baccated appearance. The tusk of the mammoth, Mr. Nasmyth observed, presented a laminated concentric structure: the experiments of Mr. Hunter on animals fed on madder, lead to the conclusion that the structure of the teeth is actually laminated; and the workshop of the mechanic, called by Professor Leslie the school for philosophers, furnishes numerous facts in support of the same position. Other phenomena of daily occurrence are left unexplained by the theories of the dental structure which have hitherto been adopted; but all may be accounted for, Mr. Nasmyth ventured to assert, by the laminated cellular arrangement of the interfibrous substance, and by the peculiar baccated disposition of the fibres. The enamel which, according to Retzius, Purkinje, and others, consists of fibres, Mr. Nasmyth finds to be composed of compartments, or divisions, of a semicircular form; the convexity of the semicircle, or arch, looking upwards towards the free external portion of the tooth. Mr. Nasmyth finds that the enamel contains a larger quantity of animal matter than had previously been supposed. In proof of this he adduced a chemical analysis of its composition, which had been undertaken at his request by Dr. Thomson of Glasgow. After having alluded to his researches on the structure of the pulp, which are given in our report of his paper on that subject, read before the Medical Section, he proceeded to state that there exists a remarkable uniformity in the structure of the formative tissues of the tooth, and of the dental substance itself; for not only is the interfibrous substance cellular, but the surface of the pulp, which is the organ of the production of the ivory, and the internal, or productive, surface of the capsule also, uniformly present a reticulated, or cellular, appearance. Mr. Nasmyth concluded by remarking, that he ventured to hope that his researches had established a new and beautiful instance of the harmony of the laws of nature in demonstrating the fact of the uniformity of the products of the capsule; for not only, he said, have I found that the enamel is uniformly provided with an external covering, but that there is also a membranous investment of the *crusta petrosa* itself. He also thought that we must be compelled to allow the uniform presence of a fourth toothbone substance, the existence of which is more constant in all animals, either normally or anomalously, than any of the other three hitherto recognised constituent substances.

Dr. Adams, 'On Peat Bogs,' insisted on the great advantage which would result from rendering them serviceable for agricultural purposes. He mentioned, that in some cases where his plan had been adopted, the bogs were ac-

tually more profitable than the neighbouring lands. Another paper was read upon the same subject, in which it was stated that they might be made available as an excellent manure by the use of sulphuric acid, applied to the peat in heaps, mixed with putrefying vegetable matter as a sort of compost.

[Mr. Elias Hall exhibited a fine Map of the great Central Coal-field, and the Section closed.]

SECTION D.—Zoology and Botany.

1. Dr. Pritchard, 'On the Extinction of the Human Races.'
2. Mr. Forbes, 'On the Distribution of the Pulmoniferous Mollusca in Britain.'
3. Major-General Briggs, 'On the Cotton Plant of British India.'

Dr. Pritchard, 'On the Extinction of the Human Races,' lamented the disappearance of so many varieties, and warmly appealed to the feelings of the meeting on behalf of the active and indefatigable Aborigines Protection Society, whose pamphlets and prospectuses are so industriously circulated. A long discussion followed.

Mr. E. Forbes read a Report, drawn up at the request of the British Association, 'On the Distribution of the Pulmoniferous Mollusca of Britain, and the Influences which affected that Distribution.' In this respect climate and soil principally operated; the cold northern parts being far less abundantly inhabited than the central and southern regions, where they increased more rapidly, and displayed superior colours and forms. Rocks had also great influence, and those of a calcareous order were particularly favourable. This able naturalist went at considerable length into the various minutiae of his subject; and Mr. Lyell enlarged on the expediency of completing observations on the chemical influence of strata, the subaqueous distribution of species, &c. &c.; so that errors in geological deductions, respecting such as still existed, or were extinct, might be avoided.

Major-General Briggs, 'On the Cultivation of the Cotton of Commerce,' a paper of great commercial and colonial interest. The committee of agriculture, &c., emanating from the Royal Asiatic Society, has been some time engaged in investigating the subject; but still much remains to be ascertained concerning it, especially as regards the soil in which the best colour is produced. General Briggs pointed out that the American, African, and Asiatic cotton plants, were all of different kinds; some perennial, and some triennial. Treating of the cultivation of cotton in India for the supply of British consumption, he earnestly recommended the common species indigenous to the country, the *Gossypium herbaceum*, as most worthy of attention, being as fine and better coloured than the exports from New Orleans, and only supposed to be inferior from the want of care in picking and preparing it. The non-interchange of commodities between England and the East has been long a reproach to us, which the public discussion of such matters as this is, we trust, calculated to bring to an end. It is evident, with regard to cotton, that unless they come from abroad in a fit state for use, our manufacturers will not pay the same price for them as when they are clean and properly managed. They will prefer those which are neither filled with sand nor with flowers, nor are unbleachable; though in colour, length of staple, silky fineness, and other qualities, they may be grown equal.

SECTION E.—Medical Science.

1. Dr. Thompson, 'On Alkaline Dyspepsia.'
2. Mr. Hodgson, 'On Tyng Arteries, and on a certain Appearance of those Vessels.'

3. Mr. Coalhupe, 'On the Respiration of Deteriorated Atmospheres.'
4. Mr. Costello, 'Cases of Calculus treated by Lithotomy.'
5. Mr. A. Nasmyth, 'On the Structure of the Teeth.'

SECTION F.—Statistics.

1. 'Contribution to the Medical Statistics of Birmingham,' by the Local Committee.
2. 'Academical Statistics,' by Professor Powell.
3. Report 'On the State of the Working Classes in Bristol,' by the Statistical Society of Bristol.

At this Section a report, drawn up by a Committee of the Association, was read, 'On the Mining Districts of the North of England'; some contributions to the medical statistics of Birmingham by a local committee; and also a report 'On the State of the Working Classes of Bristol,' by the Statistical Society of that city.

SECTION G.—Mechanical Science.

1. Mr. Jeffreys, 'On Ventilation and Warmth.'
2. Dr. Lardner, Conclusion—'Resistance on Railways.'

The first paper was that of Mr. J. Jeffreys, 'On Ventilation,' inserted in our last No. p. 587.

Dr. Lardner concluded his observations 'On the Resistance of Railway Trains.'

This day the general Union Ordinary, briefly mentioned at our page 568, took place, and was altogether a very animated scene. The town-hall is a superb building for such purposes; and not only was the great area itself filled with company, but the side galleries had each a long dinner-table, and the end galleries filled with well-dressed lady spectators. Among the leading personages we observed, or had pointed out to us, the Marquess of Northampton presiding, the Earl of Dartmouth, the Earl of Bradford, Lord Sondes, Viscount Lifford, Sir J. Mordaunt, Bart. M.P. Sir E. Bagot, Sir J. Guest, Sir D. Wilkie, the Bishop of Toronto, Mr. Stevenson, the Ambassador of the United States, Mr. Scholefield, M.P., Mr. Gally Knight, M.P., Mr. Thorneley, M.P., Mr. Hutton, M.P., Mr. Wilbraham, M.P., the Hon. Colonel Clive, Le Comte de Fambour, M. Schönbain, Mr. W. Scholefield, the Mayor of Birmingham, and nearly all the scientific men who had taken prominent parts in the sectional proceedings, and the local Directors and Secretaries, to whom the meeting generally, and this entertainment in particular, owed so much for their exertions in making every necessary arrangement.

On the removal of the cloth, a temporary platform was got up, near the chair, from which the Noble Marquess gave the usual loyal toasts, "The Queen," "The Queen Dowager, and the rest of the Royal Family," which were drunk with loud cheers.

"The British Association," was the next toast, and, in introducing it, his lordship spoke eloquently and warmly of the benefits it had conferred on science, and the brotherly feelings it had engendered and promoted among scientific men, of every portion of the empire, and of all countries engaged in similar pursuits.

The health of the President, the Rev. Mr. W. Vernon Harcourt, followed, and the proposer took occasion to defend the Association from the charge, that in advancing science it injured religion. It was not, however, the first time that accusations had been made, for it was urged against Galileo, whose system of astronomy, then so much condemned, was now universally believed. It was quite as possible, indeed, that Dr. Buckland, or Professor Sedgwick, or other geologists, might be as mistaken in interpreting the book of nature, as others might be mistaken in interpreting the book of God; but he did say it was not consistent with

the spirit of Christianity or religion to impute mistakes, if they really did exist, to evil intentions, and to impute to others opinions which they did not entertain, merely because we entertained different opinions ourselves. He thought, however, that such assertions arose from a narrow and erroneous view; and whether geologists were correct or not in those opinions on geology, which certain persons deemed to be inconsistent with Scripture, he must say, that they as firmly and really believed Scripture itself to be true, as those who made the imputations against them (*cheers*). He believed Scripture to be inspired, but he confessed, if he were afraid of the inquiries which the pursuit of science rendered necessary, he should shew that he had not the thorough confidence in the religion he professed which he now entertained.

Professor Whewell, being called upon, gave "The Scientific Societies of Great Britain," to which he added, with a just eulogy, the name of the Marquess of Northampton, the president of the Royal Society. For this his lordship returned thanks, and proposed "The Universities of Great Britain and Ireland."

Dr. Buckland acknowledged the compliment, as connected with the University of Oxford, and observed that an agricultural school had been established there, in consequence of a suggestion which he had thrown out at the meeting at Newcastle, for the appointment of a scientific committee to attend to that important object, the multiplication of the quantity of the food of mankind, which would confer incalculable benefit upon the agricultural improvement of the earth, and he had no doubt the example would be extensively followed in other places. It had been asked what was the utility of geology, and he would wish to mention one great benefit that had resulted from the last meeting of the Association in Newcastle. At that assembly a committee was formed, to act under the authority of the Association, for the purpose of collecting mining records, the result of which would be the preservation of human life, and the prevention of the waste of human property. By the exertions of that committee a society was established, and the thousands of human beings, whose lives would be saved in future generations, would have cause to cherish the memory of the British Association, and those who had been instrumental in the establishment of the institution.

The President then gave the next toast, "Success to the Trade and Manufactures of Birmingham." In uttering that sentiment he could not refrain from observing, that science was intimately connected with the prosperity, not only of the wealthy manufacturer, but still more so with the welfare and very existence of those workmen who obtained their livelihood in connexion with the machinery which science had so much improved.

The Mayor of Birmingham, on behalf of his fellow-townsmen, begged to return thanks for the handsome manner in which the last toast had been proposed and received. As he was one of those who had the pleasure of soliciting the Association to hold the present meeting in Birmingham, he thought it proper to express to the members of the society the acknowledgments of the town, for having accepted the invitation; and he knew no greater benefit that could be conferred on a manufacturing population like Birmingham, than that which must arise from the attendance of such a host of distinguished men, who had visited the town this week. Although the reception might be somewhat less

resplendent than the Association had been accustomed to meet with, yet he trusted the welcome was no less warm or sincere; at all events, he hoped the members would feel themselves justified, by the treatment they received, to confer the very high honour of a second visit upon the town of Birmingham at some future day.

The health of Mr. Stevenson, the American minister, was next drunk with great applause; which Mr. S. answered, by dwelling emphatically on the mutual relations of Great Britain and America, and on the duty of cultivating the most intimate intercourse of peace and friendship between them. They were allied in blood, religion, habits, and associations; and they worshipped the same God, in the same language. The present was an enlightened age, which might justly be called the age of improvement, and of those arts particularly which give happiness to man and improve human nature. Could they look about with apathy, or carelessly contemplate the workings of mechanical art, and those wondrous developments in geology, chemistry, astronomy, and every thing which tended to benefit and adorn mankind? They saw the mighty power of steam, proudly walking the waters like a giant refreshed in its strength, and overcoming the wind and waves; and what, he would ask, could conduce more to the extension of civilisation? It increased the prosperity of nations, and made neighbours of people who had never seen each other before. The Association had nothing to do with the strife of political opinion; they were brought together by one congenial feeling, and in a spirit of peace and union every thing was calm around them: he sincerely hoped the Society would long continue to dispense the fruits of its enlightened labours, more widely than it had yet been able to accomplish.

To the health of the distinguished foreigners who had honoured the meeting with their presence (stated to be thirty-four in number), the Comte de Pambour very briefly returned thanks in French.

The President then gave "The health of those noblemen and gentlemen who had honoured the Association by their countenance and support, and who had handsomely thrown open their houses for the entertainment of many of the members." They were particularly indebted to the Earl of Dartmouth and the Earl of Bradford, whose kind encouragement of the Association tended much to its advancement and prosperity. He also complimented Sir R. Peel, whom some of the members had visited at Drayton, and regretted that he was not among them on this occasion. Science was of no party, and every political man might mingle with its friends advantageously to himself and his country.*

The Earl of Dartmouth returned thanks. He had been particularly alluded to as fulfilling the office of one of the vice-presidents, and however unworthy he was to be associated in that capacity with the Noble Marquess (Northampton), he could only say he was sincerely anxious for the prosperity and continued useful exertions of the Association. He was fully sensible of the great advantage it

* This is an opinion that cannot be too strongly enforced, and indeed it is quite surprising that statesmen of all parties do not more clearly see how much of deserved popularity they may acquire by the very cheap, simple, and easy means of bestowing a personal attention to the encouragement of literature, and the arts and sciences. The busiest of ministers would find time to do this, if he was as fully aware as he ought to be how much it would promote his own interests and influence, as well as the weight and character of the government with which he was connected.—Ed. L. G.

was to a district, the inhabitants of which were so much interested in the advancement of every branch of science, to be visited by the British Association, and he believed that feeling was very prevalent throughout the neighbourhood.

The President next proposed "The Philosophical Institutions of Birmingham."

Mr. Hodgson acknowledged the honour which this great assemblage had conferred upon the philosophical institutions of the town, although not possessed of the advantages of an ancient town. But the visit of the British Association to Birmingham could not but impart new energies to its scientific institutions and increase their means of usefulness, by proving to all that natural knowledge is not only highly esteemed by those who are engaged in its pursuit, but also by those who are most elevated in worldly station or literary attainments. He remarked that a recent calamity had cast a gloom over the delight with which the Association had been welcomed amongst us. The lamented death of Mr. Corrie, for more than thirty years the respected President of the Philosophical Institution, had deprived the scientific establishments in this town of their greatest ornament.

The health of the governors and masters of the Free Grammar School called up the Rev. Mr. Lee. He observed that it was but a few months since that the officers of the Free School ventured upon the novel experiment of introducing into the establishment a *département devoted more especially to instruction in the arts and sciences*; and he did feel it to be a most happy occasion and favourable augury, that the year in which this experiment was commenced should also be the year of the visit of the British Association to the town of Birmingham.

The local treasurer, secretaries, and officers, the stewards of the dinner, &c. &c., were finally toasted, and suitably acknowledged; after which the company broke up about eleven o'clock.

Of the results of the final meeting of the General Committee on Saturday, we communicated the particulars in our No. 1181 (pp. 568-9); as also the fact of the closure of the whole at the Town-Hall, at two o'clock. These, however, require some further notice, and, for the sake of completeness in our Report, we shall, at the same time, shortly revert to the proceedings of the General Committee on Thursday.

When the invitations from various places were brought forward, that from Glasgow was supported by written documents from the municipal authorities, signed by the lord provost, the principal public bodies, and learned and scientific institutions. The speaker of the deputation stated, *inter alia*, that within the walls of the College, ample accommodation could be made for all the Sections.

The Hull invitation was ably enforced by Mr. Frost, who, if Glasgow were preferred for the next meeting, earnestly hoped that his townsmen would not be disappointed of the honour in the ensuing year.

Manchester renewed its invitation through Mr. Charles Wood, who also expressed a hope that this gratification might be allowed them in 1841.

The wishes of York were not to interfere with the circle of invitations from different places, but to state the desire of that city when such circle had been completed, the British Association would renew it by visiting the site of its birth.

Sir C. Lemon, though not deputed from Plymouth and Devonport, would take it upon him to say, that whenever the Association could hold their meeting there, it would be taken as a great compliment, and every exertion be used to give them an hospitable reception.

The Marquess of Northampton, on moving that the next meeting should be at Glasgow, observed, that the invitations they had just heard so warmly pressed furnished very satisfactory evidence that the country were not tired of them, whatever individuals might allege in depreciation of their usefulness. That great manufacturing towns, and great seaports of England, after the example of the highest seats of learning and science, still considered it an honour and an advantage to receive the British Association, was extremely gratifying; and proved that their annual assemblage was truly reckoned to produce a great good to the community. He had much pleasure in proposing Glasgow, which united all the advantages of an important sea-port, a populous manufacturing town, and a celebrated university. It was also surrounded by a very interesting geological district; and, indeed, afforded them every ground to expect a meeting as satisfactory as any they had yet attended.

Mr. F. Bally seconded the motion, which was carried unanimously.

Mr. Murchison then proposed that the time should be Thursday, the 17th of September, when the heads of the University should have returned to their duties. The General Committee would meet on Wednesday the 16th; and thus by choosing the middle of the week, instead of Monday, as heretofore, they would consult the feelings of the Scots people, which were averse to travelling on the Sabbath. Mr. M. raised a laugh by observing, that on the ensuing Sunday the members might walk about and enjoy the beauties of Glasgow.

Mr. John Taylor seconded the motion, which was agreed to; and thus a date fixed, which will be more convenient for the Geological Section than of late years.

The President, Vice-Presidents, &c., were then nominated, as previously reported; and we have only to add, that Mr. Murchison's consent to be re-elected one of the Secretaries was only obtained at the express and unanimous desire of the General Committee, to back that of the Council and Committee of Recommendations. On the election of Major Sabine, a most cordial testimony was borne to the great value of the Reports with which he had enriched the volumes of the Association's Transactions; to his important labours in magnetic surveys and the investigation of terrestrial magnetism; and to his effectual efforts in promoting the Antarctic Expedition, about to sail under the command of his friend and associate in these labours, Captain James Ross.

Mr. Murchison expressed his sense of the honour conferred upon him, and said he had performed the duties of his office to the best of his abilities. He asked his enemies to forgive him, if he had made any: he had not intended to make one. (*Applause.*) He had thought he might do more for the science to which he was devoted with his hammer and in far travel; but if it was thought that his services would be advantageous to the Association, he acceded in an instant to their request.

The re-appointment of Professor Phillips to the office of Assistant General Secretary was also hailed with great approbation; for every one acknowledged his faithful and zealous ser-

vices, not only to the general cause, but to many of the Sections, to which he communicated valuable scientific papers. The re-elections of Mr. John Taylor as Treasurer, Mr. Yates as Secretary of the Council, and of Colonel Sykes, Mr. Porter, and Mr. Leonard Horner, as Auditors, were also cordially carried; and Dr. Buckland having moved the thanks of the Committee to the Dean of Ely, the retiring Secretary, the meeting adjourned.

At the concluding General Meeting, on Saturday, the Marquess of Northampton, President, his lordship read a letter from the illustrious M. Humboldt, in which he expressed his regret that his official attendance upon the King of Prussia put it out of his power to visit the Association at Birmingham; and at the same time stating the high esteem in which he held its proceedings, as conducive to the best interests of science.

The Dean of Ely read a list of the grants for the next year; and Mr. John Taylor, the Treasurer's report.

The Dean then moved a vote of thanks to the inhabitants of Birmingham, for the cordial and hospitable reception they had given the Association. He was not the less pleased with it, because it did not involve the splendour of their entertainment at Newcastle; which led to serious and alarming expenses, which it was not their wish to inflict upon the places they visited. No doubt, it was delightful to experience such treatment, but he was not sure that it was altogether of a philosophical character. At Birmingham it had been conducted on a kind and temperate scale. The accommodations were excellent, the private hospitalities sufficient, and all being without ostentation, he considered it a model fit to be followed on future occasions.* Sir C. Lemon seconded the motion, which was carried by acclamation.

Professor Whewell moved the thanks to the philosophical institutions of Birmingham; and alluded, in an affecting manner, to the death of Mr. Corrie, whose eloquent invitation to this meeting could never be forgotten by any one who heard it. The reverend gentleman then urged the claims of science, which taught us our ignorance, as well as the elevation of our nature. Those misrepresented it much who described it in other terms; for the lessons of science implanted reverence and gratitude for the past, hope for the future, and humility in our own estimation.

Mr. Lyell seconded this motion, and noticed the rapid progress of the Philosophical Institution and its museum, as a consequence of this meeting.

Dr. Buckland moved the acknowledgments to the governors and master (the Rev. Mr. Lee) of King Edward's Free School, for the use of that noble building. The learned professor

* As similar sentiments were uttered on other occasions, we cannot but observe that we question their taste and judgment. "Comparisons (says the editor) are odious," and Birmingham might have received the compliments it fairly deserved without depreciating, in the slightest and most distant manner, the truly magnificent hospitalities of Newcastle. In our opinion this time was falling in too much with the silly outcry against our feasting and holding festivals, as if it were felt to be just, which it certainly is not. Let us view the matter in its truth. Were the scientific proceedings injured at Newcastle? No; they were at least equal,—we should say, superior, both in extent and value, to those at Birmingham. And as for the prodigious and alarming expense; what was the result? Why, that after all the sumptuous entertainments, and most gratifying private accommodations at Newcastle, a handsome surplus remained of a voluntary subscription, to be apportioned among the most useful and valuable institutions of the town!!! For our parts, we cannot imagine any thing more worthy of grateful remembrance than our Newcastle usage; and we think it injudicious to have uttered a syllable that might be misconstrued otherwise.—*Ed. L. G.*

took the opportunity to eulogise the new plan of education carried into practice here, by which, besides those classical instructions so indispensable to the scholar, the practical in Science and the useful in the Arts were also taught.* Such, he maintained, must have been the intent of the munificent founders of all colleges, though, at the period they lived, such studies were unknown. Now, based on primary religious instruction, which must be the sure foundation in every age and at all times, no system could be good which excluded such information, and the study of the natural world, the production of the hand of God. Could it be possible that there was a discrepancy between his works and his revealed word? There was none; and it was only the prejudice of an intolerant mind that could imagine such a contradiction. He compared them to persons undervaluing the highest legal and medical authorities, merely because they dissented from them on some immaterial points; and setting their own ignorance up as the standard which admitted of no dispute. So, because they did not agree with him (Dr. Buckland) in his interpretation of some passages of Scripture, charged him with the most inconsistent opinions;—he, to whom the world appeared to be a temple of the Deity, and life itself one continued act of adoration: If rightly interpreted, such would be the sense and feeling of every Christian lover of Science in his investigation of the glorious works of the Creator of all. The speaker then adverted with praise to a lecture on education by Dr. Blakiston (of which a copy sent to us attends our future notice); and expressed his belief, that the assailants of the British Association were in the condition of those who called out "sour grapes." The summaries which its volumes contained were of the greatest value to science; and more was done to promote its interests in this one week than during all the rest of the year. After a touching eulogy upon Mr. Corrie, and mentioning the death of Dr. Smith, the father of English geology, the learned professor sat down. Mr. Wrottesley seconded the motion, and it was unanimously voted.

Mr. Murchison proposed thanks to the gentlemen who had so ably planned and carried out the local arrangements, and particularly specified with commendation the Model-room, with its curious examples of manufacturing industry; the Dudley excursion, and the entertainment of Thursday; which popular features were well calculated to advance the graver interests of the Association. Mr. J. Taylor bore testimony to how much had been accomplished in these respects, and trusted that the impulse given by the meeting would tend to encourage the progress of manufactures and the fine arts wherever they assembled. He also spoke in praise of the economy which had been exercised, and which he preferred to any extravagance; and having seconded the motion, it was accordingly carried.

Mr. Hallam (the first individual of very high literary eminence—independently of science—whom we have seen take an active part in the

* We may here observe, that the same system is acted upon in King's College, London, and has always been warmly advocated in our columns. And, a propos of this Edward VI. School, we were told a singular anecdote, viz. that when it was founded the offer of 20*l.* a year, and of a portion of waste crown lands, was made to Birmingham and an adjacent village: the latter chose the ready money, and has enjoyed its annual 20*l.* ever since; whilst the property allotted to Birmingham has increased in value with its increasing property, till it is now many thousands a-year; and must, in the course of time, become productive to an extent that can hardly be calculated.—*Ed. L. G.*

proceedings of the Association, and we hail it as a good sign) moved thanks to the various distinguished foreigners who had honoured the meeting by their presence. He defended the Association from the attacks made upon it, and compared its utility to the work of those who erected light-houses for their own safety and guidance, but which were a blessing to every nation of the earth. He concluded by complimenting the speech of the American minister, and the sentiments he had uttered on the preceding Thursday; and Dr. Roget seconded the motion.

The Marquess of Northampton moved a similar vote to the President, Mr. Vernon Harcourt; which Mr. Hutton seconded: and then the noble chairman closed the proceedings, and bade them all farewell. He alluded with high satisfaction to the praise bestowed upon the Association by such a man as M. Humboldt; to the foreign invitations to Pisa, Piedmont, and Gottingen, which they had received; and to the useful experiments on railroads brought forward at the meeting. What they did for science might be questioned or under-rated; as people might ask, What is the use of walking? What is the use of the mental faculties? All he would answer was, that our limbs were given us and our minds endowed by Providence, for our happiness and its own wise ends; and he would as soon think it necessary to defend the possession of these, as the benefits conferred on mankind by the cultivation of science.

During the applause which followed, the noble Marquess vacated the chair, which was taken by the Earl of Dartmouth, and the thanks of the assembly officially voted to him, for his great and constant services to the Association, in the most cordial manner. The Marquess expressed his thanks, and the meeting separated.

LITERARY AND LEARNED.

THE BRITISH EMPIRE IN THE EAST.

By COUNT BJÖRNSTJERNA, the Swedish Ambassador.
[Concluded from Page 590.]

[In this Number we complete the very important paper on our Indian Dominions by the Swedish Ambassador; having pointed out the value of which, in the few remarks with which we introduced it, we shall now only express our sense of the obligation conferred upon the *Literary Gazette*, by enriching its pages with a view of more importance than has often fallen within the sphere of any periodical publication.]

Concluding Reflections.—From the distant period when the sun of civilisation first rose on the banks of the Ganges, to that when a few of its rays reached an opposite hemisphere on the shores of the Ohio and the Mississippi, more than fifty centuries have expired, and still the greater half of the world remains on the lowest step of cultivation, sunk in ignorance and darkness! During this long period, the civilisation of mankind seems rather to have changed its abode than to have extended its dominion, and in those places where it formerly flourished most luxuriously with its companions, trade, industry, and riches, there is now nothing remaining but barbarism and deserts. *Palmyra* stands alone in the wilderness, with its thousands of broken columns; *Persepolis* and *Babylon* are fallen to the ground; and where *Thebes* and *Memphis* raised aloft their giant monuments, the wanderer now seeks refuge under the humble roof of the Beduin. In the place of those which have passed away we see, on the contrary, in another hemisphere, towns rise like mushrooms from the marsh—*Albany*, *Mobile*, *Cincinnati*, and others. They certainly do not yet equal the greatness of the fallen, but the course is opened, the time is unlimited; and who knows

but what a Carthage may still rise on the Hudson; a Tyrus on the Amazon?

Does not even Europe itself, this centre of civilisation, present the same deplorable scene of fallen powers and culture passed away? See that classic ground where *Plato* stood surrounded by his disciples, *Demosthenes* by his hearers, and *Phidias* by his master-pieces, after having been sunk in darkness for centuries, now first again shoot up a weak and scarcely kindled ray! See the rich shore where *Constantine* raised his capital; its triumphal arches are fallen, its hippodrome changed to a slave-bazaar; and where the holy Chrysostomus, under the lofty dome of St. Sophia, eloquently spread the mild doctrines of Christ, now is heard only the false belief of Islamism! See the romantic palace of *Alhambra*, how it bears witness of the former cultivation of the Moors—their refinement in the arts and in chivalry! But what are the Moors now?—half-savage barbarians, and the royal palace of Granada a ruin surrounded by the wild guerillas. Has not Rome itself, once called the Eternal City, fallen from its double height, the temporal and spiritual? It is now no more than the grave of the former, and the shadow of the latter!

Thus have *light and darkness*, like *life and death*, *creation and destruction*, alternated with each other!

But in this general change, as well of the material as of the intellectual world, a high, a consoling thought, presents itself to the mind of man; viz. that the *light* has, at every stage of its existence, gained an increased brightness, through the advance of *science*; *life*, a higher meaning by the revelation of Christianity; the *creation*, a more extensive development through the decrees of *Omnipotence*: that each has thus more and more advanced on the path towards perfection, continually drawing nearer the common goal, where the *mystery will be solved*.

We know, that “in the beginning God created the heaven and the earth. And the earth was without form and void, and darkness was upon the face of the deep; and the Spirit of God moved upon the face of the waters,” and then the *naked rock first raised its head above the surface*; that, after a chaotic night of an immeasurable space of time, a new period in the creation began; called, in the beautiful figurative language of Holy Writ, the day of creation,* when *vegetable life* was kindled first in the lowest link, the humble moss, then rising in its development, to those noble-spreading trees, with the lofty evergreen *palm*† at their head. That, after other revolutions had taken place, *organic life* commenced, beginning with the low *zoophyte*, and rising gradually from link to link, through the different degrees of testaceous and amphibious animals,

* For the Almighty within the circle of eternity, “one day is as a thousand years, and a thousand years as one day.” (See David’s Psalms).

† The tropical nature of all the remains, as well of the *vegetable* as of the *animal kingdom*, which, after worlds that have passed away, have been discovered in the strata of the most northern countries, and which consist, within the vegetable kingdom, in a great measure, of the *palm-tree*; and within the animal kingdom, of such creatures as are now only found under the tropics (the rhinoceros, tapir, hyena, &c.), seems to prove, that the temperature of the northerly and polar countries, at this early period of the creation, was much warmer than it now is, probably answering to that which at present prevails in the neighbourhood of the equator. That there could ever be the same temperature in the *polar regions* and between the tropics, cannot be supposed, it being contrary to the physical law of our planetary system. Hence it must follow, that at the time when the temperature at the *poles* was so high that the *palm-tree* could grow there, that within the *tropics* must have been proportionably greater, and, therefore, so high, that the physical organs of man could not endure it. Hence, again, it follows that *man’s* first dwelling must have been in the

and the varied kinds of fish; that, after renewed changes, by which the ocean’s bed was lifted above the level of the clouds,* and the tops of the mountains sunk below the depths of the sea, those monsters of the ancient world† appeared, which are now, happily, no longer to be seen, though they have left, in their fossil re-

northern regions, where the temperature was the same as now is at the tropics. This agrees also with the Indian tradition, which states that the countries near the north pole were *first inhabited*, and that it was thence that the first conquerors of India (the Brahmins and Ketrays) came; this tradition also gives the names of these northern countries, which so nearly resemble those of Scandinavia, that one is almost tempted to believe that these conquerors came from this peninsula.

Among the Greeks we find *Plato* stating (from ancient records), that the part of the earth first inhabited by the human race, was an uncommonly large island, *Atlantis*, which, according to *Olaus Rudbeck*, was our Scandinavia. Without entering into the latter author’s somewhat hyperbolic arguments, it is, nevertheless, curious to observe how well they agree with the above-named *geological* discoveries with respect to the former temperature of the *polar regions*, as they do also with the Indian tradition.

Recent etymological researches have, on another side, shewn, that the language in Lapland is nearly related to that spoken in Liffland, and, that the latter has a great affinity to Sanscrit; whence it must follow, that the Laplandish language is also related to the Sanscrit, although no one has yet thought of drawing up a comparison between them.

If we now unite this similarity between the Laplandish language and the Sanscrit, with the Hindus’ traditions of their northern origin, and also with the opinion, which may be received hypothetically at least, that the countries near the poles were inhabited before those in the neighbourhood of the tropics, we may thence very logically conclude that the Sanscrit is derived from the language of Lapland, and that the Hindus (or at least their superior castes) are descended from the first inhabitants of Scandinavia—the Laplanders and the Dwarfs!

“Wie lieblich um meinem entseelten Busen
Der holde Wahnsinn spielet.”—*Oberon*.

The hypothesis of the polar countries being inhabited before those situated nearer the tropics must, however, be confined to the *antediluvian* race; for, with regard to those who escaped the deluge, and have left traces after them in all parts of the earth,† they must, first, have fixed their dwellings on some of the highest mountains, which would, of course, be first free from the mass of water which then covered the earth. The Himalay mountains, and the table-land of Thibet and Pamer, being among highest tracts, it seems most probable that the *post-diluvian* race first fixed their dwellings there, and thence descended to the lower parts of the earth. This supposition is, however, grounded on another hypothesis, that the surface of the earth has not, since the last great deluge, undergone any of those tremendous revolutions which have, in some instances, raised mountains from the depths of the sea, and, in others, sunk them below its bed,—a hypothesis which, no more than the other, can be proved, seeing that the two leading branches (the Thibet and the Hindu) of the Himalay mountains themselves are not, according to the latest researches (Gerard’s and Jacquemont’s), of *contemporary origin*, but the one older than the other; the same is the case with regard to the *Alps*, the different chains of which (according to Beaumont) were not formed at the same period.

On the Himalay mountains there are, 16,000 feet above the level of the sea, and consequently much higher than the clouds, immense strata of ammonite and other fossils of maritime animals and plants. Such is also the case on the Alps.

† Ichthyosaures, Plesiosaures, Megalosaures, &c.

* A scientific Frenchman, M. Laurent, is said to have expressed, in a work lately published by him, the same opinion respecting the *polar regions* having been inhabited before the other parts of the world. I have not, however, seen this work, and therefore cannot say whether the reasons given by him agree in a greater or less degree with those above presented to the reader.

† It appears to me as if this deluge had, in Sweden, gone from north-east to south-west, seeing that almost all the larger rolling-stones here (which have evidently been the tops of granite mountains, either still rising from the earth or sinking under its surface) shew clearly that they have been broken by a force (that of the deluge) coming from the north-east, and still shew in that direction (north-east) the flatter surface seen in granite on that side where it has been broken. In most places, these *rocks* also correspond with rocks situated immediately on the north-east side of them. That they should have been carried forward by a torrent of water, or masses of ice, seems to me contrary, as well to the laws of hydraulics as of physics: the strongest stream of water could not move even smaller stones; how, then, could it carry with it *great rocks*? especially up steep heights, where they are now often met with. Should they, on the other hand, have been masses of ice, it must first be explained how great piles of rock could float on the water, which afterwards became ice. The smaller rounded stones (the erratic) are fractions of the larger, and, even now, often fit together with them or with each other.

mains, indisputable proof of their having existed; that those were replaced by the higher natures of the mammalia; and, finally, in the last of these periods of creation, the noblest work of the Almighty, *man*, appeared on the earth, and, with contemplative countenance, beheld and admired its beautiful paradisiacal surface.

But ought not this developement, constantly increasing through an immeasurable space of time, at every stage, as well of the *material* as of the *organic* creation, which has raised the former from the barren surface of the granite rock to these numerous strata and this delightful vegetation, which now form the riches of the world; and the latter from the lowest link of the zoophyte, to the noble being *man*, the image of his Maker; ought not this to inspire us with the pleasing hope (like the rays of a beacon, which shews through the darkness the way to the distant harbour), that a similar developement shall also exist in the *spiritual* world, and that the high celestial guest that animates our perishable clay shall, in proportion to the cultivation of the powers of the mind, to the suppressed sensual appetites, and to the performance of duties imposed in the course of previous stages, rise and approach more nearly the ideal of perfection, gain a higher *intelligence*, the noblest of enjoyments, the truly paradisiacal; and after having, in an ethereal, more suitable form to the developement of the soul, wandered through the wide extent of those planetary worlds, which form the abodes of a higher organism than our own, shall finally reach the greatest of all happiness: *Absorption in its Divine origin?*—Such is the belief of the *Brahmin*.

FINE ARTS.

NEW PUBLICATIONS.

History and Practice of Photogenic Drawing, on the true Principles of the Daguerrotype; with the Method of Dioramic Painting. By the Inventor, L. J. M. Daguerre, Officer of the Legion of Honour, and Member of various Academies. Translated from the original by J. S. Mmes, LL.D., Hon. Member of the Royal Scottish Academy of Fine Arts, &c. London, 1839. Smith, Elder, and Co.; Edinburgh, Adam Black and Co.

THIS little treatise will, of course, be eagerly sought and read by every admirer of "The New Art." Published, as it wisely is, at a very moderate price, it would be exceedingly unjust on our part if we were to do more than simply to state that it is divided into four chapters: the first consisting, principally, of the interesting reports upon the subject to the French Chamber of Peers, by M. Gay Lussac, and to the French Chamber of Deputies, by M. Arago; the second, describing the comparatively unsuccessful experiments, during a long course of years, of M. Niepce; the third, containing a full and remarkably explicit account (illustrated by plates representing the necessary apparatus) of the details of M. Daguerre's process; the fourth, explaining, somewhat obscurely, the principles on which dioramas have been painted.

It happens, very opportunely, that a French gentleman, M. St. Croix, has arrived in London from Paris; and, at the Argyll Rooms, every day, publicly goes through M. Daguerre's process. We "assisted" the other morning at one of these lectures or exhibitions. Unfortunately, the weather was more than usually capricious; now, the sun shining with great splendour, anon, a deluge of rain wrapping the whole scene in gloom; nevertheless, we were much grati-

fied. The process, however, takes a longer time than we had anticipated. From the preparation of the plate (a matter of exceeding nicety and importance) to the fixing of the image (that of the opposite building), occupied above two hours. Owing to the unfavourable circumstances to which we have alluded, the image after all was imperfect, but the parts which *did* tell were wonderfully beautiful; and we saw several plates that had been executed at a more auspicious moment, which were without blemish, and in which the minutest touch was reproduced with magical fidelity, although with much less force than we expected. Many persons will be disappointed by the low tone of the image. Undoubtedly that is a great defect: it is impossible not to wish that, speaking musically, the piece could be played an octave higher. But the art is in its infancy; every scientific mind in Europe will be immediately directed towards the subject; and we predict, that ere long, improvements will be suggested in the process, which will leave nothing to be desired, either in that, or in any other respect.

The Army and Navy. Painted by J. P. Knight, A.R.A.; Engraved by S. W. Reynolds. Ackermann and Co.

WHEN we read, in "The Edinburgh Review" of July, 1838, the account of the only interview that ever occurred between those illustrious men, Wellington and Nelson, and which took place in 1805, in the antechamber of the office of one of the secretaries of state, just after the former had returned from his brilliant career in India, and just before the latter sailed on that memorable expedition which terminated in the glorious victory of Trafalgar, it struck us that it would make an admirable picture. We are of that opinion still: but we cannot say that we think Mr. Knight, able artist as he is, has been happy in his conception of the subject. Instead of that eager communication of opinions and feelings which must have animated both the great commanders in question, on an occasion so mutually interesting to them, they are represented coldly standing side by side, as if unconscious of each other's presence. In fact, they are simply two unconnected whole-length portraits; the likeness of the naval being, by the by, much more faithful than that of the military hero. It is but justice to add, that all the accessories of the composition are skillfully introduced, that the general effect is rich and powerful, and that the plate has been spiritedly and beautifully engraved by Mr. Reynolds.

Portrait of the Duke of Wellington. Painted by J. Simpson; Engraved by B. P. Gibbon. Moon.

OR lives and portraits of our illustrious hero it seems as if "the line would stretch out to the crack of doom." As we either stated, or intended to state, in our notice of the original picture when it appeared in the Exhibition of the Royal Academy of the present year, we are no great admirers of cocked hats upon canvass; although Mr. Simpson has contrived to make his as little offensive as possible.

Woodland Sketches; a Series of Characteristic Portraits of Trees, adapted for Studies for Artists and Amateurs. Drawn from Nature and on Stone by George Childs. Nos. III. and IV. London, 1839. Tyas.

THESE two numbers, we are sorry to say, complete this very clever and interesting publication. Of the beautiful and character-

istic representations of trees which they contain, our favourites are, "The Cedar," "The Ash," "The Weeping Birch," and "The Scotch Fir."

Findens' Portraits of the Female Aristocracy of the Court of Queen Victoria. No. VIII.

How inexhaustible are the beauties of nature! The portraits which ornament the present number are those of Countess Cowper, Lady Forbes, and Lady Mary Grimston, "the counterfeit presentments" of three lovely women, all from the skilful pencil of Mr. John Hayter.

ORIGINAL POETRY.

SONNET ON GREENWICH HOSPITAL.

ENGLAND may point to yonder pile with pride,
And tell the Stranger—who with wondering eyes
Demands for whom these lofty columns rise,
That grace with regal pomp fair Tharvest's side—
"Here who by Rodney, Howe, and Nelson led,
Hurled my dread thunders on the roaring seas,
Braving for me the battle and the breeze,
Find from the storm a shelter for their head.
And ne'er may England's sons with sparing hand
Grudge you the mansion, princely though it be,
That with your scars ye won, ye veteran band!
Here, from the perils of the deep set free,
Make landmen stare with stories of the main,
And fight in peace your battles o'er again."—R.B.S.

BIOGRAPHY.

HENRY SINGLETON, ESQ.

IT is with great regret that we announce the death of this veteran, able, and universally respected artist, which took place on Sunday, the 15th instant, at the house of his friend, Mr. Simpson, at Kensington Gore. Mr. Singleton was seventy-three years of age, and had been for some time, we imagine, the oldest living exhibitor at the Royal Academy, and at other institutions connected with the fine arts. His works, therefore, have been too frequently before the public to render it necessary for us to say more of them than that, if they did not reach the highest point of merit, they always evinced the possession of great knowledge, talents, and refinement. No man composed with more facility, and no man's compositions were more generally pleasing. It was but lately that we noticed, in the *Literary Gazette*, the completion, by Mr. Singleton, of an extensive series of cabinet pictures, illustrative of Shakspeare; an effort which, at his time of life, was exceedingly creditable to his powers, and to his love of his profession. Sir Joshua Reynolds, speaking of Luca Giordano, expresses surprise that, considering his numerous qualifications, he had not made himself "a great man in art." The same may be said of Mr. Singleton. The cause, probably was, that having many years ago formed a certain style, and established certain principles of design, light and shade, and colouring, he thenceforward painted entirely from his own conceptions and recollections, without any further reference to those sources of excellence which the intense and never-ending study of nature can alone supply. Although his *forte* lay in works of imagination, Mr. Singleton occasionally painted portraits: his group of the Royal Academicians, sitting in the council-chamber of Somerset House, under the presidency of Mr. West, attracted much attention at the time it was produced, and ought to have secured his admission into the Royal Academy. It has been engraved by Mr. Beutland. We are happy to say that Mr. Singleton was in easy circumstances, the result of his industrious and moderate habits. The unaffected simplicity of his manners, and the kindness of his disposition, had endeared him to a large circle of friends, by whom he will be sincerely lamented.

VARIETIES.

Science in Italy.—Our last *Gazette* contained a paragraph, under this head, concerning the Scientific Meeting at Pisa in October. It appears that such an assemblage is held to be objectionable in the Roman states, for Cardinal Lambruschini has issued a circular letter to the chancellors of the Roman Universities forbidding the professors and the directors of cabinets of natural history and botanic gardens to visit Pisa on the occasion, or to correspond with the philosophers there. His holiness the pope has, it is averred, strong reasons for this prohibition.

Poisons.—Paris Academy of Medicine.—A communication was made from M. Orfila, in completion of his method for discovering arsenic in the human body, in cases of poisoning. It is well known that he has fully succeeded in detecting the minutest portions of this mineral, by boiling the substances, and then applying chemical tests to the result. But he had afterwards inquired, Whether arsenic might not exist in all human bodies, independently of poisoning? Whether it might not be introduced into the body by means of chemical tests, and the apparatus used in searching for it in such cases? and, Whether it might not also be communicated from the earth in which the corpse might have been interred? He has discovered that these three suppositions are all possible, and not of unfrequent occurrence; but he has also shewn that the arsenic obtained by his boiling process cannot be mistaken for the arsenic introduced by either of the three above hypothetical causes, and has laid down precise rules for making the distinction. It is considered, that he has rendered great service to the study of forensic medicine.

Progress of Literature.—Our Journal has been the parent of a very numerous offspring spread all over the face of the earth; but we were not prepared to see it stated ("Times" of Monday,) that "In Ohio they have a *Literary Gazette*, called 'The Bucky Blossom;' and in Kentucky, 'The Rose of the Valley;' in New Jersey, 'The Belvidere Apollo;' in Maryland, 'The Kent Bugle;' in Ohio, also, 'The Toledo Blade;' and in Mississippi 'The Bowie Knife.'"

Strange Seal.—A more striking conjunction of civilization and barbarism could hardly be given than by the fact related in the following anecdote. An *English lady* lately passing to Constantinople, in a steam-vessel, was about to sit down on a convenient-looking basket which stood on the deck, when, to her utter astonishment, she was warned by the commander not to do so, as it contained the *head of the governor of the Dardanelles*, on its way to be fixed up before the gates of the seraglio!!

Mrs. Loudon's Ladies' Flower Garden, No. 1X. (Smith), continues its prosperous career. The present number contains some beautiful groups of flowers, coloured so like the life, that one is tempted to seek for their perfume.

W. Ainsworth.—We learn with the greatest gratification that our enterprising friend, and his associates, have been enabled to escape from the dangers of Turkish and Egyptian warfare, and arrive in safety at Constantinople.

Göttingen Scientific Meeting.—We hear that Major Sabine, Professor Lloyd, and others of our men of science, have gone to the meeting at Göttingen, where it is probable they will encounter the eminent Professor Strauss, and discuss all that has hitherto been ascertained by experiment, or anticipated by theory, respecting the great question of terrestrial magnetism.

Theory of Waves.—On the 1st instant

a fir-tree, about forty feet in length, and covered with great barnacles, was drifted across Dover harbour, and towed into that port. It is supposed to have been parted from the American shore by a hurricane, and borne on its long voyage across the Atlantic by the tidal action of the waves.

LITERARY NOVELTIES.

In the Press.

A new novel by Miss Burney, called *The Romance of Private Life*.—Sporting Excursions in the Rocky Mountains, by J. R. Townsend, Esq.

LIST OF NEW BOOKS.

An Encyclopedia of Rural Sports, by D. P. Blaine, Esq., Part I. 8vo. 4s.—The Book of Common Prayer, arranged in the direct order used in the Church Services, by the Rev. J. Bosworth, D.D., &c., post 8vo. 6s.—Chronicles of the Devises, being a History of the Borough, &c., of that name, by James Weylen, 8vo. 14s.—Archdeacon Hodgson's Charge to the Clergy of Derby, July 4 and 5, 1839, 4to. 2s.—Illustrations of the Comparative Anatomy of the Nervous System, by Joseph Swan, Part V., 7s.—Jethro: Lay Agency for the Diffusion of the Gospel among our Home Population, post 8vo. 6s.—Our Country: Spiritual Destitution of England, by Dr. J. Matheson, post 8vo. 4s.—Little Pedlington and the Pedlingtonians, by John Poole, 2 vols. post 8vo. 11s.—The Poetical Works of G. G. Cuthill (a Welsh Poet), 8vo. 15s.—Saturday Evening, 6th edition, fcap. 6s.—Sketches in Ireland, 3d edition, fcap. 6s.—Essay on the Verification of Homer, by J. Milnor, 8vo. 3s.—Prayers by the Rev. H. Allen, 18mo. 2s. 6d.—Hon. and Rev. R. P. Percival's Apology for Apostolical Succession, 12mo. 4s.—Rev. H. Stebbing's Sermons, Vol. I. 12mo. 8s. new edition.—Journal of the Rev. Joseph Wolff, 1827 to 1838, 8vo. 12s.—Hon. and Rev. C. C. Percival's Plain Sermons, Vol. III. 12mo. 4s.—Short Moral Tales, German and English, by W. Berger, 18mo. 4s.—L. A. Donatti's German Grammar, 3d edition, 12mo. 3s.—The Magistrate's Pocket Companion, by W. Eagle, 12mo. 15s.—Documents and Dates of Modern Discoveries in the Nervous System, 8vo. 6s.—Trotter's Key to Ingram's Mathematics, 12mo. new edition, 9s. 6d. bd.—History, &c., of Photogenic Drawing, by L. J. M. Daguerre, translated by Dr. Meme, post 8vo. sewed, 2s. 6d.—Le Tellier's French Grammar, by F. J. Walter, 12mo. 4s.—Lord's Physiology, 3d edition, 12mo. 7s. 6d.—H. Meldinger's German Self-Teacher, fcap. 6s. 6d.—Days of Marlborough, and other Poems, by J. King, 12mo. 4s.—E. W. Symonds's Law relating to Merchant-Sea-men, 12mo. 4s.—The Duke, a Novel, by Mrs. Grey, 3 vols. post 8vo. 11s. 6d.—The Game of Billiards scientifically explained, by E. Knott, fcap. 2s. 2s.—Alfred de Rosann, by G. W. M. Reynolds, 8vo. 7s. 6d.—Rollo at School, by J. Abbott, 12mo. 2s. 6d.—An Apology for Cathedral Service, post 8vo. 2s.—Gilbert's Wonders of the World, edited by H. Ince, 4to. 10s.

Prevailing wind, S.W.
Except the 6th, 9th, and 13th, generally cloudy, with frequent and heavy showers of rain.
Rain fallen, 1 inch and 43/5 of an inch.
Edmonton. CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

We are sorry that we cannot comply with the wish of the Editor of the "Foreign Quarterly Review," and insert his statement of the coincidences between him and the Swedish ambassador on the subjects which have recently given so much national interest to the pages of the *Literary Gazette*. The question of priority upon these points seems to us to be immaterial. Their truth is one great point; and their being stamped with so high an authority as that of Count Björnsterne is another, which, without disparaging the opinions of any reviewer, appears to us to give them weight and importance. We are ready and willing to give our contemporary full credit for his sagacity in his No. for October 1839; but do not see how that interferes, or is interfered with, by a work prepared for the press early in that year.

Our review department has been rather curtailed this week, in order to make room for the winding up of the Association, and the conclusion of Count Björnsterne's interesting paper on India.

ERRATA.—In our last, page 595, last line but two of Section F, for "where" read "whose;" note, p. 590, col. 1, for "Karamsin" read "Karamulin."

ADVERTISEMENTS.

Connected with Literature and the Arts.

THE MODEL of the BATTLE of WATERLOO is now EXHIBITED at the Egyptian Hall, Piccadilly, by brilliant Artistical Light. Constantly illuminated from Four o'Clock in the Afternoon, and throughout the day in dark or unfavourable weather.
Open from Ten in the Morning until Nine in the Evening.
Admission, One Shilling each.

RETREAT near LEEDS, for the RECEPTION and RECOVERY of PERSONS AFFLICTED with DISORDERS of the MIND.—We have begun to announce to the Profession and the Public that the above Establishment is under his particular superintendence, and that the most strict attention is paid to the Medical as well as Moral Treatment of the Individuals who are committed to his care. The Retreat is delightfully situated on rising ground at the opening of Air Dale, a little more than a mile from the town of Leeds. The Situation is healthy, cheerful, and also sufficiently retired: the Gardens and Plantations are extensive; the Premises combine proper accommodations for the exercise and amusement of the patients; and the Apartments are spacious, airy, well ventilated, and fitted up in the most commodious manner. The Establishment is to be considered more in the light of a temporary residence in the country, where the Patient is placed while he undergoes such a course of treatment as may be necessary to restore the functions of the Brain, than as an Asylum in which the patient is to remain; hence it is well suited for persons of weak mind, or who may be subject to fits of temporary insanity—for whom confinement is necessary. In recent cases a perfect and speedy recovery may generally be expected. Mr. H. also receives Patients under his care attended by experienced persons in Lodgings at Private Houses, according to the provision of 2d. and 3d. of William IV., c. 109, sec. 47.—Applications, either personal or by letter (postage free), addressed 30 East Parade, Leeds, will meet with immediate attention, and have the most satisfactory reference, as to Patients, to Patients already discharged, or their Friends; also to Physicians resident in London, Dublin, Birmingham, Leeds, Sheffield, Scarborough, Wakefield, Bradford, &c., who have had occasion to visit patients at the Retreat. This day is published, in royal 8vo. dedicated, by permission, to Sir Benjamin Collins Brodie, Bart., V.P.R.S., and Charles Aston Key, Esq., Senior Surgeon to Guy's Hospital.

Practical Observations on the Causes and Treatment of Curvatures of the Spine, with Hygienic Directions for the Physical Culture of Youth, as a means of preventing the Diseases; an Etching and Description of an Apparatus for the Correction of Deformity, and Engravings illustrative of the Cause. By Samuel Hargreaves.

London: Simpkin, Marshall, and Co.; Edinburgh, Oliver and Boyd; Dublin, W. Curry, Jun., and Co.; Leeds, W. Bann and Son; and all Booksellers.

Messrs. Hare and Coppenhwaite, Surgeons, &c., are in want of a well-educated Youth as a Pupil.

PICKWICK ABROAD.

A new edition.

COUNTRY BOOKSELLERS and the Public are respectfully informed, that Mr. Tegg, of Chesham, has purchased the entire Stock and Copyright of "Pickwick Abroad; or, a Tour in France." A new edition of this popular Work is in the Press, and will be ready for delivery in a few days, in one very large Volume, octavo, embellished with Forty-one fine spirited Engravings, by Crowquill, &c.; also Thirty-three Cuts by Bonner. London: Printed for Thomas Tegg, 73 Chesham; and may be had, by order, of all other Booksellers in the Kingdom.

KING'S COLLEGE, LONDON.—Medical School, 1839-40.—The Winter Session will commence on Tuesday, the 1st of October, at One o'clock, with an Introductory Lecture, by Professor Arneti, at Two o'clock. Descriptive and Surgical Anatomy—Richard Partridge, F.R.S. Physiology, General and Morbid Anatomy—K. B. Todd, M.D. F.R.S.

Chemistry—J. F. Daniell, F.R.S. Materia Medica and Therapeutics—J. P. Boyle, M.D. V.P.R.S. Medicine—Thomas Watson, M.D. Surgery, J. M. Arneti.

Midwifery, and Diseases of Women and Children—Robert Ferguson, M.D.

Comparative Anatomy—T. Rymer Jones.

The King's College Hospital will be opened early in the coming Session, so that the Medical Students can now complete their Education at King's College.

August 27, 1839. J. LONSDALE, B.D., Principal.

ST. GEORGE'S HOSPITAL MEDICAL SCHOOL.—Session 1839-40.

The following Courses of Lectures will be delivered in this School, commencing October 1st, 1839:—

Theory and Practice of Medicine—Dr. Macleod and Dr. Seymour.

Theory and Practice of Surgery—Mr. Cesar Hawkins and Mr. G. Babinpton.

Clinical Medicine—Dr. Seymour, Dr. Macleod, and Dr. Hope.

Clinical Surgery—Sir B. C. Brodie, Bart., Mr. Cesar Hawkins, and Mr. G. Babinpton.

Materia Medica—Dr. Seymour and Dr. Macleod.

Midwifery—Dr. Robert Lee.

Medical Jurisprudence—Dr. Lee and Mr. Charles T. Maxson.

Botany—Dr. Robert Dickson.

Anatomy and Physiology—Mr. Tatum and Mr. Henry James Johnson.

Descriptive Anatomy, with Dissections—Mr. H. J. Johnson and Mr. Henry Charles Johnson.

Chemistry, at the Royal Institution—Mr. Brande and Mr. Faraday.

The Introductory Address on the Opening of the Hospital School for the Session 1839-40, will be delivered in the Theatre of the Hospital, at One o'clock, &c.

The Anatomical Lectures are delivered in the Anatomical Theatre in Kinsmen Street, White Place.

A Public Distribution of Prizes in the several Classes will take place at the termination of the Session.

Further Particulars and Prospectuses may be obtained by applying to the Porter of the Hospital, to the Porter of the Hospital Museum, or at the Anatomical Theatre in Kinsmen Street.

MR. BENTLEY HAS JUST PUBLISHED THE FOLLOWING NEW WORKS.

I.

THE DUKE;

A STORY OF THE PRESENT DAY.

By MRS. GREY. 3 vols. post 8vo.

II.

VICTORIES OF THE BRITISH ARMIES.

By the Author of "Stories of Waterloo," "Wild Sports of the West," &c.

2 vols. 8vo. with characteristic Illustrations and Portraits.

"In every page of this work there is either some eloquent description, some trait of heroism, or some lofty memorial of our national prowess. In vigour and rapidity of detail, in spirit-stirring and picturesque description, and in the power of representing a mighty conflict, there is scarcely any military author who can equal the present writer."—*Naval and Military Gazette*.

III.

IRELAND;

SOCIAL, POLITICAL, AND RELIGIOUS.

By GUSTAVE DE BEAUMONT.

Edited by W. C. TAYLOR, LL.D. of Trinity College, Dublin. 2 vols. post 8vo.

"M. de Beaumont is unquestionably the first in talent and intelligence of those who have undertaken to explain the question of Ireland to a European auditory. * * * On the statements contained in the work we make no comment; the reflections they suggest are as obvious as they are important. It is not necessary to recommend a work to public attention which is sure to command it, and one that will produce a wide and powerful impression."—*Athenaeum*.

IV.

CONFESSIONS OF A THUG.

By Captain MEADOWS TAYLOR, of the Service of His Highness the Nizam. 3 vols.

"If this work fail to arouse the feelings of the public to the suppression of Thuggee, no other can; as no other can be better calculated to excite the lively interest of the reading community. To the admirers of romances it will afford a treat, such as they have not had for years; for not one of those publications contains so many fearful scenes, while the truth and reality of these will lend them an interest such as no mere fiction can excite."—*Atlas*.

NEW WORKS JUST READY FOR PUBLICATION:—

I.

THE CONCLUDING VOLUMES OF THE

MEMOIRS OF CHARLES MATHEWS, COMEDIAN.

By MRS. MATHEWS.

(Vols. III. and IV.) Embellished with numerous characteristic Illustrations and Portraits. (Immediately.)

II.

A NEW ROMANCE BY THE AUTHOR OF "THE PILOT."

3 vols. post 8vo.

III.

MEMOIRS OF HIS OWN TIME,

INCLUDING

THE REVOLUTION, THE EMPIRE, AND THE RESTORATION.

By LIEUTENANT-GENERAL COUNT MATHIEU DUMAS, Private Secretary to Napoleon. 2 vols. 8vo.

IV.

ARISTOCRACY IN AMERICA.

FROM THE SKETCH-BOOK OF A GERMAN NOBLEMAN.

Edited by FRANCIS J. GRUND.

Author of "The Americans in their Moral, Political, and Social Relations." 3 vols. post 8vo.

RICHARD BENTLEY, NEW BURLINGTON STREET,

Publisher in Ordinary to Her Majesty.

REVIEW OF NEW BOOKS.

*The Eccelebion; * a Treatise on Artificial Incubation.* In 2 Parts. By William Bucknell. 8vo. pp. 56. London, 1839. Published for the Author.

THIS pamphlet is descriptive of the Exhibition in Pall Mall; and, together with that exhibition, merits a more distinct notice than we have hitherto found an opportunity to give to either.

The hatching of chickens by heat, here termed "the production of animal life by machinery," is of ancient date, and has long been practised in Egypt down to the present day. We like the former phrase better, for the simple fact that the heat is applied through the medium of a well-contrived machine does not, in reality, constitute machinery the producer of life. But, enough of the terms: the exhibition itself is one of great interest. In this room alone it is possible to bring into existence, through winter as well as summer, a hundred birds in a day, or upwards of 40,000 in a year. Artificial incubation may, therefore, be made to contribute to abundance and the luxuries of life.

It is, however, as affording curious means for investigating the process of nature in advancing an organic substance to vitality, that we chiefly prize this exhibition. Eggs may be broken daily, as they proceed in their development and examined by the aid of the microscope; thus exposing to view the actual commencement of life, and the gradual formation of those members which life is to animate. It is a remarkable sight; and, by analogy, throws a strong light upon the most abstruse subjects of physical inquiry.

We had the curiosity to observe some experiments of this kind, and were much delighted with the results. About the fourth or fifth day (we speak from memory) the first trace of a distinguishable organ appeared, where an opaque and cloudy spot had hitherto been witnessed. This was the heart of the bird. By placing the egg conveniently on cotton, in a common wine-glass, with water at 98°, and keeping it to that temperature, it was easy to continue the observation for eight or ten hours. From the heart, fine filaments spread over the surrounding surface. Anon, circulation began to appear in them; and soon we were able to distinguish the auricles, veins, and arteries, in full play—in one, yellowish atoms flowing rapidly like sand in an hour-glass; and in the other, assuming a redder colour. The contemplation was beautiful. Again, a dark speck was observed; and, even before this single broken egg was exhausted, it was ascertained to be the future eye of the chicken, whose rudiments were now shaping out from chaos.

Day after day similar microscopic inspection will show how the work advances—fibres, brain, intestines, muscle, bone, beak, feathers, are all forged in this wonderful sphere—the yolk, and the white, and the shell, contributing their various functions, till about the fourteenth or fifteenth day, when the pamphlet says:—

* *Eccelebion*, I bring forth, and *Bios*, life.

"During the last week of incubation, the birds are so far matured in the shells, that any visitor wishing to enjoy the gratification of hatching them at home, may do so without difficulty, by simply keeping them moderately warm; the warmth of the human body, or 98° of Fahrenheit, being the standard."

This latter experiment we certainly did not try, for we were unwilling literally to hatch our own chickens, and did not relish the idea of counting them before they were hatched.

We will not enter into the somewhat florid and *adventitious* description of the machine, which is capable of containing above 2000 eggs at a time; but some of the relative facts deserve note. Greater heat is required to bring forward, say 1000 fresh eggs, than to mature 1000 during the last week of incubation. Thus a heat is, after a while, generated by the eggs themselves; or a lesser heat is required at the end than at the beginning.

"Birds in a healthy condition require no assistance to effect their escape from the shell; which operation they perform in a remarkable and uniform manner, making a circular fracture of the shell with their bill, and bursting its integuments by strong muscular exertion. In cases of weakness in the bird, or defective hatching, assistance may be given; but such birds generally die in a few days, or, perhaps, hours. Darkness is also considered favourable to the process; probably, from too much light occasioning an unhealthy excitement in the nervous system of so exquisitely delicate a creature. Few eggs, excepting those of rare or foreign birds, are worth the trial of hatching, if more than a month old. * Very hot weather destroys vitality in a few days. An egg having been frozen, is, of course, also worthless. This machine does not, as is frequently the case with eggs set upon by the parent bird, ever addle them. This evil is occasioned by the alternation of heat and cold, arising from the hen's unsteady sitting. The warmth imparted by the *Eccelebion* is uniform and continued. A flush of fresh cool air passing over them each day, for a short time, is considered beneficial.

"There is no difficulty in teaching the young of the various tribes of gallinaceous fowl to eat and to drink; they perform these operations spontaneously, or from observation, as appetite prompts them; nor is food necessary until the expiration of twelve or twenty hours after leaving the shell.

"If chickens, about two months old, and upwards, are turned in among a brood of younger birds, they will sometimes take to brooding, and tending them with the delight of natural parents. The gratification being quite mutual, the young chicks run after, and strive with each other for their favours with the most untiring perseverance. Although, probably, it is simply the pleasurable sensation derived from the genial warmth communicated by the young birds nestling under them, which induces them to do it, it is, nevertheless, a striking and highly interesting picture to witness these mimic mothers acting the part of foster-parents

* The parent hen gives it in similar cases, and the chickens live.—Ed. L. G.

with so much apparent satisfaction, yet with the awkwardness with which a girl, in similar circumstances, fondles her doll.

"The chicken, at the time it breaks the shell, is heavier than the whole egg was at first."

We will now, recommending the *Eccelebion* to the attention of the public as a place of curious instruction, extract a few passages from the pamphlet, in which the writer notices preceding circumstances connected with his own performance. In Egypt, the art "is practised only by a few individuals: these inhabit a particular village, named Bermé, situated in the Delta of the Nile, about sixty miles from Grand Cairo, and by teaching the secret to their children, these Berméans perpetuate the practice of their art. It is, however, only during the serene autumnal months, that they will venture upon the performance of this curious business; at which time, scattering themselves over the whole land of Egypt, they bring into existence, under the supervision of the government, the enormous and almost incredible number of above ninety-two millions of various kinds of poultry. The ovens being limited to three hundred and eighty-six, and the business monopolised by the government, we may conclude this estimate a near approximation to the truth.

"The members of the French Academy determined to make experiments in their own country of this Egyptian practice. These experiments were placed by the Academy under the direction of the celebrated M. De Reaumur; and, under the patronage of the royal family, most strenuous exertions were made to plant this novel mode of increasing illimitably the quantity of human food upon the soil of France. It was a subject calculated to excite popular enthusiasm; the nobility, clergy, and gentry, vied with each other in its encouragement, and titled dames and ladies, high in honour, proved at once their patriotism and their patience, by becoming the mothers of canaries and goldfinches, by hatching them in their bosoms."

Thoroughly French: and we believe these *Ledas* were very fond of their offspring as long as they could be fond of any thing—pity that the talking canary did not speak French! So of the noble and gentle patrons. After the first effervescence was over, they contented themselves and their *patrie* with the *dindons aux truffes*, and *poulets and potage à la reine*, which cocks and hens produced in the usual way. How could any thing Artificial flourish in France?

"It must (says Mr. Bucknell) have struck even the most superficial observer, that the extraordinary fecundity of gallinaceous fowls is a wise and most benevolent dispensation of Nature, to provide, the more abundantly, food for man; as, in those tribes of birds not suited for his table, the female lays no more eggs than she can incubate. With respect, therefore, to domestic poultry, the most nutritious of all human food, this rich provision of a bounteous Providence is for the first time available to Europe."

We imagine the writer to be in error as to the number of eggs birds of all kinds will lay. Take eggs from the nest of the sparrow, the plover, the crow, the hawk, &c., and they will

continue to lay others, the same as gallinaceous fowls.—*Boysiah Experientia docet.*

Before we conclude, we must give the writer's commercial view of the subject:—

"We now (he says) come to the last consideration connected with this subject, which is—Are the profits likely to be realised, such as to warrant an endeavour to establish this artificial system of obtaining an additional quantity of human food? Mr. Mowbray, in his standard work already mentioned, gives the consumption of food by birds in the highest state of condition, as follows:—'By an experiment made in July 1806, a measured peck of good barley kept, in a high style of condition, the following stock, confined, and having no other provision: one cock, three hens, three March chickens, six April and six May ditto, during eight clear days, and one feed left.' Here, then, are nineteen birds, varying in age from two months to their full size, consuming one peck of corn in eight days, which, at one shilling per peck, gives a cost of one halfpenny and an eighth per head; which, however, is considerably above the cost of chickens for the first eight weeks of their existence. But, taking it at this high average, it gives an expense for each bird of nine-pence, all but a fraction, for fourteen weeks' keep, at which age they are in the greatest perfection, 'being the most delicate and easy to digest of all other animal food.' Where they can enjoy the advantage of a good run, the expense would still be lessened, perhaps one-third. Now, what is the price at a poulterer's, or in the London markets, of a fine fat chicken fourteen weeks old, or nearly its full size? Never less than two shillings, and for six months in the year, or during the dear season, four and five shillings; which, adding to nine-pence an additional three-pence for the value of the egg and extras, gives the enormous profit of from one hundred to five hundred per cent, divided between the breeder, the middle-man, and the retailer. It need not be wondered at that such is the case, nor can it be otherwise while the present system continues. A poulterer, whose sale is not more than ten dozen per week, must keep a man and a horse and cart, and attend the different markets for his purchases. All these things, with incidental expenses, will amount, at least, to two guineas per week, which two guineas must be spread over his ten dozen birds, before he derives any profit for himself. Upon any artificial system, these expenses would be saved, and the two guineas thus thrown away would keep a thousand birds, averaging all ages, a whole week."

With regard to the philosophizing in this pamphlet upon mind, instinct, &c. &c., we cannot affirm that it is all (for instance, that the *Eccaleobion* develops mind) unquestionable; but there are some points worthy of notice:—

"No one who witnesses the irruption of a large brood of chickens from their shells, by means of the *Eccaleobion*, but must feel convinced that they sensibly feel the peculiarity of their situation, and a few hours' additional strength renders this increasingly obvious. We can easily believe that a chicken hatched in the usual manner, understanding the cluck of its parent, and having the advantage of her nursing, so exactly suited by nature to its wants and condition, that they are no sooner produced than satisfied without effort or possibility of error, can scarcely express emotions of the mind. The case, however, is different when produced by the *Eccaleobion*; without any parent to soothe or administer to their wants, or to awaken or enter into the sympathies of their

nature, they betray surprise at their situation, and, like a child just awoke out of sleep, evidently wonder where they are, and how they came there. Before the chicken has liberated itself from its shell, it utters sounds in a tone and voice not to be misunderstood, challenging sympathy, and indicating disappointment at not being answered. When, during the night, a large number of birds have freed themselves from their calcareous shackles (of course in complete darkness), and the door of the machine is for the first time opened, and light bursts in, and the apparition of a human head appears before them, no infant ever displayed more astonishment in its countenance at strange sights, than is depicted in the eye and actions of these birds: some will approach, as if to welcome that unknown something they feel they want, while others retire, in fear, to the darkest corners of the machine. No parent answers to their joyous chirp, gives encouragement to their fears, or calls them to receive her protection; and the emotions they betray are precisely those we should expect in a rational being. As they are entirely removed from the circumstances Nature herself would have placed them in—in instinct, as distinct from mind, could not produce these emotions, as instinct would be a power given to them suited, and sufficient only, to their natural condition; for, can we for a moment suppose, that instinct would cause them to express surprise and astonishment, when, if in their natural state, no occasion or use for such emotions could possibly exist? A few hours after, spontaneously, and without teaching, some of them, and these teach the more stupid, begin to eat. This attempt appears to arise, in the first instance, simply from animal impulse; but shortly, the faculties of mind are brought into play, among which that of observation is most prominent; noting each other's actions, they learn from one another, not only how to eat, and more especially how to drink, but soon discover the quality of different kinds of food; and, before two days of their existence have passed, can distinguish them by sight: so that if one among them has a favourite morsel in its bill, it is a great chance if he be allowed to enjoy it without some of his companions participating in the luxury. If instinct taught and impelled them to gratify their animal wants, would it, without the possession of mind, give to them, in an eminent degree, the faculty of observation, and a capacity to appreciate the benefits to be derived from following certain courses they have observed others take, while similar ones, from which no advantage is to be derived, remain unnoticed, or, if noticed, unfollowed?

Whenever a granivorous bird, in a state of nature, is caught and killed, upon opening it, the crop and gizzard are found to contain a large quantity of these indigestible bodies; and, from their evident utility in the economy of the alimentary organs, man, without looking further into the matter, pronounces that instinct causes the bird to swallow them. Of about a thousand *Eccaleobion* birds that were reared in lofts and rooms, with bushels of fine gravel lying in heaps and scattered about, none would eat it, though several died in consequence of not doing so, by becoming crop-bound. If instinct is so effectual, why did not instinct teach these birds to swallow pebbles? but neither instinct, nor my own endeavours thereat, could induce them to do so. The reason is obvious. Like as children insensibly acquire, by receiving from their parents such food as they soon learn to relish, and by observation and habit

find agreeable to their palates and stomachs, so birds learn to choose and mix their peculiar food—but as, without parents to direct, few children would eat the most wholesome, preferring to live upon sweets and food injurious to them, so these birds, as mothers they had none, and instinct was at fault, could not be persuaded to eat stones, a want of sense certainly, which some had reason to repent; nevertheless, the remainder owed not their salvation to wisdom imparting instinct. All these birds were, with but few exceptions, in the best possible health and condition, completely fat, and had been so from their earliest days. They were of all ages, varying from five to ten weeks, and were all turned out into a large yard in the height of the fine weather of summer. This change, trivial as it may appear, was unfriendly to them, as many of them took cold, and some died. For food, they always had a full supply of the best corn, and occasionally a mess of scalded oatmeal; they, however, still for some time refused pebbles, but eat of every green thing they could obtain, as also insect and animal food; gradually, however, they learned the virtue there is in stones and other hard bodies, and swallowed them like others of their kind. Most of them were very fine and beautiful birds, and not the least extraordinary circumstances attending them are, that although the greater half were cocks, there was, with slight exceptions, neither fighting nor crowing among them, even when arrived at nearly their full size. It is usually asserted, that the high mettle and courage of the game-cock is natural to it, that is, instinctive, and that if two were to meet in a desert they would fight until one was killed. That they have in their natural state courage sufficient for the protection of themselves, from their numerous enemies, cannot be doubted, but all beyond is the effects of diet and education. The birds not crowing, also, I cannot account for, otherwise than from their not being within hearing of the thrilling claron of older birds."

Some remarkable deductions may be drawn from these phenomena; but we have done enough to attract attention to them and their source. The *Punctum Salientis* of the ancient doctors may now be obviously examined; and we hope that men of ability and science will think it worth their while to pursue a sufficient set of careful experiments on an important and obscure branch of physical, and to a certain degree, of metaphysical inquiry, now so readily offered for the exercise of their skill, talents, and ingenuity.

Character and Costume in Turkey and Italy.
Designed and Drawn from Nature, by Thomas Allom, Esq. With descriptive Letterpress, by Emma Reeve. London, 1839. Fisher, Son, and Co.

THE literary portion of this handsome volume advances no high pretensions to originality. Subordinate to, and explanatory of, the graphic embellishments, it is necessarily unconnected in its parts. Nevertheless the descriptions are pleasingly written; and we subjoin a few extracts from them:—

"The medak, or story-teller, is a person of much importance to the amusement-seekers of Constantinople; and one eminent in his profession is certain of an attentive and liberal audience, whenever he is pleased to hold forth. A good *artiste* possesses, in a most astonishing manner, the power of exciting tears or laughter from the usually grave and apathetic Turks, who smoke their *chibouks*, and listen to the

progress of his tale with untiring interest. The customary scene of exhibition is at some one of the numerous caffinets: a sort of elevated divan, near an open window, is prepared for the principal actor; while the auditors are accommodated around him, and served by an attendant with tea, coffee, sherbet, melons, ices, and the never-failing pipe. As soon as the performer commences, the utmost silence prevails; every eye is fixed upon the speaker; and certainly, if we may judge from the eagerness with which his words are received, the popular medak must be a man of no contemptible talent; his vivacity, his varied and animated gestures, his expressive action, his quick and flowing eloquence, are all surprising, when it is remembered that the recital of a fictitious narrative has thus hurried a Turk from 'his propriety.' And its effect upon the listener is not less so; every joke calls forth an answering burst of merriment, and the serious passages are met with corresponding emotions: the great heroes of our drama could neither wish nor obtain a better tribute of applause. No payment is demanded for admission to the caffinet; but in the convenient pauses of the story, an individual, appointed for the purpose, passes silently through the assembly to receive their contributions; each auditor drops a few paras into the box, the more speedily as he is anxious for the tale to proceed; and the Turkish improvisatore seldom has reason to be dissatisfied with his remuneration. During the festival of Ramazan, the most distinguished of these men are engaged at the principal coffee-houses, for a certain number of nights, at a stipulated sum, which does not, however, preclude their collecting from the audience. Sometimes the intervals of the narrative are occupied by music: two or three guitarists, with their instruments, are seated in the inner divan, and accompanying their own, or the voices of others, relieve the entertainment by their performances. Frequently the songs are very pleasing, and the diversification is agreeable.

"The odalique is a fair slave of Circassia or Georgia, the purchase and property of her master alone, and frequently the favourite of his heart—the 'light of his harem'; yet she is bound to yield implicit obedience to the commands of the principal wife, and to treat her with the utmost deference and respect; her subordinate situation is never forgotten; she is scarcely allowed to converse in the company of her mistress; and when their common lord honours the female apartment with his presence, while the chief lady takes her station at the extreme end of the sofa upon which he is seated, the odalique is contented to place herself at his feet in submissive silence. For this reason the Buyek Hanoum, or head of the harem, would rather welcome the introduction of many slaves, to share or engross the affections of her husband, than admit the intrusion of a second wife, her rival in authority, although still her inferior in rank. But the latter infringement upon the happiness of a Turkish wife seldom occurs in the middling classes of society: a Turk usually marries a woman of his own condition; the remainder of his household, should he desire to increase it, consists of slaves; and the careful distinction of rank, if it destroys the pleasures of social intercourse among its inmates, is productive of concord; it avoids the vain struggle for precedence, and prevents the worst torment of jealousy, that of mortified vanity. The odalique, however she may be the favourite of her master, is still a slave; and the wife, though her charms have lost their power, remains the

undisputed and legitimate queen of the harem; yet every lady has her private apartment, to which she may retire when she pleases, to enjoy in solitude a freedom from restraint. * *

"The causes which produce the mephitic vapour that hovers around Rome, threatening to infect the immediate suburbs, and even the city itself, has been the theme of much learned and fruitless discussion; yet the operation of natural causes alone could not have occasioned the alteration in a region formerly so well peopled and cultivated, had not the Lombards, Franks, and their barbarous coopeers, first devastated the lovely land, and left it, waste and bare, to the attacks of an insidious enemy, which had hitherto lingered innocuous in its bosom; the houses, pavements, crope, plantations, and, above all, the drains, were destroyed at the fatal period of their invasions; agriculture was neglected, the earth was left untilld; no effort was made to counteract the impurity of the air, or the defects of a soil always favourable to the stagnation of water, till the evil attained a magnitude that now, perhaps, admits of no remedy. But the wilderness of the Campagna, still fair in its desolation, is not unapproachable during the winter and spring months. Pestilence is not always seated there, like Satan in the garden of Eden, 'devising death'; and at some seasons the traveller may pass with safety through a land that 'breathes of beauty.' There, amongst the ruins of ancient grandeur, the goatherds, in their rude and shaggy dress, may be seen guarding their flocks; but it is a sight that affords little pleasure, for the dejected and unhealthy countenances of these poor men too frequently tell the tale of their sufferings; and many of them, and of others, whose employments induce them to drag on a miserable existence in the fatal precincts, return, after some few years of painful martyrdom, to die, and only to die, in a purer atmosphere. Yet an Italian flock of goats is an object pleasing and picturesque; nothing can exceed the grace and agility of their bounding movements, or the bright glistening whiteness of their long hairy coats. They are faithful, tractable, and affectionate; the goatherd has no difficulty in the management of his charge; the oldest of the flock is usually a very efficient aide-de-camp; he leads his companions in the track of their master's footsteps, and it is singular to observe his perfect understanding of, and ready obedience to, the slightest signal of the goatherd, whom he never attempts to forsake: on the road he follows him, and, should he pause to rest or sleep, the docile animal will lie down by his side, and nestle in his master's bosom.

"The game of Mora—or, as it was generally termed, *Midiare Digtis*, or *Midiare*, from whence came *Micatura*, and, by corruption, *Mourre* (the French word for it) and *Mora*—is of great antiquity; its invention was ascribed to Helen, who, it is said, was accustomed to play with Paris, the son of Priam. The game may be played by two or four persons, as in billiards, and usually consists of six points; but this is arbitrary, and left to the arrangement of the players, who then present as many fingers as they choose, calling aloud some particular number; and if either of the numbers thus mentioned agree with the amount of fingers presented, he who named it counts one towards his game, by holding up a finger of the left hand, or, sometimes, a fist or elbow. But neither player is permitted to count, if, on the contrary, both numbers are incorrect. When a player exclaims *tutta* (all), he must display his open

hand, and the point is won, if his rival at the same time exhibit all his fingers. *Mora Mutola*, or *Dumb Mora*, is played in like manner, but with this exception, that instead of calling the numbers, the players, before they commence the game, agree by what mode they shall designate odd and even; after which, whoever utters a syllable incurs a forfeit. Should any difficulty arise during the progress of the game, no words are allowed, but the required explanation must be given and received by signs. The Spartan women were reputed very skilful at this game. Cicero had a saying concerning it, when remarking of a man whose honesty was unimpeachable, that grew into a proverb—*Dignus est quicum in tenebris Mores*.—'He is so honest, that you might play Mora with him in the dark;' as much as to say, He will honourably confess how many fingers he presented.

"Apart from the feeling of moral degradation which belongs to the idea of slavery, that unhappy state is more tolerable in Turkey than domestic servitude among many nations. The Turk treats his slave with invariable kindness, is gentle to his failings, attentive to his happiness; and there have not been wanting instances, when a reciprocal and faithful attachment has rendered the connexion almost like that of a father and his child; while, far from contemplating the expected change as a misfortune, unprovided youth of both sexes, from Georgia and Circassia, frequently entreat their parents to offer them for sale at Constantinople, as the best means of promoting their future advancement. The price of his labour is paid to the parent or friend who has the disposal of the slave; but he is well fed, and at certain periods, twice in the year, every member of the family in which he is domiciled presents him with a donation; this is called 'backshish,' and varies according to the pleasure of the bestower. Should slaves of either sex be dissatisfied with the conduct of their master or mistress, they are by no means under obligation to wear out a miserable existence in service that is repugnant to them; and upon signifying three several times their intention to change owners, the previous purchaser is compelled to submit. In many instances they have the power of choosing their own possessor, and can insist upon this privilege, although the original master is loser in consequence of a determination to serve some particular individual, who is perhaps unable or unwilling to pay an equivalent sum, or to outbid another of superior riches and liberality.

"Exclusive of the carnival and the principal festivals of the Romish church, there is not a saint in its numerous catalogue who has not his appropriate day of celebration in Italy, when his votaries meet to do him honour by a strange mingling of pleasure with religious ceremony; and so like are they in character to each other, that the description of a 'Festa at Sorrento' would apply with almost equal fidelity to that of any other Italian district. Sorrento is considered by some the most delicious spot on the southern coast of Naples, its climate contracts no insalubrious quality from the heats of summer, and is mild and pleasant during the winter season; the scenery is more beautiful than grand, the town clean and well built; and its environs are filled with luxuriant and well-cultivated gardens, that would give to the country the appearance of a paradise, but for surrounding walls, which obscure them from the view of the passenger. Sorrento is held in esteem for its antiquity, and as the poet Tasso's birthplace. Various remains of ancient sculp-

ture have been discovered on several occasions, and are collected and preserved beneath an arch in the town, where they are exposed to the gaze of the curious. But this sweet spot of sunny Italy is rendered still more interesting from the fact that the traveller is not compelled to turn from the contemplation of nature's beauties with a sickening feeling of regret, in order to behold the misery of a large number of the human species in degrading contrast. The inhabitants of Sorrento are remarkable for an amiable disposition, and for their honest and industrious habits: it is said that a stranger may pass through every part of it alone, and at midnight, in fearless security; the amusements of such people, though blended with ignorance and superstition, may escape the sneer of philosophy, for they confer enjoyment. At an early hour, on the day of the expected festa, the roads to the church whose saint is to be celebrated, are crowded with vehicles of every description; numbers of mules and asses; carts shaded with green boughs, drawn by oxen gaily adorned with garlands of wild flowers, laden chiefly with aged and infirm persons; while many of the younger and more active are seen thronging on foot, dancing their way for two or three miles perhaps, as if incapable of suffering fatigue. After the conclusion of divine service at the church, they congregate in some vineyard or other convenient place, and devote the remainder of the day to merriment. The Neapolitans are seldom quiet in their amusements; and—as decked with fillet, rosaries, and flowers, their temples encircled with vine-leaves, and their hands and faces stained with the ruddy juice, their wild shouts and clamorous songs mingle with the clatter of tambourines and the snapping of castanets, while with strange gesticulations they join in the mazes of the dance—a spectator might imagine that he was witnessing the vagaries of an assemblage of maniacs.

"The approach of an Italian vintage is always hailed as a season of universal festivity; and the country never presents an aspect of greater beauty than when the ripe grapes, decorating the numerous and fruitful vineyards, seem to invite the hand of the gatherer. At the appointed time the wealthy citizens repair to their country residences, the vintage begins, and all, without distinction of sex or age, are called upon to assist; even children are allowed to mingle in the mirthful employment, while the most perfect equality prevails among the labourers who have met together from the various classes of society. Every where is life and motion,—heavily laden wagons make their slow way through the usually quiet lanes and roads, reeling beneath the weight of their juicy burden; and, while the summer air is 'musical' with song, amusement is not allowed to interrupt the progress of labour. The time exclusively devoted to enjoyment does not arrive till the vintage is ended, when a liberal feast is spread for the gatherers in the spacious kitchen of the master's house. The arrangement of this supper resembles that of the ancient Saturnalia of the Romans—gradations of rank are disregarded, and masters for the occasion serve at the table of their domestics. After supper they return to the open air; the whole party mingle in the dancing that commences; and the most refined lady in the company would not, for that evening, refuse the honour of her hand to the meanest peasant who requested her for his partner. Yet, notwithstanding the latitude that is permitted, and the quantity of wine the

plebeian guests are encouraged to take, which produces an immoderate gaiety rather than intoxication, not an expression calculated to offend the most 'polite ears' is ever heard to escape from their lips, and the unrestrained moments of the revel are invariably guarded by the strictest propriety. On this gay night, that none should be without a share in the festivities, the peasants who have not been employed in the preceding work, assemble in the different public-houses in the village, where they order a supper, at which the new wine is not forgotten, and, following the example of the legitimate gatherers, spend the succeeding night in dancing and amusement beneath the open sky: not a sound save of mirth and laughter is heard in the noisy village, till the cool air of morning breathes upon the heated parties, and the sun rises over the scene of merriment—then, and not till then, the company separate for their different homes, and cease to celebrate the gathering-in of the vintage."

We shall advert to the pictorial part of the volume elsewhere.

The Duke. By Mrs. Grey. 3 vols. 12mo.

London, 1839. Bentley.

A NOVEL of the higher circles of society, in which there are many scenes of considerable interest, and others displaying a conversancy with life and character. The hero, the Duke, is too distinctly drawn in his prominent features from an illustrious living personage, to allow of his fictitious ramifications, or the notice of his relatives, being either agreeable or proper; for the general reader cannot be aware where the line between truth and invention should be interposed. The original ground of the story is not very probable; and some of the incidents in working it out are not more likely. Still, as more strange things daily occur in actual existence, we may agree to receive these as it has pleased the authoress to give them to us. Taken separately, the death of the child Rose, the disappointment of Lord Fitz-Henry, the birth of the youngest Cecil, the death of the imbecile Lord Clairville, and several others, deserve much praise, either for their nature, humour, pathos, or force; though, as a whole, we do not feel much for the noble-minded and beautiful youths, nor the unparalleled and angelic damsels, with mouths of exquisite sweetness, lofty brows of marble polish, Hyperion curls or clustering ringlets, eyes of liquid loveliness or lightning, as the case may be, and form and expression, all of which belong to the school of romantic description. In conclusion, we shall only say that these three volumes are pleasant to read, and that the leading moral they would inculcate—a lesson to hard-heartedness—is tolerably well carried out; but, from all kinds of morality, Lady Florence's episode must be deducted. One of the few passages in which an attempt at the comic is made (the better parts of a touching order being too long for extract) will serve as an example of the writer's talents:—

"With the usual recklessness of consequences, where a woman was concerned, Lord Fitz-Henry was now bent on seeing and knowing more of our heroine. No sense of propriety interfered to withhold him, or the fear of giving pain and alarm to a virtuous girl. *Côûte qui côûte*; he must again behold her, and he trusted to his own perfections and adroitness to smooth all other difficulties. Although very young, Lord Fitz-Henry had already spent a life of pleasure and indulgence, and, at the age of twenty-four, was almost

satiated with unrestrained gratification. The sole and darling child of a young and disappointed mother, deprived of a father's wholesome restrictions from the nature of his profession and long military career, he had been his own master from his earliest boyhood;—the use he had made of the mastery was to make himself the slave of every dangerous and debasing passion. Until his mother's death, the tenour of his pursuits and occupations had been well concealed by her from the duke, his father: in this deceit she had been assisted by his tutor, who had found very soon that his greatest merit in the mother's eyes consisted in leaving the young man to perfect freedom, so that, until that moment, the duke had been the only one in a certain set, ignorant of the profligacy of his son. It was discovered too late. Even Fitz-Henry pleaded the utter impossibility of changing old habits, and the duke was forced to consign him to his fate, trusting that time might effect the reform which he found his best endeavours fail to achieve. Handsome, agreeable, rich, and powerful, the whole world appeared to be at his feet, so rarely had his desires ever been opposed. Inheriting much wealth from his mother, whose fortune had been the acting influence on the relations of the young Walter Fitz-Henry, when prevailing on him to make so early a marriage, he was perfectly independent of his father, and found that money was a powerful agent to his pleasures and vices. It is sad to think of the fearful ordeal which man in the season of youth is obliged to pass. Pleasure seems to put forth its blossoms on every side; passion urges him to pluck them while yet he may; and rushing forward with inconsiderate ardour, the enjoyments are secured, while too often every better principle is lost. Lord Fitz-Henry felt, for the first time, some misgivings as to the ultimate success which might crown his present pursuit. There was something even in the brief glimpse which he had caught of his thickly veiled divinity, that had stamped her as a being very different from the usual inhabitants of a suburb, who wear straw bonnets and dark shawls. Perhaps this feeling heightened the excitement of his fancy; and without excitement he could not exist. It had become as necessary to him as opium to the Turk, or tobacco to the American; and have it he must, in some form or other. After lounging about for some time, and yet seeing nothing but the same dingy-looking house, which was rendered still more dismal in appearance, from the upper windows being closely curtained, Fitz-Henry went to the extremity of peeping over the green canvases blinds into the parlour. His inspection offered very little to interest him, merely enabling him to see three young children sitting at the table in the centre of the apartment, busily conning their books. All this was very tiresome, and so potentially *ennuyeux*, that he was half resolved to set off instantly for Norwood, and see what Jennie and her friend, the fair Aspasie, were about. But just as he was wearied to the utmost, at the dull aspect of affairs, it came into his head to go into a shop exactly opposite to the house. He thought that there, at least, he might gain some information with regard to its inhabitants. It was a kind of general grocer's; and who sells all sorts of commodities, and whose heterogeneous stock in trade consists usually of cheeses, bacon, eggs, letter-paper, and sealing-wax, tallow candles and mops, patterns and sugar-candy. In he went, hardly knowing what he was going to say or do, and found himself in the midst of various customers. One

buying an ounce of tea, a second two rushlights, and so forth. The smell which issued from this comprehensive magazine was not very agreeable to the fastidious nerves of the exquisite Fitz-Henry; however, he bore it with manly fortitude, and stood at the door with his arms folded, and his eyes fixed upon the opposite house, waiting until he could command the attention of the mistress of the shop. One by one the customers departed. Some elbowing our delicate lordling, as he stood taking up the entrance of the doorway; others courtesying respectfully, and eying him with looks of scrutiny and surprise. At length they were all gone, and the shop-keeper, a fat good-tempered looking woman, with the blandest tone of voice to which a chandler's shop ever resounded, ventured to ask, 'Can I serve you now, sir?' 'Oh! yes, certainly, by all means,' said Fitz-Henry, starting, and remembering, for the first time, that it was doubtless expected he should make some purchase. 'If you please, ma'am, and his eye glanced inquiringly round the shop,—'if you please, I want some Spanish liquorice and a mop.' 'How much, sir?' said the good woman, enchanted by his courteous bearing. And on his begging for half-a-crown's worth in his simplicity, he saw a piece, at least half a yard long, wrapped up in brown paper for his use. 'Any thing more, sir?' was then asked. 'Why yes, ma'am,' replied Fitz-Henry, beginning to be amused at his present predicament, and determined upon doing the thing handsomely. 'Suppose you put me up half-a-dozen of those mops.' 'Half-a-dozen, sir?' she said, looking incredulous. 'Yes, why not? And one of those magnificent-looking cheeses,' Fitz-Henry said, looking learnedly at the shelf on which they stood. Refusing with unfeigned horror to taste a bit of the 'prime Cheshire' which was handed over the counter to him in a dirty-looking iron implement, he said, taking some sovereigns from his purse, 'And now, ma'am, if you please I will pay you, and will send for these things by and by,' an expression very often used by his lordship for 'never.' He paid the money, however, to the delighted shopkeeper, who never in her life had served so good-looking and affable a customer; and he began in an opportune moment the interrogatories he wished to make. 'And now, my good lady, that I have transacted my little business, I just want to ask you a question or two. Can you tell me who lives in the house opposite? The one with the upper windows closed.' 'Yes, sir, I can certainly tell you all I know on the subject, and that's a very little.' 'But their names,' impatiently repeated Lord Fitz-Henry. 'Why sir,' she replied, looking mysterious, 'they goes by the name of Norton. But my son, who is a bit of a scholar, says he is certain that they are incog—incog—no, incognatus,—that's what he says they are. And I have my reasons for being sure that Norton is not their real and true name.' 'Do tell me all about it, my dear madam,' said Fitz-Henry anxiously. 'By the way, you may put me up two of those fine-looking hams, he added, pointing to some huge dried legs of pork which graced the ceiling. He then paid some more money, and said,—'Now tell me your reasons for thinking their name is not Norton.' 'I must tell you, sir, that Mrs. Jackson, what takes in washing, buys all her things at my shop, and sometimes I have a little chat with her when I am serving her. Says I, "Mrs. Jackson, the new folks at No. 5 can't give you much trouble in getting up their clothes. I never saw much plainer dressing. I beg

your pardon, Mrs. Brown,' says she, 'I never set eyes on more beautiful linen.' 'Bless us,' says I, 'how odd!' Says she, 'If you will just step over to my house on Saturday, afore I sends home the clothes, I'll just shew you some of it. Such shimmies! all trimmed with wollonseens, and the finest Irish! Then the pocket hanketchers! all cambric, and some with needle-work, so pretty and ladylike; and indeed every thing to match. But what strikes me odd,' says she to me, 'is that all the hanketches is marked with C, and not one with N.' Now, sir,' continued Mrs. Brown, 'I always goes a great deal by the under clothes, and that is a proof positer to me that they are something higher than they seems. You often see your flourishing would-be grandees, with a gown and bonnet on fit for a queen; and then if you could only catch a look at the shimmy, you would be surprised.' Lord Fitz-Henry coughed away a laugh, not to offend the narrator; and to end the dissertation asked if she had ever seen any of the family. 'See them! why bless you, Miss Norton, as they calls her, comes here very often to pay the bill, sweet pretty creature! Would you believe it, sir?' continued Mrs. Brown, 'my son Jeemes has quite lost his heart to her. "Jeemes," says I, when he is going on about her, "what a fool you are!" "Mother," says he, "a cat may look at a king!" And then he runs on about her being like an angel. And the other day, when she took off her glove to take some money out of her purse, he really looked as if he could have eaten her little lily-white hand.' 'The audacious monster!' muttered Fitz-Henry between his teeth; and then inquired, in a tone of affected carelessness, if there was no gentleman belonging to the family. 'Lord bless you! yes, sir; there's the brother, a fine-looking young gentleman, but very proudlike, not condescending like Miss Norton; but they are both good young people, to think of all they have gone through with that sick mother! The poor soul was brought to bed last night, and then the trouble they had with the dear baby that died. They are for all the world, young as they are, like father and mother to the little children.' 'Have they a father?' inquired Fitz-Henry. 'That's what I can't exactly make out,' replied the verbose grocer. 'I have tried to get something out of the nurse, but I might as well look for blood in a stone. Howsomdever, I went over this morning to ask if I could be of use, now the poor lady is put to bed, and I see Miss Norton herself.' 'How does she look without her bonnet?' was the next question put. 'I warrant you she looks like an angel, nothing else in life. Though I must say, sir, that her hair is done funnily; not a curl, or a bow, or a plait, as I have seen on the beautiful ladies' heads in the hair-dressers' shops. Still she looked sweetly pretty, though it was done so meanlike.' 'You are really a charming woman, Mrs. Brown,' said Fitz-Henry, fancying that he detected beauties through Mrs. Brown's graphic description. 'Lor, sir! you are very good,' she said, courtesying and smirking; 'and if you say so of me, who have had a family of nine, and brought up seven, what would you say of Miss Norton? You should have heard her thanking me, and saying she would take my kind offer, if so be that they wanted hands. It was so prettily said, and so like a real lady. I warrant me there is more there than meets the eye.' It appeared as if Mrs. Brown's words were prophetic; for at this moment Lord Fitz-Henry, whose eyes were constantly fixed upon

Evalyn's house, turned very red and then quite pale; while a low-murmured oath, which being in Spanish did not scandalise Mrs. Brown, betrayed considerable inward emotion. An apparition had met his eyes which had a most stunning effect upon his senses. It was nothing less than the form of his own father, walking quietly up to the very door that he had so watched! He rang gently, and in an instant the door was opened by the fair creature for whose sake the gallant Fitz-Henry was now suffocating in the grocer's shop! She at first started in surprise; but the next moment, as if in a transport of joy and pleasure, she placed both her hands in the extended one of the Duke of Strathaven. Fitz-Henry saw him enter, and the door was shut. It was then that the disappointed innamorato, stunned, bewildered, and annoyed beyond the power of description, rushed out of the shop; and hastily seeking his horse, which he had left at a neighbouring livery-stable, he mounted it, and galloped furiously away."

A Summer's Day at Hampton Court; being a Guide to the Palace and Gardens: with an Illustrative Catalogue of the Pictures according to the new Arrangement, including those in the Apartments recently opened to the Public. By Edward Jesse, Esq., Surveyor of Her Majesty's Parks and Palaces, author of "Gleanings in Natural History." 12mo. pp. 135. London, 1839. Murray.

A SUMMER'S DAY, and a more pleasant way to spend it, the great metropolis of England does not afford, than that to which we are so agreeably guided by this small, but neatly embellished, useful, and instructive companion. It opens with an account of Cardinal Wolsey, the builder of Hampton Court Palace, full of interesting historical and antiquarian matter. The remaining portions of his magnificent abode are then described in the anecdotal and entertaining manner which characterises Mr. Jesse's pen. Thus, after giving us the number of his retinue and attendants, and the details of their daily services, Mr. Jesse says:—

"From the above list, which it is hoped will not be found uninteresting, the visitor will be able to form an idea of the use made of Wolsey's hall, and of the persons who filled it. On entering it, it is impossible not to be struck with its fine proportions, and the beauty of the roof, the workmanship of which is most elaborate, consisting of carvings in wood. The hall of Christchurch, Oxford, built also by Wolsey, is said to be more chaste and impressive, although many persons give the preference to that of Hampton Court. This hall is one hundred and six feet in length, and forty in breadth; and the east and west ends have each a gable window, more remarkable for purity of taste than for richness. The sides are lighted by seven lofty, well-proportioned windows, placed at a considerable height from the floor, as was usual formerly in all great halls, in order that the walls might be hung with tapestry on festive occasions. There is a dais, or platform, at the upper end of the hall, and one side of it is a window, the ceiling of which is one of the most beautiful of the kind in this country, and perhaps unique with respect to the taste and richness of its workmanship. It was upon one of the panes of glass of this window that Henry Howard, earl of Surrey, so famous for the tenderness and elegance of his poetry, and for his martial exploits, wrote some lines with a diamond on the fair Geraldine," which

"The fair Geraldine, it is now known, was Elinbeth,

excited the jealousy of Henry VIII., and perhaps assisted in bringing the high-souled and hot-tempered Surrey to the block in 1547. It is a curious fact, if it can be depended on, that the first play acted in the hall was that of 'Henry VIII., or the fall of Wolsey,' it being represented on the very spot which had been the scene of the cardinal's greatest splendour. Shakspeare is said to have been one of the actors in this play."

Another passage, relating to the surveillance of Charles I. at Hampton Court, affords a fair example of our author:—

"It may not be uninteresting in this place to relate an anecdote connected with the residence of Charles I. at Hampton Court, especially as it has become a sort of tradition still occasionally mentioned in the neighbourhood. It is said that the king was one day standing at one of the windows of the palace, surrounded by his children, when a gipsy or beggar-woman came up to it, and asked for charity. Her appearance excited ridicule, and probably threats, which so enraged the gipsy that she took out of her basket a looking-glass, and presented it to the king: he saw in it his own head decoliated. Probably with a natural wish to conciliate so prophetic a beggar, or for some other reason, money was given to her. She then said that the death of a dog in the room the king was then in would precede the restoration of the kingdom to his family, which the king was then about to lose. It is supposed that Oliver Cromwell afterwards slept in the room referred to. He was constantly attended by a faithful dog, who guarded his bedroom door. On awakening one morning he found the dog dead, on which he exclaimed, in allusion to the gipsy's prophecy which he had previously heard, 'The kingdom is departed from me.' Cromwell died soon after, and the subsequent events are sufficiently known. The rooms in which Charles I. was confined, and the little chapel adjoining them, are perhaps more interesting on that account than any thing in the palace. The chapel, in particular, in which Charles offered up his prayers to that Being who supported him through so many troubles, and enabled him to meet death with firmness and resignation, is curious from its architecture, and full of interest from the circumstances connected with it. The ceiling is beautifully worked, and the walls are nearly covered with paintings in fresco taken from Scripture subjects. There is a little oratory in the corner of the chapel, in which we may suppose the king's devotions were offered up. It is now too probably the receptacle of pickles and preserves. One must regret that this chapel cannot be seen either by the historian or the antiquary, or indeed by the public generally, which certainly ought to be the case. I also regret that I have not been enabled to give an engraving of it for this work. After the death of Charles I., Hampton Court became the occasional residence of Oliver Cromwell, who used frequently to hunt in the neighbourhood, and a part of Bushy Park was formed by him into a preserve for hares. His third daughter, the Lady Mary Cromwell, was married at Hampton Court to Lord Falkenbridge in 1657, and his favourite daughter, Mrs. Claypole, died there. In her delirium she is said to have taxed her father with his crimes, and that this hastened his death. It was at this place he was attacked with his last illness."

second daughter of Gerald Fitzgerald, earl of Kildare, by Margaret, daughter of Thomas Grey, marquess of Dorset, and the third wife of Edward Clinton, earl of Lincoln."

But the most novel portion of the volume, and that which will place it in the hands of every visitor, is a *catalogue raisonné* of the splendid gallery of pictures, now exhibited in the fine suite of rooms which run round the edifice. These are now thrown open to the public, without let, hindrance, or charge; and have, by the addition of several hundred pictures, hitherto unseen in the royal repositories, become infinitely more important to art and interesting to the curious. They have been especially enriched in early portraiture, so as to form, indeed, a school of the Art; and being arranged with far better taste, and a due regard to the time to which they belong, they will also be found to be admirable illustrations of our history, and of the eminent persons who acted prominent parts in its national movements.

We merely add a page to shew in what manner this task has been executed:—

"*The Queen's Gallery.*—This gallery is eighty feet long and twenty-five feet wide, and was sometimes called the Tapestry Gallery, from seven pieces of tapestry, taken from the history of Alexander the Great from paintings by Le Brun. These tapestries were much faded, and lost much of their interest. They have now given place to the present interesting and well-arranged collection of pictures. Portraits of William III. and Queen Mary over the doors—William Wissing. Died, 1687. He was principal painter to James II., and sent by him to the Hague to paint William and Mary, by which performances he gained great reputation. Henry VIII. and his family—Hans Holbein. Born in 1498; died, 1554. This great painter was admired by all Europe for his forcible colouring and his exquisite finishing. His paintings in this gallery are perhaps unequalled for their historical interest and their fine execution. The Elizabethan group immediately under the picture just mentioned, cannot fail of interesting the spectator. We have, first, a portrait of Queen Elizabeth when a child—Holbein. Queen Elizabeth when about twelve years of age—Holbein. This is a most interesting picture, and perhaps one of the most curious in the collection. The young princess has an agreeable, childish expression of countenance, and at the same time much sense. The mouth is pretty, and the hair reddish. Over a white petticoat, richly embroidered with gold, she has a crimson dress, adorned at the waist and neck with jewels and pearls, and a cap of the same colour. In her long, thin hands, she holds a prayer-book. The picture is most elaborately finished throughout. Queen Elizabeth, an allegorical picture—Lucas de Heere. Queen Elizabeth—Zuccherro. Queen Elizabeth—Marc Guérardo or Garrard. Died in 1635. His portraits are generally neat, the ruffs and habits stiff, and rich with pearls and jewels. This is said to be the last portrait painted of the Queen. The pictures which surround this Elizabethan group, are portraits of some of the great and wise men of her court, such as Nottingham, Walsingham, Bacon, &c. They are copies. King and Queen of Bohemia dining in Public—Van Bessan. Charles I. and his Queen dining in Public—Van Bessan. This and its companion are curious historical pictures. Lady Vaux—Holbein. Probably the wife of Nicholas, lov. Vaux, a great ornament to the courts of Henry VII. and VIII. Portrait—Gonzales. Queen Mary when a Child—Holbein. Portrait—Ant. More. Portrait of a Young Man—Albert Durer. Born, 1471; died, 1528. This memorable artist was a universal genius. His imagination was lively, his compositions grand, and the finishing of his pictures

remarkably neat. The one before us is admirably and carefully painted. The date 1506 is upon it, and the initials. Sir Theodore Mayerne—Rubens.* The two large pictures above the smaller ones represent the embarkation of Henry VIII. at Dover, and the meeting of that king and Francis I. of France in the field called the Cloth of Gold, near Calais. These pictures are not only historically very interesting, but a curious fact is connected with one of them. After the death of Charles I., the Commonwealth were in treaty with a French agent, who had expressed his desire of purchasing these pictures for the king of France. Philip, earl of Pembroke, who was a great admirer, and an excellent judge, of painting, and considered these valuable pictures an honour to an English palace, came privately into the royal apartments, cut out that part of the picture where King Henry's head was painted, and, putting it into his pocket-book, retired unnoticed. The French agent, finding the picture mutilated, declined purchasing it. After the Restoration, the then Earl of Pembroke delivered the mutilated piece to Charles II., who ordered it to be replaced. On looking at the picture in a side light, the insertion of the head is very visible. It may fairly be doubted whether Holbein painted these pictures. They are too coarse; besides, he did not arrive in England till six years after the interview depicted, and therefore could not have taken the many excellent English portraits which are introduced into the pictures at that time. It is, however, immaterial, as their intrinsic merit and historical interest will always demand attention."

Lardner's Cabinet Cyclopædia. Vols. 113, 115, 116. London, 1839. Longman and Co.

VARIOUS circumstances have combined to postpone our reviews of these volumes, beyond the period that our attention should have been devoted to them. The first, a continuation of Sir James Mackintosh's "History of England," is from the pen of Mr. Wallace, whose sudden and premature death it was, perhaps, which averted our minds from the consideration of the work. It was our wish to have published a memoir of the author, whom we have long known and esteemed, throughout a life sedulously devoted to literary pursuits; but being unable to procure such a memorial of him, we could not bring ourselves to a critical examination of his last production. Wallace was a native of Ireland, and a man of sterling abilities. He was long connected with the periodical press, and particularly with the "Morning Herald" newspaper. As a critic, generally, he possessed a sound judgment, and a fund of needful information; but on dramatic writings and performances, he was pre-eminently gifted with talents to enable him to sit as censor. He had been to Covent Garden on a Thursday evening, to witness one of the masterly efforts of Macready, whose art he greatly admired, and to whom he was individually much attached; and on the Saturday he was a corpse.

The next volume on our list is the sequel to Mr. Forster's "Life of Cromwell," in the series of "Lives of Eminent Statesmen." Here, as in the former portion, Mr. Forster has diligently sought out for new matter to illustrate the biography of one of the most extraordinary men that ever acted a striking part in the history of

* Mayerne was a native of Geneva, and was physician to four kings; namely, Henry IV. of France, James I. of England, and the two Charleses. He had a great reputation."

England; and has succeeded so well as to bestow much original interest upon his work.

The last is a volume of Mr. Swainson's "Natural History," and appropriated to fishes, amphibians, and reptiles. It is, as might be anticipated from the writer, a very able performance, though somewhat fine and metaphysical. The technicalities are severe, and we confess that, even with our dictionary, we could not always get on to the right understanding of the text. For popular reading, six dictionaries would not suffice. The circular arrangement, of course, is a prominent feature. For example, speaking of amphibia:—

"Passing over the various artificial arrangements of this class, as unimportant to the paramount object of our volume, we rejoice in being able to avail ourselves, in this part of our undertaking, of the labours of one of the most eminent erpetologists in Europe; who, thoroughly impressed with the truth of that circular arrangement, which, if it pervades one class of animals, must necessarily pervade all, has distributed the *Amphibia* in accordance with such a series; and we deem his labours so successful, that we shall not venture to hazard the least alteration of our own. In a valuable work, not particularly devoted to zoology,* Professor Bell has arranged all the amphibians yet known under the following orders:—1. *Amphispneuria* contains the sirens and proteans; 2. *Aouora* comprehends the frogs and toads; 3. *Urodela* includes the salamanders; 4. *Abranchia* has the genera *Menopoma* and *Amphiuma*; while 5. contains the singular genus *Cacilia*. It is easy to perceive that this last passes into the first by means of the dipod sirens, and thus the whole form a circular group more or less perfect in its connecting links."

Another passage deserves quotation, as a fair specimen of the author:—

"We shall now conclude this rapid survey of the amphibians by some remarks upon the sirens. It has been said that these animals, uniting in themselves so many opposite affinities, 'are of the number of those beings which seem peculiarly formed to set classification at defiance, and which are distinguished in the animal kingdom for the anomalies of their organisation.' This sentence, however, betrays but a very partial acquaintance with the subject. In the first place, we deny that there are any anomalies in nature, although there appear to be many when we attempt to work out her natural groups. Anomalies imply contradictions to established laws; let us ask, therefore, upon what grounds we can term the structure of any being anomalous, before we are acquainted with those laws which it contradicts? If we invent systems of supposed affinities, without any regard to those beautiful harmonies of representation which nature almost forces upon our notice, not only the sirens, but innumerable other animals, will appear altogether anomalous. The contradictions, however, which they present must be laid at the right door; that is, to the errors of our own systems, and not to the departure of nature from those laws of which we have but an imperfect knowledge. But let us look to the sirens, or, indeed, to the whole of the amphibious class, in another point of view. All writers agree that they exhibit as many affinities to fish as they do to true reptiles; nay, no less a name than that of Camper can be cited for considering the siren as a true fish, belonging to the apodal order of

Linnaeus! If then—as nature every where proceeds by 'measured steps and slow' in leaving one group and entering upon another—if then, she has given to a group of animals a peculiar organisation intermediate between reptiles and fish, it becomes absolutely necessary that such animals should exhibit differences from both the classes they are intended to connect; that they should be, in fact, the graduating links—the narrow but well-proportioned passage—which is to lead us from one vestibule of nature's temple to another; and so, accordingly, do we find them. So far, then, is the siren from being peculiarly formed, so to speak, for setting natural classification at defiance, that it offers one of the most beautiful and most essential links in the chain of nature. The anomaly would be, if such animals had never been created. Without them there would be a gap, 'which nature's self would rue,' as destroying, in the most perfectly organised kingdom of the animal world, that particular race of beings which demonstrates the union of the whole of the vertebrated animals into one vast circle."

Whatever are its difficulties and imperfections, it must be owned that this is a valuable work for the science of which it treats; and having allowed it thus its just merit, we shall leave it with a smile at two of its statements. Speaking of the true *Chatodonidae*, Mr. Swainson gravely tells us, that it has "a small head and a much smaller mouth," and we should have wondered if it had been larger: and the following will speak for its own amusing conclusion:—

"Analogies of the Zeida and the Scomberidae.

Sub-families of the Scomberidae.	Analogies.	Sub-families of the Zeida.
Scomberinae.	Dorsal fins distinct.	Centrolophinae.
Thynninae.	Dorsal fins united.	Zeinae.
Alepocephalinae.	Body long, subanguliform cylindrical; mouth and teeth large; lower jaw long-set and pointed.	Sphyraplinae.
Fistularinae.	Back armed with many naked spines before the dorsal fin; snout sometimes lengthened.	Gasterostinae.
Xiphiinae.	Lower jaw short, the upper prolonged and pointed.	Notosanthinae.

These analogies are so conclusive, that we apprehend they need no amplification."

IRELAND.

[Third notice: continued from page 553.]

THE mellow style of Mr. Otway throughout his *Tour in Connaught* is delightful. Description, legend, adventure, succeed and relieve each other. The tone of the brogue is in our ears, the smell of the peat in our nostrils, and the humour of Pat is before our eyes, as we accompany our agreeable tourist

"westward, where Dick Martin ruled
The houseless wilds of Connaught."

Without further observations, we will commence with a picture of Irish life at Kinnegad; which town, Mr. Otway informs us, "is, like most towns in East and West Meath, 'a lean place amidst fat lands.' What a sleepy spot! few up and doing, but the cur dogs and beggars. The bugle of the passing coach sends its clangor along the quiet street, it reverberates amongst the mud walls and dunghills—the lazy cobbler lifts his head from his last, and scratches, significantly, beneath his woollen nightcap—the tailor lays down his goose, scratches also, ruminatingly, at the organ of destructiveness, and stares at the passing vehicle—the tinker's ass brays responsively as the guard blows—the sow rises from her wallowing in the green puddle that bubbles and foeters before the huxter's

door, to grunt in unison—mendicants and cur dogs rush forth and surround us, the one barking, the other begging. Oh, why have we not the pencil of a Wilkie or an Ostade, a Callot or a Della Bella, to picture the grouping of a coach changing horses at an Irish village! Here I challenge all the mendicant countries in Christendom to match me Ireland in the trade, or costume, or aptitude for begging—France, Italy, ay, even Spain itself, must yield the palm. Where, under the sun, could you find such eloquence of complaint—such versatility of supplication—such aptitude of humour—suing, with felicitous tact, the appeal to the well-guessed character of the applicant? Observe, there is always a leader of the begging band, who controls the rest, and asserts a manifest superiority in striking the key-note of supplication. Take, for instance, the quenn-bee, or rather wasp, of the Kinnegad swarm that surrounded us: what a tall, sturdy, sinewy virago! her dark, unquiet eye, bespeaking her quick spirit—her powerful form, the danger of disputing with her—her sallow skin and sharp features, that the pabulum of her existence was drawn more from whisky than from wholesome eatables: alas, for the body, soul, and spirit of that being whose existence depends on whisky and potatoes! Look at her, with her filthy, faltering hand fixed now on the coach-door, in the attitude of threatening requisition, and almost intentionally frightening a delicate female within into the reluctant bestowment of sixpence. Again, see with what a leer of cunning she addresses herself, in flattering guise, to an outside passenger; and how knowingly she smokes a youth with a cigar in his mouth; and while coaxing him out of a penny, which he flung at her head, she played upon the puffer, offered to lend him her duceen, quizzed him for his parsimony, in attempting to smoke and chew at the same time from the same tobacco twist, and exhibited him off in the truth of his nature—as a jackanapes. Then she moved off to the rear of the coach, and commenced flattering a farming sort of a young man, large, rude, and ruddy. 'Och! then is that yourself, Master Tom? I hope your honour's heifers sold well last market—maybe it's yourself that hasn't the pocketful o' money coming out of Smithfield: and long may your father and your mother's son reign, for it's he that's the good warrant to give to the poor—my blessing, and the blessing of poor Judy's children, light upon him every day he gets up, for it's he that never passes through Kinnegad without throwing me a silver shilling. Do, Master Tom—and the heavens be your bed—throw us a half-a-crown now, and we'll divide decently. Yes, your honour, I know you'll be after putting your hand in your pocket. Molly, aggr,' turning to another beggar-woman, 'what a sweet smile Master Tom carries! Isn't he as like the dear man his father, as if he was spit out of his mouth?—But why shouldn't he be good, seeing as how he's the *rale* could sort—none of your upstart Jackeens?' Here a sixpence, thrown at her head, rewarded her pains, and immediately she turned to a respectable-looking man, with broad-brimmed hat and sad-coloured attire, who stood on the other side of the vehicle preparing to mount. 'Do, your reverence, throw us a taster before you go, and soon and safe may you return, for the prayer of the fatherless and widow will be along wid yees—blessing on his sweet, charitable face! Wouldn't ye see, Honor,' addressing herself to another beggar-woman, with the wink of an eye, 'that there was a heart within him for the poor?' Here Honor interposed: 'Judy Mulcahey, and had

* "The Encyclopedia of Anatomy and Physiology, part i. p. 91."

luck to yees, why call the gentleman 'his riverence,' when you know no more than my sucking child whether he be a *clergy* at all, at all?' 'Yes, but I do know; and for why shouldn't I? Don't I see his galligaskins covering so tight and *nate* his comfortable legs?—blessings on his riverence every day he rises!' And then, in an under voice, and turning to a beggar-man behind her, 'Jack, what matters it to the likes of us, whether he be the right sort or no—what *concerns* it is to Judy and the childer, whether he be priest, parson, or methody preacher, so as I slawder him out of sixpence? Do, your riverence, do—and the poor widow's blessing attend ye—throw something before yees go amongst us.' Thus she carried on her attacks, praised and joked, prayed and imprecated, now a blessing, now a blasphemy; and when the guard sang out 'All's right,' and the coach drove off, she heaped curses, for sheer fun sake, upon all those whom, for herself and fellows, she failed to put under contribution—and then for the whisky-shop, to dissolve, with all rapidity, the proceeds of her morning's occupation. But, 'adieu to the village delights.'"

This faithful and vivid sketch is curious for future reference as one, taken immediately previous to the introduction of the poor-laws.

Arrived at Kilbeggan, Mr. Otway observes:—

"The inn of the town I must remember as long as I live; its titled landlady I well recollect—the Lady Cuffe; never did the fountain of honour play off such a ludicrous prank, as when it showered its spray on the head of an innkeeper; yet so it was, when about seventy years ago the Viceroy of Ireland dubbed mine host of Kilbeggan a knight. Lord Townshend, the then lord lieutenant, a man addicted to the most dissolute habits; and who, by the satirical writers of that day, was represented as one perfectly regardless of pomp, dignity, or parade—one who, as he walked the streets, used to scatter his ribald jests among the common passengers—whose festivities were often degraded down to disorder, and his recreations to indelicacy,—he, on occasion of a journey to Connaught, was, by some accident that occurred to his equipment, obliged to stop at Kilbeggan for the night, and partake of such accommodation as Mr. Cuffe, the innkeeper, could afford. In those days good claret was not an unusual thing to be had, even in small country inns; and so it happened that Mr. Cuffe was able to send up some fowl and fish, well cooked and well served, and that the claret was in its *bouquet* and flavour, adapted to his excellency's taste. Accordingly the great man unbent himself amongst his boon companions, and so, while losing sobriety, he forgot decorum; and as he, on another occasion, introduced his fox-hounds into the council-chamber, now, as a hair-brained Bacchanalian, he ordered the host to make his appearance, and when he came into the *presence*, the viceroy, in an affectedly grave speech, returned him thanks for his excellent cheer, and announced that he would not repay the *obligation* in any other manner but in conferring on him the honour of knighthood: and, accordingly, in spite of some of the more sober of the party, who remonstrated against this act of whimsical licentiousness, he actually forced mine host to kneel down, and duly dubbing him in set phrase and form, said, 'Rise up, thou mirror of innkeepers, and be from henceforth Sir Thomas Cuffe.' The astonishment of the innkeeper may be well supposed, as he returned to his wife to inform her of her new honours. The vice-regal visitor, as usual, retired to rest, utterly reck-

less of what he had done, and rose in the morning, altogether forgetful, until reminded of the transaction; at which, when informed, he was not a little annoyed, but plucking up courage, he said to his aid-de-camp: 'It certainly was carrying the joke too far, but curse the fellow, sure he will not take any advantage of it? Call him before me, and I'll persuade him to hush up the matter.' Accordingly, the man was introduced. 'Mr. Cuffe,' says his excellency, 'a circumstance occurred last night which I am sure you understood in the proper light: it was, it is true, carrying the *joke* too far; I hope, sir, you feel as becomes you, and that you will say no more about it, nor let the thing get wind.' 'Oh! indeed, my lord, the honour you have conferred on me, though I am right sensible of its importance, is still what I, for one, would have no objection to forego, under a proper *consideration*; but, please your excellency, what will my Lady Cuffe say?' The innkeeper and his wife were Sir and my Lady all their lives. The man died long before I ever passed through Kilbeggan, but I perfectly remember my Lady Cuffe. The remembrance of an ennobled hotel-keeper, however, is not what has fastened the inn so much on my memory, as a still more *personal* occurrence; for, be it known—and the part most concerned tingle while I tell it—I got the greatest kicking ever man got in Lady Cuffe's yard. The lamentable event was on this wise:—I, in the summer of 1799, the year after the rebellion, was travelling from the county of Westmeath to that of Tipperary, and on my way rode into my Lady Cuffe's inn at Kilbeggan; there I saw, sauntering about the house, and smoking as they reclined here and there, a set of outlandish-looking soldiers, gigantic fellows, with terrible *moustaches* and other accoutrements, denoting them to be foreigners. I was a young, spare, lathy lad at that time, much under twenty, and, like a gaping green-horn, I must needs proceed to the stables to inspect the horses and appointments of these much-dreaded men, who I was told were Hessians. Suppose me then standing in the stables, '*sicut mos est Milesianorum*,' as is the custom of Irishmen, with my mouth open, admiring all the stirrups, saddles, and bridles, &c. &c., of the Germans; moreover, be it recollected, that it was a token of loyalty in those days to carry a queue, or tail pendant from the back of your neck, and that those who neglected or lost such an accompaniment were counted disaffected,—they were Croppies. Poor innocent Croppy then as I was, there I stood unconscious of coming evil, when I all at once found myself seized as from behind, by the grasp, as it were, of a giant, my arms pinioned with one hand, the poll of my neck searched for the deficient tail with the other, and my seat of honour assailed with an immense jack-boot, whose toe did horrible execution, such as a battering-ram would inflict on a very weak postern, and then a terrible cry was shouted close to my ears, 'You be one Croppie rascal, vat te devil bring te yong rebill here? Take *dat*—and *dat*—and *dat*.' So he kicked me in the stable, and he kicked me in the street, and he kicked me up the front steps of the inn, and there the cruel monster, who was at least six feet four inches in height, then left me, as a bound would let drop a hare out of his mouth, pounded in body, and wounded in mind. Oh! the toe of that horrible jack-boot, never can I forget the infliction—what was I to do? take vengeance of course. Vengeance on whom? a common soldier—have the fellow punished—stay in the town until you lodge the com-

plaint before his officer—have him tried, flogged, and what not—oh! but that would have taken time—I should stop with my Lady Cuffe; that would take money, with which I was not over-burdened, so I thought it better to take patience, call for a chaise, and, putting plenty of straw under me, for air-cushions were not then invented, proceed in a very delicate state to the end of my journey; my only consolation being, that though a kicked man, the disgrace and pain were not inflicted by a countryman,—by a *rule* O, or a true Mac, but by a brutal Hessian."

Mr. Otway goes on to Athlone, that town in the history of William's Irish wars, so famous for

"roaring cannon,
Where men, like otters, crossed the Shannon;"

from whence he visited Clonmacnoise, a very remarkable place, from its "seven churches, round towers, and other tokens of cenobitish holiness;" and at present, according to Mr. Otway's account, a hotbed of Irish superstition.

We find that the limits which restrict us prevent our entering Connaught, with the prospect of being able to do Mr. Otway's most agreeable excursion through that province any thing like justice, in the way of illustrative extracts; and we must therefore content ourselves with his graphic account of the memorable battle of Aughrim, which presents itself to us at the threshold of his tour:—

"About three miles south-west of Ballinasloe rise the high grounds, of which the hill of Aughrim stands most prominent. It may be supposed that I would not pass near the memorable battle-field without walking over it, which I accordingly did. Even were it not the scene of one of the most important events in European history, it is a beautiful eminence to look from—a fine farm of grass land, and near it is rather a pretty village. The hill which St. Ruth, the general commanding the united French and Irish forces, chose as the ground where he would make the last great struggle for the house of Stuart, is called Killoomedan. The Frenchman, surprised as he was at Athlone, and brought to shame and confusion in the midst of his boasting, determined to shew here that he knew how to choose a good defensive battle-field; and certainly (speaking, as I confess I do, as a mere civilian) I may say, that not in Ireland could a better position be selected. I have been at Waterloo, at Culloden, at Oldbridge,—those great fields where the fate of religions, empires, and dynasties, were decided, and none of them can at all be compared to Killoomedan. The hill rises, a fine green eminence, to the height of about four hundred feet. The ascent is so gradual, that both cavalry and artillery can easily manœuvre. Along the north-eastern side, upon which the Irish army was drawn up, there were parallel rows of lofty whitethorn hedges, which partly remain to this very day. On either flank were red bogs; in front, a morass, only passable, and that with great difficulty, in two places. The only approach for cavalry or artillery was by a narrow causeway that passed under the castle of Aughrim, a stronghold of the O'Kellys, and along which but two or three could ride abreast. It was no wonder, then, that St. Ruth, with his usual complacency, felt satisfied that his position could not be forced: it was no wonder that De Ginkle, the British commander, summoned a council of war to discuss whether it were possible to beat the enemy from this position. The fog that covered the whole country during the early part of the day, and the irresolution of the British officers, did not

allow the attack, which was now resolved on, to begin till about two o'clock; and St. Ruth, observing that the assault was to be made, addressed a speech to his army, in which he took great merit to himself for the wars he had waged, and the desolations he had been so successful in perpetrating on Protestants in France and Germany. He stated, that now or never was it for the Irish to stand by their religion and country, and he closed his harangue as follows:—"Stand to it, therefore, my dears, and be assured that King James will love and reward you; Louis the Great will protect you; all good Catholics will applaud you; I, myself, will lead you to victory; the church will pray for you; posterity will bless you; angels will caress you; God will make you all saints; and His holy Mother will lay you in her bosom." This speech, of course, could be heard but partially by the officers and men; but a priest of great eminence, Dr. Stafford, crucifix in hand, went along the lines, and, with astonishing eloquence, brought all the inducements of time and eternity to bear upon the feelings of the soldiery. There can be no doubt but this man was sincere, and his devotions had a wonderful effect; he stood to his work the whole day, from the beginning to the end of the fight: there he was, passing from line to line, animating the men, and, when all was over, amidst the thickest heaps of slain he was found, cut down while exhorting the Irish to fight for God and their country. The Irish were superior to the British in numbers, especially in cavalry, but much inferior in artillery; they mustered about twenty-five thousand men. As I said, the battle began about two o'clock: the English attempted to turn the Irish right, near the house and high grounds of Urrachree; but they were repulsed with so much loss, that about four o'clock a council of war was again held, to consult whether it would not be better to draw off the troops, at least for that night; but, by General Mackey's advice (one of the best men and bravest officers in William's service), it was determined to persevere, and to send forward the centre to pass the marsh in front. That which was then a morass, requiring caution, even in those who knew it well, to pass over without sinking up to the middle, or being swallowed up altogether, is now a fine tract of meadow and pasture ground. Across the firmest, most practicable parts, the English now ventured to make their way, protected by their well-served artillery, which fired over their heads, and played upon the Irish who lay along the hedges that just commenced where the hill rose from the morass. The English, having passed the marsh, found themselves in face of the enemy, who had lined all the hedges, and had also made open and convenient places through which cavalry and artillery might manoeuvre. Here the Irish fought most heroically; and the push of pike and bayonet through the hedges reminds us of the same kind of desperate struggle that took place at La Haye Saint, on the field of Waterloo. The Irish regiments even drove back their opponents; who, told by their commanders that they must force the Irish from the hedges, or fall back on the morass and be swallowed up, fought like tigers; yet they were driven back, and were, while swamping in the bog, either killed or taken prisoners. Beaten thus, on their left and centre, the evening was closing, and the Irish had all the advantage. St. Ruth was heard to say, "Now I shall beat back the English to the walls of Dublin." Nothing could retrieve the battle but a charge of the English cavalry from the left, to try and take the Irish

in flank, and this charge must be made along a narrow causeway under the guns of the castle of Anghrim. They did attempt it, led on by Talmash, a man of ready enterprise, and of the most undaunted courage; and, like most valorous attempts, it succeeded. But while in the act, while struggling with their great difficulty, while scrambling over the torn-up causeway, and plunging on, St. Ruth was heard to cry, "What are these fellows about?" "Why they are about to turn you left," was the reply. "Then they are brave fellows," said the Frenchman, "but every man of them will be cut to pieces." It was not so—they passed on like a hurricane—they took the Irish centre in flank, and were doing horrible execution, when St. Ruth, seeing that, against all military calculation, the English horse had forced the pass and were doing valiantly, rode down the hill with a view of directing a battery that was raised to flank the pass, to play on the successful enemy. When in full career he was shot by a cannon-ball. The place where he fell is marked by a small whitethorn bush; an aid-de-camp threw his cloak over him, but not before it was known to the Irish cavalry who swept by, and subsequently it ran along all the Irish line, that their commander was no more. The Irish are subject (more especially in their own country) to sudden panics. On this occasion, though they had, decidedly, the best of the day, though they had fought with a courage and discipline such as in their own island they had never shewn before, though they had fresh troops in abundance, yet all seemed paralysed, the battery ceased to fire, the Irish horse halted and delayed to charge. Talmash, who at once saw that something was gone wrong with the enemy, took instant advantage of the delay, he called on the English, both horse and foot to advance, the columns that were unbroken at the edge of the bog moved forward, those that had been dispersed returned to their ranks, and the whole centre charged up the hill. In the meantime, no one stood forward to command the Irish—not one direction was given—those who commanded the cavalry rode off the field in despair and indignation, the foot seeing themselves abandoned by the horse, fled and dispersed over the bogs, and all was cutting down, and remorseless slaughter, until night put an end to the pursuit. Sarsfield, who had the character of an active officer, and had proved himself able to act wisely in an extremity, should have taken the command on the fall of St. Ruth. It does not appear, however, he did; it is therefore doubted by some, whether he was in the battle; at all events, there was evidently a want of confidence and counsel between the French commander and the Irish officers; the presumptuous and ill-conceived contempt for the Irish, which possessed the boastful Gaul, was exceedingly offensive, and, it would appear, that he did not communicate his plans to any one: the result was as we have seen. Providence, in the midst of almost certain success, confounded the allied arms; and the death of St. Ruth sealed the destiny of the house of Stuart. The Irish left one-third of their army on the field. The dead lay, day after day, exposed; there were none to bury them—the country people had all fled—and the carrion birds came and banqueted, and wild dogs in packs frequented the field, and became so fierce, feeding on man's flesh, that no one might pass that way; and amidst this scene of pestilence and horror, there was one dog, a wolf-hound belonging to an Irish colonel that fell, and lay upon the hill-side; on this body the attached creature remained day and night;

with the rest of the prowling animals, dogs, foxes and wolves, he fed upon the corpses that lay around, but would not allow any thing, either bird of the air, or beast of the field, to touch his master; and when the bodies were all reduced to skeletons, when he was obliged to go far away, and prowling by night through the neighbouring villages, yet he came back presently to the place where his master's bones lay festering in slow process of corruption, there to keep watch and ward. A soldier quartered in Anghrim, six months afterwards passing by chance that way, saw the dog seated by the skeleton, and drawing near out of curiosity, the animal, fearing he came to disturb his master, flew at him, and the man surprised at the suddenness of the assault, levelled his musket and shot him dead. I shall conclude my sketch of this important battle," says Mr. Otway, "by noticing a prophecy which was prevalent among the Irish respecting it. A year before it took place, a Protestant gentleman living near Anghrim met a number of that nomadic race that existed in Ireland during the sixteenth and seventeenth centuries, called Ulster Creaghts, who roamed the country, desolated as it was by the wars of Elizabeth, Charles, and William, from north to south, and drove their herds before them, pasturing on the devastated lands wherever they chose. Meeting this gentleman just near the castle of Anghrim, they demanded of him what castle that was, and upon his telling them its name, they pointed to the hill of Kilcomedan, that rose to the south of the castle, and declared that before long a great battle would be fought there between the English and the Irish, and that the English would find their coats too heavy in climbing up the eminence. This prophecy was two-handed, and was interpreted by the Irish to mean their foes casting off their coats while running away from them. Colonel Gordon O'Neill, who lay wounded on the hill, and was (before he was trampled to death) taken prisoner and brought off the field, when he saw the British casting off their coats, in order that they might more lustily pursue and overtake the Irish before they got to the bogs, called to mind, with no small grief, the prediction of the Ulster Creaghts. The green hill of Anghrim is not alone memorable for the conflict that confirmed the dominion of England over Ireland, but like every other fine green eminence, it is the domain of the fairies. One rich in reminiscences of the 'good people' told me the following 'fact.'"

Here, we must conclude for the present, notwithstanding Mr. Otway's Will-o'-the-Wisp lantern is so temptingly displayed before us to allure our unguarded footsteps into the land of fairy, "situate," according to auctioneer phrase, in the marsh of the green and pleasant hill of Anghrim; about which, in rivalry of the Ulster Creaghts, we prophesy, that many will be the English visitors thereof, as well as of Connaught, this very autumn, in consequence of his agreeable volume: indeed we certainly perceived a movement among our assembled friends at Birmingham, for the purpose of viewing the Green Isle, not through the books of others, but with their own philosophical eyes.

MISCELLANEOUS.

A Narrative of the Discoveries of Sir Charles Bell in the Nervous System. By Alexander Shaw, Assistant-Surgeon to the Middlesex Hospital. 8vo. pp. 232. London, 1839. Longman and Co. *Palnan qui meruit ferat* is an honest motto;

and this is an honest book, being a fair and straightforward account of the progress of discovery in regard to the Nervous System; and, consequently, to use another saying, to clap the saddle on the right horse. From 1811 Sir Charles Bell laboured with most philosophical acuteness and energy in this investigation. By his experiments he demonstrated that the anterior roots of the spinal nerves bestowed motion, and the posterior roots sensation. His experiments on the fifth pair and on the portio dura were equally original, ingenious, and conclusive; and Mr. Shaw shews that the results were published by him, in a paper 'On Partial Paralysis,' before M. Magendie or Mr. Mayo appeared on the stage: the latter being a pupil of Sir Charles Bell. These are the leading points which this volume seems to us to establish. In the course of his remarks, Mr. Shaw animadvertes on the errors of Professor Whewell on the subject, to whom he suggests the *ne sutor ultra crepidam*; and on the mistake of M. Müller in ascribing to M. Magendie Sir C. Bell's discovery, that the retina possesses an appropriate sense distinct from that of a nerve of touch. He also severely reprehends the useless barbarity of many of M. Magendie's experiments.

Blindness; or, the Second Sight Restored and Lost. A Poem in Three Parts, with Descriptive and Physiological Notes. By Andrew Park. Pp. 259. London, 1839. Smith, Elder, and Co.; Glasgow, Robertson; Edinburgh, Fraser and Crauford; Liverpool, Grapel; Dublin, Cumming.

THE object of this volume would recommend any literary production in verse or prose,—it is to enforce the claims of the blind to the benevolence of their fellow-creatures who enjoy the blessing of sight. In furtherance of this holy cause, the author has described almost every species of blindness, and dwelt upon the privations to which the sufferers are exposed. Some interesting matters appear both in the poem and in the notes; but as the former does not demand a critical review, we shall content ourselves with bestowing our hearty praise upon the laudable design.

A Modern Pyramid to commemorate a Septuagint of Worthies, by M. Ransmahar Tupper, Esq., M.A., and Author of "Proverbial Philosophy," &c. Pp. 328. (London, Rickerby.)—A fanciful vision, with certain not visionary discrepancies, introduces this Septuagint; for it tells us, in the first page, that the vision "was only a face," and then that a glorious living creature was growing to his knowledge, for "she wore the garb of woman." In the body of the work, we are made acquainted with seventy remarkable personages, from Abel to Felix Neef; and when they are poets, Mr. Tupper has given us examples of their writings, translated syllable for syllable, in their own rhymes. There is a good deal of imagination, and a good deal of talent; and a fair display of reading, in this volume, which we can truly say is a miscellany, whence both pleasure and information may be extracted.

Sketches of Married Life, by Mrs. Follen. Pp. 331. (London, J. Green.)—Inculcating evangelical religious principles as the only true sources of happiness in married life.

Maxims, Morals, and Golden Rules. Pp. 96. (London, J. Madden and Co.)—A hive of good selections from many excellent writers.

An Etymological and Explanatory Dictionary of the Terms and Language of Geology, by G. Roberts, author of "The History of Lyme Regis," &c. Pp. 183. (Longman and Co.)—A very much needed, a very useful, and a very excellently planned and executed little dictionary. In every science where technical terms are being perpetually coined, such aids are necessary to the learned as well as to the novice; and we deem that Mr. Roberts has conferred a great obligation on geology by producing the present volume.

THE BRITISH ASSOCIATION.

NINTH MEETING: BIRMINGHAM.
[Fifth notice.]
FRIDAY.

THE Sectional business of this day was principally conducted in Section A, Mathematics and Physics. The communication most in-

teresting, which we subjoin, was that from Sir John Herschel, respecting the action of the dissipated rays of light on the solar spectrum. Those papers relating to the effects of lightning on three of H.M. ships, by Mr. Snow Harris; to the determination of the arc of longitude between the observatories of Armagh and Dublin, by Dr. Robinson; and to the determination of the differences of longitude, by means of chronometers, by Mr. Dent, were also important; but as these subjects have been much before the public, and as the latter are still *in transitu*, we avail ourselves of the present opportunity to give a lengthened Statistical paper, reserving those read on Saturday for a future concluding notice.

STATISTICS.

Agreeably to our proposed mode of reporting the proceedings of this meeting, so fully as to embrace every topic of scientific importance, and every matter of practical utility,—in short, every novelty of interest, without lending our columns, which might be more generally and advantageously occupied, to efforts for notoriety, which it is impossible altogether to avert on such occasions, we now revert to such papers in the Statistical Section as seem to us to be susceptible of beneficial application. All that we hope for in this rather recent branch of pursuit and inquiry is, that its active and zealous friends will not overlay us with imperfect and unconnected masses of data; but will adopt some system, and reduce their facts and observations to order as they go on, so that the cause of religion and morality, the blessings of a sound education, and the enactment of good laws, may be promoted by their labours.

Among the communications made, we met with none that seemed to square more completely with this view than one by Mr. M. R. Rawson, 'On the Criminal Statistics of England and Wales,' of which the following abstract appeared:—

"One of the most important branches of moral statistics is that which relates to the commission of crime; and it is one of those which is most easily susceptible of numerical computation. The nature of the act is generally sufficient to indicate the object aimed at; the sex, age, civil and social condition of the offender, point out the principal circumstances which influence the method of the act; the degree of instruction which the party has received, and the religious knowledge of which he is possessed, for both of which adequate tests may be prepared, shew the degree of moral restraint to which he is subject, and the intensity of the passion which bursts through that restraint; while the immediate motives, when not inferable from the visible circumstances of the case, will be found, upon investigation, to be few in number, simple in character, and easy of detection and classification. A committee of the Statistical Society of London, which numbered among its members several persons who have devoted much consideration to this subject, found that almost all crimes could be referred to one of four motives, viz. desire of gain, indulgence of sexual desire, malice, and wantonness. Of the above particulars, the criminal returns of this country exhibit only a part, viz. the nature of the act, the sex, age, and degree of instruction of the party committed for trial; and even upon these points there exists, in these tables, several sources of imperfection. The nature of the act is defined according to the technical phraseology of the law, neglecting the many important distinctions in the character and moral turpitude of

the offences. The degree of instruction, also, is not shewn in connexion with the age of the offenders; so that the influence of the former at various ages, and the progress of instruction at intervals of years, cannot be ascertained. Still it would be well if the deficiencies of these returns extended no further. But, with regard to the amount, and even the character of crime in this country, they are still more imperfect; and, if taken by themselves as the index of either, would lead to the gravest error. They exhibit only the persons committed for trial before the courts of quarter sessions and circuit assizes, or in local courts; and do not include those summarily convicted, or discharged by magistrates, or petty sessions. It will scarcely be believed, that of these last no general record exists: the only information that is complete for the whole of England and Wales, is the number of persons sentenced to imprisonment upon summary convictions, which has been collected and published by the inspectors of prisons, in their report for 1838. But this is only for one year; and the number of offenders tried and acquitted, or sentenced to fines, or other punishments, has never been ascertained. The average annual number of convictions before the quarter sessions, circuit assizes, and the local courts, during the five years from 1834 to 1838, was 15,874; the number of persons sentenced by summary conviction to imprisonment, during the year ended Michaelmas, 1837, was 59,364. If, therefore, the proportion of acquittals to convictions, by magistrates, be not less than that occurring before the higher courts, and there is every reason to believe that it is greater, the number of cases summarily dealt with by the former is at least four times as great as the number brought before the higher courts. But the returns made by the commissioners of metropolitan police enable us to form a more exact idea of the number of summary convictions. In 1837, the number of persons convicted by magistrates, within the metropolitan districts, for offences, exclusive of drunkenness, and other mere infractions of police, was three times as great as the number committed for trial; and the number acquitted was four times the number of commitments; so that the number charged was, altogether, eight times as great as the number brought before the higher courts. It is probable, that the proportion of summary convictions to commitments is higher in the rural districts, where the person charged must generally suffer a long imprisonment before he can be brought to the assize, than in London, where he may be tried almost immediately before the Central Criminal Court. On the other hand, the existence and continual presence of an efficient police force in London causes a greater number of persons to be arrested on justifiable suspicion, against whom the legal evidence is insufficient to ensure a conviction. With regard to the character of the offences for which persons are summarily convicted, although it is true that a considerable portion of these are of a trifling nature; yet a large number of serious cases of the same description, and equal gravity with those tried at the assizes, are adjudicated by magistrates. It is obvious, therefore, that the criminal returns, in their present form neither indicate the whole number of persons apprehended or punished for serious offences, nor afford any information whatsoever with regard to petty offences, which form by far the most numerous class. There are, also, further difficulties in the way of inquiry into this subject. If the administration of the law remained stationary, the pre-

portion of offences annually determined before the higher and inferior courts, would continue relatively the same; but the criminal law of England is at present in a state of transition, and is every year undergoing great changes; local courts and petty sessions are increasing in number; capital punishments are being gradually abolished; large classes of offences are newly brought within the jurisdiction of magistrates; and thus the means of comparison from year to year are wholly destroyed. It must also be borne in mind, that the most complete record of the number of criminals arrested does not exhibit the amount of crime committed, as the former depends, in a great measure, upon the disposition of the parties injured, and the efficiency of the system of police. There is not in England, as in Scotland and France, a public officer in each county, whose duty it is to ascertain and record every offence which is committed; nor a public prosecutor, who is bound to exert himself to bring all offenders to justice, without reference to the feelings or desires of the persons who have been injured. Hence, crime may abound most where arrests are least numerous, and the very freedom from molestation tends to encourage and embolden the criminal. The average annual number of persons committed or bailed to take their trial before the quarter sessions, assizes, and local courts, held in England and Wales, during the last five years, was 22,174. The difference between the highest and lowest annual number during the period was 14 per cent. For the reasons previously stated, the annual increase or decrease is no index of the prevalence of crime, but it may be taken as evidence of the operation of the laws. In this point of view, there was a considerable decrease in the number of commitments in 1835 and 1836, compared with 1834, amounting, on an average of these two years, to 8 per cent; while in 1837 and 1838, there was an average increase of 4 per cent, compared with 1834, and of 12 per cent, compared with the two intermediate years. But it is worthy of remark, that this variation was very different in the two sexes. The decrease during 1835 and 1836 occurred entirely among the male sex, for the number of female commitments slightly increased; and the increase in 1837 and 1838 was more than four times as great among the females as among the males. The average increase of males during the last two years of the quinquennial period, compared with the average of the first two, was 5.9 per cent, while among the females it was 19.2 per cent. In consequence of this, the relative proportion of female to male offenders has increased 2 per cent during the five years. In 1834, it was 15.9 to 84.1; and in 1838, it was 18.1 to 81.9. The average of the whole period was 17.2 females to 82.8 males. The variation has also been very different in the several classes of offences. In the present tables the offences are divided into six classes, which have reference exclusively to the acts of parliament under which the offenders were tried. These consist of,—1st. Offences against the person. 2d. Offences against property, committed with violence. 3d. Offences against property, committed without violence. 4th. Malicious offences against property. 5th. Forgery, and offences against the currency. 6th. Other offences, not included in the above classes. A slight examination of these divisions will shew that the principle upon which they are founded is highly defective; and this has been ably demonstrated by Mr. Symonds, in a paper read before the Statistical Society of London, and published in its proceedings. Another paper upon the

same subject, by Mr. Henry Romilly, of Manchester, appeared in the last miscellaneous publication of the Statistical Society of that town. That gentleman's views, however, do not accord with those of Mr. Symonds. The first defect of the present classification consists in the definition of the offences, which is legal, and consequently, technical. The same category, and sometimes the same term, embraces all qualities and degrees of criminality. An assault may mean either a violent attack, by which the life of an individual is sensibly endangered, or the mere act of laying a whip on a person's shoulder, without the infliction of a blow. Attempts to injure or murder, by stabbing, shooting, and poisoning, are all classed together, although they severally indicate very different offences, both in mode and in degree of criminality. But the classification of the offences is still more defective for the purposes of moral investigation. It is based indiscriminately upon the two double-test principles of the effects produced, and the means used, adopting sometimes the one, and sometimes the other; and not upon that of the motives which induce the commission of the crime, or the tendencies of which the act is the evidence. Mr. Symonds has suggested a new principle of classification, which we have adopted, and which we shall have occasion presently to explain. For our present object of shewing the relative increase of different kinds of offences, during the five years in question, the classes used in the official tables will be sufficient. It appears, then, that the number of offenders against the person committed for trial, has gradually decreased to the extent of 19 per cent on the average of the last two, compared with that of the first two years of the period. Malicious offences against property, compared in the same manner, have decreased 36 per cent; while offences against property, with violence, have increased 70 per cent, and offences against property, without violence, together with forgery, and offences against the currency, have each increased 19 per cent. The latter two classes are those in which the proportion of female offenders is greatest, and the former of the two includes more than three-fourths of the whole number of offences; hence the proportionally greater increase, already noticed, in the number of female commitments. But this comparison must not be used as testimony, with regard to the general increase or decrease of particular classes of crime, for it is precisely that upon which the recent changes in the criminal law has had most influence. Many grave offences have lately been brought within the jurisdiction of magistrates, and the establishment or remodelling of local courts, and petty sessions, has afforded increased facilities for the speedy trial of less serious cases, which magistrates were formerly unwilling to send to the assizes or quarter sessions. In order to afford a fair average for statistical deductions, the returns for England and Wales of as many years as the official tables have been prepared with uniformity upon the present system, have been thrown together. In most of the particulars this has been done for five years; but, with respect to the degree of instruction, the necessary information has only been obtained during four years; and some difference in the headings during the first year of that period renders it impossible to amalgamate the return with those of the subsequent years. The remaining number, however, is fully sufficient to form an average for the purposes of the present inquiry. The total number of offenders annually committed for trial, on the average of the whole period, is 22,174.

Of these, only a small portion, amounting to 537, 2.4 per cent, were sexual offences, belonging to the first class. All the crimes contained in this class, with one exception, have been already enumerated. The second class, consisting of malicious offences, is divided into acts against property, and acts against the person. The former subdivision is identical with the fourth class, having the same title in the official tables. The chief offences included in it are arson and wilful fire-raising, injuries to cattle, and destruction of buildings, machinery, trees, and other articles. The number of offenders in this class was very small, not exceeding 158, or less than 1 per cent (0.64) of the total number. The average annual number in the second subdivision, which consists of assaults, attempts to maim and murder, manslaughter and murder, was 1174, or somewhat more than 5 per cent (5.3). This class exhibits a striking instance of the defectiveness of official tables, in not separating attempts to maim from attempts at murder, the objects and qualities of which offences are wholly different. If universality gave a right of priority in the classification of crimes, as contended by Mr. Symonds, theft ought indeed to be placed at the head of the table. It forms 17.20ths (84.5 per cent) of the whole number of offences. This class contains three subdivisions. The first includes all kinds of theft without violence, such as simple larceny, stealing from houses or from the person; thefts and embezzlements by servants; stealing of animals of all descriptions; and receiving stolen goods; and is by far the most numerous, having contributed 16,663 cases, or exactly three-fourths (75.14 per cent) of the whole number of offences. The second subdivision, which consists of thefts by fraud, viz. simple frauds; forgery of deeds and other instruments, with the exception of bank-notes; and conspiracy to raise the rate of wages, contained 497 cases, or 2½ per cent (2.24) of the whole number. The remaining subdivision contains thefts by force, of which the chief are burglary and house-breaking, robbery and poaching. The total number of offenders in this section was 1579; and the proportion to the total was 7 per cent (7.12), of which burglars and housebreakers continued two-thirds (4.54 per cent). The fourth class, composed of offences against the state, furnished 1506 cases, amounting to 6½ (6.77) of the whole number. This class includes coining and forgery of bank-notes, of which there were 855 cases, or 1½ per cent; a few cases of aiding smugglers; riots and breaches of the peace; resisting, assaulting, or refusing to aid peace-officers; prison-breaking, and returning from transportation; perjury, and administering unlawful oaths. The remaining class contains only 86 offences, or less than ½ per cent (0.39) of the whole number. To recapitulate—the proportion of thefts was 84.5 per cent; of offences against the state, 6.77 per cent; of malicious offences, 5.92 per cent; of sexual offences, 2.42 per cent; and of unenumerated offences, 0.39. Taking the twenty principal offences in their relative order, according to the number of persons annually committed for each, they will stand thus:—

1. Simple larceny	12,308
2. Stealing from the person	1,839
3. Housebreaking and burglary united	1,007
4. Stealing, by servants	955
5. Assaults	758
6. Receiving stolen goods	683
7. Riot and breach of the peace	607
8. Resisting, or refusing to aid, peace-officers	579
9. Frauds and attempts to defraud	425
10. Robbery, and attempts at robbery	392

11. Uttering counterfeit coin	318
12. Sheep-stealing	292
13. Embezzlement	309
14. Manslaughter	209
15. Rape, and attempts to ravish	188
16. Stealing from houses to the value of £1	178
17. Stealing of fixtures, trees, and shrubs	163
18. Horse-stealing	155
19. Poaching	133
20. Keeping disorderly houses	145.

The nature of the inquiries deemed requisite for information in Statistics, and of the method in which they are sought, may be gathered from the following, among other papers distributed, in illustration of the proceedings of the Section on Thursday:—

"At the meeting of the British Association in Newcastle, the sum of 50*l.* was placed at the disposal of Mr. Cargill, Mr. Wharton, Mr. Buddie, Mr. Forster, Mr. Wilson, of Glasgow, and Mr. Johnston, for the purpose of making inquiries into the Statistics of the Mining Districts of Northumberland, Durham, and Yorkshire.

"In order to render the information collected on this subject more complete, and to give it, however imperfect it may for some time be, the character of at least a part of a whole, it is proposed to arrange the inquiries under the three heads of *Mining, Manufacturing, and Moral.*

"1. *Mining.*—Comprehending the geographical extent, relative geological position; number of seams or veins; average thickness; quality (if coal, whether fire coal, steam coal, lime coal, gas coal, &c.); variations in the thickness and quality in different localities; nature of roof and floor, or of the walls of the vein; absolute contents; probable duration; of deposits of coal, iron-stone, lead, &c. Localities of mines; when commenced; most ancient workings in the neighbourhood; date and mode of working, and quantity then raised; absolute quantities of mineral now raised. Cost of raising the mineral; loss of, or on the surface, or in the mine; proportion of the mineral left in the mine; peculiarities in situation; mode of working; different qualities how disposed of; home consumption; coast; London; export (foreign); distance from port of shipment; conveyed by canal or railway; the latter worked by inclined planes or locomotives. Does the railway belong to the proprietors of the mine; is it carried by way-leaves; average cost of way-leaves per mile, or per ton transported. Number of workmen (men, women, and boys) above and below ground; average earnings. Upper classes of workmen—overmen, superintendents, under-viewers, &c.; how trained and selected. Safety of the mines; local difficulties in working; ordinary temperature of, evolutions of gas; kind and quantity of; number of accidents, &c. &c. *Results.*—Number and general direction; effects on the position and quality of the coal; deteriorated or the contrary; to what extent; converted into canal coal?—See Murchison's 'Silurian System,' v. i. p. 117; and 'Report of the British Association,' v. i. p. 84. *Water.*—Feeders at different depths; quantity and quality of water; how removed, by engines or levels; effects of the workings on the general drainage or springs on the surface. *Machinery.*—Engines employed in pumping and winding; construction; power; work done; fuel consumed; consumption of iron, wood, oil, leather, ropes, kind of ropes, &c. &c.—See De la Beche's 'Geology of Cornwall,' p. 550. *Capital Invested.*—In the mine; in machinery; in means of transport; number of horses employed by the mine; tons of shipping, &c. &c.

"2. *Manufacturing.*—Return of works immediately dependent on the mineral riches of the district; smelt mills; iron furnaces; glass works; alkali works; of chemical works in general; gas works, distinguishing those which work up the raw minerals of the district from such as depend on their locality for a supply of fuel only; quantity and quality of imported articles, and of the raw produce of the district consumed at each; approximate value of these; nature and value of manufactured products; where consumed; numbers of workmen; average earnings, &c.; healthiness of their employment; prevailing diseases; comparative longevity, &c. State of any of these manufactures, as of those of iron, soda, and glass, at different distant periods. Ancient bloomeries, sites, extent, mode of smelting; date, owners, &c. &c.—See Murchison's 'Silurian System,' v. i. p. 122.

"N.B.—A distinct set of queries must be drawn up for each class of works.

"3. *Moral.*—Including the statistics chiefly of the mining population; its amount in general and in certain limited districts; in certain pitmen's villages; for example, on the Tyne and Wear, the Ayre, the Calder, the Don, &c., in the mining dales of the Tees, the Allan, the Wear, the Swale. Actual and average ages of the working population; number of children; state of education; general desire and facilities for; religious persuasion and means of religious instruction; general morality; state of crime against property, against person; habits as to sobriety, &c.; rise and general cleanliness of their houses; salubrity of the village; medical statistics in general; proportion of disabled workmen; benefit and aid societies (statistics of). *General Industry.*—Age at which work is commenced; average period of cessation of labour; number of hours employed; actual and average rates of wages at different ages; strikes and combinations.—See 'Statistical Society's Queries.' *Females.*—Occupation of; do any work about the mines; kind of education they receive; skill in sewing, knitting, cooking, &c. On all these, and other topics not touched upon in this sketch,

separate sheets of queries must be drawn up, adapted, as far as may be, to the localities for which they are intended.

"It is of importance that these topics and queries should be properly digested, and put in as complete a form as possible, before they are sent out; and that the co-operation of many parties should be secured before any attempt is made to collect information. Prejudices must, if possible, be overcome; and by convincing parties that we have no private object to gain, we must endeavour to persuade them to lend their aid in securing the collection of this mass of information, not merely because it is likely to prove interesting to individuals, or to lead to important improvements within the mining districts themselves, but because it will be of great value also in a national point of view. Will you favour me with your opinion of this outline at your earliest convenience, and say if there be any of the departments or subdivisions on which, as a member of the committee, you would engage to draw up a list of queries; or in regard to which you would assist me with your suggestions? It appears advisable to adopt the present method of communication before calling a meeting of the committee, in order that when the meeting does take place, we may be prepared to adopt some previously concerted measure.

"Durham, April 1839. JAMES F. W. JOHNSTON."

Among the queries alluded to in the foregoing "N.B." we find these applied to a Mining, or Pit Village:—

What is the population—is it entirely a mining population?

In how many instances does more than one family inhabit the same house?

What is the size of the rooms in general?

Are there any instances in which brothers and sisters sleep in the same bed? How many? Of what ages?

Are there any instances in which a whole family, or more families than one, sleep in the same room? How many?

What is the general condition of the houses for cleanliness and order?

Have they generally pictures on the walls—of what kind?

How many houses have gardens attached to them?

Are they ornamental gardens, or otherwise—of what size?

Are pigs, poultry, &c., generally kept?

What increase or decrease has taken place in the population of the village during the last ten years?

An extract from the parish register of the births and deaths during the last two years, giving the ages.

The proportion of marriages annually to the population.

The proportion of legitimate to illegitimate births.

Is the employment of females in the mines supposed to influence the number of illegitimate births?

What number of children between the ages of four and fifteen are there in the village?

What number are receiving instruction in schools?

How many schools are there in the village?

By whom are they supported, or superintended?

Are they conducted on any particular system?

Are boys and girls educated together—and how many of each?

How many children above five years of age are able to read and write?

How many adults out of one hundred, taken at random, are able to read or write?

What is the average sum paid weekly for the education of each child?

How many attend Sunday schools—how many attend Sunday schools, and no other?

Do boys, after beginning to work, attend any other but the Sunday schools?

How many places of worship are there in the village, and of what sects?

What may the average attendance at each be estimated at?

Are the schools attached to the places of worship—and what average number of scholars attend each?

Do the female children generally learn knitting, sewing, singing, &c.—are they taught to make their own clothes, or domestic economy in general?

Do the boys learn the use of carpenter's tools, so as to be able to make or mend their own furniture?

General remarks on the description of education received, and whether any attention is bestowed on the cultivation of the moral qualities. What process of training is adopted?

Is there much desire for education evinced by the parents of children in general?

Are they given to reading—have they generally many books—of what kind?

Are the teachers regularly trained, or do they teach because they are disqualified for any thing else?

What branches are they qualified to teach?

What are the terms for tuition?

Is there any salary in addition to the fees?

In what estimation is the office of a schoolmaster held?

What is the average rate of wages earned by the able-bodied workmen, specifying the different classes—hewers, putters, bankmen, masons, miners, washers, smelters, &c.

What are the average earnings of boys?—of girls?

What is the average age at which boys and girls go to work above and under ground?

At what age do females generally cease to work in the mines?

At what age do men usually become disabled from work?

Are they paid by the day or by the piece?

Are the average earnings more or less now than formerly?

Are the occupiers of houses liable to be ejected at the will of the proprietor?

Average number of removals per annum?

Does the truck system prevail?

What shops exist in the village? Are they kept by persons engaged in any other calling or connected with the colliery?

Do the pitmen generally purchase their food, clothing, &c., in the village?

Do they pay ready money or take credit?

What is their usual food—how is it generally cooked—and is there any thing remarkable in their clothing?

What is the usual occupation of the women?

Do they generally keep the purse?

What number and proportion of the population are unable to support themselves by their labour?—from old age, from sickness, or from infirmities occasioned by accident?

How are these persons supported—by relations, by the owners of the mines, or from the poor-rates?

How many persons in the village receive relief from the poor-rates?

Is the proportion of such on the increase or the decline?

Are there any benefit societies established? If so, what are their nature and constitution?

State of Crime.—Annual number of criminals for the last five years. Proportion of male to female criminals. Of adult to juvenile delinquents.

What number of crimes against property—what number against person?

Age at which crimes against property prevail—age at which those against person?

How many public-houses are there in the village?

Are they much frequented; and if on some days more than on others?

Is drunkenness prevalent, and to what extent does it appear to conduce to crime?

What strikes have occurred during the last ten years?

What has been the duration of each?

How did the men live in the interval? On their savings, or on credit?

If on credit, did they buy their goods in the village?

Were their payments faithfully performed, or did the shopkeepers lose by the men proving faithless to their engagements?

Are accidents diminishing or increasing in number? If less in number, does this arise from improvements in machinery, or from greater caution in the miners?

In what way is medical and surgical assistance supplied to the village, and what do the miners usually pay for such assistance?

As a specimen of the answers, those from the village of Hetton were given, and they are satisfactory as regards that locality. *Ex. gr.:*

How many rooms does each house usually contain?

In how many instances does more than one family inhabit the same house?—The rooms of the pitmen's houses are some 15, and others 16 feet square.

There are instances in which brothers and sisters sleep in the same bed whilst under 9 years of age, but not of older.

In about six instances a whole family sleep in the same room, but in no instances does more than one family. Personal cleanliness is attended to. The pictures on the walls are scriptural. All the houses have gardens attached to them; many ornamental; others vegetable; about 240 square yards. Pigs, poultry, &c., are generally kept.

The proportion of legitimate to illegitimate births is about 30 to 1, rather less than among the agricultural and manufacturing population around. 1281 children in a population of 5367 (in 1831) receive instruction in schools; of which there are fifteen in the village supported partly by the Hetton Coal Company (to the amount of 35*l.* per annum), and partly by payments made by parties receiving instruction; superintended by masters, &c., on their own risk, except in the case of the national school. There are 785 boys and 496 girls at school; and the average sum paid weekly for the education of each child is fourpence. 837 attend Sunday schools; 408 Sunday schools and no other. Many attend night schools. There are ten places of worship, Established Church, Wesleyans, Primitive Methodists, Baptists, and Wesleyan Seceders, and the attendance estimated—Church, 380; Wesleyans, 496; Primitive Methodists, 370; Baptists, 150; Wesleyan Seceders, 14. Sunday schools are—Church (National), 136; Wesleyans, 308; Primitive Methodists, 280; Baptists, 60; Wesleyan Seceders, no school. The children are taught reading, writing, arithmetic, and the girls sewing in addition, with due attention to moral and religious instruction, particularly in Sabbath schools; they learn a catechism, read the Bible and New Testament daily, and commit to memory portions of Scripture as taught. Hevers have of wages, 3*l.* 6*s.*, putters, 3*l.* 6*s.*, bankmen, 4*l.* 7*s.*, wagonmen, 3*l.* 6*s.*, enginemen, 3*l.* 4*s.*, masons, 3*l.* 5*s.*, smiths, 3*l.* 2*s.*, per day, with house, firing, and garden in addition the hewers for six, and all the others for twelve hours per day. Boys about 16 years of age 3*l.* 3*s.* per day; no girls employed. Boys, 9 years old; no girls employed. Men usually become disabled from work at about 66 years of age. Men usually work underground from six to eight hours; boys, twelve hours. The swe-

rage number of removals per annum is about one in ten of the people employed. The truck system does not prevail at all. The shops are all kept by people unconnected with the colliery. In the village the workmen generally take a fortnight's credit, but if they go to towns they generally pay ready money. Their usual diet is a due proportion of animal food, roast and boiled, with wheaten bread; their clothing is good; and the women generally keep the purse. The paupers are about one in thirty. The effects of the strikes were such as to throw many out of employment, and to increase the poor's rate for a time.

SECTION A.—Mathematical and Physical Sciences.

Theory of Light and the Photogenic Process.

A letter from Sir J. Herschel was read, in which he described a remarkable property in the extreme red rays of the prismatic spectrum, which had occurred to him in his experiments on Mr. Talbot's photogenic paper. It thence appeared, "that the extreme red rays (such as are insulated from the rest of the spectrum by a dark blue glass coloured by cobalt, and which are not seen in the spectrum, unless the eye be defended by such a glass from the glare of the other colours,) not only have no tendency to darken the prepared paper, but actually exert a contrary influence, and preserve the whiteness of paper on which they are received, when exposed, at the same time, to the action of a dispersed light sufficient of itself to produce a considerable impression. When a slip of sensitive paper is exposed to a highly concentrated spectrum, a picture of it is rapidly impressed on the paper—not merely in black, but in colours, of which the red is tolerably vivid, but is rather of a brick colour than a pure prismatic red. What is remarkable is, that its termination falls materially short of the visible termination of the spectrum. The green is of a sombre, metallic hue; the blue still more so, and rapidly passing into blackness. The yellow is deficient. The whole length of the chemical spectrum is not far short of double that of the luminous one, and at its more refrangible end a slight ruddy or pinkish hue begins to appear. The place of the extreme red, however, is marked by no colour."

[The letter alluded to M. Arago's rather equivocal allusion to this fact in his account of M. Daguerre's process, and concluded as follows:—]

"It is impossible in this climate to form a brilliant and condensed spectrum without a good deal of dispersed light in its confines; and this light, if the exposure of the paper be prolonged, acts, of course, upon every part of its surface. The coloured picture is formed, therefore, on a ground not purely white, but rendered dusky over its whole extent, with one remarkable exception,—viz. in that spot where the extreme red rays fall, the whiteness of which is preserved, and becomes gradually more and more strikingly apparent, the longer the exposure and the greater the consequent general darkening of the paper. The above is not the only singular property possessed by the extreme red rays. Their action on paper, already discoloured by the other rays, is still more curious and extraordinary. When the spectrum is received on paper already discoloured slightly by the violet and blue rays only, they produce, not a white, but a red impression, which, however, I am disposed to regard as only the commencement of a process of discoloration, which would be complete if prolonged sufficiently. For I have found that if, instead of using a prism, a strong sunshine is transmitted through a combination of glasses, carefully prepared, so as to transmit absolutely no ray but that definite red at the extreme of refrangibility, a paper previously darkened by exposure under a green glass has its colour lightened from a sombre neutral tint to a bright red; and a specimen of paper,

rendered almost completely black by exposure to daylight, when exposed for some time under the same glass, assumed a rich purple hue: the rationale of which effect, I am disposed to believe, consists in a very slow and gradual destruction, or stripping off as it were, of layers of colour, deposited or generated by the other rays, the action being quicker on the tints produced by the more refrangible rays, in proportion to their refrangibilities. It seems to me evident that a vast field is thus opened to further inquiries. A decolorizing power has been attributed to the red rays of the spectrum, on the strength of the curious experiments of Wollaston, on the discoloration of tincture of guaiacum, which ought to be repeated; but in the sensitive papers, and still more in Daguerre's marvellous ioduretted silver, we have re-agents so delicate and manageable, that every thing may be expected from their application."

A picture of the spectrum thus formed, by lamp or candle light, not being fixed, was exhibited.

The President remarked on the importance of the discovery, that the actions of certain rays interfered with the action of others, so that instead of one series of discoloration, for all the rays, as hitherto supposed, each was liable to be affected and modified by the rest.

ORIGINAL POETRY.

WE devote our poetic corner this week to two productions which we found devoted to the Antarctic Expedition, and forwarded to the Erebus. The poetic spirit of the first, and the genuine, home, natural, and female feeling of the last (for it is in a neat lady's hand), would recommend them, had they no other merit with a public so much interested on the occasion.

ON A FLAG PRESENTED TO CAPTAIN ROSS,
By a Lady, to be planted on the South Magnetic Pole.

FOLDED and quiet, like a snake asleep,
Yet beauteous in repose this flag shall be,
While the Adventurer ploughs the Southern Sea,

And fearless roams o'er the Antarctic deep,
Threading with untamed patience every steep,
And rock, and isle, and gazing wistfully
At every wild bird whose expansive wing
May tell him of some further shore, where sing
The halcyons on their storm-nests round the pole;
Then, beauteous banner—then shalt thou
And start into new life, and vigour give,
And like a spirit animate the soul,
Until the about triumphant tell the tale,
That Man's proud foot o'er Nature doth prevail.
September 20th, 1839. P. G.

TO THE OFFICERS OF THE ANTARCTIC EXPEDITION.

Go forth, adventurers on the ocean,
Go from your own, your fatherland,
We hail you with a strong emotion—
A brave—a noble-hearted band!
Ye carry not the cannon's roar
To echo o'er the silent seas;
Ye bid not on the peaceful shore
Loud wallings rise before the breeze:
Not yours the sounds of war and strife,
Ye go to bless our social life.

Your perils rough—your dwelling dreary,
We may not brave—we cannot share;
Yet when your frames with toil are weary
And when your hearts are filled with care,
Oh! think ye then, that many a sigh
Shall follow you to regions drear;
And oft in woman's gentle eye
For you shall gleam the kindly tear:

And better, too, than tears or cares,
For you shall rise our frequent prayers.

And when the Christmas fire is blazing
Upon the cheerful English hearth,
And happy families are gazing

On many a countenance of mirth;
We'll pause amid the social glee,
Or 'mid the solemn anthem old,
To think of those who on the sea
Are bearing anows, and frosts, and cold,
And pray that God will bless ye then,—
Our noble-hearted countrymen!

God speed ye, mariners, and guide
Your gallant vessels safe from ill.
But e'en if sorrows should betide
May He be near to cheer ye still,
And bring you to your country back,
Your nation's pride, your nation's glory,
To tell of all your wondrous track—
To have your names renowned in story,
And all the happiness to know,
Which home and country can bestow.
Chatham, September 17th, 1839.

PINE ARTS.

NEW PUBLICATIONS.

Character and Costume in Turkey and Italy.
Designed and Drawn from Nature, by Thomas Allom, Esq. With descriptive Letter-press, by Emma Reeve. Fisher, Son, and Co.

"THE following studies from character, in Turkey and Italy," says the preface to this interesting publication, "were taken by Mr. Allom, during a residence of some months in those delightful regions, while the brightest skies of the east and the west looked down upon the work of the painter, and imparted a portion of their own life and beauty to the efforts of his pencil: they are portraits of things and individuals as they exist, and claim at least the merit of fidelity. The series consists of twelve Italian subjects, and eight of Turkey; embodying many peculiarities of custom, manners, and dress, which have been seldom referred to by travellers, and never given to the public in a form like the present."

In a recent notice of "Constantinople and the Scenery of the Seven Churches of Asia Minor illustrated," we adverted to the frequent occasions which we had had to speak of Mr. Allom's talents as an artist. Another opportunity is here afforded us of doing so. Hitherto, the figures introduced by Mr. Allom into his views, although very appropriate, have been subordinate to the buildings and the landscape; but in the beautiful work before us, the figures are principal. They bear the stamp of truth, and are full of character and expression. Among the most striking are, "The Favourite Story-teller—Constantinople," "Peasant of Sora at the Shrine of the Virgin," "Goatherds in the Campagna di Roma," "The Brigand Family—Sonina," "The Fishermen of Naples," "The Slave-Merchant—Constantinople," "Festa at Sorrento," "The Halt of a Caravan—Sardis," "Vintage of the Abruzzi—Naples," "Monks of the Trinity—Rome," &c. We have expressed our opinion of the literary portion of the volume elsewhere.

VARIETIES.

Antarctic Expedition: Terrestrial Magnetism.—A letter, signed "Cui Bono?" in "The Times" of Thursday, expresses an opinion that all the experiments on terrestrial magnetism, made during the expedition in the Erebus and Terror, will be rendered nugatory, in consequence of the method adopted (by a voltaic

magnet) to magnetise the steel bars or needles. This, it is stated, instead of a direct north and south pole, creates a consecutive series of poles all along the bar, which must destroy all dependence upon it as a true indicator of polarity. We regret to read this, but trust that the writer is either misinformed or erroneous in his conclusions. He thinks, that the artist "in this city" (London, we presume,) who performed this operation, may have destroyed all that the patient research and ingenuity of Dr. Lloyd had accomplished in the construction of this complicated and delicate apparatus: but surely this cannot be so, since Dr. Lloyd himself not only superintended the magnetising, but visited the expedition vessels, and taught the exact manner of using it to such of the officers as were unacquainted with the process. Had the apparatus been imperfect, he must have seen and rectified the error. But, beyond this, Captain James Ross, on Friday, in last week, devoted nearly the whole day to a complete series of observations on board the Erebus, off Gillingham, to ascertain the accuracy of the instruments and the magnetic influences in the ship. These observations we witnessed, Captain Crozier being on shore verifying them by similar contemporaneous observations; and we can state, of our own knowledge, that they were most satisfactory. Knowing the scientific attainments of those officers, and especially Captain Ross's great experience in reference to terrestrial magnetism, we cannot but feel satisfied that the doubts of "Cui Bono" are unfounded. — *Ed. L. G.*

Colour.—In a note to his translation of M. Arago's report to the French Chamber of Deputies, respecting the Daguerreotype, Dr. Memes observes that he is at a loss exactly to comprehend what M. Arago means by the expression *couleur locale*, for that photographic designs have no local colour. The word "colour," however, is in familiar use with engravers, who have nothing to do but with black and white, and their intermediate gradations, to describe what might with greater propriety be called "tone."

The New Art.—Unscientific persons making experiments with iodine ought to be very cautious, for it is a deadly poison.

It is in contemplation to make a very singular use of the Daguerreotype, at the inauguration of the iron railway at Courtray, if the weather should be favourable. The camera obscura, placed on an eminence commanding a view of the royal gallery, the locomotive engines, the carriages adorned with flags, and the greater part of the procession, will be open during the delivery of the inauguratory speech; a cannon-shot will be the signal for the whole assembly to remain perfectly motionless, for the seven minutes which will be necessary to obtain the resemblance of all the persons present. This picture will be put into a leaden box, to be deposited under the first stone of the foundation of the station at Courtray, in order to give to our posterity an exact idea of this grand ceremony. It is not said how many hundred years hence posterity is to dig it up to look at it.

A Company has been formed under the name of "Société Belge du Daguerreotype." It consists, says the prospectus, of artists who are accustomed to choose the most picturesque views of public edifices, &c. They will go wherever the admirers of public monuments and the owners of country-seats shall invite them. The society has raised funds to procure successively a great number of instruments. Those persons who desire to obtain photogenic

drawings may enter their names at the office of the "Courrier Belge," stating the views which they desire to have. They will be served in the order in which their names are inscribed.

The Earl of Lauderdale.—The death of this aged nobleman has been announced in the newspapers, and ought to be repeated by us, in consequence of his lordship's political and financial authorship. The pamphlets from his pen had considerable weight attached to them at the time that bullion and other questions occupied the public attention. In politics, Lord Lauderdale's opinions were, for that period, considered to be extreme; and his appearance in the House of Lords in the rough costume of Jacobinism made quite a sensation when the principles of the French Revolution were in vogue with the democratic party in this country. His lordship possessed much influence in many ways, and was often consulted on important occasions. During the latter years of his life, he passed his time rationally and quietly at his seat, Thirlestane Castle, near Lauder; and it is not very long since we met him taking his pony-ride in that neighbourhood, and apparently enjoying a green old age.

Uses of Beet-root.—The French manufacturers of sugar from beet-root, finding it an unprofitable competition against colonial produce, have, it is said, discovered that the article makes a very superior wine, and are all agog for this new superabundance of the grape.

A Property of Stone.—A Mr. John Malkott, in a letter to "The Times" newspaper respecting stone for public buildings, mentions a property which we do not remember to have seen noticed before; viz. "that all stone made use of in the immediate neighbourhood of its own quarries is more likely to endure that atmosphere than if it be removed therefrom, though only thirty or forty miles."

Earthquake in Ava.—A dreadful earthquake visited Ava on the 23d of March last, and the shocks continued to be felt to the period of the latest accounts (April 8). The vibrations were from north to south, and every brick building in Amersapora and the surrounding district was thrown down, burying hundreds of their inhabitants in the ruins; the earth was rent into wide chasms in many places, and torrents of water issued from them charged with a gray earth, and emitting a strong sulphurous smell. The bamboo and lighter dwellings escaped.

A series of earthquakes also shook the city of Messina during the 27th, 28th, 29th, and 31st of August. Those of the 28th were the most severe, and attended by a rumbling noise.

Hydrography.—A hydrographical survey of the Gulf of Corinth, and its surrounding coasts, is at present carrying on by two British vessels.

LITERARY NOVELTIES.

Announcement.—In tenderness to the acknowledged sensitiveness of the author of the following letter, Messrs. Baily and Co. earnestly request that their friends, correspondents, and agents, will not allow its contents to transpire beyond their own immediate circle and connections:—

"Strictly Confidential."

"To Messrs. Baily and Co. 83 Cornhill, London."

"Dear Gentlemen,—A writer in the 'Westminster Review' (No. —), at the end of a too-favourable notice of my humble productions, has thought proper to allude to certain *private* letters of mine, sent under the seal of secrecy from Germany; and, moreover, has ventured to promise, on my behalf, a new version of the 'Pilgrims of the Rhine.' To say nothing of the presumption of entering for a race with the Bibles—especially when he had enjoyed a start of some years, before I was thus announced as saddled—when, had he been a common hack instead of a slier, there had been time enough for him to have walked over the course backwards, besides going on the wrong side of the post, and yet to have come in a

winner, as the kangaroo said after its flight with the long-armed baboon, by 'all sorts of lengths,' to say nothing of such a handicap as to weights, with that fastest of false starts, an Anachronism—there were moral, physical, constitutional, and personal reasons against such a publication. As publishers, you are no doubt aware that there is, or was, such a book as the 'Universal Letter Writer,' professing, like the 'Ready Reckoner,' and others of the same tribe, to furnish forms or figures for all the ordinary purposes of life. Now, even in the most ordinary occasions, I have never yet found that either my feelings, or intentions, or the circumstances, would adapt themselves to the printed pattern. As a natural consequence, I was invariably compelled to write my letters, as it is called, out of my own head; but, as a good deal of my own heart somehow always entered into such epistles, it has always seemed to me that parting with them for profit would be next to, or rather worse than, selling my body. Some persons have undoubtedly intended their letters to come to light. Pope, for instance, wrote his celebrated epistles expressly for the press. The same may be said of Swift, and others of literary renown, who, evidently, contemplated not a two-penny, or a general, but a universal delivery. But such, on the contrary, is my own horror of seeing my correspondence in print, that, as my friends, male and female, are well aware, I never answer even an invitation or a billet-doux except in person. Thus, the reader who has taken the trouble to peruse my works, must have observed, that, however apt to put the communications of others into type, I have been singularly shy of setting up any letters of my own. It is, perhaps, an excess of modesty on my part, but I cannot consider myself as a corresponding member of all societies. In the meantime, my peculiar delicacy, as before hinted, does not forbid my editing any private papers which may fall into my hands; and, accordingly, in that fashionable capacity, you may announce me as the patron, or foster-parent, or what you please, save author, of a collection of letters, indited by a family party, on a tour up a very popular foreign river. I propose, as godfather, to christen the work, 'Up the Rhine;' and, as one of the company draws a little, you may as well add, with original embellishments, 'In the words of Beau Brummel, I beg leave to introduce to you a 'damp stranger,' i.e., a copy wet from the press; and a single sentence with a few figures, will secure to you the whole edition, from,

"Dear Gentlemen, yours very truly,

"THOMAS HOOD."

LIST OF NEW BOOKS.

A Letter on National Education to the Duke of Bedford, from Lord Brougham, 8vo. 1s. 6d.—Historical Record of the British Army, Fourth Regiment of Foot, 8vo. 8s.—A. Ronald's Fly-Fisher's Entomology, 2d edition, 8vo. 14s.—Mylins's History of England, 4th edition, 18mo. 6s. 6d.—Treatise on the Theory of Equations, by the Rev. R. Murphy (Library of Useful Knowledge), 8vo. 4s.—Select Poetry for Children, by J. Payne, 18mo. 3s.—Murray's Memoir on the Diamond, 2d edition, 18mo. 5s.—T. Kentish's Treatise on a Box of Instruments, and the Slide Rule, 18mo. 3s.—Architectura Domestica von a de Chateaufort, imp. 4to. 35s.—Dictionary of Materia Medica and Pharmacy, by W. T. Brande, 8vo. 15s.—Xenophon's Anabasis of Cyrus, Books I. and II., with English Notes, by D. B. Hickie, 18mo. 3s. 6d.—The New Excitement for 1840, 18mo. 3s. 6d.—Tables for Calculating the Value of Estates, by J. Bright, post 8vo. 10s. 6d.—Le Page's French Master for the Nursery, 18mo. 3s. 6d.—Essays on Government, 8vo. 4s.—A Challenge to Physiologists, 1cap. 5s.—F. Minuter's Advice to Deaf Persons, 1cap. 5s. 6d.—Deschamps' Treatise on Whist, Part II., 1cap. post 8vo. 8s.—Rumance of Private Life, 3 vols. 18mo. 3 vols. post 8vo. 31s. 6d.—Archæologia Boreana's History of the Prayer-Book of the Church of England, 18mo. 5s.—Memoirs of Charles Mathews, Vols. III. and IV. 8vo. 32s.—Ellis's British Tariff for 1840, 18mo. 6s. 6d.—Sermons on Important Subjects, by the Rev. C. G. Finney, 18mo. 3s. 6d.—Family Library, Vol. LXIX.: Life of Cicero, 1cap. 5s.—Chambers's Educational Course, Moral Class Book, 18mo. 1s. 6d.—The Ladies' Knitting and Netting Book, 2d series, 1cap. 4s. 6d.—Ruth and her Kindred, by the Rev. John Hughes, 18mo. 3s. 6d.—Robinson's Magistrate's Pocket-Book, by Archbold, 3d edition, post 8vo. 26s.

Rain fallen, 25 of an inch.

Edmonton.

CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

"C. S." and other correspondents, will be attended to as soon as possible.

ERRATUM.—In our last Number, page 685, col. 3, line 57, for "man," read "name."

ADVERTISEMENTS,

Connected with Literature and the Arts.

ELECTRICAL SOCIETY.—Notice is hereby given, that the Meeting of the Electrical Society will be resumed on Tuesday Evening, October 1st, 1880, in the Theatre of the Gallery of Practical Science, No. 7 Adelaide Street, (West Strand); and that they will be continued on the Evenings of the First and Third Tuesdays in every Month; the Chair will be taken at 8 o'clock precisely. By order of the Committee, E. W. BRAVLEY, jun., Secretary.

Sept. 14, 1880.

MARYLEBONE LITERARY and SCIENTIFIC INSTITUTION, 12, Edwards Street, Portman Square.—The delivery of Lectures at the above Institution will commence on Monday, Sept. 30th. Terms of Subscription for the Lectures, Reading Room, Library, and Literary Meetings, Two Guineas per annum, or 30s. the Half Year; each Member is allowed to introduce a Lady to the Lectures. Classes for Instruction in French, German, Music, and Chemistry. G. B. GARNETT, Hon. Secretary.

ROYAL DISPENSARY FOR DISEASES

of the EAR, No. 10 Dean Street.
Mr. Curtis will commence a Course of Lectures on the Anatomy, Physiology, and Pathology of the Ear, on Tuesday, October 1st. For particulars apply to Mr. Curtis, at his house, 2 Soho Square. Mr. C.'s Map of the Anatomy of the Ear, and Charts of its various Diseases, with the Modes of Treatment, for the use of Students and Practitioners, may be had of all Medical Booksellers.

PICKWICK ABROAD.

A new edition.

COUNTRY BOOKSELLERS and the Public are respectfully informed, that Mr. Tegg, of Chesham, has purchased the entire Stock and Copyright of "Pickwick Abroad; or, a Tour in France." A new edition of this popular Work is in the Press, and will be ready for delivery in a few days, in One large Volume, octavo, embellished with Forty-one fine spirited Engravings, by Crowquill, &c.; also Thirty-three Cuts by Bonner. London: Printed for Thomas Tegg, 78 Chesham; and may be had, by order, of all other Booksellers in the Kingdom.

BOOKS IN THE PRESS.

PAUL PERIWINKLE; OR, THE PRESS GANG.
On Tuesday, the 1st of October, will be published, embellished with Two spirited Engravings, by Phils, to be continued Monthly, and completed in Twenty Parts, uniform with "The Pickwick Papers," Part V. Price 1s. 6d.

THE ADVENTURES OF PAUL PERIWINKLE; OR, THE PRESS GANG.
By the Author of "Cavendish," &c.
This popular work will be published in future by Mr. Tegg, of Chesham, where all orders are requested to be addressed; of whom also may be had new Editions of Parts I. to IV. London: Printed for Thomas Tegg, 78 Chesham; and may be had, by order, of all other Booksellers in the United Kingdom.

THE NEW NOVEL.

Immediately in 3 vols. post 8vo.

THE FATALIST; or, the Fortunes of Godolphin.

By an Essayist on the Poisons.
"Character in high and low life; the passions of love and remorse in their strongest forms; these the author has endeavored to depict in a tale embracing many facts."—*Præf.*
William Edwards, late Southard and Letterman, Ave Maria Lane.

STANDARD NOVELS FOR SIX SHILLINGS EACH.
On the 30th instant, with the Marguerite, complete in 1 vol. with Illustrations, price 6s. bound.

ZILLAH; a Tale of the Holy City.

By the Author of "Brambletye House," &c.
Forming the New Volume of
COLBURN'S MODERN STANDARD NOVELISTS.
Works already published in this Collection, either of which may be had separately, price only 6s. with Illustrations.
Sir E. L. Bulwer's Falkland
Sir E. L. Bulwer's Deveraux
Sir E. L. Bulwer's Deveraux
Mr. Ward's Tremaine
Mr. H. Smith's Brambletye House
Capt. Murray's Frank Midway
Mr. Lister's Grange
Mr. James's Richelieu
Mary Colburn's Publisher, 12 Great Northampton Street.
* * * Orders received by all Booksellers.

On Sept. 30th will be published, in 8vo. price half-a-crown, with Lithographic Plate and Woodcuts, No. II. of the
JOURNAL of the AGRICULTURAL SOCIETY.

Contents:—
Colonel Le Contour's Prize Essay on Pure and Improved Varieties of Wheat lately introduced into England.
Mr. Stanley Carr's Prize Essay on Rural Economy Abroad.
Mr. Dixon's Prize Essay on making Compost-Heaps.
Mr. Handley's Prize Essay on Wheel and Swing Ploughs.
Mr. Cathbert Johnson's Prize Essay on Liquid Manure.
Mr. Hepper's Prize Essay on drawing Turnips.
Earl Spencer, on the Diseases of Cows.
Mr. Walbank Children, on Mbed-fording.
Mr. Youatt, on the Detection of Pregnancy in the Mare and the Cow.
Mr. Main, on Plants Injurious to Clover.
Professor Schubert, on the Physical Properties of Soil.
Report of the General Annual Meeting in May and the Oxford Meeting (with awards of Premiums) in July—Prize Essays and Premiums for Stock in 1880 and 1881—Rules and Regulations—Donations to the Library—List of Governors and Members to September 4th.
John Murray, Albemarle Street.

NEW WORK BY THE AUTHOR OF "RANDOM RECOLLECTIONS."

Just ready, in 2 vols. post 8vo. handsomely bound in cloth, **WALKS and WANDERINGS** in the WORLD OF LITERATURE.
By the Author of "Random Recollections," "The Great Metropolis," & "Travels in Town."
Saunders and Otley, Conduit Street.
* * * Orders received by all Booksellers.

THE FOREIGN QUARTERLY REVIEW.

Will be published on 30th September, No. XLVII. price Six Shillings.
Contents:—
1. Views and Objects of Mahomet in the Composition of the Koran.
2. Hungary—Mallat's History of the Magyars.
3. German Influence on the Civilization of Uncultivated Nations.
4. Industrial and Moral State of Belgium.
5. The Philosophy of Kant.
6. The Opium Trade with China.
7. Arabian Nights and their Origin.
8. Paul de Kock.
9. Des Chappelles and Whist.
10. Music Abroad and at Home.
11. Miscellaneous Literary Notices.
12. List of New Publications on the Continent, &c. &c.
Black and Armstrong, 8 Wellington Street, Strand.

STOTHARD'S ILLUSTRATIONS OF BUNYAN.
Shortly will be published, price 1s. 12. in cloth, or with India proofs, 12. 12. 6d.

THE PILGRIM'S PROGRESS.

By JOHN BUNYAN.
With original notes by the late Thomas Scott, illustrated with Seventeen Engravings from the Original Designs, by the late Mr. Stothard, and Twenty Woodcuts by S. Williams. A limited number of impressions of the plates will be taken in Cumbria, &c., to secure which an early application to the Publishers will be requisite.
Published by L. and G. Seeley, 100 Fleet Street, London.

BOOKS PUBLISHED THIS DAY.

With Cases and Woodcuts, price 1s.
CURE OF CLUB-FOOT, BENT-KNEE, WRY-NECK, SPINAL, and other DEFORMITIES, with Remarks on the late Progress of Art, &c.
By GUSTAV KRAUSS, M.D.
Member of the Royal College of Berlin, of the University of Bonn, of the Anatomical Society of Paris, &c.
London: J. Churchill, Princes Street, Soho.
"Most of the cures of club-foot, &c., recorded in these pages, are of a nature so extraordinary and striking as to offer the most encouraging prospect of relief, under even the most desperate circumstances. The author's suggestion of a Public Institution, for the relief of the poor, labouring under deformities, is well entitled to the attention of the benevolent."—*Court Journal.*

CRABBE'S DICTIONARY OF GENERAL KNOWLEDGE.
In 1 large vol. duodecimo, printed at the Clarendon Press, in double columns, and embellished with 500 Engravings, price 7s. cloth boards.

A DICTIONARY OF GENERAL KNOWLEDGE; or, an Explanation of Words and Things, connected with the Arts and Sciences.
By GEORGE CRABBE, A.M.
The 4th Edition, considerably enlarged.
London: Printed for Thomas Tegg, 78 Chesham; and may be procured, by order, of all other Booksellers.

FOR THE USE OF SCHOOLS AND YOUNG PERSONS.

Price 12s.
DR. LINDLEY'S LADIES' BOTANY.
Abridged, with numerous Wood-Engraving Illustrations, beautifully executed.
N.B. The Original Edition, with Coloured Plates, in 2 vols. 8vo. price 25s. each, can still be had.
Ridgway, Piccadilly, and all Booksellers.

1st. Dr. Lindley's Botanical Register, published monthly, price 6s. 6d.
2d. Dr. Lindley's Wreath of the most beautiful Orchideous Plants. Part V. is now ready for delivery to be completed in X. Parts.
3d. Dr. Lindley's Illustrations of the Genera and Species of Orchideous Plants. Part IV., completing the work, is now published.

BLACKWOOD'S EDINBURGH MAGAZINE, No. CCXXVIII. for October.

Contents:—
I. Torquato Tasso, or the Prison and the Crown.—II. On the Foreign Influence of Humes.—III. Country.—IV. Police and Social Questions: National Gallery, British Institution.—V. Goethe's Life and Works.—VI. Whig and Tory Finance.—VII. Ten Thousand a-Year. Part I.—VIII. Henry Gratian. Part II.—IX. State Trials. Specimen of a New Edition.
William Blackwood and Sons, Edinburgh; and T. Cadell, Strand, London.

THE WORKS OF MRS. HEMANS.

In 5cap 8vo. price 4s. Volume Fifth of
Records of Woman—Vespers of Palermo, a Tragedy—Songs of the Old, and Miscellaneous Poems.
Vol. VI. will appear on the 1st of November.
William Blackwood and Sons, Edinburgh; Thomas Cadell, London; and John Cumming, Dublin.

LORD BROUGHAM ON NATIONAL EDUCATION.

Price 1s. 6d.
LETTER to the DUKE of BEDFORD on NATIONAL EDUCATION.
By LORD BROUGHAM.
Adam and Charles Black, Edinburgh; Longman and Co.; Ridgway and Sons; and Charles Knight and Co. London.

In 1 vol. post 8vo.

THE PENITENT. A Domestic Story of the Nineteenth Century.

Also, nearly ready,
Max Wentworth; a Novel. In 3 vols.
Real Pearls in a False Setting. In 3 vols.
By the Count de la Pasture.

The Friends of Fontainebleau. In 3 vols.

By M^{rs} Burden.
Saunders and Otley, Publishers, Conduit Street.

COMPLETION OF CHARLES MATHEWS'S MEMOIRS.
(Vols. III. and IV.), embellished with numerous characteristic Illustrations and Portraits, bring the CONCLUDING VOLUMES OF THE
MEMOIRS OF CHARLES MATHEWS,
Comedian.

By MRS. MATHEWS.
* * * A Second Edition of Vols. I. and II. of this Work has recently been published.
Richard Bentley, New Burlington Street,
Publisher in Ordinary to Her Majesty.

TO TOURISTS.

In a neat pocket vol. price 6s. 6d. bound,
THE GERMAN SELF-TEACHER; or, a New Mode of Radically Studying the German Language; developing, by Lists of all the Words of Similar Meaning in the German and English, the great Affinity of the Two Languages, and the Similarity of Expression in the more essential Parts of Speech.

By HENRY MEIDINGER.
Author of the "Comparative Dictionary of the Gothic-Teutonic Languages."
London: Whitaker and Co.; and Dulau and Co.

Demy 4to. price 12s.
PARSEY'S PERSPECTIVE, or the NATURAL THEORY OF VISION, by which only can the Images of Photogenic Drawing be proved to be "natural." Perspective, as generally taught and learned upon, is an imposition on common sense. Mr. P. challenges a public denial of the fact, or any justification of the present practice in Schools of Design, the Classes of Civil Engineering at King's College, the London University, or any of the Academies of Art. Mr. Parsey removed to No. 19 Warwick Street, Golden Square. Longman, Orme, and Co.

12th edition, price 1s. 6d. half-bound,
PRELIMINARY LESSONS on the HISTORY OF ENGLAND, brought down to the Present Time, and adapted to the Use of Junior Classes in Schools.

RECENTLY PUBLISHED BY JAMES FRASER,
215 REGENT STREET, LONDON.

THOMAS CARLYLE'S WORKS.

I. THE FRENCH REVOLUTION. A HISTORY.

Vol. I. The Bastille.—Vol. II. The Constitution.—Vol. III. The Guillotine.

Second Edition, in 3 vols. 12mo. price 1l. 5s. cloth and lettered.

"After perusing the whole of this extraordinary work, we can allow, almost to their fullest extent, the high qualities with which Mr. Carlyle's idolaters endow him. The reader need not be told that it is written in an eccentric prose, here and there disfigured by grotesque conceits and images; but for all this, it betrays most extraordinary powers—learning, observation, and humour. Above all, it has no cant. It teems with sound, hearty philosophy; and it possesses genius, if any book ever did."—*Times*.

II. CRITICAL AND MISCELLANEOUS ESSAYS.

In 4 vols. crown 8vo. price 2l. 2s. cloth and lettered.

III. TRANSLATION OF GOETHE'S WILHELM MEISTER;

CONTAINING

MEISTER'S APPRENTICESHIP AND MEISTER'S TRAVELS.

REVIEW OF NEW BOOKS.

Memoirs of Charles Mathews, Comedian. By Mrs. Mathews. Vols. III. and IV. 8vo. London, 1839. Bentley.

THE continuation of the biography of our most popular and versatile friend requires no comment, as it is in manner and in matter precisely like the preceding portion, of which the public has a perfect appreciation. The admixture of grave and gay, of the serious business of life with the mimic business of the stage, and of important realities with affairs hardly less important to the party, though of infinitely less intrinsic consequence, renders the whole as interesting as entertaining. In his own native character of a fond husband and affectionate father, a generous and feeling friend, these pages present Mr. Mathews to the admiration of the world; and have we even to set against them any frailties or follies of an injurious kind? Alas! no; for even his famed irritability and extreme sensitiveness, whilst they hurt no one, and were as harmless as the summer lightning as it gleams along the placid sky, had but too justifiable a cause in exertions made with pain and suffering, and the disturbances of disease, which might have excused the ebullitions of bad temper and angry passions. If apparently small troubles were occasionally magnified into great ones by his peculiar temperament, it ought never to be forgotten that they were as evanescent as meteors, and often so comical in themselves that they dispersed in amusing sparkles, and all was calm again. And then the hilarity and fun that succeeded; the genuine abandonment to be pleased he knew not why, and cared not wherefore—what a treat was in the light and sunshine after the momentary storm!

A portrait of Mr. Theodore Hook gives value to the third volume, as that gentleman has not hitherto favoured the arts by lending them his countenance. The narration commences in 1818, embraces many of his "At Homes" and visit to America; and this volume (to which we this week confine ourselves) brings us to 1828, when he opened the Adelphi in conjunction with Mr. Yates. We pass over the accounts of curious *contretems*, journeys, inn adventures, hoaxes, &c. &c., in some of which the fair biographer herself figures whimsically enough; and come at once to such selections as we think will best illustrate the work and prove acceptable to our readers. We commence with a long but particularly descriptive and characteristic letter:—

"To James Smith, Esq.

"Philadelphia, Feb. 23d, 1832.

"My dear Smith,—I imagine by this time you begin to be a little impatient, and perhaps anxious to hear from me, though I must suppose you have made every allowance for my apparent neglect. You have doubtless heard of the calamitous circumstances under which I landed in this country; and you will readily believe that it was a most unpropitious time to extract any thing like fun or humour from the natives, even had they possessed as much as the Irish. America was, at the time of my arrival, a huge hospital, and conversation a mere medical report. My 'commercial specu-

lations' have been completely deranged, and though not destroyed, very materially injured. It was not till the frost set in that I could discover even a smile on any of the naturally saturnine, grave visages of the natives. You may suppose that I was not much disposed to mirth myself, or to draw it from others, during such a visitation. This has naturally tended to delay me in those observations which I should otherwise have immediately commenced, on the habits and peculiarities of the Americans. At the same time it is my belief, that had I arrived after a successful war, and during rejoicings for peace, instead of days of mourning and sickness, I should not have discovered much more of merriment of character, humour, or any one ingredient of which I was in search, and which is now, in fact, the chief motive of my longer stay in the country. It will require all your ingenuity, all your fancy (and more than ever I possessed), to find real materials in this country for a humorous entertainment. There is such a universal sameness of manner and character, so uniform a style of walking and looking, of dressing and thinking, that I really think I knew as much of them in October as I know of them now in February. The real, unadulterated natives, are only one remove from the Quakers: they never joke themselves, and they cannot see it in others. They would stare at you as a white wonder; and be perfectly amazed how any man under a hundred years of age, could possibly have collected so many good jokes, for they would be utterly incredulous that a man could utter his own wit. As they have never seen such people, they are not obliged to believe that they exist. If I excelled in narrative, and were a lecturer, allowed to be occasionally grave, I could find infinite variety of materials to dwell upon, and rather amusing too; but as I feel perfect conviction that I am never amusing without I assume the manner of another, I know not how to suggest matter for comic effects out of mere observations. I should be very much inclined to remove many prejudices that exist between the two countries, and most anxious to do justice to the upper orders of people. They are well informed, polite, hospitable, unaffected. I can truly say that I have never experienced more attentions in my own country. I do not believe, at least I cannot discover, that they differ at all from the polished people of the same rank in England. They do not certainly approach to the ease and finish of our upper ranks. I should feel equally disposed to scourge, to flagellate, to score to the back-bone, all the middling and lower orders. They are as infinitely beneath the notions that Europeans entertain of them, as their superiors are above them. Not merely sullen and cold, but studiously rude. This I have no hesitation in saying. The stage-driver says, 'Yes, sir,' and 'No, sir,' to the ostler: but to a question from a person who has a clean neck-cloth, he instantly draws up, and, in the most repulsive manner, answers, 'No,' 'Ay,' or 'Very well.' The upper orders are literally slaves to the lower. The poorest people in the country will submit to exist in the most miserable manner, with their families, rather than

any one of them should be degraded by servitude. The consequence is, that all the menial situations are filled by negroes (niggers), and Irish and Scotch. This constitutes the great difficulty in picking up anecdote, character, or any thing that would be called peculiarity, in Ireland or Scotland; even in dialect, the same disappointment follows the attempt. All that is attributed by foreigners to the English appears to belong to the Americans, but with exaggerations—reserve, coldness, monotony, &c. The gravity of the upper orders, which is by no means displeasing, becomes perfect unkindness (to make use of no stronger expression) in the middling orders; for though I have used the term lower, I hardly know who they are, where they are, or how they exist. They appear to me to be too proud even to be seen. Not one American have I yet seen waiting at table, or in any situation where he might run the risk of being called servant. This is commonplace to you, I am aware, but I mean to assure you that the tourists have not exaggerated it; they are all within the mark. You will from this perceive what difficulty I have to discover character or peculiarities. If I enter into conversation with a coachman, he is Irish; if a fellow brings me a note, he is Scotch. If I call a porter, he is a negro. I can't come at the American without I go to porter-houses, and that I cannot condescend to do. There are no phrases, no intonations, and no instances of bad pronunciation, false grammar, or incorrect English, that I cannot trace to be of English origin. Yorkshire, Somersetshire, and, above all, London, have applied them most copiously. Here arises another difficulty. The impression would be, that there is no novelty in this—this has been done before—these are English characters. A week in Ireland would supply more drollery than twelve months here. Then again, all persons are dressed alike; nobody well-dressed, no one shabby. The judge, the barrister, the shopkeeper, the president, the member of Congress, the mechanic, the servant, without the slightest variation. Even in the courts of justice there is no distinction of ranks. The judge in the shabby blue coat and striped waistcoat, that the tipstaff wears. Now, I feel perfectly satisfied that my audience would yawn at this description of the people, even if it could boast of the recommendation of novelty. The Yankee is a term given by all the inhabitants of other parts of the United States to those of the east exclusively. The larger cities boast of superiority in every respect, and speak of the Rhode Islander, and the Massachusetts-man, exactly as the English speak of all Americans, and have a contempt for a Yankee. I have just come from Boston in the latter state, and certainly I have discovered more of character there than in the cities of New York, Baltimore, or Philadelphia, where the language, generally, is better spoken than in London, or any part of England. I quite agree with you in your remarks, that a journal is necessary on a tour, but I doubt its use in America. 'The court of justice' is dulness itself. The Quakers' meeting would be a better subject, if

the Quakers talked as much as the counsellors; and this again would be Westminster Hall on an uninteresting day, without wigs. The 'travellers' I have acted upon. But there is no 'travellers' room' at an inn. All travellers of every description are shewn into the same room, and silence reigns amidst the smoke of cigars. The only notions I have had (droll to say) is a coach scene, *'à la diligence'*. Some of the summer dresses would be new to the English. Negro women dressed like Quakers—very common here. A very fat negro, with whom I met, driving a stage-coach (which are almost as peculiar as the French), and urging his horses by different tunes on a fiddle, while he ingeniously fastened the reins round his neck. This would give an opportunity for the only costume which differs from that of our own country, the summer dress. With respect to songs, I really fear that I shall hardly be able to suggest subjects. The only striking subject for a pater-song is the inordinate love of title; a remarkable instance of the weakness and inconsistency of these simple republicans. Though the honour of knighthood bestowed on their president, even if he were a Washington, would rouse the country into a civil war, they are more ridiculously ostentatious of the petty titles that are recognised than any people under the sun. There is not any regular military establishment; a militia is kept up by occasional drillings, &c.; and, in case of war, this is their only effective force. The officers, therefore, are composed of all ranks of persons; and whether they have actually served or not, whether retired or in present exercise, they tenaciously exact their titles. On every road, even at the meanest pothouse, it is common to call out, 'Major, bring me a glass of toddy!' 'Captain Obis, three cigars, and change for a dollar!' 'Why are we so long changing horses, colonel?' This was addressed to our coachman—A fact! 'Why, Achilles is gone to get one of the horses shod, but the major is a good hand, he'll soon clap four shoes on.' 'Othello, run to Captain Smith's for a pound of cheese.' I heard at New York—'Colonel Hunter, your bread is by no means so good as that you baked at the beginning of the year.' 'Sheriff, your health.'—'Judge, a glass of wine.'—'Counsellor, allow me to send you some beef.' They are chiefly remarkable for accenting the wrong syllable, in engine, genuine, enquiry. Located is in general use; *approved*, *ultimated*, &c. 'Admire,' is to have an inclination to do any thing, as, 'I should *admire* to skate to-day.' 'Ugly' means *ill-tempered*;—'It is a pity such a pretty woman should be so *ugly*.' If they speak of a 'plain woman' they say she is *awful*. 'Clever' is *good-natured*; as 'He's a *clever* fellow, but a damned fool.' 'Considerable,' in the general sense, but as an adverb; as, 'He is *considerable* rich.' 'Guess' is always used in cases where no doubt exists:—'I *guess* I have a headache.' 'Servants' are called *helps*. 'Slick' is *nice*. 'A *slick* potato.' 'He did it *slicker*.' (cleverly); and, '*slick* right away.' 'My wife died *slick* right away'; that is, she went off pleasantly, but suddenly. 'That is a little too damned bad'; 'a little grain of water.' 'Progress,' used as a verb; as, 'I *guess* our western States *progress* very fast; i.e. improve. 'Admirable' is generally said. The participle *to* is very generally used (not by learned persons) after a verb; as, 'I *guess* it's a fine day. Will you take a walk?'—'I should *admire* to,' or, 'I have no occasion to.' 'When were you to Boston?' 'Have you been out in the rain?'—'Yes, but I had not ought to.' The following dialogue

was furnished me by an ear-witness, who knew my desire to collect:—'Any thing new to-day, Mr. B.?'—'I *guess* I have not heard any thing.' 'How's your lady?'—'Nicely. She *progresses* fast under Doctor A. She comes on *slick*, and grows quite *fleshy*.' 'How's Miss Sabrina?'—'She's quite *good* (well).—She's a *foine* girl.' 'I think she is, though she's rather awful.'—'I never saw her ugly in my life; and if she had but a pretty face, she'd be complete! Real!' 'Have you taken her to the theatre yet?'—'I hadn't ought to.' 'Why?'—'I *guess* I can't afford it.' 'Is not Mathews a favorite of yours?'—'Not by no manner of means. I wish he'd take himself off.' 'I reckon he'll take us off when he's at home in his own country again.'—'He won't dare to. We would not suffer that there.' 'He's a smart fellow' (applied to any talent); 'but I like a steady actor, as gives us time to admire him, and find out his beauties.' They use the word *raised* for *born*; or erecting a building: 'Where were you *raised*?'—'In Virginia.' 'I *guess* you have considerable hogs and niggers?'—'Yes, we have plenty of them black cattle.' 'Will you come and take a little grain of brandy, or whisky?'—'I should admire to, for I'm considerable thirsty; but I must first go and speak to the *gentleman* as looks after my nags.' 'Where does your horse keep?'—'At Colonel Crupper's livery-stables.' 'I *guess* the colonel has pretty damned bad help?'—'The ostler as tends the stable is a spry likely lad?'—'Yes, he's spry and well-looking, but pretty ugly.' 'I don't mind his ugliness. If he shewed me any of it, I'd make him clear out pretty damned quick.' 'You'll find me at Sampson's grog-shop, I *guess*. You won't be long?'—'I'm coming right back. Tell Sampson to put a little grain of bitters in my brandy.' The strongest character is the *landlord* of an inn. He is the most independent person in America. You must be impressed with the idea that he confers a favour upon you, or it is in vain to expect any accommodation. He can't be caricatured; I won't spare him an inch. He is, too, the most insolent rascal I ever encountered; he is the double-distilled of those qualities I described as appertaining to the middling orders. Here I can *personate* to advantage. It will be my main stay, my sheet-anchor. I have already three or four distinct specimens of the same species. The effect will depend more on manner than matter. *Par exemple*. If you arrive at the inn, the regular system of inattention and freezing indifference is instantly apparent. No one appears. You enter the house, and search about for a landlord or waiter. Probably you pass the former, but, fearing he may be the judge or the governor of the state, you are afraid to address him. You find a *nigger*—no mistaking him. 'Where's your master?' (a black look).—'*Dat* Missa Rivers.' The following little dialogue took place with me. I respectfully solicited a room for myself and friend (an Englishman, who, like myself, was aware of the manners and customs, and hoped to be annoyed, for the sake of others (At Home). 'Can we have a private room?'—'I *guess* you can, if there isn't nobody in it.' Mathews. 'Can we have some dinner?'—'Landlord. 'Dinner? why, we've dined these two hours! It's four o'clock!' (All ranks dine at a *table d'hôte*). Mathews. 'Still, we have had no dinner; perhaps, sir, you would oblige us?'—'Landlord. 'I suspect, rather, we've something left as we had for our dinner. But you should have come sooner if

you wanted to dine; this is no time for dinner, after every body's done. It puts one's *helps* out of the way.' Mathews. 'Well, sir, the help will be paid for his trouble; therefore try your best for us.' A Hottentot Adonis appeared, with his sleeves tucked up to his shoulders (thermometer 90°), an effluvia arising from his ebony skin that he ingeniously overpowered by one of greater power from a leg of lamb. Mathews. 'Any port-wine?'—'Yes, massa, berry good a wine.' Mathews. 'Bring a bottle.' A bottle of mulled Day and Martin was brought. 'Any ice?'—'Not to-day, massa; none in Elizabeth Town; a can't get a any *Sudday*' (Sunday). At this moment enters mine host, who takes a chair, and sits down with his hat on, and a cigar in his mouth, and inquires, who we are?—where we are going? &c. 'Colonel Gymptenike and Major Foose, going to Bristol.' Mathews. 'Your wine is very hot.'—'Landlord. 'Why I don't know for that; it *keeps* in the bar.' Mathews. 'Have you no cellar?'—'Landlord. 'I suppose I have, but not for that. It's always in the bar right an end.' Mathews. 'It's rather thick; have you had it long?'—'Landlord. 'Three weeks and a bit. I fetched it in my chay myself from Philadelphia, a little while back.' At four in the morning a messenger arrived in the mail, who inquired for me, having a letter for me from a friend, advising me to fly, as the fever he knew, was in Elizabeth Town. Mine host *guessed* I was the man, and entered my room with a candle. Landlord. 'A letter for you, I reckon.' Mathews. 'Did the messenger tell you to give it me in the middle of the night?'—'Landlord. 'I *guess* he did not. It was my own contrivance.' Mathews. 'It is an odd hour to wake a man.'—'Landlord. 'I *guess* I did the right thing, and that there is always propriety. Whatever you perform, fulfil *that* right away.' I was so tickled that I said: 'You're a pleasant man; how's your wife?'—'Landlord. 'Why, she's tolerable well, but *pretty poor*' (very thin). Mathews. 'Well, I shall not get up until eight or nine, therefore adieu! thou lovely youth. I must still think it was very extraordinary to disturb me.'—'Landlord. 'Ah, I don't mind remarks when I fulfil propriety. I'm an honest man, and I presume I have done the right thing, and then remarks is equal. I am a *doile* man in church and state.'—*Exit with candle*. Another instance, lately in my journey from Boston to New York; nearly the same dialogue; but a different-looking being; a dear little punchy fellow, with a hat as large as a tea-board, and *such* a tail! He was just going to bed; and when we asked for supper, he said, 'Why, we have supped these three hours; what made you come to-night?' But this interview requires personation, and is one of the few instances of originality. I shall be rich in black fun. I have studied their broken English carefully. It is pronounced the real thing, even by the Yankees. It is a pity that I dare not touch upon a preacher. I know its danger, but perhaps the absurdity might give a colour to it—*a black* Methodist! I have a specimen from life, which is relished highly in private. A *leelle* bit you shall have. By the by, they call the *nigger* meetings '*Black Brimstone Churches*.' My wordy bredren, it is a no use to come to de meetum-house to ear de most hellygunt orashions if a no put a de cent into de plate: de spiritable man cannot get a on widout de temporalities; twelve 'poestes must hab de candle to burn. You dress a self up in de fine blue a cot, and a bandalore breechum,

and tink a look like a gemman, but no more like a gemman dan put a finger in a de fire, and take him out again, widout you put a de money in a de plate. He lend a to de poor, lend to de Law (Lord), if you like a de security drop a de cents in to de box. My sister n a de gallery too dress em up wid de poke i de bounet, and de furbelow-tippet, and look n de glass and say, 'Pretty Miss Phyllis, how bell I look!' but no pretty in de eye f de Law (Lord) widout a drop a cent i de plate. My friend and bredren, in ty endeavour to save you, I come across de ay in de stim a boat. I never was more shock an when I see de race a horrie a rubbin down. fo fear o' de Law afore dere eye on de Sabbat day, ben I was tinkin of de great enjawnment my friend at a Baltimore was to have dis light, dey rub a down de horse for de use of de bhil. Twix you and I, no see what de white ik make so much fun of us, for when dey act i foolish demselve, dey tink dey know ebervyng, and dat we poor brack people know noting all amosee (almost). Den shew dem how nch more dollars you can put in de plate dan white meestum-houses. But, am sorry to y, some of you put three cent in a plate, and ke out a quarter a dollar. What de say ven u go to hebben? Dey ask you what you do de twenty-two cent you take out of de ute when you put in the tree cent? what you do den?' I have several specimens of these ick gentry that I can bring into play, and cticularly scraps of songs, and malaprops, h as Mahometan below Cesar (thermo- ter below zero), &c.

"Song.
'Oh! love is like the pepper-corn;
It make me act so cute.

It make de bosoms feel so warm,
And eye shine like new boot!
I meet Miss Phyllis tudder day
In berry pensive mood;
She almost cry her eyes away
For Pomp's ingratitude.

'O lubby brushing maid,' said I,
'What makee look so sad?'
'Ah! Scip,' de broctuous virgin cry,
'I feel most debblish bad!

For Pomp he stole my heart away.
He taught him berry good;
But he no lub me now he say!
Chah! what ingratitude!

can no more; but you shall hear again
rtly from yours, most truly,

"C. MATHEWS."

another letter from Mr. R. Peake to Mr.
thews also affords us an excellent opportu-
of exhibiting him in his true colours, and
he same time the sound sense and sparkling
nt of his attached friend:—

"English Opera House, Dec. 10th, 1894.

My dear Mathews,—I received your
ghly epistle yesterday, and shall attend to
several requests. You need not apologise
ne; 'I see by my paper' (your favourite
se), that the entertainment has been as
easful in the country as in London. You
me, what is to be the subject for next
on? Careful bird, to be thus thinking of
nest into which your eggs are to be de-
tied. But I am sure it will be many seasons
re those eggs will be added. The extraor-
ary variety of your conceptions, and the
ne powers of conveying them to an au-
ce, would give ample employ to a dozen
ors. In regard to the subject—as the
uthful Days' succeeded so well, we might
a sort of continuation of them under the
of 'Mathews's Mems.' or, should you
it, to be a little more intelligible, 'Mr.
hews's Memorandum Book.' This would
e a good vehicle for all you have collected
ur tour, some of your untouched matter,

and the rest to be provided by your authors.
The 'Monopolylogue' is sure to spin out of my
brains when they are warmed up to a concert
pitch by one or two of your admirable readings.
They, and the pleasant hospitality of Ivy Cot-
tage, cannot fail to inspire your Monsieur
Scribe. I am just returned from my annual
trip to the sea-side. On the Parade, the first
day after our arrival, we met a family with
whom we had been formerly slightly acquainted
(I must tell you that this family had risen from
humble origin to large fortune by means of an
extensive manufacture of cordage). Here, wo
to us! our bow of recognition was not returned.
My wife was nettled (for she had gentle blood
in her veins). 'Don't be uneasy,' said I, loud
enough to be heard by the party; 'they are on
the high ropes; don't cut them!' I also met
that cantankerous quondam friend of mine,
—, on the beach, trying to get his bile blown
out of him; but all the gales that Boreas
could produce from his elemental emporium
could not effect that. He was in his accus-
tomed mood, and asked me where was *old*
Irritable? the name by which he designated
your worship. *He does not know you*—how
few do! I was aware, that while you were
giving gratification to thousands by your un-
rivalled talent, though excited by the cheerful
roars of laughter, and the loud applause of
crowded audiences, you were writhing at the
same moment with pain so severe as almost to
amount to continued torture. How you have
been able to bear up against it for so many ses-
sons has proved to me a matter of surprise!
Since your first appearance at the Lyceum, in
1818, I have been constantly with you, and
may be able to form a just conclusion. You
ask me for news. Am I to skim the papers?
You see them all. But if you require a little
extra intelligence, it is at your service. There
has been a great flood in Northamptonshire,
which has, of course, immersed in water vast
numbers of unfortunate sheep. I'll venture
to say, that more mutton broth has been made
in that county than in any other. I saw Tom
Hill yesterday; and I am happy to say that he
looks one year younger than when he had the
interview with Sir Robert Walpole, to give his
advice as regarded the rudiments of the educa-
tion of the hopeful Horatio. I must tell you
a good little bit which occurred a few days
since. The excellent, kind-hearted Dr. Kitch-
iner, in his extreme *bonhomie*, thought that
he had hit on the means to reconcile the con-
flicting interests of the Theatres Royal—Drury
Lane, Covent Garden, Haymarket, and En-
glish Opera House (no easy task). To accom-
plish this desirable object, he invited Messrs.
Henry Harris, Elliston, Arnold, and Morris,
to dine with him; the latter did not accept the
invite. But the doctor never recollected how
seriously the respective managers were at
'daggers drawn.' When they met in the
doctor's library (the only guests) it was a scene
of inconceivable surprise. Harris was per-
plexed; Elliston assumed an air of infinite
grandeur; Arnold had the tact to see the
doctor's well-meant intention, and contrived to
meet his powerful opponents with pleasantry.
Dinner was served, the doctor's best, for a
small party. Of course, there was some em-
barassment with the high contending powers,
until Mr. Arnold, breaking the ice, proposed,
that the very best thing the rival managers
could do, would be to avoid all conversation on
theatrical affairs. This was agreed to by all
but Kitchiner, who wanted their dramatic differ-
ences settled that night at his table; and with
this feeling the doctor continually interlarded

the discourse, in spite of the efforts of his
visitors to refrain from attacking each other.
The wine circulated (the doctor's wine, as he
gave away much of it, always wanted *keep-
ing*); Harris and Arnold joked, and avoided
all hostile allusions; but Elliston was unable
to conceal his patent dignity, and had become
rather tipsy. He rose, and placing his hand
on Arnold's head, he exclaimed, in a pompous
manner, '*Minor manager, I will lay my hand
on you and crush you!*' This prodigious
threat, of course, produced hearty laughter. I
have met, at the house of the father of my worthy
colleague, John Hamilton Reynolds, an odd,
quaint being, by name Thomas Hood. He
appears to be too modest to let a pun; but
when it is effected, it is capital. On better ac-
quaintance (though he is the most shy cock I
ever encountered) I think I perceive under his
disguise one of the shrewdest wags of this age.
I predict, that before your present authors are
worn threadbare he will be your man. I inclose
you two songs, complete, for the forthcoming
entertainment. I like them; I hope you will;
if not, there's more of the raw material in the
warehouse over my eyebrows. My letter al-
most assumes the form of a despatch, but will,
I trust, reach you in a franked cover from the
Home Secretary's office. If his lordship had
never to sign his noble name to any thing less
disagreeable than to 'this present writing,' be-
ing that which has sent (as delivered by you),
and will again send home thousands laughing
to their pillows, his lordship would be an envied
man. To your paragraph of 'particularly private'
I reply, that I effected your purpose, and
I trust to your wishes. On handing over old
R—the 20l. I told him it had been raised by
a subscription of his well-wishers, and lied ac-
cording to your directions, in the most discreet
manner. What could make the surly fellow
imagine that you were his bitterest enemy I
cannot divine; perhaps in early days he thought
that he was the best comedian of the two, and
was savage that he never found his way to a
London audience. I think it will give you
gratification to ascertain that this act of yours
is a much greater charity than you could have
apprehended. The misery of the lodging, the
squalid state of the family; and yet the old boy,
with the same cynical turn of the nose, asked
me rather peremptorily, the names of the per-
sons who had subscribed for him. What made
you fall in love with such a specimen? As the
money was in his hands, I had effected my part
of the affair, and left him with a divided feeling
of pity and contempt. The wife and daughters
exhibited quite a distinct appreciation of the
gift. He has, however, since addressed a well-
worded letter of thanks to his 'unknown friends,'
which you shall have when you come to town.
Turn we to another subject, as my double sheet
is not yet full. I once in a booth saw the con-
jurer Gyngell performing his various tricks:
but he contrived to divide his entertainment
into several parts; coming forward before the
curtain, bowing to his audience, with this elu-
cidatory address, 'Ladies and gentlemen, the
next will be something else!' so I perforce must
go (though no conjurer) to my something else.
John Hardwick has composed an elaborate epi-
taph for his friend Benzley:—

"Here lies Samuel Benzley;
He lived hard, but died easily."

"This epitaph is as concise and pithy as that of Mr.
T. Dibdin's upon a celebrated book-room, whose injunc-
tion to his tombstone was facetiously supposed to be as
follows:—

"Reader of these four lines take heed,
And mend your life for my sake,
For you must die, like Isaac Reed,
Though you read till your eyes are dead."—A. M.

By the way, when last we met I omitted to relate to you the joke on Sir George Smart. Sir George was dining at Bartley's, and during dinner a most tremendous storm of thunder and lightning came on. It was terrific, and Sir George is reported to have laid down his knife and fork in serious alarm. We were not surprised at this, because Sir George (a sensible man) was fully aware that he was a *conductor*! If this letter should be received since you have heard from home, all are well at Kentish Town, and Miss Sophia Laforest is on a visit with Mrs. Mathews. They are never melancholy when together. Your favourite white pony, I am sorry to inform you (I know not how offended), has kicked your coachman David, who, I'll be bound to say, returned the compliment; though they are both very fond of each other; but this is in accordance with the way of the world. Have you not acted *Jonathan in England*? Great difficulty must lie in the effective representation of the other parts; Bartley, Keeley, Sloman, Salter, even Minton, were capital with us. My paper bids me cry 'Hold! enough!' but I have still space to tell you, that Wrench has not improved in the only bit of mimicry he attempts, the imitation of the 'Baa of a sick lamb.' Gods! how we fools laughed at it! But laughter is very wholesome, and always a delight. I laugh as much as I can. Small room to say, thanks for the cheque on Rowland Stephenson for my (your) book-keeping for last season. That the same success may ever continue to attend you is, of course, the ardent wish of, my dear Mathews, your sincere and faithful friend,

"R. B. PEAKE."

To these long extracts we will now take the liberty to append a collection of *facets*, without being very minute in affiliating them upon their parents.

In Verse, by Mathews, on the effect the death of the Queen had on theatrical affairs:—

"The death of the Queen has caused great perturbation;
We must *mourn* by command, and throughout the whole nation,

The theatres closed, the poor actors forlorn,
Must starve. Other subjects can eat while they mourn.
What follows is plain: 't is believed in all corners,
The mourners are actors—the actors are mourners."

"Extempore on rising from my seat at the close of 'At Home,' on Saturday night:—

"If, in whatever docks this earthly ball,
'Tis still great Mother Nature—one in all!
Hence Mathews needs must be her genuine son,
A second Nature, that acts all in one."

"S. T. COLERIDGE."

"I ruralised yesterday for a chop dinner; and, as I have nothing of my own to say, I will just give you a specimen of an epitaph that I think good. The mourning husband puts his initials at the bottom of the lines:—

"Hannah, wife of George Onions,
She was—
But words are wanting to say what.
Look what a wife should be,
And she was that.
GO."

"Affectionately yours,

"C. MATHEWS."

In press (when Mr. C. J. Mathews had been some time in Paris, he returned with the following laughable *jeu d'esprit* to his mother):—

"To Mrs. Mathews.

"(Will be presented by Master C. J. Mathews.)

"Paris, Sept. 3d. 1819.

"My dear Friend,—This letter will be delivered to you by a young gentleman for whom I have a considerable regard; and, as it is likely he will reside some time in England, you will much oblige me by shewing him any little attention in your power. I do not wish that you should put yourself to the slightest in-

convenience on his account; but merely allow him to make your house his home, and supply him with every necessary of life. That you will allow him bed and board in your house, is a thing of course; and the only little extra civility I request of you, is that you will furnish him with clothes and linen, and just be at the trouble of seeing from time to time that they are in good order, and of providing him with the necessary changes and repairs when they are not. I need not request you to pay for his teaching—your good nature and politeness will naturally prompt you to do this; and as to the allowance of a certain sum weekly or monthly, as pocket money, I must remain entirely silent, convinced as I am that your consideration for me will be your best guide as to what is proper in this latter respect. I must, however, observe that he is a young gentleman of sober and discreet habits; and that a hundred or so a-year will be nearly as much as he can have occasion for, during the first two or three years of his visit to you. If, however, you are of a different opinion, and think this insufficient, I trust to the friendship that exists between us, that you will not use the least ceremony, and increase it according to your own notions of what is best. He is intended to pursue the profession of an architect, and is for that purpose placed under the guidance of a gentleman eminent in the art. My friend Mathews, who has now and then a leisure half-hour at his disposal, will do me the favour to devote it to the examination of my young friend's progress; and I am sure he will be but too happy to defray any little expense that may be incurred in the course of his studies. Need I hint how much I shall feel obliged if he will also just pay the premium requisite for his introduction into the profession? I trust he will not be offended with my mentioning a point so sure of being suggested by its own sense of what is due to a person thus introduced to him. I would not for the world be troublesome to you; and, though I am anxious this young gentleman should meet with a favourable reception at your hands, I do not require more than that you should treat him in all respects as if he were your own son.—Believe me ever, very sincerely yours.

T. POOLX.

P.S.—By the by, he is very fond of riding; and I know he would be delighted if you were to make him a present of a horse. At the same time you would be much obliging me by keeping it for him in your stable; you know we are *sans façon*, therefore I should be much offended if you were even to think of keeping a groom to wait entirely on him. He is a young man of the world, and will be perfectly satisfied with the attendance of Mathews's, whenever he may have occasion for him."

"I saw our witty friend Dubois in London, who told me an anecdote in which you figured. W— (so said the wag) pressed you to act for his benefit in the after-piece at Covent-Garden, which you said you would willingly have done, but that you were engaged that night to perform in the after-piece at the English Opera House, and could not cut yourself in half. 'I don't know that,' replied W—, 'for I have often seen you act in two pieces.' Is this true? or is it one of Dubois's own children?"

At an interview with George IVth., "the king talked of Mr. Kemble, and said, 'Your Kemble is excellent, whether on or off the stage. I used to fancy my own imitation of him very true. I had a great regard for Kemble: he was my very good friend. I'll suffer no one to speak a word against Kemble.' The king then remarked upon Mr. Kemble's

correct pronunciation of the English language, and the natural horror he felt at any distortion of it. This led to my husband's relating a story of the tragedian's correcting a servant, one night, at Lord North's. The gentlemen staying later over their wine than usual, a footman informed Mr. Kemble that 'the carriage was waiting, and that Mrs. Kemble desired him to say *she had got the rheumatism*.' After a minute's pause, Kemble turned to the man, and, deliberately taking a pinch of snuff, said, 'Tell Mrs. Kemble that I'll come: and another time, sir, do you say *tism*.' The king laughed loudly at this anecdote, and observed, 'Oh, it is so like him! I can relate a story of the same kind, which will prove that he could not abstain from such corrections, whether it was a servant or a prince who offended his nice ear. One evening, after he had dined with me, perceiving, in the course of conversation, that Kemble carried his finger round his snuff-box, evidently in distress at its emptiness, I held out my own, silently inviting him to partake of its contents, when he exclaimed, 'Is it possible! Does a prince offer his box to a poor player?' I replied, 'Yes; and if you will take a pinch from it you will much oblige me.' Kemble paused for a moment, then bowed stiffly, and, dipping his finger and thumb into the box, replied, 'I accept your Royal Highness's offer with gratitude; but—if you can extend your royal jaws so wide, pray, another time, say *oblige*.' And I did so ever after, I assure you. Oh, I'm under vast obligations to my friend Kemble!"

"At the back of a printed copy of the prospectus of the design for the erection of the Shakespeare monument, appears the following pithy communication from Mr. Bunn, the late lessee of Drury Lane Theatre, addressed to Mr. Mathews:—

"Dear Mat,—Mr. Kean, on declining to become one of the committee for the landable undertaking described at the back hereof, made the following remark to me:—'I will build him a monument myself, by acting his characters.'—Yours,
A. BUNN."

"I must give you a little anecdote, in general circulation here, which is rather amusing, more as a picture for the fancy to realise than a story of point. It is told as an instance of my 'wonderful powers.' There is a physician here of the name of Chapman, to whom I had a letter from Washington Irving. I saw him in September last, and had him instantly, and indulged in imitating him. When I went through in October, I gave this imitation at a party here; for like P—s at Liverpool, every body knew him, and it was equally droll. A gentleman present not only laughed then, but when he went home he laughed again at the recollection so immoderately that his wife really thought he had a hysteric fit. In perfect alarm, she sent the servant off for their physician. He was from home; and the servant thinking his master dying, did not stop till he found a doctor. Just as the patient was recovering from the effects of the counterfeit doctor, in came the real Dr. Chapman; and when the patient heard the sound of his voice,

"I remember another instance of the same kind. When Mr. Kemble acted in York as 'a star,' staying in the house of Tate Wilkinson, Mr. Mathews called there on some pretence, for the sake of being near the great actor. On entering the room, Mr. Kemble was sitting at the further end of it, seemingly absorbed in reading. Mrs. Wilkinson, a broad Yorkshire woman, inquired of Mr. Mathews as he entered, whether he did not find the streets bad to walk in; telling him that Mr. Kemble had been out, and had assured her they were very *slippy*. Mr. Kemble, evidently ear-wounded by the word, slightly shook his head, without any other movement, and, as if unconscious that his correction was audible, muttered, '*slippy—slippy—slippy*.'—A. M."

he was off again, and was actually very near being bled while in his second fit.—A fact!

“C. MATHEWS.”

“An Irishman at the house of a friend of mine, the author of ‘The Spy,’ and ‘The Pioneers,’ discovered a part of the wood-work of a chimneypiece on fire, that endangered the whole house. He rushed up to his master and announced the alarming intelligence. Down he rushed with him; a large kettle of boiling water was on the fire. ‘Well, why don’t you put out the fire?’—‘I can’t, surr.’ ‘Why, you fool! pour the water upon it.’—‘Sure, it’s hot water, surr.’—Fact!”

“A lady here has a *Dow Buckinghamish* sort of beard. A gentleman to-day said, ‘It would be indicative to mention it, though somebody ought to tell her of it. I think I’ll send her an anonymous razor.’ The same lady was rather gummy about the ankles. The man observed, ‘She has patent heels, to keep the dust out of her shoes,’ &c.”

“I made an angry reply to a beggar-woman to-day:—‘I have no money.’—‘Good luck to you, leave us a lock of your hair.’ Adieu!”

“The following is a fact:—The present sheriff, at his dinner, when somebody proposed the Duke of Wellington’s health.—‘The first captain of the age,’—actually gave out ‘The first chaplain of the age!’ He is a cutler, and, when his health was proposed, a wag whispered to the band, who had played appropriate tunes to the other toasts, to play ‘Terry, helgho, the *Grinder!*’ which was done! The king shook hands with a peasant, when he was here, who said, ‘I’ll not wash that hand for a twelvemonth.’ One little bit at parting:—A drunken fellow, taken home by his friend, was challenged by another: ‘Who is that?’ ‘Where are you going?’ &c. ‘Why, I think your friend has had too much?’—‘Why, I think he had better have divided it fairly, half to-day and half to-morrow.’ A watchman came up. ‘How much has he drunk?’ said a by-stander.—‘A gallon at last!’ ‘Then I take him into custody for carrying off a gallon of liquor without a permit!’”

“I give a specimen of the style in which Mr. Bannister generally wrote to my husband:—

“‘To C. Mathews, Esq.

“‘May 30th, 1834.

“‘Incomparable Mathews,—Although I have left off acting, I shall have great pleasure in performing (my promise to dine with you) on the 28th. Ever yours, truly,

“‘JNO. BANNISTER.

“‘65 Gower Street.”

Ireland, Past and Present.—“I have nothing to say and no time to say it in. By the time you receive this I shall have arrived, please God, and have performed in Liverpool. ‘This country never was and never will be, what it was before the union.’ (!) ‘Good! now that I heard.’”

“The circumstance of Mr. Mathews’s dwelling in this letter so emphatically upon the superiority of the Scottish character, reminds me of several anecdotes related by him in reference to the lower orders of that country, who partook of the respect which the higher ranks excited in him at all times. I remember his telling me a story of his having dined a short distance from Edinburgh, accompanied by an old laird, much in the habit of exceeding discreet limits, when he found himself induced by good wine and good company to take more of the former than he was justified in doing. On the occasion in question, he had taken

Mr. Mathews in his carriage to the house where they dined on a Saturday evening. On their return to Edinburgh after midnight, when they reached the toll-bar through which they had passed on the evening of the day before, the usual demand was made by the pretty daughter of the toll-keeper, which the laird resisted on the plea that he had paid on first passing through, and should not pay again. The young girl reminded the laird that it was now another day; that the Sabbath morn had broken upon his return; and, therefore, she expected a fresh payment. But the impracticable laird persisted in his wrong-headed determination not to pay a second toll on one day. In vain his friends expostulated and endeavoured to discharge the claim, in order to get home. The unreasonable laird would not permit his friends or his servants to satisfy the demand, and he applied the most violent and unbecoming language and epithets to the girl; all which she received with great meekness, nevertheless with unflinching determination not to unlock the gate without the toll being first paid. The fury of the laird, and the continuation of the noise, at length induced an old woman in her night-dress to peer out of an upper window, with the question of, ‘Eh! Maggy, what’s the gentleman saying?’ when the girl replied, ‘Ah, mither; it’s no the gentleman, it’s the wine that speaks!’ Strange to say, this observation sobered the laird, who demurely ordered his servant to ‘git the lassie her will for once, though ‘twas hard to pay twice in one day.’ As a pendant to the preceding picture of native good sense and moderation, I add the following anecdote:—During some severe weather, Mr. Mathews had hired a hackney coach to take him to the theatre where he had to act. Something had happened several times to derange the harness, and the driver, a steady old Scotchman, had been obliged to descend from his box to put it in order; but a third occasion put an end to my husband’s patience, besides giving him some alarm lest he should not arrive in time to dress. He looked out of the coach-window, and perceiving the man very deliberately tying some rope together, to effect the necessary repair, somewhat angrily called out that such delays were very provoking; and being unable to induce the man to hasten his operations, he exclaimed, in a sharp tone, ‘Be pleased to remember how much time I am losing.’—‘Vary weel, sir,’ answered the man, quietly and slowly, ‘and you will be pleased to remember that I’m losing just as much time as yourself!’”

With this we must shut up Vol. III. There is some hard hitting at poor Benson Hill, and it is melancholy after reading the accounts of such sums of money as Mr. Mathews earned by his profession, to think that he did not die in more abundant circumstances.

Historical and Descriptive Notices of the City of Cork and its Vicinity; Gougoun Barra, Glengariff, and Killarney. By J. Windele. Cork, 1839. Bolster.

THIS volume appears to us an excellent guide for the south-west of Ireland, full of new and curious matter, put together in a quaint and agreeable manner. Some amusing anecdotes and many notices of interesting persons are interspersed throughout, which give Mr. Windele’s work claims on the attention of general as well as local readers. We make a few extracts, completely at random:—

“In 1850, Cromwell sojourned in Cork a few days, and whilst there converted the

church-bells into cannon; observing in reply to a remonstrance, that since gun-powder was invented by a priest, he thought the best use for bells would be to convert them into *canons*. The jests of the Protector not having been either very numerous or brilliant, it is as well to preserve the only one, it is believed, perpetrated by him in Cork.”

In the burial-ground of the Cathedral of Cork, we are told that there are few old monuments.—“On one stone is inscribed,

‘Here lies a branch, of DESMOND’S race,
In THOMAS HOLLAND’S burial-place.’

The Geraldine alluded to, was, I believe, a knight of Glen, interred here in the last century. Beneath the shade of one of the old elms lies, without stone or memorial, the unfortunate J. B. Trotter, author of ‘Walks through Ireland,’ and some other works. He was a man of high connexions and early hopes, but closed a chequered life in poverty and sorrow. In his outset he had been the companion, and afterwards the private secretary, of Charles James Fox; after the death of that statesman, however, all his prospects darkened, and in 1818 he died in great wretchedness, in very humble lodgings, on Hammond’s Marsh. • •

“The bishops [of Cork] have at all times been extremely jealous of the privileges of their manor; a curious instance of this was given in 1721, by the celebrated Dr. Peter Brown, then bishop. The wife of an Alderman French having died, the bereaved husband addressed to his lordship the following letter, still preserved.

“‘To the Rt. Rev. Father in God, Peter, Lord Bishop of Cork and Rosse.

“‘My Lord,—Since it has pleased Almighty God to take to himself my companion, and having a desire to do her the last office as decently as I could so, I would beg leave of your L^{ship} that the May^r. with his sword and maces, may accompany the funeral to the grave, and you’ll very much oblige, my Lord, yr. L^{ship}’s most dutiful servant,
W. FRENCH.’

“The bishop’s note upon this, strongly recording his stern sense of duty to himself and successors, is appended, in his own handwriting, at foot, and runs thus:—

“‘This letter was delivered to me by Mr. Woodroff, from Alderman French. I positively refused to suffer the Mayor to come within y^e liberties of my manor wth his sword and maces, adding that such leave would be in effect giving up y^e privileges of y^e manor, upon w^{ch} y^e Mayor and Aldermen came to the burial at St. Fin Barrie’s without sword or maces.—This I certify, April 11, 1721.’

“‘PETER CORKE AND ROSSE.’”

A new cemetery, which has been recently formed a short distance from the city of Cork, is thus noticed by Mr. Windele:—

“An object of increasing interest, is, what may be denominated the *Père la Chaise* of Cork—the new cemetery established by the Capuchin Friars, a few years since, where was formerly a botanic garden. It lies to the south-east of ‘Evergreen.’ The situation is beautiful, and the utility of the object above all praise. It has already obtained a deserved preference over the old narrow crowded burial-grounds within the city; whilst the receipts, over and above the

“Archbishop Gilbert, when bishop of Salisbury, stood upon his rights respecting a similar jurisdiction of the city and cathedral, refusing to let the mace be carried before the mayor in the church precincts, and once having a kind of scuffle with the mace-bearer upon the subject. Soon after, the judge of assize being applied to by the cook, at a circuit dinner, to know if his lordship chose any particular dish, replied, ‘No!’ but as he heard the bishop was to dine with him, he desired, if there was any soup, that there might be no mace in it, as the bishop did not love mace.”

necessary expenditure, are applied to benevolent purposes: in this way, from the year 1827 to 1834, a sum of 1529*l.* has been applied amongst the poor of the city. Besides, it has become an auxiliary in the cause of art in Cork, as testified by the improved taste displayed on several of the monuments, some of them of great beauty. That of Mr. Murphy, designed and executed by Hogan, and another by Pain, to the memory of the late T. Sheehan, may safely be singled out, amongst the most favourable specimens. The Gothic altar-tombs, in the lower parts of the grounds, are also works highly creditable to the taste and talent of Pain, and of his former pupil, the late George Buckley. The career of the last-named gentleman, unhappily too brief, was one full of the greatest promise. He had scarcely entered upon the practice of his profession, when he was snatched away; but he has left enduring indications after him of the highest order. 'Si monumenta quis, circumspecte': these grounds contain many of them, and may hardly be seen and examined, without admiration of his genius, and regret for his too premature loss. Nothing can be better kept than this cemetery; trees and shrubs of rarity and beauty are profusely scattered about; every grave possesses its yew, willow, or cypress, and many are carefully decked with flowers. But even here, as elsewhere, the ridiculous lurks—the ass's ear may be detected; some of the inscriptions are in the worst taste, redolent of the blindest folly, vanity, and absurdity."

After reading Mr. Windle's account of Cork, no one can doubt its Irish location; as although no less than four squares are enumerated, he actually tells us that Cork has none!

"Of squares, Cork possesses none; although the word, strangely enough, occurs as a name to several places: thus, we have Buckingham Square, Knapp's Square, Jones's Square, and Daunt's Square, to which a stranger would find it rather difficult to apply the term. In the latter square, is the domicile of that ingenious citizen, renowned in lathering metres,

"ONE ROBERT OLDEN,
Inventor sole of H'Eukerigenolence,
Soother of beads."

Life of James Watt. By M. Arago. *Memoir on Machinery, considered in relation to the Prosperity of the Working Classes.* By the same. *Historical Account of the Discovery of the Composition of Water.* By Lord Brougham. 8vo. pp. 142. 1839. Edinburgh, A. and C. Black; London, Longman and Co.

To persons interested in matters of Science this volume will be acceptable. M. Arago's biographical sketch of our illustrious countryman James Watt (with its sequel paper) is, on the whole, an honourable and appropriate tribute, though Solomon de Caus, and Denis Papin, being Frenchmen, flourish quite as much in the foreground as facts can justify; and a laudation of Buonaparte, and a slap at William Pitt, are lugged in without any very strong reason or apparent necessity. The few anecdotes with which the narrative is relieved tell well; as, for example, the following:—

"I shall (says M. Arago) probably have occasion, in the sequel, to return to some of the other properties of steam. If I do not insist upon them at present, it assuredly is not because I attribute to this assembly the state of mind of certain students, who one day observed to their mathematical professor, 'Why are you taking all this trouble to demonstrate these theorems? We repose entire confidence in you; give us only your word of honour, and

that will suffice.' But I feel anxious not to abuse your patience; and I ought also to remember that, by referring to particular treatises, you will readily supply the omissions which I shall find it impossible to avoid."

The progress of the steam-engine from crude ideas to the prodigious applicability of motive power combined with machinery, effected by Watt, is a history of curious and useful character; shewing where almost accident, and slight observations, and acute deductions, and enlightened inventions, contributed in turn to bring on the whole to perfection. A boy wishing to play supplies one important link; a philosopher, of the deepest thought, another. So are all great discoveries made: it was only once that a Minerva was produced complete, even from the head of a Jove, and that not without the mechanical aid of a Vulcan!

The name of the translator of this Memoir is not mentioned, but we quote from one of his notes an extract, to prove that many other important designs occupied the mind of Watt. He observes:—

"At a time when so many people are occupied with projects of rotatory steam-engines, it would be unpardonable were I not to state that Watt had not only thought of them (of which we find proof in his patents), but had actually constructed them. Mr. Watt subsequently abandoned them, not because they did not work, but because they appeared to him decidedly inferior in an economical point of view to machines of double powers and rectilinear oscillations. There are, in fact, few inventions, great or small, among those so admirably combined in our present steam-engines, which are not the development of some of the original ideas of Watt. Examine his labours, and, in addition to the principal points minutely enumerated in the text, you will find he proposed machines without condensation; in which, after having acted, the steam is dispersed in the air, and which were intended for localities where large quantities of cold water could not readily be procured. The operation of the principle of expansion in machines with several cylinders, was also one of the projects of the Soho engineer. He suggested the idea of pistons, which should be perfectly steam-tight, although composed exclusively of metal. It was Watt, also, who first had recourse to mercurial manometers for measuring the elasticity of the steam in the boiler and the condenser; who conceived the idea of a simple and permanent gage, by whose assistance might always be ascertained, with a glance of the eye, the level of the water in the boiler; and who, to prevent this level ever varying injuriously, connected the movements of the feeding-pump with those of a float; and who, when required, placed in an opening in the cover of the principal cylinder of the machine the indicator—a small apparatus, so constructed that it accurately exhibits the state of the steam, in relation to the position of the piston, &c. &c. Did time permit, I could shew that Watt was not less skillful and happy in his attempts to improve the boilers, to diminish the loss of heat, and to consume those torrents of black smoke which issue from common chimneys, however elevated they may be."

That he was also the first to discover the

* There is another note of the translator's which we do not comprehend, and which he had been more explicit on so interesting a subject. M. Arago, in his able demonstration that the improvement of machinery does and must add to the prosperity of the working classes, says: "There is one principle which has remained unconverted, amidst the animated controversies to which the science of political economy has given birth, viz. that

composition of water, previously held to be a simple body, is pretty clearly established by M. Arago, the essay of Lord Brougham, and the notes of the present Mr. James Watt; though the nearly contemporaneous claims of Mr. Wankire (who certainly originated the inquiry in 1781), Priestley, Cavendish, and Lavoisier, through the years 1782, 3, and 4, have puzzled the question. Other singular improvements can also be traced to this extraordinary individual, who so highly merited the eulogium of Jeffrey:—

"We have said that Mr. Watt was the great improver of the steam-engine; but, in truth, as to all that is admirable in its structure, or vast in its utility, he should rather be described as its inventor. It was by his inventions that its action was so regulated as to make it capable of being applied to the finest and most delicate manufactures, and its power so increased as to set weight and solidity at defiance. By his admirable contrivances, it has become a thing stupendous alike for its force and its flexibility,—for the prodigious power which it can exert, and the ease, and precision, and ductility, with which it can be varied, distributed, and applied. The trunk of an elephant that can pick up a pin or rend an oak is as nothing to it. It can engrave a seal, and crush masses of obdurate metal like wax before it,—draw out, without breaking, a thread as fine as gas-samer, and lift a ship of war like a bauble in the air. It can embroider muslin and forge anchors,—cut steel into ribands, and impel loaded vessels against the fury of the winds and waves."

Even to the end he was a benefactor to his species: his jointed waterworks at Glasgow, his hydraulic ram at Manchester, his copying machine, were but scintillations of his wonderful genius; and M. Arago, towards the close of his discourse, tells us,—

"The health of Mr. Watt had improved with his years; and his intellectual faculties retained all their vigour to the last. At one time our associate imagined that they were declining, and, in keeping with the seal he had adopted (an eye surrounded with the word *observe*), he determined to satisfy his doubts by making observations on himself; and, accordingly, when upwards of seventy years of age, he determined to select some kind of study on which he might try his powers, and for a time was in despair, because he could find no subject that was new to him. At length he thought upon the Anglo-Saxon tongue, which is a difficult language; and immediately it became the subject of the desired experiment, when the facility with which he mastered it, soon convinced him there was no ground for his apprehensions. During the last few months of his life, Mr. Watt was engaged in the construction of a machine intended to copy rapidly, and with mathematical precision, pieces of statuary and sculpture of all dimensions. This machine, of which it is to be hoped that the arts will not be deprived, must be nearly completed. Many of its productions, upon the whole very satisfactory, are now to be seen in various private collections, both of Scotland and England. The illustrious engineer presented them to amateurs somewhat facetiously, as the first attempts of a young artist entering upon the eighty-third year of his age. Of that eighty-third year, our associate was not permitted to see the end."

population increases with general prosperity, and rapidly diminishes in times of wretchedness." Upon which our annotator observes, "To this general rule Ireland is an exception; the cause of this, however, is well known." We want the Q.E.D. to this?—Ed. L. G.

He died as he had lived,—a death which every good man might pray to die, full of years and honour,—respected, beloved, pious, and resigned; and a memory to bequeath to the latest posterity, of a life not surpassed in human usefulness and greatness of results by that of any individual who had ever existed.

The Triumph of Drake; or, the Dawn of England's Naval Power. A Poem. By R. Grymbald Bigsby, D.C.L., F.R.S., F.S.A., &c. 8vo. pp. 80. London, 1839. Hamilton, Adams, and Co.; Orr and Co.; Tilt. Nottingham, Allen.

In the *Literary Gazette* of the 10th of June, 1837, we gave an account of the Astrolabe of the gallant Sir Francis Drake deposited in Greenwich Hospital by the writer of this poem, into whose family the interesting relic had passed by intermarriage with the noble house of Stanhope (Chesterfield). To this account, which was widely copied into the public journals of the time, we beg to refer our readers for the subject of this poetical effusion. In it the descriptions of Drake and his voyages, and of his mistress Queen Elizabeth, with the pagantry and splendours of her court, are vividly painted. We quote a passage in proof of this, and as a fair example of the whole. It paints Drake's triumphant return and reception by his sovereign:—

"Dark was the warrior's veteran cheek,—his stern, majestic eye
Of many a stormy fight discoursed—of many a tempest
Yet in his lofty mien ye read a frank and generous mood,
A love of danger more than strife—of mercy more than blood!
A doublet of pale yellow silk, with pearl-white satin
slashed,
O'er which bright gems and silver lace their mingled
radiance flashed,
With trunk and hose of like fair hues, his manly figure
graced
A diamond-hilted dagger gleamed resplendent in his
Of azure velvet laid with gold, his cloak superbly shone,
And dazzling plumes of snowy light adorned his hat's
dark dome;
His ample beard swept o'er a ruff which princely taste
might choose;
Each glove was brodered o'er with pearls,—gemmed roses
deck'd his shoes.
From a broad chain, that round his neck its massive links
entwined,
His astrolabe, of peerless worth, with conscious pride re-
clined;—
Of ruddy gold, with sculptures quaint, by Collet's rare
burin wrought,
Presenting hieroglyphic signs, with mystic counsel fraught,
It seemed some potent talisman, by favouring gunt placed,
To guard that hero's sacred form on the ocean's storm-
cloud waste!
And oft, indeed, its warning voice had bid rude danger
flee;
And guided his adventurous path o'er many a trackless
sea."

MISCELLANEOUS.

Little Annie and her Sisters. By E. W. H. 32mo. pp. 98. London, 1839. Masters.

THE production of a pure-minded and accomplished woman, this sweet little tome is a fit offering for the young. The narrative respecting Viscountess Cremorne, the granddaughter of William Penn, and that referring to Penn himself, are fine specimens of simple yet elegant diction. The account of Windsor Castle, too, is very pretty. The work is quite a *bijou*, and is dedicated to the Honourable Georgiana Gore—a lady worthy of the tribute.

The Collected Works of Sir Humphry Davy, Bart. Edited by his Brother. 8vo. pp. 466. Vol. II. London, 1839. Smith, Elder, and Co.

THIS work is carried on with great spirit; the present volume contains the whole of Sir Humphry's miscellaneous papers between the years 1789 and 1805, as well as an introductory lecture on chemistry, and skeletons of two lectures on chemical philosophy. The editor's

annotations are few in number, but generally very interesting.

A Practical Treatise on Accounts. By Isaac Preston Cory. Second Edition. 8vo. pp. 370. London, 1839. Pickering.

THAT Mr. Cory's valuable essays are justly appreciated, is proved by the short period that has elapsed since the publication of the first edition of this able work.

The Faust of Goethe. Part the First. Translated into English Rhyme, by the Hon. Robert Talbot. Second Edition, revised and much corrected, with the German Text on alternate pages, and additional Notes. 8vo. pp. 569. London, 1839. Wacey.

MR. TALBOT has, in the contest for best translation, taken the bull by the horns;—on one side is the German, on the other the English, so that every page offers the *experimentum crucis* to the linguist and the poet. So much has been said and written about Goethe, that we confess we are tired of it. Not only have his excellences been dwelt upon to a most fatiguing extent, but his extravagances, his faults, and his very nonsense and trash, have been commented upon till we are sick of seeing how much folly can be wasted on foolishness. Mr. Talbot has judiciously saved us from the drivel; and if we express our opinion that the present translation of *Faust* is the most correct and satisfactory that has yet appeared, we shall have done enough to refer the admirers of that extraordinary and unequalled production to a volume which contains so capital an English version of it.

The Life-Book of a Labourer. By a Working Clergyman. 16mo. pp. 350. London, 1839. Smith, Elder, and Co.

A SERIES of simple and impressive sketches, written by a country clergyman in his leisure hours; and, if it be indeed his life-book, his leisure hours have been very few. The sketches number but twenty-two.

Lewis Glyn Cothi's Works. Part II. 8vo. London, 1839.

THIS publication proceeds under the auspices of the London Cymmrodorion, or Royal Cambrian Institution, and gives us the poems of Lewis Glyn Cothi, a Welsh bard, and strongly attached to the house of Tudor, who flourished in the fifteenth century. They are enriched with historical and biographical annotations, and prefaced by a sketch of the wars of the rival roses. A glossary adds to the intelligibility and value of these compositions, which afford curious instances of the arts of versification and construction in the poetry of that period, as well as some interesting local information respecting the family and its connexions that so long thereafter illustrated the throne and nobility of England.

The Pulpit. Vol. XXXV. (London, Sherwood and Co.)—The sermons published in this volume are selected with the same judgment and good taste which have characterized the previous portions of this well-conducted periodical.

The History of Rome, by the Rev. W. M. Hetherington, M.A., from the "Encyclopædia Britannica." (Edinburgh, Black.)—A reprint, in a cheap form, of Mr. Hetherington's abridgement; for that can hardly be dignified by the name of history which is contained in an essay in an encyclopædia.

Essays on Government. 8vo. pp. 246. (London, Edinham Wilson.)—Very Radical, and too political for our pages.

Economical Cookery for Young Housekeepers, &c. &c., by a Lady, fourth edition, 18mo. pp. 136. (London, Harvey and Darton.)—The fourth edition! These words prove the utility of this little cookery-book.

The Student's Manual, &c., second thousand, 12mo. pp. 221. (London, Simpkin, Marshall, and Co.; Lancaster, L. and R. Willan.)—A reprint of Mr. Todd's popular American work, which has reached a seventh edition across the Atlantic, and will be a standard work with us.

The Theory, Practice, and Architecture of Bridges. Parts III. and IV. (London, Weale.)—We spoke in high terms of the first two parts of this useful work; it is continued in the same commendable spirit in which it was commenced. *New Pocket Dictionary of the Italian, French, and English Languages,* by S. E. Petroni and J. Davenport. 2 vols. 18mo. (London, Daltou and Co.)—This is one of, if not the very best arranged dictionary, we have met with for some time. It is highly creditable to the abilities and perseverance of Messrs. Petroni and Davenport; and we cordially recommend it.

ORIGINAL CORRESPONDENCE.

To the Editor of the *Literary Gazette*.

Motagua, 9th March, 1839.

DEAR SIR,—It being through the medium of your valuable periodical that I first communicated to the world my observations on the ruined cities of Palenque and Copan (see *Literary Gazette*, Nos. 769 and 965), I have the pleasure of addressing you the following few remarks on these remarkable remains.

By a rather extraordinary coincidence I received, last Monday, No. 35 of the "Foreign Quarterly Review," in which I see both you and I are attacked in a silly manner by the editor, from he himself having imagined that I had assumed to be the first discoverer of Palenque.* The fact is, that when I examined those ruins I had no knowledge of the publications of my predecessors, whom I now find to have been Captains Del Rio and Dupailx. With respect to Copan, the only account of the place published before mine is that by the Rev. Domingo Juarros, who never visited the spot, and whose description is moreover entirely fabulous. With respect to these ruins, I verily believe myself to be the first white man that has ever visited them, since the commencement of the preceding century, and they certainly never yet have been noticed by any writer.

Reverting to the learned reviewer of the "Foreign Quarterly," casting aside facts and discarding common sense, he erects an hypothesis that our Tulecas were descended from the Canaanites; and in the face of my assertion, written on the spot, that the Tulecas were not physically dissimilar from the present Indians of Central America, whose physiognomy is identical with that sculptured on the monuments of Palenque; he avers them to be a people as extraordinary as if they appertained to another planet. I will agree with him so far, as that neither the colour of their skin, their hair, features, nor form, at all resemble the inhabitants of the remote Levant: and what a truly ridiculous idea, *primâ facie*, that of tracing an American people from the bottom of the Mediterranean!

The reviewer has not formed to himself any correct notion of the architecture of Palenque, and his assertion that the tower in the court of the palace may have been employed as a place of sepulture is preposterous. He quotes my facts, almost my words, and distorts them to his own purposes.

Again, page 251, the reviewer contradicts all his own previous theories, and even asserts that Palenque was not Tuleca, but its inhabitants consisted generally of Hindoos!! His account of Mr. Waldeck's travels is really laughable, stating that that gentleman was

* As a proof of my never pretending to be the original discoverer, I cite the following passages of my letter from the ruins of Palenque (of nearly the same date as that to the *Literary Gazette*), addressed to the Société de Géographie de Paris, and published in the bulletin of that Society. "Les Espagnols fondèrent premièrement le village moderne de Palenque parmi ces ruines, mais ils changèrent l'emplacement, il y a à peu près d'un siècle, a deux lieues d'ici dans la plaine." "Le peu de curiosité des habitants de l'entour fait que ces ruines sont peu explorées." I must, however, remark, that as the ruins of Palenque are buried in a thick forest, the explorer has to search for the edifice with difficulty, and each monument he finds is a discovery, as far as regards himself.

obliged to leave the ruins of Palenque from hunger, though known to be but six miles from the modern village of the same name; and from whence the investigator's breakfast and dinner can be brought almost hot, and at the hour desired. He adds a description of Mr. Waldeck's travels in the mountains of Yucatan, when every geographical tyro knows that peninsula to have neither hill nor river.

Mr. Waldeck, a gentleman of splendid talents, and who was the preceptor of my childhood, must have been much annoyed at the ignorance of his reviewer.

Further investigations still more strongly impress me with the general correctness of my system, in relation to the ancient population and civilisation of America, as developed in my last letter to you, of 19th June, 1834, from Copan.

The city of Motagua, as well as that of Copan, was within the territory of the Chorti kingdom: it stands in latitude 15° 17' N., and longitude 88° 57' W. from Greenwich; within a mile of the left bank of the river of the same name, and about 25 leagues below the junction of the Copan.

Motagua, like Palenque, is not mentioned by the historians of the Spanish conquest. I cannot, at present, determine whether it was destroyed previous to the arrival of the Europeans, but I should rather surmise not: its obelisks and altars, being superior and more remarkable than those of Copan, seem to indicate it as the capital of the Chortis; and yet, if it had been such at the period of the conquest, assuredly its capture would have been noticed by the Spanish writers. Perhaps Motagua was the first capital founded by the Tultecas on their establishment of the Chorti state, and the seat of government was subsequently removed to Copan, on account of the latter's less warm and more salubrious climate.

The architecture of Motagua is very similar to that of Copan, except being on a more gigantic scale. The identity of the hieroglyphics of Palenque, Copan, and Motagua, lead me to suppose that the inscriptions were entirely in one language (the Tulteca), already become dead at the time of cutting, and superseded at the former place by the Maya, and at the two latter by the Chorti. I transcribe a few words of these two tongues:—

Maya.	Chorti.	English.
Chup	irik	woman
Xib	unlik	man
Na	tu	mother
Lium	taia	father
Vixnehen	unen	daughter
Mehen	unen	son
Sucin	uainin	elder brother
Visin	tigere	younger brother
Zimlache	chal	tapir
Cai	alique	fish
Hanal	unehi	to eat
Ukul	inchamai	to drink
Cimil	te	to die
Che	otot	tree
Na	tokar	house
Mullal		cloud
Hol		hole
	copante	bridge.

In the orthography of the indigenous languages of Central America, *x* has the sound of the English *sh*.

The principal building of Motagua, now fallen, and merely a colossal mound of stone, is of a rectangular form, and covers an immense space of ground: some of the blocks, of a brick shape, are a yard long, and so in proportion. This edifice, however, never rose to the height of the temple of Copan.

Close to the bottom steps of this principal building, and on the side furthest from the river, are two stone altars, each of a single piece; the largest measures two yards and a

half every way. On the side of the altar facing the building, and near its top, a cross is worked in basso-relievo; on the opposite side of the stone is a small face; the rest of the altar is covered with hieroglyphics; and, in one spot, eight small tablets of phonetic characters are enclosed in an oval.

The smaller and more eastern altar bears on its face, fronting the edifice, a gigantic head, the temples of which are bound by four fillets, divided into small compartments of hieroglyphics; the rest of the stone is crumbling to bits, and a gigantic masica, or bread-nut tree, grows on its top, encircling the altar with its powerful roots. Near here I observed an immense stone turtle.

The whole of the ruins are now enclosed in a lofty and thick wood, the most remarkable trees of which are mahogany, cedar, bread-nut (on the leaves and berries of which horses, cattle, and hogs, are commonly fed), anona, and cacao, or chocolate trees. Amidst the labyrinth of the forest, and taking the direction of the various mounds of stone, both squared and in a rough state, which indicate the position of these ancient buildings, I conceive I can trace the streets, though no such regular communications existed in Palenque or Copan. The site of this city was on a perfect level, as was the greater part of Copan.

The chief square of Motagua is situated at some distance towards the east of the principal building already mentioned, and is surrounded by six handsome obelisks still standing, the loftiest of which is nearly seven yards high; the taller obelisks are smaller at the top than at the bottom; they all bear in basso-relievo a gigantic figure on two opposite fronts; and the other two sides contain squares of hieroglyphics, the whole very neatly worked: the figures stand square to the front, their ears monstrously large, great beads hang from some of the noses, one arm generally hid by the drapery, and a fan or flapper in the hand; the clothing is highly ornamented, and long trousers are distinguishable on many figures. The whole square was nearly surrounded by edifices; towards its centre, and opposite one of the obelisks, is an immense circular stone, containing a front face and numerous hieroglyphics in basso-relievo.

Many other obelisks are found fallen throughout the ruins; they all still bear evidence of having been painted red.

Stone, similar to that used in these works, is not to be found at a nearer distance than the Palmilla, more than three leagues higher up the Motagua; the river not having a sufficient body of water to support the larger masses brought here, they must have been rolled to this spot with prodigious labour. Possibly the Tultecas used the tapir as a beast of draught and burden. Though the squared and wrought stone in this city, like that of Copan, is of a soft species, yet there is a great difficulty in ascertaining with what instruments it was worked: might it have been with chaya or other harder stone, or implements of copper or other metal? certainly the Tultecas had not the use of iron. Hard stones, such as are found in or near the river, and in an unworked state, were abundantly employed in these buildings.

Scattered ruins are found along the banks of the Motagua, and its affluents, below this spot. From hence to the sea, the Motagua flows through an uninhabited forest, strikingly contrasted with the evidences of its former crowded population. I have calculated, on various data, that at the period of Columbus's visit to Central America, the country contained from

ten to fifteen millions of Indians, whose numbers have been rapidly decreasing to the present day, that we have not fully two millions of inhabitants of all classes; nor do I believe that the white, black, or mixed population, have increased within the last two hundred years.

Such facts, in a country so fertile and salubrious as Central America, and where the springs of life are never checked by Winter, oblige me to adopt a system completely opposed to Malthus; and incline me to believe that in the greater number of cases population rather increases in the ratio of the difficulty of existence, than the reverse. This remarkable contrast in the progress of population between us and our neighbours of the northern parts of America, does not depend on the difference of our races: the English themselves, who were formerly settled in considerable numbers along our northern continental shores, from Becaroto to Belize (Honduras), are now reduced to 300 white persons at the latter place; while the British settlements in the bay of Campechy have entirely disappeared.

I have taken upon myself to call this ruined city "Motagua," as most probably it bore that denomination, and gave it to the neighbouring river. Except towards some of their sources, the affluents and main canal of the Motagua flow within the modern state of Guatemala, one of the six members of the federation of Central America.—Dear Sir, your obedient, humble servant,
JUAN GALINDO.

ARTS AND SCIENCES. THE BRITISH ASSOCIATION.

[Sixth notice.]
SATURDAY.

FOUR Sections met at an early hour this day, to read and discuss the papers which had passed the Committees, in order to complete the sectional business, previously to the assembling of the General Committee and the general closing Meeting. The proceedings of the two latter we have anticipated in our former Numbers (1181 and 1183).

The Sections and papers announced were:—

SECTION B.—Chemistry and Mineralogy.

Professor Reich, 'Researches on the Electrical Currents in Metalliferous Veins, made in the Mine Himmelsfurt near Freiberg.'

Mr. Kexley, 'On the Relation of Atoms in Organic Compounds.'

Dr. Schaffhausen, of Munich, 'On the Relative Combinations of the Constituents of Cast Iron, Steel, and Malleable Iron.'

SECTION C.—Geology. At 10 A.M. Professor Owen's 'Report on Enaliosauria.'

SECTION D.—Zoology and Botany.

Mr. Babington, 'On some New British Plants.'

Mr. Dawson, 'On Alpaca Wool.'

Mr. Lancaster, 'On White Bees.'

Mr. Clarke, 'On the Structure of Insects.'

SECTION E.—Medical Science.

Mr. Namyth, 'On the Epithelium of the Mouth.'

Mr. Hodgson, 'On Calculus in the Female.'

Dr. Logan, 'On the Nerves of Sense.'

Mr. Jeffreys, 'On the Philosophical Principles and Medical Action of the Respirator.'

Professor Reich's experiments were similar to those of Mr. Fox and Mr. Hewwood in Cornwall (from the latter of whom we look for the most important information on the subject, at the Glasgow Meeting next year); and the electrical current in mines of copper or lead was subjected to tests at Himmelsfurt. The two points to be connected were wrought to a fresh surface, and a copper disc, three inches wide, pressed tightly upon them by means of a wooden block. Upon this plate the bare end of a copper wire, the rest being spun over with silk, was held by a clamp, and a long wire was reeled off, till it came into contact with the

second point, where Schweigger's delicate multiplier ascertained the effect of the current as follows:—"Two ore points, separated by a non-metalliferous mass, a cross vein, or a vein wrought out, give rise to an electric current in the metallic wire connecting them. Two ore points, in uninterrupted metallic connexion with each other, induce no electrical current through a wire connecting them. If only one disc be connected with an ore point, and the other with the timbering, or be held in the hand, there is no effect produced on the multiplier. If an ore point be connected with masses of ore already won, a current sometimes manifests itself, and sometimes there is none. When an ore point is connected with non-metalliferous rock, frequently no current takes place; frequently, however, a feeble current occurs in the connecting wire. (This result does not agree with that of Fox and Henwood, who never detected current, but Professor Reich performed the experiment eighteen times, and always obtained the same result.) With respect to the cause of the electrical currents, observed in metalliferous veins, three different opinions have been reached. They have been ascribed, 1. To general electric currents at the earth's surface, produced either entirely, or in part, by the earth's magnetism; 2. To hydro-electric, and 3. To thermo-electric, actions of the various metallic components of the vein. The first hypothesis, according to Reich, is refuted by the independence of the direction of the currents on their position relatively to the earth's axis. Thermo-magnetism he holds to be incapable of producing such strong currents: as the strongest currents he observed exactly where the two points were separated by a non-metallic conductor; and he concludes, that there remains only the hydro-electric action of the metallic components of the vein to account for the phenomena."

Mr. Exley's paper gave an account of his continued experiments to determine the truth of his theory of organic compounds. He holds that there are three kinds of atoms—viz. tenacious atoms of common matter, of which fifty-five different sorts have been chemically ascertained; electrical atoms, observed in electrical phenomena, with less absolute forces, but larger forces of repulsion than the tenacious atoms; and ethereal atoms, with forces still more diminished, and with spheres of repulsion still more enlarged.

Dr. Schaufaentli's experiments on iron went to prove that the purest carbon, at the highest temperature, retained hydrogen and occasionally oxygen, and that what was considered to be pure iron was, in reality, approaching to a carburet. He described a method of obtaining graphite by running puddling slag in a fluid state, or cakes of iron and manganese, over fragments of pit coal, which, on being cooled, left the graphite in thin layers on the surface of the slag. The molecules of iron, according to these experiments, are arranged in the gray cast-iron the most regular form, having all their surfaces in one plane; the most equal distribution of molecules appeared in hardened steel; cooling in fascicular aggregation in soft steel, being loose and longitudinally arranged in wrought iron. Pure iron could not be welded; welding power depends on its alloy with the purest of silicon, and the good and various qualities of all the wrought irons depended on alloys of pure iron with other metallic elements, and the presence of most of the electro-negative metals had been generally overlooked in the existing analysis of iron. The presence of arsenic in Swedish steel, when forged red hot, could be ascertained by its smell, as well as in

the Low Moor iron. The usual solution of iron under analysis, in order to separate those metals from the iron, must be, for the necessary correction, divided into two parts—one to be treated with a current of sulphuretted hydrogen, the other part dropped into sulphurate of ammonia, and carefully digested. A small quantity of silica was more difficult to separate from a large quantity of iron than generally seemed to be believed; and the real amount of carbon could only be ascertained by Berzelius's method of burning iron in a current of oxygen, or mixed with chlorate of potash and chromate of lead in a glass tube, used first by Berzelius for analysis of organic bodies. The author maintained that steel was an entirely mechanical production of the forge hammer, which tore the molecules of certain species of white cast-iron out of their original position, into which the forces of attraction, in respect to the centres, as well as to the position of the molecules, had arranged those molecules by the slow action of heat. Steel, as it came out of the converting furnace or the crucible, was nothing more or less than white cast-iron, of which Indian steel, called Wootz, was the fairest specimen. The author finally gave an analysis of two specimens of cast-iron and one of steel. The first specimen was French gray iron, from Vienne, department de l'Aisne, obtained from a mixture of pea-iron-ore with red hematite, by means of coal from Rive de Gier and heated air, specific gravity, 6.898. The second iron was Welsh iron, from the tin-plate manufactory of the Maesteg Iron-works, near Neath, in South Wales, obtained from a mixture of clay iron-stone and Cumberland red ore, by means of coke and heated air. It was silvery white, without signs of crystallisation: specific gravity, 7.467. The third specimen was a fragment of a razor forged in the author's presence, in the workshop of Mr. Rodgers, of Sheffield, of the specific gravity of 7.92.

	Gray French Iron.	White Welsh Iron.	Steel.
Silicon	4.96430	1.00867	0.62043
Aluminum	1.00738	0.08371	0.00000
Manganese	0.78130	traces.	1.22000
Arsenic	0.00000	0.00000	0.23400

	100.00000	100.00000	100.00000

Several gentlemen, among whom were some connected with the iron trade, expressed a high sense of the value of this communication; from which it appeared that the peculiarities of Swedish iron, in a great degree, depended on the presence of arsenic, and those of Russian iron on the presence of phosphorus.

Of Professor Owen's interesting paper in Section C, we have been unable to procure a satisfactory analysis; but as the results of his elaborate investigations are, we believe, about to be published in a detailed form, we shall then have it in our power to give them our more clear attention.

In Section D, Mr. Babington's communication related to a score of new additions to our native flora, chiefly in Cornwall; Mr. Lankester described specimens of white beetle, differing from the fish figured by Mr. Yarrell; and a letter from Mr. Garner described the luminosity of the *beroe pileus* as being produced by the *oilia* under peculiar circumstances.

Mr. Danson exhibited samples of Alpaca wool, woven into stuff resembling silk, and of a beautiful black colour; and strongly recommended the introduction of the animal into this country for the sake of its fleece. There are five species of the llama in Peru, among which the Alpaca bears this fine wool of from six to twelve inches in length; others have short, coarse hair, and the Vienna a fine short wool. That they would flourish in England is not to be doubted, for Lord Derby has bred them at Knowsley; and even so far north as Oban, in Argyshire, they are to be seen browsing on the hills in a perfect condition of health and activity. (We have ourselves seen them there, and noble looking creatures they are.) Of the value of their fleece in manufactures there can be no question, as more than a million of pounds, at from 2s. to 2s. 6d. per pound, has been already imported for that purpose; and the yarn spun from it is sold in France, where it enters into competition with silk, at from 6s. to 12s. 6d. per pound. Mr. Vigors stated that the animals had been domesticated in the Zoological Gardens; and though they were subject to disease and brought forth their young at a bad season, Christmas, they might be advantageously acclimated in this country.

Professor Jones, as one of the committee appointed to observe the habits of salmon, exhibited an ingenious apparatus constructed for that purpose; and expressed a hope that, by attending to this inquiry, means might be devised to restore our fisheries to their former abundance. A letter from Mr. Relph, a salmon-fisher of fifty years' experience, stated the following fact. In May 1819, seventeen hundred fry were marked, by cutting off the dead fin above the tail, at Kingsgate, near Carlisle, and in the July and August ensuing a number of whittings or herlings, thus marked, were taken on their passage from the sea. In September 1821, a grilse was caught, seven pounds six ounces in weight; and also several salmon, weighing from ten to sixteen pounds. The grilse had grown at the rate of an ounce per week.

STATISTICS.

We annex a statement relating to the 'Statistics of the Mining Districts of the North of England,' from which a general idea may be formed respecting their condition and working.

"*Queries relative to the Ventilation, to the Quantity of Water in the Mines, and to the Steam Engines employed in them.—Answers from the Hetton Colliery.*"

Ventilation, &c.—How is the mine ventilated?—By coursing the air, and by rarefaction by furnaces.

Length of air-courses?—From 3 to 112 miles.

Average velocity of air in the courses, and how estimated?—41 feet per second, taken by exploding a small quantity of gunpowder and timing the smoke. In the main roads is 12 feet per second.

Average cost of maintaining the air-courses per mile?—10l. 10s. per mile per annum.

Average temperature of the air at the bottom of the shaft, and in the furthest workings?—Bottom of shaft, 65°; furthest workings, 70°.

Quantity of fire or choke damp?—Considerable.

Kind of lamp in use—why this lamp?—Davy's lamp—preferred, being considered perfectly safe.

Are you aware, from personal observation, of any circumstances in which a Davy lamp, in good order, has proved dangerous in the hands of a careful miner?—No—if properly used.

Average original cost of lamps, and expense of upholding them—expense of oil (to the workman)?—Original cost 7s. 6d. each lamp—expense of upholding 1s. 9d. per hundred per day, or for 800 lamps about 300l. per annum.

—The Colliery owners find the oil for the workmen.

Capital invested in lamps?—3032.

Springs and Feeders of Water.—In sinking, were feeders met with at different depths—were they copious or otherwise—and what was the quality of the water? (Impregnated with salt, soda, iron, alum, &c.)—Yes; in the first sinking the principal feeder was 2000 gallons—in the second, 1000 gallons—and in the third, 1800 gallons per minute—mostly fresh water; when impregnated at all it is with iron.

Is the water applied to any economical purpose—in salt

works, in feeding canals, driving machinery, &c. &c.—In driving machinery.

Does the occurrence of such springs render any special precautions necessary?—Tubbing; all the shaft feeders are tubbed off.

Is tubbing in use; if not, why?—Yes.

Is the supply of water in the mine constant or periodical—does it vary at different times of the day, or at different seasons of the year? Does it appear on the whole to increase, or the contrary?—Constant—stationary.

Do the workings appear to affect the general drainage of the springs on the surface?—Not at this colliery.

Is the mine drained by engines or levels, or both?—By engines only.

If any accidents have happened from inundations, can you give the particulars?—None have happened.

Depth from which the water is raised?—160 fathoms.

Forcing or lifting pumps?—Lifting.

Average quantity of water delivered per minute?—294 gallons.

Pounds lifted one foot high per ton of coal?—109,515,010 lbs.

Winning Engineer.—Depth from which the coal is raised?—175 fathoms.

Weight of the corf, loaded and empty?—Least corf and load, 153 cwt.—3 corves, 31—greatest, 3 loaded. Tub and load, 251 cwt.—tub alone, 74 cwt.

Time of drawing?—Least weight, 1 minute—greatest weight, 90 seconds.

Velocity?—1080 feet (one-fifth of a mile) and 700 feet per minute.

Average number of corves raised 100 fathoms in 24 hours?—5040.

Pounds lifted one foot high per ton of coal?—40,642,500 lbs.

Cooling from radiation—how prevented—and with what?—Not provided against.

Boilers.—Steam pressure in the boilers—least per square inch on the safety valve?—Condensing engine boilers 10 lbs. per square inch, and non-condensing 35.

'Returns of the Educational Statistics of Birmingham, by a Local Committee,' were read by Mr. Clarke. 1. King Edward's School.—The number of boys educated is 444. Branch schools are fast coming into operation in various parts of the borough, for giving the children in the lower grades of the middle class a sound English education. The present income is about 4500*l.*; but in three years it will be doubled by the falling in of leases. The Blue Coat School, for the education of children belonging to the Established Church.—Income, 2715*l.* annually. Boys educated, 143; girls, 63; total, 206. Protestant Dissenting School, in Park Street, for girls only.—Income, 615*l.* 6*s.* 9*d.* Girls educated, 46. Products of labour, 7*l.* 5*s.* 1*d.* School for the Deaf and Dumb.—The present numbers are, boys, 22; girls, 25; total, 47: of these 37 were born deaf and dumb, 10 became so at a very early age from illness. In five cases, other members of the same family were similarly afflicted. To this report were appended some pathological and physiological remarks, from which it appeared that the imperfection of the senses most frequently occurs in the offspring of marriages between first cousins and other near relations. Literary and Scientific Institutions.—The Philosophical contains about 400; the Mechanics, 450; and the Athenaeum, 300 members. To this paper were added an account of Lynch's Trust, a charity for aged females; and an account of the number of inquests held during fourteen years. The average of inquests during the first seven years is 115, and during the last, only 170; though the population has nearly doubled, and the use of dangerous machinery has increased in a still greater proportion. The average of accidents from machinery, in the first period, was 26; and in the second, 37.

'Suggestions in favour of the Systematic Collection of the Statistics of Agriculture,' by G. R. Porter, Esq. If there be any subject of greater importance than another, that subject is the adequate supply of food for the people; and yet this is a subject that, in England,

which prides itself on being the country of practical men, has never hitherto been considered to any useful or practical end. The amount of ignorance is so great, that to this day the public does not possess any authentic document, from which to learn even the quantity of land under cultivation in any county of England. To obtain the requisite data, it would be necessary to know, not only the extent of cultivated and improvable land within the kingdom, but also the various uses to which it is applied, and the proportion allotted to each branch of cultivation. We should have then to inform ourselves concerning the productiveness of the soil; the proportion of its produce required for reproduction; the number of each of the various kinds of animals reared and maintained; the rate of their increase; the proportion of each required for the adequate reproduction of its own kind; the number applicable to the sustenance of the people; the number of skins furnished for purposes of manufacture; the number of fleeces shorn; with various other particulars not necessary to enumerate. Neither would it be sufficient that these points should be ascertained once for all. We require to know, not only whether the land is capable, under ordinary circumstances, of supplying the absolute wants of the population, but also whether or not the actual produce of each year, as it occurs, is sufficient to that end; and if it be not sufficient, then to ascertain the proportion in which it falls short of sufficiency. For these purposes, it is indispensable to have an organised machinery in constant action. The importance of accurately knowing the provision available for the sustenance of the people, is not less than that of knowing the yearly produce of various articles of commerce which are used as accessories in manufacturing processes. The condition of the crop of indigo in Bengal is accurately communicated to the merchants of London at the earliest moment; and the information thus given has, through its influence upon the market price, an immediate effect in checking or promoting consumption. The like result attends on the collection of information concerning the growth of hops in this country; the extent of land devoted to the cultivation of that article being known through the records of the Excise Office, the department which is intrusted with the collection of the hop duty. In Belgium and Holland, every kind of information connected with agriculture is obtained with the nicest accuracy. This duty is performed under the superintendence of a body of gentlemen, usually proprietors of estates, residing in different places, and who are elected in the respective provinces for purposes of local government, by the same persons who elect the members of the representative chambers. Having the requisite amount of local knowledge bearing upon the condition and circumstances of the several communes in their respective districts, they are able to prevent or to detect errors in the returns, which are made at certain periods according to forms prescribed for the purpose, by the farmers or occupiers of land. The result is every year the subject of a detailed report, which is printed under the authority of the governor of the province. A considerable amount of information on the subject of agricultural statistics is also collected in different parts of France. In the department of the Eure, a complete account of its cultivation had been published by the prefect; from which it appeared that the produce of wheat throughout the department is not equal, on the average, to quite 18½ bushels to the English acre, and that the return obtained from the

seed sown is not greater than sevenfold: results which may be pronounced by no means equal to those obtained by English farmers. The produce of barley, not much of which is grown in the department, does not exceed 17 bushels per acre; of oats, not quite 30½ bushels per acre are obtained. The employment of the machinery necessary for the effective performance of the labour suggested must, in this kingdom, be attended by considerable expense. It cannot be expected that qualified persons would be willing to quit, or to neglect, other and perhaps gainful employments, for this purpose, except on the condition of being paid. It is probable that, in all parts of the country, gentlemen might be found, every way qualified, who would be willing to examine and control the returns when obtained; but those to whom the first task of collection is assigned must be paid. The number of parishes in the United Kingdom exceeds 14,000, and for each one of these, with the exception of town parishes, a paid agent must be employed. Then, too, the whole body of information, when collected, must be put into form by some competent person, who would also require payment for his service. To provide for the complete and correct performance of the work, might thus require an annual outlay of from 20,000*l.* to 30,000*l.*—a large sum, unquestionably; and it is necessary, therefore, to mention some of the benefits which would flow from the possession of accurate information upon this subject. It is now well known, that the harvest of 1837 was deficient to so great a degree, that before the produce of 1838 was harvested, the great superabundance of the two preceding years was all consumed, and the stock of grain throughout the kingdom, whether in the hands of farmers or dealers, was more nearly exhausted than at any other period in modern times; so that if we could not have had recourse to foreign wheat then warehoused in our ports, we must have suffered most severely before the produce of 1838 could have been brought to market. So entirely, however, was the public misinformed on the subject, that instead of a reasonable advance in price sufficient to give warning of the fact, and so to check the consumption, which, as regards the most costly grain (wheat), had, it is well known, long been going on with unwearied profusion, the markets fell progressively during the months of August, September, and October, 1837, from 6*s.* 1*d.* to 5*s.* 1*d.* per quarter; and it was not until the middle of the following May that the weekly average was again as high as it had been immediately before the harvest of 1837. By the third week in August 1838, the weekly average price had advanced beyond the rate at which foreign wheat is admitted to consumption, on payment of the nominal duty of one shilling per quarter. It would not be possible to calculate, with any tolerable accuracy, the loss which this country sustained through the want of information thus shown to have prevailed with regard to only one year's operations; but we can have no hesitation in believing that its amount must have been at least sufficient, if employed at interest, to provide in perpetuity for every expense that could accompany the most completely organised machinery for collecting agricultural statistics throughout the United Kingdom. If the very considerable purchases of foreign wheat which were suddenly made during the autumn of 1838, in almost every market of Europe, occasioning the prices to be driven up to an exorbitant height, had been made progressively and quietly, without exciting a spirit of speculation, no one

* This unit is large, the Cornish reports have for the unit an imperial bushel averaging 94 lbs. of Welsh coal. Captain Teague reported his engines with 112 lbs. or 1 cwt. for the unit.—This latter unit may be adopted instead of the ton, if preferred.

can doubt that the saving would have been sufficiently great to have borne out the assertion just hazarded. Whether the quality of suddenness given to the purchases made by us in foreign corn markets in the autumn of 1838, may not have occasioned an aggravation of the evil under which the money dealings of the country have since been suffering, is a question as to which different opinions may be entertained. It does not appear unreasonable to conceive that, in proportion as those purchases could have been made to approximate to the conditions of ordinary commercial dealings, so would the derangements which they were calculated to occasion have been diminished; or, to speak more correctly, they would not have been experienced. The gold which has left our shores, in payment for corn, will doubtless find its way back in exchange for goods, when time shall have admitted of the requisite adjustment. If time—that important ingredient in most human transactions—had been allowed to enter more largely at first into the conditions of our recent corn-trade, that adjustment would, to some extent at least, have accompanied its progress. Our corn-laws were intended, not as a mode of acquiring revenue, but wholly for regulation and protection. It may not, therefore, be right to insist very strongly on the sums which, under the circumstances just supposed, might have found their way to the Exchequer from this source in 1838, beyond what were actually collected. It may, however, be interesting to state, that if the average rate of duty received on the foreign wheat and wheat-flour brought into consumption in 1838, had been the same as was received on that admitted in 1837, the Exchequer would have benefited by no less a sum than 2,156,596*l.* beyond the money actually received; and one-fourth part of this sum, if employed at interest, would yield a revenue sufficient for making the requisite statistical inquiries concerning agriculture throughout the kingdom. It would be taking a very narrow view of the subject, to limit the advantage of knowledge concerning it to the amount of saving that might be effected under a recurrence of such circumstances as have attended the deficient harvests of 1837 and 1838. The natural, the necessary tendency of any systematic and comprehensive inquiry, such as might be made by public agents, acting under legislative sanction, would be to place the nation as far as possible, and for a long series of years, beyond the probability of scarcity. It is well known by every body who has made any extensive inquiries concerning the state of agriculture as a science, in various parts of the kingdom, that the improvements made in some countries have not been hitherto followed in others; and it has been stated, in illustration of this fact, “that if all England were cultivated as well as the counties of Northumberland and Lincoln, it would produce more than double the quantity of food that is now obtained.” To what can this be attributed, unless it be to the want of information, such as the public agents would collect in every county, and which could not fail to interest deeply every cultivator? Farmers have often been accused of an unwise preference for the plans and processes employed by their ancestors; and their pertinacity in this respect has been contrasted with the rapidity which accompanies the march of improvement in mechanical and manufacturing processes. The reason for such difference is obvious. Manufacturers residing in towns are brought necessarily and constantly into collision; new inventions are continually

brought under their notice, so that their results can be tested and judged with the greatest facility and accuracy. Practical agriculturists, on the contrary, live apart; they come together but rarely, and have not that degree of acquaintanceship, the one with the other, which leads them, even when they meet, to the interchange of professional experience; and if the result of a successful agricultural experiment should at any time reach their ears, they cannot be certain that all the circumstances connected with its prosecution have been faithfully detailed. The tendency of statistical inquiries, such as would be carried out by the means already described, would be in a great degree to remove the disadvantage under which the farmer now suffers. Authority, resting not upon a single experiment only, but upon the successful practice of hundreds of men placed in similar circumstances with himself, must have the authority of undoubted facts; and the farmer would be compelled to adopt whatever should come thus recommended, with an alacrity equal to that which we see exhibited by the manufacturer. It may, perhaps, be feared, that if the public should acquire a knowledge of any peculiar advantages, those by whom they are enjoyed would be exposed to have them invaded. The agriculturalist, in this country, what is called, a protected interest. Our cultivators, consequently, appear desirous of excluding inquiries which they think might have the effect of weakening their claim to the continuance of that protection. This fear is altogether chimerical. In Belgium, where the utmost publicity is given to every fact connected with the agriculture of the country, it has never been pretended that any improper advantage has been taken of that publicity. The knowledge which it appears to be so desirable to obtain with reference to the whole kingdom, is already easily procurable with regard to every individual farm, by any person whose interest may induce him to the task. The landlord, who is interested in extracting a due proportion of the produce of the farm under the name of rent, cannot find much difficulty in correctly estimating that produce. A like facility attends the operations of the tithing-proctor and of the parochial tax-gatherer. The knowledge is, in fact, already procurable by every one who can turn it to the disadvantage of the farmer; all that is wanted is to extend the information, so that the farmer himself may be placed in a condition to profit from its possession, and thus to add to the sum of the general prosperity.

Mr. W. R. Gregg read a paper ‘On the State of Education in Rutlandshire,’ from which it appeared, that in that country there is a church for every 400 inhabitants. There is no Roman Catholic population in the district; no place of worship or Sunday school connected with that class having been erected. It appeared that 2-7ths of the population belonged to various sects of Protestant Dissenters, the Wesleyans predominating; while the remaining 5-7ths belong to the Church. In Lancashire, the Dissenting schools predominated over those of the Church. The following is a comparison between the state of education in Rutlandshire and other districts:—

Sunday Schools.		Per cent.
Manchester and Salford	17	
Rutlandshire	16	
York	12	
Liverpool	6	
Day and Evening Schools.		
Manchester and Salford	10	
Rutlandshire	15	
York	17	
Liverpool	13	

A paper ‘On the Libraries of Hull,’ was also read.

Mr. Clarke read a paper ‘On the Commercial Statistics of Birmingham,’ prepared by a Local Committee. The Savings’ Bank report shewed the satisfactory progress of this institution. It was established in 1827, and at the close of that year 980 accounts had been opened, and 33 closed; 2337 deposits were made, to the amount of 10,612*l.*; the average of each deposit was 4*l.* 10*s.* 9*d.*, and of each account, 10*l.* 16*s.* 9*d.*, and the number of depositors, 935. At the close of 1838, 1897 accounts had been opened during that year, and 454 closed; 9136 deposits entered on the books, amounting to 47,362*l.*; the average of each deposit was 4*l.* 17*s.* 4*d.*, and of each account, 17*l.* 17*s.*, and the total number of depositors, 7446. The amount of silver marked at the Assay Office, from its establishment in 1774, has been 4,011,997 ounces; and the weight of gold marked from the year 1825, when an act was passed authorising the assaying of gold manufactures, has been 27,167 ounces. The total amount of duty received is 105,851*l.* A curious fact was mentioned in this return; 25,000 gold wedding rings were assayed and marked at this office in last year. The workhouse return was complete for nineteen years, and exhibited a classified report of the expenditure, with the average number of paupers, the proceeds of their labour, &c. The return of assessed taxes shewed the amount collected in each year from 1817, and exhibited a very satisfactory improvement in the state of the town. The total amount of taxes collected in 1816 was about 36,000*l.*; and the sum paid in 1838, if calculated at the same rate, would have been considerably more than 50,000*l.* The steam power employed in Birmingham is at the present time 3436 horses’ power, of which 2155 horses’ power is employed in the metal trades of the town. The number of steam-engines is 240, of which 65 are high pressure, and the remainder condensing engines. In the first thirty-five years after the introduction of steam power, only 42 engines were set to work; in the next fifteen years, 78 were erected; and in the last eight years, 120 have been established. The consumption of coal is estimated at 240 tons per day, and the number of persons employed at 5200 males, and 1762 females. The return of occupations comprised 791 members of a Providence Institution, who were divided among no less than 110 different branches of trade; thus demonstrating the division of labour to an extent far beyond the calculation of political economists. Of the whole number, 56 per cent were workers in the metals. The table of weekly wages shewed the result of an inquiry into 662 cases, of which 479 were taken without choice from the members of the Provident Institution mentioned in the last return. The averages were as follow:—For boys, 7 to 13 years of age, 3*s.* 1*d.*, and for girls, 2*s.* 4*d.* per week; from 14 to 20 years, 5*s.* 9*d.* for males, and 5*s.* 2*d.* for females; for men and women, 24*s.* 3*d.* and 8*s.* per week. Reasons were assigned for the belief that these averages might be taken as a near approximation to the average wages of Birmingham mechanics.

Professor Powell read a paper ‘On Academic Statistics, shewing the Proportion of Students in the University of Oxford who proceed on to Degrees.’

Mr. Tripp then read the ‘Report of the Committee appointed to inquire into the Condition of the Working Classes in the City of Bristol.’

“3028 houses were examined, containing 5961 families,

consisting of 30,717 persons; 5363 were boys, and 5493 girls. English, 5290; Irish, 501; Welsh, 170; Scotch, 15; French, 5; Italian, 6; Dutch, 5; German, 5; Prussian, 2; Swiss, 1; East and West Indian, 2; and American, 1; not ascertained, 48. Families having sufficient cupboards or shelves, 3658; having some, but deficient, 1421; without any, 679. Families having religious books (Bible and Prayer-Book only, or both), 3439; having other books or tracts, or parts of some, 947; not having any books or tracts (including two not ascertained), 1804. Families having prints of some kind on the walls, 3080; not having any, 2938; not ascertained, 13. Families clean and respectable, 3610; dirty and disreputable, 1095; in considerable distress, 690; condition not ascertained, 616. Heads of families depositors in savings' banks, or members of benefit societies or trade clubs, 940; not depositors, nor belonging to any benefit society, &c., 4073; not ascertained, 68. Heads of families who can read and write (more or less), 5122; who can only read, 2523. Total who can read, 7645; unable to read or write, 3204; not ascertained, 12. (Men, 4583; women, 5278.) Average rent paid by 1799 families, for one room unfurnished, 1s. 3d. per week; 4 families, for 1 room unfurnished, free; 342 families, for 2 rooms unfurnished, 1s. 11s. 4d. per week; 790 families, for 3 rooms unfurnished, 2s. 5s. 4d. per week; 639 families, for 1 room furnished, 2s. 10s. 4d. per week; 1156 families, for 2 rooms furnished, 3s. 10s. 4d. per week; 156 families, for houses (under 30s.), 9s. 9d. per annum; 59 families, for houses (30s. and above), 5s. 8d. per annum. Of the houses, the lowest rent was, per annum, 3s. Of the children, are healthy, 10,085; unhealthy (1-14th), 771. Children at school, not above 3 years of age, 180; from 3 to 14 years old, 3384; above 14 years old, 222. Children not at school, not above 3 years of age, 2294; from 3 to 14 years old, 2535; above 14 years old, 2391. Children stated by their parents to be able to read and write, 2010; able to read only, 3034; unable to read or write, under 7 years of age, 3603; above 7 years of age, 1308. Children able to repeat the Lord's Prayer, 6504; not able, or too young, 4352.

Religious Professions.—Church of England, 4547; Roman Catholics, 499; Methodists, 223; Dissenters (other), 560; Jews, 5; without any profession, 81; not ascertained, 47; heads of families, 5981.

Bodily Complaints.—Cripples, 1; spinal deformities and accidents, 24; paralytic, 81s. Vitus's dance, &c., 48; dumb, 6; blind, 13; idiots and insane, 91.

Small-Pox.—Natural pox, 1633; vaccinated, 3535; inoculated, 93; neither, 1102; caught small-pox after vaccination, 17.

Mr. Clark next read 'Contributions to the Medical Statistics of Birmingham, by a Local Committee.'

ELECTRICAL SOCIETY.

TUESDAY, Oct. 1.—The first meeting of the season.—Read, a communication from Mr. Gassiot, 'On the Attractive Force manifested by the Electricity of the Gymnotus Electricus.' In a former paper, Mr. Gassiot had submitted to the Society experiments of which with the aid of Mr. Snow Harris's beautiful apparatus, the thermo-electrometer, heating effects had been obtained from the electric action of the gymnotus. The present one describes experiments by which attractions of gold leaves were manifested; it being, Mr. Gassiot believed, the first instance on record of such an effect from animal electricity, and consequently enabling the electrician to fill up that blank in Faraday's celebrated table of identity in the different descriptions of electrical action. Attraction was evidenced with Bohnenberger's single leaf electroscope; and also, but much more satisfactorily, with an electroscope made of a common glass tumbler, placed in an inverted position, having two small holes drilled in the opposite sides, through which passed two wires with brass balls attached: to each ball a gold leaf was fixed, about 1 inch long and one-eighth of an inch wide, the leaves being placed parallel to each other. The leaves were approximated as close as the eye could observe, without contact, or about $\frac{1}{16}$ to $\frac{1}{8}$ of an inch apart, and on contact with the eel being made, they were not only attracted with considerable force, but were actually fused scintillating in the most beautiful manner. Read, also, a paper by Mr. Pollock, 'On the Connexion between the Electric Phenomena of the Striking Distance and Latent Heat.'—The phenomena of the electric machine, and of the secondary wire, the striking distance being manifest in each, agree, and are,

Mr. Pollock considers, dependent upon the excess of latent heat. But they differ from those of the primary wire before contact; because, as he explained, these are dependent upon deficiency of latent heat. After contact, however, these three classes agree, being all consequent to the conditions of excess. The inferences deduced were, that the twofold view of voltaic action (see Report of Electric Society, Mr. Pollock's paper, in *Literary Gazette*, Nos. 1085, 1086) is correct, that the terms quality and intensity are unnecessary, and that the latent heat of bodies and their electric fluid are identical. This latter result, Mr. Pollock observes, naturally flows from the investigation of the phenomena attendant upon the production of the spark, according to the acknowledged laws of latent heat, and its changes of capacity. Thus, in the voltaic battery the zinc is oxidised; it undergoes expansion; its capacity for heat is increased; it is disposed rather to absorb heat from surrounding bodies than to impart it to them; hence there can be no spark previous to contact: when contact has been made in the primary wire, and the circuit completed, vibration is set up, heat is generated beyond the power or capacity of the wire to retain, and, on breaking contact, this heat is liberated, producing the spark. Again, if the secondary wire be subjected to the influence of the primary wire, on making contact in the latter, the latent heat passes to the secondary wire, and there produces the spark. In common electricity, by compression of the rubber, there is a diminished capacity, and heat is liberated. Hence results the common electric spark, either taken immediately from the conductor, or by discharge of the Leyden jar. Thus all the above effects are the natural results of the laws of latent heat, and we are wandering unnecessarily when we assume the existence of any separate or distinct action, or fluid, called electric. Professor Schönbein expressed his surprise at the boldness of Mr. Pollock's conclusion. This appeared to be the feeling of most present. Several phenomena were stated to the author of the paper, which were considered subversive of his views. These he reduced or approximated to the laws of latent heat; although, as far as we could judge, not to the satisfaction of the querists. Mr. Brayley, the secretary, then exhibited and illustrated the arrangement of Mr. Grove's battery; and Professor Schönbein explained the theory of its transcendent power. It is only necessary, however, for us to state that, by subsequent experiment, the action of the battery has been found to have been considerably underrated in the paper read by Mr. Grove before the Chemical Section of the British Association. (See *Literary Gazette*, No. 1180.) He has since corrected the error, and described other improvements of the arrangement in the last number of the "Philosophical Magazine."

FINE ARTS.

NEW PUBLICATIONS.

The Heroic Action of Grace Darling and her Father, who, at the Imminent Peril of their Lives, rescued the Survivors of the Wreck of the Forfarshire Steam-packet from perishing on the Rocks of the Fern Islands, on the 7th of September, 1838. Engraved by David Lucas, from a Picture painted on the spot by H. P. Parker and J. W. Carmichael, containing Portraits of the Heroine and her Father. Moon.

"THE act of noble daring and generous self-devotion which this picture commemorates," it

has been justly observed, "created a sensation throughout the country almost unparalleled;—all England rang with the praises of the dauntless girl and her brave father." Many circumstances contributed to swell the national feeling on the occasion. The extraordinary danger of the act; its humane purpose; its triumphant result; the sex of the chief actor; her age; nay, her very name (for we own we doubt whether, had that name been Molly Clutterbuck, so much romance would have been shed over the whole incident as was communicated to it by the happy and euphonious appellation of Grace Darling); all combined to excite public admiration to a degree which must at length have become almost painful to its highly deserving object. It was to be expected, and was, indeed, most fitting, that the memory of such an event should be perpetuated by the pencil, as it has been in various ways by the pen; and, in the fine print before us, we have a skilful and vivid representation of the awful, yet inspiring scene.

"The point of time chosen for the picture is that when the little boat is nearing the rock: in the fore-ground are seen William Darling and his daughter, toiling through a sea that would have daunted the bravest heart that ever beat beneath a sailor's jacket; the old man is steadily plying his oars, and Grace, who manages the aft-oar, is trying to avoid a huge fragment of the wreck that seems about to be dashed by the fury of the waves against the boat, threatening to destroy it. In the middle distance are the remains of the wreck; the vessel had broke in two, and the after-part had been carried away; but the fore-part, with the disabled paddle-wheels, lies on the rocks, the sea beating over her, so that no one could be on board and live; near it, on a fragment of rock, to which they managed to get from the vessel, are the few half-clad sufferers, whose gestures express their transports of joy and gratitude at the prospect of speedy deliverance, mingled with prayers for the safety of their preservers, and thanksgiving to the Divine Providence that has spared their lives. In the further distance is Longstone Lighthouse, its light dimly shining through the gray of the morning, whose first ruddy streaks illumine the wild watery horizon, and reveal the whole expanse of the tempestuous ocean. Over head two or three screaming sea-gulls, buffeting with their native element, seem almost beaten down by the hurricane that drives on the rack of storm-clouds, mixing the clouds and spray; the crests of the leaping surges are seen relieved against the sky on every side."

The talents of the three artists who have united in the production of this powerful and interesting work are too well known to the public, and have too frequently been the theme of praise in our columns, to render it necessary for us to say more than that they have evidently exerted themselves in the present instance to do their best.

Medal, struck by the Corporation of London to record the Visit of Her Majesty Queen Victoria to the City to Dinner, on Lord Mayor's Day, November 9, 1837. Engraved by William Wyon, Esq., Chief Engraver of Her Majesty's Mint.

THIS medal has on the obverse Her Majesty's bust, and title in Latin; reverse, the Guildhall of the city, with an inscription in English, recording Her Majesty's visit. We venture to doubt the classical propriety of using two languages on the same medal. But we give the civic authorities great credit for the idea of

thus transmitting to posterity the knowledge of a social event, which, unlike so many of those that burden history, was one unalloyed by grief or crime; and was, we may hope, purely of satisfaction on one side, and certainly of joy and gladness on the other. The idea of striking the medal, therefore, has our warmest approval, while the execution of it calls for our unqualified admiration; and we trust that, when all the civic authorities have been supplied with medals, the public will be allowed to purchase this splendid specimen of loyalty, enshrined by art, worthy of the occasion which has called it forth, and honourable to the taste that selected it. On the obverse is Her Majesty's bust, with the tiara worn at the city dinner; her flowing, wavy locks, gathered in a graceful knot at the back of her head. The likeness is most accurate, and to those who have not been so fortunate as to have seen the original, it presents a characteristic individuality, a mild dignity, a placid, happy, contented expression of countenance, which will induce a conviction that they really behold the faithful portrait of our youthful virgin queen; conscious of the high situation which she has been at so early a period of life called upon to fill, but sustained in her great charge by her full reliance on the affection and loyalty of her people.

To represent faithfully the youth and loveliness of our queen, in this the spring days of her existence, we think is one of the severest tests of an artist's ability; and the more we dwell on Mr. Wyon's work, the more we are astonished and gratified with his surprising success. The graceful arrangement, character, and expression of the whole bust, its breadth and softness, the perfect youth, yet sweetly defined womanhood, of the features; the exquisite delicacy of the line connecting the cheek and neck, and the surpassing beauty of the lower part of the face and lip, strike us as a combination of excellences where all the truth of nature is displayed in all the perfection of art. And we also feel proud that this record of a people's love to their sovereign will be also an honourable testimony of the high state to which the Fine Arts had attained in England, and by which that record will be so splendidly transmitted to future ages.

Portrait of the Queen. Painted by H. E. Dawe; Engraved by J. Possewhite. Brighton, Mason.

If the cap, roses, bonnet, feathers, and laced frill, could be removed, this would be a very pleasing portrait of her Majesty.

ORIGINAL POETRY.

LAYS OF A DREAMER.—NO. I.

THERE is a star—a beaming star,
Which, 'mid the sky's ethereal blue,
In smiling radiance sheds afar
A modest light I love to woo;
And, though each other eye might gaze,
Nor like that glist'ning beam the best
Of all the rival sister-rays
Bedecking Night's cerulean vest,
Yet still to me it seems to glow
With light all other light above,—
Star of my soul! full well I know
Why thy soft trembling gleam I love,—
In mystic lore thou'rt said to be
The Star of my Nativity.

The turmoils of the day were past—
Its sorrows and its joys were o'er—
Like wrecks, its sun-born hours were cast
On dread Eternity's dark shore.

Earth saw, nor mourned; a moonless sky
Still brightly sparkled heaven's dome,
In all the varied radiance
That ever guided voyager home,
Or lit the wearied wanderer's way,
Like beams from out the Mercy-seat
Telling of realms of endless day—
Homes where the earth-worn homeless meet:
Each star shone forth its own fair light—
A congress of the gems of night.

I looked around the shining heaven
With anxious gaze, and as the youth
To whom the throb of love is given
In life's first glow of early truth,
Would seek amid a crowd, where shone
The rays that beautiful eyes impart,
For her alone—the chosen one—
The idol of his doating heart;
So did I seek amid the throng
Of heavenly beauties that soft beam
My star-love wore: nor sought I long,
For soon there came a lambent stream
Of light, in softened brilliancy,
As though alone it shone for me.

Intent, I watched its glories shine,
And mused in half-bewildered thought,
Wishing that from its fire divine,
In inspiration, could be caught
The history of a realm so fair—
A glimpse of the creative plan
That hung yon orb of glory there,
A wonder to the creature Man.
My prayer seemed heard, deep slumber stole
O'er every sense, and, as I slept,
A dream passed o'er my ravished soul,
Bright and most strange, for I had leapt
With heavenward spring, and sped my
flight,
A pilgrim to an Isle of Light.

As the first Eden met the eye
Of new-born man, and Nature spread
Her all of earth, and sea, and sky,
In guise most sweet,—so when I fled
A world of night, and hovered o'er
This seeming spark of heavenly fire,
A paradise was spread before
My ardent view: could charm inspire
The heart with love for Nature's hand
That did not deck this happy land?

The verdant mead, the forest's shade,
The purling stream, the ocean wide,
The spreading plain, the sylvan glade,
The mountain tow'ring in its pride,
The lowly vale, the mossy dell,
The sea-beat shore, the rocky height,
The cave where echoing murmurs dwell,—
All burst in beauty on my sight;
And all—all fair, and not a blight
Was there on shrub, or flower, or tree,—
Each bloomed in sweet fertility.

There was a voice of gladness round,
Each bird was carolling its joy;
On every side was heard the sound
Of beasts, not seeking to destroy
In quest of blood, but loving still
"Green herbs for meat," as first 't was given
By the Almighty sovereign will,
Ruling the realms of space and heaven—
Strength giving, not desire to kill;
While every creature seemed to shew
That peace our earth no more can know.

But where was Man?—was he not lord
Of Nature's fair and bounteous feast;
Or did she spread her festive board
To feed alone the bird and beast?
Yes! Nature's every child was here,
Save Man, the vaunting lord of all!

That creature of our grosser sphere,
Who taught a beautiful world to fall.
Blest scene of peace! and doubly blest
Since Man might not disturb its rest.

And thus methought earth's secrets, bared
To philosophic eye, have shewn
Was once our world, yet Nature cared
For all her creatures; Man alone,
Last of creation, had no lot
Then in Life's heritage—behold
Existence rife, while Man "was not,"
Till mighty works of life grew old!
The meanest thing had crawled ere man,—
the elect,
The Earth-god, and the Desolator, walked
ereot.

Such was my dream—the vision fled—
Yes, dreaming from the first I'd been,
Not amid stars, but snug in bed,
And wrapt in slumbers most serene:
But though my supper had been light—
Ay, light enough for any Brahmin—
It happened that but yesternight
From Doctor Buckland I'd been cramming.
And still one moral we may draw
Out of this wilderness of rhyme,
That Man, though now to life a law,
Being yet the youngest boon of time,
In mercy might such fact confess—
And this is all my vision's worth—
By using with all gentleness
His elder brethren of the earth. R. J.

THE DRAMA.

Covent Garden.—The dramatic season has recommenced, and the first great move has been the opening of Covent Garden under the management of Mr. and Mrs. C. Mathews. On Monday evening a crush-house assembled to witness *Love's Labour's Lost*, and a new farce by Mr. C. Dance. The impulse given to the stage by the noble effort of Mr. Macready was evident in the care and beauty with which the play was got up in scenery and costume. Nothing could be more correct and splendid. The play itself is certainly one of the least attractive which could be selected from the glorious storehouse of the Bard of Avon; and, with the exception of a bevy of charms in the female characters, and the excellent Shaksperian acting of Keeley and Meadows, there is nothing to recommend it to a popular run. It comes off weakly and heavily. A good deal of confusion took place at the commencement of the entertainments, owing, as it appeared to us, chiefly to the excessive crowding of every part of the theatre. The address, by Mrs. C. Mathews, was unheard; and appeals to the audience, by Mr. C. Mathews, only so far as he announced that the single gallery left for the public would be opened at a shilling instead of eighteen-pence. This prudent concession will not, we should think, be eventually any loss; since, if the large space assigned to this portion of play-goers, and commanding a good view of the stage, should be constantly and respectably filled, it will produce as high a revenue as the two galleries have hitherto done. The other changes in arrangement are a 7s. dress circle, in which places may be taken and kept for the whole night. This is almost equivalent to having the same number of private boxes, and, however convenient to a class of play-goers, will not, we think, be very palatable to the generality, especially on nights when the other parts of the theatre may be crowded. One night a week is to be assigned to Olympic pieces, to which we can see no objection; but

we would advise that any night would be preferable to Saturday for that purpose. The new farce is hardly so humorous and pointed as others from the same successful pen; but it is cleverly acted by Mr. Farren, Mr. C. Mathews, &c., and goes off, on the whole, satisfactorily.

Haymarket.—At this house the performance of *Shylock* by Macready, and the return of the richly comic Power, are the principal matters to be recorded. In the first, there is a striking improvement upon the earlier efforts of the same admirable artist; he seems to have carefully re-studied the character, and perfected it. There is not a single exaggeration or clap-trap to move the multitude; but the whole is addressed to "the judicious," and in a style of the purest conception and execution. Let who wants a dramatic treat hasten to witness the *Merchant of Venice*. Of Power we may say nothing, except that he also appears, like all excellent actors, to acquire fresh vigour and raciness every year. The cheering applause which rewards such performers gives them a confidence in themselves, and leads to exertions inspired by that favour which they would otherwise have been incapable of making. This is the secret of first-rate acting.

Adelphi opened on Monday, with Hackett and Rice in two Yankee characters, and a new piece called *Mount St. Bernard*, full of romantic adventure and terrible incidents. The former was received with great applause; and the latter, with the capital acting of Mrs. Keeley, Miss Allison, Mr. Lyon, and Mr. P. Bedford, went off with *éclat*. The scenery is really wonderful when we consider the size of the theatre.

English Opera House.—A promising *début* was made on the closing night of the season, in the character of *Rosina* in the opera of *The Barber of Seville*, and in the person of Miss A. Corra, a pupil of the Royal Academy. We believe this to be an assumed name; and have heard that, to contribute to the support of a numerous family, her good and praiseworthy feelings have prompted this young lady thus to apply the talents nature and education have given her. Whether or not this be true, her powers, natural and attained, exhibited on Saturday evening, are of a high order. Her voice, a soprano, sweet, clear, and flexible, cultivated with great care, and of considerable compass, only requires the strength which confidence will produce. Miss Corra evidently felt the novelty of her situation, and timidity marred her efforts. Parts of her acting, however, led us to conclude that with care, study, and practice, her place will be high in the class of actresses in opera and musical pieces. She appears very young, her person is ladylike and interesting, her manner playful and pleasing, and her speaking-voice truly feminine.

VARIETIES.

Zoological Society.—At the monthly meeting held on Thursday afternoon the usual reports were read. Balance in favour of the Society at the end of September, 289l. 19s. 4d.; visitors to the gardens and museum during that month, 12,204. 750l. had been added to the funds, being the price of 7½ acres of farmland at Kingston.

Aérolite.—Professor Shephard, of Carolina, had found chlorine and silicon in the analysis of an aérolite.—*Birmingham Meeting.*

Poussin.—A masterpiece by Poussin, called

the *Vierge aux Roses*, is said to have been discovered in Paris, under the daub of an armed knight. Poussin, it seems, in one of his letters, mentions such a picture having been taken away from him by the Marquis de Pardailhans.

Fine Arts.—The Duke of Sutherland has assigned a fine subject to the pencil of Martin, and one which seems well suited to his genius, viz. "The Assuaging of the Waters after the Deluge." Our native school has not of late been so much encouraged as we could wish, especially in its higher efforts, and we rejoice in being able to state an instance of such judicious and liberal patronage.

Bull.—"The late Mr. Justice Vaughan was next brother to Sir Henry Halford and to Sir Charles Vaughan," &c.—See all the newspapers.

Extraordinary Tide.—On Saturday night between eleven and twelve o'clock, at the turn of the tide, the sea rolled in with a tremendous force at Weymouth, and was attended by a roaring noise like thunder. The cause of this phenomenon has not been ascertained.

M. Michaud, the author of the "History of the Crusades," and other esteemed works, died a few days ago at Passy, in his seventy-second year.

Nicholas Nickleby has finished his career in a double number, and with a portrait of the author by Maclise. Mr. Dickens has, we think, wound up this story with greater skill and effect than any of his preceding productions. It is most effective, and must add even to his reputation.

The Harmonicon.—A musical instrument, lately invented by M. Paris of Dijon, has attracted much notice in France. It resembles the instrument called the Concertina, well known in London from the very clever performance of young Regondi; but it seems to be superior, in some respects, to the Concertina. The sound is produced by the vibration of thin metallic plates, and it is played by keys like those of the pianoforte; but the air which acts upon the vibrating substances, instead of proceeding from bellows within the instrument, is blown by the mouth through an elastic tube. The excellence of the instrument, accordingly, consists in this, that while the fingers on the keys merely mark the different notes of the scale, the expression lies in the mouth. It is the living breath of the performer which gives accent, articulation, and emphasis to the notes, as in the oboe or clarinet, and enables the performer to "discourse most eloquent music," in a manner which the production of sound by the mechanical contrivance of a bellows does not admit of. The Harmonicon is made in three varieties; the first is of the compass of the oboe, the second of the *Coruo Inglese*, and the third (of a larger size than the others) combines both these instruments, and has a compass of three octaves. This instrument is highly approved by the French composers; and one of them, M. Adolphe Adam, has given an account of it in the "Monde Dramatique," in which its capabilities are pointed out. It is calculated, in particular, to be of great utility in provincial orchestras, where it is an excellent substitute for the oboe—an instrument as disagreeable in the hands of an ordinary performer as it is delightful in those of a Grattan Cooke. Accordingly we are informed, the Harmonicon has already been adopted in the orchestras of many provincial theatres and musical societies.—*The Polytechnic Journal.*

Daguerriotype Portraits.—M. Jobard, at Brussels, announces that portraits taken by M.M. Daguerre and Niepce's patent will be forthcoming in a few months, and have every requisite of portraiture but colour.

LITERARY NOVELTIES.

To the Editor of the Literary Gazette.

SIR,—I shall feel greatly obliged by your favouring me with any information it may be in your power to afford, in reference to the following subjects:—

1. *Coder Vaticanus*. (1908.)—Signor Mai, prefect of the Vatican Library, it is supposed, has, for some time past, been engaged in preparing for publication an edition of this celebrated manuscript, a considerable portion of which (it is understood) has already been printed.

2. What portion has been so printed? and when may a completion of it be looked for?

I believe it will not be a *facsimile* edition (like Mr. Baber's of the Alexandrian MS. in the British Museum), but merely an exact transcript of the text contained in the MS. It is presumed that Monsignor Mai will enrich it with notes, but not, it is hoped, attempt to make corrections, as Grabe injudiciously did in his edition of the *Alexandrian*.

3. *Copto-Sahidic MSS.* In Oct. 1836, Rev. Mr. Tattam, author of an Egyptian Grammar, and editor of the new edition of Woid's "Coptic Lexicon," and of the "Minor Prophets in Coptic," set out for Egypt in search of MSS. He was to leave Cairo for Upper Egypt in November, and, on his way home, he was to examine the different libraries in Italy for Coptic and Sahidic MSS., in order to publishing editions of the whole Bible in those versions.

Have any tidings reached this country of that rev. gentleman (who is patronised by the Archbishop of Canterbury, and other high dignitaries of the Church)? and if so, what success has attended his laudable endeavours in the service of biblical literature?

I may just here mention that M. Quatremère, in his "Researches into the Language and Literature of Egypt," published at Paris in 1806, mentions, that the only complete copy of the Coptic Bible was in the possession of M. Marsel, director of the Imperial (now royal) press. That gentleman's MSS. (that is, most of the Coptic MSS.) have since become the property of Dr. John Lee, of Doctors' Commons, and of Hartwell House, near Aylesbury, Bucks. (See Mr. Tattam's preface to Woid's "Lexicon.") Is the said Bible included among the number? I presume not. Otherwise there would hardly have been necessity for Mr. Tattam's travelling abroad. Requesting the favour of a communication upon these points, I remain, yours, &c. C. S.

LIST OF NEW BOOKS.

Compendium of Dr. Brown's Philosophy of the Human Mind, by J. P. Boyle, 12mo. 6s. 6d.—Literal Translation of the Three Books "De Officiis" of Cicero, with Notes, 12mo. 4s.—Colburn's Modern Novelist, Vol. XVIII.: Zillah, by H. Smith, fcap. 6s.—Rollin's Ancient History, 6 vols. 8vo., new edition, 2l. 2s.—The Fatalist; or, the Fortunes of Godolphin, 3 vols. post 8vo. 12. 11s. 6d.—Fifty Illustrations of the Gospel Narrative, new edition, in a case, 12s.—Pickwick Abroad, by G. M. W. Reynolds, 8vo. 21s.—The Autobiography of Archbishop Laud, 18mo. 5s.—Keeble's Psalter, second edition, 24mo. 1s. 6d.—Sparrow's Rationale of the Book of Common Prayer, 18mo. 5s.—Taylor's Golden Grove, new edition, 18mo. 3s. 6d.—Yes and No; a Tale for the Young, 18mo. 2s.—Life and Times of Archbishop Sumner, 24mo. 1s. 6d.—Autobiography of T. Platter, a Schoolmaster of the Sixteenth Century, 18mo. 2s.—Practical Treatise on Drawing, and on Painting in Water-Colours, by G. F. Phillips, 8vo. 10s. 6d.—T. Leach's Historical Statement of the Steam-engine in Cornwall, royal 8vo. 10s.—The History of Rome, by the Rev. W. M. Heston (from the "Encyclopædia Britannica"), post 8vo. 6s.—The Greenland Minister; a Poem, by the Rev. F. R. Blackley, 12mo. 5s. 6d.—Jardine's Naturalist's Library, Vol. XXIV., British Birds, Vol. II., fcap. 6s.—Dr. Varty on Civilization, 3d edition, 8vo. 6s.—Dr. Gregory's Elements of the Practice of Medicine, 5th edition, 8vo. 16s.—Rev. W. M. Hart's Practical Sermons, 12mo. 6s.—Retzsch's Outlines to Burger's "Lectiones," 4to. 18s.—Short Sermons for Little Children, by an Elder Sister, 18mo. 3s.—The Wife and Mother's Book, 32mo. 3s.—J. Taylor's Sermons for Sundays, Part I., 3s.—The Young Artist's Guide, by F. Greenwood, 8vo. 6s.—The Organs of the Senses described by C. A. Bell, fcap. 6s.—Chemistry no Mystery, by J. Seaford, fcap. 6s.

Abstract

Journal of Management Education 30(6)

REVIEW OF NEW BOOKS.

Aristocracy in America. From the Sketch-book of a German Nobleman. Edited by F. J. Grund, author of "The Americans in their Moral, Social, and Political Relations." 2 vols. 12mo. London, 1839. Bentley.

MR. GRUND'S own publication was one which merited and received so much public attention, that his name ought to be a passport to any succeeding work. Of the present we shall, however, only say that, whether it be from the pen of a German nobleman, as it purports; or, whether the title be a mere author's *incognito*, the substance is sketchy, and the view it gives of American society, especially of such as assumes to walk in the upper circles, rather of the caricature and ironical order. A portrait of General Jackson, prefixed to the first volume, does not prepare us for this; but such is the fact—witness the following specimens. Description of the author, &c. —

"It was in the month of August last year, that, early in the morning of a sultry day, while sauntering along the wide and dirty streets of New York, I was, just at the corner of Chamber Street and Broadway, struck by the singular appearance of a male figure, which I at once recognised as European, though the individual in question had apparently taken the most studied pains to disguise his origin. His statue was straight and erect; his neck, already thin and stiff, was, by the aid of a black cravat, reduced to a still narrower compass; and his hat was sunk down his neck so as to expose half his forehead. His frock-coat, despite the heat of the day, was buttoned up to the chin, and yet of such diminutive dimensions as scarcely to cover any one part of his body. His trousers were of the same tight fit as his coat, and the heels of his boots added at least an inch and a half to his natural height. His steps were short and quick, deviating neither to the right nor left from a straight line; and his head, which was thrown back, seemed to act as a rudder in directing his motion. Thus far, his appearance differed in nothing from a genuine New-Yorker, except that his shoulders were very much broader, and his legs much more stout, than one generally meets with on the borders of the Atlantic. I seldom saw an European imitate exactly the particular business-dress and gait of an American; and in this instance the copy appeared to me so burlesque, that I felt curious to see the full face of a man whose body bore such evident imprints of two worlds. I therefore stepped quickly forward a few paces, and, leaning against the window of a print-shop, endeavoured to take a front view of my hero. He seemed to guess my intention, and, desirous of avoiding observation, turned his head towards the opposite side; which, however, did not prevent me from recognising at once my friend the author, with a large roll of paper in his hand. 'Ah!' exclaimed he, grasping my arm, 'I am glad to meet you,—the very man I wanted to see. Whither are you now going?' 'To breakfast.' 'Are you invited?' 'Not that I know of.' Then I shall accompany you. I have to speak to you on a very important

subject.' 'I am going to the Turkish divan.' 'The very place I like,—it's private, snug, genteel; one can be there without meeting a reporter.'

"We stretched ourselves each on an ottoman (chairs being entirely banished from the establishment), and 'the author' at once came to the point. 'I wanted to hand you my sketch-book,' said he, after heaving a deep sigh, 'containing the journal of a tour through the principal Atlantic cities, and a few memorandums of my stay in Washington.' 'Ah! have you finally resolved to publish it?' 'Not I. I am a married man, related to one of the most aristocratic families in town, with the prospect of inheriting a fortune. I must not quarrel with my bread and butter.' 'Oh! I understand you; you wish me to publish it for you; that's more than I can promise to do without seeing the manuscript.' 'But you may omit what you do not like, or soften down what is likely to give offence.' 'That you know is useless. The Americans do not like to be spoken of in any way. They are so thin-skinned as not even to bear praise; they take it for irony.' 'I know it. Our first people are like the Venetian senators, who would not allow the government to be praised; because, if one man bestowed praise, another might be guilty of censure. There is no knowing where matters will end when once in the mouth of the people.' 'All this ought to put me the more on my guard; yet, out of friendship for you, I will make myself a martyr. If you had the courage to write the truth, I will have the boldness to publish it.' 'Bravo!' cried my friend, embracing me in a continental manner, 'I see you are a real German; and, if ever I inherit —' 'Pray don't mention it. It will be as much as you can do to pay your wife's mantua-maker. You cannot count your father-in-law's money until after his death. There are bank liabilities, insurance liabilities, and Heaven knows what other mercantile and private liabilities! Just give me the manuscript, and trust the rest to my affection.' 'You are too kind—too generous!' cried he; 'but I must, nevertheless, give you a few hints. I think you had better omit the account of my flirtations entirely. It is not in good taste. All such things are necessarily insipid; and if Mrs. K—psch—rtz should by accident learn —' 'She would never forgive you.' 'It is not that I am most afraid of; but my father-in-law, and the public —. Besides, my flirtations, as is always the case in the United States, ended in a most sensible manner, and on that account are not likely to interest an European reader. The first lady sent me word by her servant not to trouble myself with writing her any more letters, as she was determined to send them back unopened. The second gave me a verbal warning in these terms:—'I am sorry you should be in love with me, because papa and mamma think it all nonsense; I do not say this to hurt your feelings, but merely to prevent you from taking any unnecessary steps in the matter. I shall, nevertheless, be always happy to see you as a friend.' And the third ended in the most legitimate manner,—in my marriage. I think my

sketches of fashionable parties, and in general of the character and principles of our 'first society,' are much more likely to give satisfaction: only soften them down a little for the sake of Judge Lynch; it would break my heart to see you tarred and feathered. As regards my account of American statesmen and politicians, you must calculate your chances of a duel. A Southerner will fight three times as quick as a Northerner; but the Northerner will never forgive you. Be careful how you repeat what I have said about *parsons*; they have more power in the United States than in any other country. They have the power of breaking any man they please; for they possess the most complete control over the women. I have, in this respect, always been of Jean Paul Richter's opinion, who despised 'the *pater-noster* globe of piety,' as much as 'the empty bubbles of worldly prudence.' But you know my religious sentiments, and are best able to judge whether I deserve the name of a Christian. If I have sometimes been severe upon Unitarianism and Dr. Channing, it is because I hate cant in any shape, and would oppose any man that would constitute himself moral pope of the community. The Bostonians, who, according to their own confession, are a 'people full of notions,' are always ready to deify a man that 'captivates their fancy;' and accordingly have within the narrow confines of their city a whole Olympus of gods and goddesses, of which the reverend Socinian is the *Jupiter tonans*. But you will best know how to manage these matters: only one thing,—forgive the vanity of an author!—you must promise me as a *conditio sine qua non*. 'And what is that?' 'Not to make such a thing of it as Fanny Kemble's 'Journal';—that is, not to strike out three-fourths of the book, and then publish the rest all dashes and stars.' I gave him my word to leave as few stories untold as possible, and, in general, to stick to my text as far as was consistent with prudence; after which he quietly sneaked off to his office, leaving me to do the best with the manuscript."

Here is part of a general conversation at a public breakfast:—

"Our people are altogether too prosaic.' 'They are too much occupied with politics,' observed another gentleman. 'Altogether too much, sir,' repeated the admirer of Germany. 'But they say it is all for their own good; it improves their condition.' 'I don't want to know their condition. Heaven save me from politics!' 'It is certainly not a flourishing trade in this country,' said I. 'Not only that, sir, but it is not a respectable one.' 'And why not?' 'Because every blackguard meddles with it.' 'But not every blackguard is successful in it.' 'Quite the reverse; it is only the blackguard who is successful.' 'That's an old one,' cried an elderly-looking gentleman. 'But who will talk politics on a hot day without taking a julep? Holla, John! a dozen fresh juleps, with plenty of ice,—and rather stiff, mind ye.' 'It's no use to talk politics to us, sir,' observed a Mr. * * * of Baltimore, addressing me in a calm, tranquil voice, which had something of the tone of advice and condescension in it; 'we are no longer green.'

'What do you mean by that?' 'I mean precisely what I say,' replied he. 'We have all more or less passed the age in which respectable Americans take an interest in politics; and are, thank God! not yet sufficiently old and decrepit to recur to it once more because we are unfit for every thing else.' 'Yea, yea!' interrupted a highly respectable gentleman, whom I had known in Boston, and who had a high reputation for being fond of cards; 'a man never takes to politics in this country unless he is ruined in business. I have seen a hundred instances of it in my own city. Let a man have a falling-out with work, and he is sure to turn patriot.' 'Because patriotism is the last refuge of a scoundrel,' as Johnson said, remarked a young barrister, visibly contented with having had an opportunity of exhibiting his erudition. 'Happy country this!' observed one of my companions, 'in which every scoundrel turns patriot!' 'Say, rather, in which every patriot is a scoundrel,' rejoined the lawyer.

Our author paints the upper classes in America as being most abject tuft-hunters, and apt to undervalue all their home productions when compared with those of Europe; but we copy a more national picture, at a dinner-party:—

"The ladies were all *en grande toilette*, though among the gentlemen not one appeared to be dressed for dinner. The conversation was very loud; but, notwithstanding, completely drowned in the clatter of knives and forks. I perceived that the women talked, not only much more, but also much louder, than the men; American gentlemen of the higher classes being indeed, the most bashful creatures in the presence of ladies of fashion I ever saw. They approach women with the most indubitable consciousness of their own inferiority, and, either from modesty or prudence, seldom open their lips, except to affirm what has been said by the ladies. One is always reminded of poor Candide's honest prayer,—'*Hélas! madame; je répondrai comme vous voudrez.*' I have seen one of the most distinguished old gentlemen in the United States,—one who held the highest rank in the gift of the American people, and whose learning and knowledge on most subjects rendered him a most pleasing and entertaining companion of men,—betray as little self-possession in the presence of women as if he had been making his *début* in society; and this, too, in the house of one of his most intimate friends. This excessive awkwardness in the men, to which even the most distinguished of their race make no exception, must be owing to something radically wrong in the composition of American society, which places men as well as women in a false position. The conviction of this fact must force itself on the mind of every impartial observer who has had an opportunity of making himself familiar with the customs and manners of the higher classes. There appears to be a singular mixture of respect and want of sincerity on the part of the men with regard to the women; produced, I believe, by the unnatural position which the latter hold wherever they are brought into contact with the former. In the first place, American ladies occupy, from mere courtesy, a rank in society which is not only opposed to that which they hold in private life, and in their own families, but which is actually incompatible with the exercise of discretion on the part of the gentlemen. 'The ladies must be waited upon;' 'the ladies must be helped;' 'the ladies must be put into the carriage;' 'the ladies must be taken out of the carriage;' 'the ladies must have their shoe-strings tied;' 'the ladies must have their India-rubber shoes put on;'

'the ladies must be wrapped up in shawls;' 'the ladies must be led up stairs and down stairs;' 'the ladies must have their candles lit for them when they go to bed.' On every occasion they are treated as poor, helpless creatures, who rather excite the pity than the admiration of men; and as the services they require are numerous, just in proportion to the scarcity of hired servants, the gentlemen are obliged to officiate in their stead. These continual exigencies cannot but render the society of women often irksome to men who are daily engaged from ten to twelve hours in active business, before they dress to do the agreeable at a party; and hence the retiring of the ladies is but too frequently hailed as the signal for throwing off restraint, or, as I once heard it called, 'for letting off the steam,' and being again natural and easy. If, in any of these matters, the men were allowed to use their own discretion in bestowing attention on those only whom they like, all would be well enough. The ladies would receive a great deal of voluntary tribute; and the gentlemen, delighted with the privilege of a choice, would be more prodigal of their *petits soins* to those who would have a smile in return for their devotion. But, instead of this, a fashionable American is harassed by an uninterrupted series of exactions, made for no other purpose than for gratifying 'the ladies;' while the rules of society are such, that he can scarcely ever find a chance of making himself agreeable to a particular individual. Hence an American *salon* exhibits nothing but generalities of men and women, in which no other merit is recognised but that which belongs to the sex. In this manner American ladies are worshipped; but the adoration consists in a species of polythelam, in which no particular goddess has a temple or an altar dedicated to herself. Whenever an American gentleman meets a lady, he looks upon her as the representative of her sex; and it is to her sex, not to her peculiar amiable qualities, that she is indebted for his attentions. But look upon the same lady when she returns home from a party, or after the company has been dismissed at her own house! She is indeed honoured and respected, a happy mother, a silent, contented wife, and complete mistress at home; but how seldom is she the intimate friend of her husband, the repository of his secrets, his true and faithful counsellor,—in one word, the better half of his existence! And yet what woman would not rather be that than an idol, placed on an artificial elevation in society, in order to be deprived of her true influence on the deliberations and actions of men? I have undoubtedly seen American ladies who were all a woman could wish to be to their husbands; but I scarcely remember one, especially in fashionable life, who was not quoted to me as an exception to the rule."

We conclude with a few extracts relating to a literary party at Boston, and the state of the American press; as these, with what we have already extracted, will sufficiently shew the varied matter and tone of the work:—

"What was most interesting to me was the little ease which prevailed amongst them; none seeming to know his true position. They approached each other with great caution, as if they dreaded each other's malice. I am sure they did not venture a single expression which they would not have liked to see in print. In addition to this, they watched each other's motions, and the greater or less degree of intimacy which existed between their entertainer and his invited colleagues; in short, they wanted nothing but tact and manners to pass

for a tolerable body of diplomatists at a provincial court in Germany.

"There is scarcely a paper in any of the large cities of the United States which has a decided political character—advocating some great historical principle, and employing in its warfare other weapons than common-place dialectics, and constant appeals to the passions of its subscribers. The effect produced by the American papers is due to their number; there being not one of them which can boast of a subscription sufficiently large to make it a true representative of public opinion. Their power is owing to combination. No great central institution has as yet taken the lead, but they have a wonderful faculty in communicating each other's ideas, either by direct quotations, or by dressing up the same thought in a variety of manners. An American paper, in fact, is said to be edited with great talent when it contains in each number from half a column to a column of original matter: the rest consists of extracts and advertisements. The latter constitute the pecuniary resources of an editor; the subscriptions being so low that, unless a 'fair advertising patronage' can be obtained, little profit or absolute loss must necessarily attend the publication. From this single circumstance the leading character of American newspapers may at once be inferred. The commercial part of the community advertise the most; their interests, therefore, are sure to be advocated, while those principles which refer to the higher branches of statesmanship or political economy are rarely made the subjects of newspaper controversy, except perhaps the Southern States. The Southerners are the only people in the Union who study politics as a science, having both the education and leisure for that purpose. The southern papers, therefore, are, on an average, much better edited than those of the north; though from their higher standard, and the peculiar composition of southern society, they have comparatively a small number of readers. The practical men at the north call the Southerners, and especially the Virginians, 'metaphysical politicians,' in contradistinction to those whose immediate object is the increase of trade and traffic. The northern papers advocate each only a particular part of a political system: one, a bank of fifty millions; another, one of forty millions; one, a bank in New York; another, one in Philadelphia, &c., just as it suits the convenience of their subscribers. It is not the press which leads the public,—it is the public which leads the press.

The editors "once armed with a quill, they care not whom they meet in the arena. Fortunately it is their practice to praise indiscriminately every book, pamphlet, or poem, of which a copy is sent them 'for notice;' except when the author attacks their favourite doctrines, or pretends to be wiser than themselves. In such cases they exhibit an *esprit du corps*, and woe to the unfortunate offender that provokes a power so formidable! Not only will judgment be pronounced on him editorially, but also in an infinite number of anonymous articles, furnished by the legion of literary twaddlers which surround our 'independent press,' and claim the occasional insertion of a squib as a bonus for the amount of their annual subscription. This species of assassination is considered perfectly lawful, and is practised by lawyers, physicians, clergymen, merchants, manufacturers, and tradespeople of all sorts. Whoever subscribes to a paper considers himself the editor's patron, and obliges the latter to give publicity to his dull lucubrations.

"You may always doubt a democratic editor's sincerity when his advertisements begin to increase. He is then sure of making himself agreeable to a certain portion of the commercial community, and to meet soon with the proper reward of his new political faith. You may then expect to see him promoted in society and on 'Change; and ten chances to one, he will be able to settle with his creditors. After that, he begins to differ in one or the other point from the leading principle of the democratic party (for it is seldom that a man changes at once from a Democrat to a Whig), until, by degrees, he renounces the whole doctrine as unworthy 'of a gentleman and a scholar.' Then he begins his abuse against the mob, declaiming loudly against anarchy and usurpation; because new converts to a doctrine must show more zeal than those who have been brought up in it, and in order to exhibit their contempt for the class of society from which they themselves have sprung. These abuses are afterwards returned with interest by those who have remained faithful to their cause, or who have not yet had a chance of promotion. Hence arises a newspaper controversy, which is neither calculated to elevate the style of our writers, nor to throw much light on the great principles for which they are contending. After subtracting the personal abuse and common party along of our papers, there remains scarcely enough matter to elicit one generous thought, or a single truth capable of adding to our political knowledge."

The Philosophy of the Mind. By James Douglas, Esq., of Cavers. 8vo. pp. 387. Edinburgh, 1839. A. and C. Black; London, Longman and Co.

THE turn of the age towards metaphysical inquiry, is one of the best signs of its intellectual spirit. "The noblest study of mankind is man;" and though it may lead to a thousand mistaken notions and erroneous pursuits, yet is it a study which cannot be followed, even in mistake and error, without producing instruction and improvement. As the wild labours of astrologers led to the sublime knowledge of astronomy; and as the darkling toils of alchemists opened the secrets of chemistry to view; so the investigation of mind must conduce to that superior understanding, which teaches us our duty to God, to our neighbours, and to ourselves.

Among the most zealous and rational of those engaged in this manner we ought, before now, to have brought forward the name of Mr. Douglas; but the bustle and turmoil of the busy London season, of temporary publication and many meetings, leave but too little time for philosophy: and his volume has, like others, lain by for a fitter opportunity.

In order to clear his way, the author casts a rapid glance over the history of by-gone "Speculative Opinions;" points out the fallacies which he considers to have prevailed in them, and not only marred their own value, but caused a stream of misconception to run through theories founded upon them, or partially adopting them as dogmata demonstrated beyond the inquisition of question. He then addresses his own acute and logical powers to the various subjects of "Perception," "Memory and Suggestion," "The Train of Thought," "Reasoning and Logic," "Emotions," "Taste," "Freedom of the Will," "Morals," and finally "Religion." Upon each his observations are well worthy of attention; though, when we have reflected to the utmost upon them, we must confess, that

we have only endeavoured to make some progress: for it is most true that

"The elementary acts of mind escape our notice as much as the elementary atoms of matter escape our view. The Philosophy of the Mind, if it ever reached perfection, will consist in the complete history of all the acts of the mind, the enumeration of each of its feelings and powers, with all the combinations into which they enter. This is a labour at which, perhaps, no discoverer can ever arrive. At all events, one inquirer after another must be contented to proceed but a step or two on the way."

We differ, however, from Mr. Douglas in his opinion that

"It is only in Greece that we can obtain authentic records of the many, but vain, efforts of the human mind to arrive at speculative truth."

Surely the East—Persia, Hindostan, and even China, would refute this notion. But to leave minute points, we may state, that the first chapter is full of interest. The summaries of the systems of Thales, Pythagoras, Empedocles, Zeno, Heraclitus, Leucippus, Democritus, Protagoras, Socrates, Plato, Arceilaus, Aristotle, Epicurus, and other great men of the Grecian schools, convey very accurate views of their several and conflicting doctrines; and the sequel in which the Alexandrian teacher, Plotinus, and later philosophers down to our own time, are briefly represented and canvassed, completes the important *coup d'œil* over former "speculative opinions." We know no better test of the author's own ideas, or fitter specimens to offer as examples of his volume, than to quote what he says of some of his immediate predecessors:—

"Locke is most indebted to his own thoughts for the materials of his works; but if indebted to other writers, he is more so to Hobbes than to any one else. His first book against innate ideas is, by consent of the best authorities, considered the weakest portion of his works,—rambling, equivocal, immoral (without being intentionally so), and credulous of the foolish stories related by rash and ignorant travellers. In adopting the opinion of the atomists, which considers the mind as a mere *tabula rasa*, in opposition to the innate ideas of Plato, and the transcendental philosophers, he appears totally unaware of the third and the true system, already indicated, though imperfectly, by the Stoics; those 'notions' which spring up in the mind with, and are involved in, the very exercises of our intellectual powers. Locke, after Hobbes, states the mind to be white paper, and the two inlets of knowledge to be sensation and reflection. In sensation, the soul is 'merely passive.' Then occurs the confusion, from which Locke never fairly extricated himself, with respect to ideas. 'Whatever the mind perceives in itself, that I call idea;'—'which ideas, if I speak of sometimes as in the things themselves, I would be understood to mean those qualities in the objects which produce them.' Locke, after Descartes and Epicurus, laid great stress upon clearness. Unfortunately the style may be clear, while the thoughts may be indeterminate, and utterly confused. The Epicureans were almost always clear; but in their thoughts, how shallow, perplexed, and contradictory! The same contrast occurs in Locke,—how confused and contradictory are his notions, while his style remains popular and transparent! His notions alone respecting space and time, if notions they may be called, sufficiently exemplify this. A train of thoughts continually passes through the mind—reflection upon this train furnishes us

with the idea of succession—and the distance between any parts of that succession is that which we call duration; hence time, according to Locke, might be defined the distance between two thoughts. As this train has a variable swiftness, we should be possessed of a quick time and a slow time, were we not able to strike the average, and to obtain a medium measure of time in the ordinary swiftness of our ideas. Endless addition, in Locke's estimation, gives us the clearest idea of infinity. A strange definition of the infinite, that which may continually be added to. Locke evidently mistakes the indefinite for the infinite; that which approximates to the infinite, or, correctly speaking, continually tends towards it, without ever reaching it; he confounds the subjective infinite, that to which the mind of man can assign no term, with the objective infinite, which has no term in itself, by its own nature excluding every limitation. According to Locke, the mind, from contemplating changes either in itself, or in the external world, acquires the idea of power. Agreeably to this view, the idea of power would merely be the perception of change; and if the mind were thus constituted, as Locke describes it, the mind would be unable to discriminate between cause and effect. We remark these blemishes in an author, to whom not only the study of the mind, but what is of more importance, the cause of civil and religious liberty, is so much indebted, not with any view of detracting from his great merits, but in order to point out that sensation and reflection are inadequate to account for the origin of all our notions."

Of Hume:—

"Hume has a precious argument for the disbelief of the Deity:—'In a word, I much doubt whether it be possible for a cause to be known only by its effect (as you have all along supposed), or to be of so singular and particular a nature as to have no parallel and no similarity with any other cause or object that has ever fallen under our observation. It is only when two species of objects are found to be constantly conjoined, that we can infer the one from the other; and were an effect presented which was entirely singular, and could not be comprehended under any one known species, I do not see that we could form any conjecture at all concerning its cause.' In order, therefore, to believe in God, it is a prerequisite that there should be two gods, the least number that can form a species, and two universes. Nor would this probably be sufficient, unless this double pair of infinities should become the objects of our senses, and thus be classed among our impressions. But, according to Hume's philosophy, there would be little use for a Deity—nothing to create, and nothing to govern. Our impressions present us with nothing but themselves—no world without us, no soul within us—nothing but their own shadowy and deceptive appearances. If Hume has curtailed the sum of existence, he has added considerably to the list of virtues, holding that utility is the criterion of merit, and that whatever is useful is virtuous. And, having given a new apotheosis to wit, cleanliness, and even to vanity, he adds what the French call a *je ne sais quoi* in manner, which, he asserts, 'must be considered as a part of ethics, left by Nature to baffle all the pride of philosophy, and make her sensible of her narrow boundaries and slender acquisitions.' We can scarcely conceive a more striking commentary on the words of St. Paul, how sense forsakes those that forsake God—how vain become their imaginations, and how deeply and hopelessly

the foolish heart of the atheist is darkened. Hume, at one moment, seemed on the brink of a better philosophy. In his treatise of 'Human Nature,' speaking of cause and effect, he says, 'When I consider their relations, I can find none but those of contiguity and succession, which I have already regarded as imperfect and unsatisfactory. Shall the despair of success make me assert that I am here possessed of an idea which is not preceded by any similar impression? This would be too strong a proof of levity and inconstancy: since the contrary principle has been already so firmly established as to admit of no further doubt.' This pretended proof is merely the assertion of Locke. Thus Hume believed where he ought to have doubted, and hence he doubted where he ought to have believed."

Of Kant:—

"Kant carried his idealism too far, and left too narrow a basis for the material world. This was the first weak point of his system, where it speedily gave way; but it is a weakness still more manifest in subsequent systems, and which exposes them all to the inroads of scepticism, in the same manner that the idealism of Berkeley, delivered over the philosophy of Locke to the doubts of Hume. A second of Kant's consisted in pushing too far the consideration that the nature of the mind gives its form to all our thoughts; and therefore asserting that space is the form of sensation, and time the form of our thoughts in general. This is an error not original, but an adaptation of Leibnitz's hypothesis. It is an error, also, which may be brought immediately to the test of facts. If it were not false, all our sensations would be localised; but of five senses, only two—touch and sight—spread their sensations over extension, and each of these over a different extension. It has justly been said by the admirers of Kant, that the whole of his theory hangs together, and that if one link fails, the whole falls to the ground. His doctrine of space alone furnishes a refutation of his opinions; but even previous to this, the very outset of his inquiry labours under an irretrievable error. The transcendental philosophy involves a fatal absurdity. If we must inquire whether knowledge is possible, before we can ascertain it to be certain, we are entangled in a series of previous inquiries that have no end, for we have stronger ground to inquire whether the possibility is possible, and whether the transcendental philosophy can itself have any existence, than Kant can have for demanding that the transcendental philosophy should stand as a porch, through which alone we can enter the temple of knowledge. Understand, and make others understand, the operations of the mind, and there is no need to prove that such knowledge is possible; but Kant, like the German metaphysicians in general, has a horror of experience, and too much resembles the dove to which he with less justice compares Plato, which thinks its flight would be swifter beyond the resistance of the lower air, not knowing that that very resistance impels it forward. Kant and the other German writers have been accused of intentional obscurity; if it were so, they have an excuse in that weakness of their countrymen which leads them chiefly to admire what they do not understand. Obscurity and perplexity, however, seem but too natural to the mind of Kant. On the most common subjects, and uttering the truest observations, his meaning is hard to be spelled, partly because he fails to interest the attention, and partly because, like the scholastics, he reduces every subject to its most abstracted form, till it

reaches the verge of nonentity—a failing still more conspicuous in his followers than in himself."

Of Reid, Mr. Douglas is, as every intelligent being must be, a warm admirer, and almost a disciple; but without going further into any of the other topics which he so ably investigates, we must be contented with affording his work one other quotation upon a general inquiry.

Thus, upon *Morals*, he observes:—

"If the moral faculty is weak in most men, it is owing to want of culture. There is ample provision in the mind for its complete development; no other power is aided by so many concurrent faculties, or derives accession from so many different sources. We have only to attend to the dictates of conscience, to render its oracles more frequent and more distinct, and those parts of the human frame which are most apt to resist its authority, when once brought into subjection, would augment its power, and aid in enforcing its dictates. There is no need of dreaming, with the Stoics, of extirpating the passions: if duly regulated, they become the ministers, not the opponents, of Duty; and Pleasure herself, though considered the chief foe of Virtue, is ready to act as her handmaid. Mistaken notions of Christianity have discouraged the culture of Moral Philosophy in latter days, and the moderns have not effected so much as the ancients, with all their disadvantages, in this branch of the study of the mind. Christianity was not intended to supersede the exercise of our powers, but rather to invigorate their exertions, by giving them the right direction, and supplying them with the true data on which to proceed. Instead of furnishing a system of morals, Christianity has afforded a new fountain of spiritual existence, from which that system may be deduced, by implanting a new and stronger principle of virtue, by conferring upon its disciples a renovated and godlike nature, and by exchanging that external law, which only enforces an outward compliance, for that inward law which is written on the fleshly tables of the heart. Where our faculties cannot penetrate into the invisible world, and into the secrets of futurity, Christianity affords us the light and information of a supernatural revelation; but where our native faculties are commensurate with the attainment of truth, we are called to press forward in the pursuit of excellence and of knowledge, and to advance in moral science, as in natural, by the sincere and diligent exercise of our faculties. 'Whatever things are true, whatever things are honest, whatever things are just, whatever things are pure, whatever things are lovely, whatever things are of good report; if there be any virtue, and if there be any praise, think on these things.'"

The Romance of Private Life. By Miss Burney. 3 vols. 12mo. London, 1839. Colburn.

THESE volumes contain two tales; the first, "The Renunciation," occupying two of them, and the last, "The Hermitage," the third.

"The Renunciation" is founded on the adventures of a twice-concealed female child, who is stolen the second time in order to pass her off for a wealthy heiress, and so secure her fortune for the abductor's natural son. The incidents, which happen chiefly in France and Italy among English travellers and their foreign acquaintances, are developed in a ready manner; and the characters in general are distinctly and cleverly drawn. As we do not, however, like to delve into the secret mysteries of inventions of this sort, we must be content

to give a single extract as a specimen of the writer's sense and style:—

"The conversation now changed; Monsieur de Verneuil came in from an exploring ramble, delighted with what he had seen and with the beauty of the weather; and whilst he and Mr. St. Hubert were engaged in an animated discussion on the subject of some antiquities he had been looking at, Isabel suddenly said, 'Pray, my dear Agnes, do you know a Mrs. William Stratton who is here?' Agnes answered in the affirmative. 'Have you ever been to any of her parties?' 'I have been to several.' 'Are you going to her this evening?' 'I am invited, but, meaning to spend the evening with you, I sent an excuse.' 'Oh the pity! Had you been going, I would have gone too. I had a letter of introduction to her from a lady in London, who told me that she was here at the pinnacle of all *ton*; visits have been paid and mutually returned by us; and I have now received an invitation from her for to-night to a concert, and I cannot tell what besides. Let me hear a little about her; we have never met, and I have not the least idea what she is like.' Mr. St. Hubert catching these last words, anticipated Agnes's answer. 'She is like,' he said, 'one of the many minor queens of fashion that abound in foreign countries, and do very little honour to their own. The native inhabitants are so much divided in opinion concerning them, that by some they are laughed at; and, what is worse, are regarded by others as real specimens of English refinement and elegance. She is a lady who dashes at every thing;—who writes dramas, paints pictures, models busts, composes music, recites her own verses, and sings her own bravuras. Furthermore, she gives balls, concerts, dinners, and masquerades;—she is never tired, never quiet, and would think an evening thrown away that was not spent in a crowd.' 'And are any of the Romans such barbarians as to be insensible to all this extraordinary variety of merit?' 'The Romans have not the least objection to her parties,—for, besides being sure of good refreshments, they often meet with good company, and seldom fail to see or hear something to gratify their sarcastic propensities: but do not imagine that, generally speaking, they are for one moment duped by her pretensions; they would see through them even in a compatriot; how much more in an *ultramontane bel-esprit*?' 'Yet,' said Agnes, 'if a foreigner is unaffected, and shows a disposition to be grateful for civilities received, there are no people kinder than the Romans.' 'I beg, my dear Agnes, you will ascribe to them no particular merit for that!' cried Isabel with vivacity. 'The same may surely be said of the French, and not seldom even of the English, though their greater reserve of character may make their kindness more tardily apparent.' 'Well argued, Isabel!' said her husband; 'Mr. St. Hubert, I am sure will not hesitate to acknowledge, that in all civilised countries real genius, accompanied by simplicity of manners, is an assured immunity from ridicule, whilst the *charlatanerie* of affected pretenders provokes (and justly) the whole force of its artillery.' 'True;—genius may be cavilled at by envy; but it can with difficulty be rendered ludicrous.' 'There is no degree of malice or detraction,' cried Isabel, 'I would not heroically submit to, for the glory of being envied! But to excite derision, would, I think, drive me mad!' 'You would not know any thing of the matter, my dear madam; no one laughs at another to his face; and were that even to happen, as excessive vanity is the chief

aliment of ridicule, it is also the surest preservative from mortification. A vain man is the most unsuspicious creature in the world, and will innocently join in the laugh against himself, and then look round to discover the jest. 'Probably,' said Agnes, 'that is what makes vain people so good-humoured?' 'You may be assured it contributes to do so in no small degree. I might not be able to feel much respect or friendship for a vain man, but I would rather have him for an inmate than a very proud one.'

"The Hermitage" gives its name to another mystery of stabbing, self-accusation, ignominy, distress, despair; all terminating as they ought to do, but seldom, we imagine, as they really do—in *Private Life*.

The Zoology of Captain Beechey's Voyage; compiled from the Collections and Notes made by Captain Beechey, the Officers and Naturalist of the Expedition, during a Voyage to the Pacific and Behring's Straits, performed in H.M.S. Blossom in 1825, 6, 7, and 8. By J. Richardson, M.D., F.R.S., &c.; N. A. Vigors, Esq., A.M., F.R.S., &c.; G. T. Lay, Esq.; E. T. Bennett, Esq., F.L.S.; R. Owen, Esq.; J. E. Gray, Esq., F.R.S.; the Rev. Dr. Buckland, F.R.S., &c.; and G. B. Sowerby, Esq. 4to. pp. 180. London, 1839. Bohn.

ILLUSTRATED with upwards of fifty finely coloured plates by Sowerby, and published under the authority of the Admiralty, this volume does honour to the press and fine arts of England. The great talent employed upon every branch of science which it embraces—in natural history, including mammalia, birds, fishes, crustacea, reptiles, and molluscan animals and their shells,—has made it as perfect as a work of the kind can be; and the beauty of the colouring in all these cases represents them to the very life. The rarity of many of the specimens adds much to the importance of these remarkable illustrations; and when we observe that the whole has received the supervision of the highly gifted commander of the expedition, Capt. F. W. Beechey, we have said enough to testify to the merits of the publication.

The mammalia are few in number, consisting of bats, mice, rats, moles, weasels, squirrels, bears, racoons, badgers, martins, ermines, skunks, otters, wolves, wolverenes, dogs, foxes, lynxes, opossums, seals, beavers, sea-horses, deer, hares, goats, sheep, antelopes, porcupines, puma or cougar, &c., all briefly described by Dr. Richardson. Then follows the ornithology by Mr. Vigors; and many of the birds are entirely new to science, whilst other species are rare in European museums: from which we copy only one curious note about the sooty albatross:—

* Of this gentleman, however, Captain Beechey complains in his Introduction; and says, after complimenting other scientific friends and contributors, "I wish I could with sincerity have included with the above-mentioned names that of Mr. J. E. Gray, who undertook to describe the shells; but the publication has suffered so much by delay, in consequence of his having been connected with it, that it is a matter of the greatest regret to me that I ever acceded to his offer to engage in it. This delay has, from various causes, been extended over a period of eight years; and I cannot, with justice or propriety, conceal from the government, the collectors, and especially from the contributors to the work, whose MSS. have been so long printed, that it has been occasioned entirely by Mr. Gray's failing to furnish his part in spite of every intimation from myself and others: promising us MSS. from time to time, and thereby keeping the department in his own hands, yet always disappointing the writer, until at length, from other causes, the publisher (Mr. Richter) fell into difficulties, and all the plates and stereotypes were sold by the assignees, and lost to the government."

"Mr. Collie informs us that a good many of these birds flew about the ship when off the coast of South America, from two hundred to five hundred miles from land, between the 40th and 50th degrees of south latitude. A specimen, from which the following description was taken, being hung by the bill before it was dead, had a small drop of tears collected in each eye."

The fishes have been assigned to Messrs. Lay and Bennett, and many of them are singular-looking monsters. Mr. Owen has undertaken the Crustacea, and no abler pen could be devoted to the subject. The Reptiles are by Mr. Gray, and occupy but a few pages; and the Mollusca by the same, lead to the conclusion, in which Dr. Buckland presents us with some geological details selected from the notes of Lieut. Belcher and Mr. Collie.

Altogether, we have to repeat that this is a rich and elegant contribution to science.

An Encyclopædia of Rural Sports. By D. P. Blaine. Part I. 8vo. pp. 128. London, 1839. Longman and Co.

FROM the first part, now before us, we should be inclined to say that this will be a very complete work of its class; and no class can be more popular. The compiler possesses great experience, and he has (as the address informs us) devoted more than seven years of assiduous labours to his task:—

"In tracing (he adds) rural sports to their origin, he has carried his researches back to the infancy of society, when man was compelled in self-defence to make war upon the wild animals by which he was surrounded; and he has described the simple methods, first in use, by which they were ensnared or overcome. Descending with the stream of time, he has developed the gradual progress of improvement in the construction of implements, and in the adoption of aggressive and defensive plans, until they have reached their present state of comparative excellence, bringing down the history of rural sports to the period when those pursuits, which were originally embraced for purposes of personal security, were converted into a means of recreation and amusement. In reference to modern times, the reader will find in the work a detailed description of the rural sports of Great Britain and Ireland, as well as of all foreign countries, comprehending those of racing, coursing, shooting, hunting, hawking, fishing, &c.: nor have the athletic exercises of the British Isles been omitted. It may be added, that the foreign sports, hitherto in a great measure untroubled ground, form a new and important feature of this work. A succinct but accurate sketch of the natural history, anatomical structure, physiological peculiarities, and geographical distribution of the chief animals of the chase, has been given. The natural history of the horse, also, embracing every variety in use among sportsmen."

This is a wide field, and will surely require the ten parts promised to embrace it all. The embellishments are nearly as numerous as the pages; this part contains no fewer than eighty-six clever wood-engravings, by Branstons, from drawings by Alken, T. Landseer, Dickes, and other able artists.

Beginning at the beginning, our author tells us all that is known touching the capture of animals for their flesh and skins, by the earliest Habitants of the earth. The sports of Asia and Africa are then rehearsed, and also those which assail the bison, bear, &c., in the new continent. In short, there are 430 notices

of as many varieties of sports and sporting, drawn from writings of all ages, and accompanied by judicious and interesting observations, historical, humorous, moral, and anecdotal.

Having spoken in the terms of high praise they deserve of the illustrations, we would observe that the artists must never sacrifice truth to art: as for example in "Curling," (No. 81, p. 118), the attitude of the curler is altogether wrong; no man could heave the heavy stone from the position in which it is here held, if indeed he could lift it to the point with his arm so extended. And again in a winter sport, and in the severest cold, why dress the sportsman in the costume of a summer wrestler or tumbler? The draughtsman never saw a bevy of curlers with their dreads, great-coats, thick shoes and crampers, glowing cheeks and blue noses, worsted mits and besoms; bawling, and shouting, and sweeping, and averring, and crackling along the ice. No Dutch painter could desire a finer group or subject for his pencil. Neither is the "Golf-scene" (No. 80, p. 117) quite to our mind, either in the attitude of the striker, or the parties running in the distance,—there is no running in the game, which is its great beauty as a healthful exercise;—and we notice these slight imperfections in the onset, because nothing can contribute more to the value of this work than to have the pictorial accessories accurate. Even in trifles the eye must not deceive the mind.

We hope, however, in alluding to such specks, to do nothing to derogate from the great merit of the work, which is full of information and amusement. No stories are more generally acceptable than the incidents and adventures connected with the chase; no reading more pleasing than well-digested descriptions in natural history. And Mr. Blaine has collected these in abundance from every quarter, so that his judgment, and diligence, and extensive research, are alike conspicuous throughout; whilst his original remarks rivet the whole together in a very compact and excellent form.

Memoirs of Charles Mathews.

[Second notice.]

THE fourth and concluding volume of Mr. Mathews's biography, will have its variety and interest best illustrated by a few further selections from its miscellaneous contents. It commences with the opening of the Adelphi, in concert with Mr. Yates, A.D. 1828, and concludes with the last sad act of all which ends man's eventful history—the death of poor Mathews at Plymouth, on his fifty-ninth birthday. We might have had him some years longer, even though the mind was of a nature to wear out and throw off its mortal coil; but he was strangely the sport of accidents throughout his life, and the effects of these upon his otherwise robust constitution hastened that period which is appointed to drop the curtain alike upon actor and spectator:—

"There seems (says his biographer) a fatality attending all my husband's movements from home. How many severe and dangerous accidents did he encounter in the course of his life! First in Ireland, in 1794, he was almost drowned (I might almost say *actually*, for he suffered all the pains of such a death), and was taken out of the water in a state of total insensibility. In 1801, a heavy platform fell upon him while acting, and he was taken off the stage as dead. In 1803, he was violently thrown from his horse at a review, and was

threatened with dangerous consequences ever after. In 1807, on a shooting party, his gun burst and shattered his hand, and he was many weeks after under a surgeon's care. In 1814, he was thrown out of his tilbury, and became lame for life! In 1817, another horse fell going down a steep hill in a tilbury, and Mr. Mathews was thrown over the animal's head, and severely cut and bruised. In 1827, while in a floating-bath at Brighton, the 'life-preserver' turned round and forced him upon his face, in which position he must have been suffocated, had not a gentleman witnessed the accident, and rescued him from his danger. In the year 1829, the roller of the drop-scene, on the Plymouth stage, fell upon his head while 'At Home' there, and he was taken up to all appearance dead, and remained many minutes in a state of insensibility. Four years after this, *precisely the same accident occurred in the Devonport theatre, and with the same results!* In 1833, while returning from an evening walk, a large dog ran between his legs and knocked him down with a violent shock. This accident again placed him under a surgeon's hands. A few weeks after, while recovering from this hurt, another dog threw him off a garden seat, and painfully injured his hand and wrist. But the last trial was the most severe since that of 1814."

The fatality here alluded to was his being exposed almost to death on Salisbury Plain.

A story, in which John Kemble acts a whimsical part, will now serve our purpose. He and Mathews had met on a visit to see the Hottentot Venus, and soon after "these friends had been dining together at Mr. Charles Kemble's house. Mr. John Kemble had taken much wine, and when the party broke up, Mr. Mathews determined to accompany the tragedian to his own door. Giving him his arm, therefore, they proceeded slowly to Mr. Kemble's house in Great Russell Street, Bloomsbury. The tragedian was full of talk, and 'very happy,' as it is called; and although the hour was late, his pressing invitation to his friend to enter the house with him, induced my husband to obey. It was evident that the man who opened the door was the only person who remained up in the establishment. Mr. Kemble went into his library, accompanied by Mr. Mathews, and desired the attendant to bring a tray; at the same time, with great formality, introducing him to the notice of his guest as the 'gentleman who did him the honour to take care of his wine,' &c. It was in vain that Mr. Mathews protested against further hospitality. Mr. Kemble was too much excited to have his spirit easily laid; and, surrounded as he was with books, he began a disquisition upon their authors, above all, his '*belov'd Shakespeare!*' on whom he discoursed most eloquently, after taking a volume from the shelf, and devoutly kissing the binding. At length the tray was brought in with wine and water, &c., and with it entered an enormous cat, decorated with a red collar and a bell. The appearance of his favourite cat called forth its master's most affectionate notice, and many relations of its extraordinary power of understanding, its devoted attachment to its master's person, &c., were detailed to Mr. Mathews. *Mustapha*, Mr. Kemble declared, had much of human feeling of the best kind in his composition; he described how he watched his return home, mourned his absence, &c., and grew maudlin in its praise. The animal seemed, indeed, happy in its master's presence; and it looked up in his face as it composedly lay down before him. Mr. Mathews mewed: Mr.

Kemble, turning round at this sound, which he believed to proceed from the cat, observed, 'There, my dear Mathews, do you hear that? Now that creature knows all I say of him, and is replying to it.' This amused my husband, and he repeated the experiment in all the varieties of feline intonation, mewing, purring, &c. Mr. Kemble at last said to him, in his slow and measured tones: 'Now, you don't know what he means by *that*, but I do. Mus!—Mus!—(on every reiteration of this affectionate diminutive, raising his voice to its most tragic expression of tenderness)—*umph!* My dear sir, that creature *knows* that it is beyond my usual time of sitting up, and he's uneasy! Mus! Mus!—' But Mus was sleepy and inattentive, and his master resumed his criticisms upon the different readings of Shakespeare, talked also of *Lope de Vega*, and was again interrupted by a mew, as he believed, from the dissatisfied Mus. 'What,' asked his fond master, looking down upon him, 'what is it you desire, my good friend?' (Mus, alias Mathews, mewed once more, in a more supplicating and more touching tone.) 'Well, well! I understand you: you want to go to bed. Well, I suppose I must indulge you.' Here Mr. Kemble deliberately arose, put down his book upon the table, with its face open at the page to which he had referred, took a measured pinch of snuff, and somewhat tottered to the door, which he with difficulty opened. He then awaited *Mustapha's* exit; but *Mustapha*, having no voice in the affair, preferred remaining where he was; and his master kindly reproached him with being a '*little capricious*' in first asking to go, and then preferring to stay.' With a smile and look at my husband of the gentlest indulgence towards his favourite's humour, he tottered back again to his chair, resumed his declamatory observations upon the relative powers of dramatic writers, and their essential requisites, till the troublesome *Mustapha* again renewed his mewing solicitations. Mr. Kemble once more stopped, and, looking again at the imaginary cause of his interruption with philosophic patience, asked,—'Well, Mus, what would you have?' Then, after another pause, turning to his guest, said: 'Now, my dear Mathews, you are fond of animals, and ought to know this one; he's a perfect character for you to study. Now, sir, *that cat* knows that I shall be ill to-morrow, and he's uneasy at my sitting up.' Then, benevolently looking at the cat, added, 'Umph! my dear Mus. I must beg your indulgence, my good friend; I really can *not* go to bed yet.' Mus whined his reply, and his master declared that the cat asked to be allowed to go away. On the door being a second time opened, after similar exertion on Mr. Kemble's part to effect this courtesy, and several grave chirpings in order to entice Mus. from the fireplace, the animal at length left the room. Mr. Kemble then returned, as before, to his seat, drank another glass of wine and water, and, just as he was comfortably re-established, the incorrigible Mus was heard in the passage again, in loud lament, and importunate demand for readmittance. 'Umph!' said Mr. Kemble, with another pinch of snuff,—'now, *that* animal, sir, is not happy, after all, away from me.' (Mus was louder than ever at this moment.) 'Why, what ails the creature? Surely there is more in this than we dream of, Mathews. You, who have studied such beings, ought to be able to explain.' Poor Mus. made another pathetic appeal for readmittance, and his master's heart was not made of flint. Mr.

Kemble apologised to his guest for these repeated interruptions, and managed once more to make his way to the door. After opening it, and waiting a minute for the re-entrance of his favourite, but not seeing it, he smiled at my husband with the same indulgent expression as before, and remarked, 'Now, would you believe it, Mathews, that *extraordinary* animal was affronted at not being let in again on his first appeal?—and now it is his humour not to come at all! Mus!—Mus!—*Mustapha!*—Mus!' But as no Mus. appeared, the door was closed with the same deliberation, and Mr. Kemble once more contrived to regain his chair, and recommenced his comments, quite unobservant of the almost hysterical fit of laughter to which my husband was by this time reduced, at the imposition he had so successfully, though, in the first place, so unintentionally, practised upon the credulity of his grave and unsuspecting friend. But it did not end here; for Mr. Mathews reiterated his imitations, and Mr. Kemble again remarked upon his favourite's peculiarities of temper, &c.—again went to the door,—again returned,—till even 'Mr. Midnight' (as some friends of ours christened Mr. Mathews, from his love of late hours) felt it time to retire, and leave Mr. Kemble, which he did as he saw him fall asleep, in the act of representing his idea of the scene of the sick king in 'Henry IV.,' with his pocket handkerchief spread over his head as a substitute for the characteristic drapery of the dying monarch."

From among the correspondence we select a characteristic letter from Mr. Trelawney (Byron's associate, the "Younger Son"), with whom Mr. Mathews formed an acquaintance during his last trip to America:—

"To Charles Mathews, Esq.

"Boston, Philadelphia, Dec. 18, 1834.

"Dear Mathews,—A thousand thanks for your kind letter. Words of kindness are doubly welcome in this cold climate amongst these icy people. For eight days I was bed-ridden like an old croon, and then my lamp of life was replenished and trimmed, and is now burning brightly. I am glad you have come to like Boston, particularly so that Mrs. Mathews has found friends, and that you are decently housed. This is no country for our delicate lady-kind, or for 'those that single may' with the refined and noble-minded of the Old World. This is an itinerant nation of traffickers,—a paradise for your hardihoodsman,—your artisan and artificer; and I am glad there is such a place of refuge for the wretched. As to me, I like to go as far as 'God has any ground,' to see what stuff 'im made of. returns here. Poor fellow! it seems as if every man of genius must be wedded to some monstrous folly. Mediocrity alone has common sense, and keeps the high road like a respectable gentlemanly, damned bore! Fanny Kemble (that was) will write to you. The morning you called on her, she had gone to her farm. The thermometer is now twenty-two degrees below freezing: my hands are freezing, and my faculties are frozen; but my heart has still vital warmth enough to assure you and Mrs. Mathews that I am truly obliged for your friendly inquiries after my health, and that it will be a real pleasure to shake hands with you in England, or any where else. Yours truly,

"ED. TRELAWNEY."

A letter from Mathews himself, for the meeting of the Covent Garden Theatrical Fete (1835), which his bad fitness prevented his from attending, gives a fair and gratifying idea

of the generous interest he took in the welfare of his professional brethren, and of the general warmth of his heart:—

"The day before it took place, he felt able to write; and a copy of the following letter has been furnished me for insertion by my husband's old and esteemed friend, Mr. Farley:—

"To the Committee of the Covent Garden Theatrical Fund.

"Crick Rectory, Daventry, April 7th, 1836.

"My dear Brethren,—I need not say how much I regret I cannot be with you to-morrow. You all know my sincerity, when I say my heart will be there. I vainly flattered myself that I should take you all by surprise, and present myself last week, 'armed at all points'; but, alas! I knew not my own weakness. As I am now so near you, I could not endure the thought that you should remain in utter ignorance of my situation,—or imagine I was indifferent, or neglecting you without good reason. The newspapers, too, I understand, have announced my arrival in London, &c. Therefore, as I thought it probable that, on the day of the anniversary dinner, inquiries might be made by the visitors of the stewards, I felt some little anxiety that you might briefly inform them of the cause of my absence, and say the information came from myself. On the 2d of October last, I sickened at New York; I felt blighted—my energies withered, my appetite destroyed, my spirits broken. I was not confined to my bed one day; but I was never in health one hour from the time of my arrival until I quitted America. In December I announced to my wife my conviction that I must fly or die. I could not play out my engagement at Philadelphia. I performed one night at Boston to a great house; all the tickets were sold for the second. I could not appear, and was confined nine days. When I came out again the thermometer was at twenty-four degrees below zero. I stood at my table one hour and a half, and the bolt of ice that entered my head, and extended to my feet, has in fact remained in my lungs until this present moment unthawed! From my landing, 30th September, till I fled, 16th February, I performed in all thirty-two nights. I had the satisfaction of concluding as I commenced at New York, to one of the greatest, if not the best house of the season. The Americans and I parted friends on the night, I believe now to have been the last upon any stage, and my spirits were cheered,—but I landed, 'poor old Mathews' indeed, at Liverpool, broken down (very feeble for eighty) with inflammation of the lungs, asthma, swelled dropsical-looking legs; and, in fact, at one time was given over. These are the facts. I have raffled against the predictions of the Liverpool physicians, and to the amazement of all who surround me; but I am robed of all energy, I am weak as an infant, my stock in trade, my hitherto leathern lungs, give strong indications of being under the influence of the Bostonian shaft of ice with which I was stricken in January. Mrs. Mathews who was compelled to leave me when I was pronounced out of danger, has been exceedingly herself, since her arrival in London; and herack me to-day, that she might not have communicated my exact situation to any of my old fellow-labourers in our great cause. I have moved as far as this by easy stages, where I've excellent advice, and shall remain for a few days. God bless you, dear fellows! if I could wheeled into the room, I do think I could do one song to-morrow; but perhaps I had better not try. Do one of you, good boys, write six lines on Thursday, and say

how all went off; directed as above (saying also Northamptonshire). Success—success—huzza! I am doubly hipped. Let all the stewards sign it. Farewell. Remember

"POOR 'OLD MATHEWS.'"

To the very last the struggle of the spirit against the flesh was maintained with extraordinary vigour. Mathews had been so accustomed to force pain and suffering to yield to his exertions both on and off the stage, that it seemed as if by mere will he could resist the approaches of death itself. But alas!

Do all we can,
Death is a man,
That never spareth none.

"His medical attendants had left him one morning exceedingly ill, and without hope of his leaving his bed for the day. Such was their anxiety that they shortly repeated their visit, and proceeded immediately, as a matter of course, to his bedroom. There he was to all appearance lying as they left him, with little more than his nightcap visible above the clothes. In short, there was nothing beneath them more than a stuffed mockery; for the man himself had arisen, shaved, washed, neatly dressed himself, and walked unassisted down stairs into the sitting-room, where he received his surprised visitors with a significant 'Aha!' The dear invalid had not been seen to smile for many days,—nay, weeks. On this evening he was tranquil, and asked to hear Mr. Wightwick and Charles play and sing to the guitar, reminding Mr. Wightwick of several Italian airs he had formerly heard him sing, and pressing to hear them again, alternately requiring Charles to amuse him in like manner, by the airs he loved best, ending with his great favourite 'Jenny Jones.' As Charles finished singing it, he observed, 'Ah! I think if I were dead, that song would restore me to life!'—"June 26th, he took his pencil as soon as he awoke, and wrote as follows:—'*Bulletin*—Thursday,' (it was Friday), '28th, my birthday. Fifty-nine!!! Calm and beautiful night:' adding verbally, '*you always forget my birthday!*' I told him he was mistaken, that his birthday was not till Sunday: and that 'this was only the 26th.' He considered a little, and then moved his head in acknowledgment of his mistake. In this manner, without much variation, he went on till Saturday the 27th. He awoke on that morning with a placid countenance; and in answer to my usual inquiries, said, at intervals, (as he had recently felt obliged to speak), 'Oh! I have had such beautiful visions!—such lovely, heavenly visions! I wish some imaginative poet, like Coleridge or Shelley, could hear what I have seen; what a beautiful account he would give of it! O such heavenly visions!' (May this not have been a foretaste of what he was soon to enjoy for ever?—I am happy in so believing.) I observed to him, how well he looked,—(he had put on, with great difficulty, a change of linen),—nay, that his appearance was youthful; and so fresh!—his complexion was glowing, and his eyes bright. I placed it all to the account of his 'beautiful' night and sweet dreams. I told him playfully, 'that he looked quite handsome.' To my surprise and pleasure, he replied, with a smile, imitating the tones and manner of John Kemble, 'Go, go, you little flatterer!' I approached him with tears of joy at this unwonted rally, saying, how happy he had made me by this cheerfulness; but the very act of moving quickly towards

him,—the slight agitation of the air occasioned by it affected his breathing, and he looked alarmed. I kissed his head, instead of his cheek therefore; and afterwards placed a looking-glass upon the bed, in order to shew him his improvement. He deliberately looked into it, and with affected vanity held up his hands and eyes in pretended admiration of his own beauty, and I was all delight and hope."

The final close: the last evening:—

"He appeared, indeed, much better, and only complained of his legs being cold. In the course of the evening I found my spasmodic complaint increasing, and fearing it might be observed by him and distress him, or incapacitate me from attending him, about twelve o'clock I approached him, and kissing his head, said, 'I want you to go to bed now.' He closed the Bible which he had been reading; and, looking up at me, without his usual request to be allowed to remain up longer, replied meekly, '*I am ready.*' About a quarter past twelve I had completed all the customary arrangements in silence, and by the physician's order diluted his night draught with water, and seen him drink it, when he gave me the kiss which said '*good night!*' and I withdrew to the other part of the room, divided by folding-doors, which, left ajar, afforded me the means of hearing the slightest sound or intimation that he wished my presence. For though he was uneasy during the whole day, if I was not continually with him, he had latterly, doubtless from humane consideration for me, finding my eyes always upon him during the night, declared he could not sleep unless my sofa was away from his view. His little favourite, Pop, who could never be removed from the side of the bed, unless by force, was always carried with me, lest his breathing should disturb his master's rest. I listened, as I was in the habit of doing, for some time at the open part of the door, until I ascertained that the dear sufferer was asleep, and then threw myself upon my sofa. On this night 'tired Nature' must have sunk for some minutes into a half-unconsciousness, for a sudden spring of the little animal towards the folding-doors, fearfully roused me to the hearing of an unusual sound in the next room. I instantly rushed forward, and as I reached the foot of the bed I missed the form I sought; he had fallen from the bed-chair, which always supported him, on to the side of the bed. I endeavoured to lift his head, which hung down, and replace him; but he was too heavy for me, even in the energy of my despair, to raise. O my dear, dear husband! I knew not how they were summoned, but I found the bed soon surrounded by his physicians and other pitying spectators of my agony, as I held the dear inanimate remains in my arms, till I was at length conscious that all hope was vain, and that my best and dearest friend was gone for ever! I was then led away (O the separation!), upon being assured by the kind physicians that the pang had been momentary. I believed what I was told, for every thing near him was as I left it; the hand-bell (which he would have sounded had he been previously conscious of a change) was unmoved; his smelling-bottle, Bible, all, all as I had placed them: the only indication of voluntary action was the position of a shawl which he always spread over his bosom when he lay back to rest. This shawl was found thrust under his waistcoat in a heap, next to his heart."

Again we repeat, "Ahs, poor Yorick!" He lies buried in St. Andrew's Church, Plymouth, where a suitable monument and inscription

* * * This ballad, first sung in public in 1837 by Charles, was written during a sojourn in Wales in 1836, when the prettiness of the air suggested the words."

point out the spot, and preserve his dying memory.

IRELAND.

[Fourth and concluding notice: continued from page 614.] WE must request our readers to turn to page 534, where we commenced our notice of several Irish works, and they will there find that Nos. 7, 8, and 9, still remain to be attended to by us. Nos. 7 and 8 relate to a miraculous medal, struck in honour of the immaculate conception of the Virgin.

The following is "An Historical Account of the Origin and Effects of the New Medal struck in honour of the Immaculate Conception of the ever Blessed Virgin, and generally known by the name of the Miraculous Medal."—"Towards the end of the year 1830, the Sister M——, novice in one of those communities at Paris which are devoted to the service of the poor, saw, whilst at prayer, a picture representing the Holy Virgin, such as she is usually represented under the title of the immaculate conception; that is, standing, and with hands outstretched. There issued from her hands, as if in bundles, rays of wonderful brightness; and among these rays she distinguished some more considerable than the rest, which fell upon a point of the globe that she saw also in the picture. At the same instant she heard a voice, saying, 'These rays are the symbol of the graces which Mary obtains for men, and that point of the globe upon which they flow more abundantly is France.' Around the picture she read the following invocation, written in characters of gold: 'O Mary, conceived without sin, pray for us, who have recourse to thee!' A few moments after this picture turned round, and upon the reverse she distinguished the letter M, surmounted by a small cross, and underneath the sacred hearts of Jesus and Mary. After the sister had attentively observed all this, the voice said to her, 'It is necessary to have a medal struck after this model, and the persons who shall wear it indulgenced [indulgencée], and who will make with piety that short prayer, shall enjoy the especial protection of the Mother of God.' She came on the next day to inform me of this vision, which I considered as the effect only of her imagination, and I remained satisfied with saying to her a few words on the true manner of honouring Mary; which is, by imitating her virtues as far as we are able, and that this is also the best means of securing her protection. She retired without disturbing herself, or occupying her mind further with the vision. Six or seven months after the same vision having returned, the sister thought that she ought again to inform me of it; but I did not attach more importance to it than at first, and I dismissed her as before. At length, after another interval of from six to seven months, she saw and heard the same things; but the voice added, that 'The Holy Virgin was not pleased that they were so neglectful of getting the medal struck.' On the last-mentioned occasion, without letting it appear, I did not fail to pay some attention to what I had heard, and particularly for fear of displeasing her whom the Catholic Church venerates as 'The refuge of sinners.' On the next day, always influenced by the Holy Spirit, it was, perhaps, only an illusion, and the effect of a de-

...thereupon take any further notice of it. Many weeks had passed away in the same manner, when I had occasion to see my friend the bishop; the conversation gave me an opportunity of relating all that had happened to the venerable prelate, who

said that he saw no inconvenience in having the medal struck, considering especially that it offered nothing opposed to the faith of the Church; but, on the contrary, that it was every way conformable to the piety of the faithful towards the Blessed Virgin: that it could not but contribute to make her honoured, and that he desired to have one of the first. From thenceforth I determined to get it struck. Some unexpected incidents, however, made me defer this project till the end of June 1832, at which time it was struck by Vachette (Quai des Orfèvres, No. 54 bis), according to the model above mentioned. We will here observe, that one day, as the sister was reflecting whether it would not be proper to put some words on the reverse of the medal, as there were on the other side, the voice said to her, that the two sacred hearts, the letter M, and the cross, spoke sufficiently to the Christian soul. As soon as the medal was struck, it was sought after and distributed, particularly among the religious Sisters of Charity, who had had some knowledge of its origin. In one of their houses at Paris, they gave a medal to each of the young females there brought up, and they inspired them with much confidence in the Holy Virgin. The cholera had just recommenced its ravages in the capital; the little sister of one of those children was attacked by it: diarrhoea, cramps, vomitings, &c., left no doubt of the danger of her illness. The superioress had so much confidence in the medal, that when they announced to her the state of this young girl, she suddenly exclaimed, 'Has not she a medal?' They hastened to inquire from her; she answered, that she had not: one was then given her, which she received with much piety, and in a very few moments afterwards she found herself cured. About the same time, there was written to us from the diocese of Meaux, that the application of the same medal had lately cured a woman, *enceinte*, and so dangerously attacked by the cholera, that there was no hope of saving her life. A few days after, she had a happy delivery, and the mother and her child are well. In the same place, there was also obtained by this medal the cure of a child, five years old, who had not been able to walk. After having consulted the most eminent physicians, and exhausted all human means, the disconsolate mother had recourse to the Holy Virgin. She put the medal on the child, and commenced a novena, and from the first day he was entirely cured of his infirmity. These facts being known in the environs, caused the medal to be more and more distributed. In many places the Sisters of Charity made use of it to obtain some sentiments of religion for poor sick persons who refused to confess themselves; several unexpected conversions were wrought, and caused a general desire and demand for the medal. It was soon spread through all the provinces, and even in several foreign kingdoms: in Switzerland, Piedmont, Spain, Belgium, England, in the Levant, and even in China. The number of these medals already distributed in different countries, amounts at present to above a million. Every one asks for them by the name of the 'Miraculous Medal,' or of the 'Medal that cures.' We have also learned with great edification, that this year (1835), particularly, a great number of Christian mothers have given it as a new-year's gift to their children; and the satisfaction with which they received them proves how precious and agreeable these pious gifts were to such young persons. In conclusion, we have letters about it from every quarter, and containing accounts the most consoling:

priests filled with the Spirit of God declare that they reanimate fervour in the towns as well as in the country; clergymen, held in the highest esteem for their learning and piety, and even prelates the most distinguished, say, 'That they have great confidence in the medal; that they consider it a means arranged by Providence to revive the faith, so sensibly weakened in our time.' Every where cures and conversions are obtained through them, which have all the appearance of miracles, as will be seen in this account. Among so many new and signal proofs of the special protection of the immaculate Mother of God, promised to those who will wear this medal, we have made choice of those instances only where the details have appeared the most certain, and the most calculated to edify."

We refrain from comment on the several statements with which we are furnished of the cures performed by this miraculous medal, and turn to No. 9, the last of the works on our list—a second edition of *Lady Chatterton's Rambles in the South of Ireland*. Having so recently welcomed the first edition of these pleasant volumes, we have now only to express our satisfaction at the convincing proof of the estimation in which they are held, by a reprint becoming so soon necessary.

We cannot, however, dismiss the subject of recent Irish works without commendation of Mrs. S. C. Hall's efforts to serve the sister tale by means of "Chambers's Journal," in which periodical a series of national tales have recently appeared from the pen of that amiable and accomplished lady, written in the best possible spirit. Religious topics have been carefully avoided, and the object Mrs. Hall appears to have had in view, is the praiseworthy one of infusing a better spirit, and a more active moral tone, among the peasantry of Ireland. Whatever may be the result of these cottage tales, we cannot too highly express our approbation of the spirit in which they are conceived, and we sincerely trust that they will forward the good work of producing what Lady Chatterton has discovered to be the mainspring of Ireland's unhappy state, namely, *common sense*, in that richly endowed island.

MISCELLANEOUS.

Practical Philosophy of the Muhammedan People, &c. A Translation of the Akhlāk-i-Jalālī, the most esteemed Ethical Work of Middle Asia, from the Persian of Fakir Jāny Muhammad Asiād. With References and Notes. By W. F. Thompson, Esq., B.C.S. Printed for the Oriental Translation Fund 8vo. pp. 496. London, 1839. Allen and Co.; Paris, Duprat.

FOR this valuable contribution to our knowledge of Asiatic religions, morals, opinions, feelings, legislation, and social and domestic manners, we are much indebted to the Oriental Translation Fund, and to the translator Mr. Thompson. It develops the principles of the Arabian Tales work out in practical life. The reverence for the Prophet, and the ceremonies with which it is demonstrated, the submission to rulers, and the fatalism attached to it; the various states of domesticity: with their duties to wives, concubines, sons, servants, and slaves; in short, every circumstance of individual life, from the highest to the commonest acts of politeness and decent behaviour, are laid down and described with singular precision. From such a work we can discern what the people must be in their relations. Nor are its philosophical positions

less worthy of our particular regard and consideration.

The Fatalist; or, the Fortunes of Godolphin. By an Essayist on the Passions. 3 vols. 12mo. London, 1839. Edwards.

THE scene of this novel is laid in Cornwall, and some diversity is imparted to it by the introduction of miners and mining affairs. For the rest, a villain in possession of great estates, a wronged heir of opposite qualities, a puritanical and scoundrelly land agent, two heroines to match the heroes, an eccentric schemer, his troublesome wife, and her brother, a fierce navy captain, fill up the principal personages in the drama; which, with gipsies, almost supernatural appearances, descriptions of scenery, &c. &c. &c., are compounded altogether into a very readable story. The lower people speak dialects which we neither recognise as Cornish, Irish, Scottish, Yorkshire, nor Somerset; and this, with other points, induces us to suppose that the author is young in the trade. Not so young, however, as to be unable to coin words; as per example: "I would rather follow my daughter to the grave, than behold her so infamous herself!" We have only to repeat, that *The Fatalist* possesses merit enough for its class to induce novel-readers to allow it the usual quantity of their idle time.

Thoughts on what has been called the Sensibility of the Imagination, with Practical Illustrations from the Lives of Petrarch, Sterne, and Byron. And on other Subjects. Pp. 180. London, 1839. Simpkin, Marshall, and Co.

WE have read this volume with much interest, though there are many opinions maintained to which we cannot subscribe. Yet, as a whole, it treats of subjects in which the lovers of literature are deeply concerned; and often in an original and impressive manner.

The Carthusian. Nos. V. and VI. London, 1839. Walker.

THIS is the concluding part of the periodical under this title which has issued from the Charter-House School, and which, as our former notices testified, does no discredit to the taste, talents, and learning, of her *alumni*.

The New Navy List for the year 1839. (London, Smith, Elder, and Co.)—Arranged on the plan of the "New Army List" of the same publishers, which has met with such general approbation in the army; this list will probably be as serviceable to the navy.

General History of Civilization in Europe, by M. Guizot.—*The Conduct of the Understanding,* by John Locke.—In a cheap form and well printed, these works are a fair continuation of the "People's Editions."

A Guide down the Danube from Paris to Marseille, &c. &c. by R. J. Claridge, Esq. A new edition, pp. 292. (London, Westley; Madden and Co. Paris, Galligani.)—Most of our autumn tourists have long departed for their pleasant destinations. To those who are yet for a trip down the Danube, we recommend this useful companion.

Joseph Bentley's Plans Terrestrial Globe, &c. (Manchester, Banks and Co.)—For geographical learners, and for reference in geographical matters, this is a very useful publication. Two maps of the northern and southern hemispheres, moving round under brass meridians, are so disposed as to render all the common questions in geography easy to be ascertained and understood; and a copious definition of scientific terms, and the usual quantum of topographical, historical, commercial, &c. information (130 pages, 4to. double columns), render the plan conveniently equivalent to the use of the terrestrial globe with its appended volume of explanations.

Black's Economical Tourist:—Scotland. Pp. 40. (Edinburgh, A. and C. Black.)—Tourists' time is, we fear, over for this season: when the next arrives (and as time flies it will soon come), this little book, with its two maps, will be found a serviceable guide.

Manchester as it is. 12mo. pp. 244. (Manchester, Love and Barton; London, Orr and Co., Ball, Arnold, and Co.)—A concise and useful guide to the manufacturing metropolis.

Education for the People, by Mrs. Hippeley Tuckfield. Pp. 272. (London, Taylor and Walton.)—With a good many sound, practical hints, and a tolerable share of peculiarity and whimsiness, this volume impresses the writer's opinions and observations upon "pastoral teaching," "village teaching," "teaching teachers," and

"instruction of the deaf and dumb." The gist of the whole is to inculcate the acknowledged principle of making the pupils understand their lessons instead of repeating them by rote.

A Class-Book for Jewish Youth of both Sexes, &c., by H. A. Henry, Master of the Jews' Free School. Pp. 126.—It is stated that no elementary work of this sort has hitherto been prepared for the tuition of Jewish children. If so, the present school-book was a desideratum. It contains an abridged sketch of the Bible, notices of the patriarchs, prophets, and rulers of Israel; a detail of fasts, festivals, ceremonies, and customs (curious enough for the general reader); and some religious and moral inculcations deduced from Scripture, attention to which will not hurt any Hebrew, young or old, in London or elsewhere.

Life of Scott. Vol. VII. (Edinburgh, Cadell.)—A picturesque portrait of the poet's second daughter, Anne, his faithful companion and affectionate nurse, imparts an interest to this volume of Scott's interesting biography. A view of his strangely miscellaneous Study, whose walls are hung with all sorts of antiquities, from the Highlands to the South Seas, is the vignette.

Recreations on Geology, by Rosina M. Zornlin. Pp. 224. (London, J. W. Parker.)—As far as it goes, a pleasing and well-written little work, well deserving of the name of "Recreations" given to it. The young geologist will read it with instruction and advantage.

Petres Education, by S. G. Goodrich, author of "Peter Parley's Tales." 8vo. pp. 111. (London, W. Smith.)—An importation from America, and containing many sensible observations, but with nothing so peculiar to the great question which divides England, as to induce us to enter upon its details.

Essay on the Verification of Homer and his Dignities, &c., by James M'ivor Scholar of Trinity College. 8vo. pp. 135. (Dublin, W. Curry.)—Much classic diligence and very creditable erudition are displayed in this essay, which bravely stands up for the mysterious digamma, in opposition to Professor Dunbar and M. Spitzner; but we fear that nothing we could say on the subject would render it otherwise than dry to any portion of our readers. We shall, therefore, only refer to the work.

Documents and Dates of Modern Discoveries in the Nervous System. 8vo. pp. 172. (London, Churchill.) In our last Gazette we noticed Mr. Shaw's publication connected with this very important subject, and we have now much satisfaction in pointing attention to another volume, which presents us with a valuable and interesting précis of the various discoveries that have rewarded the labours of anatomists and physiologists in this vital branch of human inquiry.

ORIGINAL CORRESPONDENCE.

THE ANTARCTIC EXPEDITION.

To the Editor of the Literary Gazette.

Ship Hotel, Charing Cross, 4th October, 1839.

SIR,—In your paper of the 14th ultimo you noticed, in a very kind manner, the sailing of the Antarctic Expedition under Captain Ross, and also the names of the officers belonging to them. Amongst them was mine—Henry Mapleton, master of the *Erebus*; but as I have not gone out in her I shall feel obliged to you by stating in your widely spread journal the cause.

I received my flattering appointment to her while serving on board H. M. S. *Snake* in the West Indies, and unfortunately only two days previous we captured a slave vessel with the small-pox raging. We were placed in fifty days' quarantine. Immediately I could I left her and proceeded to England, where I arrived last Sunday evening, three days too late, the Terror having passed down the Channel on the Friday. My vacancy was not filled up until the day previous to her sailing. Having served many years in her majesty's service, and knowing most of my friends read your valuable paper, I shall feel much obliged by your noticing the cause of my not going out in her.

Even under these circumstances I have to apologise for the trouble I give you, and remain, yours, &c.,

HENRY MAPLETON, Master R.N.*

* We insert the whole of this letter, though marked "private," with some gratification, as affording a fine example of that emulous and intrepid spirit which animates the Britons engaged in such undertakings. The writer's regrets are very natural to such minds; and to this particular instance we may well apply the language of Maro:—

"In freta dum fluvii current, dum montibus umbrae
Lustrant convexa, potius dum sidera pascit,
Semper honos, nonneque tuum, laudesque manebunt!"
—M. L. G.

"ONE SHILLING" AND "SIXPENCE."

To the Editor of the Literary Gazette.

SIR,—A young friend has just brought your paper of the 24th, containing the letter "I. S.," stating that it was considered necessary to place "one shilling" and "sixpence" on silver coinage, to counteract the evil of penny pieces being gilded, and passed as sovereigns.

If this really was the motive (I am not inclined to consider it a *reason*) for the government to ticket the coins with "one shilling" and "sixpence," it is a pity that they had called the attention of the suffering public to the change, and to the cause of the alteration, by awakening their vigilance to renounce the differences of the gold and silver types, rendered the attempt at deception more difficult; and thus, in the language of the *scholar* "to have taken the gold off the gingerbread."

As your correspondent does not state that speaks "from authority," I suppose him, myself, merely to argue from appearances; I am, therefore, the more sceptical as to motive for changing the type of the silver coin: I observe that the sovereign of Queen Victoria has the royal arms within two wreaths and the shield being surmounted with the crown; the general aspect of the coin becomes similar to the reverse of the shilling. Obliterate the words "one shilling," which is easily done, and, in the common course of currency, persons would notice the difference. To make a decided contrast in the size of coins, by extending the surface of the silver and contracting the size of the gold, and casting the bust of the sovereign altogether the silver, I would have suggested, as a chance of attaining the object stated by "I. S."

But, supposing (which I altogether doubt that this was the motive with government) where was its utility, unless they called in many millions of shillings and sixpences at the great recoinage of 1816, and the subsequent coinages down to 1830? While continue in circulation, will the gilders' materials for the villainous purposes state "I. S.?" Every person must regret the depreciation of the currency; but, whether metal or paper, it is an evil which has existed from the earliest periods of society. Previous coining, even in the days of barter, were false weights and false measures. See prophet Amos, chapter viii. verse 5; and the golden days of coining, we find false money. Mr. Miles shewed me a false tetradrachm Athens, contemporary probably with Pericles; I think it came out of the Earl of Aberdeen collection; and I have before me contemporary false Greek coins of Naples, Velia, and under the Great, as well as mint shillings, George I. and II., which are gilt, and had sceptres added between the shields, saying that they have been intended as forgeries of guineas; and by them lays a farthing William IV., 1833—which, remember, has tannia on the reverse, gilt—and which a friend of mine took in a payment of 8l. as a sovereign in London, last year. Possibly, Mr. Editor, you are old enough to remember gold and silver shilling pieces circulating in England, and the coiners (outside the Mint) imitated the inferior metal, without any assistance from legal currency? I sincerely wish that your correspondent, "I. S.," may, in his benevolent device, some plan to put down the falsification of the coinage, and he will deserve to have a statue erected in gold; waiting which, afraid, that it will only be plucked by our individual vigilance, and an earnest exercise of

yes and ears, by looking at the coin, and ringing it on our counters, and not by the real 'mon Pure Blason of "one shilling" and sixpence." R. S.
Cork, 26th August, 1836.

ARTS AND SCIENCES.

BOTANICAL SOCIETY.

EPT. 6th.—Mr. J. Reynolds in the chair. Read, a paper by Dr. Lhotsky, 'On a new method of introducing Palms of large Size into hothouses.' Several different species had been selected for the experiment, viz. *Cocos nucifera*, *Glauca guineensis* (Dende), *Attalea fontana* (Ficus), *Attalea* (Tato), &c. Some of the specimens were twenty feet in length, and 10 lbs. in weight. They were all dug up with considerable portion of the roots, from the roots of which the earth was not shaken. The stem full-grown leaves were chopped off, and only the recent ones preserved, the rudiments being seared with a red-hot iron and pressed with a compound of hot pitch and tar. Around the stem cotton was laid, and over this a thick layer of flax. The trees thus prepared were packed in boxes, the bottoms of which were perforated with large holes; were inspected occasionally, and their roots sprinkled with a little water once a week. By these means a degree of vegetation was kept up in them during the voyage from Bahia to Trieste, the root of which, in consequence of detention at Gibraltar, was extended to seven months. Notwithstanding this lengthened unnatural confinement, the trees when replanted put forth roots vigorously. After the reading of the paper, in the course of conversation, it was stated that the *Silpa pernata* had been found a year in a wild state on Rumbles Moor, near Ilkley, Yorkshire.

Oct. 4th. Dr. W. H. Willshire in the chair. Donations of plants from the Botanical Society of Edinburgh were announced. Read, a paper by Mr. Buckman, 'On the Geographical Distribution of the Plants of Cheltenham,' containing also a list of the plants to be found in its locality.

LITERARY AND LEARNED.

ASIATIC SOCIETY.

It is interesting to the philosopher, and useful to the statesman, to consider attentively the remarkable changes which are rapidly taking place in many parts of Asia, which must raise a powerful influence over the civilization and happiness of all the people in that quarter of the globe, and which must ultimately alter the relations which have hitherto existed between it and Europe. A society instituted as the Royal Asiatic Society of Great Britain is constituted, must be eminently fitted to investigate the causes, and to anticipate the probable effects, of such changes. As Alexander Johnston, the chairman of the Committee of Correspondence of this Society, in his report of the annual proceedings of the Committee, which he made to the Society at its anniversary meeting in 1836, pointed out to the members of the Society the different causes which were operating these changes, the sources from which the Society could derive such information as they may require on the subject, and the manner in which the British government in India may facilitate inquiries, we have pleasure in being enabled, by the recent publication of this report in the "Proceedings" of the Society, to lay before the public the following extracts from it: considering them to be of considerable interest to the public at the present moment, owing to the

very peculiar state of the relations of Great Britain with Turkey, Egypt, Arabia, Afghanistan, and China.

"It must be obvious to all who have observed with attention the events which have occurred within the last sixteen months, in five very large divisions of Asia, that important changes are about to take place in the situation, opinions, feelings, and manners, of the people of the different countries in each of those divisions. It has, therefore, been the duty of the Committee of Correspondence, during the last year, to collect such information relative to the ancient and present state of those countries, as may be useful in regulating the political and commercial relations between Great Britain and each of them in such a manner as to render the different changes, which are taking place in them, equally beneficial to Asia and to Europe. The countries to which the Committee have directed their attention, are, first, those which are situated to the north and south of a line drawn from the eastern shores of the Euxine to the mouth of the river Amur; second, those which are situated in Asia Minor; third, those which are situated in the peninsula of Arabia; fourth, those which are situated on the different parts of the coasts of Arabia, Persia, and India, into which slaves have been imported for many ages from the eastern coast of Africa; fifth, those which are situated along the different highlands which extend from the Himalaya Mountains north, to Cape Comorin south. The first division of Asia to which they have directed their inquiries comprehends the several countries situated between the Euxine and the Caspian, between the Caspian and the Lake Aral, on both sides of the river Oxus, and on both sides of the river Amur. The country situated between the Euxine and the Caspian, extending from north to south, about 400 miles, is bounded on the north by the plains of Cuban Tartary, on the south by the river Phasis and Cyrus, on the west by the Euxine, on the east by the Caspian, and is intersected from west to east by the different branches of the Caucasus, which form a natural bulwark between the countries on the north, and those on the south of that great range of mountains, through which there are two openings, celebrated in history by the names of the Iberian and Caspian passes; the peculiar position of this country has rendered it important at all times, and renders it particularly important at the present time, as well in a commercial as in a political point of view: in a commercial, because of the short distance, by the Euxine sea of its western ports from Odessa, the mouth of the Danube, Constantinople, and the Mediterranean, and of the still shorter distance by the Caspian sea of its eastern ports from Persia, and all the different provinces on the banks of the river Oxus; in a political, because of the influence which the possession of it must give Russia over the people of Asia Minor, Persia, and of both banks of the Euphrates and Tigris. The importance attached by the ancients to the success of the Argonautic expedition, however enveloped in fable, shews the anxiety which traders had, even in the most remote ages, to trade with this part of Asia; the traffic which, within the last few years, has been carried on between Great Britain and Persia, through Trebizond, and the efforts which are making by British merchants, notwithstanding the many obstacles which they have encountered, to open a regular trade with Circassia, shew the advantages which it now offers for trade. The sanguinary wars which were

waged between the northern barbarians and the Romans, in early ages, those which occurred between the Persians and the Greek empire, in the seventh and eighth centuries, and the contest which is now carrying on between the Russians and Circassians, prove the value which has always been and still is attached to it in a military point of view. The countries which extend from the eastern shores of the Caspian Sea to the Aral Lake, and those which lie along the banks of the Oxus, were formerly an object of interest to Europe, from their being the countries through which passed the trade which was carried on between Europe on the one side, and Central Asia, China, and India on the other; they are, at present, an object of equal interest to Europe, from their being the countries to which Russia will, probably, be led to extend her arms, and Great Britain her trade, by the common course of events, and from their also being the countries through which Russia is expected to threaten, if not to attack, the influence and the possessions of Great Britain in India. The embassy and military expedition, sent some years ago to the Khan of Khiva, and the naval port established on the south-eastern shore of the Caspian by Russia, the travels of Lieut. Burnes through many parts of Central Asia, the political and commercial relations established by Great Britain with Cabul, the countries on the Oxus, and the facilities which are afforded by the improvement in steam navigation to those who wish to navigate the Oxus, must daily increase the intercourse between Great Britain and Russia on the one side, and the inhabitants of both banks of the Oxus and all Central Asia on the other, and must gradually introduce amongst them the arts, science, and knowledge of Europe. The large tract of country which extends along both banks of the river Amur, from its source, till it empties itself into the sea of Okhotsk, that, on the north, belonging to the Russians, that on the south to the Chinese, though little known in ancient times, has been an object of interest to Russia ever since the reign of Catherine II., in consequence of the Amur being the only great river in the neighbourhood of Siberia, and the other possessions of Russia in the north-eastern part of Asia, which flows into the sea in a south-eastern direction, and consequently the only great river along which the produce of Russian Asia can be with any certainty conveyed to the sea. This circumstance led Catherine, in 1789, to fix on Oud, not far from the mouth of the Amur, and a port about two hundred versts to the south of Oud, as two places of trade, and to form the plan of sending six ships from the Baltic to Kamtschatka, to co-operate with a powerful expedition that was to go down the Amur, and take possession of both its banks to its mouth; of opening by this way a trade with Japan, China, and India; and of having in those cases a naval force sufficient to make her authority respected by the inhabitants of the neighbouring countries. Measures are said to have been recently adopted by the Russian government for carrying this plan into effect: if they succeed, they must produce a great and a favourable change; must facilitate the formation of commercial relations between Russia on the one side, and Japan and the northern parts of China on the other; must familiarise the people of Japan and China with European intercourse, and with European manufactures, arts, and science, and gradually alter their situation, opinions, feelings, and manners. From all these circumstances, the Committee conceive that Russia and Great Britain, each nation following up what it conceives to

be its own interest, must, either by extending their territories and political influence, by opening markets and outlets for their produce and manufacture, or by diffusing a knowledge of the Christian religion and European arts and sciences, rapidly produce a great and beneficial change in the situation, opinions, feelings, and manners, of the people of all the countries included in the first division of Asia, to which the Committee have directed their attention. The second division of Asia to which the Committee have directed their inquiries, is Asia Minor: the greatest part of this division is under the government and influence of the Turks, the descendants of a race of people who, in the early period of their history, inhabited the range of mountains called the Altay Mountains, which are equidistant from the Euxine and the Chinese Seas, the Polar and the Indian Ocean, and which were even then known to be rich in those metals that are equally useful in peace and war; this people occupied that particular portion of the mountains which produced iron in great abundance, and were themselves the principal collectors and forgers of that metal. It is necessary, in order to form some judgment of the nature of the changes which are likely to occur amongst the inhabitants of this division of Asia, to inquire into the history and character of the Turks, and into the nature of the moral and political changes which are daily occurring amongst them; the Committee have, therefore, considered the history of the Turks under four heads:—1st. That which relates to their original departure from the Altay Mountains, and their subsequent conquest of and settlement in Armenia, to which country they gave the name of Turkomania in the seventh century. 2d. That which relates to their conquest of Persia, and the extinction of the Caliph of Bagdad in the eighth century. 3d. That which relates to the reunion of their power, after it had been for some time divided into small states, under Othman, and the establishment of their empire at Bursa, in Carmania, in the thirteenth century. 4th. That which relates to their conquest of Constantinople about the middle of the fifteenth century, and their becoming a European as well as an Asiatic power, by acquiring an interest, and taking a prominent part, in the politics of Europe. In all the different periods of their history, their courage, their activity, their temperance, and their religious enthusiasm, shewed the energy of their character, and enabled them to produce a material change in the internal situation, and in the circumstances, of the different people over whom they from time to time established their authority. The Turks, from being masters of Constantinople and the Hellespont, of the sea of Marmora, of the Bosphorus, and of the countries extending along the southern shore of the Black Sea, from the entrance of the Bosphorus to Trebizond, of the whole of Asia Minor, and of Mosul, Bagdad, and Busora, must have a great influence over all the different classes of people in Asia Minor. Any moral and political change in the opinions, feelings, manners, and usages, of the Turks, must be followed by a change in the opinions, feelings, manners, and usages, of those people. The constant intercourse between the Turks and the English on the one side, and between the Turks and the Russians on the other; the knowledge and observance of the European system of military discipline which the present Sultan Mahmoud has introduced into his army and navy; the improved education which he has given to his military and naval officers; the scientific

machinery which he has adopted in his arsenals; the advantage and the power which he derives from the application of steam, both at sea and on land; the use which he makes of printing and lithography; the change which he is preparing in the minds of his people, through the influence of the press; the plan which he has adopted of having resident ambassadors with numerous suites at the courts of England and France; the encouragement which he holds out to the members of these embassies to acquire a knowledge of the nature, object, and effects of the different free institutions which prevail amongst the English and the French, and of the liberal and enlightened opinions upon which their political and commercial systems are founded; the steps which he has taken to abolish monopolies throughout his country; the regulations which he has made for protecting his subjects from the ravages of the plague; the reforms by which he is eradicating the corruption which had got into the different departments of his government; the treaty of commerce which he has concluded with Great Britain; the pains which were taken by his ambassador, Redschid Pasha,* when he was on his former embassy in England, to become acquainted with every institution which could be useful to his countrymen; the manner in which the pasha was elected a member of the Mechanics' Institution in London; the circumstance which led the members of the Royal Asiatic Society to propose Sultan Mahmoud to be an honorary member of their Society; all prove the enlightened principles by which he regulates his conduct,—the change which has already taken place in the opinions, feelings, manners, and usages of the Turks, and that which may soon be expected to take place in the opinions, feelings, manners, and usages of all the people of Asia, who are under the authority, or within the influence, of the Turkish government. The third division of Asia to which the Committee have directed their inquiries is Arabia, a country which extends north and south, from Belis on the Euphrates, to the Straits of Babel-Mandeb, a distance of 1500 miles. The breadth of this country, taking it from Mocha on the Arabian, to Muscat on the Persian Gulf, may be estimated at 1000 miles. The interior is described as high land, a space between the high land and the Arabian and Persian Gulfs, and Indian Ocean, as comparatively flat. Arabia is generally divided into six great provinces:—those of Bassein and Oman, on the Persian Gulf, those of Hadramant and Yemen on the Indian Sea, that of Hejaz on the Arabian Gulf, and that of Nejd, which contains all the high land in the interior. The extent in geographical miles is considered to be about four times that of either France or Germany; the population is often estimated at between eight and nine millions of people. By the history of this people, from the time of Abraham to the present period, it appears that their general habits, when not excited by any particular religious, moral, or political motive, have always been the same as those exhibited in the present day by the Bedouin Arabs. These habits, however, seem always to have been liable to be rapidly changed by different events. The Arabs, under Mahomed, excited by a desire of being admitted into his paradise,

and by a conviction that their lives depended upon fate, became great warriors, and extended their conquests in a little more than sixty years, from the confines of China, east, to Cordova and Seville, west; and from Teakoue, north, to Abyssinia, south. When their power of conquest was checked, the same people who had been the greatest of conquerors became the most distinguished and zealous patrons of every branch of literature and science, under the kalifs of Bagdad, in Asia; under those of Fes of Morocco, in Africa; and under those of Cordova and Seville, in Spain. After their love of science and literature was extinct, they distinguished themselves as enterprising navigators and traders in the Indian sea; and still continue to carry on a very considerable portion of trade in those seas. The Committee, considering the influence which the Turks must have upon those who inhabit the north part of Arabia, that which the Pasha of Egypt must have upon those who inhabit the eastern shores of the Arabian Gulf and the whole southern coast of Arabia, and that which the constant communication between Europe and India, through the Arabian and Persian Gulfs, must have upon the people in the neighbourhood of those seas, feel themselves authorised to conclude that a great change must soon take place in the opinions, manners, and feelings, of all the people of Arabia."*

(To be continued.)

FINE ARTS.

On Academies of Art (more particularly the Royal Academy), and their Pernicious Effect on the Genius of Europe. By B. R. Haydon, Historical Painter. Pp. 44. London, 1839. Hooper.

MR. HAYDON'S hostility to academies has long been well known. Schools of art he strongly recommends; but he maintains that academies have at all times and in all countries been highly pernicious. The pamphlet under our notice appears to have been one of a series of lectures delivered at Manchester.

"In Greece," Mr. Haydon observes, "there were no academies of art, in the modern sense; all knowledge was imparted in schools, of which some great master was the director and head, as the great Italian masters were. A royal academy of art, composed of a limited number, electing each other, responsible to no one, unacknowledged by the laws, yet claiming their protection, and based on a constitution purely despotic in principle, in a country boasting of its constitutional rights—asserting itself to be a private body when just reform is asked, and claiming the right of a public body when there is an opportunity to share in public advantages!—affecting a paternal love for genius, and taking advantage of its rank in the state to impede the progress of talent by every ramification of artifice—making tools of the body of artists to increase the splendour of their annual display, which adds to their fund to pension their own members; and yet refusing the men who thus contribute to their influence, without any of their profits, the simple favour of fitting their works to be properly seen in one light by the public, after having been painted in another,—is a species of institution to advance high art, sound taste, or general knowledge of design, which the Marathonian Greeks would have considered most

* Sir Alexander Johnston stated to the Society, that in the frequent communications which he had with Redschid Pasha, while he was in England, respecting the history of the Turks, his excellency had, with the most enlightened views, promised to procure for the Society every description of information which they may require; and to advise the sultan to send the Society copies of the different works upon the subject in the Libraries of Constantinople, Adrianople, and Bursa."

* Sir Alexander has stated to the Society, that the result, when published, of the very able and scientific survey which has been made by Commodore Haines and his officers, will afford the public very late and very interesting information relative to the different places on the southern coast of Arabia."

certainly unqualified for such purposes; nor would the democracies of antiquity have endured it for a day."

It was not until after the death of the great masters — of Raphael, of Titian, of Giorgioni, of Buonarroti — that academies were established in any part of Europe, and by those academies no distinguished artist has ever been produced. Mr. Haydon proceeds to describe the personal intrigues by which he contends that the Royal Academy of this country has, at various periods, been disgraced; and concludes by expressing his confident hope that that body will be either abolished or reformed, and that "a feeling is generating, a taste spreading, which in the end must beat down all opposition, and render doubts of our genius in 'high art' absurd." In this last point, at least, we perfectly concur with him.

NEW VEHICLE FOR COLOURS.

A VEHICLE or medium for painting, which will render the colours permanent, has long been a desideratum in the arts. The "Polytechnic Journal" announces the recent discovery of a medium, "which will mix readily with the colours, flow freely in the pencil, dry firmly in a few hours, and preserve its character after being exposed to the most intense heat, or subjected to the action of the strongest acid: it is of itself perfectly transparent and inodorous, and in using it the painter has no need of varnish, oil, or any other fluid, which can possibly affect the beauty of the tints, or endanger the durability of the work." It appears that some further improvements have been suggested in the mode of preparing this vehicle. The inventor very liberally intimates his intention of publishing his process as soon as those improvements are completed.

D. Roberts, Esq. — Laden with artistical spoils of the East, Mr. Roberts has returned to his native land after an absence of nearly a year, spent in travelling through Egypt and Syria, &c. We have been indulged and gratified by a view of his numerous drawings; and may truly say, that such a treat is not often enjoyed. Of his talents and power we need not speak; for the public, and especially the best judges, have long appreciated their eminent value. It is only needful, therefore, in order to afford some idea of the effect of their application in this instance, to notice that they have been employed upon the most remarkable objects and interesting scenery of these ancient and sacred countries. Not to mention the glorious antiquities of Egypt, her no less glorious river, and her splendid mosques;* we may tell of pictures of the Holy Land, of the wild and picturesque Mount Sinai, of Horeb, of Jerusalem, of many spots to which the Christian and Jewish world turn with the deepest affection and veneration; and when we add to these the majestic ruins of Baalbec, the almost unapproachable and dangerous remains of Petra, the desert, the vast Christian convent with its small train of monks, the daring Arab, the caravan, the caravanserai, we have merely hinted at a noble series of subjects never before so beautifully and accurately represented by the skill of the pencil. In one of the Syrian ruins we were surprised to find Egyptian hiero-

glyphs, presenting the names of very early kings! Will this connect with the exode of the Israelites; or throw a light upon the Shepherd rule? We know not; but we state the fact as a proof of the artist's attention to the details, as well as to the grand and general features of the subjects, of which he has made so delightful a collection.

NEW PUBLICATIONS.

The Duke of Wellington writing his Despatches: a Scene in the Peninsular War. Painted and Engraved by John Burnet, F.R.S. Hodgson and Graves.

It is certainly a very extraordinary fact, when the long, and eventful, and glorious military career of the Duke of Wellington, and the innumerable subjects of graphic illustration which that career must have furnished, are considered, that to mere portrait have the efforts of our artists with reference to that illustrious individual been hitherto limited. To the best of our recollection, Mr. Burnet is entitled to the praise of being the first who, retaining all the peculiar qualities of portrait, has nevertheless represented the hero in a situation, and under circumstances, which forcibly exhibit his character and habits. In the middle of the night, when all his gallant comrades in arms are sunk in slumber, the ever vigilant Duke has ascended, without any attendants but his orderlies, to an elevated spot, where he may at the break of day reconnoitre the position of the enemy. At the moment chosen by Mr. Burnet, he is writing, by the light of a fire of fagots, a despatch, which a Spanish messenger is waiting to convey on his mule to some distant post. The abstraction of the great warrior's countenance is finely expressed, and the way in which the light shoots from below, beades its novelty, is admirably suited to shew his manly and intellectual features to advantage. Mr. Burnet has very judiciously represented His Grace in the prime of life, with form erect, with unbleached locks, in every way gratified and prepared to execute the mighty task intrusted to him. In the distance is a convent in flames, which, while it indicates one of the horrors of war, contributes to the singular but powerful and masterly effect of light thrown over the whole composition. Did Mr. Burnet possess the divided merit of being either the painter or the engraver, it would be great; how much more so, when he unites both characters in his own person!

Lady Seymour, Queen of Beauty, as she appeared at the Tournament. Bouvier del. M^rLean.

A LOVELY being! Well worth breaking a real lance for! We will venture to say, that by far the most dangerous wounds that occurred during the whole of the chivalrous festival at Eglintoun were inflicted by the bright eyes of the ladies. But then, again, they are skilful leeches.

A Practical Treatise on Drawing, and on Painting in Water-Colours. By G. F. Phillips. London, 1839. Baily and Co.

In our notices of works of art we have frequently spoken of Mr. Phillips's water-colour drawings with the praise which they deserve. It is no fault of his that he has been unable to add much to the information already in possession of the public, with respect to the subject on which he here treats. But his principal object, as stated in his preface, is to furnish that information "at a price within the reach of all classes of society."

Architectura Domestica. Von A. de Chateauf. Ackermann and Co.

EIGHTEEN plates, beautifully engraved in outline by T. T. Burry, of the exteriors and interiors of private residences, either erected or about to be erected, at Hamburg and Lubeck, and in the neighbourhood. With the letter-press descriptions, which are in German and English, they form a very handsome quarto volume.

BIOGRAPHY.

ROBERT GEORGE CLARKE, ESQ.

THIS estimable gentleman died at Brighton on Saturday, in his sixty-ninth or seventieth year. He was for many years printer of the Royal or Government Gazette,* and both in that situation and in his previous occupations largely enjoyed the confidence and regard of many persons of the highest rank in the state. Mr. Clarke was editor of the "Sun" newspaper up to the year 1811, in which capacity his great intelligence, soundness of judgment, and firm integrity, justly entitled him to that trust which was reposed in him by men of all classes in official employment, during a period of unexampled interest and difficulty in national policy. In private life he was no less valued, nor, by those who enjoyed his intimacy, beloved. His conversational powers were of a superior order, and whether for terseness of repartee, or clearness of observation from a mind well stored with historical and useful information, we have rarely met with an individual who contributed more largely to the pleasures of social and intellectual intercourse. About two years ago Mr. Clarke had the misfortune to lose his wife, which so deeply affected him that we may say, in the common language, he has never since held up his head. The friends who were wont to delight in his company, saw that the spring of their gratification was dried up for ever; and to them the event of his death was indeed the certain issue of a fine sensibility wounded beyond human cure. In respect to his memory they may well be consoled, that if there ever breathed a good, amiable, and worthy man, that man was Robert George Clarke.

HARRY PHILLIPS, ESQ.

In Mr. Phillips, the celebrated auctioneer of New Bond Street, we have this week to regret the loss of another well-known and much-esteemed character, who has filled a large space in the public eye for many years. He died at Worthing on the 3d, at the age of seventy-two; but to a very recent period enjoyed excellent health, and the healthy spirits of a green old age. Used during a long life to the transaction of very important business, intrusted with secret concerns of a nature out of which romances and novels more curious than invention might readily have been constructed, and accustomed to mix in the best society, Mr. Phillips's manners and conversation were peculiarly pleasing and instructive. His acquaintance with the men and things of the day might truly be described as universal; and thus, without telling aught which ought not to be told, his anecdotes were most entertaining, and illustrative of circumstances which

* In the early days of the *Literary Gazette*, there often occurred amusing mistakes between our publication and that of our late friend. At one time we would be threatened with a prosecution for damages, for not inserting a notice of dissolution of partnership, sent a late hour on Friday night; at another, he would receive a letter, requesting the insertion, among the bulletins of the day, of an account of a *humble notary*, such as the child of a labourer in Yorkshire being born with six fingers and two thumbs on each hand, and six or seven toes on each foot!!

* A curious prohibition was annexed to the leave most liberally given to Mr. Roberts by Mehmet Pasha, to enter all the mosques, and make drawings of their interiors. He was accompanied by a janissary (being also himself in the Arab dress), and forbidden to use pencils of the bristles of the unclean beasts. They must be of camel's hair; nothing pig-like being admissible in Mahomedanism. — *Ed. L. G.*

strongly marked the character of the age in which we have lived. His knowledge of the Fine Arts, and judgment in articles of *certa*, were, we presume, equal to any, the best informed, of his contemporaries, no matter in what sphere they moved. Millions of property changed owners under his hammer; and though no doubt perfectly independent and easy in his fortune, we might take upon ourselves to affirm that its extent affords the best proof of the honest principle with which he discharged his duties to his employers. In his family Mr. Phillips was happy, one son now representing him in his business, and others having been or being in India, in eligible situations; and as a just tribute to his dust we can add, that many acts of consideration, humanity, kindness, and generosity, might, with more than the tombstone's usual truth, be inscribed on the monument of Harry Phillips.

JOSEPH GOODYEAR, ESQ.

WE regret also to announce the death of Joseph Goodyear, Esq., historical engraver, on Tuesday, the 1st instant, at the early age of forty-one. He was a native of Birmingham, whence so many of our engravers who have distinguished themselves have come—the practice as *bright* engravers, which the manufactures of Birmingham afford to boys and young men there, may account for this: the engraving upon silver and steel, in which they are thus early practised, gives them great facility in the use of the burin; and when this practice is united with a fine taste and a study of higher art, eminence in engraving history and landscape has so often been the consequence, that a large proportion of our present eminent engravers have learned the rudiments of their art in Birmingham. Mr. Goodyear died after a lingering illness of two years, in comfortable circumstances, the result of his own industry and talent. His last work was the beautiful plate engraved from Eastlake's "Greek Fugitives," in the first number of Findens' splendid work, now in the course of publication, "The Royal Gallery of British Art." His long illness prevented his completing any subsequent undertaking. He died, sincerely regretted by his friends, among whom he was enabled to reckon his brother-artists: these were the readiest and the warmest to bear testimony to his kind-hearted and excellent character.

ORIGINAL POETRY.

LAYS OF A DREAMER.—NO. II.

The Author's Head-piece.

I DREAM! I dream! for I hear the songs
Of the wild ideas of some luckless wight:
He, like myself, to a class belongs,

Who curse the art, yet still must write.

I seem in the orb of an author's skull—

'Tis a dream,—'tis a dream, and I'll revel
my full.

Grand Chorus of Ideas.

Here we dwell, each in his cell,

On the shores of our milky sea;

'Tis ours to reign o'er the realm of brain,

And long that reign shall be.

Solo.

I am a spirit of history,
And "historical novels" I write;
Distilling facts from mystery,
And gilding oblivion with light:
Blending the false with the true,
Till no one can tell what the fact is,
And history my sport to run through—
No wonder 'tis hurt by the practice.

Grand Chorus of Ideas.

Here we dwell, &c. &c.

Solo.

I am of doggerel a doer,
Nor care I a fig for the Muse;
'Tis nowadays folly to woo her—
Tact—tact is the talent I use.
As to wit, it must give place to punning—
Terms used on fallacious pretences—
Since he is esteemed mighty cunning,
Who drives the words out of their senses.

Grand Chorus of Ideas.

Here we dwell, &c. &c.

Solo.

I am inventor of twaddle,
And writer of annual tales;
Any trash that comes into my noddle,
When smoothly related, avails;
Beside, I cull flowers long forgotten
By readers of modern taste;
And I glean from the musty and rotten
Of that valuable paper called *waite*.

Grand Chorus of Ideas.

Here we dwell, &c. &c.

Solo.

I am a cobbler of drama,
And snatch from old Shakspeare the bays;
I now and then meet with a *damner*,
But who really cares for his plays?
No; plots from the French and the German,
And jokes from each friend I have stole,
Mixed with dialogue dull as a sermon,
Makes a very good "*his*" on the whole.

Grand Chorus of Ideas.

Here we dwell, &c. &c.

Solo.

A writer of novels of fashion,
Behold an adept at the trade!
No lady's a victim of passion,
No *roué* seduces a maid,
No crim. con.'s hushed up and forgiven,
No minor gets cleaned out at dice,
But I, for a bargain well driven,
The scandal will *book* in a trice.

Grand Chorus of Ideas.

Here we dwell, &c. &c.

Solo.

I'll "build" you a nautical story,
To make all the landmen stare;
I'll tell of Trafalgar's glory
Quite as glibly as if I'd been there;—
I'll "tack," "reef," "make sail," in such
lingo

That none but a tar understands;
And I'll swear by my "eyes," "limbs,"—by
jingo!

Of readers I'll "pipe up all hands."

Grand Chorus of Ideas.

Here we dwell, &c. &c.

Solo.

I write for each month's periodical,
Nothing passes around but I note;
And then, by an art quite methodical,
Embellish the matter I *quote*.
I'll spare neither sister nor brother,
If their follies will serve me a particle;
I'd shew up the faults of my mother,
If they'd help me to make out "an article."

Grand Chorus of Ideas.

Here we dwell, &c. &c.

Thus sung the Ideas in their tiny halls
—Self-love makes singing rare—
Prebends or cobblers in their stalls
Could not have less of care.
But, oh dear! what is here?

* Cockney.

The master of this most elegant choir
Has "too many irons in the fire:"
A dozen blues devils are come with their revels,
The pen is not always a good "bread winner,"
The author has made but a scanty dinner.
He's been warming his nose by taking "a
whiff."

He's been drinking his grog remarkably stiff;
And by thus indulging his palate and nose
The poet is getting quite lachrymose.
There's not an Idea but is shedding a tear,
Yet what they are crying for does not seem
clear;

And I try to cry, too, but awake with a scream—
'Tis a dream,—a dream,—'tis nought but a
dream! R. J.

THE DRAMA.

Covent Garden.—The Olympic night, as it is called, on Saturday brought together the best audience of the week, after the opening Monday; and went off with great spirit. The mercurialism of Mr. C. Mathews lost none of its effect by being transferred to the larger stage; and Vestris, seconded by Farren, Mrs. Orger, and the rest of the well-combined company, filled the series of light pieces in so agreeable a manner, that we may pronounce the experiment to have fully succeeded with the public. It offers, indeed, a pleasing and entertaining variety in dramatic representations. On Thursday, the *School for Scandal* was produced, admirably dressed, and, on the whole, exceedingly well played. It was a good house, and at the fall of the curtain the applause was loud and unanimous. We have not time to speak in detail of the performances; but can assure our readers of an excellent evening's amusement if they choose to visit "the Garden" on Thursday next, when "this comedy will be repeated."

Druvy Lane is in the perspective, and we hear that Mr. Hammond is actively and liberally employed in restoring the stage, re-decorating the house, and doing every thing necessary for a brilliant opening.

Haymarket.—At this theatre, in addition to the increasing attractions of Macready's fine delineation of *Shylock*, Power's *Married Lovers* has been successfully revived; and with Mrs. Lacy (the original heroine at Covent Garden) to play up to his own character, the entertainment forms a popular change in the run of very popular pieces here, in which alone the representative system for Ireland is administered to the perfect satisfaction of all parties, Tory, Whig, or Radical.

Adelphi.—*Rip Van Winkle*, with the Adelphi-American actors, and *Mount St. Bernard*, with its picturesque scenery, have done their duty here during the week; and striking novelties are announced, among which we think we recognise *Jack Sheppard*.

Astley's.—On Thursday there was a private rehearsal of a new Andronicus, (not Titus, but) one Mr. Carter, who has assumed the title and dignity of "the Lion King," (not the Heraldic of Scotland, but) a real Van Amburgh lion and tiger tamer. The lion consents to be his pony in a triumphal car, and instead of the usual tiger behind there is an elephant of a more docile quality. The feats exhibited were much applauded by the company.

English Opera House.—The Musard Concerts are again succeeding wonderfully, and filling the house every night.

VARIETIES.

Daguerreotype Exhibitions.—M. St. Croix has resumed these exhibitions at the Adelaide

Gallery, where they excited considerable interest; but were stopped for a while by an injunction in Chancery, said to have been obtained, *sub roâs*, by M. Daguerre, who did not like his apparatus to be explained, and the profits pocketed, by any other person. The operation, as we have observed, occupies more time than we expected; so that unless you return in an hour or two to witness the result, you can only see portions of the process; which are, however, clearly stated, and the anticipated effects, in our wintry and uncertain climate, declared. A view of Regent Street, another of St. Martin's Church, a third of household furniture, with a Daguerreotype picture reflected, are shown; but the most striking production is a picture of a section of the lecture-room itself, with a bust of Faraday on the bench, which is quite delightful. We understand that the machinery costs some 20*l.*, and at that expense anybody may set up Daguerreotyping. We also observe, that Mr. Cooper has announced lectures thrice a-week at the Polytechnicon, to illustrate the same process, and under a license from Daguerre; who thus evidently claims a right to control all public exhibitions of his process, although sold, as we say, out and out, to the French government!

Typoface.—Under this title a M. Pellet, of Bordeaux, has, it is said, formed a material with which he can take perfect casts of the human face divine, without inducing that rigidity and contortion which are caused by the application of plaster.

Volcanoes.—The great volcano in Ternate became very active on the 25th of March, and had continued to throw off streams of lava, attended by terrific eruptions during forty-eight hours, when the latest accounts came away.

Lightning-Travelling.—Mr. Brunel, it is reported, has succeeded in obtaining a railway speed equal to two hundred miles an hour!!! The story of the American milestones will be realised.

French Statistics of Crime, &c.—During the year 1837, crime was considerably on the increase in France. In the course of the year, the number of criminal cases brought before the court of assizes amounted to 5873, thus exceeding by 573 that of 1836: in 1830 of these, full conviction followed; in 1516 cases, modified verdicts were returned; in 1737, the accused were acquitted. The number of crimes against the person remained stationary in 1837; having amounted to 1555, or three cases less than in 1836; but the crimes against property had increased 15 per cent. There was a falling off, we are told, in the crimes of "murder" and "assassination," of 21 and 11 per cent, respectively; but "poisonings" increased 42 per cent. The number of prisoners tried by the courts of assize was 8094, which gives one accused for every 4638 inhabitants; of these, 1425 were females: 4601 of those 8094 accused could neither read nor write; 2530 read, but wrote imperfectly; 709 could read and write; and 254 had received education. 33 were capitally convicted; 177 were sentenced to hard labour for life; 782 to the same penalty for limited periods, and the remainder to various terms of imprisonment. Had not the jury brought in a verdict of "attenuating circumstances" in 150 cases, 183 would have been condemned to death. 25 were executed. The tribunals of correctional police tried, in 1837, 140,247 affairs, comprehending 193,065 individuals, or 11,758 affairs more than in the preceding year. The courts

of simple police decided, in 1837, in 137,737 cases, or 9455 more than in 1836. There were 206,993 citizens inscribed on the jury list in 1837. The number of suicides committed in the whole kingdom, in 1837, amounted to 2443—viz. 1811 men, and 632 women; the single department of the Seine offered 457. The greatest number of suicides occurred in the spring and summer months, as will be seen by the annexed table:—

In December, January, and February	490
In September, October, and November	514
In March, April, and May	683
In June, July, and August	756

New Balloon.—M. Garnerin is reported to have made some progress in the direction of balloons through the air, by supplying them with sails somewhat in the form of those of windmills.

Copenhagen, 26th August.

The Aurora Islands.—In consequence of the statement given in several journals, that the Aurora Islands, which were discovered in 1769, have been again seen, or, if you will, again discovered, we have received from a respectable quarter (says the Danish "Ove T. Avis") the information that they were seen in November 1825, by Captain Thayer, four in number, a little to the east of the mouth of Rio de Janeiro; viz. in 43° 30' long., and 53° lat.

St. Petersburg, 2nd July.

The Aurora Islands and their first Discovery.—Don José Espinosa, the companion of Malaspina, in his excellent, but not generally known, "Memorias Sobre las Observaciones Astronomicas de los Navegantes Españoles," gives us a note which deserves attention, on the occasion of the re-discovery, which has at length been made, of the Aurora Islands. This note is in the following terms:—"The Spanish frigate, Aurora, discovered the islands in 1762, and gave them the names which they now bear. In 1790, they were again seen by La Princesa frigate, which belonged to the Philippine Company. Don Martin de Oyarvide, captain of that frigate, shewed to us (the officers of Malaspina's expedition), when we were at Lima, his journal and the situation of those islands, from his own observations. In 1794, the Atrevida, corvette, was sent from the Malouines (Falkland Islands) to determine, by astronomical observations, the position of the coasts. The corvette lay off the islands from the 21st to the 27th of January, and determined, by the chronometer, the difference of longitude between them and the harbour of Soledad, in the Falkland Islands. There are three islands, all nearly in the same meridian. The middle island is rather low; the two others may be seen at the distance of nine leagues. Here follow the astronomical determinations:—Southernmost island, lat. 53° 18' 22", long. 41° 40'; middle island, La Rasa (i.e. the low), lat. 53° 9' 10", long. 41° 38'; northernmost island (*Isla Nueva*), which was not known before 1794, lat. 52° 27' 34", long. 41° 26'. The latitude is south, the longitude west, of Cadix. (According to the recent statements of the Americans, in the Mary Jane, there are six Aurora Islands, one of which is in lat. 53° 22'.) The captain of La Princesa affirmed that, in 1790, he had found a shoal eleven miles N.E. of the southernmost of the Aurora Islands. The Atrevida looked in vain for this shoal, and saw only some small icefields, which might have been taken, at a distance, for cliffs or sand-banks." All this was published in Madrid in 1809, in the first part of the "Memorias." How many shipwrecks would have been avoided, if navigators had not

been so bold as to disregard such detailed accounts and astronomical observations! Nay more, Purdy, in the sea map of the world, 1823, marked the course of the Atrevida, 1790, as "in vain, and finding nothing." Krusenstern, Duparrey, and Brûé, who accompanied Freycinet, and carefully studied the more doubtful reefs and islands, have marked the Aurora Islands in their charts of the world: nay, Brûé (and this fact is worthy of attention) added in the map of South America, 1826, the following note: "*Isles de l'Aurore vues en Décembre 1825, par le Capitaine Thayer.*"—*Petersburg Gazette.*

Rain-Gauges.—It was acknowledged at the Birmingham meeting that small reliance could be placed on rain-gauges in elevated situations, where they were exposed to winds and storms. Unless something of a superior construction can be devised, we must be content with the average accuracy of the present instruments, though precision is so important to all meteorological observations.

LITERARY NOVELTIES.

LIST OF NEW BOOKS.

Winds, S.E. and N.E.

Except the afternoon of the 8th, and following day, cloudy; rain fell on the morning of the 4th, and evening of the 8th.

Rain fallen, 4 of an inch.

Edmonton. CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

The Headman.—Mr. Bentley has obtained an injunction from the Master of the Rolls, compelling Messrs. Foster and Hextall to suspend their edition of Cooper's popular novel, "The Headman."

We have received a set of small plates, very sweetly executed, and apparently intended as the embellishments of some forthcoming Annual; but as there are no indications, either of the title of the work, or of the name of the publisher, or of the title of the subjects, or (with a few exceptions) of the names of the artists, we are unable to notice them. One minute's use of the black-lead pencil would have obviated this difficulty.

The Oxford contributions are welcome, and shall appear. The additions also will be acceptable, though perhaps the title of the whole might be expanded to, and writs of *habeas corpus* inquiring moved for.

ADVERTISEMENT.

Connected with Literature and the Arts.

THE MODEL of the BATTLE of WATERLOO is now EXHIBITED at the Egyptian Hall, Piccadilly, to the highest Antiquarian. Constantly illuminated from 4 o'clock in the Afternoon, and throughout the Day in dark or unfavourable weather.
Open from Ten in the Morning until Nine in the Evening.
Admission, One Shilling each.

PULPIT ELOQUENCE.

MR. RICHARD JONES is returned to Town for the Season, and may be consulted as usual, at his own House only, 14 Chapel Street, Grosvenor Place, Belgrave Square.

ISLINGTON LITERARY AND SCIENTIFIC SOCIETY, Established 1833.

This Institution offers the following advantages to Subscribers:—

The Library consists of a valuable collection of upwards of 4000 volumes of Standard Works, for circulation and reference. The Reading Room is supplied with 15 newspapers, 30 periodicals, and 300 volumes of books of reference, and is open from eight in the morning till one o'clock in the afternoon. The Museum contains many valuable specimens, and is lighted for the reception of members every evening. Lectures by eminent professors are delivered every Thursday evening during the season.

Meetings for the discussion of literary or scientific subjects, and also

Conversations, are held monthly. A French Class, under the superintendence of Professor Lambert, meets weekly, and the evening is concluded with Conversations in that Language.

A Literary Class has been formed to facilitate the progress of literary composition and discussion among the junior members of the Society, and meets once in each fortnight.

A Music Class meets for practice every Monday, and Concerts are given at stated periods.

A General Public Class assembles on Saturday evening, and enjoys the use of a considerable collection of apparatus, the property of the Society.

Applications to become Proprietary or Ordinary Members, may be made to the Librarian at the Institution.

JOBAN WILKINSON, Hon. Sec.

Prints..... 4s 6d

"The effect of it as a work of art is of the highest order; and, as a whole, it forms not only an object of worth, as a portrait, but also as a picture."—*Argus*, Sept. 20.

London: Published by Hodgson and Graves, Printers to the Queen, 5 Pall Mall; and may be had of every respectable Printer in Europe.

TO ADVERTISERS.—ANTI-CORN

LAW CIRCULAR.—Arrangements have been made for making this paper (which is a stamped periodical) a medium for advertisements; to commence with the 15th number, to be published on the 15th October. Orders will be received for the publisher at the office of the Anti-Corn Law Association, Newall's Buildings, Market Street, Manchester. Of the first thirteen numbers, upwards of one hundred thousand copies have been circulated in all parts of the Kingdom. Its Subscribers include the most eminent Merchants and Manufacturers in the Kingdom, the Peerage, and Members of the House of Commons. It is supplied to all the principal Reading-rooms, Club-houses, Hotels, &c. &c. in Great Britain. Advertisements must be sent on or before the Friday preceding publication.

TO PUBLISHERS AND MISCELLANEOUS ADVERTISERS.

THE SCOTTISH CHRISTIAN HERALD.—Monthly Circulation, 12,000.

Publishers and Miscellaneous Advertisers are respectfully informed that in future an Advertising Sheet will be attached to this highly esteemed and widely extended periodical, its circulation being 12,000 monthly, and decidedly the most extensive Scottish Advertising medium extant; more especially for works of a religious and moral tendency, school-books, and works of an elementary nature, the Magazine being used by all the most respectable magazines in Scotland, &c. &c.

To Miscellaneous Advertisers desiring of making known their articles in Scotland and its metropolis, this periodical will be found the most desirable channel, affording the greatest publicity among the respectable and intelligent classes of the community upon all matters connected with art, manufactures, and science. Advertisements received at the Office of the Publisher, R. Greenbridge, Finnerley Alley, Paternoster Row, not later than the 15th inst.

The whole now first collected, chronologically arranged, and illustrated with the most valuable Series, from MSS. and other Sources. In this edition, the Manuscripts only indicated by Initials, will be inserted at full length.

Richard Bentley, New Burlington Street.

Publisher in Ordinary to Her Majesty.

NEW NOVEL.—In 3 vols.

REAL PEARLS IN A FALSE SETTING.

By the COUNT DE LA PASTURE.

Late 18th House.

Saunders and Otley, Publishers, Conduit Street.

THE COLONY OF WESTERN AUSTRALIA.

By N. OGLE.

In 1 vol. 8vo. with coloured Map in Side-pocket, Four Plates,

Tables, &c. &c., price 14s. in cloth.

The leading Points in this Volume are:—

1. The importance of the Colony.
2. The neglect.
3. The total want of principles and system in our Colonial Office in the planting of new Colonies.
4. The new view of this country having irretrievably entered the last era—the manufacturing and mechanical, the absolute necessity of supporting it by new and independent occupations for our manufactures, which at the same time can return to us the raw commodities.
5. The sound condition of Western Australia inviting capitalists—the plans proposed.
6. The view of the future there, and the future prospects of that country, and its probable influence on the innumerable islands of the Indian and Pacific Oceans, and the nations of the East.
7. The reference to the miseries of the manufacturing era, and the pseudo-political declaration of its results constituting a nation's wealth.

James Fraser, 216 Regent Street, London.

In 1 vol. post 8vo., price 6s. 6d. cloth, and lettered.
MARIANNE, the LAST of the ASMO-
NEAN PRINCESSES; a Historical Novel of
Felicite.

Among the most tangible parts are the Deaths of Aristobulus and Zillah—the Description of Daphne—the Scene in the Cave of Ruget—the Storm on the Borders of the Desert—the Escapes—Marianne after the Death of Hyrcanus. The incidents are numerous, and the Style very highly wrought and interesting. The author has done his best to use the language of the people, and particularly the parallelisms, who exulted, or wishing to disguise their meaning by figurative expressions.
James Fraser, 216 Regent Street.

GRAMMATICAL TEST.

EVENING AMUSEMENTS in ENGLISH GRAMMAR, in 3 vols.

Vol. 1. The Grammar. Vol. 2. History of Rome, and Poetry up to Milton; Vol. 3. The Key, with 2 Packs of Cards, all in Case, price one guinea.

By MR. HALL.

Author of "The Roots of the Latin Language Simplified." This work, forming an agreeable round game, tests the acquirements of youth in this important science, and is the only work and of nearly a person, require grammar in private. Parents and Tutors will find this deeply worth attention.

Also, No. 2.

Hall's Diamond Map of the Latin Rudiments, for the Use of Schools, in Case, price 1s.
London: Sold by Bell, & Sons, and Co. 34 Paternoster Row.

Price 6s.

Vol. XXIV, containing British Birds, Vol. II.

By SIR W. JARDINE.

Illustrated by Thirty-two Coloured Plates, and Portrait and Memoir of Jardine. The volumes published on Ornithology are—Humming Birds, Gallinaceous Birds, Game Birds, Pigeons, Parrots, Birds of Western Africa, Flycatchers. Price 6s. each. The arrangement of the subjects admits of any volume being taken alone.

8. Highbury, 23 Fleet Street: W. H. Lizars, Edinburgh; W. Curry, Jun. and Co. Dublin; and all Booksellers.

9. A new work on Dogs, by Colonel Hamilton Smith, will be the next published.

10. 2d edition, in small 8vo. price 7s. 6d. cloth boards.

THE LAST of the PLANTAGENETS.

An Historical Narrative, illustrating some of the Public Events and Domestic and Ecclesiastical Manners of the Fifteenth and Sixteenth Centuries.

"This is an extremely well-conceived and well-wrought legend of the olden time. The interest of romance has seldom been more happily combined with the verisimilitude of history. The supposed autobiographical narrative is assigned to Richard Plantagenet, the son of Richard the Third; and we are not sure whether the touching story of King Richard's death, and sympathy with his innocent and unfortunate offspring, may not have found more powerfully upon our feeling in favour of the much-traduced monarch than even Mr. Sharon Turner's clear and dispassionate vindication of his character."—*Eclectic Review*.
Smith, Elder, and Co. 65 Cornhill.

THE ANALYST.

Price 4s., No. XXIX, being the Second of a New Series of

THE ANALYST, a Quarterly Journal of

Science, Literature, National History, and the Fine Arts.
Edited by EDWARD MAMMATT, Esq., F.R.S., &c.

NEW PEERS.

DEBRETT'S COMPLETE PEERAGE of the UNITED KINGDOM. Improved by WILLIAM COURTHOPE, Esq.

The 32d edition, including the New Peers created at and since the Coronation, with a Portrait of Her Majesty, beautifully engraved by Deane, and the Arms (now incorporated with the Text) from Designs by Harvey. In 1 vol. price 25s. in extra cloth. J. G., F., and J. Rivington; and other Proprietors.

In 4 large vols. 8vo. price 2l. 2s. in boards.

ECCLESIASTICAL BIOGRAPHY; or, Lives of Eminent Men connected with the History of Religion in England; from the Commencement of the Reformation to the Revolution. Selected and illustrated with Notes, By the Rev. CHRISTOPHER WORDSWORTH, D.D. Master of Trinity College, Cambridge; and Member of Exeter and Oxford Societies.

3d edition, with a large Introduction, some new Lives, and many additional Notes. Printed uniformly with the "Christian Institute," by the same Editor.
J. G., F., and J. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Printed by HANNAH PAGE MOYES, of Brook Green, Hammersmith, and GEORGE BARCLAY, of Number 2 Pall Mall, Place, Pall Mall, both in the County of Middlesex, Printers, at their Printing Office, Number 26 Castle Street, Leicester Square, in the said County; and published by WILLIAM ARMITAGE SCRIPPS, of Number 13 South Molton Street, in the Parish of Saint George, Hanover Square, in the County of Westminster, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, October 12th, 1839.

REVIEW OF NEW BOOKS.

Jack Sheppard; a Romance. By W. Harrison Ainsworth, Esq., author of "Rookwood" and "Crichton." With Illustrations by George Cruikshank. 3 vols. 12mo. London, 1839. Bentley.

Or *Jack Sheppard*, which has just issued from the press, complete in three volumes, with extraordinary engravings by George Cruikshank (whether we consider them as performances of art or illustrations of men and manners), we spoke when its first sheets appeared as a contribution in "Bentley's Miscellany;" and we reprinted an example of the force, spirit, and interest which the writer had contrived to communicate to the history of a notorious criminal. Upon looking at the whole, several questions suggest themselves before pronouncing critical sentence upon the work. First, Is it necessary that every publication should be framed for the express purpose of pointing a moral? Secondly, Does *Jack Sheppard* succeed or fail in this object? And, thirdly, Do such subjects offer fair materials to exercise the talent of authors, and afford public gratification, without injury, to the public mind? To the first inquiry we think we are bound to concede, that, much as we value moral inculcation, to adhere to it as a *sine quâ non* would be to exclude a multitude of amusing, playful, imaginative, and innocent productions, which have ever been the enjoyment of cultivated society. To the second the reply would be, that, so long as human nature is human nature, and there is guilt as well as virtue, it may be as expedient to explore the lower and darker recesses of villany as to develop the stilted crimes of tragedy in high places. Nay, as the former immediately affect and come in contact with the vast majority of our fellow-creatures, it is the more expedient to put the ignorant many on their guard against the seductions of common vice and the invasions of bold brutality. The main point, therefore, comes, after all, to be the treatment of the theme. Are we made to feel a deeper concern for the scoundrel and murderer than for the wronged and good?—is criminality made prosperous, and honour and honesty (alas! too often suffering in the real world) held up to disregard and odium?—is there no justice manifested in apportioning punishment and misery to the evil-doer, as the consequence of evil deeds, and awarding consolation, if not happiness, to the virtuous? If such were the gist of any plot and narrative, however striking for the talent with which they were contrived and wrought, we should at once condemn the book, and lament that an author capable of such things should have betrayed the cause, for the promotion of which Providence had gifted him with superior intelligence and endowments. But we find none of these offences in *Jack Sheppard*; and as Fielding has chosen "Jonathan Wild" as his "great man," to barb the keenest shafts of irony against crime, so do we think Mr. Ainsworth has, in an entirely different and more popular manner, elected his ruffian victim, *Jack Sheppard*, to demonstrate that there is no mortal *nulla virtute reductum*; that depravity, however covered by bravado, is sure to entail

compunction and punishment; and that unequal as are the fates of the bad and the good, the preponderance of suffering rests with the former, and the balance of even earthly comfort with the latter class. Our author has curiously, though incidentally, supported this view, by supposing that Hogarth took the hint of his vigorous and impressive lesson of Industry and Idleness (in the two apprentices) from seeing *Jack Sheppard* previous to his execution, when his portrait was painted by Sir James Thornhill: may not we also guess that something of Mr. Ainsworth's story might have been suggested by Hogarth's pictures?

Gaolbirds and their associates are not, it is true, pleasant companions to contemplate; but had not a Howard and others undergone that task, where would have been the reforms in our prison-discipline and criminal jurisprudence? What a contrast do Mr. Ainsworth's vivid scenes present to the actual state of things in our day! See Cruikshank's inimitable procession of *Sheppard* to Tyburn; the buffoonery, the riot, the orgies, the triumph of Sin, the incitement to rapine and bloodshed; and compare them with the sad and solemn administration of the law, the change effected within a century; and say whether the upholding of the past to censure is not calculated to expedite the further improvement of the future! In fine, *Jack Sheppard* is

To all an example,
To no one a pattern,

and an ignominious death is the just reward of an atrocious life. The touches of remorse and repentance with which it has pleased Mr. Ainsworth to invest his closing career, are worthy of much commendation, not only as finishing the humanity of his conception, but as doing homage to the invincible principles of conscience and retribution. Of the literary ability with which he has executed his design, we need say nothing, as it has been every where acknowledged; and for intense description and fearful interest, there are portions of this production which it would not be easy to surpass in our own or any other language. We shall only make one quotation as an example of the writer's power, though such proof is unnecessary for those who remember his description of Turpin's famous ride to York. It relates the destruction of Jonathan Wild's house:—

"The day appointed for the execution was now close at hand, and the prisoner, who seemed to have abandoned all hopes of escape, turned his thoughts entirely from worldly considerations. On Sunday he was conveyed to the chapel, through which he had passed on the occasion of his great escape, and once more took his seat in the condemned pew. The Rev. Mr. Furney, the ordinary, who had latterly conceived a great regard for Jack, addressed him in a discourse which, while it tended to keep alive his feelings of penitence, was calculated to afford him much consolation. The chapel was crowded to excess. But here—even here, the demon was suffered to intrude, and Jack's thoughts were distracted by Jonathan Wild, who stood at a little distance from him, and kept his bloodthirsty eyes fixed on him during the whole of the service. On

that night an extraordinary event occurred, which convinced the authorities that every precaution must be taken in conducting Jack to Tyburn,—a fact of which they had been previously made aware, though scarcely to the same extent, by the riotous proceedings near Westminster Hall. About nine o'clock an immense mob collected before the lodge at Newgate. It was quite dark; but, as some of the assemblage carried links, it was soon ascertained to be headed by the same party who had mainly incited the former disturbance. Amongst the ringleaders was Blueekin, whose swarthy features and athletic figure were easily distinguished. Another was Baptist Kettleby, and a third, in a Dutch dress, was recognised by his grizzled beard as the skipper, Van Galgebroek. Before an hour had elapsed, the concourse was fearfully increased. The area in front of the gaol was completely filled. Attempts were made upon the door of the lodge; but it was too strong to be forced. A cry was then raised by the leaders to attack Wild's house, and the fury of the mob was instantly directed to that quarter. Wrenched from their holds, the iron palisades in front of the thief-taker's dwelling were used as weapons to burst open the door. While this was passing, Jonathan opened one of the upper windows, and fired several shots upon the assailants. But, though he made Blueekin and Kettleby his chief marks, he missed both. The sight of the thief-taker increased the fury of the mob to a fearful degree. Terrific yells rent the air. The heavy weapons thundered against the door; and it speedily yielded to their efforts. 'Come on, my lads!' vociferated Blueekin, 'we'll unkenel the old fox.' As he spoke, several shots were fired from the upper part of the house, and two men fell mortally wounded. But this only incensed the assailing party the more. With a drawn cutlass in one hand, and a cocked pistol in the other, Blueekin rushed up-stairs. The landing was defended by Quilt Arnold and the Jew. The former was shot by Blueekin through the head, and his body fell over the banisters. The Jew, who was paralysed by his companion's fate, offered no resistance, and was instantly seized. 'Where is your accursed master?' demanded Blueekin, holding the sword to his throat. The Jew did not speak but pointed to the audience-chamber. Committing him to the custody of the others Blueekin, followed by a numerous band, darted in that direction. The door was locked; but with the bars of iron, it was speedily burst open. Several of the assailants carried links, so that the room was a blaze of light. Jonathan, however, was nowhere to be seen. Rushing to wards the entrance of the well-hole, Blueekin touched the secret-spring. He was not there. Opening the trap-door, he then descended to the vaults—searched each cell, and every nook and corner separately. Wild had escaped. Robbed of their prey, the fury of the mob became ungovernable. At length, at the end of a passage, next to the cell where Mrs. Sheppard had been confined, Blueekin discovered trap-door which he had not previously noticed. It was instantly burst open, when the horrid

stench that issued from it convinced them that it must be a receptacle for the murdered victims of the thief-taker. Holding a lamp into the place, which had the appearance of a deep pit, Bluekin noticed a body richly dressed. He dragged it out, and perceiving, in spite of the decayed frame, that it was the body of Sir Rowland Trenchard, commanded his attendants to convey it up-stairs—an order which was promptly obeyed. Returning to the audience-chamber, Bluekin had the Jew brought before him. The body of Sir Rowland was then laid on the large table. Opposite to it was placed the Jew. Seeing from the threatening looks of his captors, that they were about to wreak their vengeance upon him, the miserable wretch besought mercy in abject terms, and charged his master with the most atrocious crimes. His relation of the murder of Sir Rowland petrified even his fierce auditors. One of the cases in Jonathan's museum was now burst open, and a rope taken from it. In spite of his shrieks, the miserable Jew was then dragged into the well-hole, and the rope being tied round his neck, he was launched from the bridge. The vengeance of the assailants did not stop here. They broke open the entrance into Jonathan's store-room, plundered it of every thing valuable, ransacked every closet, drawer, and secret hiding-place, and stripped them of their contents. Large hoards of money were discovered, gold and silver plate, cases of watches, and various precious articles. Nothing, in short, portable or valuable was left. Old implements of housebreaking were discovered; and the thief-taker's most hidden depositories were laid bare. The work of plunder over, that of destruction commenced. Straw and other combustibles being collected, were placed in the middle of the audience-chamber. On these were thrown all the horrible contents of Jonathan's museum, together with the body of Sir Rowland Trenchard. The whole was then fired, and in a few minutes the room was in a blaze. Not content with this, the assailants set fire to the house in half-a-dozen other places; and the progress of the flames was rapid and destructive. Meanwhile, the object of all this fearful disturbance had made his escape to Newgate, from the roof of which he witnessed the destruction of his premises. He saw the flames burst from the windows, and, perhaps, in that maddening spectacle suffered torture equivalent to some of the crimes he had committed. While he was thus standing, the flames of his house, which made the whole street light as day, and ruddily illumined the faces of the mob below, betrayed him to them, and he was speedily driven from his position by a shower of stones and other missiles. The mob now directed their attention to Newgate; and, from their threats, appeared determined to fire it. Ladders, pavers' rams, sledge-hammers, and other destructive implements, were procured; and, in all probability, their purpose would have been effected, but for the opportune arrival of a detachment of the guards, who dispersed them, not without some loss of life. Several prisoners were taken, but the ring-leaders escaped. Engines were brought to play upon Wild's premises, and upon the adjoining houses. The latter were saved; but of the former nothing but the blackened stone walls were found standing on the morrow.

We had almost forgotten to mention one species of composition which animates these volumes, and in which Mr. Ainsworth is not surpassed: we allude to the jovial chant or ballad. These are, as heretofore, instinct with

life and humour, and most characteristic. An excellent likeness of the author, engraved by G. F. Bach, after a drawing by R. I. Lane, embellishes the work, giving us his true lineaments in a style so graceful, as to reflect credit even on the skill and talent of this admired artist.

The Antiquity of the Book of Genesis, illustrated by some new Arguments. By H. Fox Talbot. 8vo. pp. 76. London, 1839. Longman and Co.

Hermes, or Classical and Antiquarian Researches. By the Same. 8vo. pp. 191. London, 1839. Longman and Co.

WHEN the 1st No. of *Hermes* appeared, we had great pleasure in pointing out some of the very curious results at which the author had arrived, and paying the compliments due to his extensive critical research, ingenious philological conjectures, and abundant references to ancient writers (some of them seldom referred to), in support of the various interesting hypotheses which he had undertaken to maintain. Both the publications above indicated merit similar praise; and even where they fail to bring perfect conviction, they are sustained by so many remarkable illustrations, drawn from obscure, remote, and difficult authorities, as well as from more familiar classics, that it is impossible to peruse them without feeling, with great satisfaction, that we are receiving immediate instruction, and being led, at the same time, to further reflection and investigation, which will reward our thoughts and repay our labour.

Mr. Talbot has let a new and memorable light in upon our physical world, furnishing us with fair and accurate transcripts of its component parts; but much as we have prized his success in this way, we are not sure that we value less the *Photogenic light*, which, from the Sun of his Mind, he has darted upon so many points of antiquarian inquiry, hitherto vaguely seen and erroneously guessed at.

In proof of the great antiquity of the Book of Genesis, he says:—

"I think it can be shewn, by solid arguments:—That there remained a memory in heathen lands of some mysterious book having been known to their ancestors, though lost long since, and the greater part of its contents forgotten. But that, nevertheless, a recollection had been preserved of the subject of the Book: That it related to the Creation. And that the very words of the book, by which it commenced, had, by a remarkable chance, been retained in memory; and that the first words were the following ones:—'In the Beginning.' From which I argue—supposing these facts to be supported by a chain of evidence sufficiently strong—that these mysteries were no other than the Hebrew Scriptures, and that this book was the Book of Genesis."

He proceeds to shew that the most ancient recorded idol worship of Nature, under all her names in Greece, Phrygia, Egypt, Rome, Asia Minor, &c. &c., had reference to the history of Eve in Paradise. The fable of Pandora* is particularly demonstrated to be nearly allied to the Scripture account.

She is "the wife of the first-created man, upon

whom the gods had showered every blessing which it is possible to imagine; but had laid upon her one injunction, that she should keep her one secret which she was never to attempt to discover. But, alas! her curiosity tempts her to violate this fatal command! Immediately all happiness flies away from earth; and in its place sorrow, misery, and all manner of evils, invade the abode, and embitter the existence, of mankind. Can it be said that the author of this fable had never heard of the temptation of Eve? That he drew the allegory from his own imagination? That the resemblance is casual, and nothing more? I hold, on the contrary (and the same has often been maintained before), that the first author of this beautiful tale, whoever he was, and wherever he lived, must either have had access to the sacred books of the Jews, or at any rate to some Eastern writings, which had immediately or remotely been drawn from the same source. Now, then, I argue thus:—Since this tale is related by Hesiod, one of the most ancient of profane authors, the biblical history of our first parents must be more ancient than him. I have introduced this argument so very briefly, merely to illustrate the nature of the proof which I think may be derived from every coincidence of this sort, which can be satisfactorily pointed out. Such coincidences clearly prove the prior existence of those writings, from which they can be shewn to have been in part or wholly borrowed."

reconcilable to common sense? I cannot help thinking, that this extraordinary line,

Ζηνι, ἐνὶ φωνῇ ἐξέλιτο μένιστος Ζηνι,
is a fragment of some much earlier poet, who had sung the tale

"Of Man's first disobedience, and the fruit
Of that forbidden tree, whose mortal taste
Brought death into the world, and all our wo,"

in an age that long preceded the bard of Aëra; and that, among the living evils which approached mankind (Λογισματα φειραται) he had enumerated the serpent tribe: who once (to our calamity) had the gift of speech, but now approach and wound us in silence:—

Ζηνι, ἐνὶ φωνῇ ἐξέλιτο μένιστος Ζηνι,
because Zeus had deprived them of the power of speech, which they had made so ill a use of. Such I think a probable solution of this otherwise inexplicable passage.† A fragment of the old poem I think I see in the words in which Hesiod describes the catastrophe:—

Ἀλλὰ γυνὴ χερσὶν ἔπειθε μῦθον ἄφρονα.
The woman stretched forth her hands, and took off a μῦθον ἄφρονα. I cannot help thinking that we have here a word of the archaic Greek language, which, like so many others, was afterwards lost in the Greek, but preserved in the Latin language—the word *mutum*. Observe, also, the epithet *μῦθος*, so entirely useless, so *plum* *obscure*, as the critics have it, if applied to the cover of the jar. For what signifies the idea of the cover? The mischief was, the lifting it at all, whether it were great or small. But, in the ancient poem, "a large fruit" would have been an appropriate expression—*ἀφρονα*—tempting to the eye. I have shown that Pandora may easily be identified with the goddess of fertility, the giver of the fruits of the earth, the *Πανδώρα*. Now one of the names of that goddess, and a very celebrated one in Italy, was *Pomona*, the goddess of fruit; or, as we may venture to translate it, the goddess with the apple, since she is represented with a large apple in her hand on many ancient monuments. And this remarkable circumstance is also found in the bronze Etruscan statues of the most ancient period: on some of which the Etruscan name of the goddess—*Fierse*—is inscribed: that is (I do not hesitate to say), the *Flores* of the *Pomona*, who presided over the vegetable world. The golden apple who sowed Ceres and Proserpine, and in the history of the latter, the apple plays a prominent part. I shall content myself with quoting a passage from *Vicini's* description of an antique statue, which says much to the imagination in a few words:—"Elle tient dans sa main le pomme fatale qui l'empêcha de s'éloigner continuellement d'elle!"

† "The ancients themselves seem to have been much puzzled with this line: and as the simplest mode of surmounting the difficulty, they proposed to scratch it out as spurious. Scholiast.—*Ἀφροναὶ δὲ στήθεος ἢ λήγοντες ἀφροναὶ αἱ γυναῖκες.*"

* "What can possibly be more strange than what Hesiod says respecting the evils which flowed from Pandora's fatal curiosity in the opening of the jar? [Egy. v. 100.] 'Ten thousand sorrows went abroad among mankind. The earth is full of evils. The sea is full of them. By night and by day, sickness and diseases approach the dwelling of man;—approach him now in silence: because Zeus has taken from them the power of speech.' What is this? How is this passage of the poet

The Demeter of Greece, the Cybele of Phrygia, the Artemis of the Ephesians, in short, the Rhea, Ceres, Ops, Flora, Pomona, Isis, were all, more or less, congenial to the Mosaic record. Mr. Talbot also leans much on the story of the Sibyls and the Sibylline leaves, or books, which he conceives to have been the Hebrew writings. Among other suggestions we find the following :—

"It is a very remarkable circumstance, that one of them was called the Jewish Sibyl. Pausanias says ('Phœd.' cap. 12): 'After the Cuman Sibyl, there is related to have been a Hebrew prophetess, whose name was Sabbe; she was the daughter of Eereus and Erymanthe: some call her the Babykonian, others the Egyptian Sibyl.' Now as it is perfectly clear that no true daughter of Israel could have gone forth into pagan lands uttering pretended oracles among idolaters, it follows, that this prophetess could only have been held to be from Judæa, because her prophecies and her doctrines resembled those of the genuine Jewish Scriptures. If she were in reality a native of Judæa, and if she brought with her some parts of the genuine Scriptures, in that case she practised no other imposition than in assuming the prophetic character herself, without any authority. But this would be too strong a supposition to be made without necessity. It is quite sufficient, if it should be admitted to be possible (and the mention of a Jewish Sibyl renders it probable), that there were occasionally brought into Italy from the East imperfect copies of the Hebrew Scriptures, bearing some general and distant resemblance to the genuine ones; from which they had been altered and interpolated to serve the purposes of pagan imposture. Such a volume, I think, may have been in reality offered to the Roman king (Tarquin), and that the tale may thus have had a real foundation."

Again :—

"I come now to a point which appears, to me at least, to be of the highest importance; and shall submit it to the candid judgment of the reader. Among the various titles of the Phrygian goddess, which antiquity has handed down to us, none is more celebrated, and few are more obscure, than that of Berecynthia. To explain it, learned men have had recourse to an expedient which they generally adopt, as I find, when all other resources fail them. Mount Berecynthus, they say, gave its name to the goddess, or else, the goddess Berecynthia gave her name to the mountain. But two assertions of this sort will not support each other, except after the unsatisfactory fashion of the tortoises in the Indian mythology, of whom each upholds the other, and both together the world. Dismissing, therefore, this explanation of the name, I will propose another, which I believe to be the true one. The volume which the Greeks call *Genesis*, the Hebrews themselves call *Bereshith*: naming it so from the two first words with which it commences: *בראשית*. In the beginning.' And it is my belief, that in like manner as Cybele was called *Magna Mater*, *Deus*, *Genetrix*, 'Creation,' so she was also called by her semi-Judaizing worshippers in Phrygia by the well-known and celebrated Jewish name of the creation, *Bereshith*,—a title which the more polished tongues of the Greeks converted into *Berecynthia*. From which (if admitted) it follows, of necessity, and with the clearest evidence, that the book of *Genesis* commenced then, as it commences now, with the same identical two words. I conceive that this is no small point to have rendered probable, on mere pagan testimony, in the general wreck of all

the very ancient literature of the Gentiles. And I should therefore be much gratified to find that the opinion of others respecting it concurred with my own."

As we are unable to go into the whole reasoning, connected as it is in such a way that separation must injure it, we must be content with the foregoing examples of Mr. Talbot's general mode of treating his interesting subjects. The observations upon the worship of *Atin* by the Phrygians are also well worthy of particular attention; but we must conclude by earnestly recommending the entire essay.

No. 2 of *Hermes* is quite equal to its precursor, and that is saying much. We have always entertained the belief that more of the earliest histories of mankind could be learned by the investigation of the remains of the most ancient languages than from any other source; and, though perfectly aware of the thousand phantasies which may beset and bewilder philology, we are nevertheless convinced that the certain establishment of a very few etymologies must be of prodigious importance in detecting the origin and relations of nations, the extent of intercourse among the first communities of man, and the truth of mysteries wrapt in darkness for thousands of years. It is worthy of the enlightened human mind, ambitious of all knowledge, and of maintaining its place in the highest scale of creation, to seek such intelligence with all the energy of an exalted nature. We take the very first word with which this No. begins, as a specimen of the writer's acuteness and learning:—

"Discordia."—All etymologists derive this word from *cor*, the heart. And, no doubt, this explanation is plausible, and has ancient authority in its favour. Yet how awkward a turn it gives to such phrases as the following:—

'Animus secum discordans.'—Cic.

* *Membris humanis adversus ventrem discordantibus.*

Printed by the Government Printer, Ottawa, Ontario, Canada.

Where the learned are unanimous, it may appear rash to differ from them; yet I cannot help thinking that the origin of the word is totally different, and that it comes from *Xαρδν*—a musical string.—Homer (*Od.* *φ.* 406).

Ὁς ἐστὶν αὐτῆς φερμαγγος πιστάριμος καὶ αὐδῆς

Ρηϊδίως ικανύσσει νηφίφιν πολλοσι χορδήν

Ἄψαξ ἀμφοτέρωθεν ὑστρίθις ὑπέρκειναι αὐτοῦ.

Μεταφωρίσε. Χωδαι. Φειων.

Καὶ οὕτως γὰρ ἐπεὶ οὐκ ἔστιν ἄλλος θεὸς ὡς οὗτος, οὐκ ἔστιν ἄλλος ἄνθρωπος ὡς οὗτος.

ous *Opis*.
 (Erich and Plutarch)

This etymology explains in the most satisfactory manner why *concordare* and *discordare* are so particularly applied to music. They are probably two words borrowed from that dialect of Greek which was spoken in South Italy—*συγχορδία* and *ἀσυγχορδία*. Suidas has a nearly related verb—*ψαλλεσθαι*, to play a false note; to touch the wrong string."

If we had not so much to undo in pursuits of this kind, how much more should we do! Our next example is the common word minister:—

"Minister, a servant.—This is the Masso-Gothic Minnistā, *minimus*. The evident contrast in form between *magister* and *minister* (master and servant), renders it probable that those words mean great and small people. This is the same phrase which occurs so continually

* "When it is said (see Pausanias, quoted at page 37) that the Jewish Story was the daughter of Berous, this again seems allusive to the same name; for the feminine form of Beros will be Bereith. With regard to the introduction of the letter θ in Koesevithia, it was habitual to the Greeks, *Βερεος* ν , δ , and θ , *εὐρησθῆναι* caused. As, *μαλιν, μαλιναν; λαλιν, λαλιναν*, &c."

in the Bible. 'Ahasuerus made a feast unto all the people, both great and small.'—(*Eth. i. 5.*) 'There the wicked cease from troubling, and there the weary be at rest: the small and the great are there, and the servant is free from his master.'—(*Job, iii. 19.*) (The latter part of the verse explains the former part.) 'Praise our God, all ye his servants, and ye that fear him, both small and great.'—(*Rev. xix. 5.*) The same contrast is seen in:—'Whosoever will be great among you, let him be your minister. And whosoever will be chief among you, let him be your servant.'—(*Math. xx. 26.*) The Greek word *δουλος*, a servant, hitherto I believe unexplained, is nothing else than a relic of the Latin term *minister*.

Again :—

"*Fanum*, a temple.—From *Fan*, the name of the Supreme Being, in the Mæso-Gothic language. This name has left many deep traces in both the Greek and Roman mythology."

Illustrations of Homer form a distinguished feature in this treatise; and the verbal corrections and restorations are (to us) quite delightful. For instance, the unintelligible phrase *αἰνὰ ποταῖο*—"sea resembling wine," which no sea does resemble, is excellent, as the *αἰνὰ ποταῖο*—the calm uniform sea, "whose face or countenance is one." Also the application to the two Ajaxes, where the same word *αἰνὰ*, held to be an ancient archaic form of the Iath *αἰν*, has in this sense a similar effect in giving great force to the comparison. Mr. Talbot has beautifully illustrated, and, as we think, for the first time rationally explained, the legend of Hercules and Eurytheus, by supposing that Hercules is the purifier of the earth; and the boar of Erymanthus, which he is represented, on ancient vases, as throwing into the *πίθος*, or pit, to Eurytheus, is the impure being, which he is consigning to its judge in Hades, not to a terrified king.

All the other subjects, the Danaïdes, passages in Aristophanes and Callimachus, the war with Veii (an imitation of the Trojan), Avernus, Abaddon, Cenopion, &c. &c., are treated with like ability, but we can only refer to them, and conclude with a few words from our author:—

"I have already said several things in this volume, which I am afraid may not meet with the approval of those who think that what we at present know of antiquity is all that can be known : or who believe that nothing preceded the classic times of Greece, except a period of comparative barbarism. To those, however, who think with me that the Grecian power rose on the ruins of a preceding great and civilised community, no excuse need be offered for pursuing that idea into its natural consequences. Now, I am prepared to shew by a variety of evidence, that the ancient tribes who inhabited the Peloponnesus spoke a dialect resembling the Latin. If then there are many obscurities in the Greek language and mythology, which are capable of being removed by reference to the Latin, no valid objection can be raised against such an explanation, especially when supported by any collateral evidence. With respect to the present point, I think it probable that the notion of the abyss, or bottomless deep, was common to all the mythologies of antiquity ; and that it was supposed to be the dwelling of impious spirits, in which they were tormented. These souls of the wicked were, I think, known in the Pelasgian or old Italian mythology, by the name of the *Dannate* [*antima*] ; and this word I consider to have been the sole origin of the fable of the *Danæides*."

Fisher's Drawing Room Scrap-Book. 1840.
With Poetical Illustrations by L.E.L. and
Mary Howitt. 4to. pp. 68. London,
Fisher, Son, and Co.

THE favourite task of One, whose work on earth is done—the latest strains of L.E.L. enrich and sanctify these pages. They possess an interest too painful for us to dwell upon; and the mingled voices of the living and the dead strike upon us with so agonising a thrill, that they conjure up thoughts all ghastly in image and unnatural in tone, instead of those which might enable us to judge and speak of the volume before us. There is her likeness, simply and exquisitely expressed by the genius of MacIise; pensive, reflective, an alternation of that gay and sprightly mood which equally became her. Alas, alas, we may not trust ourselves with retrospect. A brief essay by William Howitt glances fairly at her writings, and breathes a prayer over her mysterious fate. It is enough for the world.

No fewer than thirty-six plates adorn this year's publication, which in binding and tasteful embellishment forms a casquet worthy to contain these productions of art. Turner, Lealie, Parris, W. L. Leitch, J. Jenkins, E. Corbould, A. Chisholme, H. Room, and J. Hollins, contribute various subjects and portraits; whilst Allom and Bartlett are profuse in Oriental scenes, and Rouillard has given a fine soldier-looking head of Marshal Soult. Others are of Lord Holland, Sir B. Brodie, Lord Byron, and Thomas Clarkson; the last a very characteristic picture, by S. Lane.

The first eight poems are by L.E.L., and the first of them, on "the Interior of a Moorish Palace,"* may be copied as a relic of her brilliant fancy:—

"Hamooda holds a feast to-night—
Fill ye the lamps with fragrant light;
Burn, in the twilight's dewy time;
The mastic, rosemary, and thyme;
And scatter round the festal chamber
Oils from the rose, the musk, the amber.

And bind ye wreaths to hang the room.
The red pomegranate just in bloom,
The tulip, with the purple glow;
That hides the burning heart below:
The crimson rose beside the pale,
And the white jasmine, faint and frail.

Fling ye the silken curtains wide,
With gold restrained—with scarlet dyed,
And let the colours wander o'er
The polished walls—the mowry floor.
The painted glass has hues to vie
With morning's dew or evening's sky.

White are the walls, but o'er them wind
Rich patterns curiously designed.
The Koran's sentences of light,
Where azure, gold, and red unite;
And like their mirrors, fountains play
To lull and cool the burning day.

See the sherbets be cool with mows,
Flavoured with lemon and with rose;
High in pearl baskets pile the grape
So that no purple bloom escape;
Bring ye the sweetmeats, and serve up
The coffee in a golden cup;

Call in the music, hours are long
Unsped by the dance and song;
Prepare the fairest slaves, whose eyes
Are stars to light our human skies;
Gather scents, songs, tales, smiles, and light—
The Bey Hamooda feasts to-night. L.E.L."

From the lines on "Byron at Newstead Abbey," we select only a few stanzas:—

"The youthful poet! here his mind
Was in its boyhood nurtured;
All that impatient soul enshrined
Was here developed first.
What feelings and what thoughts have grown
Amid those cloisters, deep and lone!
Life's best, and yet its worst:
For fiery elements are they,
That mould and make such dangerous clay.

* "The palace, built by Hamooda Pasha, is a magnificent specimen of Moorish architecture."

A thousand gifts the poet hath
Of beauty and delight:
He flingeth round a common path
A glory never common sight
Would find in common hours.
And yet such visionary powers
Are kin to strife and wrath.
The very light with which they glow
But talloth of the fire below.

It is the curse of such a mind
That it can never rest,
Ever its wings upon the wind
In some pursuit are preest:
And either the pursuit is vain,
Or, if its object it attain,
It was not worth the quest:
Yet from the search it cannot cease,
And fold its plumes, and be at peace."

The "Shrine and Grotto of Santa Rosalia," the niece of William the Good, who, at the age of fifteen, retired from the court of Palermo to a life of seclusion and solitude among the mountains, offers us the following just reflections:—

"Hers must have been a life of dreams,
Exalted and sustained,
By that enthusiastic faith
Which such a victory gained.
Yet hold I not such sacrifice
Is for the Christian's creed:
I question of its happiness—
I question of its need.
God never made a world so fair,
To leave that world a void,
Nor scattered blessings o'er our path,
Unless to be enjoyed.
Look round—the vales are sweet with flowers,
The woods are sweet with song:
The soul, uplifted with their joy,
Says, such joy is not wrong.
Divine its origin—divine
The faith it keeps alive:
Not with the beautiful and true
Should human nature strive.
Each fine sense gifted with delight,
Was to the spirit given,
That, conscious of a better state,
It might believe in heaven."

Of Mary Howitt's contributions we may state that they do not detract from her well-earned fame. The difference between writing on themes suggested by your own mind and to illustrate subjects given by others, on which you are called to exercise your talents, has, in some cases, and especially where the lively has been attempted, diminished her success; but the whole does honour to her muse. No one ever overcame these difficulties like L.E.L.; she adopted the hint as if it had originated with herself, and lavished upon it, no matter what the splendours of poetical imagining, or the deep gushes of natural feeling. But we ought not to institute comparisons. On the contrary, we would select Mary Howitt's lines on "The Burial-ground at Sidon" to shew how worthy she is of the association of this Book:—

"The dead are every where!
The mountain-side; the plain; the woods profound;
All the wide earth—the fertile and the fair,
Is one vast burial-ground!

Within the populous street;
In solitary homes; in places high;
In pleasure-domes where pomp and luxury meet,
Men bow themselves to die.

The old man at his door;
The unweaned child murmuring its wordless song;
The bondman and the free; the rich, the poor;
All, all to death belong!

The sunlight glides the walls
Of kindly sepulchres enwrought with brass;
And the long shadow of the cypress falls
Athwart the common grass.

The living of gone time
Builded their glorious cities by the sea,
And awful in their greatness sat sublime,
As if no change could be.

There was the eloquent tongue;
The poet's heart; the age's soul was there;
And loving women with their children young,
The faithful and the fair.

They were, but they are not;
Suns rose and set, and earth put on her bloom,
Whilst man, submitting to the common lot,
Went down into the tomb.

And still amid the wrecks
Of mighty generations passed away,
Earth's boomest growth, the fragrant wild-flower, decks
The tombs of yesterday.

And in the twilight deep,
Go veiled women forth, like her who went,
Sister of Lazarus, to the grave to weep,
To breathe the low lament.

The dead are every where!
Where'er is love, or tenderness, or faith;
Where'er is power, pomp, pleasure, pride; where'er
Life is or was, is death!"

As another example of her talent we will conclude by adding the piece on so unpromising a matter for the "poet's dream" as a view of Newcastle, and entitled by her "A City Street."

"I love the fields, the woods, the streams,
The wild-flowers fresh and sweet,
And yet I love no less than these,
The crowded city-street;
For haunts of man, where'er they be,
Awake my deepest sympathy.

I see within the city-street
Life's most extreme estates,
The gorgeous domes of palaces;
The prison's doleful grates;
The hearths by household virtues blest,
The dens that are the serpent's nest.

I see the rich man, proudly fed,
And richly clothed, pass by;
I see the shivering, homeless wretch,
With hunger in his eye;
For life's severest contrasts meet
For ever in the city-street!

And lofty, princely palaces—
What dreary deeds of woe,
What untold, mortal agonies
Their arras chambers know!
Yet is without all smooth and fair,
As heaven's blue dome of summer air!

And even the portliest citizen,
Within his doors doth hide
Some household grief, some secret care,
From all the world beside:
It ever was—it must be so,
For human heritage is woe!

Hence is it that a city-street
Can deepest thought impart,
For all its people, high and low,
Are kindred to my heart;
And with a yearning love I share
In all their joy, their pain, their care!"

We shall now only repeat that the embellishments are numerous, beautifully executed, various, and interesting.

Memoirs of His Own Time; including the Revolution, the Empire, and the Restoration.
By Lieut.-General Count Mathieu Dumas.
2 vols. 8vo. London, 1839. Bentley.

Two generations are included in the *Memoirs* of General Dumas; and events, almost unexampled in the history of mankind from the earliest records to his own times. Much he witnessed, much he experienced, and much he has preserved for our information and edification. That the tone and manner are those which smack a little of garrulity and age, while they do not detract from the value of the facts, they unquestionably enhance the entertaining quality of the narrative. The spice of egotism seasons the description of historical events, and the *quorum pars magna fui* is quite a treat throughout the Buonaparte period. To Segur and Thiers, General Dumas accords the praises due for their substantial and valuable contributions to the history of a considerable portion of the time which he occupies; and he also points out to contempt the multitude of trashy contemporaneous memoirs which have been hack jobs and inventions to perplex and mystify the truth. Born about 1755, at Montpelier, M. Dumas was old enough to join the army in 1773, and to accompany the French expedition to America in 1780. The opening of this Pandora box, fraught with such terrible retribution to France, is noticed in a manner singularly interesting:—

"The French government (says M. Dumas), which, ever since the peace of 1763, and the

loss of the fine colony of Canada, bore with impatience the humiliating conditions which it had been compelled to accept, after a war which was equally disastrous and ill-conducted, saw with secret joy the flourishing colonies of England ready to emancipate themselves; it desired their success, and favoured their efforts. Its assistance, though not yet avowed, had excited the warmest remonstrances on the part of England. Louis XVI., since his accession to the throne, had devoted all his care to the re-establishment of the navy. Great armaments were prepared in the arsenals of Brest and Toulon. French officers, whose ardour had become impatient of a long peace, went to America, where they were received in the ranks of the insurgents. The young Marquis de la Fayette was one of the first to give an example of the most generous attachment to the cause of American independence, as soon as it had been proclaimed. He had fitted out a man-of-war at his own expense, and gone as a volunteer to join the army of General Washington, if not with the permission, at least with the approbation, of the king and his ministers, who could not be ignorant of so decisive a step. The Marshal de Castries caused a proposal to be made to me, to accompany M. de la Fayette, with some other officers. I eagerly accepted the proposal, but it was too late. The government, whose interest it was still to dissemble the succour it afforded, stopped for some time this kind of emigration. The war between the two rival maritime powers was imminent, but the preparations were still covered with a mysterious veil. A train of field artillery intended for the insurgents had been prepared at the arsenal of Douay, and was to pass through Dunkirk to be embarked at Ostende. It is well known that there was at that time an English commissioner at Dunkirk, whose business it was to see that the works and fortifications of that port, which were destroyed according to the most shameful article of the peace of 1763, were not restored. We had been and were still obliged to endure this disgrace, and to conceal from Mr. Frazer the arrival and departure of this artillery. The remonstrances of that officer, if he had been immediately informed of the passage of this train and the place to which it had been sent, would have embarrassed the commander-in-chief. The Count de Puysegur, in order to prevent difficulties, which at least would have been unreasonable, invited Mr. Frazer to dine with him, to meet the principal officers of the garrison. I was deputed to take care that no message should reach the English commissioner, and to detain him as long as possible, by spinning out the conversation on professional subjects. I acted this mortifying part as well as I could, but with secret vexation. The convoy passed through the town at the beginning of the night and was sent to Ostende. The English commissioner was, or pretended to be, ignorant of it."

But the remote epoch of the American war is not so much calculated to interest our readers as some of the later revelations respecting the consequent infection of France and the progress of her bloody revolution. We pass, therefore, for our illustrations of this valuable work to the time when the various castes of revolutionists strove for the mastery in Paris to overthrow rival factions, and, according to their peculiar views, to modify the government of the country with the power in their own hands. The king's ministry had given in their famous report of the state of the nation, and resigned; and General Dumas, who was a prominent member of the National Assembly, tells us:—

"The Assembly, being sufficiently informed by the speeches of the members, and the reports of the ministers, closed the debate on the question itself, and turned its attention merely to the form of the declaration of the danger of the country; it was decided on the motion of Hérault de Séchelles, that this spontaneous act of the legislative body should not be subject to the king's sanction; therefore, after having decreed that no time was to be lost, the president put on his hat and pronounced these words:—*Citizens! the country is in danger!*" Yes, doubtless, the danger was imminent for all Frenchmen, but too certain for the unhappy prince, whose ruin, which was resolved upon, would lead to that of the constitution. The danger, however, was not yet inevitable, at least as respected the personal safety of the king and his family. Louis XVI. had full time, and the hour was come for him, to abandon the capital, governed by a faction, which had just disclosed its fatal projects, and to leave that palace where the royal majesty had been already profaned with impunity, and which was guarded by only a small number of troops, brave and faithful soldiers it is true, but foreigners, whom the factions had easily rendered suspected in the eyes of the deluded people. In these awful circumstances, the true friends of liberty and of the monarchical constitution wished that the king should, in concert with them, put himself in a situation to be sheltered from the storm which they had not been able to avert. The Duke de la Rochefoucauld Liancourt proposed to transfer the royal residence to Rouen, and to take advantage of the good spirit manifested by all the inhabitants of Normandy as well as by those of the northern provinces. General Lafayette offered the king a still safer asylum, more worthy of the royal dignity, by urging him to repair to the army, to take the command of it in person, and to lead it against the enemy, while the constituted authorities should gradually deliver themselves from the yoke of the Jacobins, and restore order and confidence, dispelling the delusion of the people by this unanimous proof of the king's intentions. Every thing was prepared for the execution of this project, the secret of which had been intrusted to me, as well as to several of my friends. A great number of the members of our side, about sixty, were ready to concur in it, and the majority of the Assembly would have soon followed us. General Lafayette, under the pretext of a reinforcement of cavalry to the army of the Moselle, had sent to Compiègne two regiments of chasseurs, commanded by Alexander Lameth. The king, without passing the limits prescribed by the constitution, might have, in a few hours, reached Compiègne. He could not be followed by any organised force; all the rest out of the walls of Paris was but a contemptible band. Thus the royal family would be safe from any attempt, under the protection of the army; the king might have convoked the assembly in his new place of residence, he would have made known his just motives, he would have rallied all good citizens round him; lastly, his most devoted friends would have been obliged to come to him, and to seek in the French camp an asylum against persecution. This at least was, under the circumstances, the only means of saving the constitutional monarchy; and, whatever events might have succeeded, was it not saving the country and liberty, which were on the brink of a precipice? We flattered ourselves in vain with attempting this perilous but only means of safety: nothing could overcome the repugnance of the king, and still more of the queen, to trust themselves

to Lafayette. Nothing could change their resolution, not to venture on any extraordinary measure, and to resign themselves to the decrees of Providence. The memory of Louis XVI. has been calumniated, by supposing that that unfortunate prince reckoned on the assistance of foreigners, and that he expected his deliverance from the probable success of an invasion: this is an absurdity. The affair of the 20th of June could not leave him any doubt of the fatal issue of such an event, the bare threat of which sufficed to ruin him. Inoffensive, mild, and religious, Louis XVI. felt a horror of civil war. He thought that it was his duty to oppose to the enemies of the crown only passive courage. I have said elsewhere, and I am convinced, after all the testimony which I have been able to collect, that he had been obliged to fly with his family at the time of his journey to Varennes, only by being persuaded that when he had retired to a frontier town, without any connivance with foreigners, or with an armed party in the interior, he would be in an independent position, and free to accept and to refuse such or such an article of the constitution. It was a false calculation, and at all events an act of great imprudence, but it was also the error of a pure conscience. The same motives, the same prejudices, influenced the king on this occasion, and unhappily he was confirmed in his determination by his most intimate counsellors. The latter saw with satisfaction the weakness of the constitutional party, and wished for its defeat; this party was in their eyes the true obstacle to the restoration of the royal authority; it was the enemy with which no compact should be ever made; their inconsiderate zeal despised every other danger, the most violent provoked an explosion. Though we were well acquainted with these dispositions of the court, and the weak means of intrigue, corruption, and police which were employed to support them, we still flattered ourselves that we should be able to prevail over infatuated courtiers, who could not judge so well as ourselves of the extent and imminence of the danger. I hoped that the king would yield at length to the new entreaties of General Lafayette, but I was completely undeceived by the Count de Puysegur, formerly minister of war, one of the most faithful and enlightened friends of Louis XVI. I had necessarily confided to his honourable friendship the secret, which was still profoundly kept, of the enterprise which we contemplated. He thought with me that it was the only remaining chance of saving the king; but he took from me all hope of success. 'Never,' said he, 'will you induce the royal family to confide to Lafayette a power resembling that of the ancient constables of the kingdom, and thus place their own fate and that of France in his hands. The queen opposes it absolutely; Madame Elizabeth objects from religious motives; Baron de Vioménil, whose presumption and intrepidity you well know, undertakes with the Swiss guards alone, not only to defend the palace, but also to drive into the suburb all the insurgent mob, which, he says, might easily have been dispersed, if once vigorous measures had been adopted.' While the terrified court neglected our advice, rejected our aid, and gave itself up to rash counsels, the Jacobins were swelling their ranks with a great number of federalists, whom the popular societies had sent to Paris to be present at the fête of the 14th of July, and who were afterwards to go to the camp of Soissons. Their presence excited terror in the families of the citizens, and even in the assembly. The con-

spirators shewed more insolence. The attempt of the 20th of June was celebrated by them as a first victory. They prepared a scandalous triumph for the faithless magistrate who had been the hero of it. The suspension of the mayor, Pétion, which the directory of the department had so justly pronounced on the 6th of July, and which the king had confirmed on the 11th, was revoked on the 13th by a decree of the Legislative Assembly. We were compelled to endure this manifest violation of the constitution. The impunity of this great crime was illegally proclaimed in the name of the law, and the judges who had prosecuted the investigation into it were accused of having neglected their duty. The last mask was now thrown aside; the petitioners contended with each other in audacity and insolence, being encouraged by the applause of the galleries, which were chiefly filled by the federalists. The fermentation was extreme, and we had reason to fear that the 14th of July was the day intended for a great catastrophe."

The results are well known; and soon after we read:

"The Place Vendôme was filled with the crowd which followed the wretches who carried heads on the ends of their pikes. Above all I beheld, with horror, very young men, even children, playing with heads, throwing them into the air, and receiving them on the ends of their sticks. This passed but a short time before the discharge of fire-arms in the attack and the assault of the palace of the Tuileries. At the first cannon-shot, the crowd which filled the Place Vendôme and choked up the Rue Saint-Honoré dispersed and fled in all directions. Soon afterwards cries of victory were heard, and the mass of people flowed back with the same precipitation, pressing about the environs of the hall. A little later, in the midst of this tumult, we saw the famous Téroigne, on horseback, in a scarlet riding habit, followed by a great number of workmen, carrying ropes and all sorts of tools. She rode round the statue of Louis XIV., insulting the great monarch, and crying, 'Fall, tyrant!'

The inviolability of the persons of the deputies, though it had already been infringed, was a matter in which all the members of the Assembly had a common interest, however unable it had been to maintain this constitutional privilege. In the midst of this confusion, notwithstanding the dispersion of a great number of our friends, we had still the right, and perhaps also the duty, of completing the fulfilment of our trust, in concurring by our counsels in the defence of the territory. Theodore Lameth and myself entered the hall on the side of the Jacobins, since called the Mountain; on that side the benches were closely filled; those on which we usually sat were, on the contrary, very empty.* As we crossed the hall, we met and almost ran against Robespierre, who, coming out of the bar with some petitioners, was passing in a contrary direction, to enjoy the honours of the sitting at the summit of the Mountain. We had scarcely taken our usual places, when Merlin de Thionville, with whom, notwithstanding the extravagance of his opinions, I have never ceased to be connected by mutual esteem, gave me a proof of probity, which I take pleasure in recording here. He ventured to come and seat himself between us. 'Why are you come here?' said he; 'do you

* After all that had passed during the preceding days, the reproach directed by some prejudiced writers against the constitutional party, which was attacked, pursued, and dispersed by the assassins of the faction, is unquestionably a manifest injustice." The author belonged to this party.

know to what you expose yourselves? Look at those demagogues.' 'We come to do our duty; to take the new oath which is required, and to sit till the close of the session.' 'Well, then, wait only a quarter of an hour; you will ascend the tribune; and when you have taken the oath, do not stay a moment in your seats, and then endeavour to slip away.' We followed his advice, and retired by the passages behind the bureau of the president. If I were writing the history of the Revolution, I should here have to draw the dark picture of the ruins of the social fabric, and of the greatest disorder into which any nation has ever fallen. I should have to shew, first, the national representation usurping all the powers constituted by the fundamental law, and abdicating the exercise of them by the illegal convocation of a Convention. I should then have to analyse the acts of this Assembly during the forty days in which it survived itself; acts by which, borne down as it was under the ruins of the constitution which it had overthrown, it proved that it was now but the instrument of the sanguinary faction which domineered over it, and dictated its decrees. The Girondins endeavoured, in vain, to seem to direct, in the storm, the dismantled vessel of the state. Their tardy moderation rendered them suspected by the new power which rose above them. The constitutional party was proscribed and disdained; the Girondins were attacked; domiciliary visits were made in the houses of some of them, and especially in that of Brissot. The hall of the Assembly and the bureaux were an asylum for them also. I remember that, having come one morning, very early, to the place where the united legislative and military committees held their sittings, I was very much astonished at finding Condorcet lying under the table. It was, I believe, on the 13th of August, the very day on which he proposed the famous address to the French people, which was a historical and philosophical review of all the late events, and all the acts of the Legislative Assembly, from the commencement of the session to the 10th of August inclusive—a memoir in justification of the policy of the Girondins, and of all the violations which they had proposed or tolerated to attain the object which escaped them.

"The first news of the taking of Longwy and Verdun had excited the greatest exasperation. We learnt every day the arrest, the condemnation, the execution of persons, whom the search made in the palace and in private houses had implicated, or even rendered suspected. I was informed by a member of the committee of surveillance of the Assembly that I had been again denounced to that of the commune. D'Espinassy, whom I had consulted, urged me to quit the Assembly before the end of August, because the inflammatory speeches in the clubs, and in the sections, and especially in the public and numerous meetings of the commune of Paris, left no doubt that a great insurrection was at hand. I did not see any necessity for making any change in my usual way of life. I had, however, taken the precaution to send out of my house a very intelligent postilion, in whom I could place entire confidence. I had given him a cabriolet and two good horses, permitting him to go on the stand, and to let them for his own profit, promising to give him the two horses as a reward, if he would take me out of Paris when I should give him notice. I advised him to attend his section, to get acquainted with the most ardent patriots, to provide himself with all the certificates which might be useful to him, and to come sometimes during the night, to give me an account of what

he had seen and heard. I have already said that I had left the house of my father-in-law, M. Delarue, because the famous Hebert, member of the commune of Paris, who governed my section, was one of those who had denounced me."

[To be continued.]

Fruits of Reflection. A Discursive Poem.
8vo. pp. 67. London, 1839. Simpkin, Marshall, and Co.

THERE is no name upon the title-page of this volume; but its purpose is so excellent, its im-
culcations so benevolent, and its poetic feeling so laudable, that we should consider it an act of injustice in a literary journalist to aid in concealing the author.—Mr. Webb Hall, whose agricultural paper at the British Association has so recently demanded the public acknowledgment. Mr. Hall's active philanthropy upon these and other occasions deserves our warm praise; and gratified should we be, if we could believe that the praise so bestowed might lead others to imitate his useful and humane example, whether in the cultivation of the field or the cultivation of the muse. But our business here is not panegyric, but criticism; and we turn to the *Fruits of Reflection*, truly designated as "a discursive poem." It is discursive, yet the same amiability and love of kind inspirits every part: it is altogether consistent in discountenancing evil, and enforcing good. Peace, and harmony, and good-will, are opposed to war, and discord, and animosity. It is shewn how much more blessed the condition of mankind would be, if a stoke of the pains were taken to diffuse happiness around the sphere of each individual which are taken to plunder, to annoy, and to oppress. The golden rule is indeed expanded in every precept; and joyful would it be, even in this vale of tears, were that rule in its integrity, the inculcations of Mr. Hall, or the concordant principles of the Christian religion, more thought of and practised than they unfortunately are among the pretenders to humanity and the professors of Christianity.

The prominent quality of the poem is not imagination, but, as we have intimated, natural feeling: of which the following may be selected as a pleasing specimen:—

"Oh! were it mine, with sky-lark melody,
Upward to soar, and on as strong a wing,
To rise as high in the blue vault of heaven's
To sing as sweetly as the ascending bird;
To praise as fervently its great First Cause,
And to attract, in the same heavenly course,
The uplifted eye fatigued by following;
Thence to return to an undecorated home,
Pursue the duties of appointed lot,
And rise again at the approach of morn.
To sound the notes of cheerfulness and praise:
Then would I scan with strictest scrutiny
Th' effects of evil in the world below,
And trace the causes upward to their source,
And strive again to root the noxious weed,
And deeply mark its broad deformity
Both far and wide for public infamy.
Oh! I would then pursue with eager step
The various causes of the maladies,
Daily and nightly, which afflict mankind;
And make the habitation of the world
Of such fair form, so beautifully made,
Disturb'd 'tis true by elemental strife,
Prolific source of sin's deformity."

On Education (next to the absolute supply of physical wants), that most momentous of all subjects, propounded for the future improvement of our social state, Mr. Webb Hall utters only a few, but they are sound, notes:—

"Oh, then, my country—what remains to pass
Thy faithfulness to rectitude and God?
—Much still; but what no governments can give,
Subjects must earn the happiness they know.
Thy youthful trains must educated be,
The diff'rence great, 'twixt right and wrong must learn,
Employment still and industry, must show

The happiness which these alone can give.
The doom divine which man must ever feel,
By labour still to eat his daily bread,
Beneficent, in anger though it fell,
The sentence of our God and Father provid.

"Our bliss is ever of the social kind;
Man leaves on man: 'tis a divine decree;
From earliest infancy the debt begins;
Hark—to the infant's cries the mother wakes;
—The mother—who the precious gift forgets?
Who can forget her long continuous toil?
Which foster'd all our infancy and youth,
If pass'd not over to a ruder hand:
The various kindness which her hand convey'd,
Full well I trace in vivid memory's store;
Full well I recollect her constant care:
Oh, may it ne'er be lost while life-blood warms!
Brothers and sisters too, a common tie,
Foster the feeling which mankind should know;
Birds of one nest, unlike the feather'd tribe,
Expanded ether should not part the claim."

Against War our poet breathes his abhorrence:—

"But to describe the various stains of war,
Except to blot them, pains the memory;
And to become familiar with the scenes
Lessens the horror which the mind should feel.
A glory false has long conspired to save
The subject terrible from dire disgrace,
And cast a halo round the forms engadg'd,
Worthy,—of a nobler work.
To dissipate th' inveterate prejudice;
To shew unmask'd the noxious hateful course;
To paint the cruelty which flows from war,
And all the aggravations it records,
Would well reward and dignify a mind,
The best and noblest which the world contains.
To advocate humanity—the cause
In which the best of men have spent their lives,
Is admirable, wise, and truly great.
To stem the torrent of opposing throings,
By means still pure—still capable to stand,
A scrutiny, ev'n in the last dread hour,
Is surely brave—is surely honourable!
Let it not be thought, that the true courage
Of the exalted mind is lost in him
Who advocates the soul, calmly possess'd;
Proof against sneer or cutting ridicule:
That fears to give offence against his God,
'T is true: but fears not still the consequence
Which man can shew: O! surely this is brave!!"

And after all—the life spent well or ill—how true the following:—

"O death! destroyer of the human frame,
And its refiner: how dost thou advance,
Even to mortal eyes, thy choicest sons,
And lower sink thy sons degenerate."

And with this we close the volume. The style bears some resemblance to Akenside, but we will not say that its beauties of composition are at all equal to its beauties in sentiment and principle.

The Book of the Thousand Nights and One Night; from the Arabic of the Egyptian MS. as edited by W. Hay Macnaghen, Esq., B.C.S. Done into English by Henry Torrens, B.C.S., B.A., and of the Inner Temple. Vol. I. 8vo. pp. 540. 1838. (Calcutta, Thacker and Co.; London, Allen and Co.)

WHILE we are delighting in the Noe. of Mr. Lane's excellent version of these immortal tales, we are not sorry to see a *curiosum* edition. Any thing that will induce us to renew, as far as they can be renewed, the pleasurable feelings of our youth, when first the "Thousand and One Nights" made a garden at eve, in which the Greek and Latin lessons for the morning were forgotten, or postponed to the latest moment, to be learned in time for the watchful master; any thing to steal us from the wearisome business and matter-of-fact of every-day life, and convince us that fancy though dulled, and imagination though withered, have still an existence within our bosoms; any thing to withdraw us from steam, and bores, and railroads, and chattering, and hurry, and jostling, to repose on the Oriental luxuries of humour, adventure, beauty, poetry, magic, and supernatural creations, is welcome as water to the thirsty traveller in the desert. To be always strung with

usefulness is enough to bend men double to the very earth: let us, therefore, be happy in every opportunity to relax the bow, and stand upright, with our faces enjoying the heavens.

The MS. whence this translation is "done"—and very well done it is, with few errors to call for critical notice—"was brought to this country by the late Major Turner Macan, the editor of the 'Shah Namuh,' who purchased it from the heirs of Mr. Salt, long British consul in Egypt. After Major Macan's death, it became the property of the publishers of this volume, and the printing an edition from it was undertaken by that firm, the work being edited by Mr. Macnaghten of the Bengal Civil Service. This MS. contains the full number of the 1001 Nights, with many tales entirely new to European readers. It is interspersed with poetry, which possesses in the original much merit, and the style in which it is written has been considered, by the best Arabic scholars in this country, to be singularly pure and excellent."

Mr. Torrens determined on translating it, keeping as literally as he could to the Arabic, and versifying as correctly as he could all the poetry of the original. In these features consist the claims of his work to interest the public; and the vast difference between it and M. Galland's free imitation, is very striking. In retaining the poetry another novelty deserves our praise, for we find it throughout extremely characteristic, and often extremely beautiful, in thought and imagery. In other respects, Mr. T. observes:—

"The admiration of beauty inherent in the Arab, his innate voluptuousness, and his license of expression, have obliged me to omit portions of these tales, in which the style of description is more accurate than delicate; while the habit of devotional feeling common to the Moslems at large, and exhibiting itself in pious ejaculations and prayer on every possible occasion, rendered it needful to dispense with a translation of certain words, the constant use of which would appear to European readers rather irreverent than devout."

"Considerable progress had been made with this volume, before it came to my knowledge that Mr. Lane himself meditated a translation of the 'One Thousand and One Nights' from a MS. said to be not inferior to that from which this version is rendered. I need hardly say that had I, at an earlier date, been aware of this intention, I might have hesitated before I undertook the work in open rivalry to so competent a translator. But having, when this reached me, done so much that little remained to do, and observing that Mr. Lane announced, as part of his design, the omission of the greater portion of the poetry of the original, I did not oppose the desire of the spirited publishers of this volume that I should complete it."

In the tales new to us are some relating to the crusades, which fixes a date to at least a portion of these compositions. In the spelling we have again corrections, which the writer defends as necessary, but which continue the trouble and uncertainty which has too long prevailed in this respect, and considerably affected the taste for Eastern literature. Thus the Koran is Qoran; the caliph, khuleef; the vizier, vuzeer; the three kalendars, three qurundeels; Bagdad, Bhugdad; Harem, Hureem, &c. &c. Fifty of the nights are contained in the first volume; according to which proportion, there should be twenty volumes in all.

As a specimen of the style we select the following part, relating to "Ubdool Mulik Bin Murwan" who (we are told in a note) was "the fifth khuleef of the race of Omueeyah, and who

commenced his reign A.H. 65 (A.D. 685), and extended the Mooslim power to Spain, and to the confines of Hindostan. The monarch in the tale is, of course, an imaginary personage, but the story itself, now for the first time translated, is curious, as entering upon details of the wars between the Mooslims and the Christians. The author has jumbled together the exploits of the early Mooslims against the Syrian Christians, with the wars of the crusades, and has bestowed upon the Emperor of Constantinople the name of an ancient Persian monarch, Fureedoon, the conqueror of Zohak. The detail of the peculiar armour of the Christians, with the surcoat over it, and the mention of 'Frankish pirates,' a probable allusion to the Normans, give some clue to the period about which the tale was written."

The story itself commences thus:—

"This is not more wondrous than the tale of the King 'Oomr Bin Na'man, and his son Shurkun, and his son Zool'ul Mukap, and what came to pass to them of things wondrous and strange.' Said the king, 'And what was their story?' She replied, 'They relate, oh, mighty king! that there was in the city of safety, Bughdad, before the khuleefut of U'bdool Mulik Bin Murwan, a king who was called 'Oomr Bin Na'man, and he was of the tyrants, the mighty ones, and he had subdued the kings of the Kosroos, and the Kaisars, and, so he was, that there was no bringing fire near him—his heart extinguished it, nor could any one surpass him in the battle-field: and when he was angered there came forth from his nostrils sparks of fire, and he had made himself king over all quarters, and the Lord had given him all his servants, and his command had penetrated into all cities, and his armies had reached the most distant lands, and the east and the west had entered into his rule, and whatsoever was comprised in India, and Sind, and China, and the land of Hijaz, and the country of Tumun, and the islands of India, and China, and the country of the north, and Diyar Bukr, and the land of the Negroes, and the islands of the seas, and whatso is in the earth from the rising of the day like as Sihoon, and Jihoon, and Nile, and Euphrates, and he sent his messengers to cities most remote to bring him the truth of men's report and condition. Then returned they to him, and told him of justice, and obedience, and honesty, and of prayers for the Sultan 'Oomr Bin Na'man. This was so, and 'Oomr Bin Na'man, oh, king of the age! of noble race was he! they used to bear him presents, and rarities, and sums to expend from every place. Now, he had a son whose name was Shurkun, and he was likest of men to him, and had arisen a misfortune among the calamities of the time, and subdued the brave, and excelled his contemporaries. So his father loved him with exceeding love—there could no greater be, and destined him heir to the kingdom after himself. Now Shurkun grew until he reached to man's estate, and his age became twenty years: then God gave him all his servants as a possession, for the excess of boldness was his, and cruelty. Now his father, 'Oomr Bin Na'man, had four wives by contract, and by law, but he was not enriched by them with a son save Shurkun, and he was by one of them, and the rest were childless; he got not a son by one of them. And with these had he three hundred and sixty concubines for the number of the days of the year of the Copts, and these concubines were of all nations, and he had built for every one of them a private chamber, and these chambers were within the palace, for he had built twelve mansions to the number of the months of the year,

and made in every mansion thirty private chambers; thus the sum of the private chambers was three hundred and sixty, and he lodged these handmaids in them, and appointed a night for each damsel, and came not again to her for a full year, and he abode thus a long period of time. Now his son Shurkun was renowned in all quarters, and his father rejoiced in him, and his might increased; so he grew violent and masterful, and conquered fortresses and towns. Now so it was by order of that was decreed that a damsel among the handmaids of 'Oomr Bin Na'man became pregnant, and her pregnancy was announced, and the king was informed of that; so he rejoiced with exceeding joy, and said, 'Perchance my offspring and my generation may be all of them males!' So he dated the day of her pregnancy, and kept treating her with distinction. Now Shurkun learned that, and the matter seemed to him a heavy one and a mighty one, and he said, 'One hath come to tear the sovereignty from me.' And he said in his soul, 'If this damsel bear a male child I will slay him!' And he concealed that intention in his heart. This now was what was in the matter of Shurkun, but for what happened in the matter of the damsel, truly she was a Roumish girl, and the king of Roum, and lord of Caesarea, had sent her as a present, and despatched with her great store of rarities; and her name was Sufeeh; and she was loveliest of the damsels, and she was the handsomest salaried, and the most esteemed, and she was mistress of sense, and wisdom, and loveliness even most excellent. Now she had waited on the king the night he rested with her, and said to him, 'Oh, king! I desire of Heaven this night that truly he enrich thee with a male child by me, that I may bring him up fairly, and bring him to man's estate in knowledge of Him, and in His keeping.' And the king was pleased, and marvelled at that speech. Now it ceased not to be after that fashion, till her months were completed, and she sat upon the chair of child-birth; and she, in the time of her pregnancy, at prayers would arise and make fair orisons, and pray the Almighty that he would grant her a perfect male child, and make her child-birth easy to her, and the Almighty acceded to her prayers. Now the king had deputed an eunuch with her to bring him tidings of what she should bring forth, whether a male infant or a female; and in like way did also his son Shurkun send one to let him know that. Now when Sufeeh brought forth that which was born, the wise women examined it, and they found it a daughter with face more beautiful than the moon. So they informed those that were present of it, and the messenger of the king returned, and gave him the tidings, and in like manner did the messenger of Shurkun take him that same news; and he rejoiced with exceeding joy. Now when the eunuch departed, said Sufeeh to the wise women, 'Wait awhile for me, for truly 'tis as if there were somewhat else yet.' And she cried out, and the pains of child-birth came upon her, and the Lord made it easy to her, and she bore a second birth. So the wise women looked at it, and found it a male child, even like the full moon, with forehead flowery white, and cheek ruddy, rose-tinted; and the damsel was glad by reason of him, and the eunuch, and the whole train of servants, and every one that was present. So Sufeeh was freed of her burden, and they sent forth the cry of joy in the palace, and the rest of the damsels heard that, and they envied her; and the tidings reached 'Oomr Bin Na'man.

Now he rejoiced, and asked for gratulation, and arose, and went forth, and kissed her head, and looked at the child that was born: then bent he over him, and kissed him, and the damsels struck the tabors, and played on the instruments of music, and the king gave order that they should name the child that was born Zoo'ool Mukân, and his sister Nuzhut Ul Zumân. Now they did like as the king ordered, and answered, 'To hear is to obey.' And the king set apart for them those that should serve them, and eunuchs, and a train of domestics, and nurses; and assigned allowances for them of sugar, and diet drinks, and oils, and else beside of whatsoever is eatable beyond the power of tongue to rehearse it. Now the people of Baghdâd heard of how the Almighty had enriched the king with offspring, and they decked out the city, and the bearers of glad tidings knocked at the doors; and the great men, and the ministers, and the lords of the state, came forward and gave the king joy, even 'Oomr Bin Na'man, of his son Zoo'ool Mukân, and his daughter Nuzhut Ul Zumân. So the king thanked them for that and gave them dresses of honour, and shewed much kindness to them in gifts, and treated all that were present fairly, both private men and public, and gave not over after this fashion till four days were passed. Now after every little space of the year, would he ask after Sufeeh and her children; and at the end of four years, he gave order to take to her jewels, and robes, and raiments, and money, even a very great matter, and he intrusted her with their education and their good instruction. All this was so, and the son of the king, even Shurkun, knew not that his father 'Oomr Bin Na'man had got a male child, and knew not that he had got any save Nuzhut Ul Zumân; and they concealed from him the tidings of Zoo'ool Mukân until days and years were passed, and he was occupied in engaging the bold, and sallying against the horsemen. Now, meanwhile, as the king 'Oomr Bin Na'man was sitting on a day among days, lo! the chamberlains came in to him, and kissed the earth before him, and said, 'Oh, king! there hath reached us messengers from the King of Roum, Lord of Constantinople, the Great, and they desire entry to thee, and to take orders before thee: so even as the king shall order for their entry, either we will let them in, or not, for there is no disputing his command.' Now, upon that he allowed them to enter, and when they came in, he stepped to them, and embraced them, and asked them of their condition, and what was the cause of their coming. So they kissed the earth before him, and said, 'Oh, king! the glorious lord of lofty honour, know that he that sent us to thee is the King Fureedoon, Lord of the cities of Greece and the armies of Christendom, he that is established in the sovereignty of Constantinople, to let thee know that he is indeed now waging fierce war with an obstinate tyrant, and he is Lord of Caesarea: and the reason for that is, that it fell out one of the Arab kings, in ancient time, met with, in one of his conquests, a hoard of the age of Alexander. So he removed therefrom wealth past computing, and in the mass of that he found in it were three jewels of rounded shape of the size of ostrich eggs, and they are from a mine of jewels unullied, such as one could not find the like to look on, and each pearl is graven in the Greek character with matters that are mysteries, and they have virtues and properties even in great number. Now, among their properties is that whatsoever child that is born that shall have one of these jewels hung upon

him, then shall no evil befall him so long as the jewel remain attached to him, and he shall not cry, nor shall fever ail him. Now when he laid hands upon them, and fell in with them, and knew what were their mysteries, he sent an offering to the King Fureedoon of certain rarities and money, and among the sum of them the three jewels; and he equipped two vessels, the one had in it valuables, and the other even to guard that present from whosever should interrupt it on the sea. Now the king was well assured in his soul that there was not one able to detain his vessel, especially as he was king of the Arabs, and the course of the ship in which were the presents was in the sea which was under the sovereignty of the King of Constantinople, and she was bound to him: and there were on the shores of that sea none save the subjects of the king that is greatest, Fureedoon. Now, when the two ships were equipped, they voyaged until they neared our cities; then came forth upon them certain pirate-ships from that land, and in them troops from about the Lord of Caesarea. So he, the pirate, took and got together whatsoever was in the two ships of rarities, and money, and the stores, and the three jewels, and they slew the men. Now that news came up to the king, and he sent against them an army, and they routed it; and he sent against them a second army, stronger than the first, and they put it to flight also. So upon that the king was angered, and swore that he would not go forth against them save in his own person and the whole of his army, and that he would surely not turn from them, till he should leave Caesarea of Armenia ruined, and leave her land and all the towns over which her king ruled wasted; and his desire of the Lord of the Age, and of these times, 'Oomr Bin Na'man, king of Baghdâd and of Khorassan, is that he should aid with an army from about him, that glory may become his. And he, our king, hath sent to thee with us something in the sort of presents, and he requests of the king's grace their acceptance, and the kindly grant to him of aid.' Then the messengers kissed the earth before him."

The sequel of the tale is too long for us to tell, but one quotation will suffice to shew the character of this new translation; and we will only add a few snatches of the verses as examples of the poetry:—

"Man in his prosperous days is like a tree,
Round which men stand while fruit thereon there be,
Until, its bearing o'er, away they hie,
And leave it in sand and sludge to wither dry."

"Stay, grant me but one look before we part,
And though 'tis like to burst, I'll nerve my heart
This trial to sustain:
But yet if this should make you feel distress,
Leave me to perish here of love's excess,
Rather than give you pain."

"Morn heralds her coming!
Then give me to drink.
Wine shall make the grave gamesome,
Nor let him once think:
Sure so clear is the liquor,
The goblet so fine,
Who can tell which holds which—
Is 't the glass? Is 't the wine?"

"How many of God's mercies be hid from us,
Though slight the veil that hides them from the

Of the intelligent! How many matters
Seem fraught with sorrow in the morning tide,
Which ere 'tis even make us sing with joy!
Much ease hath often come after much ill,
And from the labouring and o'er-burdened heart
Hath cleared away all sorrow."

"The tracks that they have left I trace,
And pine for those are far away,
And water with my tears the place,
Where late they made their stay,
And to that power, whose mandate stern
Has doomed their absence hence, I pray,

To make me blessed in their return
An't were but for a day."

"The rich grows poor! his glory fades away,
As pale 's the bright sun at the close of day;
If distant, all unmarked men let him be,
If present, in the tribe no part hath he.
He, sinking through the streets, by stealth appears,
Or sheds, in desert haunts, his gushing tears:
God knows! a man at his own kinsman's door
Is but a stranger, if he be but poor!"

We conclude with a sample of the low and ludicrous; and a descriptive quotation in prose most poetical.

"I am so mad in love with the dungdrawer,
That for him I'd give my life away;
The gait is so sweet of the dungdrawer,
It talks of the dancing spray.
One night it fell out that chance, or fate,
Presented him mine eyes before,
Quoth I, 'Love makes me grow less and less,
Just as it gets more and more.
With the fire of love inspired by you,
This heart of mine you've set in a flame.'
'T is no wonder, quoth he, 'if a dungdrawer
A lamplighter becomes."

A Garden.—"It was arched over as it
were a portico; in it were vines, and its grapes
opposed in colour the red as it were a ruby,
and the black as it were ebony; then entered
they beneath a trellised bower, and found in it
fruits cultivated and uncultivated, and the
birds upon the bough singing in melodious
tones, and the thousand-noted nightingale
reiterating the various modes of song, and the
turtle-dove had filled the place with her voice,
and the greeble in its utterance as it were a
human being, and the ring-dove as if one
drinking, intoxicated with wine. The trees
had given, in perfection, produce of all edible
sorts, and of all kinds of fruits in pairs; the
apricot partaking of the camphor-tree, and the
almond, and the plum of Khorassan; and the
red plum as it were the colour of the fair, and
the cherry that humbles the brilliancy of gold,
and the fig that parts its red and its white,
making two colours; and the birds as 'twere
pearl and coral, and the rose that opens with
its redness like the cheeks of the lovely ones;
and the violet as 'twere a sulphur-match to
which fire is applied at night, and the myrtle
and the gillyflower, and the peony with the
anemonies, and these leaflets were gleaming
with the copious weepings of the clouds, and
the white teeth of the camomile laughed gaily,
and the narcissus kept gazing on the rose with
its black eyes, and the oranges as 'twere round
goblets, and the lemon like rounded balls of
gold. The earth was carpeted with flowers of
all colours, and the spring advanced and
brightened this place with its gladness; the
stream in murmuring ripple, and the bird con-
fusedly warbling, and the wind with rustling
gush tempering the world to quiet."

We have not taken pains to enter upon the
details in which this version of these famous
tales differs from others. Upon the question of
their origin and antiquity as a same and entire
work, opinions vary; but the probability ap-
pears to us to be, that as they were transplanted
into various countries, alterations, adaptations,
and additions, were made, which constitute all
the differences that occur in Persian, Egyptian,
Middle Asian, and East Indian copies.

Soldanella, a Fragment; and other Poems. By
George Lloyd. 8vo. pp. 65. London, 1839.
Madden; Wrexham, Painter.

We have often said, that so long as there were
youth and passion, there would be poetry
written and poetry read. This slight volume
is one of the proofs thereof. The story of
Soldanella is one of scenic description, legend-
ary apparition, and unfortunate love.

We quote a passage as a sample of the feeling
and spirit of the composition:—

"Bedabbled, torn,
Poor Soldanella sat forlorn.
Pale her cheek, as the primrose sweet,
That rises early Spring to greet,
Her eyes, their gladsome lustre past,
Around a haggard look scarce cast;
Beneath whose fringe of darkest silk
Lurked purple streaks, like early dawn:
As if with violet steeped in mill-drawn
Death there her fatal doom had drawn.
Changed was her form, no more that grace
Of life and love, but waning trace
Of misery and madness there:
Disastrous change, from one so fair!
At length she rose, and wildly spoke,
Like dreamer from some strange dream woke;
'I've come to seek thee among the slain,
Dear Giallo, upon Morgarten's plain.
There, there shall thy Soldanella die:
Where the bridegroom lies, the bride should lie."

A song, complementary to the valour and inde-
pendence of Wales, will afford a fair idea of
the merits of the minor poems:—

"*Song of the Cymry.*
Ye sons of the heroes, whose bravery tamed
The proud-soaring eagles of Rome;
Ye sons of the patriots, whose ready swords shamed
The Season that threatened your home:
Say, what is your watchword? 'It is, and shall be,
We are sons of the Cymry, we are sons of the free!'
When the Norman, by treachery, entered your land,
Your ancestors rushed from their hills;
Repulsed the invader—then abated the red-brand;
'The mountain-air freedom instils!
What then was your watchword? 'It was, and shall be,
We are sons of the Cymry, we are sons of the free!'
The leek is your emblem, and bravely your sires
That emblem have borne in each clime;
The thought that inspired them your hearts yet
Inspires,
And will to the end of all time!
For what is your watchword? 'It is, and shall be,
We are sons of the Cymry, we are sons of the free!'
Oh! cherish the language your ancestors spoke,—
Religion, and Liberty's tongue!
'Tis upright and honest, ungalled by a yoke,—
The language the Cymry bards sung!
To you then how sacred that language should be,
The language of Cymry, the word of the free!
And never let Discord or Cowardice come,
In the seats where your fathers have dwelt:
Oh! never let Fashion, that new-fangled drum,
Be heard where the bard's strains were felt!
Beware of the Season; our watchword must be,
'We are sons of the Cymry, we are sons of the free!'"

MISCELLANEOUS.

The Juvenile Scrap-Book. By Mrs. Ellis,
author of "The Women of England."
12mo. pp. 105. London, 1839. Fisher and
Co.

SIXTEEN varied and very pretty engravings
illustrated by Mrs. Ellis, in tales of prose and
verse, recommend the "Juvenile Scrap" of this
season. The writer herself seems to indicate
that she has been perhaps too grave in her
inculcations, and some relief might have been
acceptable. The stories are however attractive
as well as instructive; and the youthful reader
will, we think, feel a sufficient interest in these
pages, to make them at the same time a
pleasant and a beneficial study—by many, chivalry,
old customs and sports, moral lessons
enforced by living examples, foreign scenery,
&c. &c., are the chief subjects, and altogether
form a very agreeable as well as useful
miscellany.

*Walks and Wanderings in the World of
Literature.* By the Author of "Random
Recollections," "The Great Metropolis,"
&c. 2 vols. 12mo. London 1839. Saun-
ders and Otley.

OUR indefatigable author is at all events
happy in the names and titles of his pro-
ductions: though in the present instance we
do not catch the particular connexion between
the contents of his volumes and the "World of
Literature." Scottish tales and descriptions of
no great interest or power, and reminiscences
of boyhood and country manners, in which
there is more of the craft of authorship than

the spirit of originality, are the staple of a
publication which nowhere rises above medi-
ocrity.

*Antiproprietarian; or, an Attempt to Liberate
and Purify Christianity from Popery, Politick-
kirkality, and Priestcraft.* By John Rogers.
12mo. pp. 362. London, 1839. Simpkin,
Marshall, and Co.

THE above title might prepare readers for a
literary curiosity, and such is this volume; the
first of three, in each of which Mr. Rogers
proposes *seriatim* to discuss one of his subjects,
viz. 1st. Popery, 2d. Politickkirkality, and 3d.
Priestcraft. It is well for us that the nature of
the subject takes it out of the purview of the
Literary Gazette; for sure we are we should
not know how to deal even with this third part
of it, further than to say, that it is in form and
substance, the coinage of words, the style, and
the ideas, about as singular a work as we ever
saw.

ARTS AND SCIENCES. ELECTRICAL SOCIETY.

TUESDAY, 15th October. Read, the first part
of a paper by Mr. C. Griffin, 'On the question,
Why do electrified bodies recede from each
other?' Also a paper by Mr. C. V. Walker,
describing 'some Effects of Voltaic Electricity
on Vegetation.' The battery employed was
one of the ordinary troughs of twelve cells, in
which ten pairs were excited. It was con-
verted into a constant battery by covering the
zinc plates with writing paper, and filling the
cells with solution of sulphate of copper. Nine
days were allotted for the duration, and mus-
tard seed employed as the subject of each ex-
periment. Under certain circumstances, voltaic
electricity appeared to aid, and, under others,
retard, the progress of vegetation. Photo-
graphs exhibited to the Society the respective
conditions of the plants after the nine days'
natural and artificial growth. Copper and plat-
inum electrodes were severally used. The
copper positive electrode seemed to impregnate
the plants with oxide of copper, and so poison
them. Mr. Walker has preserved a specimen
of these which he intends to submit to chemical
test. The next paper read was by Mr. G.
Mackrell, 'On the Lamination of Clay by
Voltaic Action.' One of four simple arrange-
ments of a single pair of copper and zinc plates,
with solutions of sulphate of copper and impure
sulphate of zinc, presented a slight appearance
of lamination on the copper side of the clay;
and on the zinc side there was a thin layer of
copper some distance across, and the fracture
throughout assumed a perpendicular direction.
In one of the others also, there was a trace
of lamination on the zinc side. In the other
two there was not the least appearance of
lamination. From the respective positions
of the four arrangements, it would seem
that a certain relation of the voltaic current
to the magnetic meridian was necessary to
the success of this experiment, known as that
of Mr. R. Were Fox. The position of the
first above described was copper east and zinc
west, of the second the reverse, and of the third
and fourth, north and south, and south and
north. The copper plates used by Mr. Mack-
rell were engraved plates for cards broken into
two parts, and on the surfaces opposite to the
zinc plates a considerable thickness of metallic
copper was deposited from the sulphate of cop-
per, bearing the reversed impression of the let-
ters of the engraved plate in bas-relief; thus
accidentally confirming the experiments of Pro-
fessor Jacobi as described in his letter to Fara-
day, dated the 21st June last, and inserted in

the September number of the "London and Edinburgh Philosophical Journal." Previously to the separation of the meeting, Mr. Henley exhibited and described an electro-magnetic machine, the chief improvement in which was stated to consist in breaking contact by means of the magnetism induced in the wires which are placed in the axis of the coil.

ROYAL GEOLOGICAL SOCIETY OF CORNWALL.

Twenty-sixth Annual Report of the Council.

In presenting their Twenty-sixth Report, the Council have again to express their regret that the fifth volume of the Society's "Transactions," which was promised at the last meeting, has not yet been completed. The delay is principally owing to the editor, and to circumstances over which he had no control. They, however, believe that it will be published early in the next year. They have recently had to deplore the loss of two of the founders, and most munificent members, of the Society, in the death of the Earl of Mount Edgcumbe and Sir John St. Aubyn, Bart., who had frequently filled the offices of vice-presidents. During the past year the additions to the museum have been very considerable; among the most important contributions they participate a series of specimens, principally from the neighbourhood of Hull, which contains also many from other localities, both British and foreign, from John Edward Lee, Esq., corresponding member of the Society; a collection of shells from the tertiary formations on the skirts of the Alps, from the Chevalier Michelotti, of Turin; and a series of rock specimens and organic remains from Pembrokeshire, from Henry Mac Lauchlan, Esq., F.G.S.; which affords an instructive and admirable illustration of that region, and shows the intimate connexion between it and the fossiliferous rocks of Cornwall. The library has been enriched by the "Transactions" of the American Philosophical Society from its commencement, obtained in exchange for a set of the Society's "Transactions;" and by the purchase of Goldfuss, Dehayes, and Brongniat's admirable works on fossil geology. The Council have, therefore, great pleasure in congratulating the Society on the flourishing state of its collections. As a large proportion of them are deposited in drawers, they consider that additional space ought, if possible, to be obtained for their display, and in order to render them more generally available and useful. In consequence of this augmented and rapidly increasing value of the Society's property, they advise that, for the future, it should be insured in the sum of 1000*l.* instead of 400*l.*, as heretofore. The establishment of an academy for instruction in the collateral branches of the science of mining is an object which has occupied the attention of the Society from its foundation, and its necessity and importance have been often the theme of its reports. The Council congratulate the Society on the accomplishment of this most useful and desirable object by the munificence of Sir Charles Lemon, Bart., and on the ability and reputation of the gentlemen who have been selected to carry it into operation. Its establishment is, however, too recent to admit of an opinion as to its adaptation to the wants of our labouring population; still the Society cannot allow the completion of one of the earliest wishes of its founders to pass without an expression of their most ardent hope for its success.

Signed, by order, W. J. MEADOWOOD,
4th October, 1839. Secretary and Curator.

The following papers have been read since

the last report:—1. 'On a Formation of Bog-Iron Ore at Perran Convals Mine,' by W. Mansel Tweedy, Esq., F.R.S., member of the Society. 2. 'Notes accompanying a Series of Specimens from some Parts of Pembrokeshire,' by Henry Mac Lauchlan, Esq., F.G.S., corresponding member of the Society. 3. 'Notice of the Discovery of Organic Remains in the Quarzose Slate of Gerraus Bay,' by Charles W. Peach, Esq., associate of the Society. 4. 'On the Mineral Composition and Mechanical Structure of the Metalliferous Veins of Cornwall, and their Relations to the Rocks they traverse,' by W. J. Meadowood, F.G.S., London and Paris, Hon. M.Y.P.S., secretary of the Society, and curator of the museum. 5. 'An Account of the Quantity of Copper produced in the United Kingdom, in the year ending 30th June, 1839,' by Alfred Jenkin, Esq. From the curator's report, it appears that donations to the museum and library have been numerous and increasing; and, from the treasurer's report, that this excellent Society continues to flourish as all the friends of useful science could wish.

STATISTICS OF ENGLAND.

Marriages, Births, Deaths, and Diseases, June 30th, 1837-38.—It appears from a report recently presented to Parliament, that 111,481 marriages were registered during the year ending June 30th, 1838: 24,030 during the first quarter; 24,449 during the second; 23,201 during the third; and 29,801 during the fourth quarter, ending June 30th, 1838. Matrimony was at a maximum in the Christmas quarter, at a minimum in the quarter ending March 31st. 1075 males and 16,420 females were not of full age. 167,301 marriages were performed according to the rites of the established church; and of these it is stated, that nine were by special license, 13,677 by license, 66,410 by banns, 493 by superintendent registrars' certificates. The number of marriages solemnised not according to the rites of the established church, was 4380; namely, 2976 in registered places of worship, 1093 in superintendent registrars' offices, 76 between Quakers, and 135 between Jews. The births of 204,983 males, and 194,845 females, were registered; 74,586 in the first quarter, 89,598 in the second quarter, 113,815 in the third quarter, and 121,781 in the fourth quarter. The register of births is imperfect, as the parties are only compelled to give information when applied to by the registrars; hence a great number of the children of the poor escaped registration in the first year. It appears, however, that the numbers registered were on the increase; but it can never be complete until the registration of births is rendered compulsory, as it is in other countries. The total number of deaths registered in the first year was 335,936; namely, 170,985 males, and 164,951 females. The mortality of males is higher than that of females. After a correction for the increase of population, &c., the mortality was nearly 1 in 45. The registration of deaths has therefore been successful beyond all expectation. The probable number of burials registered in the parochial registers is estimable at 281,715; while the number of deaths registered under the new system was 335,936; or adding 5764 that occurred in the first year, and were registered in the beginning of the second, 338,600; thus exceeding the estimated number in the parochial registers of burials by 46,945. The imperfection of the old system deprived a great proportion of the population of the civil advantages of registration; and rendered all attempts at calculating the mortality of the English population futile. Accurate tables of mortality, and just rates of life assurance, &c., largely supplied by different parts of the population, could not be calculated from the registers of burials. Of the 935,385 males, 131,034 were children under 5 years of age; 39,590 males, 31,898 females, died in the first year of life. The deaths are stated at each year of life in 25 different divisions. The deaths in the metropolis were 55,597; in the district of Manchester and Salford, 3573; in Liverpool and West Derby, 2,048; in Leeds, 3573; in Birmingham, 3317. From the appendix containing an abstract of the fatal diseases, it appears that the mortality in the first half-year was 3 per cent; while the mortality in the second half-year (January 1 to June 30, 1838), including the season of excessive cold, was 2-4 per cent. In the half-year measles destroyed 4739 lives; scarlatina, 2580; whooping-cough, 3044; diarrhoea, 2755; but neither influenza nor cholera was extensively epidemic in this period; and small-pox and typhus were the reigning maladies. Small-pox destroyed 5611 lives in the half-year; 219 in Exeter, 172 in Bath, 634 in Liverpool and West Derby. 6047 persons died of typhus. 35,522 deaths were attributed to diseases of the respiratory organs; and of these 77,754 to consumption—20 per cent of the total deaths. Nearly 4 die of consumption annually out of 1000 living; and 4-2 out of 1000 females, 3-4 out of 1000 males. 1385 persons died in childbirth; 4845 violent deaths—3965 of males, 1240 of females, were registered. The excess of males was 2965, and it more

than counterbalanced the mortality of childbirth. The diseases of different parts of the kingdom differ very much in intensity. Two comparative tables of the diseases that exist in the open country are given. It appears that in 1831, the population of the metropolitan division, including Greenwich, was 1,404,800; and the population of five counties—Cornwall, Somersetshire, Wiltshire, Dorsetshire, and Devonshire—was nearly the same, or 1,409,024. The total deaths in the metropolis amounted to 34,060, in the counties only to 16,216. The deaths in 34 city districts, including Manchester, Liverpool, &c., were 22,994; in seven counties, with nearly the same population, the deaths only amounted to 14,478. The following table shows the classes of diseases by which the mortality was occasioned; and the remarks explain the cause of the increased mortality in cities:—

Deaths by Twelve Classes of Fatal Diseases in City and in County Districts.

Estimated population, Oct. 1. 1837	Cities. 3,538,161	Counties. 3,500,730
Epidemic, endemic, and contagious diseases	12,905	6,045
Sporadic diseases—		
Of the nervous system	7,705	3,607
respiratory organs	16,610	7,847
organs of circulation	500	300
digestive organs	6,476	1,622
urinary organs	215	161
organs of generation	420	353
organs of locomotion	322	154
lymphatic system	62	45
Of uncertain seat	4,305	3,720
Age	7,994	3,182
Violent deaths	1,270	980
Not specified	1,104	1,607
Total	47,958	22,893

The concentration of the population in cities doubles the deaths; from the two first classes of diseases: the ratio of deaths having been as 1 to 3-11, and 1 to 3-13; and the augmentation in the latter class occurs principally in convulsions and hydrocephalus:—Deaths by convulsions, counties, 1347; cities, 3293; ratio, 1: 2-76; by hydrocephalus, counties, 530; cities, 1540; ratio, 1: 2-75. The three following diseases, which principally affect adults between the ages of 15 and 65, show that unhealthy places augment the fatality of diseases in different degrees:—

	Counties. 1837	Cities. 2135	In Cities. 20
Deaths by consumption	1087	2135	20
childbirth	217	372	71
typhus	1804	5456	221

The occupations in cities are not more laborious than agriculture, and the great mass of the town population have constant exercise and employment; their wages are higher, their dwellings as good, their clothing as warm, and their food certainly as substantial, as that of the agricultural labourer. The Poor Law Inquiry, and successive parliamentary committees, have shown that the families of agricultural labourers subsist upon the minimum of animal food, and an inadequate supply of bread and potatoes. The source of the higher mortality in cities is, therefore, in the insalubrity of the atmosphere. Every human being expires about 636 cubic feet of gas daily, which, if collected in a receiver, would destroy other animals; and is constantly producing, in a variety of ways, the decomposition of animal and vegetable matter, yielding poisonous emanations in houses, workshops, dirty streets, and bad sewers. The smoke of fires and the products of combustion are also poisonous. All gases and effluvia, like odours, are diffusible; they have a certain force of diffusion, which Professor Graham has expressed numerically; and all emanations from human habitations in the open country mingle, almost as soon as they escape, in the currents of the atmosphere: but locate, instead of one individual to a square mile of land (the supposed density of population in the uncultivated forests of America, and the stanzas of Valerius), 600,000 individuals upon a square mile, as soldiers in a camp, and the poison will be concentrated 600,000 fold; intercept the space in every direction by 10,000 high walls, which overhang the narrow streets, shut out the sunlight, and intercept the movement of the atmosphere; let the rejected vegetables, the offal of slaughtered animals, the filth produced in every way decay in the houses and courts, or stagnate in the wet streets; bury the dead in the midst of the living; and the atmosphere will be an active poison, which will destroy, as it did in London formerly, and as it does in Constantinople now, 5-7 per cent of the inhabitants annually, and generate, when the temperature is high, recurring plagues, in which a fourth part of the entire population will perish. But the health will be little more impaired by residence upon 1 than upon 100 square miles, if means can be devised for supplying the 300,000 individuals with 300,000,000 cubic feet of pure air daily, and for removing the principal sources of poisonous exhalations. The latter object is partly accomplished by paved, open streets, by the scavenger, by an abundant supply of water, by large, well-constructed sewers, and by constant removal of dirt and cleanliness; but it is difficult to positive have impurities can be removed, and how a stream of uncontaminated air can be supplied where the sun cannot heat the earth and air, where there are no open squares, or the streets are narrow, or the houses are only separated by courts, or built in cul de sac. It will be found, therefore, that the mortality increases as the density of the

population increases; and where the density and the affluence are the same, that the rate of mortality depends upon the efficiency of the ventilation, and of the means which are employed for the removal of impurities. It is stated that the general average throughout the country of sanatory measures, which are in actual but partial operation, would probably reduce the annual number of deaths in England and Wales by 30,000, and diminish the numbers constantly disabled by sickness in the same proportion.—*The Times*.

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, October 12.—The following degrees were conferred:—

Doctor in Divinity, Grand Compendium.—R. W. Jeff, Canon of Christ Church.

Masters of Arts.—Rev. T. Watson, St. Edmund Hall; Rev. H. P. Dunster, Magdalen Hall; W. H. Le Marchant, Exeter College.

Bachelors of Arts.—Rev. J. T. Barclay, St. Edmund Hall; W. F. Sims, Magdalen Hall; G. F. Goddard, Denny of Magdalen College; J. Innes, Trinity College; A. L. Bean, Pembroke College.

CAMBRIDGE, October 10.—The following degrees were conferred:—

Doctor in Divinity.—Rev. J. Morton, Trinity College, incumbent of Chorlton-cum-Hardy, near Manchester.

Bachelor in Divinity.—Rev. G. Langhew, St. John's College.

Masters of Arts.—L. C. Booth; W. Oliver, St. Peter's College; J. Pullin, Clare Hall.

Bachelor of Arts.—T. R. Drake, Corpus Christi College. A grace also passed to confer the degree of M.A. upon J. P. Gall, B.A., of Trinity College, by Royal Mandate.

ASIATIC SOCIETY.

[Concluded from page 651.]

"THE fourth division of Asia to which the Committee have directed their inquiries, is that which contains those countries in Arabia, Persia, India, and the Eastern Isles, the natives of which have been from time immemorial in the habit of purchasing slaves from the eastern coast of Africa. The friends of the abolition of slavery having attained the object which they had in view in the West Indies, and having succeeded in getting slavery abolished in that part of the world, seem determined to direct their attention to getting slavery and the slave-trade abolished in the Eastern part of the world. As there is every reason to believe that they will succeed in accomplishing that object in the East which they have already accomplished in the West, and that the people of Arabia, Persia, India, and the Eastern Islands, will no longer be able to get slaves from the eastern coast of Africa; it is probable that slavery will, ere long, be abolished in those parts of Asia, and that a change must take place, in consequence of this event, in the manners, usages, and feelings of themselves, and of their descendants." The fifth

* "As many persons have, in consequence of the discussions which have recently taken place in both houses of parliament, relative to the state of slavery in India, and of the slave-trade in the Indian seas, expressed a wish to know what has hitherto been done in India upon these questions, the following note is added:—From 1803 to 1808 the attention, as well of the people who inhabit the western coast of India, and southern coast of Arabia, as of those who inhabit the coasts of the Arabian and Persian Gulfs, and the eastern coast of Africa, was frequently called to the subject of slavery, and to that of the slave-trade, by various measures which Sir Alexander Johnston carried into effect during that period on the island of Ceylon. In 1800, Sir Alexander having been sent to England by the government of that island, for the express purpose of proposing and explaining to his majesty's ministers a variety of different measures which he thought necessary to be adopted for the improvement of the island, and of the situation of the natives, proposed to them, amongst other, the necessary measures for attaining the following objects:—1st. For putting an end to the slave-trade in the Indian seas. 2d. For putting an end to the state of domestic slavery on the island of Ceylon. 3d. For putting an end to the state of slavery which prevailed amongst all the people who belong to the three castes, called the Coria, the Nellus, and Palla castes, on that island. 4th. For putting an end to the right of forced labour, which, as well the government of the island as certain privileged persons, claimed by ancient usage from very numerous classes of inhabitants on the island. 5th. For inducing the Imam of Muscat to make over the island of Zanzibar, on the east coast of Africa, to the British government; and to co-operate

division of Asia to which the Committee have directed their inquiries, is that which contains the people who inhabit the high lands in the different ranges of mountains which run from the Himalaya mountains, north, to Cape Comorin, south; who, from being of a more robust make, and less peevish about caste, are supposed to be better adapted than the other people of India, to labour for hire in the West Indies, at the Cape of Good Hope, and in Australia. The Committee, judging from the want of labourers, which is now experienced by the proprietors in the West Indies, in the settlements at the Cape of Good Hope, and in Australia, conceive that those proprietors will naturally endeavour to induce the inhabitants of the high lands of India to emigrate from their own country to those different countries in which their labour is required; and should they succeed, which is not improbable, in doing so, it is obvious that a very great change must take place in the feelings, manners, and opinions, not only of those who emigrate from India, but also of those who live in their neighbourhood." Con-

with them in preventing the exportation of slaves from that coast to the Mauritius, and different parts of Asia. His majesty's ministers, having fully approved of these measures, appointed Sir Alexander Chief Justice, and President of His Majesty's Council on the island of Ceylon, and instructed him with such powers as were requisite for enabling him to carry them into effect. In 1811, on his return to Ceylon, he took out with him a commission for trying and punishing all such persons as might be guilty of the offence of trading in slaves, contrary to the act which had been recently passed, declaring that offence to be felony; and, on his arrival there, he immediately caused the commission and that act to be proclaimed and published throughout Asia and the Indian seas. In the year 1813 (see 9th Report of the African Institution), some men of importance and influence in Africa, Arabia, India, and the Eastern Islands, having been guilty of trading in slaves on Ceylon, were tried, convicted, and punished, at Colombo, under the above act; a circumstance which excited great interest in the several countries to which the prisoners respectively belonged. On the 12th of August, 1816, Sir Alexander having previously brought out with him from England a charter under the great seal, granting to the native inhabitants of Ceylon the right of sitting upon juries, and being tried by juries of their own countrymen for any offences with which they might be charged, and also many other rights and privileges of British subjects, all the proprietors of domestic slaves on the island, 763 in number, came to a resolution, out of gratitude to the British government, for having granted to them those privileges, declaring free all children born of their slaves after the 18th of August, 1816, and thereby put an end to the state of domestic slavery which had prevailed on Ceylon for 300 years (see 11th Report of the African Institution). In 1817, measures were taken by the Ceylon government for carrying into effect a plan proposed by Sir Alexander Johnston to his majesty's ministers some years before, for gradually emancipating all the people of the Coria, Nellus, and Palla castes, from the particular description of slavery to which they were subject; and in 1834, an order was passed by his majesty in council, in England, for carrying into effect a plan which had also some years before been proposed by Sir Alexander to his majesty's ministers for abolishing the right of the government on Ceylon, and certain privileged individuals, to exact forced labour from numerous classes of the inhabitants of the island. Shortly after the trial which has been mentioned as having taken place in 1813, Sir Alexander having had frequent communications with various subjects of the Imam of Muscat, for the purpose of inducing the Imam to co-operate with the British government in preventing the exportation of slaves from the eastern coast of Africa; and having imparted his views upon the subject of the island of Zanzibar to the Marquess of Hastings, then governor-general of India, his lordship, sometime afterwards, succeeded in getting the Imam of Muscat to offer to surrender the island of Zanzibar to the British government, upon certain conditions; of which offer his lordship informed Sir Alexander, who, however, on stating the circumstance to the African Institution, found that some obstacles had occurred to prevent the British government from accepting this offer. Sir Alexander, about three years ago, availing himself of the friendly relations which subsisted between Captain Cogan and the Imam, who is now honorary member of this Society, wrote a letter through Captain Cogan to the Imam, and a short time afterwards received an answer from the Imam, declaring that he was anxious to co-operate in every way in his power with the British government in preventing the exportation of slaves from the eastern coast of Africa."

* "Sir Alexander Johnston called the attention of the Society to the very curious and interesting papers upon the history and manners of the different people of this

considering the importance which must be attached at the present moment by Great Britain to every description of information relative to British India, the Committee feel it to be their duty to seize the opportunity of expressing their hope that the British government of India will exert their power, patronage, and influence, both with the natives of the country and with their civil and military servants, in encouraging them to collect, arrange, and publish detailed observations, relative as well to the agriculture, manufactures, productions, botany, and natural history of British India, as to the manners, laws, customs, usages, history, and religion, of all the different classes of people who inhabit that vast empire; and thereby emulate the bright examples which have been set them in ancient and modern times, by distinguished sovereigns and governments, who have at different times presided over the destinies of all those nations which can in any way be compared, either for extent of dominion, or for numbers and variety of people and productions, with that extraordinary empire which is now possessed in India by Great Britain. Alexander the Great afforded Aristotle the most ample means for making the collection of facts in natural history, and in every branch of science and literature, from which he prepared those numerous works that still continue, after the lapse of 2000 years, to exercise their influence upon the present age. The republic of Rome assisted Pliny with all their power, in obtaining materials for his work on natural history. The kaliphs of Bagdad in Asia, those of Fez and Morocco in Africa, and those of Seville and Cordova in Europe, patronised the ablest and most learned men in their dominions, in rescuing from oblivion the science and literature of the Greeks and Romans, and in adding by their own inquiries, studies, and observations, to the knowledge of previous ages in arithmetic, geometry, mechanics, astronomy, medicine, and every department of natural history. The kings of Spain, as soon as they had conquered Mexico and Peru, employed several of their officers in preserving those materials which have enabled many distinguished writers of the present day to illustrate the history of those interesting nations. The late Empress of Russia, Catherine II., devoted large sums of money, and employed all her influence, in assisting Pallas to collect local information in every part of her Asiatic provinces, and in writing a detailed account of whatever was remarkable in those provinces; and the republic of France, even in the midst of foreign wars and internal confusion, when they sent Bonaparte to make the conquest of Egypt, sent along with him a commission composed of some of the ablest men in France, in every branch of science and literature, to procure on the spot a thorough knowledge of the country and of the people, and have, thereby, enabled the French nation to lay before Europe such a history of Egypt and the Egyptians as reflects the highest honour upon the men who composed the commission, and upon the nation which enabled them to prosecute their inquiries. No nation in the world ever possessed so extensive a field and such efficient means as Great Britain now possesses, for collecting every description of valuable information relative to India. She has territories extending from the Himalaya mountains, north, to Point de Galle, south,

description, in different parts of India, by Captain A. Mackintosh, of the Madras Military Service, particularly to his valuable account of the Mahader Colles, and of the tribe of Ramooodees; and expressed his hope that Captain Mackintosh will continue his very useful inquiries into that subject."

through upwards of thirty degrees of latitude; and from the Gulf of Cambay, west, to the frontiers of China; east, through upwards of forty degrees of longitude. Some of them not more than a few inches, others not less than 26,000 feet, above the level of the sea, exhibiting the effects of every variety of climate, having in them almost every modification of mineral, vegetable, and animal production; containing, in different parts of their population, human beings influenced by every variety of religious opinion, and by every description of laws, manners, and usages; intersected by, or lying contiguous to, some of the largest rivers in Asia,—the Brahmaputra, Ganges, Indus, Nerbudda, Tapti, Kistnah, Coleroon, and Cavery; and having a sea-coast of nearly 5000 miles in extent, for the most part open to the Indian Ocean. She has a standing army of upwards of 250,000 men, commanded by well-educated and enterprising men, having under their control and direction a body of engineers and medical officers, who have had the most scientific education which can be given to men in their respective professions, and which peculiarly fits them for every description of scientific research. She has establishments upon the most extensive scale for making surveys of the country; she has numbers of draughtsmen, printing-presses, and lithographic transferring machines, for the purposes of recording and illustrating all the information which may be collected; she has a post, which travels night and day, at the rate of four miles an hour, from the banks of Sutledge, north, to Dewander Head, or Ceylon, south; and from Surat, west, to Sylhet, east; and which can convey information from Calcutta, the capital of British India, to every part of her dominions in the east, within sixteen or seventeen days. An annual revenue of upwards of twenty millions sterling, and a local government, unchecked in its scientific or literary projects by any local control. With these advantages, the people of India, on the one hand, may be enabled to communicate to the people of England a thorough knowledge of the productions of their country, and of the nature of their wants; while the people of England, on the other, may be enabled to communicate to the people of India a knowledge of the latest improvements in the arts and sciences of Europe; and by raising their moral and political situation in their own country, enable them to enjoy and exercise, with honour to themselves, and with advantage to their country, all the rights and privileges of freemen and of British subjects. Under these circumstances, the people of India, the people of Great Britain, and the people of Europe, have each a right to expect from the British government in India, that they will enable them respectively to avail themselves of the opportunity which is afforded them by the position in which India now stands with respect to Great Britain, of becoming thoroughly acquainted with every fact which may render this position a benefit, as well to India, and Great Britain in particular, as to Europe in general.”*

* “Sir Alexander Johnston stated to the Society that Lord Auckland, ever since he has been governor-general of British India, has taken the most efficient measures for attaining the literary and scientific objects which the Society have in view; that he has already sent to England some very useful and interesting communications, relative to different parts of the country; and that he has made arrangements for collecting such information as may be wanted relative to all those countries through which the British armies are about to march, on their way to Candahar, Ghazni, and Cabul.”

ORIGINAL POETRY.

Sketches of Poets who have been afflicted by Aberration of Mind.

NO. I. COWPER.

In pensive mood along the winding Ouse
Who yonder strays to woo the evening Muse?
'Tis Olney's bard that, 'neath the poplars'
shade,
Seeks with his Mary the "cool colonnade;"
While happy *Beau* runs barking by their side,
And eyes the lilies glittering in the tide.
Unhappy Cowper! Fancy's darling child,
Whose strains my youthful morn so oft beguiled,
How hath my heart with deep compassion bled,
When of thy woes and sufferings I have read!
For ah! 'twas thine to pass long years of woe,
A wretched pilgrim in the vale below:
The fibres of thy gentle soul were torn
By all the pangs of "moody madness" born;
And even Religion, Misery's common friend,
To thee alone her balm refused to send.
Ah! how could he that taught the way on high,
E'er deem himself an outcast from the sky;
Or think the bard inspired by heavenly love
Should be excluded from the realms above?
But now, meek sufferer, all thy pangs are o'er,
Thy bark at length hath reach'd the sunlit shore,
Where no wild billows beat, no raging tempests
Then rest in peace within thy tranquil shrine,
Till angels breathe around thee strains like thine:
And then, admitted to the realms on high,
That bliss thou'lt share which Earth did still deny.
There Theodora shall thy presence greet;
And there again thy Mary thou shalt meet;
Kind Hezekiah, too, shall join the friendly choir;
There ardent Newton glow with milder fire:
With seraph-hymns thy palm-wreathed lyre shall sound,
While blessed spirits stand entranced around;
And angel harps the music shall prolong,
And to Jehovah swell the glorious song.

R. B. S.

Translation of Victor Hugo's "La Tombe d'il," &c., Les Vois Intérieures, XXXI.

THE grave said to the rose—

"O flower of love,

Where go the tears that dewy morn on thee
Sheds from above?"

The rose said to the grave—

"Grave, tell me this—

Where go the souls that daily disappear
In thine abyss?"

The rose replied—"O sad

And dismal tomb,

Out of those tears do I distil
A sweet perfume."

The grave replied—"O flower,

Blushing and bright,

Out of the souls that come to me I make
Angels of light."

J. H. M.

BIOGRAPHY.

SIR ANDREW HALLIDAY.

WE copy the following obituary of an individual whom we knew and esteemed, from a Dumfries journal, "The Courier" we believe, and edited by one of our most popular writers—Mr. John McDiarmid:—"Sir Andrew Halliday died at Dumfries on the 7th day of September last; he has not long survived the wasting climate of the West Indies, where he was inspector of hospitals. He retired to the air of his native country; but it

was only to droop and die. His life from his youth up was one of action. He served on the staff of the army both in Portugal and Spain; was at the assault of Bergen-op-Zoom, and at the battle of Waterloo; and accompanied William IV., when Duke of Clarence, in his journeys abroad in quest of health. He was a good scholar as well as a skilful physician, and his varied and almost general intelligence obtained him high esteem with princes abroad as well as at home. Like his daleman, Telford the engineer, whom he knew and loved, he was of humble parentage, though of good and ancient blood, for he came from that brave 'Thom Halliday, my sister's son so dear,' as he was called by the renowned Sir William Wallace. He knew most of the epicopical history of Scotland, and was familiar with his country's antiquities; he knew as much of the poetry and traditions of the land as if they had been the study of his life. He had skill as well as taste in literature and in natural philosophy, as his 'History of the House of Hanover,' and his 'West Indies' sufficiently prove. He had collected materials for writing an account of the chief campaigns of Wellington, which he had witnessed. He loved ingenious men; he was ever ready to do a good deed or speak a kind word; and such was his generous nature, that though he met with a base return to-day, he was ready to befriend the meritorious to-morrow. He took so much care in helping others on in their fortune, that we fear he neglected his own; his half-pay at home was not large, and Portugal, we have heard, stopped his well-merited annuity, serving him as she served her other benefactors. We hope this country will remember that his lady survives him. We knew him, and loved him with the love that is due to the generous and good, and say of him, without a chance of contradiction,—"A warmer heart death ne'er made cold."

THE DRAMA.

CONSIDERABLE activity has prevailed in the drama since our last, and a number of novelties have been produced at the various theatres.

Covent Garden took the lead on Monday with Beaumont and Fletcher's fine acting play of *Rule a Wife and Have a Wife*, for the sake of introducing to the stage Mr. G. Vandenhoff, a son of the popular tragedian, and who appeared in the character of *Leon*. The choice was judicious, for the part is in itself effective, and requires little more than person, voice, manner, and the usual dramatic attributes for the personation of genteel comedy, to ensure success; and all these, except, perhaps, ease and usage in treading the boards, the *débutant* possesses in a palpable degree. The defects, therefore, are those incident to inexperience; the merits, of a permanent order. Still, we must speak of the *début* as one more of promise than of actual performance; for, whether proceeding from nervousness or some other cause, the stronger portions of the cast were not given with the force of which they are susceptible, and the situations were accordingly not made the most of. Judgment, and a freedom from exaggeration or overdoing the part, being the foundations, we may look for the qualities now wanting to be supplied as Mr. Vandenhoff becomes more and more practised in his profession. Mrs. Nisbett's *Estifania* was capital, though more subdued than we expected from her buoyancy—a buoyance which could not be better bestowed in abundance than upon this character. Mr. C. Mathews has not the stamina to which we have been accustomed in *Peres*, but made a lively swagger go as far as it could, and was

altogether very amusing. The other parts were well sustained by Selby, Fitzjames, Mrs. Brougham, Miss A. Taylor, &c.; and we must make a special exception in the way of much higher praise in favour of Bartley's *Cafégo*, F. Mathews's old woman, and her daughter, Mr. Meadows.

On Wednesday, the opera of *Artaxerxes* was produced: *Artaxerxes*, Vestris; *Arbaces*, W. Harrison; *Semira*, Miss A. Taylor; *Artabanes*, Mr. Borroni (first appearance on the English stage) and *Mandane*, Miss Austin (a pupil of Mr. Welsh, and her first appearance), respecting whose musical endowments report had been previously busy and loud, so that the house boasted of a full and fashionable audience at the rising of the curtain. There are two modes of judging of such appeals; either by comparison with the past, or by pushing that aside and looking only at the effort *per se* in reference to the existing condition of the art. If we apply the first of these tests, and consider, also, the great advance which has taken place in the public taste, we should only be able to compliment Miss Austin on a moderate degree of triumph. We should say that she was a sweet and elegant little *Mandane*, very highly accomplished in the music, with a fine rather than a rich organ, and well taught to look, gesticulate, and act the part. But, alas! how tame and inefficient when contrasted with the glorious *Mandanes* of former years! With reference to the present state of the stage, Miss Austin's claims come more prominently and advantageously forward, and she may justly be welcomed to it as a charming acquisition. The great trial song, "The Soldier Tired," was expressly given, but wanted power, and when encoored, the repetition exhibited this want more obviously. Vestris was not quite at home in *Artaxerxes*, but sung "In Infancy our Hopes and Fears" so sweetly as to merit a universal encore. In *Arbaces*, Mr. Harrison was eminently successful, and also fairly won an encore to "Water parted from the Sea," which he gave in almost a perfect style. The two or three notes in which he partially failed in both occasions, hardly detracted from the execution and finish of the whole. Miss A. Taylor did the little *Semira* has to do in a very pleasing manner; and Mr. Borroni was all alive in *Artabanes*, which he acted rather too much and sung very well. At the end the applause was general, and Miss Austin was called forward to receive it in person; after which a cry was raised for Mr. Borroni (pronounced "Brawny, Brawny!") in pit and gallery, so that it was some time before it was ascertained what was wanted. At last, however, Mr. B. appeared and made his bow, and whimsically remained behind Mr. Harrison whilst he was giving out the opera for repetition on Friday. Mr. Welsh presided admirably in the orchestra, and the scenery and dresses were most appropriate and beautiful. It affords a pleasing anticipation to find *opera* so ably done here, as to afford great variety with the comedy and lighter pieces of the season.

At *The Haymarket* we have a new farce entitled *His Last Legs*, from the popular pen of Mr. Bernard. When we mention that it is Power who is on his last legs, and that the character fits his foot to a T, we have said enough to account for a good hour's continual laughter every night, and the entire success of the entertainment. The plot has some resemblance to the *Irish Tutor*, but the difference in the chief character (O'Callaghan being a reduced Irish gentleman), would make the variety sufficient, were it not made so by new situations and the diversity of other parts. Among these,

Charles Rivers, very cleverly and amusingly played by Mr. Walter Lacy, and *Mrs. Montague*, a widow and former flame of O'Callaghan's, as ably performed by Mrs. Clifford, are the most prominent. The whim of the farce turns mainly upon the ridicule of animal magnetism; and to see Power manipulate his patients, and explain the process by which cures are effected, is quite irresistible. He certainly contrives to mesmerize and convulse the audience at the same time; and if he wants any talent, it would be that of composing them again, which we defy him to do.

The Adelphi has brought out a great, an enormous performer,—an Elephant, superior in wisdom to Ganeel or Mille d'Jeck. The only part of his performance which is lame, is a mere and well-acted pretence of lameness from his journey; he dances like Taglioni, drinks like Drunken Barnaby, feeds like Alderman —; and, what is wonderful, walks over his prostrate master without hurting him, which is more than any nobleman, steward, or gentleman's agent, could do. But he is a surprising beast, and worth his weight in ivory.

Asiety's.—The *Lion King*, though only a *Cartier*, has been riding his triumphal chariot triumphantly throughout the week; and seems to have got his menagerie into such subjection that we do not think he will be eaten for a month to come. It is only the gallery doorkeepers who are torn to pieces from four to six o'clock daily, which may be seen for nothing in the Westminster Road.

Of *The Strand Theatre*, Mr. Hammond took his leave on Saturday, when it closed its season. He spoke as mysteriously as the Delphic oracle of the projects at Drury Lane, but as it opens on the 26th, we shall then get into these Sibyl secrets.

VARIETIES.

Improvements.—Among new improvements we see announced the formation of a company entitled "The Common Road Steam Conveyance Company," whose object is to expedite travelling by means of Colonel Macaroni's steam-carriages, which are affirmed to ascend steep hills at the rate of six or seven miles an hour. Another proposition proposes to establish a Life Insurance Company, but with the novel feature of also making a provision for invalids and aged insurers. The Prospectus is sustained by names of rank, weight, and character; and if the calculations hold good, assuredly no objects can be more worthy of public consideration. To aid sickness and infirmity, and to create funds for loans and endowments of children, deserve the attention of every father of a family.

Poisons.—In a communication from M. Orfila to the Paris Academy of Medicine, he has, it is stated, shown that the arsenic obtained by his boiling process, as a test of poisoning, cannot be mistaken for arsenic introduced, either by the chemical tests applied to detect it, or by communication from the earth in which a corpse is interred, or existent in the body itself; and has laid down precise rules for making the distinction. This must be of great service to the study of forensic medicine, and tend much to the elucidation of crime.

New York Theatre.—The national theatre at New York (Mr. Wallack's) has been burnt down; and the flames from it have caused a far-extended conflagration, in which several churches have been destroyed. Mr. Kean having recovered from a fit of sickness, was to have played on the night after the accident;

and Mr. Vandenhoff, we regret to hear, has suffered much loss in his stage wardrobe, &c. by the calamity. We fear, however, that Mr. Wallack must be the most unfortunate loser.

The newspapers state that her majesty has commissioned Mr. C. R. Stanley to make a series of drawings from views of the beautiful scenery in Windsor Park, as now seen, and of her majesty's own selection.

Rigular Far-Westerns.—Talk of bulls! I knew an ox so fat that his shadow stuck to the ground for an hour after he was gone!

Talk of spirits! I had a cask of whisky and gin, that, after drinking a glass of it, you spoke broad Scotch perfectly; and after three tumblers, pure Gaelic!

Sunset and Acrostic.—*Paternoster Row*.
P AUSE, stranger, gaze on Paternoster Row,
A place coeval with our Christian claim!—
T he noisy world's great publishing depot;
E ver o'erflowing with new-minted fame,
R eflected bright from many an honoured name,
N o end to fancy in that voiceless tomb;
O what a world of spirits now lie tame!
S o lion-like when life was in its bloom!
T here live the dead, there read their varied doom,
E ach calmly sleeping in his foeman's arms,
R eflection lighting up the boards of gloom,
R epected most by those who feel their charms.
O ur Father's Row, thou hast the world's regard,
W hile but a lane obscure, near thee, St. Paul's Churchyard!
ANDREW PARK.

A Natural Doubt.
Thus lately preached good B—N—,
Taking his text from prophet Joel:
"Would you have all your sins forgiven,
Let every thought be fixed on heaven."
So far so good: yet, teacher say,
To which bright world you point the way—
The one within you assure skies?
Or that which beams in Anna's eyes?
For if you mean her eyes' dark apple,
I'm the best Christian in your chapel.

OSTROGOTH.

LITERARY NOVELTIES.

Scholar's tiny Elbow Almanack has this year been con signed to the poetical taste of Lover, and could no have been in better hands. The six portraits are of the Duchess of Sutherland, Mrs. S. C. Hall, Persiani, Moore Macready, and Sir Martin Shee—one half of them, at least Irish subjects "in little," and, therefore, most fit to be treated by a true-hearted Irishman, an admirable Irish miniature painter, and an Irish bard of whose genius "Rory O'More" is only one bright national scintillation. As the larger Annuals are now coming into bloom, we must not forget our own sweet and cherished floweret among their gay and gaudier blossoms.

We rejoice to learn that a new work by Sam Slick has been struck off the anvil of the Great Western, and may soon be looked for among our new publications.

In the Press.
A second series of Enlarged Gleanings, Historical and Literary, including an Essay on Emulations.—*Bibliotheca Scholastica*; or, a Classical and Archaeological Dictionary of the Manners, Customs, Laws, Institutions, Arts, Literature, &c., of all the most celebrated Nations of Antiquity; by P. Austin Nuttall, LL.D.

CONJECTURAL PHILOLOGY.

To the Editor of the Literary Gazette.

October 1st, 1839.

SIR,—I have this instant read in "The Times" of to-day two lines of South Australian, with their translation. Knowing nothing of the language, it strikes me never theless at the moment, that it is nearly all pure Tatar, in an astonishing degree. I am not aware of any grammar or vocabulary being in England, but am tempted, in utter darkness, to essay at a conjectural etymology; and will cheerfully bear the ridicule of error, if wrong, for the sake of a very curious philological analogy, if the deductions are correct.—I am, &c. B. E. POKK.

Turkese ninka nokion burk onno mayoo waadpen tonghe: Constantly you see white men make clothes.

Arache ningo booly onna mayoo boora waanqan: Plenty you black men by and by speak English.

1. *Turkese* and *arache*, containing same roots, assimilate in sense.

2. *Ninka*, is clearly *you*,—*ing-en-ang*, existing person or things.

3. *Burk(onno)* is the Hebrew, *בָּרַךְ* {White, boora of second line. {Indian, *burrah*, {great, {Caribbean, *bukra*.

consequently referring to English as whites.

4. *Onno* is one of second line (Asiatic and Europ., of Persian, Arabic, English, &c.), *een*, *an*; man; as belonging to—possession.

5. *Mayoo*, in first line, probably verb *make*; for in second line, the verb *make* requires a representative; and *mayoo* is found there—both third persons plural.

6. *Booby*, of second line, by juxtaposition with one (see first line too), must be black (Indian, pale, wild, dark).
 7. *Nobles*, by relative position, must be *see*, second person singular.
 8. *Wangon* (Anglo), by relative position, must be *clothes*.
 9. *Wangon*, by relative position, must be *by and by*-English.
 Such are my philological conjectures.

LIST OF NEW BOOKS.

Transactions of the Medico-Chirurgical Society of London, Vol. IV., new series, 8vo. 14s.—Crutwell's Original Housekeepers' Account-Book, 1840, 4to. 2s.—Life and Services of Nelson, by Clarke and McArthur, Vol. I., 8vo. 5s. 6d.—Character and Costume of Turkey, Italy, &c., by T. Allom, folio, 3l. 3s.—Food for Babes; or, First Sermons, 18mo. 3s.—Buddicom's Christian Exodus, 2d edition, 2 vols. fcap. 14s.—The Minister's Manual for Visiting the Sick, by the Rev. H. H. Victor, 12mo. 3s. 6d.—Wright's Life and Campaigns of the Duke of Wellington, Vol. I., 8vo. 14s.—Vegetable Organography, by M. Aug. P. De Candolle, translated by R. Kingdon, Vol. I., 8vo. 14s.—Meyen's Report on Vegetative Physiology, translated by W. Francis, 8vo. 7s. 6d.—Bell's Elements of Algebra (Chambers's Educational Course), 18mo. 4s. 6d.—Cyclopedia of Anatomy, &c., edited by R. B. Todd, Vol. II., royal 8vo. 2l. 10s.—The Anatomist's Manual, by J. P. Maygrier, fcap. 7s.—J. Ray on the Medical Jurisprudence of Insanity, with Essay by Dr. Spillan, 12mo. 6s.—The Modern Literature of France, by G. W. M. Reynolds, 2 vols. post 8vo. 16s.—Frey's Hebrew Grammar, 10th edition, 8vo. 8s. 6d.—Martin's Conveyancing, by C. Davidson, Vol. III., Part II., royal 8vo. 15s.—The Agricultural Calculator, by R. Solomon, 24mo. 3s.—Manual of the Law of Scotland, by J. H. Burton, 12mo. 9s. 6d.—Max Wentworth, 3 vols. post 8vo. 1l. 11s. 6d.—Lizars' Text-Book of Anatomy, Part I., 12mo. 6s.—What is an Egg worth? or, the Blessings of Providence, square, 2s.—Mrs. Barron's Course of Reading and Instruction, 18mo. 2s.—Affection's Keepsake, 1840, 2s. 6d.—Pictorial Keepsake, 1840, fcap. 10s. 6d.—Friendship's Offering, 1840, fcap. 12s.—Researches, Physiological and Anatomical, by J. Davy, M.D., 3 vols. 8vo. 30s.

METEOROLOGICAL JOURNAL, 1839.

October.	Thermometer.	Barometer.
Thursday... 10	From 50 to 62	30.47 to 30.69
Friday... 11	40 to 60	30.56 to 30.55
Saturday... 12	48 to 60	30.74 to 30.60
Sunday... 13	43 to 57	30.94 to 30.92
Monday... 14	36 to 58	30.85 to 30.80
Tuesday... 15	39 to 55	30.74 to 30.84
Wednesday 16	39 to 50	30.94 to 30.97

Prevailing wind, S.W.
 Except the morning of the 10th and 11th, generally clear; rain fell on the 10th, 11th, 12th, and 13th. Lightning during the evening of the 11th.
 Aurora borealis very brilliant, with coruscations of a deep crimson colour, extending from north to west, on the evening of the 13th, from 8 till half-past.
 Rain fallen, .975 of an inch.

Edmonton.

CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

Cure of Stammering.—It will save trouble to ourselves and to our correspondents, who, either personally or by writing, have sought information from us on this subject, to state that Mr. Hunt, to whose wonderfully easy, immediate, and efficacious cure of stammering, this Journal has borne testimony, has resumed his residence in London. Not having made memoranda of some of these occasions, and having had the particulars driven from our memory by various matters since, we have no other way of equipping ourselves to those friends and readers whom it is always our wish to oblige.

To the Editor of the Literary Gazette.

SIR,—I saw to-day an assertion in your paper of Saturday last, that Mrs. Charles Mathews (senior), in the *Life* of her late husband, has "some hard hitting at poor Hunt on 111;" the lady does not mention my name, but, since you have done so, I beg that you will refer your readers to "The Atlas" and "Observer" of the 6th inst. wherein they will find letters on the subject, proving that the "hitting" was not aimed with truth, and is likelier to rebound against the lady than to hurt me or mine. *Fido*, too, "Home Service." We should pride in any honest man's sympathy, under poverty, not induced by idleness or extravagance of our own; but we shall not require *any pity*, until we take some dishonouring road to ices—which, spite numerous examples of the kind, we ever will do, let our enemies insinuate what they like. (You, Sir, I regard as our friend; if you are, as I believe you, a friend to justice. In which belief I am respectfully ours, and resigned to avow that I remain—poor
 Brompton, October 11th, 1839. BARNUM HILL.

Mr. Taitan.—We had intended to add a note to our own correspondence (see p. 669, No. 1185), but omitted it through an oversight. Mr. Taitan, whose Eastern travel and search for Coptic MSS. are there referred to, has been, I believe, most successful in collecting ancient records of great interest and value, and is now in Italy on his return home, laden with these literary and Scriptural treasures. *Ed. L. G.*

"Geotome" will find a letter at our office.

ERASTUS.—In our last No., page 662, col. 2, line 45, "gratified" read "qualified."

ADVERTISEMENTS,

Connected with Literature and the Arts.

TO ADVERTISERS.—ANTI-CORN

LAW CIRCULAR.—Arrangements have been made for making this paper (which is a stamped periodical) a medium for advertisements; to commence with the 15th number, to be published on the 29th October. Orders will be received for the publication of the Anti-Corn Law Association, 10, Pall Mall, Buildings, Martin Street, Manchester. Of the first thirteen numbers, upwards of one hundred thousand copies have been circulated in all parts of the kingdom. Its subscribers include the most eminent Merchants and Manufacturers in the kingdom, the Peers, and Members of the House of Commons. It is supplied to all the principal Reading-rooms, Club-houses, Hotels, &c. &c. in Great Britain.—Advertisements must be sent on or before the Friday preceding publication.

WESTMINSTER MEDICAL SOCIETY.

THE first General Meeting of this Society will be held on Saturday Evening next (Oct. 15th), at the Society's Rooms, Master Hall, Strand, upon which occasion Mr. Marson will read a paper upon Variolæ Ophthalmica. The chair will be taken at Eight o'clock.

E. J. CHANCE, Hon. Sec.

CROSBY HALL.

PREMIUM to the Amount of ONE HUNDRED GUINEAS, with an Award for the most approved Dissertation and the American Law Association, 10, Pall Mall, Park, University College, and Crosby Hall, where the conditions may be obtained, or from Messrs. Smith, Elder, and Co. 65 Cornhill.

BOOKS IN THE PRESS.

THE BEST OF SPINDLER'S CELEBRATED NOVELS. Next work, in 2 vols.

SPINDLER'S JESUIT. A Picture of Manners and Character in the First Quarter of the Nineteenth Century.

FROM THE GERMAN.

"The Jesuit" is a work of great and original talent. It exhibits the most striking picture we have seen of the secret of the fearful omnipotence of that order.—*Foreign Quarterly Review*.

London: Dartlet and Clark, Hotham Hill.

On Monday week will be published, in full gilt binding, elegantly embossed, price 12s.

FRIENDSHIP'S OFFERING, AND WINTER'S WREATH FOR 1840.

Being the 17th Volume of this long-established and favourite Annual, which surpasses all its predecessors in the choice selection of its Embellishments, and the beauty of their execution; while its Literary Contents, by the best Writers of the day, more than sustain that high character of superior excellence for which it has ever been distinguished.

"This most beautiful Christmas present enjoys the merit of having been the second in its existence of all those that now contest with it the palm of celebrity; and it is no exaggeration to say, that, both in literary talent and pictorial embellishment, it fully maintains the distinguished rank to which its priority of existence gives it a nominal title."—*Monthly Magazine*.

SMITH, ELDER, AND CO. 65 CORNHILL.

In small 8vo. with a Map and Plates; price 9s. 6d. in extra cloth,

AMERICA and the AMERICAN CHURCH

By the Rev. HENRY CASWALL, M.A.
Rector of Christ Church, Madison, Indiana; and late Professor in the Theological Seminary of the Diocese of Kentucky.
Ten Years Resident in the United States.
J. G. F., and J. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

The Holy Bible Chronologically Arranged.
Handsome printed in Four large Vols. 8vo. price 3s. 6d. in boards, a new edition, with Marginal References, of THE OLD and NEW TESTAMENT, arranged in Historical and Chronological Order, in such manner that the Books, Chapters, &c. may be read as one connected History, in the very Words of the authorised Translation. With copious Notes and Indices.

By the Rev. GEORGE TOWNSEND, M.A.
Prebendary of Durham.
J. G. F., and J. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.
*The Old and New Testaments may be purchased separately; and the same Work, with short Notes, may be had in one large volume, price 1s. 4s. in boards.

Rev. C. Girdlestone's Commentary on the Bible.
In 5 vols. price 3s. boards, the Fourth Part (containing Kings, Chronicles, Nehemiah, and Esther).

THE OLD TESTAMENT, with a Commentary, consisting of Short Lectures for the daily Use of Families.
By the Rev. CHARLES GIRDLESTONE, M.A.
Rector of Alderley, Cheshire.
In this edition of the Holy Bible, it has been the chief object of the Editor to furnish families with an exposition for daily reading. The Scripture is divided into paragraphs of a convenient length, and the explanatory and practical matter is digested, under each portion, into one consecutive lecture, so as to demand of the reader no previous study or attention.
J. G. F., and J. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and J. H. Parker, Oxford.

Also, lately published,
Volume the First (containing the Pentateuch), price 18s.; and
Volume the Second (Historical Books), 18s.; or in Parts, at 6s. each.

And, by the same Author,
The New Testament, with a Commentary.
In 3 vols. or Four Parts, price 1s. 16s.

In 2 vols. 8vo. price 1s. 12s. in boards, the 3d edition, dedicated (by permission) to the Most Rev. the Archbishops of Canterbury and Armagh.

A TREATISE on the CHURCH of CHRIST, designed chiefly for the Use of Students in Theology. With a Supplement, containing Replies to Objections, especially from Unitarian Prophecy.
By the Rev. J. H. PARKER, M.A.
Of Worcester College, Oxford; and Author of "Origines Liturgicæ."

J. G. F., and J. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.
*The Supplementary series had been printed by the Purchasers of the First Edition, price 6d.

In 8vo. price 10s. 6d. boards, Volume the First of THE CLOUD OF WITNESSES: a Series of Discourses of the Eleventh and Part of the Twelfth Chapters of the Epistle to the Hebrews.

By the Rev. JAMES S. N. ANDERSON, M.A.
Chaplain in Ordinary to the Queen, and to the Queen Dowager, and Perpetual Curate of St. George's Chapel, Brighton.
J. G. F., and J. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall. Sold by J. H. Parker, Oxford; and the Booksellers in Brighton.

In 8vo. price 16s. in boards,
DODSLEY'S and RIVINGTONS' ANNUAL REGISTER, for the year 1839.
Printed for J. G. F. and J. Rivington, Longman and Co.; J. M. Richardson, Jeffery and Son; J. Booth; Hamilton and Co.; Whitaker and Co.; G. Lawford; Simpkin and Co.; J. Dowling; J. Redwall; Sherwood and Co.; Bower and Co.; W. H. Reid; and Walter and Son.
Lately published, the Volume for 1837, 8vo. 16s.

FISHER, SON, AND CO.'S ANNUALS AND ILLUSTRATED WORKS.

L. E. L.'S PORTRAIT AND LATEST FORMS. FISHER'S DRAWING-ROOM SCRAP.

BOOK, 1840, embellished with a beautiful Portrait of the deeply lamented L. E. L., and Thirty-five other highly finished Engravings, comprising Scenes in various Parts of the World, Portraits, Historical Narratives, &c. &c. With Poetical Illustrations by L. E. L. and MARY HOWITT.
To the friends and admirers of L. E. L. this volume of "The Favourite Annual" will become, to use her own expressive and endearing words,
"A head of memory's rosary,
Whence we reckon and remember
Of friends and of scenes
Beautifully bound and richly gilt, price 6s. Guinea.

"This is the best, indeed the only portrait that bears the slightest resemblance to the distinguished writer it represents."—*United Service Gazette*.
"The only print that affords a just idea of the original—here, who was almost idolized by the young and warm-hearted."—*The Art-Union*.

THE JUVENILE SCRAP-BOOK, 1840.
By Mrs. Ellis, Author of "The Widow of England." Consisting of Sixteen Engravings, tastefully bound, price 5s.

CHARACTER and COSTUME in TURKEY and ITALY. Embellished with a Portrait of the late Sultan, Mahomet the Second, in his State Costume, and Twenty other Prints. Designed and drawn from Nature by Thomas Allom, and splendidly printed in the united style by Hulmandel. With Descriptions of the Places by Emily Reeve. Atlas etc. elegantly bound in Morocco, price 3s. 6d.
"Published with a view to instructing & interesting by their intrinsically picturesque character; interesting as tending to preserve the records of a state of society and manners rapidly becoming extinct."—*Morning Chronicle*.

THE TURKISH EMPIRE ILLUSTRATED; comprising Constantinople and the Seven Churches of Asia Minor, the Bosphorus, Adrianople, Athens, &c. &c. from Drawings made expressly for the Work, during a Residence of several Months, by Thomas Allom, Esq., Major Irton of the Rifle Brigade, and A. Hervé, Esq. With an Historical Account of Constantinople, and Descriptions of the Places by the Rev. Robert Walsh, LL.D., Chaplain to the British Embassy at the Ottoman Porte.
The First Series, containing Forty-Eight Plates, elegantly bound in Morocco, price 11s. 6d.
"Of the many magnificent works in series of publications, this is one of the most excellent. The drawings bring before us every thing that is most peculiar in the Eastern habits and costume, and most striking in Turkish scenery and architecture."—*The Art-Union*.

THE SHORES AND ISLANDS of the MEDITERRANEAN, by the Rev. G. N. Wright, M.A. Illustrated in a Series of Views of the Coast of Spain, by Major-General Sir Grenville T. Temple, Bart., W. L. Leitch, Esq., Lieut. Allen, of the Royal Engineers, and Major Irton, of the Rifle Brigade. The First Volume, containing Thirty-three Engravings, handsomely bound and gilt, price One Guinea.
"The beauty of this work is surpassing; it is one of the cheapest and most desirable works we ever saw."—*John Bull*.
"The landscapes at Ithaca, with their Odyssean associations; the interiors of Palermo, and the wild scenery of Africa; above all, the architecture at Malta, and the remains of ancient cities, with which the work abounds, are highly illustrative of classical and antiquarian investigation, and render it almost unendurable by the foot of man in modern times."—*The Atlas*.

SYRIA and the HOLY LAND, by John Carter, Esq. Illustrated in a Series of One Hundred and Twenty large and highly finished Engravings, from Drawings taken during a Journey made expressly for the purpose, by W. H. Bartlett, Esq. In 3 vols. etc. handsomely bound, embossed and gilt, price 3s. 10s.
"The engravings of Syria, &c. have of much delighted every one, that I have been requested to say you will be kind enough to send out three sets of the work. The drawings are so faithful, that they quite describe themselves. On a late excursion which I made to the mountains, on a visit to Emir Bether, I recognised several of the scenes."—*Littell's Living Age*.
James Black, Esq. of Beyrout, June 1839.

THE ILLUSTRATED BUNYAN'S PILGRIM'S PROGRESS; a Christian Keypoke for 1840. With Life by Colver, and Notes by Mason. Containing Twenty-two highly finished Engravings. Cloth, 2s.; Morocco, 3s.
"This exceedingly beautiful edition is fully entitled to take precedence of all others. Its value is greatly enhanced by Mr. Colver's remarks."—*Eclectic Review*.
"A splendid edition, with Life of Bunyan by Colver, which places his character in a new, and, as we apprehend, the true light. It is enriched with the best portrait of Bunyan that we have seen."—*The Morning Post*.
The printer and engraver appear to have rivaled each other

to confer honour upon a work which will never cease to be admired."—*Methodist Magazine*.

VIII.
BEAUTIFUL PRESENTATION EDITION, Tastefully bound and gilt, 2s. 3d.
HANNAH MORE'S POPULAR WORKS, with Notes and a Memoir. In 8 vols. embellished with a Portrait, from the original Painting in the possession of the Duke of Devonshire, &c. &c. A View of Henry Wood, and highly finished vignettes to each Volume. Bound in cloth, price 3s.; with embossed sides, gilt back, and gilt edges, complete, 5s. 3s.; separate vols. 5s. 6d. each.

ELLI'S HISTORY OF MADAGASCAR.

Edited, from original Documents furnished by the Missionaries, and from Papers placed at his service by the Colonial Office, by the Rev. W. Ellis, Foreign Secretary to the London Missionary Society, Author of "Polyneesian Researches," &c. &c. In 2 vols. 8vo. Illustrated with embossed Plates and Maps, and a Plan of the Capital, bound in cloth, price 35s.
"We question whether so full and detailed an account was ever given of a country, of which so little had previously been known, and lying at such a distance from us, if we except Mr. Ellis's 'Polyneesian Researches.' His information is so various and so minute, that it must become a text-book with all who wish to acquire a knowledge of this remarkable island, especially to all who are going out there, whether their object be science or merchandise, the gratification of curiosity, or the interests of religion."—*Eclectic Review*.
"Mr. Ellis has produced a work which, with some cradles and faults of arrangement, is the best which we can hope to possess for another generation, and one which has the merit of exhausting the entire subject, and which must be received as a complete and reliable source of the most important of all knowledge,—that of our race."—*The Edinburgh Gazette*.

CHARMING VOLUME FOR CHILDREN LEARNING FRENCH.

PANORAMA des ENFANS; ou, la Morale, la Religion, la Science, et les Arts, mis à la Portée des Enfants. Par M. L. De Tourville, Membre de l'Institut Historique. Auteur de plusieurs Ouvrages d'Éducation. Embellished with Six Engravings, prettily bound, with gilt edges, price only 4s.

PRESENT-BOOK FOR YOUTH, IN FRENCH. HEURES DE RECREATION. By H. and E. Sazenne.

Containing Twelve entertaining and moral Tales, embellished with Twelve Engravings, handsomely bound and gilt, price 7s.

HEWLETT'S SCRIPTURE HISTORY FOR YOUTH, containing upwards of 180 Engravings on Steel. In 2 vols. bound in embossed roan, gilt edges, price 18s.

"Such a treasure for any deserving child from six years of age to the Bible of teens."—*Literary Gazette*.

HEWLETT'S SCRIPTURE NATURAL HISTORY FOR YOUTH, containing Eighty Engravings on Steel. In 2 vols. bound in embossed roan, gilt edges, price 12s.

"Such a book as this is greatly fitted to endear the Scriptures to the rising generation, and to render the pursuit of them at once delightful and profitable."—*Evangelical Magazine*.

VOLUME THE FIRST OF FISHER'S ILLUSTRATED LIFE AND CAMPAIGNS OF THE DUKE OF WELLINGTON, K.G.

By the Rev. G. N. Wright, M.A. Profusely embellished with Engravings, comprising, principally, highly finished Portraits of distinguished British and Statesmen, his Grace's Contemporaries and Contemporaries. Handsomely bound and gilt, price 15s.

COMPLETE AND ILLUSTRATED EDITION OF HORACE WALPOLE'S LETTERS.

In Monthly Parts of about 250 Pages, embellished with Portraits and other Engravings, from Drawings executed expressly for this Work, price 6s. each, Part I. to be published on the 1st of November,

THE LETTERS OF HORACE WALPOLE

(EARL OF ORFORD).

Forming an uninterrupted Series from the Year 1735 to 1797, containing his Letters to—

George Montagu, Esq.
Sir Horace Mann
Richard West, Esq.
Lady Craven
Gray (the Poet)Hon. H. Seymour Conway
John Chute, Esq.
Sir David Dalrymple
Rev. William Mason
Lady HerveyThe Earl of Hertford
Richard Bentley, Esq.
Earl of Strafford
Mrs. Hannah More
David Hume, Esq.Countess of Alibury
Captain Jephson
George Colman
Mr. Pinkerton
The Misses Berry, &c. &c.

Including upwards of 300 Letters never before published. The whole now first collected, chronologically arranged, and illustrated with explanatory Notes, from MSS. and other sources; to which will be added, his

REMINISCENCES,

Forming, with the Letters, an ANECDOTAL HISTORY OF A GREAT PART OF THE LAST CENTURY. In this edition the Names formerly only indicated by Initials, will be inserted at full length.

. By an arrangement with the former Publisher of Walpole's Letters to George Montagu, Esq., these Letters will also be included in the present only complete Edition of the Letters of the Earl of Orford. Among many other Portraits, the following will accompany this Edition:—

Gray (the Poet)—George Montagu, Esq.—Sir Horace Mann—Richard West, Esq.—Margravine of Anspach—Marshall Conway—Miss Berry—Earl of Hertford—Hon. Mrs. Damer—Richard Bentley, Esq.—George Selwyn, Esq.—Earl of Mount Edgumbe—J. Williams, Esq.—Horace Walpole—Madame du Defand—John Chute, Esq.—Lady Hervey—Lady Townshend—Earl of Strafford, &c. &c.

RICHARD BENTLEY, NEW BURLINGTON STREET,

Publisher in Ordinary to Her Majesty.

REVIEW OF NEW BOOKS.

The Heavenly Doctrine; or, the Gospel of our Lord Jesus Christ, in all its Primitive Purity, such as he Preached it Himself during his Terrestrial Sojourn: newly Revealed by Three Angels of the Lord, and which Jesus Christ has confirmed himself, by the Reprobation of the Romish Papacy; with all the Proof of its Imposture against the Doctrine of our Saviour. Literally translated from the original French, promulgated by Charles Louis, Duke of Normandy, Son of Louis XVI. King of France. 12mo. pp. 350. London, 1839. Causton.

THIS is a startling title-page! And the work itself throws quite into the back-ground the Socialism of "Mrs. Chappelsmith, late Miss Reynolds." The pseudo-son of Louis XVI. has become the founder of a new religion; having been, instigated thereto by three Angels, with whom he has had the long conversations which chiefly fill up these 350 pages. Thom, alias Sir William Courtenay, was but a type, or fore-runner, of this greater prophet; and as for the Roman Catholic Church, if it can survive this attack, all we shall say is, that we wish Dan the luck to be Pope as soon as there is a vacancy in the immortal chair of the Vatican.

It is a very curious book, however, and seems already to have found disciples and apostles in the Church of Rome: for its canons are thus subscribed, page 343:—

"In the name of the Catholic and Evangelical Church, (Signed) Jean Baptiste La Prade, President of the Council, formerly a Roman Catholic priest. Ange Francois Alexandre Appert, Titular Curate of St. Arnoult, formerly a Roman Catholic priest. Modeste Gruau, Ancien Procureur du Roi de France, and formerly a Roman Catholic. Charles Louis, Duke of Normandy, Protector of the Catholic and Evangelical Church, formerly a Roman Catholic."

To these canons we shall come by and by; but, in the meantime, must give some account of the volume. It sets out, like a fine epic, *in medias res*, though, unlike an epic, it never reverts to the beginning, but only promises it hereafter, and in this manner:—

"The preliminary part of the *Heavenly Doctrine*, containing the narration of some extraordinary and miraculous incidents which preceded the new revelation of the true Gospel of our Lord Jesus Christ, is now in the press, and will shortly be published."

As this might stagger sceptical people, the Duke of Normandy thus adjures them, under date of London, May 1839:—

"*Princes and Nations of the Earth*,—it is not to be doubted but that many persons will disbelieve that angels from the Almighty have prescribed to me what my pen has written in this book. I shall feel no surprise at such incredulity, since there are many who do not even believe in the existence of God: how, then, can they believe in his angels? Moreover, there are some who own Jesus Christ merely with their lips, but faith does not exist in their heart. It is not on my own authority that I speak thus, for the Angel of the Eternal, our God, rarely leaves me; and he makes me write, besides, many other things. However, the

time is not yet come to publish them,—nor, especially, to put them into practice, although it is nigh; and no mortal will be able to arrest the arm of the Almighty. Let it not be imagined that, in setting to work, I have been influenced by the idea of recovering my sacred rights, and repelling the attacks of my enemies, and of my political adversaries, to pretend that Divine power interfered in my cause. I take the just God—the Almighty, who knows my heart—to witness, that I have renounced, from the bottom of my soul, the crown of France, which belongs to me by right; and wo to the senseless being who could falsely invoke the name of the Eternal, to deceive men! If the Almighty, in his infinite wisdom, has decreed that I am one day to re-ascend the throne of my fathers, may his holy will be accomplished, and not mine. Nevertheless, I have not renounced my name nor my country, and no one in the universe can take from me this right; for truth is stronger than falsehood, and makes the shame of my persecutors' calumnies recoil upon them. God Almighty, who knows that I am the truth, and who has preserved me to be the instrument of his impenetrable designs, will know well how to grant me justice upon the earth, if such be his unchangeable and irresistible will. But I will put aside all question of temporal interest, for my aim here is not to convince of my identity; and, besides, I have received from above the mission to make evident the error of them who have fallen into the snares of the evil spirit, through the imposture of those Italians who call themselves the apostles of our Lord Jesus Christ. I formerly believed for a time, like many others, that they were really so; and truly it is neither my knowledge nor my merit which has opened my eyes; I have seen the truth by the sole power of the Eternal, my God and your God; for he is such, in spite of you, and there is no other. It is he who has sent angels unto me, in whom it has been impossible for me not to believe; although, on the first apparitions of these heavenly messengers, I was fully persuaded that I was the object of some political intrigue: the first part of this work, and witnesses of unquestionable veracity, exist, to attest that I speak the truth."

Our readers will remember the assassination story at Camberwell; upon which these revelations may throw a light, withheld from our obtuse police magistrates. But the Duke proceeds to inform us:—

"Some apostolic and Romish priests, at the same time that they boast of being of the true Church of our Lord Jesus Christ, have employed, by infamous means, the influence of their high consideration, and still daily make an abuse of that invention of the Romish priesthood—confession, to deprive me of the pecuniary resources which Frenchmen, having faith in my identity, have shown themselves disposed to procure for me. They have but too cruelly obtained their impious end, for, under pretext of taking from me the possibility of having this work of God himself printed, and spread abroad among the people, since more than two years they have left both me and my family in a most grievous state of privation, having only God for support,

and a few friends for consolation. However, notwithstanding this state of distress, which enters into the views of Providence, to manifest to the world the almighty power of God, the *Heavenly Doctrine*, printed in thousands of copies, is diffused every where, in French and in English. Why, then, this frantic opposition on their part against the truth of the Gospel, which God in his mercy, and for the happiness of the present and future generations, has vouchsafed to reveal a second time by his angels, whom he has sent to visit the earth?"

The Translator* also vouches for the angelic origin of the publication; and who can doubt what both author and translator, two credible witnesses, prove? The latter says:—

"It is stated in the title-page of the present work, that the *Heavenly Doctrine*, or true Gospel of our Lord Jesus Christ, has been newly revealed by three angels to the much-persecuted son of the unfortunate Louis XVI. Such an extraordinary assertion cannot be expected to meet with implicit credence, without additional evidence of its truth. This evidence, it is presumed, will be furnished by the perusal of the following pages to the end; and the translator can venture to say on authority, that forthcoming events will fully confirm it."

"The translator thinks it right to make known, that there exist revelations anterior to that of the *Heavenly Doctrine*, which explain many important points relating to the future state of our souls, &c., as well as to the anomalies we may continually observe existing in the world around us. But for important reasons, which will be manifest hereafter, the *Heavenly Doctrine* has been published first."

Our readers, perhaps, would not wish us to enter into the reasoning, either *pro* or *con*, on so important a subject, so early as it now appears armed for the field of controversy. We have lived to see even greater follies adopted by multitudes of persons in our enlightened age, not only in France and Germany, but in Great Britain, so famed for its wisdom, and so boasted of for its rationality. We have seen Joanna, and (no, we have not seen) Shiloh. Brothers the prophet had his day: and so had the Kentish impostor, only a few months ago. Why, then, should we deny the chance of proselytism to the pretender of a higher destiny, Charles Louis, duke of Normandy? We are not aware of any cause of impediment; and, like the old Pagans and Christians, who, when they vowed offerings to the Supreme Power, did not consider it bad policy to light a candle to the devil, or ahirman, for fear of the worst that might happen; so do we, therefore, hasten forward thus early to shew that the new *Doctrine Catholique (et Angélique)*, it ought to be) has met with due attention at our hands. And, as Master Elbow says, "here be proofs:—"

"Why," asked I (saith the Duke) of the angel, "does the merciful God make choice of me?—Of me, who am the poorest in spirit?—Of me, who know nothing, and who am persecuted by enemies powerful on earth, and who certainly, on account of my misfortunes, will not

* Charles de Comon, Disciple de la Doctrine Catholique et Evangelique. London, August 1839.

believe that which thou and the other angel have said to me hitherto? "It is exactly by thy misfortune," answered the angel to me, "that thou hast found grace before the Almighty: it is on account of thy unheard-of sufferings, that thou hast been chosen by the wisdom of God for the instrument of his justice. * * * He who opposes legitimate power, opposes the command of God; and those who do so procure for themselves their condemnation. I told you to go and preach my Gospel, to do the greatest good unto men—and thus, by doing good, you have nothing to fear from princes; but by meddling with political affairs, you will do harm, for you cannot serve two masters. Therefore, do you wish to have nothing to fear from him who has power in hand? only busy yourselves with your ministry, with which I have commissioned you. It is in this manner you shall do real good, and you shall even receive the praises which you deserve on account of the good you do, by preaching peace, justice, obedience, and submission to the masters of this world; for they are, even with regard to you, and for your good, the ministers of God. If, on the contrary, you do harm, by meddling with their ministry, of which God will require from them an account, you will also be hated by their people. Fear them, then, since it is not uselessly that they have the executive power in hand—being the ministers of God, to punish severely him (no matter who he be) that does evil. I am myself come into the world for submission; this is why I have said to you: I am not come to abolish the laws, but to accomplish them. Therefore, whosoever wishes to be my disciple, and as such the true shepherd of my flock, which my heavenly Father has given me, ought to follow my example."

The mass of the volume is a new reading or version of the New Testament; of which an idea may be formed from the subjoined extracts:—

"'Why,' said I to the angel of the Lord, 'dost thou make me write what is already written; for persons object to me on every side—We know all this, and you say nothing new?' The angel answered me: 'So much the worse for those who know the heavenly truth, and who hide it, on account of their impotence and of their iniquity. The justice of God Almighty shall come unto them, for he has said by the mouth of his servant Isaiah (ch. xlv. v. 11): 'It is I who call from the east a bird of prey—and from a distant land, a man who shall accomplish what I have resolved. I have said it, and I will make the thing come to pass. I have formed the design of it, and I will execute it.' And this man (said the angel of the Lord to me) is thou. And it is not in vain that the Eternal said (v. 12): 'Hearken unto me, you who have stubborn hearts, and who are far from righteousness. I have made my justice approach, and it shall not remove.' * * *

For God said, by the mouth of his servant Zechariah (ch. vi. v. 12): 'Thus has the Eternal spoken—behold a man whose name is bud; who shall shoot up from under him, and shall rebuild the temple of the Eternal.' V. 13.—'It shall be himself who shall rebuild the temple of the Eternal, and it shall be himself who shall be filled with majesty; and he shall sit and rule upon his throne; and he shall be a sacrificer, being upon his throne; and there shall be a council of peace between the two.' And this bud, which shall shoot up from under him, is the Gospel of our Lord Jesus Christ, of which the Eternal spoke when he said, by the mouth of his servant Isaiah (ch. xli. v. 27): 'It is I,

the first, who have said to Sion—Behold, behold them; and who shall send to Jerusalem a messenger of good tidings.' And these good tidings are the works of God Almighty, of whom Jesus Christ said (according to John, ch. viii. v. 26): 'He who sent me always speaks the truth; and it is what I have learnt from him that I publish in the world.' 'All this is very pure truth,' said I to the angel of the Lord."

He (the angel) goes, *inter alia*, refuting Romish doctrines, to inveigh against the adoration of the Virgin, whom he declares to have been an unbelieving Jew, and not a Christian:—

"Does not the evangelist Mark (ch. vi. v. 3) bear the same testimony? 'And I, John the Baptist—the angel of the Lord, I bear the same testimony, in the name of the Eternal, the God of Israel, the Creator and the heavenly Father of all men, and of all the angels in the heavens and on the earth; and I declare unto you, that the mother of the body of our Lord Jesus Christ, as well as of all his brothers and sisters, and Joseph himself, were very far from believing in the Heavenly Doctrine, which the angel of God's presence preached upon the earth, and that they all remained Jews, during the whole time of their life upon the earth.' This is why our Lord Jesus Christ said (according to the evangelist Luke, ch. viii. v. 19), when his mother, according to his earthly body, and his brethren came to find him, and when it was said to him 'your mother and your brethren are without,' he answered, as may be read at v. 21: 'My mother and my brethren are they who listen to the word of God, and who put it into practice.' Thus Mary, the wife of Joseph, did not believe, since she did not follow the word of God. And does not the evangelist Mark (ch. iii. v. 35), bear the same testimony, as well as the evangelist Matthew (ch. xii. v. 50), where the Lord Jesus Christ says: 'For whosoever shall do the will of my Father who is in heaven, the same is my brother, my sister, and my mother;' and I, the angel of the Lord—I bear you testimony, that these are the true words of our Lord Jesus Christ."

The Lord's Prayer, according to this new order, ought to run thus:—

"Our Father, who art in heaven, may thy name be hallowed; may thy reign come upon earth; may thy will be done here below, as it is in heaven; give what is necessary for our subsistence, and forgive us our debts, as we forgive our debtors; do not allow us to expose ourselves to temptation; but make us be protected against it by thy grace. Amen."

And to conclude this strange exposition, we select the following from among the "Prescriptions" for the "Pastors of this Church," derived from the three angels by the Duke of Normandy, as aforesaid:—

"3. In the case where he who, through vocation of the Eternal our God, wishes to become a pastor, is still young, he must promise, upon his word, to take a virgin to wife before the completion of his twenty-fifth year, to the end that he may learn how to govern properly his own family, keeping his children in submission, and in an entire purity of morals. For if a preacher of the Gospel does not know how to govern his own family, how would he take care of the Church of the Eternal our God?"

"4. Nevertheless, it may happen that persons of more than forty years of age, of the self-styled Catholic, Apostolic, and Roman Church, would wish to attach themselves to the true Church of our Lord Jesus Christ, who only is

the chief, according to the command of the Eternal, our Almighty God. These persons shall be at liberty to marry or not; but those who are not yet thirty years old shall also, without exception, be bound to take a virgin to wife; who must, however, be of a family which, although it may be poor, enjoys an unsullied reputation.

"5. Each commune of two thousand souls shall have a married pastor, and another young preacher unmarried, so that mutually in their ministry, the second may support the first, and the first the second, like brothers, according to Jesus Christ, who is the chief, and who has said that every workman deserves his bread. However, to avoid all scandal, the commune shall pay to the first pastor, at least four thousand French francs; and, to the second, two thousand francs, if he be not married, and, if he be married, the same sum as to the first.

"6. Every commune shall furnish each of its pastors with an appropriate house for their dwelling, which shall be kept in good repair at the expense of the commune, according to its wealth and its situation. The dwellings of the pastors must be near the edifice called a church, if it be possible: and if the commune of a town, or of a village, contain more than two thousand souls—and even if the population should amount to four thousand, it shall be in their power to fix the number of pastors that they wish to accept: and that this may not give rise to any scandal, they shall address themselves to the council of the church on this subject. Those who shall teach the children in the schools, and who are called schoolmasters, shall enjoy the same consideration as the catholic and evangelical pastors. And, since they shall subject themselves, as pastors, to the same evangelical law, according to our Lord Jesus Christ, the same rights belong to them.

"7. As regards the council of the church, there shall be in every country, under the protection of the sovereign, a ministry entirely composed of pastors, with the title of 'Ministry of Ecclesiastical Affairs,' which shall be solely employed upon the affairs of the church of their chief, our Lord Jesus Christ, without interfering in any way with political affairs, or in any affair of state.

"9. All the members of this council must be married men, except those who have become widowers during their ministry, and who do not wish to marry a second time; which, according to the holy will of the Eternal our God, is allowed to all pastors, without exception for any one. It is also allowed to all the pastors of the catholic and evangelical church, to marry the widow of one of their fraternity."

The rest of the constitution is fully detailed. The marriages in form are to be public,* and the divorces almost as easy as in Socialism:—

"The persons who are to serve as witnesses to the newly married couple, shall sign the register with all their names, and no one who-soever can annul such a marriage, unless it be by the free will of both parties. The husband cannot send away his wife without her consent

* "This is the formula according to which marriages are to be solemnised before the altar of the Eternal our God. The pastor of the place, first addressing himself to the man, shall say to him: 'Son of the Church of the Almighty, is it thy free will to marry —, whom thou presentest here, before the eyes of the Eternal thy God, who sees thee, and who knows what passes in thy heart?' If the man answers 'Yes,' then the pastor shall address the woman, saying: 'Daughter of the Church of the Almighty, is it thy free will to marry —, whom thou presentest here, before the eyes of the Eternal thy God, who sees thee, and who knows what passes in thy heart?' If the woman answers 'Yes,' then the pastor of the place shall ask the man for a silk ribbon, of a sky-blue colour, with which he shall tie the woman to the right

thereto; nor the woman her husband, unless he agree to it. Now if, in an unfortunate case, the married couple should wish to separate willingly, their separation must not be effected by the ministers of the Eternal, our God; and under no pretext whatever, ought any pastor of the place to meddle therewith: but let this separation be effected before the temporal magistracy according to the laws of the government of each country."

We hope the time-honoured customs of countries will also be admitted, and then the selling of wives with halters round their necks will be gospelised and legalised. But we come to a doubtful point:—

"Let no pastor prevent a Christian from marrying a woman, whether she be a Jewess, a Turk, a Roman Catholic, or a *Tartar*."

Having caught which, we take our leave of the new faith, assuredly not desiring to avail ourselves of this last privilege of its Institutions.

The Epicurean; a Tale. With Vignette Illustrations, by J. M. W. Turner Esq. R.A.: and *Alciphron; a Poem.* By Thomas Moore, Esq. 12mo. pp. 405. London, 1839. Macrone; Simpkin and Marshall; Jennings.

THIS publication was arranged with poor Macrone, whose premature death threw it, we suppose, into the hands of creditors or assignees, under whose auspices it is now given to the world. When the *Epicurean* first appeared, our review of it, we have reason to believe, obtained pretty general approbation; and therefore we will not tread over the same ground again, except to notice that Mr. Turner's illustrations are full of his genius and beauty. Nor shall we deem it necessary to say much of *Alciphron*, seeing that this poem was only the first form in which Mr. Moore endeavoured to cast his ideas; and, finding it insufficient or inconvenient for their development, adopted the poetical prose relation which superseded it. There are nevertheless many sweet passages* in the original design; though we agree entirely with the author that "the great difficulty of managing, in rhyme, the minor details of a story, so as to be clear without becoming prosaic, and, still more, the diffuse length to which narration in verse

would be likely to run," afforded ample grounds for the change so judiciously made.

What, therefore, should we do by way of illustrating this volume? We are led by the author, who concludes his preliminary notice thus:—

"But the letter of the hypocritical high-priest, whatever else may be its claim to attention, will be found, both in matter and form, new to the reader."

We insert it without comment, as it is precisely one of those effusions which is likely to provoke much:—

"Letter V.—From Orcus, High-Priest of Memphis, to Decius, the Praetorian Prefect.

"Rejoice, my friend, rejoice!—the youthful chief Of that light sect which mocks at all belief, And, gay and godless, makes the present hour Its only heaven, is now within our power. Smooth, impious school!—not all the weapons aimed At priestly creed, since first a creed was framed, E'er struck so deep as that sly dart they wield. The Bacchant's pointed spear in laughing flowers conceal'd.

And oh, 'twere victory to this heart, as sweet As any thou canst boast,—e'en when the feet Of thy proud war-steed wade through Christian blood, To wrap this scoffier in Faith's blinding hood. And bring him, tamed and prostrate, to implore The vilest gods e'er Egypt's saints adore.

What!—do these sages think, to them alone The key of this world's happiness is known? That none but they, who make such pseud parade Of Pleasure's smiling fairs and win the maid, Or that Religion keeps no secret place,

No niche, in her dark fane, for Love to grace? Fools!—did they know how keen the seat that's given To earthly joy, when season'd well with heaven; How Piety's grave mask improves the hue Of Pleasure's laughing features, half seen through, And how the priest, set aptly within reach Of two rich worlds, trafficks for bills with each, Would they not, Decius,—thou, whom th' ancient tie

'Twixt Sword and Altar makes our best ally,— Would they not change their creed, their craft, for ours? Leave the gross daylight joys that, in their bowers, Languish with too much sun, like o'er-blown flowers, For the veild loves, the blisses undisplay'd? That slyly lurk within the temple's shade? And, 'stead of haunting the trim garden's school,— Where cold Philosophy usurps a rule,

Like the pale moon's, o'er Passion's heaving tide; Where Pleasure, cramped and chill'd by Wisdom's pride, Counts her own pulse's regulated play, And in dull dreams dismisses her life away,— Be taught by us, quit shadows for the true, Substantial joys we sager priests pursue,— Who, far too wise to theorise on bliss, Or pleasure's substance for its shade to miss, Preach other worlds, but live for only this:— Thanks to the well-paid mystery round us flung, Which, like its type, the golden cloud that hung O'er Jupiter's love-couch its shade benign, Round human frailty wraps a veil divine.

Still less should they presume, weak wits, that they Alone despise the craft of us who pray;— Still less their credulous vanity decay.

With the fond thought, that they who pray believe. Believe!—Aps! forbid—!—forbid it, all Ye monster gods, before whose shrines we fall,— Deities, framed in jest, as if to try

How far gross man can vulgarise the sky: How far the same low fancy that combines Into a drove of brutes yon sodic's signs, And turns that Heaven itself into a place Of sainted sin and defiled disgrace, Can bring Olympus e'er to shame more deep, Stock it with things that earth itself holds cheap, Fish, flesh, and fowl, the kitchen's sacred brood, Which Egypt keeps for worship, not for food,— All, worthy idols of a faith that sees In dogs, cats, owls, and apes, divinities!

Believe!—oh, Decius, thou who hast no care Of things divine, beyond the soldier's share, Who takes on trust the faith for which he bleeds, A good, fierce god to swear by, all he needs,— Little canst thou, whose creed around thee hangs Loose as thy summer war-cloak, guess the pangs Of loathing and self-scorn with which a heart, Stubborn as mine is, acts the zealot's part,— The deep and dire disgust with which I wade Through the foul juggling of this holy trade,— This mud profound of mystery, where the feet, At every step, sink deeper in deceit.

Oh! many a time, when, mid the temple's blaze, O'er prostrate foot the sacred clasp I raise, Did I not keep still proudly in my mind The power this priestcraft gives me o'er mankind,— A lever, of more might, in skillful hand, To move this world, than Archimede e'er plann'd,— I should, in vengeance of the shame I feel At my own mockery, crush the slaves that kneel

Besotted round; and,—like that kindred breed Of reverend, well-drest crocodiles they feed, At famed Arsinoë,—make my keepers bleed, With their last throb, my sharp-fang'd holiness.

Say, is it to be borne, that scoffers, vain Of their own freedom from the altar's chain, Should mock thus all that thou thy blood hast sold, And I my truth, pride, freedom, to uphold? It must not be:—think'st thou that Christian sect, Whose followers, quick as broken waves, erect Their crests anew, and swell into a tide, That threatens to sweep away our shrines of pride— Think'st thou, with all their wondrous spells, even they Would triumph thus, had not the constant play Of Wit's resistless archery clear'd their way?— That mocking spirit, worst of all the foes Our solemn fraud, our mystic mummery know, Whose wounding flash thus ever 'mong the signs Of a fast-falling creed, prelusive shines, Threatening such change as do the awful freaks Of summer lightning, ere the tempest breaks.

But, to my point,—a youth of this vain school, But one, whom Doubt itself hath failed to cool Down to that freezing point, where priests despair Of any spark from th' altar catching there,— Hath, come nigh since,—it was, methinks, the night That followed the full moon's great annual rise,— Through the dark winding ducts, that downward stray To the earth-hidden temples, track'd his way, Just at that hour when, round the shrine, and me, The choir of blooming nymphs thou long'st to see, Sing their last night-hymn in the sanctuary. The clangour of the marvellous gate, that stands At the well's lowest depth,—which none but hands Of new, untaught adventurers, from above, Who know not the safe path, e'er dare to move,— Gave signal that a foot profane was nigh:— 'Twas the Greek youth, who, by that morning's sky, Had been observed, curiously wandering round The mighty fane of our sepulchral ground.

Instant, th' Initiate's trials were prepared,— The fire, air, water; all that Orpheus dared, That Plato, that the bright-haired Samian peer'd With trembling hope, to come to,—what, at last? Go, ask the dupes of Myst'ry: question him Who, mid terrific sounds and spectres drive, Walks at Eleusis; ask of those who bave The dazling miracles of Mithra's cave, With its seven starry gates; ask all who keep Those terrible night-myst'ries where they weep, And howl and dirges to the answering breeze, O'er their dead gods, their mortal deities,— Amphibious, hybrid things, that died as men, Drown'd, hang'd, empal'd, to rise, as gods again;— Ask them what mighty secret lurks below This sev'n-fold mystery—can they tell thee? No; Gravely they keep that only secret, well And fairly kept,—that they have none to tell; And, duped themselves, console their humbled pride By duping themselves all mankind beside.

And such th' advance in fraud since Orpheus' time— That earliest master of our craft sublime,— So many minor mysteries, imps of fraud, From the great Orphic egg have wing'd abroad, That, still 't' uphold our temple's ancient boast, And seem most holy, we must cheat the most; Work the best miracles, wrap nonsense round In pomp and darkness, till it seems profound; Play on the hopes, the terrors of mankind, With careful skill; and make the human mind Like our own sanctuary, where no ray, But by the priest's permission, wins its way,— Where, through the gloom as wave our wizard rods, Monsters, at will, are conjured into gods; While Reason, like a grave-faced mummy, stands, With her arms swathed in hieroglyphic bands.

But chiefly in the skill with which we use Man's wildest passions for Religion's views, Yoking them to her car like fiery steeds, Lies the main art in which our craft succeeds. And, oh, be blast, ye men of yore, whose toil Hath, for our use, scoop'd out of Egypt's soil This hidden paradise, this mine of fane, Gardens, and palaces, where Pleasure reigns In a rich, sunless empire of her own, With all earth's luxuries lighting up her throne:— A realm for mystery made, which undermines The Nile itself, and, 'neath the twelve great shrines That keep Initiation's holy rite, Spreads its long labyrinths of unearthly light, A light that knows no change,—its brooks that run Too deep for day, its gardens without sun, Where soul and sense, by turns, are charmed, surprised.

And all that bard or prophet e'er devised For man's Elysium, priests have realised. Here, at this moment,—all his trials past, And heart and nerve unshrinking to the last,— The young Initiate roves,—as yet left free To wander through this realm of myst'ry, Feeding on such illusions as prepare The soul, like mist o'er waterfalls, to wear All shapes and hues, at Fancy's varying will, Through every shifting aspect, never still;— Vague glimpses of the future, vistas shewn, By scenic skill, into that world unknown, Which saints and sages claim alike their own;

side of the man; and, thus tied, the betrothed shall remain standing before the altar.

Then the pastor of the place shall change the rings, and he shall put that of the man on the right hand of the woman, and that of the woman on the right hand of the man.

It is but just that the newly married couple shall pay one shilling to the person who keeps the register of the church, and as much for the certificate of the marriage, if the newly married couple ask for one." Funerals are also provided for: "the pastors of the Catholic and Evangelical Church must render all kinds of services that may be required of them, according to the custom of the country, without any payment. And as for the poor, the Church must be bound to give them ever a place in the burial-ground, and to bury the sepulchres of the rich, for nothing—that is to say, gratis."

We append one Moore-ish example:—

"Who would have thought that he, who rovd
Like the first bees of summer then,
Rifling each sweet, nor ever lov'd
But the fat hearts, that lov'd again,
Readily as the red replies
To the least breath that round it sighs—
Is the same dreamer, who, last night,
Stood awed and breathless at the sight
Of one Egyptian girl; and now
Wanders among these tombs, with brow
Pale, watchful, sad, as tho' he just,
Himself, had ris'n from her dust?

Yet, so it is—and the same thirst

For something high and pure, above
This withering world, which, from the first,
Made me drink deep of woman's love,—
As the one joy, to heaven most near
Of all our hearts can meet with here,—
Still burns me up, still keeps awake
A fever nought but death can slake.
Farewell; whatever may befall,—
Or bright, or dark,—thou'lt know it all."

And all those other witching, wildering arts,
 Illusions, terrors, that make human hearts,
 Ay, ev'n the wisest and the hardest, quail
 To any goblin throned behind a veil.
 Yes,—such the spells shall haunt his eye, his ear,
 Mix with his night-dreams, form his atmosphere;
 Till, if our sage be not tamed down, at length,
 His wit, his wisdom, thorn of all their strength,
 Like Phrygian priests, in honour of the shrine,—
 If he become not absolutely mine,
 Body and soul, and, like the tame decoy
 Which wary hunters of wild doves employ,
 Draw converts also, lure his brother wits
 To the dark cage where his own spirit flits.
 And give us, if not saints, good hypocrites,—
 If I effect not this, then be it said
 The ancient spirit of our craft hath fled,
 Gone with that serpent-god the Cross hath chased
 To his soul out in the Theban waste."

The Mabinogion: from the Llyfr Coch o Hergest, and other Ancient Welsh Manuscripts; with an English Translation and Notes. By Lady Charlotte Guest. Part. II. Containing *Peredur, the Son of Evrawc.* London, 1839. Longman and Co. Illustrated by Rees.

IN a former Number of the *Literary Gazette* (No. 1144, for December 22, 1838), we gave some account of the curious collection of ancient Welsh romances, bearing the title of *Mabinogion*; reviewing, at the same time, the first part of a translation of them into English by Lady Charlotte Guest. It afforded us very sincere gratification to announce the appearance from the press of these long-expected literary treasures,—the curious relics of by-gone times; and to express our cordial approbation of the manner in which the fair editor had, in the published part, executed the laborious task which she had so honourably undertaken of giving them to the public in an English dress.

The pleasing duty now devolves upon us of recording the appearance of the second part of the work; which, we will venture to predict, will be received, by the admirers of its precursor, with equal interest and delight; as well for the singular incidents of the tale, as for the taste and ability displayed by the translator in the literary execution.

The earlier pages of the present part are devoted to the concluding portion of the ancient Breton romance of the "Chevalier au Lion," from a manuscript in the French King's Library, with illustrated notes, which could not be brought into the former part; and there is appended a short account of the versions of the same romance in the languages of Germany, Scandinavia, Sweden, and Iceland; the last of which is accompanied by a beautiful facsimile of the original manuscript.

Having thus brought to a satisfactory close the pleasing romance of "The Lady of the Fountain," Lady Charlotte Guest presents to her readers a second tale, selected, like the first, from the Arthurian Cycle of the *Mabinogion*, intitled *Peredur ab Evrawc*; or *Peredur, the Son of Evrawc*.

To the true lovers of the marvellous, who follow with eager, breathless, and soul-absorbing interest the narrative of the extraordinary adventures, the daring exploits, and the astounding supernatural agencies and transformations, which impart so powerful and fascinating a charm to the earlier romances of all nations, the perusal of the work before us will be sure to furnish a rich and delightful treat. For no hero in the long and brilliant catalogue of Arthur's knights, how greatly soever renowned for personal valour and prowess, was ever impelled by his high chivalric spirit to encounter more redoubtable adversaries, to expose himself to more numerous or appalling supernatural foes armed with unknown and inappreciable power, and to

achieve over the force and machinations of the whole a more complete and decisive conquest, than *Peredur*, the son of *Evrawc*, "the Earl of the North."

To the literary antiquary, on the other hand, whose sensibilities, though different in kind, are not less ardent in degree, this romance will be equally agreeable and welcome. Apart from the interest of the story itself, he will behold displayed in its incidents and machinery, striking illustrations of the singular superstitions, the feelings, the manners, and the habits of certain classes of mankind, at the very dawn of civilisation; and will see exhibited in the same mirror, in colours equally vivid, the strange notions of the courtesies of civil and social life, the extravagant sentiments of honour, and the odd principles of moral duty and obligation, which were very generally prevalent at a period greatly advanced, when the "age of chivalry" may be said to have reached its meridian splendour. For it is to be remarked, that it is among the distinguishing characteristics of these romances, and of others of the same class, that they incorporate in the same tale the incidents and agencies, the trains of thought, the costume, the manners, and the habits, which properly belong to periods of time far removed from one another, and to very different states of society. The former of these periods comprehends the age in which the scene and action of the romance are laid; and from the traditional history, the real or imaginary events of which the original authors of the tales, in their ruder form, drew the materials of their narratives. The latter embraces the era when they underwent literary correction and polish, and were committed to writing.

Looking at the story of *Peredur ab Evrawc* in its whole construction, its characters, events, and machinery, we feel quite certain that the expectations awakened by the perusal of "The Lady of the Fountain," with respect to the intrinsic value of these early British romances, as additions to our standard literature, and as adapted to furnish to the reader a large fund of amusement and gratification, will be rather strengthened than diminished by the publication now before us.

Of the labours of Lady Charlotte Guest, both as translator and commentator, it is impossible to speak in terms of too high commendation. Her version of the romances proceed with unabated spirit, and with the same fidelity and good taste as were displayed in her former tale; while the illustrations manifest the same unwearied research, and the same anxiety to enable her readers clearly to understand the meaning, and fully to relish the beauties, of her authors.

The Shores and Islands of the Mediterranean; Drawn from Nature by Sir Grenville Temple, Bart., W. L. Leitch, Esq., Major Irton, and Lieut. Allen, R.E.; with an Analysis of the Mediterranean, and Description of the Plates. By the Rev. G. N. Wright, M.A. 4to. Vol. I. Pp. 96. London, 1839. Fisher, Son, and Co.

THIS is the season for beautifully embellished publications, and few can be more beautiful either in subject or execution than this series of plates representing the picturesque scenery and interesting objects which adorn the shores of the lovely Mediterranean. To these views, the Barbary States, visited by Sir G. Temple, Sicily with its Norman and Saracenic remains, Malta, Italy, and Greece, have all contributed their quota; and the whole is a collection of above thirty as charming engravings as can

well be imagined. Some are rich in architecture, some lively in figures and costume; and others sweet in the landscapes of Nature, and others curious in ancient ruins: the whole, certainly, one of the most engaging publications of this brilliant class which we have seen. The letterpress is brief but sufficient; and, drawn from the best sources, conveys a variety of pleasing information to the reader whose eye has been already delighted with the embellishments. We may safely predict great popularity for this volume.

Findens' Tableaux: the Iris of Prose, Poetry, and Art, for MDCCCXL. Illustrated with Engravings by W. and E. Finden, from Paintings by J. Browne. Edited by Miss Mitford. Folio, pp. 70. C. Tilt.

"THE DREAM," which graces the title-page of this elegant volume, is a beautiful specimen of the whole plan, which consists of twelve plates of human groups, by Mr. Browne. It represents a lovely boy sleeping, and his dream shews many small groups of figures (such as surround the other engravings), invented with great taste, and drawn with infinite grace and spirit. All these bear reference to the principal, and serve as a framework commentary on the subject. We have not seen more appropriate and characteristic accompaniments. With regard to the principal designs, they are generally well conceived; but, perhaps, upon the whole, too smooth and pretty. The young men (such as the Woodcutter) are peculiarly liable to the remark of being effeminate, and like handsome girls in male attire. The females are much better—we except the Roundhead's daughter with her round shoulders, and almost the beacon, with its indifferent foreshortening. Wherever there are children introduced, they are deliciously painted; and most of the subjects are of a touching nature. Of the letterpress, we cannot say much: "Venice," a poem, by Barry Cornwall; and "The Bride," and "The Woodcutter," two of the editor's neat little prose narratives, being the only essays to be noticed, with praise as literary productions. But, after all, such publications must rely chiefly on the Arts; and in this respect the *Tableaux* are worthy of the high names of the Findens.

A Six Years' Residence in Algiers. By Mrs. Broughton. 12mo. pp. 452. London, 1839. Saunders and Oiley.

MRS. BROUGHTON is the daughter of Mr. Blanckley, who was British consul at Algiers during the period to which this entertaining and interesting volume belongs. By some fatality, intending to take a very early notice of it, our purpose was lost sight of, and we are indeed a day after the fair in paying the authoress that tribute which the merits of her production deserve. The only fault to find is not with the book, but with the time the writer has permitted to elapse before she favoured the world with so pleasant a description of Algiers and the Algerines. A mighty change has since come over the spirit of their dream; and it is very agreeable to be thus enabled to throw a retrospect on the times that have passed away for ever.

The matter consists of extracts from Mrs. Blanckley's diary, and the reminiscences of Mrs. Broughton; and we begin with a characteristic trait:—

"I understand our dragoman, Rais Ah, was married last night, although he says that he had no intention of the kind two or three days ago. He is a strange being. He served several years in our navy, where he acquired

his present refined knowledge of the English language. The name he bore was Tom Lee. He professes himself to be a most devoted admirer of the English, more especially of the ladies of that country. . . . This morning, I remarked that Rais Ali had a large key stuck in his sash, and inquired what it belonged to. He said it was the key of his house. 'What! have you locked up your wife?' 'Yea.' 'And who with her?' 'Oh! nobody but the cat. I go to-day to buy her a slave.' I pitied the poor bride so much, that I offered to pay her a visit, at which the Rais appeared much pleased."

A remarkable gipsy prophecy will serve us here for a variety. A Mrs. Farara (an Englishwoman) "accompanied her husband to Algiers, where the general impression was, that he was not always so kind to his gentle wife as he ought to have been; but alas! ere long, besides such secret grief, she had other and more poignant sorrows to endure. A son was born to her,—a lovely boy; so lovely, indeed, was he, that he excited the admiration of all who beheld him. He had just completed his second year, and was one evening at the open door of their house, held in the arms of a Christian slave, who was a hired servant of Signor Farara's (no Christian being permitted to have slaves of their own), looking at the passers-by, who failed not to pay some compliment, or express some kind wish, as they gazed on the beautiful child. At length came a *gitan* (a gipsy); she stopped, and looking earnestly at the boy, she said, 'It will be well for you if you pass your fourth year.' Scarcely had she said these words, when the slaves who held the child, and one or two other servants that were standing by him, drove the luckless creature from before them, and entering the house, closed the door. As may be supposed, the circumstance failed not to make considerable impression on their minds; and, in their indignation at the ill-omened predictor, they told the circumstance to the parents, who were so much affected at it, although poor Mrs. Farara said she tried to drive away the superstition as sinful, that they scarcely allowed their darling to leave their sight for an instant. This is not an imaginary tale; and however futile it may appear, I can only relate it as it was. The fair child continued to increase in beauty and intelligence, and his doting parents in their pride and joy in beholding him, although their hearts failed not to quail whenever the dire prediction shot across their anxious minds. Mrs. Farara constantly declined the invitations she received from the different consular families, although her doing so was the cause of much regret; so much was she esteemed and respected, especially by the lady of the American consul, between whom and Mrs. Farara there existed, of course, a more than common sympathy of habits and tastes, so that it was with no ordinary self-denial that she returned a refusal to the many friendly invitations from the American Garden; but one day the hospitable owner called upon Mrs. Farara, with a positive determination to make her and Signor Farara return with her. All excuses were negatived, her husband joined in expressing his desire that they should comply with the flattering invitation; therefore, after giving the most earnest and particular injunctions to every member of their household, to surround the beloved object of their solicitude with every caution and care, the anxious parents mounted their mules, and accompanied their kind hostess to the American Garden; but ere they had reached it, what were the poor

mother's feelings of self-reproach and regret, when she recollected that this was the birth-day of her precious child; that this day completed his fourth year. Oh! why then had she been induced to leave him? the gipsy's prediction was not yet fulfilled, and surely will not be now, added she, as she strove to smile, in answer to some remark of one of her companions. Again, let me repeat, this is not an imaginary story, but one which I have often heard repeated by more than one witness of this sad, but alas! true event; and need I add, that the sorrowful impression with which I heard the circumstances related, has not ceased to keep alive in my recollection all the affecting details. So careful was every individual of the family, in sympathising with the strict orders of the absent parents, that they each strove who could best watch over the precious child; and the most confidential persons of the household, the two *servantes*, or clerks, had desired that the *Carissimo Piccolo* might play about the counting-house, that they might be enabled faithfully to fulfil their promise of watching over his safety. The playful boy scrambled up the back of their chairs, pinched their hair, then tried to snatch the paper they were writing upon from beneath their pens; their desks were placed parallel to each other; they ceased from writing and gazed, admiring his playfulness; instinctively they both took up their penknives to mend their quills, when, strange, awful fatality! the devoted child, in playful defiance, attacked one of them, who in return pretended to stab him with his penknife; he turned to his other guardian, who as thoughtlessly did the same, and the blooming boy fell upon its blade,—it pierced his little heart.—The dire forebodings of the *gitan* were realised, and the disconsolate parents were for ever bereft of their only child."

The following is a good picture of national manners:—

"This evening I went to the wedding of the daughter of the *cadi*, or chief judge. The bride is a very lovely creature, a widow of nineteen, and has two beautiful children. Her first husband was strangled, and it has been since proved that he was perfectly innocent of the offence of which he had been accused. But whatever her feelings of regret may have been, she could not avoid entering again into the conjugal state, as singleness or widowhood is considered alike sinful and discreditable. Her family, therefore, have lost no time in finding her another husband. I found her surrounded by a crowd of most brilliantly dressed ladies; indeed, my eyes were perfectly dazzled by the splendour of the jewels by which their *salmas* (i.e. golden caps) and persons were covered; whole bouquets of roses, jessamines, peacocks' feathers, and butterflies, were completely formed of diamonds. In short, my powers of description are baffled, for it would be useless to attempt to give an account of all the wonders on which I gazed. Nor was I less struck with the number of beautiful women amongst them. They are quite as fair as Europeans, and their eyes far surpassed in brilliancy and beauty any I had ever beheld. Nothing could exceed their courtesy, and the politeness of their reception. I was placed on the same low sofa with the bride, but would willingly have exchanged my seat for a higher one, had there been such in the room, for I could not attempt imitating my fair hostesses in their tailor manner of sitting, and the sofa was merely a brocade covered mattress placed upon the floor. The gratification of my curiosity compensated for such trifling inconvenience. Shortly after our en-

trance, we were served with coffee and sweetmeats. The coffee was served in the most delicately beautiful porcelain cups, about the size of dolls' tea-cups; and, in lieu of saucers, they were inserted in golden chased cups, which enabled one to hold it without burning one's fingers, the coffee being quite boiling, but disagreeably thick, and, to my taste, oversweetened. After we had partaken of these refreshments, a band of female musicians, playing upon a kind of guitar, and a curiously shaped drum, made of earthenware, and covered at one end with parchment, called a *tambouca*, and several *tambourines*, began their strange music; and at the same time a hired dancer stood up in the centre of the apartment, holding an embroidered handkerchief in each hand, which she waved and twisted about, and, scarcely moving her feet, she threw herself into various attitudes. After a time, another dancer stood up, performing in the same manner, and both sang a plaintive song, to the apparent satisfaction of the assembly; for it is inconsistent with their ideas of propriety and decorum for ladies of rank and respectability to dance. And those who do so are inferior persons, whose trade and profession it is to exhibit themselves for the amusement of those who pay them for such performances. After this exhibition had continued some time, the bride, conducted by some of the principal ladies, ascended a few steps to one of the shelves, or bed-places, which invariably occupy each end of all Algerine rooms; and, having seated herself upon cushions, her companions proceeded to make great changes in her toilet and appearance, some of them adding ornaments to her already highly-adorned *salma*; whilst others occupied themselves in actually plastering her lovely face with a profuse quantity of red paint, to which they added patches of gold leaf, so as effectually to mask and disfigure her. I was then invited, through the interpretation of the Italian lady who accompanied me, to pay a visit to the bridegroom, which I very willingly agreed to, and was conducted to a room on the opposite side of the gallery. After having passed under several tiers of brocade, silk, and muslin curtains, we found ourselves in the presence of the bridegroom. He was an elderly Turk, with but one eye; and equally great as was the contrast between his appearance and that of his lovely bride, was the change from the noise, show, and company in her apartment, to the quiet and sombre appearance of his, although both were handsomely hung with crimson silk damask. He had only one companion, a middle-aged Turk, and they both looked very dull and stupid, until, on his asking me if I thought his wife (whom he had never seen) handsome, and, on hearing my agreeable answer, he stroked his beard with great satisfaction, and said, 'Star buono, signora, star buono.' While we sat with him, his friend took his leave; and as the time for the introduction of the bride approached, we also returned to her apartment, and found her additional toilet quite completed. Indeed, with so many additional jewels had she been decorated, that she was quite unable to bear the weight of her *salma* without the support of two of her attendants, who walked on each side of her, and held her head. At the moment of her leaving the room, a veil of purple crape, splendidly embroidered in gold, small pearls, and precious stones, was thrown over her head. In this array she was conducted to the door of the bridegroom's chamber, amidst the universal cry from each individual present, of *Lai, lai, lai, lella*,—a sound of great joy always raised at marriages by the

assembled guests. The curtains were raised, but only a certain number of the company, probably the nearest relatives, entered, and conducted the veiled bride to a seat on the left of the bridegroom, who continued seated. Her veil was then removed by one of the ladies, and for the first time the old Turk beheld his wife, or rather her masked countenance. An old woman, who had taken an active part in the whole ceremony, took from the hands of a black woman a small silver ewer containing rose-water, and approached the bride, whom she addressed. The bride then raised her two hands, and extending their hollowed palms, the officiating lady filled them with rose-water out of the ewer. The bridegroom then, turning round, drank it out of the bride's hands. He then underwent a similar ceremony, the bride drinking out of his hands. During all this time the shouts of '*Lai, lai, lai,*' continued unceasingly, both from those within and those on the outside of the chamber. This ending the marriage ceremony, we and the rest of the company took our leave of this paired, not matched couple."

We now pass on a long way through government disputes and dangers of the most imminent kind to which the ministers of European powers were exposed in this den of savage tyranny. To put an end to their persecutions, Mr. Blanckley was called upon, and behaved with great prudence and gallantry; the account of which we will pass for the present.

The following are curious particulars:—

"I understand that a cup of coffee, containing the powder of ground diamonds, a most effectual poison, was offered to the late unfortunate pacha, out of respect, as they said; but he refused to drink it, saying that he did not choose to be accessory to his own death. He, therefore, politely declined the honour which the Turks intended him, preferring rather to be led out by the chausses, like a culprit, to the usual place of execution, where he was strangled. A distinction was, however, made in his case, as he was strangled at once, instead of undergoing the usual refinement of cruelty, in being twice revived by a glass of water, and only effectually executed the third time that the bowstring is applied. It is said that one of the Grecian women whom he married is in the family way. Poor unfortunates!"

The next are youthful anecdotes of the now famous French *espan*, M. Arago:—

"The Swedish consul came out with a Monsieur Arago, to introduce him to Mr. B., and to solicit my husband's aid and assistance in getting the latter away from this country with all his astronomical instruments. M. Arago had a British passport, on account of having been sent by the Institute of Paris to Yarmouth, to find the longitude. He went afterwards to Spain in the pursuit of some object connected with science, and was in that country when Ferdinand the VIIIth was decoyed into France; in consequence of which, the junta having ordered all Frenchmen to be banished from Spain, this clever young man took refuge in this country, the very moral antipodes to the encouragement of the arts and sciences."

Mr. B. went to town to solicit the dey to allow M. Arago to quit this country, and endeavoured to make him understand that his researches were for the benefit of mankind in general; and as a proof of the interest felt in his behalf by the English government, he shewed him King George's seal on Mr. A.'s passport. But the dey answered, that if he were of any other nation, he might listen to such arguments, but that no Frenchman should

leave this kingdom; and that if he wished to find the longitude, &c., he might take his spy-glass, and go up one of the mountains in this vicinity, which would answer his purpose quite as well as in any other part of the world. And thus terminated the audience with this enlightened prince."

[To be continued.]

DUMAS' MEMOIRS. [Second Notice: conclusion.]

THE Count's escapes and exiles resemble many with the particulars of which we are familiar; but they will be read with much personal interest, for they are, indeed, bitter romances of real life, and exhibit the dreadful condition of a country reduced to anarchy by civil war and savage misrule. We will, however, close the first volume with an extract for which we know not whether the advocates for the *ballot* will thank us or not:—

"It is (says our author) remarkable that at this time, when the anarchists had already obtained so many advantages that there was scarcely any room to doubt of their dreadful triumph, Lafont Ladébat, one of our most faithful friends, should have been appointed president. It is because the majority of this Assembly was still sound, but it did not shew itself, except by the ballot on the choice of individuals; and the same men, who from a sentiment of justice and shame, obeyed the voice of conscience, could not bear the trial of the personal dangers to which they were exposed by the menaces of the factions, when it was necessary to vote openly."

The following are remarkable statements, and shews the dangerous and uncertain condition of public men and parties during the revolutionary struggle:—

"With my thoughts wholly taken up with fatal presages, I felt that I had need of passing some hours in the country in the bosom of my family. I could no longer reside in my house at Paris, in a remote quarter, Rue des Fossés du Temple, without running the risk of being attacked by the assassins of the Directory, who loudly proclaimed in the clubs that the people should be avenged of its enemies in their own houses. Returning to Paris towards evening, some days before the 18th of Fructidor, I met M. T., a sensible man, and one of those who with good sentiments at the bottom, a sound judgment, but little firmness of character, yield to circumstances, mix in all societies, and desire to perform no other part than that of spectators. I had often met with him, and he had been employed in the offices of the general police; was well acquainted with Barras, and still more with some women who were intimate with him. 'I am glad to meet with you,' said he; 'I passed yesterday evening and part of the night at the house of Barras; it was very seriously debated at this meeting, whether it would be best to cut the throats of about forty members of the two councils, or only to transport you to Cayenne. Many maintained the famous maxim that the dead alone never returned. In the end, the resolution to transport you seemed to prevail. You may depend upon this as certain; all is ready—make your arrangements accordingly.' I thanked him, and proceeded to the Pavilion Marazan, where my colleagues had already assembled, and were engaged in discussing reports which were more and more alarming, and endeavouring to appreciate the degree of credit to which they were entitled. It was the 15th of Fructidor. About ten o'clock at night the porter came and told me that somebody inquired for me, and

requested me to go out, on very important business. I found in the ante-chamber Colonel R., commander of the battalion of the National Guard of the 'Butte des Moulins,' a man of a very ardent character, who was wholly devoted to our cause. 'I have something very important to communicate to you,' said he, 'but we must be alone. Have you sufficient confidence in me to accompany me to the garden.' I followed him. He took me under the trees in the most solitary part below the terrace, towards the Seine, and addressed me in the following terms: 'You have but one moment left; you cannot doubt of the crime which is meditated against your persons. I propose to rid you this very night of the two directors, Rewbell and Barras. I am certain of having them put to death, and am not uneasy for the result, if you engage, on your word of honour, to declare in the tribune of the Council of Ancients, that, to save the republic, you have commanded this attack. You will nominate two new directors, and all will submit.' 'You propose to me to order an assassination?' I exclaimed. 'You call that an attack; but suppose that civil war is declared, what means would you have to execute such an attack?' 'I have,' said he, 'at my disposal a hundred brave men, as resolute as myself. The attack is easy, and we incur but little danger. The Directory has taken no other precaution than to have a guard of twenty-five men at the gate of the palace of the Luxembourg. You know that the arcades on the right and left of the gate are open, and are only four or five feet above the level of the street. We shall scale these arcades, and attack the guard in the rear, by the two sides of the gate. The picket will be surprised and dispersed in the court-yard, or in the street. During this skirmish, some of us will enter by the portico, on the right, seize and stab Rewbell in his apartment on the ground-floor, while some others will ascend by the portico on the left to the apartment of Barras on the first floor. I promise you that, before the alarm can be given at the Little Luxembourg and the barracks of the guard of the Directory, Rewbell and Barras will no longer exist; we cannot so easily get to the apartment of Larevellière, who lodges in the Little Luxembourg, above Carnot, on account of the vicinity of the barracks.' 'God forbid,' said I, 'that I should authorise or suffer the assassination even of the most guilty man; besides, your project is a mad one. Do I not know that it is impossible in the circumstances in which we are placed, to collect such a number of men, resolved to attempt so rash an undertaking?' 'Since you doubt,' said he, 'pronounce in a loud voice this watchword, '*Famille!*' I did so, and we were instantly surrounded by men, who till that moment had concealed themselves each behind a tree. The darkness prevented my judging of their numbers. They observed the most profound silence. 'It is enough,' said I to Colonel R.; 'I am satisfied—let us retire.' While we were returning to the Pavilion Marazan, I thanked him for his zeal, and dissuaded him from his horrible undertaking, refusing to take the criminal responsibility of it in any manner, either on myself or in the name of my friends. I must here add that the Emperor Napoleon having heard of this adventure, through what channel I know not, made me tell him all the particulars, and said, 'You were a fool; you don't understand revolutions.' ••• After the arrest of those members of the Committee who were assembled in the Pavilion Marazan, the officer to whom this expedition had been confided was going to take them away. They

refused, declaring that they would not quit their post, unless they were torn from it by violence. It was necessary to ask for new orders; directions were soon received to convey them, dead or alive, to the prison of the Temple. One of them, Bourdon de l'Oise, formerly a member of the Convention, was called out of the room, and told that he might escape; he returned into the room, informed his colleagues of the proposal that had just been made to him, declared that he should blush at having merited it, and swore to die with them. While they were dragging Pichegru to the staircase, an officer said to him, 'There you are, then, general of banditti?' 'Yes, when I commanded you,' replied he coolly."

General Dumas returned to his native country under Napoleon, was reinstated in his rank, and appointed to attend King Joseph to Naples in a high official capacity. Of this period we select two brief illustrations, as anecdotal specimens of the work:—

"An untoward event disturbed the fête of the king's entry: on the same night, while the city was illuminated, the English attacked and took the Isle of Capri, at the opening of the Bay of Naples. I devoted myself with all the zeal in my power to the organisation of the war department. The hatred and activity of Queen Caroline continued to increase; she strengthened the bands of brigands: the life of King Joseph was several times threatened; his confidence and his desire to obtain popularity frequently exposed him to the risk of falling into the snares that were laid for him. The activity and ability of the minister of police, Salicetti, preserved him from these dangers; several conspiracies were discovered; one of the most active agents of these machinations was the same Sir Hudson Lowe who afterwards became so famous by his unworthy conduct towards the illustrious prisoner of St. Helena. At that time he commanded the island of Capri, which had become the focus of this kind of dishonourable warfare. The condemnation of several chiefs who were seized in Naples or the environs, among others of the Marquis de Palmieri, and of Fra Diavolo, checked the audacity of these brigands; several laid down their arms and obtained pardon. Salicetti became the object of the hatred and vengeance of our enemies. They succeeded in making in the hotel in which he resided a real mine, a hollow globe loaded with a great quantity of powder, and fixed to the ceiling of a shop under a drawing-room which the minister had to pass through to go to his bed-chamber. A match was put to it at the moment that he was retiring to rest; above two-thirds of the house were blown up by this explosion. His daughter and his son-in-law, the Marquis de Torella were buried under the ruins, but were happily saved by a portion of the flooring remaining in an inclined position over their bed. Salicetti escaped, because instead of stopping in the drawing-room to give orders, as he generally did, he passed rapidly through it."

The General accompanied Joseph to Spain; and we have some account of events there till Napoleon determined on the invasion of Russia. Here begins a tale of fear, to illustrate which we shall continue to select a few quotations:—

"Since Napoleon had sent above the half of his best troops to Spain and Portugal, he had been constantly labouring to organise a grand army in Germany, more numerous than any he had yet commanded in person. The corps of Marshal Davoust alone, which was cantoned in the departments of the Elbe, had been increased to eighty thousand men. I had received orders

to send the flower of the last conscription to the corps which composed this army. The search for refractory conscripts, after the expiration of the amnesty which was granted on occasion of the emperor's marriage, had produced an addition of about fifty thousand men, all belonging to the preceding levies, and from twenty-three to twenty-five years of age. Subaltern officers had been taken from the army in Spain, both for the infantry and the cavalry, and considerable purchases of horses had been made in the kingdom of Westphalia and the departments of the Rhine. This organisation, these immense preparations, were terminated about the month of February 1812. I had several times written from the dictation of the emperor, and I had occasion to admire his inconceivable memory, and the precision with which, without having recourse to the lists, he bore in mind the effective force of the several corps, in order to determine the means of raising them to the complete war establishment, according to their wants. One day, having laid before him a general table which he had desired me to give him, and which he ran through very rapidly, he dictated a distribution of conscripts, founded on this statement of the effective force of all the corps of the army, without once hesitating, and stated the actual force of each of the corps and their position. He walked rapidly up and down, or stood still before the window of his cabinet. He dictated with such rapidity that I had scarcely time to set down the figures clearly, and to indicate, by abbreviations, the notes which he added. For full half an hour I had not been able to take my eyes from the paper on which I wrote. I had no doubt but that he had before him the general table which I had given him, and when he paused a moment, and I was able to look at him, he perceived and laughed at my surprise. 'You thought,' said he, 'that I was reading your table. I don't want it; I know it all by heart. Let us go on.'"

During my stay at Berlin, General Guilleminot, aid-major-general of the grand army, arrived in that city. He was engaged in drawing up a report on the itineraries which he had been instructed to make; one in the direction of Petersburg, the other in the direction of Moscow. He communicated this report to me. It contained much valuable information respecting the two roads, and we reasoned, on these two suppositions, on the difficulties of such an invasion. About the same time I had been informed that the counsellor of state, Niebuhr, son of the celebrated Danish traveller, with whom I had been much acquainted during my residence in Holstein, was then in Berlin. I hastened to call upon him, and as we were conversing on the approaching war with Russia, and of the conjectures that might be made of the offensive plans of the Emperor Napoleon, he told me that since he had known that General Barclay de Tolly was commander-in-chief of the Russian armies, he had no doubt that he would carry into effect the plan for a defensive campaign, which he had presented at the time of the treaty of Tilsit, when, with some other Russian generals, he had opposed making peace. Niebuhr had passed three months at Memel, in constant intercourse with Barclay de Tolly, who, having been severely wounded at Eylau, had been conveyed to Memel, to which the court of Prussia had retired. Niebuhr had perfectly recollected all the details of this plan of combined retreats, by which the Russian general hoped to draw this formidable French army into the heart of Russia, even beyond Moscow, to wear it out; to remove it from the basis of its operations; to make it consume all its resources, sparing those

of the Russians, till, aided by the rigour of the climate, he should be able to resume offensive operations, and prepare for Napoleon on the banks of the Wolga a second Pultawa. It was a fearful and too just prophecy. It appeared to me so positive and so important, that, on rejoining the imperial head-quarters, I did not fail to communicate it to the Prince of Wagram. I cannot doubt that he related it to the emperor, but I heard nothing of it, and I took good care not to repeat these gloomy forebodings."

Much as we have read of the devoted configuration of Moscow, the following is so graphic, and yet so near the sublime, that we must give it place:—

"When we arrived before Moscow, we found the mountain called the Sparrow's Hill covered with unfinished entrenchments, which the Russian generals had, doubtless, intended to defend; but this position, as well as the capital, had been abandoned, and the hopes of a battle, to which the emperor had looked forward as a second victory, vanished. The emperor stopped in the suburb of Moscow, on the bank of the Moskwa; the king of Naples penetrated to the Kremlin, of which he took possession, after expelling several thousands of armed peasants who had taken refuge in it. The emperor then ordered Count Dars and me to go into the city after the vanguard, in order to ascertain the state of things, and to make a report to him on the following day. He prohibited every other person from entering the city. Night drew near: when we penetrated into that vast and magnificent solitude, scarcely did a few individuals of the lower class shew themselves here and there, as the troops of the king of Naples passed. We crossed the Kremlin, the square of the bazaar, and the street leading to the square of the palace of the government. The advanced posts of the light cavalry of the king of Naples had pushed some hundred paces further to the boulevard; a numerous post of infantry was stationed in the square before the palace of the government. The last rear-guard of the Russians still held the northern suburb. The night was fine; the unclouded beams of the moon illuminated those fine edifices, those vast palaces, those desert streets, in which reigned the silence of the tomb. We sought long for some person of whom we might make some inquiries, and at length we met with a professor of the academy, and some Frenchmen who had concealed themselves during the confusion attending the evacuation of the city. These individuals related to us all that had passed during the last few days, and could not make us comprehend this sudden disappearance of a population of three hundred thousand souls. We entered some palaces, all the doors of which were open. Towards midnight we chose our night's lodging in this same quarter of the government, which appeared to be the central part of this immense city. I took up my abode in a palace at one of the corners of the square, which I was told belonged to the Countess of Mockanow. It was a large house, built of hewn stone; the style of the architecture was indifferent, but the internal arrangement was very convenient, and it was very well fitted up. In the kitchens underground I found two moidjicks, or slaves, who shewed me the apartments. Every thing was in as good order as if the family had been expected; in the drawing-room, which was

"In a conversation with a foreign minister at Hamburg while the French army was still in the Prussian territory, we were discussing the probable result of this great expedition, he said: 'I ask only one thing, and that is, that whatever happens the Emperor Alexander may hold out till November.'—Zr."

preceded by two others, there was a round table, on which the ladies' embroidery-work was still lying; not the most trifling piece of furniture was out of its place; the keys were still in the drawers, in a very handsome bed-chamber. I learned afterwards that all the linen and the most valuable effects had been deposited in a cellar: among other valuables, there were two busts of the emperor and empress concealed in casks of honey. I took the keys of this cellar into my own possession, that nothing might be taken away. In the coach-houses there were five or six new carriages, in very good condition. I had scarcely thrown myself on my bed, when I heard the post in the square cry 'Alert! to arms! fire!' I learnt that a fire had just broken out at the exchange, near the Kremlin, behind the bazar; I immediately repaired to the spot, and saw that very little could be done to check the progress of the flames, which were already extending to the galleries, or colonnades round the bazar. There can be no doubt that hired incendiaries had begun at that moment to execute the order which had been given them by the governor, Count Rostopchin, to set fire to this noble capital. The Emperor Napoleon arrived on the following day, and fixed his head-quarters in the imperial palace of the Kremlin; the imperial guard was lodged in the vast palaces of the senate, and in the other buildings contained in the Kremlin. My first care was to ascertain what provisions for the subsistence of the army might be found in the public magazines and in private houses. I caused the magazines which line the quay between the Kremlin and the foundling-hospital to be opened in my presence; the barrels and sacks of flour and groats in these magazines were estimated at about forty thousand hundred weight—a valuable resource, which might have sufficed for a short stay. I hastened to visit the hospitals, which were already crowded with the sick and wounded of the Russian army. The most considerable of these establishments, situated at the extremity of the city near the summer-palace, appeared to me to be in a dreadful state of neglect; every thing was wanting, and death made horrible ravages; the dead bodies cast into the street lay round the walls, objects of horror and compassion. Other hospitals, such as those of Gallitzin and Scheremetow, were in a better condition; several Russian officers had been received into them, and room was reserved for ours. The fitting up of hospitals was my principal occupation, as well to find suitable buildings as to collect, as far as possible, every thing necessary for those establishments. I was well seconded by the zeal and activity of our boards and their agents, but our efforts were too often insufficient, and too often vain. The number of the sick and wounded brought from the field of battle amounted to nearly six thousand. The fire at the Exchange had consumed all the buildings round the bazar; every moment we received information of some new fire; it was not possible to doubt that the entire destruction of the capital had been contemplated and prepared. No exertions, however prompt and active, could stop in the several quarters of the city the progress of the fire. Some incendiaries, men who had escaped from the prisons, were pursued and arrested, and speedy justice was done on them; but on the following day the fire was seen to break out on all sides, and principally in those parts where the wind might cause it to spread with the greatest rapidity. On the third day, the fire-brands, borne by a violent north-west wind, set fire to one of the towers or pavilions of the Kremlin adjoining

the arsenal, where General Lariboisière, commander-in-chief of the artillery, had caused the ammunition of the artillery of the guard to be deposited. The emperor ordered his guard to be employed in checking the progress of the fire. He persisted, however, in remaining in the Kremlin, which was already surrounded with flames, and where the dense smoke made it almost impossible to breathe; it was not till the evening of the third day that he resolved to leave Moscow, and transfer his head-quarters to the imperial palace of Petershoff, about a league from the outer circuit of the city, or the wooden town (*Ville de bois*). He then gave orders for the city to be evacuated. Count Daru and myself, on being informed of this order, and not knowing that the emperor was gone, went to the Kremlin, which we did not reach without considerable difficulty. We there found Marshal Duroc, who had stayed till the last, and was mounting his horse to follow the emperor. It was with much trouble that we returned to our quarters. As we proceeded along the quay, our horses could scarcely bear the heat produced by the fire; that of Count Daru, who followed me, hesitated to pass the only issue that was left us between two houses which were burning furiously.

It was night before I was able to quit the house which I occupied. We left Moscow under a real rain of fire. The wind was so violent, that it carried to a great distance the iron-plates, which were torn from the roofs and made red-hot by the flames. The feet of our horses were burnt. It is impossible to form an idea of the confusion which prevailed in this precipitate evacuation. The noise of the fire resembled the roaring of the waves; it was truly a tempest in an ocean of fire. The whole road to Petershoff was covered with fragments of different kinds, especially with broken bottles, which our soldiers had thrown about. We bivouacked on the skirts of a little wood, from which we could behold this frightful spectacle—the image of hell. That immense city was nothing but a plain of fire; the heavens and the entire horizon appeared to be in flames, and I was able at the distance of three-quarters of a league to read the orders which were brought me from the major-general."

The fatal retreat is well described, but we must come to a conclusion, which we do with a notice of the battle of Bautzen in the ensuing campaign:—

"Kirgenor was killed, and Duroc mortally wounded. This was the second most grievous loss that Napoleon had suffered since the opening of the campaign among his most faithful followers. Two days before the battle of Lützen, Marshal Bessières, while directing in person a strong reconnoissance of cavalry, was killed by a cannon-ball. The glorious death of Duroc deprived him of his surest friend, to whom he was the most attached, whose probity, noble independence, and enlightened counsels, were so useful to him. The losses of the French army on this day were very considerable; more than six thousand wounded, the greater part but slightly, were conveyed to Dresden, or went thither on foot and in great disorder. The hospitals were already full; I had much difficulty in fitting up new ones, and in providing the first indispensable necessities. I observed, with great regret, several of these men who were slightly wounded; most of them young conscripts who had but lately joined the army, had not been wounded by the enemy's fire, but had mutilated each other in the hands and feet. Such accidents, which were so bad an omen, had already been observed during

the campaign of 1809. The various reports which reached the emperor roused his indignation. He questioned me respecting the reports which I had received, and the examinations which I had caused to be made in my presence by the surgeons. I did not seek to dissemble so melancholy a truth. He ordered an inquiry, and the special report that was made to him was contrary to my too well-founded observations. He preferred believing those, who, to make their court, dissembled a truth, which was indeed very afflicting, but very important in such circumstances."

How our author acted in after time, during the restoration, the hundred days, &c. &c., we leave to the readers of his work to discover. Suffice it to say, that he reconciles himself to the *gironettery* which these eventful changes induced, and might take as his motto,

"Tempora mutantur, et nos
Mutamur in illis."

A Memoir of the Life, Travels, and Gospel Labours of George Fox, an Eminent Minister of the Society of Friends. Post 8vo. pp. 323. London, 1839. Harvey and Darton.

WRITTEN with all the excusable partiality of a partisan and professor of the same creed—hating steeple-houses, organs, liturgies, and "priestcraft"—this memoir, nevertheless, possesses considerable interest in our times. George Fox was an enthusiast, but no great end was ever accomplished without enthusiasm. His career, sufferings, and triumphs, afford a remarkable picture of the age in which he lived—an age of cant, puritanism, laxity, fanaticism, persecution, bigotry, hypocrisy, cruelty; and all flourishing under the sacred names of Christianity and religion! But the principal attraction of the volume is to remark how many of the matters for which George Fox was persecuted almost to the death, have since been adopted as the greatest social and moral improvements of the country. His objection to capital punishments and oaths, his views of prison discipline and mendicity, his reformation of public-houses, and other exemplary points, are no longer theories, but represent the actual position of the English world in which we live. Take an instance or two:—

"Let none (he says) be gaolers that are drunkards, swearers, or oppressors of the people; but such as may be good examples to the prisoners. And let none lie long in gaol, for that is the way to spoil people, and to make more thieves; for there they learn wickedness together." Again he says, 'Let all gaols be in wholesome places, that the prisoners may not lie in the filth, and straw like chaff, &c.:' and after mentioning some of the nuisances then existing in prisons, he adds, 'Let these things be mended.'

"Let no man keep an alehouse or tavern, that keeps bowls, shuffle-boards, or fiddlers, or dice, or cards. Let neither beggar, nor blind people, nor fatherless, nor widows, nor cripples, go begging up and down the streets; but that a house may be provided for them all, and also meat, that there may be never a beggar among you."

"Let no man be put to death for [stealing] cattle, or money, or any outward thing—but let them restore; and mind the law of God, which is equity and measurable, agreeably to the offence."

And this was nearly 200 years ago. Need we state more to shew that George Fox ought to be remembered among the remarkable men whom England has witnessed? We do not

know whether the Society of Friends is increasing or falling off in numbers; though we observe that some of their peculiarities in dress, stiffness, and extreme opinions, are wearing away. Soon after their institution, it is evident, from what the author tells us, that their sectarianism turned out profitably in a worldly sense, for he writes, quoting Fox:—

“At the first conviction, as Friends could not put off their hats to people, nor say ‘you’ to a single person, nor bow, nor use flattering words in salutations, nor go into the fashions and customs of the world, many Friends who were tradesmen lost their customers; for the people were shy of them and would not trade with them, so that for a time they could hardly get money enough to buy bread. But afterward when they came to have experience of Friends’ honesty and faithfulness, and found their yea to be yea indeed, and their nay, nay; that they kept to their word in dealing and would not deceive any, but that if a child was sent to their shops they were as well served as though they came themselves; the lives and conversation of Friends did preach loudly, and reached the Divine Witness in the hearts of the people. Then things were altered, so that the inquiry was, ‘Where was a draper, or tailor, or shopkeeper, that was a Quaker?’ inasmuch that Friends had more business than many of their neighbours; and if there was any trading, they had a great part of it. Then the envious professors altered their note, and began to cry out, ‘If we let these Quakers alone, they will take the trade of the nation out of our hands.’ This hath been the Lord’s doing for his people, and my desire is that all who profess his holy truth may be kept sensible hereof.”

George Fox’s interviews with Cromwell are very characteristic of both; but we must now leave this little volume to the curiosity of readers.

MISCELLANEOUS.

A Manual of Christian Antiquities; or, an Account of the Constitution, Ministers, Worship, Discipline, and Customs, of the Ancient Church, particularly during the Third, Fourth, and Fifth Centuries: to which is prefixed an Analysis of the Writings of the Anti-Nicene Fathers. Compiled from the Works of Augusti and other Sources. By the Rev. J. E. Riddle, M.A., author of several Works. 8vo. pp. 830. London, 1839. Parker.

THIS valuable compilation is well calculated to save years of reading and study. It fulfils what is stated in the title-page, and contains vast masses of information on every point which affects the history of the early Christian Church, and every opinion which to this day forms the leading controversies among Roman Catholics, Protestants, and sectarians of all kinds. The author’s views are those of the Church of England; but, without approaching any question of doctrine, we can truly say that, as a work of great information on the very important subjects which it embraces, Mr. Riddle’s volume well deserves a place in every good library in the empire.

Phonography; or, Writing of Sounds. V.D.S. London, 1839. Effingham Wilson.

THIS little treatise is divided into two parts; viz. Logography, or writing of speech, and Musicography, or writing of music; and is the result of an attempt—which, however, the author states he found too arduous for him—“to trace the first outlines of an algebraical

language, which would have laid before the eyes the operations of the mind, freed from the incumbrances of the grammar.” The subject is one of great curiosity and importance; but it appears to us to be utterly impossible to render it generally intelligible in twenty duodecimo pages.

Chemistry no Mystery; or, a Lecturer’s Bequest. Pp. 310. London, 1839. Harvey and Darton.

AN amusing illustration of many chemical facts and experiments. As far as it goes, philosophy in sport; and not undeserving of notice where it is desired to attract young minds to chemistry, and afford information in that delightful and important science.

The Oracle of Rural Life, and Sportsman’s Almanack for 1840. London, 1839. A. H. Baily and Co.

WITH fourteen sporting prints, and many clever head-pieces, this nice little Almanack is full of the usual useful information, and is particularly instructive in horticulture. It is amusing, good for reference, and very pretty to look upon.

Max Wentworth. 3 vols. 12mo. London, 1839. Saunders and Otley.

THIS is one of the novels about which we wonder by whom it could be written, and wherefore it was published.

Real Pearls in a False Setting. By the Count de la Pasture, late 18th Hussars. 3 vols. 12mo. London, 1839. Saunders and Otley.

A FILTHY abomination; in which, if there is a commonplace talent, it is far more than counteracted by dirty allusions and low attempts at humour.

The Redeemer: a Poem. By W. Howorth, author of “The Cry of the Poor.” 8vo. pp. 306. London, 1839. Tilt.

A RELIGIOUS poem of considerable merit, and breathing the genuine spirit of Christianity.

The Hebrew Grammar in the English Language. By the Rev. J. S. C. F. Key. 8vo. pp. 172. London, 1839. Craddock.

A TENTH edition, revised, enlarged, and improved; so no more need be said.

The Natural History of the Birds of Great Britain and Ireland. Part II. Incessors, by Sir William Jardine, Bart. F.R.S.E. F.L.S. &c. &c. 12mo. pp. 408. (Edinburgh: Lizarra; London, Higley; Dublin, Curry, Jun. and Co.)—This forms the eleventh volume of the ornithological series of the “Naturalist’s Library,” and is from the pen of its accomplished editor. It is beautifully illustrated with coloured plates of favourite and well-known songsters and others belonging to our islands; and is further enriched with a portrait and memoir of William Smellie. The plates are thirty-two in number.

The Penny Cyclopædia of the Society for the Diffusion of Useful Knowledge. (London, Knight.)—Continued in the same style as heretofore: the present volume extends from Massagetta to Muridae, and contains the usual number of illustrations, which, however, are in many instances sadly worn, in consequence of the multitude of impressions that are necessarily taken.

A Treatise on the Culture of Corn, Potatoes, and Peas (pp. 31), by Luke Pigott,—and a very useful advice.

A Mother’s Reminiscences (pp. 79), by Mrs. Borron, containing a variety of instructive information for youth.

The Rose Unique. Pp. 238. (London, Hatchard and Son.)—A tale of religious inculcation.

The Report of the Section of the Liverpool Medical and Surgical Association (25th July, pp. 98), gives a just and gratifying account of the success of vaccination.

Mr. Eagle’s Remarks on Modern Astronomy. Pp. 35. (London, Renshaw.)—A queer little book, in which Mr. Eagle denies every thing but the Mosaic account of the universe. In other matters the writer is a great theorist; in this he takes an Eagle flight the other way.

Domestic Breeding. Pp. 60. (London, Britton and Reid.)—One of the many manuals compounded from larger publications, and useful in their way.

The Literary World, Vol. I, by J. Timbs. (London, G. Benger.)—The first twenty-seven numbers of this periodical collected together, and doing great credit to the editor’s judgment and industry. Like “The Mirror,” of which he was long the editor, it is pleasantly embellished with interesting wood engravings.

ARTS AND SCIENCES.

Observations on the Chemical Modifications which the Nitric Acid, Alcohol, and Ether undergo, when subjected to the double Influence of the Voltaic Current and Platina. By C. F. Schönbein.*—From the “Bibliothèque Universelle de Genève.”

IT has long been known, that the manner in which the decomposition of nitric acid placed in the voltaic circuit occurs, depends on the degree of concentration of that liquid. If very much concentrated, it cannot disengage hydrogen on the negative polar wire plunged into it, because that gas combines with a portion of the oxygen in the nitric acid, and transforms it into nitrous acid; while diluted acid disengages without difficulty oxygen and hydrogen. But it appears not to have been hitherto remarked, that even when the most concentrated acid is used, it occasions for several moments disengagement of gas at the negative pole; and it is precisely that phenomenon, which I had repeatedly observed, that induced me to submit to a more attentive examination nitric acid in its relations with the voltaic current, and to ascertain the circumstances on which the variations in the chemical effect exercised by the pile on that liquid depend. The results to which my experiments have led are of a nature so peculiar, that I think it my duty to make them known.

Before stating them, I must remark that the apparatus which I have used in my researches is a pile *en couronne de tasses*, formed of sixteen small elements, disposed in such a manner as to allow the pairs to be more or less sunk in the exciting liquid, and, consequently, to obtain at pleasure weak or strong currents.

If nitric acid of $\frac{1}{2}$ be put in communication, by means of a platina wire, with the positive pole of the above-mentioned pile, and there be plunged into the acid a wire of the same metal communicating with the negative pole, there is disengaged at the latter, as I have already observed, at the moment of immersion in the liquid, a gaseous substance, which is apparently hydrogen: but this phenomenon lasts at most only a second.

If the liquid which I have mentioned be diluted with half its volume of water, the disengagement of gas at the negative pole, under the preceding circumstances, takes place during several seconds. In a mixture of equal parts of water and acid, this disengagement of gas lasts at least half a minute; and if the mixture be made of two parts of water, and one of acid, the disengagement of hydrogen at the negative pole never stops of itself, but continues uninterruptedly as long as a current passes through the liquid. I ought here to remark, that the thickness of the negative polar wire exercises a sensible influence on the duration of the disengagement of gas which takes place at its surface, in such a manner, that that duration is shorter as the diameter of the platina wire is greater. Other facts, hereafter stated, will shew that the density of the platina used for the negative electrode has also a great influence on the result, as well as the force of the current used for the experiment.

If the acid which is used be of such a degree of concentration, that the disengagement of gas

* The great value of the experimental data afforded to Electric and Chemical Science by the researches of so able an Electrician, and close observer, as Professor Schönbein, and involving, in the present case, the application of the Voltaic pile to Organic Chemistry, has induced us to transfer the “Observations” to our columns. We trust to be example here has set will be more followed, and the subject receive the attention it so well deserves among the chemists and philosophers of England.—*Ed. L. G.*

at the negative electrode (consisting of a platinum wire about half a line in thickness) ceases sooner or later to take place, it is by various means practicable to put the platinum wire destined to serve as the negative pole in such a state that no gas shall be disengaged at it. I call this peculiar disposition of the wire its "extraordinary state." The means which may place it in such a state are the following:—

1. Communication between the polar wires themselves before immersion in the acid.—If, before plunging the negative polar wire into the liquid, it be brought into contact with the positive polar wire, which is there already, let it be then introduced in that state, and, as soon as it has entered, be separated from the positive electrode; no gas is disengaged at this negative pole: I ought, however, to observe, that this effect does not take place if the liquid used be formed of one volume of nitric acid of 1.49, and one volume of water.

2. Bringing to a red heat, or merely to a high temperature, the extremity of the negative electrode intended to be plunged into the acid.—If the positive polar wire be already plunged into the liquid, let the free extremity of the negative polar wire be brought to a red heat, and no gas will be disengaged at the latter on its entrance into the acid.

3. Transport.—The most remarkable and the most singular mode of depriving platinum wire, in its quality of a negative electrode, of the property of causing the disengagement of hydrogen on its surface in the nitric acid, is incontestably that which appears to consist in making the extraordinary state pass from one wire to another. If the two polar wires be plunged into the liquid, and if the negative electrode be in the extraordinary state, a second common wire of platinum, which communicates by one of its extremities with the negative pole of the pile, may be introduced into the acid, without the latter's causing any disengagement of gas at its surface. The extraordinary state of this second wire lasts not only as long as the first negative polar wire remains in communication with the pile, but still continues after the latter has been withdrawn from the voltaic circuit. It is hardly necessary to say that the extraordinary state may be transferred from the second wire to a third, from that to a fourth, &c.; at least, provided the experiment be made under the circumstances previously described. Nor is it more necessary that I should expressly observe that the result takes place in whatever manner the extraordinary state may have been produced in the primary negative polar wire.

If, however, a platinum wire has lost, by any of the means indicated above, the property which belongs to an electrode of causing the disengagement of hydrogen at its surface, that power may be restored to it in different ways.

The best mode of obtaining this object consists in withdrawing the wire from the liquid, and leaving it for some time exposed to the air. The stronger the acid in which the wire acquired the extraordinary state, the longer time this wire should be kept in the air; in order that it may again disengage hydrogen at its surface when replunged into the acid, and again put in communication with the pile. If a mixture of one volume of nitric acid of 1.49 and one volume of water be used for the experiment, it will be sufficient for the purpose of depriving the wire of its extraordinary state, to withdraw it for an instant only from the acid. With the mixture I have mentioned, it is not even necessary to withdraw the wire from the liquid; it will be sufficient

in some manner to intercept, for a few instants only, the circulation of the current along the wire. In certain cases (see further on), the extraordinary state may be made to cease by a simple shock upon the wire, while it serves as a negative electrode, and is immersed in the liquid.

After this exposition of the general results which I have obtained, I proceed now to describe more in detail some experiments I have made with nitric acid of 1.35, and with acid solutions of greater or less strength.

First Experiment.—The liquid employed is nitric acid of 1.35. A platinum wire, half a line in thickness, passes usually into the extraordinary state after having officiated for five seconds as a negative electrode. The same state may be produced in the same platinum wire, by the means indicated above—1, 2, and 3. When the wire has served some time as a negative electrode, in its extraordinary state, several bubbles appear on its surface; which, however, seem to proceed, not from hydrogen, but solely from the decomposition of the nitrous acid which is there accumulated. If the extremity of the negative pole intended to be plunged into the acid be made of spongy platinum, there will not be disengaged the smallest trace of gas, neither at the moment of the immersion of this platinum in the acid, nor later.

Second Experiment.—The liquid employed is composed of three volumes of nitric acid, of 1.35, plus one volume of water. The negative polar wire of platinum passes no more by itself into the extraordinary state; may more, that state cannot be produced by the first of the means which I have indicated above, but easily by the red heat, and by transport. It is sufficient to strike or to agitate in the liquid the wire which is in the extraordinary state, in order that the disengagement of the hydrogen may be made at its surface in a durable manner. The same object may be obtained by removing the platinum for several instants out of the voltaic circuit.

Spongy platinum, which has been used as a negative electrode, prevents all disengagement of gas, without recourse be had to heat, or the other means by which the extraordinary state is developed in the metal in wire.

Third Experiment.—The liquid is formed of three volumes of nitric acid, of 1.35, plus two volumes of water. Every thing takes place in these circumstances as in the second experiment; with this difference only, that if it be desired to pass into the extraordinary state a compact platinum wire, by the red heat, or by transport, it must be rolled into a clew, or cluster, at that extremity which it is intended to plunge into the acid. It is also with that extremity thus rolled and heated, that the pile must be closed, to obtain the result in question. If it be first plunged into the acid, and afterwards a communication be made by another, left in its ordinary state, with the negative pole, it disengages gas like a common platinum wire.—Spongy platinum has no need either of heat or of any other means, immediately to prevent the disengagement of hydrogen.

Fourth Experiment.—The liquid is formed of one volume of nitric acid, of 1.35, plus one volume of water. Before making a negative electrode with the spongy platinum, that metal must be submitted to a powerful heat, in order to prevent the disengagement of hydrogen. If it be moistened with the acid of the experiment, it must be but moderately heated to make it pass into the extraordinary state. In any circumstance it is impracticable to give to a simple wire of platinum the faculty of preventing the hydrogen from becoming free. But if about

the half of a wire of platinum, ten inches long and half a line thick, be rolled into a cluster, nearly the size of a hazel-nut, and plunged into the acid while the other simple extremity of the wire be made to communicate with the negative pole of the pile, the cluster end will pass into the extraordinary state: but for that purpose, it is necessary that another platinum wire, equally in communication with the negative pole, and in the extraordinary state, be plunged into the acid by one of its extremities in the spongy state. This second wire may be removed from the voltaic circuit without its disengaging gas on that which is clustered. To produce the disengagement of gas on the latter, it is sufficient to give it a rather smart shock, or merely to remove it for a moment from the liquid.

Fifth Experiment.—The liquid is formed of three volumes of nitric acid, of 1.35, plus four volumes of water. The spongy platinum compares itself as in the preceding experiment; but neither the platinum wire rolled up, nor the simple wire, can be conducted into the extraordinary state. If the spongy platinum in its extraordinary state officiates in the quality of a negative electrode during a certain time, it may be brought back to its ordinary state by exposing it to the air for a few minutes. The same result is obtained in using this substance as a positive electrode, and long enough for oxygen bubbles to appear on its surface. If, however, the spongy platinum is used anew as a negative electrode, a very short time will elapse before hydrogen begins to disengage itself at its surface. It is worth while to cause it to be observed here, that even when it has again officiated for only a few minutes as a negative electrode, the spongy platinum does not disengage the oxygen as soon as it begins to officiate as a positive electrode: about twenty or thirty seconds elapse before the disengagement commences. If, on the contrary, the spongy platinum has served some time as a positive electrode, and is afterwards made to officiate as a negative electrode, rather a long interval elapses before the bubbles of hydrogen begin to appear. The last two facts have, doubtless, the most intimate connexion with the phenomena of which I have recently spoken in the "Bibl. Univ.," and to which the name of phenomena of polarization has been very improperly given.* I will return on another occasion to that interesting subject.

Sixth Experiment.—The liquid is formed of three volumes of nitric acid of 1.35, plus five volumes of water. Every thing takes place as in the preceding experiment. I ought, however, to point out, that it is with the spongy platinum, while it is plunged into the acid, that the circuit of the pile must be closed; in order that it may pass into the extraordinary state. If the circuit be closed in any other manner whatever, a disengagement of hydrogen will take place on the spongy platinum. This last observation is likewise applicable to the preceding experiment.

Seventh Experiment.—The liquid is formed of one volume of nitric acid of 1.35, plus two volumes of water. Every thing takes place as in the preceding experiment. The extraordinary state, however, developed by the red heat, is not so perfect as that produced by the heating of the spongy platinum moistened with water.

Eighth Experiment.—The liquid is formed of three volumes of nitric acid of 1.35, plus

* In a note, Professor Schiebelin observes, in reference to this: "I attribute it to the oxidation which the platinum undergoes when it is placed on the positive pole, and to the reduction which results when it is exposed as the negative pole."

seven volumes of water. In the greater number of cases it is impracticable to make the spongy platina pass into the extraordinary state by means of the red heat. Generally, a few seconds after the spongy platina has been plunged into the acid, the gas commences disengaging itself at its surface: nevertheless, the quantity of hydrogen disengaged does not appear nearly sufficient to form water with the oxygen become free at the positive pole. By heating the spongy platina moistened with the acid, the extraordinary state may be produced in the metal more easily and completely than by the red heat.

Ninth Experiment.—The liquid is formed of three volumes of nitric acid of 1.35, plus eight volumes of water. By strongly heating the spongy platina moistened with acid, the extraordinary state may be developed in it to such a degree, that it will disengage at its surface but a small proportion of hydrogen in relation to the oxygen. If the circuit be closed with the extremity in form of sponge, heated to the red heat, several seconds elapse before the disengagement of hydrogen begins to take place on the metal; and scarcely has it commenced until, after from five to six seconds, it ceases, to recommence at the end of several instants, and no more to receive any interruption.

Tenth Experiment.—The liquid is formed of one volume of nitric acid of 1.35, plus three volumes of water. If the circuit be closed with the spongy platina, heated to a red heat, about six seconds elapse before the disengagement of hydrogen commences on the metal. By heating the spongy platina moistened with acid, the vivacity of the disengagement of hydrogen may, it is true, be sensibly diminished, but it never can be completely stopped.

Eleventh Experiment.—The liquid is formed of one volume of nitric acid of 1.35, plus four volumes of water. With respect to the spongy platina heated to a red heat, the same occurs as in the preceding experiment. If the spongy platina moistened with acid be heated, and used to close the circuit, the gas disengages itself immediately at its surface; but this disengagement continues only for a few instants. However, at the end of a few seconds, it recommences, no more to stop.

I have not thought it necessary to make experiments with acid more diluted; the phenomena of decomposition at the negative electrode in the two last cases above, exhibiting themselves in a manner that may be called normal.

Before proceeding further, I ought to add a remark which is not entirely destitute of importance; that is to say, that the results reported above were obtained only when the current used in the experiments remained below a certain strength; or, which is the same thing, when the quantity of water electrolysed, in a given time, did not pass a certain limit. If that limit was passed, a disengagement of gas took place at the negative electrode. Thus, as I have elsewhere said, I have employed currents which decomposed water with only a feeble energy; and in order to be prepared always to modify, according to necessity, the strength of the currents, I used the voltaic apparatus formerly mentioned, which allowed the pairs to be more or less dipped into the excited liquor.

It still remains to examine, first, if, whatever may be the strength of the current, and whatever may be the degree to which the nitric acid has been diluted, it is practicable to stop the disengagement of hydrogen at the negative

electrode, when that electrode is of spongy platina, by giving it a suitably large volume; secondly, if, by employing a current of such a strength as to establish a disengagement of gas at the negative electrode of the platina, the quantity of hydrogen disengaged at the latter offers, with that of the oxygen become free at the positive pole, such a proportion, that water may be formed with it? It may also be asked, what becomes of the hydrogen when it does not appear under the form of gas, at the negative electrode? In the case in which concentrated nitric acid is submitted to the influence of a voltaic current, it is certain that that element is employed to deoxygenise a part of the nitric acid, for it forms nitrous acid. But when the liquid used is nitric acid, diluted several times its volume with water, does the hydrogen, separated from the water by the current, play the same part as in the preceding case? And, if so, ought it not to disengage a little gaseous oxide of azote at the negative electrode? If the hydrogen which appears at that electrode reduces the nitric acid to nitrous acid, the latter ought to deposit itself around the negative electrode, but immediately afterwards to be decomposed, the greatest part at least, into nitric acid, and gaseous oxide of azote, under the influence of the great quantity of water included in the liquid. If, then, all these suppositions were founded on experiment, the gaseous oxide of azote ought to shew itself at the negative pole; but, as I have already said, we see absolutely nothing like it occur in the diluted nitric acid. It is possible that, in the case in question, it forms itself into ammonia. In fact, the whole proportion of oxygen included in the nitric acid diluted to a certain point, being capable of being carried off from it by the hydrogen separated by electrolytical means, it may easily be supposed that the azote, thus become free and in a nascent state, would form ammonia with a portion of the hydrogen which is in the same state. I have not yet examined if this combination exists in the diluted nitric acid, after a current has for some time been passed through it by means of spongy platina electrodes. For the present, I will not attempt any explanation of the facts hitherto described. Many more experiments must be made before the subject can be fully comprehended. I cannot refrain, however, from throwing out the conjecture, that some of the phenomena in question may certainly be connected with the known faculty of platina to promote the chemical combination of hydrogen and oxygen. Several facts seem, in truth, to authorise this conjecture. They will be presently adverted to. Among the results I have mentioned, those which appear to me to be the most enigmatical are those which relate to the transport of the extraordinary state from one platina wire to another, and which have some resemblance to the phenomena of passivity exhibited by iron.

[Conclusion next week.]

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

OXFORD, October 17.—The following degrees were conferred:—

Bachelor in Divinity.—Rev. T. Byrth, Magdalen Hall.
Masters of Arts.—Rev. M. R. Southwell, Exeter College, Grand Compounder; H. L. Knight-Bruce, R. Alexander, J. R. Cornish, Student, W. C. F. Webber, Student, W. G. Penny, Student, Christ Church.
Bachelor of Arts.—J. Y. W. Hinde, Wadham College.

CAMBRIDGE, October 16.—The following degrees were conferred:—

Masters of Arts.—W. B. Clements, Trinity College;

J. E. Golding, Queen's College; J. R. Young, Caius College; H. Caddell, Corpus Christi College.
Bachelor of Arts.—E. Over, Catherine Hall.

To the Editor of the *Literary Gazette*.

SIR,—In April and May last, you did me the favour to insert in your *Gazette* two or three of my notes, and a very intelligent correspondent of yours, under the signature of "Ægyptiacus," commented upon the matter contained in them. I made no reply to the comments of "Ægyptiacus," because what I had originally designed was to leave every thing to time; I had proposed to myself merely to submit what appeared to me to be the case, namely, that we were not in possession of the names of the Egyptian monarchs who erected the pyramids; knew nothing about their order of position; that the ovals, usually considered as bearing their names, contained epithets applied to them with reference to a particular business, and nothing more. I am now enabled to place the truth beyond a doubt. Amunemeses

in the table of Abydos, is placed sixteenth ancestor of Sesotris. Χίμψης, or Χίμψης, Diódoros Siculus informs us, built the largest of the pyramids. In a tablet very recently acquired by the Museum, I have found the above royal oval in juxtaposition with

a name, which, if transcribed, produces either Χίμψης, or Χίμψης, according as the reader of the hieroglyphics may choose to add the definite article, or the contrary.

The reason why he was called Chembis, or Chemmis, the monarch himself, in the tablet, is made to tell us; at the same time that he gives us his own prenominal, and explains its meaning.

Chembis belonged to a party styled "the sacred family of Osiris;" and he was succeeded in the sovereignty of Egypt by several members of the same family, the last of whom was Timanus. The interval of time between Timanus and Amosis, the first of the eighteenth dynasty, constitutes the period of the foreign shepherd kings.

I have studied brevity as much as possible, because matter, touching the chronology and history of a period so remote, can be interesting only to a portion of your readers. I remain, Sir, faithfully yours,

C. S.

London, 14th October, 1839.

FINE ARTS.

THE ROYAL EXCHANGE.

WE have paid an hour's visit to the designs for the Royal Exchange, now hung up in the Mercers' Hall; and though, *adhus sub judice lit est* (i. e. if judex and job are not synonymous in the city), as public opinion has been courted, we will venture a few observations.

The report of the honest and able architects, Messrs. Hardwick and Gwilt, and Sir R. Smirke, to whom the competition designs were referred, is, in our opinion, most honourable to their skill and judgment. On the other hand, the trammels and incumbrances of the plan are most disgraceful to London, the capital of England, and to the country. Once in five hundred years, there is such a building to be erected. To the time of the Greshams (father and son), the English were pedlars, not merchants; importers of a few necessities and luxuries, not manufacturers for the wide world. Their trade might well be managed in a street corner, their commerce in the vestibule of a modern gin-palace. With the ruin of the Low Countries, Plutus took up his high abode

amongst us, and has here been coining and minting millions ever since, for eight or ten generations. What a pitiable thing is it, then, when a temple is to be raised to the god, that the basest worship should be tendered to him! Do we misunderstand his character? He is sordid, but not shabby; avaricious, but not mean. His true disciples know that splendour and glory are but parts of his system, and that the rule of a poor-looking deity of riches would be as repulsive as Queen Poverty herself. Not to speak of comfort, accommodation, respectability, &c. &c., all words well weighed in the locality, we should inquire, What is due to the wealthiest community of the wealthiest nation on the face of the earth?

The answer ought to be, "The most convenient and noblest piece of architecture which money and art can supply!"

What it is to be, nobody knows,—not even the Committee, not the Aldermen, not the Common Council, not the tribes of Israel, not the Lord Mayor, not the Sheriffs—who, as they hang every offence, we presume hung the lots of paper in Mercers' Hall.

As in common cases of execution at the Old Bailey, we have never been very clear why some were publicly hanged, and some were not; so have we our doubts about this Mercers' Hall hanging, and can only reconcile it to our taste and mind by fancying that the sheriffs (as aforesaid) thought them all so bad that the most just way was to serve them all alike—one hanging, and nothing new in the drop.

To speak more gravely, though it may not be quite right in regard to designs so mixed up in all their details as these are, and forming a perfect wilderness of elevations, north fronts, west fronts, east fronts, south fronts, sections, transverse sections, ground-plans, second stories, perspective views, &c. &c. &c., we must say, that the general effect is most unsatisfactory. There is not one grand design to strike the beholder, and induce him to say, This would be worthy of London and England. If the architects are cramped in their means, and are told that this proud, wealthy nation cannot afford more than a plum or a plum and a half for such a building, it is their misfortune; and, like the good old tailor adage, they are to be commiserated for trying to cut their coat according to their cloth—to rubble their stone and mortar according to their pittance. But if the Exchange should be worthy of the arts, of the age, of the people, and of the immeasurable resources of the country, the booths of *Bartlemy Fair* might enter into the competition. In short, the modern architectural exploits of England, are, with very few exceptions, too *bizarre* for laughter, too absurd for ridicule.

In regard to the drawings we witnessed, we are free to say (not injuriously to some, it was impossible to examine sufficiently in such a situation) that the mass were gross abortions. Where there was novelty, it was ridiculous; but there was not much of it. Poor copies of Greek Temples, meagre imitations of the Paladium, grotesque jumbles of every style, a few fantastic wonders—designs, of which the best parts were already far better executed in London (see Inigo Jones, Wren, Adams, and others); or one or two pseudo morsels of Norman or Tudor, and things the most unsuitable for aught but prisons, tournaments, inquisitions, or theatres, distracted us on every wall and partition. We had not the fortunate Nos. with us, and could not tell which had won the prizes. We had not time to read the descriptions, and could not tell which deserved the

slightest attention. Dipping into one, we found a fine calculation of the time it would take a person to ascend and descend the stairs—no allowance for corpulence or aldermanishness! In another, it was signified, do not look at me till you have read my account of myself; for, if you do, you will "think me *absurd and useless*;" whereas, if you read, you will learn that I am somewhere about the best plan in this room! In others, the pictures of the folks adorning the views were quite captivating (whatever the designs were); and fine horses, dogs, pretty ladies, fat grocers, straddling brokers, pury merchants, Oriental traders, sailors, Jew orangers and clothesmen, and all the medley of London, were enough to d— the building that could be the resort of such a crew.

Let us hope, that if the quarter or half a million of pounds sterling can produce an edifice of which neither the capital nor the kingdom need be ashamed, all these designs will be burnt, and something done. Surely we do not want another National Gallery!

NEW PUBLICATIONS.

Illustrations of Poems by Eliza Cook.

THE readers of the *Literary Gazette* are no strangers to the poetical genius of Miss Cook, many of whose most charming productions have graced our columns. We have before us proofs of a dozen plates, illustrative of a volume of poems by that highly gifted young lady, about to be published by Mr. Tilt. With the exception of a fine Metzu-like whole-length portrait of the fair authoress, from a drawing by T. Smart, they are in the vignette form, and are sweetly engraved by H. Adlard, from designs, full of grace and beauty, by J. Marchant.

Infant Prayer. Painted by E. Prentis;
Engraved by W. Bromley. M'Lean.

A PLEASING illustration of the lines:—

"Who taught my infant lips to pray,
And love God's holy book and day;
And walk in wisdom's pleasant way?
My Mother."

ORIGINAL POETRY.

Sketches of Poets who have been afflicted by Aberration of Mind.

NO. II. SWIFT.

STRETCHED on yon couch, see! Wit and Genius lie,

Degraded now to helpless idiocy:

No more those eyes with heavenly fire shall glow,

No more those lips with sparkling wit o'erflow.

Can this be He that wielded with his pen

The destinies of empires and of men?

Whose flashing thoughts could make even St. John smile,

And courtly Harley of his cares beguile!

Haste hither, Pope, O leave thy Twick'nham bowers;

Leave for a time thy meads and laughing flowers;

And with thee bring the simple-minded Gay,

Whose heart to woe is open as the day:

Nor sure will Arbuthnot be last to fly

(Though vain his science now) where Swift doth lie.

Here, then, around yon couch in sorrow joined,

Weep o'er the ruins of a noble mind.

Ah! Stella, how thy gentle heart hath bled

(More blest thy fate, thou slumberest with the dead),

Hadst thou the loved one of thy soul but seen,

The shattered wreck of all he once had been;

Each past unkindness thou hadst then forgiven,
Thy gentle hand to soothe his pangs had striven!

Nay, even Vanessa had compassion shewn,
And in Cadmus' woes forgot her own.

R. B. S.

LAYS OF A DREAMER.—NO. III.

The Day-Dream. An October Reverie.

Oh! 't was a glorious vision! Yet the eye
Was not in slumber sealed. The fragrant heath

I made my bed, and gazed upon the sky;
While not a single care that sky beneath
Did break in on my solitude. The sun—
The bright October sun—that browns the corn,

The latest of the harvest, had not run
One half its journey from the gales of morn;
Yet did it light a pageant nobler far
Than emperor in coronation state,
Or emperor's "triumph of the Ivory car"

In old Rome's mightier days; or e'er did wait

On Roman pontiff 'neath the papal away,
Or banqueted the eye in Orient clime;—
Oh! nought could match the splendours of that day—

Imaged in clouds I saw the march of Time
Across the azure, ether realm of space!
The emblem of eternity—unchanged,
While mighty changes pass and leave no trace,
Moves on our pageant. Daintily arranged
Those silv'ry clouds, the sun hath kissed their brow,

And bid them speed their course: see on—
and on—

They smiling come; but murky clouds have now
Joined in their progress, and the sun is gone,—

Hidden as the face of angry Deity,
That hath no joy in darkness;—but a ray—
A light-redeeming ray—doth mount on high,
Gilding the tops of many a darksome pile,

Then streaming down in fire, the shadows roll
In light away,—again the heavens smile;—
A world hath been renewed, the wondrous soul
Of nature hath refashioned it. A plain

Of golden sands doth skirt a sea of blue,
And mountains rise around the waveless main;

But ah! a sky of dark portentous hue
O'er shadows it,—the sun, the sun is hid!—

Yes! but its throne is still behind yon cloud.

Now hath the breeze the snowy mountains
chid,—

They fall away; the sea of blue is ploughed
By many a mimic sail: thin mists descend

And melt away.—Where is the azure sea?
Engulfed in new creations, and we wend

With ravished eye 'mid Alpine scenery,
Each mountain castle-crowned, and new a hall

Of pillared clouds is peopled by strange shades;
White-bearded men who come at fancy's call,

And scarce are fashioned ere the vision fades.
Chariots, and horsemen, myriads in arms!

Phalanx on phalanx rush, and yet no sound
Doth speak the thunder of the war's alarms;

As though within that shadowy conflict's bound,
All things were voiceless. Giant forms are there—

The monsters of a world before the flood—
And while we gaze a different shape they wear,

And like traditions pass, not understood,
But too revered for doubt. The Behemoth*

Doth look upon the busy strife of war,

* The Hebrew word "Behemoth," the plural of "Baham," a beast, is used in the Book of Job, l. 15, in a singular sense, to signify an animal endowed with the magnitude and power of many. The ancient rabbins tell strange stories of its might and size; but without believing these fables, we are inclined to

And, 'mid the fight, a wood of mighty growth
Ariseth to receive him. From afar
Come earth's wild denizens to seek their king,
And horsemen, chariots, and armed bands,
Are trampled underneath their gathering.
The giant horde hath passed, a castle stands
Its fosse, and donjon-keep, and battlement,
Wrought in dun masses: see yon portal
dark,
Deep caverned in its walls!—The walls are
rent!—

The portals burst in vivid flames, and hark!
Heaven's loud artillery in lengthened roar,
Proclaim in thunder that our pageant's o'er.
R. J.

THE DRAMA.

The Surrey Theatre.—This week Jack Sheppard has begun his possession of the minor theatres, and the Surrey taken the lead in an elaborate representation of the novel. The playbill is a curiosity, and so is the piece. The succession of scenery and tableaux is too much, and abridgement (after the first night) the only thing necessary. A drama cannot do a whole three-volume work, and it would be a better plan to select only the most striking incidents. The characters are capitally supported, especially the *hero* by Saville; but Heaven keep us from all the murders and other trifling accidents being made visible in such a life and death as this. The theatre is crammed every night.

The Victoria has also got up an edition of this popular story; and it is announced at the Adelphi, Sadler's Wells, &c. &c. Tremble, ye Legitimates!

VARIETIES.

Lord Brougham and Count D'Orsay.—A great sensation has been created by a report of a fatal accident to Lord Brougham, which turned out to be a fabrication; but as if every sort of falsehood was to be combined with the rumour, it was insinuated that Count D'Orsay had announced the sad news in a jocular manner at White's Club. This misrepresentation has been flatly contradicted by the Count, and Lord Methuen, to whom he happened to communicate the intelligence, received by letter from the north; but such denial was most unnecessary for all those who know the habits of mutual regard and esteem in which the parties live. The feelings of Count D'Orsay are too good to allow of his making a jest upon any calamity (however fine and trenchant his wit is on other occasions); and, above all, he is about the last man in Europe who could joke on the misfortune of a friend.

The Archimedes.—Another experimental trip has been made in this vessel, propelled from the stern by machinery in the form of a screw, and acting in the manner of a scull, which seems to have succeeded on the river. From Gravesend to London, with wind and tide, the passage was made in two hours and three minutes. What the actual power is, it needs some mixed calculations to make out—certainly we should say under ten miles an hour; and the motion of the vessel is reported to be very uneasy: still in this, as in other cases, great improvements may be made.

Improvement in the Daguerriotype.—Amongst the numerous improvements proposed in the Daguerriotype is the following, by

adopt the opinion, that the Behemoth was an animal of a distinct species now unknown, rather than abide by the generally received derivation of the word, which would make Behemoth the same as the Egyptian Pehmont—the Hippopotamus.

M. Jobard, of Brussels, for taking portraits at *l'héliographe*:—"Paint in dead white the face of the patient; powder his hair, and fix the back of his head between two or three planks solidly attached to the back of an arm-chair, and wound up with screws! The colour of the flesh, not reflecting sufficiently the rays of light, would require a powerful sun, whereas a whitened face will be reproduced as well as plaster figures by diffused light."

Mediæval Grecian Antiquities.—M. Didron and his associates, now examining the mediæval antiquities of Greece, are stated to have found a magnificent church at the convent of St. Luke in Livadia, resembling that of St. Mark, Venice, but on a smaller scale; and other very interesting churches at Megaspelon, Mistra, Salamina, and Corinth.

March of Intellect.—The "rote system" in which charity children are educated, is admirably adapted for lads of obtuse intellect, as we will prove by an anecdote which occurred at a certain evangelical school. They are examined and questioned in a particular order, and, always standing in the same rank, have always the same reply, whatever may be the question. Three of these brilliants, whom we will call No. 1, No. 2, No. 3, were accustomed to reply to the question, "In whom do you believe?" Thus, No. 1, "In God the Father;" No. 2, "In God the Son," and No. 3, "In God the Holy Ghost." It so chanced, that by accident No. 2 placed himself after No. 3. The question was asked, "In whom do you believe?" No. 1, "In God the Father;" No. 3, "In God the Holy Ghost." "What?" said the examiner, "you should say, 'In God the Son.'" "No, sir," retorted the matter-of-fact No. 3, "I believe in God the Holy Ghost: that 'ere boy (pointing to the misplaced No. 2) believes in God the Son." "You are a bright particular star," said the examiner; "pray have you been confirmed?" "No," was the instant rejoinder, "but I've been vaccinated."

Steam Towing on Canals.—The experimental improvements in this branch of transit and navigation, which have for some time been making great progress in Scotland, under the direction of Mr. Macneil, civil engineer, were brought to a very satisfactory proof, a fortnight ago on the Forth and Clyde Canal. The locomotive, Victoria, was employed on this occasion, and some of the leading results were as follow:—With a passenger-boat laden with passengers (an average load), a rate of twenty miles per hour was attained; and it was evident that the only limit to the speed was that of the power of the engine. Eight trading vessels were ranged in a line attached to each other, and the first to the locomotive; they were, together, 317 tons register, 364 tons actual load, and the draught of water, severally, 8 ft. 8 in. 9 in., 8 ft. 6 in., 8 ft. 7 in., 8 ft. 10 in., 4 ft. 4 in., 4 ft. 6 in. For the haulage of this amount of tonnage, at the usual rate of 1½ mile per hour, about twenty horses are employed, under the most favourable circumstances. The Victoria towed it with about one-fourth only of her steam power, at a rate of 2½ miles per hour. The ease with which she did this justified the opinion of several spectators, qualified to judge, that double this amount of tonnage might have been mastered by her with very little or any diminution of her speed. The wave produced by the motion of the large vessels at the rate they were towed was of the ordinary size and character; that of the rapid boats, though large, was by no means so formidable as to create any fear that it would be any obstacle to the adoption of this mode of conveyance. In one of the latter experiments, four passenger-boats were towed in a line, and the volume of the waves was evidently broken up into numberless smaller waves, spreading over the whole surface of the canal, and resembling a great ripple. The reverse of this occurred when two passenger-boats were lashed together abreast, as a twin boat: the wave then extended in a fine regular glassy swell from the boats to the shores. These effects point out the fact, that the form, magnitude, position, &c., of the wave are all susceptible of modification, as little is to be apprehended from curves, of whatever character. In the railway upon which the engine travelled there was a curve of double flexure, the radius of part of which was less than a third of a mile. No sensible retardation in her speed was produced by it, nor was any disposition observed, even in the most rapid transits, to run off the rails. To prevent the latter effect occurring from the resistance of the vessels towed, the outer rail was laid a little lower in level than the inner one, so as to give the engine a slight

tendency to descend towards the outward rail. This also prevents, in a certain degree, the overturning of the engine by a strong pull. During the whole of the several series of experiments, not a single fact occurred to check the expectation that this union of the railway and the canal will, wherever practicable, take the precedence of every other in point of combined convenience, safety, rapidity, and economy. [Abridged from the *Glasgow Chronicle*.]

Encouragement of the Fine Arts.—We always rejoice to notice matters of this description, and are, therefore, glad to learn that the Duke of Wellington has given Mr. Haydon the needful sittings at Walmer Castle, to enable him to complete his great picture for Liverpool.

Lake of Haarlem.—The great lake of Haarlem is about to be drained.

Earthquakes.—The almost usual annual earthquakes in Perthshire recently visited the town of Crieff and Strathearn. Fortunately they were not so violent as to do mischief. On the 29th of August, Irkutsk, Siberia, suffered severely from a phenomenon of the same kind. Some houses were thrown down and several lives lost.

LITERARY NOVELTIES.

In the Press.

A Life of the Rev. H. Meewes, of Altenhausen, Prussia, Author of "Der Pfarrer von Andouse," the Pastor of Andouse, translated from the German by a Lady.—Euclid's Elements of Plane Geometry, with Supplementary Propositions for Exercise; by W. D. Cooley, A.B.; and also, The Figures of Euclid, with the Enunciations, printed separately, &c., for use in the Classroom.

Nov. 6, will be published, elegantly printed, in cr. 8vo. 4s. 6d. cl.

with 200 Diagrams, engraved specially for the Work.

EUCLID'S ELEMENTS OF PLANE

GEOMETRY: with EXPLANATORY APPENDIX,

and SUPPLEMENTARY PROPOSITIONS for Exercise.

Adapted for the Use of Schools, or for Self-Instruction.

By W. D. COOLEY, A.B.

In fcap 8vo. price 1s. 4d.

THE FIGURES of EUCLID: being the

Diagrams of the preceding Volume, with the Explanations,

printed separately for the Use of Scholars in the Class-

room.

GEOMETRICAL PROPOSITIONS, with

Diagrams: being a KEY to Cooley's Elements of

Euclid, for the use of Teachers: to be printed uniformly with

that work.

Whittaker and Co. Ave Maria Lane.

UNIVERSAL PENNY POSTAGE.

THE POLYTECHNIC JOURNAL of the

1st of November, price 1s. will contain an Examination

of the Article on Post-Office Reform in the October No. of the

"Quarterly Review," with the view of showing that Mr. Row-

land Hill's experiments cannot be successfully tried, unless by

preparation in Money when Letters are posted, instead of by

purchased Stamps; which latter will cause Extensive Forgery,

and great Public Inconvenience, and increased Expense in col-

lecting the Revenue.

London: 12 Wellington Street North, Strand. Sold by all

Booksellers, &c.

N.B. No. II. contains Colonel Jackson's Account of Wood

Paving.

On the 1st November, 1839, will be published, in Monthly Parts,

each containing Two Plates, with Letterpress Description, &c.

price 1s.

ILLUSTRATIONS OF USEFUL PLANTS

EMPLOYED IN THE ARTS AND MEDICINE, &c.

By Miss M. A. BURNETT,

Sister of the late G. T. Burnett, Professor of Botany

at King's College, London.

Among other Novelties, will be introduced Portions of the

Unpublished MSS. of the late O. T. Burnett, Esq.

No. 1. contains Nicotiana Tabacum—Tobacco; and Passiflora

Cerulea—Blue Passion Flower.

London: Whittaker and Co. Ave Maria Lane.

BOOKS PUBLISHED THIS DAY.

THE QUARTERLY REVIEW,

No. CCXVIII., is published this day.

Contents:—

REVIEW OF NEW BOOKS.

FRENCH CONSPIRACIES.

Cour des Pairs. Affaire des 12 et 13 Mai, 1839. Rapport fait à la Cour. Par M. Mérielhou. *Faits Généraux et Première Série des Faits Particuliers.* Paris, 1839. Imprimerie Royale.

WE are rather surprised that this extraordinary revelation should not have attracted the especial notice of some of our able contemporaries who daily enlighten the public, or of the larger reviewers, who, four or five times a year, illuminate the world with their *Bude Ares-ups*. It is the most complete and curious exposition of the revolutionary spirit in France; remarkable as a picture of manners and illustration of personal adventures and conspiracies; important in a national point of view, not only to France, but to Europe, and especially to England, where similar antagonist principles are widely and seriously at work; and extremely interesting, were we only to consider it as a Tale of the Times in which we live. We know no romance more exciting, no popular story better wrought up, and, as it were, demanding the graphic accompaniments of a Cruikshank, Brown, or Forrester; and whether we look at it as a true account of real persons and actual circumstances, involving matter of great consequence to mankind, or merely as the development of a strange tragic-comic combination, which might be read with wonder even were it only invention, we think we cannot perform a more welcome task than by making a copious *précis* of this singular piece of 153 quarto pages.

On the 14th of May a commission was appointed to inquire into the "*Affaires*" of the two preceding days, and Baron Pasquier the chancellor of France, the Duke Decazes, Count de Bastard, Barthe, Mérielhou, and the Baron de Daunant, were named for the discharge of this high function. The present report by M. Mérielhou is the result of their investigation; and it sets out with a general retrospect which we must lay before our readers:—

"When the Court of Peers (says the reporter) was occupied with the process of April 1834, it thought it right to examine into the organisation of the vast plot which had burst forth at once in various parts of the kingdom. The long and profound investigation into which you entered at that epoch, taught you that the influence of secret societies had been one of the grand means of destruction employed by the conspirators against the government of July. The report of your commission, which will remain a valuable historical monument of our times, shewed you the dynasty and the revolution of 1830 attacked by turns, and sometimes simultaneously, by the factions of all colours; by those who laboured for the restoration of the fallen dynasty, and by those who would impose republican forms upon our country. You saw in that period of four years, from 1830 to 1834, anarchical factions borrowing every shape, adopting every language, employing every method of seduction, to obtain partisans, and to prepare the means of attack, in the order which the public authorities had

so laboriously established. You saw them deliberating, at first almost publicly, under the title of *Amis du Peuple*; then establishing secret societies, varied by their names, their principles, their composition, often agitated by the ambition of those who pretended to direct them, leading the way to general anarchy by their intestine dissensions; but, finally, nearly united under one sole direction, absorbed by the grand society of *Droits de l'Homme*, and producing the two famous insurrections of April 1834, which at the same moment deluged with blood Paris, Lyons, Saint Etienne, and violently agitated several other considerable cities. That vast and impotent attempt proved at once the desperate audacity of its authors, and their isolation and weakness. Five years have passed, and the city of Paris has just again been the theatre of a new armed attack—an attack vigorously stifled almost as soon as known—an attack which exhibited as assailants only a small number of individuals, but which, by the violence and unity of its execution, by the nature of the means employed, by the principles in the name of which it was made, is of a character to excite the highest degree of solicitude and indignation in all good citizens. In fact, it is impossible to see in the revolt which we have just witnessed, and which has left so many victims, a fortuitous and momentary union of some hundreds of evil doers, devoting themselves to acts of murder and pillage, only to satisfy the demands of vengeance and cupidity. Every thing repels such an explanation. The accused themselves, according in that respect with the *instruction*, attach the days of the 12th and 13th of May, 1839, to the still more mournful days of April, 1834, of which they claim to be the continuers. All the documents of judicial history of the five years which separate April 1834 from May 1839, unite in establishing this afflicting truth, that the anarchical passions vanquished in 1834 have not, for a single moment since that epoch, ceased their criminal hostility to the constitution and the repose of the country. It is not that we wish to establish an unjust identity between acts of unequal criminality; but, when a party has declared itself the enemy of the established government, when men agree in their wishes for its destruction, it is allowable for the country which defends itself to attribute to the same objects all acts which are to lead to the same results; and to regard with the same distrust those who have advised crime, and those who have justified it. To explain the secret motives of every one of the individuals who compose a party, to determine with precision the degree of violence and obstinacy of the passions of each of them, is impossible; but when that party has devoted itself to the destruction of established order, all the means of destruction employed successively or simultaneously by the men of that party, if not the work of all, are at least the produce of the same passions. Thus, in the interval between the plots of April 1834 and the revolt of May 1839, we behold the infernal attempt of Fieschi, which terrified the people at the very moment when you were occupied with trying the accused persons of April;

Alibaud's attempt in the following year, 1836; that of Meunier, in 1837; and the events at Strasburg, in 1838. Amidst these principal facts, the almost annual renewal of which deserves serious attention, the grand act of amnesty took place; a glorious act, which may have made a few ungrateful persons, but for which the authorities should not entertain any regret, since it has proved that the government of July was able to unite to the strength which could conquer the magnanimity which could pardon. The anarchical party, which it might have been thought would be discouraged by its defeat in April 1834, has not ceased for a single instant since that epoch in labouring at its work of destruction. The new law respecting associations (10th of April, 1834) made the factions feel the necessity of diminishing the number of adepts composing each aggregation, but the number of aggregations themselves has been augmented; the hierarchal relations which unite them to one another have been complicated; the veil which hides from the inferior agents the names of the supreme directors has become more difficult to raise; the vigilant eye of the law has met with more obstacles; the doctrines professed in these dark unions have redoubled in perversity; and the passions by which they are agitated have acquired more violence, in consequence even of the mystery in which it was supposed they remained enveloped. The records of the tribunals offer but too many proofs of this sad truth. Without adverting to all the processes which, since 1834, attest the existence of secret societies, and to their influence on our interior tranquillity, we will confine ourselves to citing three judicial facts, the intimate connexion of which with the present process will appear to you to be the more striking, as two of those facts, the two processes respecting gunpowder, relate even to the creation of the means of execution of the revolt which was projected; and as the other, the publication of the '*Moniteur Républicain*,' and '*l'Homme Libre*,' had for its object to induce persons to take up the arms which were preparing. If you see the reappearance in the process of the revolt of May, of several of the persons who figured in the anterior cases, you will easily conclude that those who have directed and executed the insurrection had prepared beforehand the means of executing it."

M. Mérielhou proceeds to point out the characteristics in which the last insurrection differed from the preceding attempts; being, in fact, a Republican rising, though the parties were by no means agreed as to what sort of a republic they wished to establish. They only agreed in aiming at a revolution, not merely political, but social, and carrying out the senseless project of Babeuf (condemned 7 Prairial, an. v.) by the most sanguinary means.

The recent arrest of Blanqui, and the new inquiry into the intended movement connected with his apparition in Paris, shew that though the revolt of 1839 was less mobbishly supported than that of 1834, and 1834 less dangerous than 1832, still the same motives continue to operate, and that conspiracy has become almost a profession with that class of the community to which the Report refers.

Beginning so long ago as 1835, the Secret Societies have been busily employed in manufacturing gunpowder; and considerable light was thrown upon their other machinations, first, by a letter seized at Ste. Pelagie, and, next, by the confessions of Pepin, the accomplice of Fieschi, on the eve of his execution.

"He intimated the existence of a new secret society, formed from the associations since the law of the 10th of April, 1834; he indicated the name of the individual who had himself initiated it, and the object of the association, which was the overturning of the government. 'It has sworn hatred,' said he, 'to royalty. I judge of the danger which it threatens by the important men who belong to it. I mean important from their talents. I have been told that Blanqui, jun., and Laponneraye, were members of this society; but I have not seen them.' He added, 'that he had been received by only two members—he who presented him, he who received him; and that he knew that the formation of a society which should take the name of 'The Revolutionary Battalion' had been previously agitated.'"

Spies were set upon persons implicated, and, in March 1836, a considerable powder manufactory was detected in the Rue d'Oursine, and five persons taken in the act; two of them old St. Simonites, and the other three pupils of l'Ecole de Droit. Blanqui and Barbès were arrested as accomplices, and as leaders in the New Secret Societies. Papers were found upon both, containing lists of names, and other memoranda, which further opened the eyes of the government. Some of them are quoted:—

"Cassius, one musket.
Such an one, four muskets, four lances, four pistols.
Such an one, from the gaming-table, won at trictrac by Barbès.
Palanchon by Barbès.
Mousse received by Palanchon.
Priot and his gunpowder; Lalot's gunpowder.
A pupil of l'Ecole d'Etat-major, by Palanchon.
Lisbonne, Albouy Street, No. 14, 500 cartridges.
Pallier.
Paquerot.
Would you see a lion?—a soldier of the 20th will bring his officer to be received."

Blanqui would not answer one syllable to the interrogatories put to him; but the lists shewed that individuals acted under assumed names, and were known by different numbers; such as No. 133, No. 126, &c. &c. Other difficulties presented themselves; and afford remarkable glimpses into the organisation of these plots:—

"The first law of this association is not to allow any writing to exist. This explains the rarity of proofs. Besides, those obtained are due only to chance."

The Report continues to disclose other particulars:—

"During the investigation of the process respecting the gunpowder in the street of Oursine, the administrative authority transmitted to the judicial authority a document which is no other than the formulary, by question and answer, of the reception of adepts in a secret society, which was that of families. Some time afterwards in the same year, 1836, this same piece was seized, printed at Fayard's, on the occasion of the process respecting the gunpowder in the street of the Dauphin. The same formulary was seized in Carcassonne, in 1836, at Albernay's, written in Barbès's hand; and again seized in June 1839, printed at Nougues's. The identity of these four documents, with the exception of some slight differences, is manifest. Their agreement with Lamieusens's portfolio, and with the papers seized at Blanqui's and at Barbès's, is striking. The following are the most prominent passages:—'The person re-

ceived is introduced blindfolded. The following oath is administered to him:—'I swear to observe the most profound silence with respect to whatever may pass in this place.' The president afterwards addresses to him the following questions, to which he is to make the answers quoted:—

- "1. What dost thou think of the present government?—That it is a traitor to the people and to the country.
- "2. In what interest does it officiate?—In that of a small number of privileged persons.
- "3. Who are at present the aristocrats?—Moneyed men, bankers, contractors, monopolists, large proprietors, loan-mongers; in one word, adventurers who fatten at the expense of the people.
- "4. By virtue of what right do they govern?—Force.
- "5. What is the predominating vice in society?—Selfishness.
- "6. What usurps the place of honour, integrity, and virtue?—Money.
- "7. Who is the man esteemed in the world?—The rich and the powerful.
- "8. Who is despised, persecuted, placed out of the pale of the law?—The poor and the weak.
- "9. What dost thou think of the *droit d'auteur*, and the taxes upon salt and liquors?—They are odious imposts, intended to press upon the people, by sparing the rich.
- "10. Who are the people?—The people are all the citizens who labour.
- "11. How are they treated by the laws?—They are treated like slaves.
- "12. What is the condition of the working man under the government of the rich?—The condition of the working man is like that of the serf and the negro;—his life is only a long tissue of misery, toil, and suffering.
- "13. What is the principle which ought to form the basis of regular society?—Equality.
- "14. What ought to be the rights of the citizen in a well-regulated country?—The right of existence, the right of gratuitous instruction, the right of participating in the government. His duties are, devotion towards society, and fraternity towards his fellow-citizens.
- "15. Must there be a political or a social revolution?—There must be a social revolution.

"Did the citizens who made overtures to thee speak to thee of the object of our labours? That object thou must already perceive by our questions; and we will proceed in a few words to explain it to thee still more clearly. We are associated, in order to struggle with more success against the tyranny of the oppressors of our country, whose policy it is to keep the people in ignorance and isolation; ours, consequently, ought to be to diffuse knowledge, and to rally the strength of the people into one single body. Our tyrants have proscribed the press and association. It is, therefore, our duty to associate with more perseverance than ever, and to supply the place of the press by verbal communication: for thou art well aware that the arms interdicted us by our oppressors are those of which they are the most apprehensive, and which we ought above all to employ. Every member is required to spread, by all possible means, republican doctrines; to make, in a word, active indefatigable communications. Dost thou promise to join thy efforts to ours in that respect? At a future period, when the proper time has arrived, we will take arms to overthrow a government which betrays the country. Wilt thou be with us on that day? Reflect well; it is a perilous enterprise; our enemies are powerful; they have an army, treasure, the support of foreign kings;—they reign by terror. We, poor working men, have only our courage and our rights. Dost thou feel strong enough to brave the danger? When the signal for combat shall sound, art thou prepared to die, with arms in thy hands, in the cause of humanity? Citizen, arise! This is the oath which thou must take:—'I swear not to reveal to any body, not even to my nearest relations, that which may be said or done amongst us. I swear to obey the laws of the association; to pursue, with my hate and vengeance, the traitors who may slip into our ranks; to love and succour

my brethren; and to sacrifice my liberty and my life for the triumph of our holy cause.'—Citizen, we proclaim thee a member of the association. Seat thyself. Hast thou arms? ammunition? Every member, on entering into the association, furnishes a quantity of gunpowder proportioned to his means;—a quarter of a pound at least. It is also necessary that thou shouldst provide two pounds for thyself. Nothing is written in the association. Thou wilt be known only by the *nom-de-guerre* which thou mayest choose. In case of arrest, no answer must ever be made to the judge. The committee are unknown; but at the moment of the combat they are pledged to make themselves known. It is expressly prohibited to invade the public streets, if the committee do not place themselves at the head of the association. During the combat the members are to obey their chiefs, with all the exactness of military discipline. If thou knowest any citizens prudent enough to be admitted among us, thou wilt present them to us. Every citizen, who unites prudence and goodwill, merits admission into our ranks, whatever may in other respects be the amount of his information. The society will finish his political education.' If any thing could increase the importance of such a document, it would be the seizure made of the papers of Barbès; not in the house where he was arrested with Blanqui, but in a secret residence which he occupied on the 28th of July, 1835, and in which he passed that same day of July. We must not fail at the same time to state that it was by no means political motives which made him, at that period, hide his place of abode. There, in the domicile in which he was on the 28th of July, 1835, was found the following document, proved to be entirely in his hand-writing. 'Citizens! The tyrant is no more. The popular thunder has struck him. Let us now exterminate tyranny. Citizens! the great day has arrived—the day of the vengeance—the day of the emancipation of the people. To realise this, we have only to will it. Shall we want courage? To arms! to arms! Let every child of the country feel that he must this day pay his debt to his country.' Is this, as Barbès has said, a dream thrown upon paper? Is it not rather a proof that Fieschi's accomplices were not all brought before the Court of Peers; and that the clues of that terrible event were not all detected by justice? Another document by the same person, written under the same inspiration, was found in the same place. It ends with the following sentence, which, it might be believed, was written during the most atrocious epochs of 1793:—'People! no pity! Bare thy arms, that thou mayest plunge them into the entrails of these butchers!!!' Finally, two other documents were found in Barbès's hands. The one is an order of the day, made in May 1835, in the secret societies, at the time when, after that year, they were dissolved by the law, and had for its object to restrain the ardour of the sectaries, at the epoch of the process of April, of which the Court of Peers was about to take cognisance: the other was the plan of the organisation of the Society of Families. In truth, at the head of the last article is the cipher of 1833, which would appear to give that date to the writing; but it will be seen, on reading it, if the rules which it establishes for such societies are not much more applicable to the actual societies than to the societies which existed in 1833, which were not prohibited by special legislation, appeared in broad day, and marched openly towards their

object. The following is the document:—
 'Every fraction of the society is called a family. The family is composed of five initiated persons, meeting twice a month, under the presidency of a chief appointed by the centre. To be admitted, it is necessary to be of age, to enjoy a good character, to lead a regular life, to have justifiable means of existence, to be gifted with the greatest prudence. Proposals are made at the meetings of the family, who discuss the merits of the candidate, and may refuse or accept him. The name, condition, and residence of the candidate, are immediately sent to the centre, in order that the most scrupulous inquiries may be made into the morality, sobriety, prudence, and energy of the proposed person. Before the result of these inquiries are communicated to the chief of the family, no overture is to be accepted. If the overtures are accepted, the presenter transmits to the candidate a series of questions, to which he is to reply before his reception. The receptions are, to be blindfolded, by the chief of the family, in the presence of the proposer only. They are to take place as frequently as possible, in the day-time, and always in light. The chief of the family must never forget to tell the person admitted that no trace of what he has done subsists; that it is impossible for the police to discover any thing; and, consequently, that no confession must be made to the magistrate, under the penalty of passing for a traitor, and of being punished as such. The person admitted ought to be rendered sensible of the importance of entering into the National Guard. Questions ought to be put respecting arms and ammunition. The proceedings are directed by the chief of the family, who, at the opening of the sittings, makes a report of that which took place at the preceding sitting. The proceedings are terminated by propositions, presentations, and the examination of accounts. On casting a glance over what has been hitherto reported, it cannot fail to be remarked how the conduct of the persons inculcated faithfully tallies with the system of organisation just cited, and with the rules described to the initiated on their admission. Thus, it is recommended to the associates to take false names; and at Lamieusens' all the surnames of the members were found, with their separations into sections, or families, of five or six members each; and at Blanqui's a great number of lists, of five or six names, were seized. Thus, the statutes require that members should furnish themselves with gunpowder and arms; and, at the houses of a great number, gunpowder and arms were seized. A quarter of a pound of powder was found at Barbès's, according to the statutes; and members of the society, who were preparing gunpowder, were arrested *in flagranti delicto*. Besides, the members are forbidden to answer the investigating magistrates; and the chiefs of the society, when they have been arrested, have cautiously conformed to that order."

Without writings, and an obstinate silence when apprehended, if the conspirators stuck fast by these rules, it would seem almost impossible to trace or detect them. But, fortunately for society, writings were retained; and some of the minor plotters could not hold their tongues. Bit by bit information was obtained; and the whole pieced together with admirable ingenuity. One fellow insisted on the destruction of Louis Philippe and the asses of his race, as the first duty of man. In one letter Fieschi is painted as a sordid coxcomb, Pepin as pusillanimous but dying game, Boireau as a poor

creature of passion, but old Morey as a hero every inch of him. The issue of the powder plot of the Rue de l'Oursine was the condemnation of twenty-four individuals to various sentences of fine and imprisonment, from 300 to 3000 francs, and from four months to two years. Among the rest, Blanqui, Beaufour, and Robier, figured as the highest mulcts, the longest terms, and each two years of surveillance at the expiration of their punishment.

In November 1838, another manufactory of cartridges was discovered, and Raban, an engraver in the Palais Royal, the principal, condemned to two years in prison, two of his associates to eighteen and three months. A very large quantity of ammunition was also seized; and every thing went to prove that the formation of secret societies to overturn the government had not ceased for an instant. The journals, "Moniteur Républicain" and "l'Homme Libre," laboured zealously in the same cause, till they were denounced, and the writers in them, with the exception of Corbière and Aubertin, tried and condemned to five years' imprisonment. The close resemblance of their articles to those in some of our English papers, only that they are much bolder, of the same kind, is very striking. Inflammatory placards were also largely posted upon the walls of Paris, and among other things we are informed, "in the course of the year a composition in verse was circulated, entitled 'Au Roi,' which had already appeared in Paris in the preceding months. It was addressed to M. le Procureur du Roi, thrown into the letter-box of 'La Presse' journal, and sent to an honourable citizen, who transmitted it M. le Préfet de Police. In atrocity and offence against the king, this ode surpasses every thing that the most delirious imagination could conceive. It has three epigraphs, one of which is,

"Recte occultus est. (Tacitus.)
 O Vertu, le poignard seul espoir de la terre,
 Est ton arme sacrée, alors que le tonnerre,
 Laisse régner le crime."

"It would be necessary to copy the whole of this impious production, if we wished to enumerate all the qualifications of which it is susceptible. We will limit ourselves to calling attention to the fourth strophe. In this strophe the author celebrates the grandeur of the people:—

"Quand, brisant sa chaîne,
 Au repaire des rois il court donner l'assaut,
 Qu'il aigle à leurs yeux la hache vengeresse;
 Que des débris du trône, on gronde, et l'on dresse
 Un marchepied à l'échafaud."

"The third, in which it is said that if the king did not fall under Fieschi's bullets, it was that he might become an example to the tyrants on the earth. . . . The fifth, sixth, seventh, and eighth, deplore the effeminacy of the people, glorify Alibaud, boast his courage, and the holiness of his mission, and point out to the regicide the Pantheon in perspective:—

"Demain le régicide ira prendre sa place
 Au Panthéon avec les Dieux" (Ninth strophe.)
 "In the tenth, we read,—

"Où, quelque soit l'élu pour le saint homicide,
 De vols, d'assassinats eût-il sétri sa vie,
 Il redevient sans tache et vierge d'infamie
 Dès qu'il se lave au sang des rois."

"The eleventh returns to Alibaud:—

"D'énergiques adieux, saluant la guillotine
 Malgré l'arrêt de mort de juges fanatiques,
 Mêlé aux plus beaux rayons des âges héroïques
 Son rayon d'immortalité."

"The twelfth salutes the regicides Pepin, and Morey, 'sublime cul-de-jatte':—

"Champion qu'affranchit le nom de sa cravate,
 Pétiade d'assassin, fils de la liberté."

Finally, the last contains this horrible oath:—

"Et nous le jurons, en face de la France,
 Nous républicains purs, si malgré sa souffrance
 Le peuple trop longtemps marchanda ses trépas,
 Nous serons les bourreaux! nous avons de la poudre
 Et du plomb de Juillet assez pour nous aboudre;
 Louis-Philippe, tu mourras!"

After demonstrating the connexion between the journalists, pamphleteers, placardists, &c., and the persons who had figured in so many conspiracies, M. Mérihous observes:—

"If the periodical reappearance of so many individuals in plots whose object is the same, can leave any doubt of the systematic combination of all the means of destruction, the expectation of finding any thing certain in the motives of human actions must henceforth be renounced. It is but too evident, that all these paths, all these attacks, lead to a common centre, the form of which may vary, but the tendency of which is inflexible, and the modes of action of which remain the same. The association, at first, existed almost publicly, under the name of Société des Droits l'Homme, dissolved in 1834; it revived from its ashes under the new name of Société des Familles, which, in its turn, was put down by the law in 1837. At the moment of the insurrection of the 12th of May, it was the Société du Printemps, or des Saisons, which appeared to comprehend the greatest number of rebels."

The Society of the Seasons endeavoured to establish itself throughout the country, and here is a part of its oath at Carcassonne, one of its head-quarters:—

"In the name of the Republic, I swear eternal hatred to all kings, to all aristocrats, to all oppressors of humanity. I swear absolute devotion to the people; fraternity to all men but aristocrats. I swear to punish traitors. I promise to give my life, even to mount the scaffold, if that sacrifice be necessary to lead to the reign of the sovereignty of the people, and equality."

And the initiated is told:—

"Citizen, thy name will never be pronounced among us. Here is the number of thy inscription. Thou shouldst provide thyself with arms and ammunition. The committee which directs the society will remain unknown until the moment at which we take up arms."

All these doings paved the way for the insurrection of the 12th of May; previous to which, Barbès returns suddenly to Paris, from his provincial proselytizing, and other conspirators from various places. Letters were intercepted, and one traced to Auguste Blanqui, who fled. These gave clues to further discoveries:—

"Every thing was organised for the struggle. The executive committee frequently assembled, and always in different places, seeking thereby to conceal itself from the authority which watched its criminal proceedings. The first care was to draw up its plans of attack, to distribute the commissions, to institute a provisional government, to prepare for the combat an order of the day. By that order of the day, Auguste Blanqui was invested with the chief command; Barbès, Martin-Bernard, Meillard, Nêtré, were appointed commandants of the divisions of the republican army. As in the case of the 'Moniteur Républicain,' and 'l'Homme Libre,' a clandestine press served to print this proclamation, intended to double the energy of the strong, to put an end to the irresolution of the weak, to seduce the masses, by promising them success after the revolt. But the pro-

mixed success did not await such an enterprise. The proclamation was read to the band of insurgents on the steps of the Hôtel-de-Ville; but the country would have remained ignorant of it, had it not been for the chance which allowed justice to seize a copy, and to submit it to your attention. At the time of the pillage at the brothers Lepage, a copy was left in their warehouse. It was afterwards sent by them in support of their declaration. The perusal of it will enable you to judge how much perseverance and intensity there is in the incendiary ravings of these guilty persons: "To arms, citizens! The fatal hour for the oppressors has struck. The base tyrant of the Tuileries laughs at the hunger which tears the entrails of the people; but the measure of his crimes is full. They are about, at last, to receive their punishment. France betrayed, the blood of our murdered brethren, cry to you and demand vengeance; which should be terrible, for it has been too long delayed. Perish finally the *exploitation*, and may equality sit in triumph on the mingled ruins of royalty and aristocracy. The provisional government has chosen military chiefs to direct the combat. These chiefs are taken from your ranks; they will lead you to victory. Their names are,—Auguste Blanqui, commandant-in-chief; Barbès, Martin-Bernard, Quignot, Meillard, Nètré, commandants of the divisions of the republican army. People, arise! and thy enemies will disappear like dust before the hurricane. Strike! exterminate without pity the vile satellites,—voluntary accomplices of tyranny; but hold out thy hand to those soldiers—thy offspring, who will never turn against these parricidal arms. Forward! Long live the republic! The members of the provisional government:—Barbès, Voyer-d'Argenson, Aug. Blanqui, Lamennais, Martin-Bernard, Dubois, Laponneraye.

"Paris, May 12th, 1839.
"Proclamations to the people and to the army, and a decree by the provisional government, are in the press."

The day for the rising, Sunday, 12th May, is stated to have been most judiciously chosen; and the outbreak to have demonstrated the mysterious bonds of these associations:—

"About two o'clock, an unusual agitation was remarked in the streets of St. Martin, St. Denis, and the adjacent streets. A considerable number of young men, of different dress, manners, and conditions, met, talked to one another, and appeared to be connected by the bond of a secret communication."

The halls of the insurgents were of a particular form, proving a same origin; and of a size to go into any sort of gun or pistol. Their plan to seize on all the armories, gunsmiths' shops, plumbers' lead, &c., was laid down in detail in Blanqui's handwriting, and the plunder of some of them identified the document with the acts of the insurgents. The particulars of the struggle are too well known to detain us with its momentary success and speedy overthrow. One part of the plan was to seize the Palais Royal, and probably fortify it. Thirty soldiers and defenders of the laws were slain.

The Report concludes with notices of the insurgent prisoners, of whom Barbès figures in the front rank, a man of property, born at Guadaloupe, and twenty-nine years of age. Then follow Nougues, a printer in the "Moniteur," twenty-three years old; Bonnet, a Genevese engraver; Roudil, an umbrella-maker, &c. &c., in all twenty-one. To these are added four *contumaces*, Blanqui, Bernard, Meillard,

and Doy. Blanqui, Bernard, and Barbès, are marked as the three B.'s who planned and were the chiefs of the insurrection. It was Blanqui who called Barbès to Paris from Carcassonne, and the three were at the head of the armed bands. He was at the head of the Société des Familles, and, from the year 1830, had never stopped in his career of agitation. M. Mérlhou says of him—

"You also know that the proclamation of the insurgents designates Blanqui as commandant-in-chief, and as being a part of the provisional government."

Martin Bernard is a printer, and was one of the principals in the Société des Saisons. Nougues's confessions let out the secret of his activity and authority. Meillard and Doy are Genevese engravers, and companions of Bonnet, their countryman and fellow-workman.

We have now finished what we proposed to do in the way of exposition of this trade of treason, and strange condition of national society. Though much of it belongs to politics, yet it comes so fairly under the domain of history, that we cannot think it out of place in our columns; and, after the Thug combinations of India, there can be few more remarkable or useful objects of study than the long-continued proceedings of such associations, be they Secret Tribunaux, Carbonari, Phalanges, Republicans, Chartists, or any other name and description of revolutionists.

Memoirs of Harriot, Duchess of St. Albans.

By Mrs. Cornwell Baron Wilson, author of the "Life and Correspondence of M. G. Lewis." 2 vols. 12mo. London, 1839. Colburn.

If the true and genuine life, *all* the life, of the late Duchess of St. Albans could have been written, what a biography it would have been! But that which was never possible of any individual was still more impossible of a person who went through a course like hers; and rose from poverty, through a hard-beset female profession, and by strange circumstances, to a height of rank and prosperity, unequalled in the history of the stage. The outward and visible signs were all that industry could collect; the apparent all that the world could expect in the Memoirs of Harriot Mellon.

Yet there is sufficient interest left for the labours of the biographer; and it is but justice to Mrs. Baron Wilson to state that she has set herself to her task with an impartial spirit, and executed its literary portion in a manner that does honour to her talents. Neither she nor those she consulted could know the secrets which led to the advancement of Mrs. Coutts; they could only tell the movement what o'clock it was, but the springs and wheels were all hidden from the sight. Nor, indeed, supposing that there were, as there must have been in this instance, as in almost every other case of singular fortune, the most striking and important particulars known only to a very few; they were of a nature which none of the later living would communicate, and the grave had closed over their earliest depositories.

We must, therefore, take the work as the revelation of all that could be gathered by diligent research, and all that could be told; for we find, as at page 55, vol. ii., very notorious matters slurred over; and, in many other places, names concealed and affairs gently used, out of a delicacy which, though approvable, does not contribute to the effect of the history.

A preliminary sketch, on various grounds,

concludes that Miss Mellon's intercourse with Mr. Coutts was perfectly pure; and that before, as well as after marriage, she was the eccentric banker's "blessed Harriot." It represents her as being always of a religious turn (ever carrying Queen Catherine Parr's book of prayers in her pocket), and given to superstition. Her temper was hasty and uncontrollably violent, which she seems to have inherited from her mother; but she was joyous, munificent, just, and charitable.

Who her father was is not very clear: he passed at Cork for an officer of the name of Mellon from India, on a sick furlough, and either married or carried off her mother, the pretty assistant to a milliner there. Returning to India, he left his lady in the way to have a daughter; and was never satisfactorily heard of more. The widow, who had previously been stage-struck and accompanied an itinerant company on a Welsh circuit, rejoined them as dresser, and soon after married a young fiddler in Lancashire of the name of Entwisle. Between the orchestra and the dressing-room they picked up a scanty subsistence, but paid all the attention they could to little Harriot's upbringing and education; who, in good time, rewarded them by appearing successfully in small characters till she reached Little Pickle at Ulverstone, in 1787, when about ten years old. Before this we are told,—

"One great source of Harriot Mellon's influence over her fellow-pupils was, the wonderful fact that she had actually been a performer in a play with Manager Bibby's actors. The character, to be sure, was not a very arduous one, being that of one of four little mourners ranged round Juliet's bier. 'But then, as the smallest and prettiest of the little girls, she was placed in front nearest to the lamps, and was consequently the prima donna of the juvenile mutes; and she used to look forward to the giving out of that particular play (and the consequent white frock with its broad, black sash) as an event exceeding all others in importance. The future comic actress, therefore, decidedly came out first in tragedy. Although too young to appear in any character, except such as one of the little Princess in the Tower, she already could recite with considerable fluency, and she likewise could sing very prettily to the accompaniment of the violin. Those who remember her singing thus, state that she was always placed standing on a table, so that her sweet little silvery voice might be on a level with her audience.' Mr. Entwisle used to carry her to different houses, to dance hampipes to his playing; and after executing the dance on the same elevated stage, she used to run round its edge to levy contributions for her avaricious relatives."

A provincial career of eight years offers nothing for remark, except that she won very favourable opinions; and, in 1795, she came to London, to the management of Sheridan, who is reviled for his conduct in the most unmeasured terms. Only hear:—

"Convivial wit, however, genuine or borrowed, often dazzles the world into blindness towards defects; yet, when we consider that his character displayed, glaringly on its surface, a frequent habit of inebriety—a want of strict

"It is said that the sweetness of her voice remained unaltered to the close of her days. A few months before her decease she found, at Holly Lodge, an old collection of Scotch melodies, in which her benefactor formerly took great delight, and she sang a volume of all the collection, with considerable taste and animation. She was a great patroness of music in all degrees, from her own unvarnished concerts of opera singers, down to the provincial bands of the towns and villages she visited."

principle to defray just debts (and to escape which he would condescend to any paltry trick or subterfuge); a carelessness as to falsely making use of, or betraying, his best friends to serve the purpose of a moment—a continual habit of raising the hopes of others by hollow promises, without a power of fulfilling them—and an indifference for truth, which made him the selected secondary aid in an act which will go down a sad history to posterity; when we recollect these points in his character, our moral judgment must diminish the enthusiastic admiration our literary taste would entertain for the author of the 'School for Scandal'—the finest comedy in our language. Mr. Sheridan had not only forgotten his promise to Mr. Wright, but even Miss Mellon's name and appearance; nor was it until the production of his own letter to Mr. Wright (in which he had desired Miss Mellon to come to London), that he could recall any recollection of the circumstance. He then became prodigal of fine speeches to the mortified young creature, who was nearly fainting from this her first experience of worldly sincerity."

A rather silly coach story occurs at pages 154-5, and a single lover, a Mr. Barry, is assigned as the only one for whom Miss Mellon ever felt an attachment. Discovering that he had falsely represented himself, the offended heroine discarded him for ever, and never afterwards, we are told, shewed a preference for any of her admirers. But come we to the grand event of her life.

The Entwises were settled at Cheltenham, and Miss Mellon had a benefit there:—

"At that time there was, among the visitors at Cheltenham, an elderly invalid gentleman, who did not join in society, but passed many hours daily taking exercise in the Long Walk. Mrs. Entwisle soon discovered, from hints dropped by his servant to the lodging-people, who, however, did not know his name, that 'his master, notwithstanding his penurious appearance, was considered one of the richest people in London; but that he was very unhappy in consequence of thinking that his wife, also advanced in years, was going out of her mind, which preyed on his spirits so much, that he had been ill, and was now trying Cheltenham for a change.' Her immediate reflection was, that the richest gentleman in London might take a box at the theatre for the benefit night, though he were ever so sad; and this idea was communicated to her daughter. A respectful note of solicitation to that effect was given to the attendant at the pump-room a few days before the performance, to present to 'the remarkable-looking old gentleman;' but, as no answer was returned, the three females decided that 'the moping, thin, old creature was too full of his own troubles to care about those of other people.' On the day but one after sending their note, Miss Mellon and her friend were sauntering very early in the Long Walk, when they were overtaken by the old gentleman. He introduced himself to Miss Mellon, whom he said he knew by sight in Drury Lane green-room, to apologise for not having sooner answered the application, for which he accounted by a great pressure of London correspondence; but he trusted his silence had been considered an assent to patronising her laudable, filial efforts, of which he had heard admirable accounts at every turn in Cheltenham. The young ladies tendered their best thanks and brightest smiles; their new friend mentioned that he had had the pleasure that morning of sending to the post-office his answer respecting the box; and after a conversation of some

length they separated, mutually pleased. On hastening home, they found Mrs. Entwisle in ecstasies. There is no knowing what grand visions had been conjured up in her wild brain; but the tangible circumstance was, that she held in her hand an open letter from the old gentleman, 'the richest person in London,' who had enclosed five guineas for a box, which he desired should be kept for Mr. Coutts! Mr. Coutts!—the Mr. Coutts!—well might the servant hint that his master was 'the richest person in London;' a man whose name was a proverb of wealth even in country towns. Thus Mrs. Entwisle raved, wondering at her husband's stupidity, that when any one had called for letters for Mr. Coutts, he had not directly guessed he was the thin old gentleman, and told her so! But the young friends defended Mr. Entwisle, by exclaiming against the idea of any one supposing that the great Mr. Coutts, who managed the royal family, and commanded every thing he liked, could be an old, pallid, sickly, thin gentleman, in a shabby coat and brown scratch-wig. Peace was soon restored, as Mrs. Entwisle was in a sunny humour after the day's adventure. The new acquaintance met generally in their early promenade in the Long Walk; and when the day of the benefit performance arrived, Mr. Coutts paid Miss Mellon the compliment of promising to occupy the box, although he had only taken it to patronise her, without intending to go. As a mark of Miss Mellon's strong superstition regarding good luck, may be given the following pendant to the foregoing facts:—The money sent by Mr. Coutts for the box chanced to be the largest sum in gold she had ever yet received from any one individual. In the envelope which enclosed it he had commended her industry, good reputation, and perseverance, and concluded by saying, he trusted she would find that his trifling present would prove to be 'luck-money.' In her enthusiastic manner she instantly declared that nothing should ever tempt her to part with these her 'first five golden guineas,' which, sent with such kind wishes, were sure to bring her good fortune. They happened to be guineas just fresh from the mint; and she put the bright coins apart in a separate purse, often shewing them to those who knew the circumstances; and she frequently endured temporary privations rather than change any portion of her 'lucky money,' the only thing she was ever known to refuse to her mother's rapacity. On the day of her marriage with Mr. Coutts she produced the well-worn purse, with its glittering contents; and twelve years afterwards its faded glories were again shewn to a bridal party when she became a duchess."

All Mr. Coutts's family appear to have been somewhat crazily inclined; and Mrs. Entwisle and her daughter played their cards so well, that after their return to London the old banker became a daily visitor and luncheon at two o'clock. His daughter also used to visit his protégée, who was by many thought to be an illegitimate daughter; soon after this she drew a 5000*l.* in the lottery; and the world witnessed her great and rapid prosperity.

Having played twenty years in London, Mrs. Coutts died, and she married her friend and benefactor. Of this event the account is rather romantic. Mr. Coutts was so ill that his life was endangered, and he despatched Mr. Raymond to Holly Lodge, to entreat Miss Mellon to marry him.

"They were several hours together; and, from the angry bursts of voice, a friend who waited for Mr. Raymond thought some un-

pleasant dispute had arisen which his interference might quell; but on entering the room, he saw poor old Mr. Raymond, actually kneeling in entreaty before Miss Mellon, and the latter standing in such a state of excitement, that the unnoticed witness was glad to retire hastily from a scene which seemed past his influence. Mr. Raymond, skilled in human nature, allowed this violence to exhaust itself; and, when it changed to hysterical weeping, he taxed her with ingratitude to the only friend she ever possessed, in caring for the world's opinion of a delay more than for the chance of saving her benefactor's life; and he worked on her sympathies by every plea in the power of his eloquence to urge. He quoted the example of Miss Farren, whom she had admired so much; who, for a length of time, was publicly known to have been engaged to the Earl of Derby during even the lifetime of his first countess; after whose decease, Miss Farren was married to the widower within six weeks, without having a plea of his dangerous illness urged as the cause of such promptitude; and yet no one had been more respected or better received in society than the second Lady Derby. Why not the second Mrs. Coutts likewise? as the first Mrs. Coutts had been morally 'dead' to the world for years! At last, worn out, if not convinced, Miss Mellon agreed that, if her benefactor still continued dangerously ill, by a given time she would obtain, by a private marriage, the privilege of going to his house to nurse him, should an increase of danger require it.* While coolly recording this fact, without the excitement of the circumstances, it seems as if no human persuasion ought to have extorted a consent which her better judgment made her so decidedly and vehemently refuse. The dispassionate impulse of every mind will accord with her first resolute refusal; yet (while no palliation is here offered for her compliance) it would be arrogant in any to affirm they could not have been so persuaded, until after they had actually passed through a similar ordeal. Mr. Raymond having secured her reluctant promise through his powers of persuasion, did not wait for his influence to cool, but produced a written consent to their marriage (previously drawn up and signed by Mr. Coutts), which she signed, and he hastened to the good old gentleman in Stratton Street. Mr. Coutts was too seriously ill to be expected to recover permanently; but, his mind being easier at the thought of his ability to do Miss Mellon a pecuniary kindness without slander, he became rather better. At the expiration of a fortnight, Mr. Raymond summoned Miss Mellon to fulfil her promise. She insisted on the ceremony being kept perfectly secret, as, in the event of Mr. Coutts recovering, she would hereafter have a public and more joyful solemnisation than the present; therefore she went to St. Pancras church with Mr. Raymond and another person. Mr. Coutts arrived in an equally unostentatious manner, and they were married by the curate, the Rev. Mr. Champeneys. When the names were signed, they departed in the same way they came, Mr. Coutts having in the vestry-room presented Mr. Raymond with a snuff-box containing the promised thousand pounds; and

* "She had always the pardonable whim of a much flattered person; viz. that whatever came from her hand must be most acceptable to the invalid, and that her presence would bring comparative ease to those she loved. Thus, it is said, when the Duke of St. Albans took the small-pox, during its preliminary shiverings, the Duchess thought nothing could be so efficacious as a cashmere shawl from her neck; and one after another of those hundred-guinea articles was just worn by her for a few minutes and transferred to the chilled sufferer, although she knew her own dread of infection would never allow her to resume their use."

Miss Mellon returned alone to her own house, without mentioning the change in her name to the nearest friends in her confidence. Every day she drove as usual to his door, and sent up to know how he was; the physicians sometimes coming down with their verbal bulletin. Nothing indicated the marriage, unless, indeed, that Mr. Raymond called her the 'Lady of Woodham Walters,'* avoiding to say Miss Mellon. In about a month from the time of the marriage, she drove one morning to the door in Stratton Street, and one of the physicians came down with great concern, to tell her Mr. Coutts was considerably worse. Alarmed out of all her caution, she clasped her hands and cried, 'Good heavens, tell me all! I am his wife!' The astonished physician then very forcibly described the danger of Mr. Coutts; and it was resolved that she must at once assume her place in the house of her husband, the crisis of his illness requiring unremitting care. Such was, in reality, the 'gay honeymoon' of the poor dying old man of eighty-six, and the greatly afflicted object of his regard!

They lived luxuriously and affectionately together till Mr. Coutts's death; and the next marriage to the Duke of St. Albans is sufficiently familiar to absolve us from further notice. We will, therefore, conclude with three miscellaneous extracts:—

"Lord Erskine soon afterwards came to Brighton, and told Mrs. Coutts, if she would give him a dinner he would provide the fish from his own pond. She agreed; and his present proved to be an overgrown pike, weighing between thirty and forty pounds, and so hideous in its appearance that no guest touched it, the mere sight of it being perfectly disagreeable to many. It had been dressed with unusual care, and Mrs. Coutts, not wishing to pay Lord Erskine the bad compliment of sending away his fish as uneatable, said, 'I let you all look at it, but I intend it as a feast for the poor bathing women and their husbands, who are to dine below stairs, and then I shall send them to the play.' Twenty or thirty of the poor people, in their ordinary dress, were hastily summoned, and a repeat made for them graced by the gigantic pike, which they actually devoured. It being a benefit night, Mr. and Mrs. Coutts and their party went to the theatre, and, in a short time, they observed the entrance of a very merry party into the pit, who kept bowing and courtesying respectfully towards their box. 'Oh, I see who they are, Mrs. Coutts,' said Lord Erskine; 'they are our ragged staff.' 'Indeed they are not,' she answered; 'they are my pike-staff.'"

The duchess's opinions of society, of a portion of which (the superior) she had little opportunity to become a good judge:—

"From the crowd and heat of these festivities, both of which were very apt to be oppressive, her grace would sometimes seek a short respite, by taking me aside, and chatting about olden times, green-room jokes, popular actors, plays, and play-writers, her beaming features and melodious laugh attesting the delight she took in these reminiscences. Twice, in instances of this nature, and nearly in the same words, has her grace exclaimed: 'Ah,

those were pleasant days! those were pleasant days! Few persons have seen so much of the various aspects—I may say, of the two extremes of life—as myself; and few persons, therefore, can be better judges of the difference between great poverty and great wealth; but, after all, this does not, by any means, constitute the chief and most important distinction between the high and the low states. No, the signal—the striking contrast is not in the external circumstances, but in the totally opposite minds of the two classes as to their respective enjoyment of existence. The society in which I formerly moved was all cheerfulness—all high spirits—all fun, frolic, and vivacity; they cared for nothing, thought of nothing, beyond the pleasures of the present hour, and to those they gave themselves up with the keenest relish. Look at the circles in which I now move; can anything be more 'weary, stale, flat, and unprofitable,' than their whole course of life? Why, one might as well be in the treadmill, as toiling in the stupid, monotonous round of what they call pleasure, but which is, in fact, very cheerless and heavy work. Pleasure, indeed! when all merriment, all hilarity, all indulgence of our natural emotions, if they be of a joyous nature, is declared to be vulgar. I hate that horrid word—it is a perfect scarecrow to the fashionable world; but it never frightens me, for I had rather be deemed 'unfashionable' occasionally, than moping and melancholy at all times. There can be no cordiality where there is so much exclusiveness and primness,—no, all is coldness, reserve, and universal *ennui*, even where this starchiness of manner is unaccompanied by any very strict rigour in matters of conduct. I look out for cheerful people when I can find them—I do every thing in my power to make them happy—and yet, were it not for the merry and frequent laugh of dear old General Phipps, could you not swear that my dinner-parties were funeral feasts? Look, now, at those quadrille-dancers in the other room; they have been supping—they have been drinking as much champagne as they liked—the band is capital—the men are young, and the girls are pretty;—and yet did you ever see such crawling movements—such solemn looks—as if they were all dragging themselves through the most irksome task in the world! Oh, what a different thing was a country dance in my younger days! I suggested that this feeling was neither confined to herself, nor by any means consequent upon position in society, but rather a general law of nature, rendering us all less susceptible of pleasurable impressions as we advanced in life, so that the change was rather in ourselves than in our associates, or in our outward circumstance;—an opinion which I ventured to illustrate by the well-known anecdote of the old lady who complained that they did not make the looking-glasses half so well as when she was young. 'But, at all events,' said the duchess, 'the old lady had once been young; so have I, and I have enjoyed the light-heartedness and the gaiety of youth. But in high life there is no such thing as youth; people are old when they first come out; the men are all grave and reverend signors, and the girls are all prim duennas, even in their teens. They are too fine and too fastidious to enjoy anything. This world, it would appear, is not good enough for them, though I quite agree with the methodist parson, that 'they may go further and fare worse.'"

This is from one of two pleasant chapters on Brighton, evidently written by Mr. Horace

Smith: but we must end, and with the end of all:—

"She was removed again to London, there being still no visible change for the worse in her health, beyond the increasing weakness, and the continual pain of the right side. Up to this time (about a fortnight before her demise) she had retained a clear recollection of every one, and the perfect use of her faculties; but having been now upwards of two months without any sustenance, beyond a wine-glass full of ale twice in the twenty-four hours, the consequent exhaustion made her memory fail occasionally. Strange to say, this only regarded the place where she was staying; for she knew all the individuals around her; so that if she momentarily forgot exactly where she was residing, she would address the attendants by name accurately, and request them to 'take her to Stratton Street, to die on the bed where Tom Coutts had expired.' She conversed placidly with the duke and others around her; and instead of her usual impatience of contradiction, she would extend her hand and thank them for their kindness. One morning, in the last week of July, she perfectly recovered from the temporary forgetfulness of where she was living, and finding that her bed had been placed in the large drawing-room below stairs, for the advantage of the air, she gave orders to be removed instantly to Mr. Coutts's room. It was then mentioned that Lady Guilford was in town, and anxious to see her: the duchess replied, 'I will see her to-morrow, when they have laid me on her father's last bed.' That evening she was carried to the room on which her imagination had so long dwelt; and, whether from the motion of being removed, or from some internal change preparatory to her decease, all pain left her afflicted side—a relief which her superstitious fancy instantly ascribed to the influence of the room and its furniture. In the early part of the following day, Lady Guilford went through this trying scene, which no doubt tended to break up the remains of her own declining health; for her decease followed within six weeks of the demise of the duchess. She received Lady Guilford placidly, saying, 'I am so happy to-day, because your father's spirit is breathing upon me, as he promised; and also he has taken the shape of a little bird, singing at my window; just as he said he would come back if he could.' This singular belief in the realisation of Mr. Coutts's death-bed promise of revisiting her as a bird, or in the invisible influence of a soft breathing, was not an idea conceived on her death-bed only. Those who knew her intimately since 1822 can testify her reliance on this fanciful promise during her most healthful and joyous days. The boudoir in Stratton Street had three long windows towards the garden; the trees in the latter contained numerous birds, that enjoyed their good quarters undisturbed and well fed; these little creatures frequently pecked and fluttered near the windows; and whenever this occurred, it is said that the duchess would open the window, throw out food for the applicants, and leave the window open with the hope of one entering; while, for the remainder of the morning, she would be as happy as a child whose absent playmate had returned. To those who have no power of believing such matters, this weakness must have carried with it a certain degree of ridicule, although none would have been so cruel or insulting as to disturb her faith in what thus innocently gave much consolation and support to the believer. At first, while viewed under the prejudice which prevailed against her most trivial actions, this

* "She was lady of the manor of some small place bearing the name of Woodham Walters. Besides many very valuable proofs of Miss Mellon's solid regard for Mr. Raymond while living, she at his death (then Mrs. Coutts) took great interest in promoting the almost magnificence of his funeral, which was attended by more than fifty mourning coaches. When it passed from Piccadilly, through Piccadilly, to Covent Garden (where six theatrical managers supported the pall), she stood to view it, evidently in tears, in a window of her late residence at the corner of Stratton Street."

romantic superstition regarding one so advanced in life as Mr. Coutts, notwithstanding he had been her only benefactor, would seem so unusual, that it must have tempted the observation, 'this is all very well acted;' but a deeper insight into her character always brought the conviction that, at all times, there was not a sufficiency of 'acting' in her artless nature even to procure from the world common justice, much less a false reputation for sentiment. Among the anomalies in the character of Mr. Coutts was, that the rigid man of business had a fanciful superstition in some matters (which is not uncommon among his clever countrymen), and a pure appreciation of the poetry of existence. A beautiful prospect—a fine day in the country—a melancholy romance—a well-wrought poem, were enjoyed by him with the fervour of a youthful mind. Thus, the idea of revisiting the object of his solicitude in the form of a little bird, or of making known his proximity by a soft breathing near her, was exactly consistent with the mixture of superstition and romance which formed the unguessed portion of character in this highly-gifted but eccentric man. The duchess easily yielded credence to the opinion of those she considered sensible, and Mr. Coutts she looked up to and cited as one whose judgment no one was to be mad enough to question. In the same manner that others quote the philosophical remarks of Bacon, Newton, or Locke, she used, from the earliest time of knowing her benefactor, until her own last days, to say, 'Mr. Coutts said so!' which, in her mind, was a decision beyond appeal. He had solemnly promised this fantastic return after death, and, therefore, she implicitly believed that its accomplishment was unquestionable. Her reliance on it was unshaken while her faculties remained unimpaired; and when these were slightly dulled by approaching dissolution, her faith in the promise was 'strong in death.'

Forget-me-Not for 1840. Edited by F. Shoberl. 12mo. pp. 360. London. Ackermann and Co.

Our old friend holds on the even tenour of its way, and a feeling preface glances at the sorrowful changes that have taken place since this, the earliest of the *Annuaire*, first greeted the public with a class of literary and artistical production new to England. Mr. Charles Swain, whose writings are the most charming contributions to the present volume, says, "This is the eleventh year since my first appearance in your little register of sweet affections. Since then, how many are dead! Hemans, Landon, Jewsbury, Hogg, Neele, Macnish, Carrington, Scott, Mackay Wilson, Inglis; and how many more?" And he adopts the theme in a touching tone:—

"A Vision of Tombe.

Addressed to the 'Forget-me-Not.'

Forget them not! oh, all forget them not!
The Bards whose spirit hath inspired thy page;
Be not the memory of the dead forgot,
Whose genius is thy proudest heritage!
Alas for life! what bosom might preface
The shadow of the grave was with each name?
Some, gray and lonely at the door of age!
Some in the golden morning of their fame—
Yet on the path of death all stricken down the same!

A vision of far tombs oppressed my sight;
I saw Kilmory wandering down the glen
To seek her Shepherd by the hill's lone height,
Hear Ettrick Bards, she ne'er might find again!
And Scott—that ocean 'mid the stream of men!
That Alp, amidst all mental greatness reared!
He, too, bowed down to Death's recording pen:
And Neele, Galt, Inglis, Malcolm—names endeared—
Passed pale, as one by one their visioned tombs appeared!

The voice of Spring is breathing! where are thou,
Daughter of Genius, whose exalted mind

From Nature's noblest and sublimest brow
Snatched Inspiration? thou, whose heart combined
Passions most pure, affections most refined;
Whose Muse with silver clarion wakes the land,
Thrilling the finer feelings of mankind!
Thine is the song to arm a patriot hand,
Or start a thousand spears midst Freedom's mountain band!

Thine is the song to fill the mother's heart,
Whose children bless thee—Hemans—round her knee!
Thine is the gifted page that can impart
A beauty born of immortality!
The temple—shrine—and trophied urn—to thee
Were themes enduring! where'er Grief had trod,
Or Hope fled tired from human misery,

Thou stood'st with Song uplifted to thy God,
Thou soothed the mourner's tears 'e'en by the burial sod!
The beautiful spirit of the minstrel dead
Comes with the harmonies and hues of morn;
Sits with my sorrowing heart when day hath fled,
And folds her glorious wings—Elysian born!
A broken rose and violet dim adorn

With their expressive grace her silent lyre:
But, oh! the wreath by that immortal worn!
The inspiration and the seraph fire,
Which light those pleasing eyes that unto heaven aspire!

Still mourns Erin—ever by that coast,
Whose dismal winds shriek to each weeping cloud,
Whose waves sweep solemn as a funeral host,
Still mourns she Love's own Minstrel, in her shroud;
The Sappho of that isle, in genius proud;
The Improvisatrice of our land;
The daughter of our soil—our fame-endowed!
For her Erin seeks the fatal strand,
And lifts to distant shores her wo-prophetic hand!

The blighted one! the breast, whose sister-tend
Sprang to each touch of feeling, heaves no more!
Our London, silent on her funeral bier,
Far from our heart, sleeps on a foreign shore;
The voice of her—the song-inspired—is o'er!
Oh, she who wept for others found no tone
To soothe the many parting griefs she bore;
None had a tear for that sweet spirit lone—
All sorrows found a balm save that far Minstrel's own!

Thou, who receivedest her rose-encircled head,
Our Minstrel in the bloom of her young fame,
Glye back our lost and loved! Restore our dead!
Return once more her first and dearest name!
We claim her ashes! 'tis a Nation's claim!
Her—in her wealth of mind—to thee we gave;
Yet—glad we for the dust of that dear frame:
Oh, bear our world-lamented o'er the wave!
Let England hold at last—'tis all she asks—her grave!"

Of the other contributions, we shall content ourselves with saying that Douglas Jerrold gives us the sad tale of the Princes in the Tower, in an old ballad form; Miss M. A. Brown, "The Captive Princess" in verse, and a good prose story; the Old Sailor, one of his interesting yarns; James Montgomery some brief pieces; Miss Lawrance (the author of that very excellent production "London in the olden Times"), "The Dappled Doe;" and that, besides other varieties, we have selections and translations from the American and French presses, all of which combine naturally with the plates (eleven in number, and beginning with the Queen), and with each other; so that we may truly say the *Forget-me-Not* is as pleasing as usual.

STANZAS.*

Sent with a sprig of "Forget-me-Not" to C. B. A**.

THIS emblem of thy soft blue eye
That stole its hue from Arno's sky,
Dear maid, I send thee ere I fly;
It says—"Forget me not."

Soon will the bark forsake the strand,
That bears me from my native land:
I leave this floweret in thy hand;
It says—"Forget me not."

When cruel seas between us foam,
And far, my love, from thee and home,
A lonely wanderer I roam,
'T will say—"Forget me not."

Farewell! Farewell! our sails are set,
Perhaps on earth our last we've met;
Believe me, *thee* I'll ne'er forget:—
Oh, then, "Forget me not!"

R. B. S.

* This would have been a little gem for Ackermann!

Heath's Picturesque Annual for 1840: Windsor Castle and its Environs. By L. Ritchie, Esq. Pp. 274. London, Longman and Co.; Paris, Fisher and Co.

The choice of subject for the *Picturesque* this year is good in every respect. The residence of our young queen, the scenery around various and beautiful, the historical, poetical, literary, and other recollections full of interest; it presents every thing to be wished for such a work by the artist and writer. We have accordingly fifteen engravings by eminent hands, after original drawings; commencing with her Majesty on horseback, by E. Corbould, and going through the Eagle Tower, vignette; Windsor Castle in two points of view, by J. D. Harding; St. George's Hall and the Waterloo Gallery, by Allom; Chapel, by Mackenzie; and others by Harding, till we end in the Fishing Temple, Virginia Water. They are all charming performances.

Mr. Ritchie's portion of the task has been executed in an able and popular manner, leaving us nothing to regret, but much to commend. There could, of course, be little new in such a composition; but it is a great deal to put what is tolerably well known together in an agreeable manner, and this Mr. Ritchie has perfectly accomplished. It is unnecessary to offer any extract from the volume; and all we shall add, therefore, is, that in the publishers' phrase, it is beautifully got up.

Gems of Beauty; displayed in a Series of Highly Finished Engravings of Various Subjects. From Designs by Edward Corbould, Esq. With Fanciful Illustrations in Verse by the Countess of Blessington. Folio. London, 1840. Longman and Co.

"HAWKING," "The Swing," "The Maid of Narni," "The Earthquake," "The Miniatures," "The Brigand," "The Lovers," "Retrospection," "The Railer," "The Bow-er," "The Flatterers," and "The Heiress," are the subjects of these charming groups; which embody an almost ideal female loveliness under the various aspects of hope, terror, affection, playfulness, sympathy, &c. &c. Of them all "The Brigand" is our favourite, both for originality and composition; but they are all very beautiful, and truly such gems as may well adorn a lady's drawing-room table, or boudoir.

The illustrations, like every thing from the writer's pen, are appropriate, and full of grace and feeling. We only regret they are so short. We select two examples. "The Railer" as sportive, and "Retrospection" as pensive:—

"The Railer.

'Oh, men are deceivers! they flatter, and sigh
To each beautiful maiden they chance to come nigh;
And silly are those who such pleadings believe,
Which never are uttered except to deceive.

They'll swear that they love, and the very next day,
The very same words to another they'll pay;
And their eyes, like their tongues, are so tutored to cheat,

That no wonder they often delude the discreet.

O Nature! I'm sure I could better thy plan,
And make earth an Eden untrodden by man;
Where women, from terror of treachery free,
Might live their best days, without loving—like me!"

'Forget ye, fair railer, from poor Adam's side
'T was the rib which was stolen that made him his
bride?
So without us false men (though to thwart you I
grieve),
There could be no woman—there had been no Eve!"

"Retrospection.

Records of hours, with joy inwrought;
Quick let the wretched flames efface
Each glowing word, each tender thought,
That once Affection loved to trace.

Digitized by Google

Why should I board the faithless vow,
When Love (for Love is Truth) hath fled;
And he who wrote the lines is now,
To me, as numbered with the dead?
He's gone 'mid younger hearts to range,
While mine still broods on all it felt;
When, swearing he could never change,
Impassioned at my feet he knelt.
Tales of our favourite haunts—of books,
Chosen by me, they ne'er could tire!
Records of sighs, of answering looks,
Hide their keen mockery, circling fire!
O Love! and canst thou never bind
Proud Manhood in thy lasting way?
While Woman, helplessly entwined,
Lives thy sad captive, dies thy prey!"

The Oriental Annual, 1840: containing a Series of Tales, Legends, and Historical Romances.
By Thomas Bacon, Esq. F.S.A. author of
"First Impressions and Studies from Nature in Hindoetan," &c. &c. 8vo. pp. 244. London. Tilt.

THIS is a splendid volume, with eighteen engravings of the magnificent subjects which the East affords, from sketches by the author, Mr. Bacon, and Captain Meadows Taylor, engraved, in their happiest style, by W. and E. Finden, and others.

At a moment when our prodigious Indian Empire is acquiring still more extraordinary claims to national attention; when our victories are nearing us to Persia, and China, and Siam, and countries hardly known to modern geography; it is very pleasing to have our curiosity gratified by a production like this, pleasant to the eye and interesting to the mind. There is much useful information in Mr. Bacon's narrative; but for the sake of its brevity, being more suited to our limits, we select the following illustration of the whole:—

"Shri Gooroo and Gopa Shahir passed into a by-word, which remains to this day, denoting any fraudulent combination. One of the most daring and successful of their impositions was plotted against a wealthy raja, celebrated far and wide in India for his religious enthusiasm, and the unbounded liberality with which he entertained all those Brahminical devotees and pilgrims who claimed his charity. In relating the story it will be necessary to premise, that the romance of Hindoo chronology divides the history of the world into four eras. The first is the Satia Youg, or age of purity and truth, during which the life of man was extended to a period of a hundred thousand years. The second is called the Trita Youg, that is, the age wherein one-third part only of mankind had become reprobate, and the term of man's life was then ten thousand years. The third is the Dwapur Youg, in which one-half of the human race became depraved, and the length of life one thousand years. And the fourth is the present age, the Kali Youg (literally, evil age), in which mankind have become altogether vicious and impure, as well as short-lived. The fraud was thus effected:—Prior to the commencement of active operations, during a period of two or three years, Shri Gooroo and Gopa Shahir suffered their hair and beards, and their finger-nails, to grow to a prodigious length, in order that they might the better represent the extraordinary characters they were about to assume. Shri Gooroo undertook to act the part of an ancient ascetic of the Trita Youg, and upon Gopa Shahir devolved the character of the disciple of this wonderful relic of remote ages. They excavated a small tumulus in a remote and unfrequented quarter of the raja's dominions, wherein Shri Gooroo was to suffer a living burial; and having planted wild shrubs and jungul underwood around the entrance of the cave thus formed, they left their work for

a season, until the plantation had acquired the appearance of an untrodden wilderness. All preliminary matters being arranged, Gopa Shahir bedaubed himself with oil and ashes, and went to the palace of the raja, demanding an audience. Being admitted to the presence, he commenced a mournful complaint, crying out, —'O raja, my heart is breaking with bitter affliction. The venerable preceptor and guide of my childhood is, I fear, for ever lost to me;—give me immediately a host of your followers to seek for him.' 'Reverend father,' replied the raja, 'who art thou? Who is thy preceptor? How was he lost to you? How can he be recovered? Speak, and depend upon my assistance.' 'O raja, in the Trita Youg I and my revered instructor lived together in a subterranean cell; and, hearing of the great god Ram's projected voyage to Lanka (Ceylon) in search of his goddess Sita, we commenced the performance of very fearful austerities in aid of his adventure. Unwilling to afflict my beloved guide by my presence during the infliction of these severities, I retired to a neighbouring cavern, and in the anguish of what followed I fainted; nor did I recover from the deadly swoon until a year or two since, when, alas! I found myself in the course of the Kali Youg. Shortly after my resuscitation, the god Ram appeared to me in a vision, and informed me that the venerable sage, whom I revered almost as a divinity, was also in the land of the living,—having survived, like myself, in a trance caused by the severity of his religious exercises, and the profundity of his meditations; but that he had not yet been recalled to the presence of life. What I demand of you, O raja, is a large party of your subjects to search for his retreat, which I am aware is within the limit of your dominions. I am dying with anxiety once more to embrace him, and to give to this darkened age a light of intelligence and sanctity, which will obscure the sun at noon-day, and shed divine peace and happiness into the hearts of all degenerate mortals of the present race.' The righteous raja was greatly agitated with the excess of his religious zeal, on hearing this extraordinary relation; and, turning to his assembled chiefs, he said,—'Truly I am greatly astounded at this wonderful disclosure; but how fortunate, or rather how miraculously favoured, am I, that so holy a being should have rested in my territories; and that I or my subjects should endeavour to render him a service! Let us forthwith commence our search.' Hereupon the raja set out with a large body of labourers; and attended by all his retinue of state, determined to continue the pursuit until the holy devotee was brought back to life; doubtless anticipating no end of spiritual promotion and advantage in return for the good office he hoped to fulfil, as the deliverer of one so wonderfully influential with the divine Ram as this fakhir. Having collected his followers, he commenced in the neighbourhood of his capital, upturning every mound and hillock to be met with, and eagerly following in person the operations of the workmen; lest by absence he should be irrevocably deprived of the first glance of the recluse,—a glance which might be supposed to extend backward into thousands of years antecedent. Gopa Shahir, who directed the operations of the men, kept them three months employed at a distance from Shri Gooroo's retreat, encouraging the hopes of the credulous raja from time to time, by the relation of pretended visions and revelations; until, as he gradually approached the true position of his accomplice, he wound the whole multitude up to an extraordinary frenzy of superstitious

expectation. At last, after cutting through several feet of solid earth, they opened a small cavern, from which came a rush of fresh air; and wherein, after an aperture had been made sufficient to admit the daylight, they discovered the ancient ascetic, cross-legged, immovable, and with his eyes fixed as if in a profound trance. Gopa Shahir was the first to enter the cave, and by applying a small vial of consecrated extracts to the nose and eyes of his spiritual guardian, he restored him to consciousness. Gopa Shahir now exhibited every imaginable demonstration of ecstatic but reverential delight. 'O most holy servant of the great Ram,' said he, 'behold the raja of these dominions has approached to pay his reverence. Be pleased to extend to him some token of your favour, in return for the devotion with which he has sought your presence.' 'Has the divine Ram recovered the goddess Sita?' inquired the holy man, without deigning to notice the speech of his pupil. 'Yes,' replied Gopa Shahir, 'he recovered the goddess, after a desperate struggle with Ravana. But these things, most holy father, are of ancient date; for you have yet to learn that, during the period of your meditations, the Trita Youg and the Dwapur Youg have both passed away; and, alas! I have to disclose to you that it will now be our misfortune to terminate our pilgrimage in the fallen age of Kali.' 'Oh! horrible, horrible!' cried Shri Gooroo, covering his face with his hands, and exhibiting every indication of intense dismay. 'Impossible! I shall never be able to exist in this degenerate age! The Kali Youg! was it not a by-word of infamy? who can survive this fearful misfortune? Alas! alas! I can only renounce all contact with the world, and retire to Kasi, where the influence of depravity can never be felt.' On hearing these words, the devout raja became exceedingly distressed, and entreated that the holy man would condescend to consecrate his dominions, at least by a temporary residence in his capital; but Shri Gooroo remained inexorable, and declared that nothing would tempt him to exist in such a world of sin and misery. He then inquired, with great anxiety, if the goddess Gunga (the Ganges) still dwelt upon earth; and, being assured that she did, he demanded to be shewn some of the water of the sacred stream. When it was brought to him, he beheld it with the most ineffable contempt, and cried, 'O thou false and deceitful raja! callest thou this water from holy Gunga? Yet, why should it not be, after all? for undoubtedly all things are now deteriorated. Behold,' said he, 'what the goddess was in the days of the Trita Youg.' Hereupon he shewed them some of the milk which remained in his bowl. The veneration of the raja was greatly increased, on hearing the wonderful words of the fakhir; and, falling at his feet, he cried, 'O most illustrious of mortals, how miserable am I, that I should be thus deprived of the holy counsels and society of so sacred a being, the contemporary of the divine Ram, and of the blessed sages, at the very moment when I had thought my good fortune to be in the ascendant! If, however, you must, indeed, depart, condescend to receive from me some token of my devotion; of this small merit you must not deprive me. Gopa Shahir here joined in the entreaties of the raja; reminding Shri Gooroo that the Shastras had ordained that all dwellers upon the soil of a raja should yield of their increase a tenth, at least, whether of fruit or of cattle, of genius or of devotion; and, since the religious merit of the ascetic had so wonderfully increased, by his long meditation within the

raja's lands, he could not consistently refuse to impart to the raja a measure of his acquired excellence, by condescending to accept some small gift from his hands. Shri Gooroo, pretending to be satisfied by this argument, lifted up one of his fingers, which Gopa Shahir explained to the raja as signifying that the sage would do him the honour of receiving one rupee. The raja expressed some mortification that so small a gift only would be accepted, but immediately offered a rupee in a posture of profound reverence, and with his hands joined. Shri Gooroo took the coin, and, turning it from side to side, regarded it, for some moments, with looks of utter contempt. 'Call you this a rupee?' said he, angrily; 'then it is truly a rupee of the Kali Youg. A rupee in the Trita Youg was equal to, at least, ten thousand of these. How infallible were the predictions of the Shastras!' So saying, he dropped the coin, as if it were valueless. The raja felt that he was bound to fulfil the expectation which the Brahmin had formed on acceding to the receipt of the rupee; and, expecting that the favour of Heaven would repay him a hundred-fold, he ordered ten thousand rupees to be immediately counted out, as a more worthy offering. Then, on his knees, receiving a benediction, he returned to his palace; and the two impostors decamped with their booty."

MRS. BROUGHTON'S ALGIERS.

[Second notice: conclusion.]

"WHEN all the different consuls had assembled, they with one accord voted that my father should be the entire director of their movements, and that he should be their organ in declaring their sentiments to the dey. My father, then, turning to Monsieur de Thainville, said, 'I accept the post of honour you and these gentlemen have conferred upon me, upon condition that you, sir, will take my arm, and thus let us proceed through the town, and into the very presence of the dey; for let us shew these barbarians, that when all principles of justice and of the law of nations are violated, Christians will unite with one another to uphold and support them.' And in this order, the other consuls following them two and two, they, without going through the usual ceremony of requesting an audience, walked through the streets of Algiers, amidst the astonished and alarmed inhabitants whispering, 'Allah! the English and the French consuls walking together!'—nothing doubting that it would not be long ere the dreaded prophecy would be fulfilled, that when the Christians were all at peace among themselves, the downfall of Algiers was decreed (and so in fact it was). But the consternation of the populace and courtiers reached its height, when the cortege arrived at and entered the palace gates, and my father desired an officer to tell the dey that they requested to be at once admitted into his presence. An answer in the affirmative was immediately returned, and in the same order in which they had walked, they mounted the staircase, and entered the audience chamber. The dey inquired what might be the motive of their visit; upon which my father informed his highness of the determination he and all his colleagues had come to, and of which he and very other consul, respectfully but firmly, begged to apprise his highness,—that if the representative of his Danish majesty was not forthwith liberated, that from that moment they considered all their diplomatic functions to be virtually at an end, and that they would everally write to their sovereigns, to state what had taken place, and to demand ships to be sent

to convey them from a country where the law of nations had been so grossly violated, and where they could not for a moment consider their persons in safety. The dey had at first received them with a grave, although rather surprised manner; gradually, as my father spoke, anger lit up his eyes, and with marked impatience he listened to the frightened dragoman's translation; but ere he had pronounced its conclusion, declaring their intention to depart, his rage burst through all bounds; he literally bounced up from his seat and fell down again, his legs still retaining their tailor position, whilst he pulled his beard, the greatest sign of a Turk's indignation, and uttering words almost unintelligible in Turkish, literally foamed. When this storm had partially subsided, he asked how it was possible that my father could act as he was doing, when he thought he would be glad that he thus punished an enemy. 'Was not England at war with Denmark?' 'And that is the very reason,' replied my father, 'that the government of that country has not yet been able to send the tribute; and your highness, in defiance of his inviolable character, has, in consequence, subjected the unfortunate consul to the greatest ignominy;' and, repeating that they were unanimously determined to abide by what he at first had the honour of making known to his highness, my father said they only waited to know his pleasure. 'You may take him,' was the sullen reply, and he gave orders that the English consul was to do as he pleased. A profound salute from the consular body terminated the interview. They left the palace in the same manner as they had entered, and so continued their procession to the slaves' bagnio, at the Marina, where, it will be needless to say, that their feelings of indignation were greatly aggravated, on finding the brave and generous Ulrich heavily ironed, in the midst of slaves, with a chain round his leg, upwards of fifty pounds in weight; those who had the disgraceful office of his keeping, declaring that such was the violence of his rage, that they had been under the necessity of thus confining him; and with no little difficulty did his scarcely calmer friends prevent him from wreaking, with his once again free arms, his justly excited vengeance upon the slavish instruments of their barbarian master. Mr. Ulrich, at daylight that morning, had been obliged to march to the arsenal, to work with the rest of the slaves, saving that they were not loaded with the infamous badge of irons which the consul alone was obliged to sustain. The order of their march back to the Danish consulate, was only varied by Mr. de Thainville and papa, triumphantly placing the respected object of their anxiety between them, and they thus accompanied him to his expectant family. Mr. Ulrich's sufferings for his sovereign and country were fully estimated by the former, who conferred upon him, in consequence, the highest Danish order of knighthood; and, after his return to Copenhagen, he was nominated to a high official situation, either in the king's household or government. The same lawless scene in which my father acted a corresponding part, was twice afterwards witnessed during our residence at Algiers."

Of customs, &c., the following are examples:—

"I well remember having paid several very agreeable visits to Sidi Ali's family at their garden. One in particular is always brought to my recollection, whenever I read of our blessed Saviour after his glorious resurrection, having asked his disciples for a piece of fish and

some honeycomb, of which they had just partaken; and by eating thereof convincing them, to their great joy, of his personality and identity (Luke chap. xxiv. verse 22). For at a dinner at which I was present at the garden of Sidi Ali, a dish of fish was served and eaten with honey; but the taste did not please me, for however much I usually liked the excellent cookery of Algerine dishes, I ate it with repugnance. Many of the common usages of daily life in Algiers are related in the Holy Scriptures; and these familiar illustrations, of course, strike me probably with greater effect than they would have struck others, to whom they bring not back

'The thoughts, the hopes of childhood's years,
The words of love then spoken.'

"Our feelings have been dreadfully shocked by hearing that David Bacri, the king of the Jews, has been cruelly massacred at the palace, whither he had been sent for, and at first received with apparent courtesy;—indeed the dey was almost unusually gracious during the whole time of the audience, conversing on the most indifferent topics; and it was only on the unfortunate victim's leaving the barbarous presence, that he had even a suspicion of the dreadful fate to which the smiling tyrant had doomed him. As he descended into the skiff of the palace, two of the chaousses seized him, whilst a third, wielding a sabre, but too evidently informed him of the sentence that had been passed upon him. Vividly are the horrible details retained in my remembrance; for carefully as my beloved mother kept us, to the utmost of her ability, in ignorance of many of the barbarous scenes which passed around us, yet I did hear the shocking particulars of this poor man's fate. They are too dreadful to be traced by a woman's pen; for he was a powerful, athletic man, and he defied heaven's first, best gift (begging Milton and Eve's pardon), to the last mortal struggle. Long, long, by night and by day, did his handsome countenance and noble person haunt my sleeping and my waking dreams. I had not seen him very often; for as he was a devoted adherent and active partisan of France, he only called upon my father on stated seasons, when visits of ceremony were incumbent on certain people to pay to the representatives of the different powers; but his was not a face or figure to be forgotten, or classed with those of the common herd. You could not mistake his being a son of Israel, for the peculiar characteristics of his race were strongly engraved upon his handsome, noble features; but he fully realized one's personification of a descendant of the princes of the house of Judah, and his dignified and highly refined address was in perfect keeping with his appearance. However, I do not know to what tribe he claimed parentage; nor should I think that he had lineally inherited his good looks, as his brother Jacob was of a far less aristocratic aspect."

"The first news this morning was that our poor landlord, Sidi Cadus, had been sent for by a chaous to the palace, where, without any accusation, his turban and shereha were taken off; he was then dragged to Bab-el-zoon, and hanged like a dog. Thus died the head of the most noble and ancient Moorish family, at seventy years of age, whose only crime, it proves, was marrying yesterday his youngest daughter to a Turk, who was hogia at the palace in Achmet Pacha's reign."

We conclude with a strange romance of real biography:—

"Mr. Clark told me the following curious

story:—That when he was at Alicant a galley arrived, which had just escaped from Tangiers with the first or favourite wife of Muli Mahomed, the late emperor of Morocco, who had lately been assassinated by his rebellious son Muli Ismael. This lady, who, with her attendants, was seeking a refuge in Spain, was originally a Miss Thomson of Cork, and when on her passage from that city to Cadiz on a matrimonial expedition, she had been captured by a Moorish corsair, and made a slave. Her first intended bridegroom had been a Mr. Shae, an Irish merchant settled at Cadiz, who, during a visit which he had made to his native country, had become acquainted with and attached to Miss Thomson, who possessed great charms; but as some impediments existed to their immediate union, they parted, having first plighted their troth; and with the understanding that at some future period she should join him at Cadiz, as it would be injurious to his commercial interest for him to absent himself again from the field of his speculations. The lady, in fulfilment of her promise, sailed to join her future husband; but as just narrated, her destiny was changed by the capture of the vessel she was in, by a Marroquin corsair, which carried her into Fez. Here Miss Thomson was detained as a slave, and closely confined, until a report of her uncommon beauty having reached the emperor, Muli Mahomed, she was by his orders removed to the imperial palace, and every inducement was held out to her to embrace the Mahomedan faith, and to accede to the emperor's desire of making her his wife. Whether it was by persuasion, or from the conviction that her fate was irrevocably decided, her various scruples were overcome, and she became the wife of Muli Mahomed, and subsequently the mother of two sons, who bore the names, the eldest of Muli Ismael, and the younger of Muli Mahomed. She was ever the most favoured of her imperial husband's wives, for he had many besides; and the number must have been great, as I have heard both from Mr. Clark, and Mr. Romans, who was at one time established as a merchant in Morocco, that the Emperor Muli Mahomed actually formed a regiment, composed entirely of his own sons, to the number of five hundred and twenty-three, most of them being blacks. Mr. Clark says that this wonderfully fated lady, when he saw her in Spain, was dressed in the Moorish costume; and strange as it appears, she seemed in all respects to have adopted the tastes of her new country in preference to those of Christendom, for she afterwards returned to Morocco, and there ended her days."

There is another version of the story, but one is enough for us; as we hope these very miscellaneous extracts are, to shew our readers what an amusing work is here presented to them.

ARTS AND SCIENCES.

SCHÖNBEIN'S CHEMICAL RESEARCHES.

[Concluded from p. 693.]

THE interesting researches of Döbereiner with reference to platinum have taught us that that metal, in a state of great division, determines alcohol to absorb oxygen pretty rapidly, and partly to dishydrogenise itself. This fact, and others mentioned above, induce me to think it probable that, in favourable circumstances, the oxygen produced by the electrolysis of water may be determined to act chemically on hydrogenous liquids,—for example, on alcohol; instead of disengaging itself in the state of gas at the positive electrode.

In fact, if oxygen in the nascent state were

mixed with alcohol, it would with more facility act chemically on the alcohol, than if the oxygen were in the state of gas. But if nascent oxygen were presented to alcohol, and if, still further, both substances were brought into contact with platinum in a state of great division, in such circumstances the chemical action of both substances ought to be more considerable than in the former case; and it may be supposed, that although nascent oxygen of itself exercises no chemical action on alcohol, it would exercise one if its affinity for hydrogen should acquire still more intensity from the presence of platinum. But by what means can we place the substances in question, one with respect to the others, in the relations which have been indicated? A perfectly simple mode of doing so is to be found in the voltaic pile, or rather in the electrolysis of water, in which the spongy platinum is made to officiate as a positive electrode. If, during the decomposition of the water, this electrode is surrounded with a solution of alcohol in water, all the circumstances enumerated above will be evidently united: for the oxygen withdrawn from the water by electrolytic means will be in the nascent state at the moment it becomes free, and in that state is conducted to the spongy platinum. The following details will shew if the conjectures which I have hazarded above are or are not confirmed by experience.

First Experiment.—In a mixture formed of one volume of water, and two volumes of common alcohol, a small quantity of hydrated phosphoric acid is dissolved, to render it a better conductor of the current. If this liquid be put in communication with the voltaic pile of which I have spoken, in which the spongy platinum serves as the positive electrode, and if the circuit be closed, not the smallest bubble of oxygen is disengaged at the electrode, provided always that the spongy platinum has been heated to a red heat immediately before putting it into communication with the pile and the liquid. If cold spongy platinum is plunged into the latter, a few bubbles are at first disengaged on the surface, but after a few instants' immersion of the positive electrode in the liquid, all disengagement of gas ceases entirely to take place on the metal, while the hydrogen becomes free at the negative electrode.

When the platinum in wire is used as a positive pole, it establishes at its surface a continued disengagement of oxygen, let the extremity of the polar wire be plunged into the liquid in its natural state or rolled into a cluster, let it be heated or not before the immersion. But I have not yet been able to ascertain if the oxygen disengaged under these last circumstances at the positive electrode amounts to one volume for two volumes of hydrogen disengaged at the same time as the negative electrode. To judge by appearances, it is by no means so; and that would be a proof, if things really thus occur, that even compact platinum may determine, in a part of the oxygen electrolytically disengaged at its surface, a chemical action on alcohol.

The question now is to know what becomes of the oxygen which is separated from the water, and which shews itself on the spongy platinum? In order to reply to that question it is, above all, necessary carefully to analyze the liquid after the current has been for some time passing through it; and to examine what new substances it contains. For want of time I have not yet been able to make this inquiry. Nevertheless, I have some reason to presume that in the given circumstances it forms the oxygenated ether of Döbereiner, or acetate of

Liebig. Already, *a priori*, the formation of that substance seems probable; but that which appears to convert that probability into certainty, is the fact that when the spongy platinum serves as a positive electrode in the alcoholic liquid, in a little time there is exhaled a very strong odour of that acetate when the electrode is withdrawn from the liquid. There can be no great doubt that, under the circumstances in question, it also forms, besides the acetate, acetic acid, aldehyde, formic ether, and acetic ether.

In terminating the description of the result of this experiment, I will add this remark: that if the liquid be diluted with one or several times its volume of water, phenomena of the same nature as those which have been described will be produced: the acetate odour, in particular, will render itself sensible on the spongy platinum.

Second Experiment.—With a mixture formed of equal volumes of water, alcohol, and common sulphuric acid, results are obtained perfectly agreeing with those which have just been mentioned. It is only when the spongy platinum serves as a positive electrode that the disengagement of oxygen on the latter can be entirely stopped, and that the acetate odour is sensible on the surface of the metal.

Third Experiment.—If the liquid used be a mixture containing one volume of nitric acid of 1.35, and one volume of alcohol, no oxygen will be disengaged on the positive electrode, nor hydrogen on the negative electrode; at least, provided those two electrodes are spongy platinum. However, in order that this result may take place at the negative pole, the platinum which forms that pole, before it is plunged into the liquid, must be red hot, or moistened with the liquid and then submitted to a gentle heat. When compact platinum is used for the negative electrode, there occurs on the latter a brisk disengagement of hydrogen. If the positive electrode be formed of a cluster, somewhat large, of platinum wire, no trace of oxygen appears on its surface. If the wire is not rolled, but has some thickness, a quantity of that gas scarcely sensible is disengaged. The odour of the acetate renders itself sensible on the spongy platinum, or on the platinum cluster, as in the preceding cases.

Fourth Experiment.—If the liquid be composed of equal volumes of nitric acid of 1.35, alcohol, and water, the disengagement of hydrogen on the spongy platinum electrode cannot meet with any further obstacle, while it does not take place on the positive electrode, whether formed of spongy platinum or of compact platinum.

Fifth Experiment.—In a liquid composed of one volume of common nitric acid, one volume of alcohol, and six volumes of water, the phenomena which take place on the electrodes are similar to those which the last case exhibits; always with this difference, that if the positive electrode be formed of compact platinum, traces of oxygen are there disengaged.

If iron be used for the positive electrode, and if the voltaic circuit be closed with that metal, it produces on the surface a pretty brisk disengagement of oxygen. This last gas is even obtained in so large a quantity, that it appears sufficient to furnish the means of forming water with the quantity of hydrogen disengaged at the negative electrode. The fact which I have just stated is important in this respect,—that to me it demonstrates that it is not the nascent state of the oxygen which is the principal cause, in virtue of which that element reacts chemically on alcohol; but that that action is essentially connected with the specific influence

which platina exercises on oxygen and hydrogen.

If gold wire be used for the positive electrode, a little oxygen is also disengaged at its surface; much less, however, than on iron. It seems to result from this that gold acts in a manner similar to platina, only in a feebler degree.

The preceding data ought, it appears to me, to induce philosophers who study electro-chemistry to submit to careful examination all the metals which disengage oxygen at their surface in their function of positive electrodes, in order to ascertain their action with regard to alcoholic liquids. It is very probable that such an examination would shew that it is according to the chemical nature, and the density of the metal which serves for the positive pole, that the relation in which oxygen and hydrogen in a free state shew themselves at the two electrodes is determined.

Sixth Experiment.—If the liquid contain, with two volumes of nitric acid, one volume of alcohol, results will be obtained in harmony with those described in the third experiment. There is, however, this difference, that some bubbles are disengaged on the negative electrode of the spongy platina. If the positive electrode be of iron wire, there will be a brisk disengagement of oxygen on its surface, while on a platina wire scarcely a bubble of gas shews itself.

Seventh Experiment.—In alcohol mixed with a large proportion of hydrate of potash, I have not been able by any method to succeed in preventing the disengagement of oxygen on the positive electrode. Considerations drawn from theory led me to expect another result. However, the small number of experiments that I have made with this liquid do not yet authorise me to admit that the presence of potash in alcohol entirely prevents the latter from exercising a chemical action on disengaged oxygen. The existence of such a reaction cannot assuredly be denied, except it be once demonstrated that under all circumstances it disengages, on the positive electrode, a quantity of oxygen sufficient to form water with the hydrogen become free at the same time at the negative electrode.

Eighth Experiment.—If ether, shaken up with nitric acid of 1.35 until it will absorb no more, be used as the liquid, no oxygen is disengaged at the positive electrode, whether it be formed of platina, compact, or in the spongy state. If platina wire be employed as the negative electrode, an extremely brisk disengagement of hydrogen takes place at its surface; while that disengagement may be prevented, if, instead of the platina wire, the same metal be used in the spongy state, and if it be made hot before it is plunged into the acidulated ether.

Ninth Experiment.—By mixing nitric acid of 1.35 with as large a quantity of ether as it will absorb, a mixture is obtained which does not allow oxygen to become free at the positive electrode. At the moment at which the pile is closed a brisk disengagement of gas takes place at the negative electrode, which stops at the end of a few seconds. This state of things once established, it may be made to pass on a second wire, by proceeding in the manner described above in No. 3.

I have not made any other experiments than the preceding, with alcohol and ethereal liquids; but they may suffice to put the fact out of doubt, that, in the given circumstances, the faculty of exercising a chemical action on ether and alcohol may be developed in oxygen rendered free by electrolytical means. I ought, however, here to repeat the observation which I have already made above on another occasion, that

the results obtained by the last series of experiments of which I have spoken, depend on a certain strength of current; and that they differ a little from those which I have described if the strength of the current made use of passes a certain limit. At the same time, as I have already intimated, it is very possible that, even when employing the strongest current, all disengagement of oxygen at the positive electrode may be prevented, provided the volume of spongy platina made use of be sufficiently considerable. There is no doubt that the quantity of oxygen absorbed by the alcohol in a given time, with the assistance of the platina, depends essentially on the number of points of contact which the metal presents to the two substances (oxygen and alcohol). But if, by means of the current, there should be disengaged at the positive electrode a quantity of oxygen, double, for example, that of which that electrode could determine the combination with the alcohol in the same interval of time, the half of the disengaged oxygen would become free; supposing at least that the current in no respect modifies the catalytic strength of the platina.

It is also possible that the proportion in which the mixture of alcohol, acid, and water is applied, exercises some influence on the result of the reciprocal action, which takes place between the platina, the oxygen, and the alcohol, whatever may be the nature of the acid in the liquid. It may also be, that the temperature of the latter is not wholly without influence on the result. New experiments are necessary to clear up that and several other points. But it is, above all, desirable to submit to exact analytical examination the spirituous liquids which have been exposed for some time to the double influence of the electricity of the current and the spongy platina, and which have absorbed either the oxygen or the hydrogen of the electrolysed water. It is the only practicable mode of studying the phenomena which take place in the given circumstances.

Permit me, before concluding, to make some general remarks on the facts mentioned in this memoir. For a considerable time, the philosophers who study electro-chemistry, particularly the ingenious Becquerel, have used weak voltaic currents, in order to produce, by their assistance, the most varied inorganic combinations, and to form composed bodies, the preparation of which, by the ordinary chemical means, is impossible. But, until the present moment, if I do not deceive myself, comparatively very few attempts have been made to enlist the electricity of the current in the service of organic chemistry. Now, although it is not probable that the voltaic agent holds, in that order of facts, the importance which it possesses in so high a degree, with reference to inorganic chemistry, I am, however, persuaded that we are yet far from having given to the employment of the pile, in the domain of organic chemistry, the extension of which it is susceptible. If we consider what an important part oxygen and hydrogen play in organic matter, and if we remark what facility those elements may be obtained in the nascent state, by means of the voltaic current, we may confidently hope to succeed, sooner or later, in determining, in a great number of cases, the circumstances in which oxygen and hydrogen, at the moment of their separation, exercise a chemical action on the organic matters presented to them. This result once obtained, we shall be able to produce, in organic substances, chemical modifications, which it would be as impossible to ob-

tain by our actual means, as it is to prepare, by the assistance of common chemistry, certain inorganic combinations, very easily obtained by means of voltaic currents.

The experiments and the facts reported above seem to me to point out the path which must be taken, if we wish to see realised the expectation I have just expressed.

It must be hoped that good chemists, especially devoted to that part of their science which relates to organic substances, will pay some attention to the objects of which this memoir treats; and that they will take the trouble of repeating my experiments, and making new ones of the same kind. They will then, perhaps, be convinced that the use of the voltaic pile is not only possible, but very advantageous, in many of the researches of organic chemistry.

Bordeaux, May 1839.

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, October 34.—The Rev. C. J. Daniel, M.A. of Trinity College, Dublin, was admitted *ad eundem*; and the following degrees were conferred:—

Master of Arts.—G. Mellish, Scholar of University College, Grand Compounder; Rev. F. Daubeny, Grand Compounder, Rev. H. Ethelston, Brasenose College; Rev. T. Yard, Exeter College; Rev. W. R. Tucker, Wadham College.

Bachelors of Arts.—W. G. S. Addison, Magdalen Hall; A. H. Anson, Balliol College.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Entomological, 8 P.M.

Tuesday.—Linnæan, 8 P.M.; Horticultural, 3 P.M.; Electrical.

Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.

Thursday.—Royal Society of Literature, 4 P.M.; Zoological, 3 P.M.

Friday.—Astronomical, 8 P.M.

THE DRAMA.

Drury Lane.—This theatre opened on Saturday with the *Fairy Lake*, and two amusing farces. The house was well filled, but not crowded, and looked extremely well in every part. We cannot say we admire the new proscenium, though it is very cleverly executed. We deem it a mistake to make such things too gorgeous: like the pictures of wild beasts, &c. on the showbooths at fairs, they injure the effects within. The drop-scene is more to our taste. Of the *Fairy Lake* we need not say much, as it was previously performed at the Strand; but the music is much more *Auberian* in the new arrangement, and consequently much finer; the scenery is beautiful; and the singing very attractive. Mrs. Wylett, the most charming of ballad-singers, always delights us, and gives the sweetest airs in the sweetest style. Mr. Fraser has succeeded Mr. Collins (indisposed and apologised for on the first night), and affords every satisfaction. Among the fairies, our ear was struck by one particularly good contralto, which, on inquiry, we found to belong to Madame Pilati; and we mention this the more readily, because similar remarks were made to us, on issuing from our box, by several able musical critics. Upon the whole, the *Fairy Lake*, as an afterpiece, is one of uncommon grace and attraction.

The activity of the management has since been manifested by a continual variety of sterling revivals. The comedy of *Wild Oats*, which requires the strangest possible cast to make it succeed as a five-act farce, was not very successful; though Downton played Sir G. Thendery Compton, Ephraim Smooth capably; Bennett, John Dory in a fair style; and Vining, Rover with considerable spirit. *Much Ado*

about *Nothing* took a higher station on Wednesday. *Benedick*, Mr. Marston; *Beatrice*, Mrs. Stirling; *Leonato*, Mr. Archer; *Hero*, Miss Mordaunt; *Pedro*, Mr. G. Bennett; and *Dogberry* and *Verges*, Downton and Compton. Mr. Marston, on his *début*, met with great success. With a handsome face, good figure, graceful action, and a full possession of the boards, he reminded us somewhat of Charles Kemble, but was deficient in energy. With a little more earnestness and spirit, and a little less coxcombry and playing to the audience, he will be a valuable acquisition in genteel comedy; but his voice requires careful training, as it wants compass and modulation to hide its defects. Mrs. Stirling's *Beatrice* was very successful, and she has only to exert her physical powers to ensure still higher excellence and effect. Downton was a noble *Dogberry*, and Compton excellent as *Verges*. Mr. Marston and Mrs. Stirling were warmly applauded throughout the performance, and at its close.

Haymarket.—On Thursday, Sir Edward L. Bulwer's play of the *Sea Captain*; or, *The Birthright*, was produced here to an audience crowded in every part, and with the most unbounded and deserved success. "Most deserved," for both in action and poetry it is a noble dramatic production; the plot and leading characters possessing much originality, and the incidents and situations turning upon them being, consequently, novel and effective. The broad conception of the story (for we will not enter upon details) is that of a mother of high rank and power (*Lady Arundel*, Mrs. Warner) devotedly attached to her apparently only son (*Lord Ashdale*, Mr. J. Webster), but having, by a first secret marriage with a page of her House, another son (*Norman*, Mr. Macready), whose father has been murdered at the instigation of her enraged sire, and he, the son, brought up in ignorance of his parentage by a *Priest* (Mr. Phelps), from whose protection he has been taken in his youth, and carried to sea by pirates. His sentence has hung like a cloud over his mother's fate: she has never felt for him a mother's love and sympathies, and she dreads his reappearance as a spectre to blast all her ambitious hopes respecting her youngest and darling child. In *Arundel Castle* also reside *Violet*, an orphan relative of the family (Miss H. Faucit), and *Miss Prudence*, an old maiden attendant (Mrs. Clifford), which two had been rescued from worse than death by *Norman* in a peril at sea, and the youthful pair made ardent lovers; and *Sir Maurice Beever* (Mr. Strickland), a poor cousin of the haughty lady, a miserly crafty plotter, holding a rod of extortion over her as the depository of the murder secret, and heir to the great fortunes of the family, in the event of the deaths of *Lord Ashdale* and *Norman*. Such is the situation of affairs, when the piece opens with *Norman*, returned with his brave shipmates, from the Indian seas, and laden with wealth. His fond meetings with *Violet* lead to rivalry with the impetuous *Lord Ashdale*; and the terrified mother, to prevent a fatal collision, promotes the elopement of her ward with the gallant sailor, whom she has recognised as her first-born. These plans being detected by *Sir Maurice*, he counterplots to destroy both the sons who stand in his way; and, by means of *Gausson* (Mr. O. Smith), the pirate, who had actually committed the murder of *Norman's* father in a chapel on the shore (now in ruins), takes measures to effect that atrocious design on the same spot where it has been appointed for *Norman* and *Violet* to meet an hour before midnight, and take their departure

from England for ever. In the interim, an attempt of *Sir Maurice* to regain the papers proving *Norman's* legal birth and title from the priest, by the same agency, leads to his assassination by *Gausson*, and the recovery of these documents by *Norman*, who thus solves the mystery of his parentage. Here the third act closes; and the fourth is wrought into the most intense interest, by his openly declaring this truth to his agonised mother, whose sternness, though shaken, still prevails. She refuses him her blessing, even after he has surrendered the all-important papers to her; and he flies from her presence for ever. The fifth act brings on the dénouement at the place of tryst. Deceived by *Lord Ashdale* having assumed *Norman's* plumed hat, as a stratagem of love, *Gausson* rushes to murder him, but the assassin is slain by *Norman*; and, finally, the mother and brothers are reconciled by the filial piety and fraternal generosity of the heroic seaman; *Sir Maurice* is detected and disgraced, and a happy family compact concludes the stirring and delightful drama. Whilst *Lady Arundel* acts upon her unnatural resolution, there is more of curiosity to guess how events are likely to ensue, than any deep feeling attached to the persons involved; but the moment *Norman* becomes possessed of the more tragic lever to appeal to her heart, and it begins to stagger more and more under that touching force, nothing, as we have observed, can exceed the intense interest of the scene. The strife of passions is carried to the highest pitch; and the whole working out of the plot, which, of necessity, occupies considerable space, is borne through triumphantly by the strong current thus created, to the very end. Tumults of acclamation hailed the descent of the curtain. Wreaths and flowers were showered upon the stage, when Macready appeared to a boisterous call of the house; and almost all the performers were demanded in turn to receive their quota of *vivas*. The author was also obliged to make his bow from a private box: all which later innovations we hold to be more honoured in the breach than in the observance, however gratifying they must be to those who have so largely gratified the bestowers of such fame.

Having divided the play into two periods, we ought to state, that during the first phase there is much beautiful poetry to adorn its preparatory progress; and we must select a few brief examples.

Falkner, *Norman's* faithful lieutenant (Mr. Howe), asks him if he intends to forswear the sea for love of the fair *Violet*; and he replies in a glorious strain—

"The sea!
No—not for Beauty's self! the glorious sea—
Where England grapples the trident of a god,
And every breeze pays homage to her flag,
And every wave hears Neptune's choral nymphs
Hymn with immortal music England's name!—
Forswear the sea! My bark shall be our home:—
The stars that light our bridal melodies;—
The stars that light the arid palaces
Of air, our lamps;—our floors the crystal deep
Studded with sapphires sparkling as we pass;—
Our roof—all Heaven!—my Beautiful, my Own!
Never did sail more gladly glide to port
Than I to thee! my anchor in thy faith,
And in thine eyes my haven."

Violet's love is also sweetly expressed:—

"Oh, for some fairy talisman to conjure
Up to these longing eyes the form they pine for!
And yet in love there's no such word as absence!
The loved one, like our guardian spirit, walks
Beside us ever,—shines upon the beam—
Perfumes the flowers,—and sighs in every breeze!
His presence gave such beauty to the world
That all things beautiful its likeness are;
And aught in sound most sweet, to sight most fair,
Breathes with its voice, or like its aspect smiles."

Enter Norman.

There spoke my fancy, not my heart!—Where art thou,
My unforgotten Norman?"

And *Norman's* answer:—

"At thy feet!
Oh, have I lived to see thee once again?
Breathe the same air?—my own, my blessed one!
Look up—look up—these are the arms which shelter'd
When the storm howl'd around; and these the lips
Where, till this hour, the sad and holy kiss
Of parting linger'd—as the fragrance left
By angels when they touch the earth and vanish.
Look up—Night never panted for the sun,
As for thine eyes, my soul!"

Some single lines told with wonderful effect, and were much applauded. Thus, when *Norman* relates how the pirates maltreated him:—

"Then they gripp'd and bound me
To a slight plank: spread to the wind their sails;
And left me on the waves alone with God!"

I woke, and heard
My native tongue. Kind looks were bent upon me:
I lay on deck—escaped the ghastly death;
For God had watched the sleeper!"

'Twas a brave seaman, who with Raleigh served,
That own'd the ship. Beneath his fostering eyes
I fought and labour'd upward. At his death—
[A death, may such be mine!—a hero's death!—
The blue flag waving o'er the victory won.]
He left me the sole heir to all his wealth."

When money is added to the inducements to fly with *Violet*, hear the indignant Roamer of the Ocean:—

"Lady,
Ye who have dwelt upon the sordid land,
Amidst the everlasting gloomy war
Of Poverty with Wealth—ye cannot know
How we, the wild sons of the Ocean, mock
At men who fret out life with care for gold.
O! the fierce sickness of the soul—to see
Love bought and sold—and all the heaven-roof'd temple
Of God's great globe, the money-change of Mammon!
I dream of love, enduring faith, a heart
Mingled with mine—a deathless heritage
Which I can take unallied to the stars,
When the Great Father calls his children home;—
And in the midst of this Elysian dream,
Lo, Gold—the demon Gold!—als! the creeds
Of the false land!"

When his claims are rejected by his mother, the following were very fine:—

"Norman. Mother, mother!
I am thy son—thine Arthur—thine own child!
Do you deny your own?"

Lady Arundel. I have no son,
Save Percy Ashdale!

Norman. Do not—do not hear her,
Thou everlasting and all-righteous Judge!
Thou, who amidst the seraph hosts of heaven,
Dost take no hollier name than that of 'Father':
Hush, hush! Behold these proofs—of the deed of marriage!

The attesting oaths of them who witness'd, and
Of him who sanctified, thy nuptial vow!
Behold these fetters!—see, the words are still
By years unaltered!—to my sire, your loves!
Read how you loved him then. By all that love—
Yes, by himself, the wrong'd and murder'd one,
Who hears thee now above—by these, my mother,
Do not reject thy son!

Lady Arundel. Quit my presence!

Norman. I will not!

Lady Arundel. Will not? Ho, there!

Norman. Call your hirings;
And let them hear me! [Goes to the hearth.]

The sacred hearth-stone of my sire—beneath
Their knightly scutcheons—and before their forms,
Which, from the ghostly canvas, I invoke
To hail their son—I take my stand. I claim
My rights! They come—your menials! bid them thrust
From his own hearth the heir of Arundel!

Lady Arundel. So, my tale is done.
Reclaim thy rights—on me and on my son
Avenge thy father's wrongs and wrongs; I ask not
Mercy from thee—and from the hated earth
I pass for ever to the tomb, which hath
Even for shame a shelter!

Lady Arundel. Gone—gone!—and here he stood, and
blest'd the mother
Who did not bless her son!—Ah, Heaven forgive me!
These are the deeds in which I place my safety,
Now won and worthless!—Oh, how human hearts
Do feed on fire, till, when the flame is slaked,
Ashes alone are left!"

But the speech which told above all the rest was the following, delivered with an electrifying power:—

"Norman. Each to his element!—the land has form'd
Thy nature as the hardy ocean mine.
It is no sacrifice. By men and angels!
Better one laurel-leaf the brave hand gathers,
Than all the diadems pluck'd from dead men's brows—
So speaks my father's son!—Were there before us
All—who in this busy and vast mart
Of merchant traffickers—this land of England—
Worship the yellow god—how one great truth
Should shake the sceptred Mammon on his throne!
Here, in our souls, we treasure up the wealth
Fraud cannot filch, nor treasure up the wealth
'Tis spent, the more we have;—the sweet affections—
The heart's religion—the diviner instincts
Of what we shall be when the world is dust!
Is it so, Violet?
Violet. I never loved thee—
No, never—till this hour! A moment since,
When thou wert what the wrong world calls more great,
Methought thou wert less Norman!"

In quoting these passages we have much forestalled what we would say of the performances. Of Macready it is enough to mention that he was truly great throughout. Miss H. Faucit played the affectionate and confiding orphan very sweetly. On Mrs. Warner devolved a character which Mrs. Siddons might have wished to personate, and in many parts of it, especially towards the end, she acquitted herself to admiration. In the earlier scenes we thought her too cold; but her task is a very difficult one, and hardly any study could perfect it for a first representation. Mr. Strickland's *Poor Cousin* surprised us, much as we have always esteemed the talents of that actor,—more like the good old school than almost any one we know in the new. His sycophancy, his heartlessness, his miserly nature, and his ambition, were all depicted with infinite skill; and the laughable pettishness with which he conceals his aspiring schemes, often obtained the hearty acknowledgment of the theatre. As thus:—

"When Poverty begs, the dogs bark at it; and when Poverty is ill, the doctors mangle it; and when Poverty is dying, the priests scold at it; and when Poverty is dead, nobody weeps for it."

His airy ambitious hopes:—

"Ah, shall I
Then be a miser?—No, there! my lord's lackeys!—
Room for the Earl of Arundel! You dined
With the earl yesterday? A worthy lord!
I'll marry a young bride, get heirs, and keep
A lean poor cousin of my own to play
At leapfrog with the little Maureices."

Enter Lord Ashdale (in disorder).

Ashdale. By Heavens! this stranger's insolence would fire

An archbishop's patience. 'Sdeath! his hand press'd here,
His breathing fan'd her locks.

Sir Maurice. How now, my Hector,
My diamond, apple of my eye? How now?—
Chafed, vexed?

Ashdale. Home, home, Anatomy, and drive
The mice from thy ladder.

Sir Maurice. Mice!—Zounds, how can I
Keep mice?—I can't afford it—they were starved
To death an age ago!—the last was found,
Come Christmas three years, stretched beside a bone
In that same ladder—so consumed and worn
By pious fast—'twas awful to behold it!
I canonised it corpse in spirits of wine,
And set it in the porch—a solemn warning
To thieves and beggars."

Which bit of dialogue hints to us to note that Mr. J. Webster (except in his entrance scene, which is too light) performed *Lord Ashdale* excellently in bearing, delivery of the sentiments, and action. Of Mrs. Clifford we have also to speak in terms of much commendation; and to the general praise may justly add the names of Messrs. Phelps, Howe, O. Smith, and Gallot, his fellow-pirate. Nothing could exceed the success of the whole, and the management may put on its *nightcap* for the rest of the season, whilst the public crowd to have their every *night's* enjoyments of a splendid drama acted in

a masterly style. The period is the Elizabethan age, and the play is not unworthy of it.

Jack Sheppard.—We regret, for the sake of our distant and foreign readers, that we cannot copy the extraordinary letters in which this name placards every wall and empty space in London. Composed of all kinds of prison and punishment symbols, it meets the eye at every turn, and makes it evident that the public has gone quite *Wild after Jack*! At the *Adelphi* he is glorified by Mrs. Keeley, the inimitable in every thing she undertakes. Paul Bedford's *Blueskin* is also celestial; and Miss Allison is a *Winifred* worthy of the love either of the good or evil genius apprenticed to her father. The scenery here is even a triumph for the *Adelphi* stage, so extraordinary for its effects in this line. At *Sadler's Wells*, too, the piece is got up in a first rate manner; and, in short, *Jack Sheppard* is every where the rage. "The Times," we observe, has honoured the author of the novel with the title of *Captain Ainsworth*, which must be a misnomer, as he has never been in the army, the navy, the marines, the yeomanry, or the volunteers. Perhaps it was a misprint for *Colonel*; seeing "as how" he has so many *companies* under his command at this moment in all (theatrical) *quarters* of the metropolis.

VARIETIES.

Hogarth and an Old Silk-Handkerchief.—For a considerable time past, the keepers of the National Gallery have been in a state of much alarm and astonishment, with respect to the apparent decay of Hogarth's fine series of paintings, which have been for so many years one of the chief attractions of the Gallery. It appeared that while the pictures around the "Hogarth's" maintained their original brilliancy of colour, the pictures by our immortal satirist daily faded, becoming more and more dingy. They were strictly observed, the wall which they adorned was examined, yet no cause for the lamentable change was detected. After much anxiety it was discovered to arise from the breath of the numerous visitors to the Gallery, who, examining the pictures in question with microscopic eye, eager to catch the minutest detail of their truly English character, approached the canvass too nearly. The damp thus occasioned, attracted and retained the dust of the room on the surface of the pictures, until their wonted and well-known beauty gradually became obscured. What was to be done? the application of liquids to clean pictures is at all times hazardous; doubly so with the delicate and expressive touches of Hogarth's masterly pencil. The effect of an old silk-handkerchief was tried on a corner of one of the pictures,—the result was miraculous—a few more rubs and the picture appeared in all its pristine beauty of colour and expression. The rubbing process was extended to the series, and our old friends with "shining morning faces" can now scarcely be recognised.

City Antiquities.—The excavations in progress in the city for improvements, are continually affording new matters of interest to the antiquary. A few weeks since the labourers engaged in deepening a sewer in Thames Street, opposite Vintners' Hall, in the middle of the street, at the depth of ten feet from the surface, discovered the perfect remains of an old Roman wall, running parallel with the line of the river. The wall was formed of alternate layers of flint, chalk, and flat tiles, and offered considerable obstructions to the workmen, from the firmness with which the materials were fixed

together. About the middle of Queen Street, at a depth of nineteen feet below the surface, were found the remains of an elegant mosaic pavement, which belonged to a dwelling-house, and which indicated that the Roman roads ran in different directions to the present. The position of this pavement shewed that the earth had accumulated over the original surface to a height exceeding fifteen feet. During the late excavations in Moorfields, many rich and rare coins were found in fine preservation. In the immediate vicinity of the Roman Catholic chapel was discovered a beautiful sepulchral inscription, denoting the vicinity as a former place of sepulture, and also many sepulchral vases. In the excavations in Charterhouse Square, and those already commenced in the formation of the new street from Holborn to Islington, no antiquities have been discovered. The collections of the City Museum, at Guildhall, devoted to antiquities, and of Mr. Smith, of Lothbury, a distinguished city antiquarian, have received considerable additions from these recent discoveries.—*The Times*.

Of H.B.'s last Caricatures, no fewer than six launched at a time, the most humorous is the "Trip to Dover," in which Burdett is driving the Duke of Wellington, Lord Lyndhurst as valet, and Brougham as an idle boy hanging on behind. With the exception of Lord Lyndhurst, the characters are perfect in every point, and the whole exceedingly laughable.

Scottish Earthquakes.—We see from the Scottish newspapers that the shocks of earthquake have continued in Perthshire, and even extended to Fifeshire. These phenomena have occurred about Crieff and Comrie from time immemorial, but we do not remember to have heard of their lasting so long or being felt so far.

LITERARY NOVELTIES.

LIST OF NEW BOOKS.

A Descriptive Catalogue of Roses, cultivated by T. Rivers, jun. Sawbridge, price 6d.—Rational Illustration of the Book of Common Prayer, by C. Wheatley, new edition, 8vo. 8s.—History of Norway, Sweden, and Denmark, by Dr. Dunham, Vol. II. (forming Vol. 118 of Dr. Lardner's Cabinet Cyclopædia) 4cap. 6s.—Aids to Preaching and Hearing, by Rev. CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

We are sorry we can do nothing with Omega's MS., which is left for him at our office.
ERRATUM.—P. 684, l. 12-13 from bottom, col. 1, for "Palladium," read "Palladian."

ADVERTISEMENTS,

Connected with Literature and the Arts.

On a sheet of Imperial Drawing Paper, price 1s. 6d.; or on Canvas and Roller, 3s. 6d.

A MAP OF CANAAN, at the Period of
its Division among the Ten Tribes of Israel; being the first of a Series of Illustrated School-room Maps. The want which has long been felt of large Maps for the Instruction of the Young, containing only the principal natural features, and chief places of a country, has been recently supplied by the Commissioners for National Education in Ireland; but the slow and costly modes of printing by the Rotary-press, and of Hand-colouring, have prevented such Maps being produced at a small price. By the new process of Illuminated Printing, the union of excellence and cheapness will be attained.

London: Charles Knight and Co., 25 Ludgate Street.

In Imperial royal 4to. Part I. containing Two Maps, and Four Pages of Letterpress, price only 1s. 6d. full coloured.

GILBERT'S MODERN ATLAS; Geo-
graphical, Historical, Commercial, and Descriptive. The letter-press edited by H. J. N. M.A. The Maps will be executed in the first style of Art, and engraved (from the most correct authorities) expressly for this Work. The Proprietor is determined that this Atlas shall be the Best and Cheapest ever published; that it shall form an important accession to the desk of the Counting-house, prove an acquisition to the Library of the Student, and an ornament to the fashionable Boudoir. To be completed in Twenty-five Monthly Parts. Gratian and Gilbert, Paternoster Row. Orders received by all Booksellers.

A DESCRIPTIVE CATALOGUE of

THE NOVELS and MISCELLANEOUS
WORKS OF DANIEL DE FOE, with a Biographical Memoir of the Author, Literary Preface, Illustrative Notes, &c. The Work will be printed by Mr. Talboys, of Oxford, with a new Type, and other arrangements to economize space, as, without any sacrifice of elegance, is comprehended in each Volume the Contents of Two of the former editions. The entire Collection will form 18 vols. published monthly.
London: Printed for Thomas Tegg, 73 Chancery; and may be procured, by order, of all other Booksellers.

VALPY'S GREEK TESTAMENT.

FOURTH EDITION, with Parallel References, and other Improvements, 3 vols. 8vo. 2l. 5s. bound in cloth and lettered,

GREEK TESTAMENT,
WITH ENGLISH NOTES,

Critical, Philological, and Explanatory, from eminent Critics and Interpreters; with Parallel Passages from the Classics, and with References to Viger for Idioms, and Bus for Ellipses: to which is prefixed, a TREATISE on the DOCTRINE of the GREEK ARTICLE, according to Bishop Middleton, Granville Sharp, &c., compendiously explained, as applicable to the Criticism of the New Testament. The various Readings are recorded under the Text. Greek and English Indexes are added.

By the Rev. E. VALPY, B.D.

Two Plates are added,—the Travels of the Apostles, a Map of Judæa, and the City and Temple of Jerusalem.

This work is intended for Students in Divinity, as well as the Library.

"This 'Greek Testament' is the most valuable of any that has yet been published with critical and philological apparatus, especially for students who wish to purchase only ONE edition."—*Horne's Introduction to the Bible.*

"Valpy's Greek Testament" is to be preferred to either Dr. Burtons or Dr. Bloomfield's."—*Christian Guardian.*

"This is a valuable accession to undergraduates, the divinity student, and even the theologian. We cordially recommend it; and those who wish to purchase only one comprehensive Greek Testament, and that not very expensive, will find in this edition the very object of their search."—*Christian Remembrancer.*

Printed by Valpy; and sold by Whittaker and Co. London; and all Booksellers in Town and Country.

DR. DAVY'S NEW WORK.
In 2 vols. 8vo. illustrated by numerous Engravings,
price 1l. 10s. bound in cloth,

RESEARCHES; PHYSIOLOGICAL and
ANATOMICAL.

By JOHN DAVY, M.D. F.R.S.
The principal subjects treated of are Animal Electricity—Animal Heat—The Temperature of Different Animals—Pneumathax in connection with the Absorption of Gases by Serous and Viscous Membranes—The Properties of the Blood in Health and Disease—The Properties of different Animal Tissues—The Putrefactive Process—The Preservation of Anatomical Preparations—The Effects of the Poison of certain Serpents—The Structure of the Heart of Batrachian Animals, &c. &c.
Smith, Elder, and Co. 65 Cornhill.

Price 2s. 6d.

THE ORACLE OF RURAL LIFE, and
SPORTSMAN'S and COUNTRY GENTLEMAN'S
ALMANACK for 1840, with Twenty-six Illustrations, referring to the Sports, Occupations, and Astronomical Features of the various Seasons of the Year. The great Circulation of the "Oracle" for 1839 has induced the Proprietors to extend the range of Intelligence embraced in the Volume for that Year; and, besides the introduction of several new features of interest, to add to the Number of Embellishments which that Volume contained. Twelve Woodcuts, illustrating, under the heads of the several Months, the respective Signs of the Zodiac proper to each.

"We have great pleasure in recommending it to our readers, as extremely well deserving their patronage. It contains a vast variety of information, not only interesting, but indispensable, to sportsmen of all classes, combining a miscellany rarely equalled for utility."—*Bell's Life.*
London: A. H. Baily and Co. 83 Cornhill.

Royal 4to. 6s. boards, large paper Indian Proof, 5l. 6d. boards,
THE HISTORY and ANTIQUITIES of

HENRY COLBURN, PUBLISHER, 13 GREAT MARLBOROUGH STREET.

To be had of all Booksellers throughout the Kingdom.

REVIEW OF NEW BOOKS.

Almanach des Chasseurs, pour l'Année de Chasse, 1839-1840. By E. Blaze. 1 vol. 18mo. Paris. Tresse, Palais Royal.

THE month of September has commenced most auspiciously for the French sporting world: the weather is delightful, the crops are all got in; there is abundance of game, and there are so many improvements recently made in guns, powder, and shot, and all kinds of shooting apparatus, that it will be the fault of a certain unmentionable old gentleman if Monsieur le Chasseur does not achieve some splendid feats this season. Accordingly the little work which we have prefixed to our article, makes its appearance this year for the first time; and, not to omit celebrating so important an event in the literary annals of the epoch, we propose to say a word or two upon the volume after sundry prolegomena upon French sporting in general.

In former days, when the old nobility were in their proper degree of splendour, when their estates were as ample as those of the aristocracy of Germany or Britain, and when they lived in their magnificent châteaux, keeping up a grand and generous system of hospitality for all comers, no country in the world was more given to hunting and shooting, no country pursued these sports on a wider and more noble scale, than France. Her ample plains, covered with corn or vines, produced not only the partridge and the hare, but also innumerable clouds of quails, bustards in abundance, and land-rails in plenty. There were then, as there are now, two kinds of partridges, the red and the gray; and in the parks and inclosed woods, pheasants were to be found in at least as large a proportion as they were in England. In her forests France had, as she still has, the red-deer in abundance, the chevreuil, or roebuck, the wild-boar, the wolf, the fox, and in the south and east the bear. In water-birds France was always exceedingly rich, for her rivers were much neglected, and indeed still are so; and along her coasts, and up her numerous creeks, as well as all along the lowlands of the west upon the Loire, and in the north-east upon the Meuse and Scheldt, wild-fowl of every species was and is to be met with in the greatest variety and abundance. Most of these *fera natura* remain to France still, but the wilder and nobler animals are greatly diminished in number. We believe that in former times the black-cock was to be found in considerable numbers among the Ardennes and the Vosges; it is now a scarce bird: but the birds of prey, no ignoble spoil when the difficulty of killing them is taken into account, are plenty as ever; and the oldest shot will still find enough to try his skill upon, of almost every European kind of the "winged inhabitants of air." Other wild animals, generally disdained by the British sportsman, probably because he has not often got them to shoot, are still common in France. Thus badgers, otters, all kinds of polecats and that family, are common objects of pursuit with the French farmer; of rabbits we say nothing, seeing that they swarm in every copse and wood.

The great Revolution, in striking a mortal

blow at the political existence of the nobility, destroyed at the same time the social system, founded on the feudal constitution of the country. It would have been well if it had done only this, but it also broke up all the social relations, and for a time annihilated all the enjoyments of French country life. Every body has heard of the grand hunting matches that used to take place at Versailles and Chantilly; every body knows that the French monarch's hunting train was like a little army; that the sports of the field were made a serious affair of state, and that they formed fully as much, if not more than in England, the main objects of a French nobleman's life in the country. Whoever has visited the two royal palaces mentioned above, or has seen some of the larger châteaux, in various parts of France, cannot but have observed the immense space afforded to the stabling, the kennels, &c.; and we have only to dip into contemporaneous memoirs, or to examine pictures painted at the time, to be convinced that France was once as decidedly sporting a nation as any in the world. But the levelling of ranks with all its pernicious consequences, the breaking up of landed property, and the fatal regulation for its indefinite subdivision, consequent upon the equal partition that takes place among the heirs of any proprietor,—these things have entirely destroyed the race of what we may call country nobility (*noblesse de province*), and country gentlemen; effecting at the same time, as a natural consequence, the ruin of the sporting system to which we have before alluded. This is no small injury to the country, for it has tended to foster that frivolity and want of independent, manly spirit of which the French upper classes may certainly be accused. It thereby acts detrimentally upon the political condition of the nation; and, what comes nearer to our subject, it has obliterated the charming *vie de château*, which our grandfathers can still tell us used to be so agreeable a feature of continental existence. Nothing can be more insipid than the manner in which a French fashionable spends his days in the country: a novel before breakfast; billiards till three or four; possibly a walk, or a ride (if he has got a horse), till dinner; *café*; and billiards till eleven;—such is the daily round in nine French châteaux out of ten. If there be any sporting at all, it amounts to a shot at some sparrows in the *basse-cour*; rarely to a blaze at a stray lark outside the garden-wall; seldom, we might almost say never, to a ride after a stag down the straight alley of a wood. The only persons in France who keep up sporting propensities on any thing like a systematic scale, are the larger farmers, the petty country gentlemen (what few there are), and the *gardes de chasse*! An exception—an honourable one—is to be made in favour of some of the higher nobility, the remnants of the great families of olden times, who live still in the same style as the nobles of England; but the generality of the upper classes of France are as we have described them in their amusements—degenerate and even effeminate; while all that swarm of *parvenus* with which the country is infested,

are as heteroclite in their pursuits as they are in their origin. The farmer and small land-owner (still a very honest and promising class in France) is the principal person for enjoying a country life, and sporting of various kinds as its natural concomitant. He is accordingly a pretty faithful votary of Diana, and during six months of the year may be seen with his gun on his shoulder, his game-bag at his side, and his short-tailed pointer, or long wiry-haired lurcher at his heels, walking up every corner of the country. Hunting with packs, and on horseback, is nearly entirely abandoned, some bastard attempts are made from time to time, by a few English residents, but they are very poor affairs, and it may be said generally that the gun and the net are the only sporting implements now in use in France. The main fault of the French chasseur, indeed, is that he is a pot-hunter: nothing comes amiss to his bag; and when he puts up a covey of birds, he thinks nearly as much of his dinner as he does of the honour of bringing a brace of them down.

This spirit shows itself rather ludicrously at times. A Frenchman, when his mind is really bent on "going a-gunning," has no notion of flaring away his powder and scattering his shot for nothing; hence he will not only fire at every bird or wild animal he meets with, but what is more, he will eat it, whatever it may be, when he once gets it home. A fine tough jay, or a lean old crow, a blackbird, a sparrow, or even a cock-robin,—every thing is game that comes to his bag. A stray duck has no chance of salvation within range of Monsieur's artillery; and should he by any chance succeed in sneaking within killing distance of a wood-pigeon, he sets it down as a *brillant fait d'armes*. What he does himself, he teaches his dog to do; and we recollect being out once in the field with a French sportsman, when "Médore," after making a dead point of near five minutes, sprung a lark, and our Gallic companion, after blazing away unsuccessfully, ran up in ecstasy to the dog, and patting it exclaimed, "*Voilà un bon chien de flaiwer un si petit oiseau!*"

However, we are inclined to think that the French are mending in this respect; we have great hopes of the rising generation; and if, as we have no doubt, another twenty years do not pass away without a stop being put to the equal division of property system, there will be, sooner or later, a return to the habits of country life for which the French of former days were celebrated. The sooner this comes the better, for they will then learn how to make the most of their magnificent country, and something will have been done towards repairing the damage occasioned by that great political curse, the Revolution. Unfortunately, the younger branch of the Bourbons do nothing to encourage country sports: they subscribe to races, and they keep up some stud establishments; but as for hunting and shooting, *c'est une autre affaire*,—they know as little of them as they do of music. Still, we repeat, we have hopes of better things for France.

That the French chasseur looks after the pot is undoubtedly true; and a happy thing it

is for the English visitor to Paris; for he finds an abundance and variety of game in that capital that suits his palate uncommonly well. *O mihi prateritis referat si Jupiter annos!*—and the many a good dinner at Vergy's, or the Trois Frères Provençaux, that we have oft enjoyed;—when the salmis de perdrix, and the bécasses aux olives, and the faisans en croquettes, and the cailles à la financière, and the pâtés de lièvre, and the filets de chevreuil sautés au vin de Champagne, smoked on the board, and regaled our indulging person. We protest that the very memory of such things makes us sad! There is not a finer night in Europe than Chevet's shop in the Palais Royal at Christmas;—such profusion! such variety!—whole bucks; wild boars at either door, duly supported by chevreuils, and flanked by coveys of partridges, broods of pheasants, and companies of quails; a whole mountain of pâtés de foie-gras, and about a ton weight of truffled turkeys; here and there a tunny or a sturgeon; salmon and turbot lying about as common as herrings; fruit!—oh, that fruit!—and the green peas, the asparagus, and the new potatoes! and the liqueurs, and the choice wines, and all the good things in the rear!—It is enough to turn one crazy to think of it! It is a positive fact:—Dom Miguel, when he was in Paris some ten years ago, used to spend a quarter of an hour every day looking into Chevet's shop; and we, gentle reader—even our own selves—we used to do the same! *Honneur au chasseur Français! immortalité à la cuisine Française!*

While the French have plenty of excellent game to pursue, they have not been dull in making considerable improvements in their fowling-pieces, and in all kinds of sporting apparatus. We do not say that they can produce any barrels like those of poor old Joe Manton, but they have made great strides of late in the art of forging good iron for their fowling-pieces, and for adapting them in most ingenious manners to their stocks. The art of highly sculpturing the stock is now nearly gone out of fashion, or at least is confined to the manufactures of Lyons and St. Etienne: inlaid work, on the other hand, is much used; and nearly every piece now sold is made to open with a hinge of some kind or other, and to receive its charge at the breast. New safety-locks of all kinds have been invented; and, in short, very great attention has been paid to the subject: the French arms being now in finish quite equal to those of the best London makers, though, we suspect, still a good deal behind them in temper and the capability of standing service. Lepage, in the Rue de Richelieu, is undoubtedly the first manufacturer of fowling-pieces; Lefauchaux is a good one; so is Robert, the no-hammer, no-nipple, fifteen times-in-a-minute man: in short, there is no scarcity of good makers, and at moderate prices (10*l.* to 20*l.*), in the French metropolis. As to shooting-belts, shooting-gaiters, game-bags, gun-cases, &c., the French, strange as it may seem, beat us all to nothing. There is a *savoir faire* about their articles of this kind that we certainly do not meet with on the British side of the Channel; and we are surprised that several valuable hints, in common application throughout France, have not been long ago imported into England. The fact is, that in all leathern goods there is an immense superiority in favour of France.—But to our book.

Monsieur Blaze is a droll dog, as will be seen from the following pithy introduction, under the head of *Seasons*:—

"The profane reckon four seasons in the

year; sportsmen know only of two: 1. that in which men hunt; 2. that in which men hunt not. The former begins on the 1st of September, and ends the 28th February; the latter begins the 1st March, and ends the 31st August. During leap-year the hunting season lasts one day more; and, in 1840, will not be closed till the 29th February."

We then find the following:—

"*Annual Festivals*.—20th September, St. Eustache; 3d November, St. Hubert; 11th November, St. Martin; 28th January, St. Charlemagne; 28th March, St. Gontran; 6th June, St. Norbert; 31st July, St. Germain l'Auxerrois; 25th August, St. Louis.—No doubt there exist in Paradise many other saints who were huntsmen: we will use our best endeavours to find them out from the ancient legends, and will point them out to the pious observations of our readers: you can never have too many protectors in Heaven."

If this is not the right Catholic doctrine of hunting, we do not know what is. The almanack-maker then points out to his fellow-sportsman the four solemn fasting seasons of the year, according to the doctrines of the Church; and afterwards, under guise of a preface, gives us a rather humorous dissertation on Matthew Lœnsbergh, the author, or supposed author, of the "Triple Liegeois Almanach," and the "Moore"—the "Almanack Moore" of France. After the regular astronomical part of the book comes a notice of each month of the year, beginning of course with September; and at the head of each division a proverb, in a verse *plus ou moins mauvais*. This part of the work he heads by the pompous words *Cynegetical Operations*; and then informs us of all the main facts relative to the treatment of dogs, the preserving of game, hunting of ditto; the arrival and departure of migratory birds, &c. Among other maxims not to be neglected is that of having puppies vaccinated, as an infallible prevention of the distemper. He is up to the crafty expedient of putting plenty of bushes about stubble-fields to keep off poachers with nets, and, indeed, shews a laudable disapprobation of all poaching practices whenever it falls in his way. [We may remind our readers, that the law is fully as severe in France against poachers, *quoad* trespassers, as ever it was in England.] M. Blaze tries his hand in another part of his book at some prognostications, but he is apparently not up to this part of his trade: as a compensation, he inserts a collection of old proverbs upon the weather, &c., which are worthy of extraction:—

"Rougé de sére,
Béou tèm espère;
Rougé de matin,
Baigne souu vesin."—*Provençal proverb.*

"Troupe d'oiseaux, lâchant les bois,
Cherchant tant villes que villages;
Nous a bien prédit plusieurs fois,
Forté pluie et grands orages."—*French proverb.*

"Si tu te sens piqué des mouches,
La pluie va tomber sur les souches."—*Do.*

"Temps pommelé, femme fardée,
Ne sont pas de longue durée."—*Do.*

"Tant vente qu'il pleut:
Cum bene spiravit, desuper unda fluit."—*Do.*

"Boire eau point ne devez
Aux mois où R trouvez."—*Do.*

"Aux mois qui sont escripts en R,
Eau fault mettre dedans son verre."—*Do.*

"Mensibus erratis purissima vina bibatis,
R quibus est nullum, diluat unda merum."—*Lat. prov.*

The *Almanach*, towards the end, contains a life of St. Hubert, the great patron of all hunters, and a cut of the miraculous stag with a crucifix between his horns, the sight of which in a forest led to the conversion of the huntsman Hubert, and ultimately opened for him the

gates of Paradise. The book is terminated by a very useful table, regularly scored and lined, for entering day by day, in every month of the year, each head of game killed by any individual; and as the list of names is curious we shall give it, as shewing what sort of game is to be met with in France at the present day:—

"Stags, wild-boars, wolves, chevreuils, foxes, badgers, hares, rabbits, polecats, weasels, pheasants, red partridges, gray ditto, quails, land-rails, water-rails, water-hens, wild ducks, black-cocks, woodcocks, snipes, red plovers, green ditto (lapwings), hawks, ring-doves, turtle-doves, magpies, and jays."

We shall only add, that it is well worth while for a British sportsman, tired of the monotonous routine of partridges and pheasants, hares and rabbits, of England, to go over to France for the shooting season, where the immense forests which abound are sure to afford him excellent diversion. A few five-franc pieces judiciously distributed among the *gardes de chasse* of the royal forests, or perhaps a napoleon or two upon occasion, with a couple of good dinners to the country gentlemen and landowners of any particular district, will open all the sporting riches of the land to any person, even a stranger, and particularly to a foreigner.

Heath's Book of Beauty, 1840: with beautifully finished Engravings. Edited by the Countess of Blessington. London, Longman and Co.; Paris, Fisher and Co.

LADY BLESSINGTON deserves an editorial palm, not only for her own writings, but for the taste and skill with which she musters her company of contributors. No Serjeant Plume ever recruited more successfully than the fair "White Serjeant" of the *Book of Beauty* has done; and filled up the rank and file from so many quarters, with so good-looking, though various, a poetical and literary squad. A glance over the contents of this year's volume will prove the case.

"The Valley of Thebes," by B. Disraeli, is a striking Egyptian sketch. "The Wife to the Wooer," by Sir E. L. Bulwer, a short poem containing the matter of a long tale, and in this respect, a very original ballad. "The Lottery of Life," by Mr. R. Bernal, is truthful and unadorned. Circumstances of a sorrowful character are related without an attempt to make them more impressive by high-wrought description. An "Imaginary Conversation" by Landor (Milton, Galileo, and a Dominican), is worthy of his fame in this species of composition. A Turkish Tale, by Miss Romer, deserves our praise; and "The Jilt," by Miss L. H. Sheridan, contains some fine reflective passages, but is wanting in point of interest: it is more of a lesson than an entertainment, "A Traveller's Story," by J. R. Chorley, possesses no peculiar feature; and "The Dream," by Lady Blessington, shews that when she pleases to enter the lists with our best Irish story-tellers, she may take her seat very high at the board. Mrs. S. C. Hall has a companion to this in "Take it Easy;" but we have seen superior productions of the same kind from the same pen. "The Improvident," by Captain Daniel, is the life and execution of a French *roué*, remarkable in incident, and well told. "The Maniac," by Miss C. Toulmin, is a forcible poetic picture; and "Love and Nature," by Mr. Milnes, a sweet little poem. "Titian's Dream," by Mr. Hume Plunkett, is an appropriate anecdote of the painter, and described with due enthusiasm. "Russian Sketches," by Lady Londonderry, as before, real and well chosen. "A Legend," by Lord

W. Lennox, is a simple tale of lowly condition, tragic in itself, but narrated with commendable simplicity. Mr. H. L. Bulwer gives us "A Strange Story," and, sooth to say, it is not only strange, but abrupt and broken enough to puzzle us. "The Fatal Hand," by Colonel Henry Webster, is a brief but stirring piece, not spun out, and concluding with effect. "El Noviazgo," by Mr. F. Cuthbert, a pleasant sketch of Spanish manners, especially as regards their early affiances and long courtships; and "An Arabian Tale," by Mr. Wilkinson, though founded on the use of familiar supernatural gifts, very consonantly finishes the text in this handsome specimen of binding, with, as it will after our catalogue be allowed, an inside to match. We have forborne to enumerate a number of slighter productions, the verses made to the portraits, and a few others. The portraits themselves are twelve in number, by Chalon (5), Boetock (3), Lucas, Robinson, Fisher, and Holmes (one each).

We have now only to select a few examples of the literary merits of this pictorial volume. First, from Lander:—

"*Galileo*.—Speak freely; and I will speak freely too. In no other man's presence, for these many years, indeed from my very childhood, have I done it. *Milton*.—Sad fate for any man! most sad for one like you! the follower of Truth, the companion of Reason in her wanderings on earth. *Galileo*.—We live among priests, and princes, and empoisoners. Your dog, by his growling, seems to be taking up the quarrel against them. *Milton*.—We think and feel alike in many things. I have observed that the horses and dogs, of every country, bear a resemblance in character to the men. We English have a wonderful variety of both creatures. To begin with the horses: some are remarkable for strength, others for spirit; while in France there is little diversity of race; all are noisy and windy, skittish and mordacious, prancing and libidinous, fit only for a rope, and fond only of a riband. Where the riband is not to be had, the jowl of a badger will do: any thing but what is native to the creature is a decoration. In Flanders you find them slow and safe, tractable and substantial. In Italy there are few good for work, none for battle; many for light carriages, for standing at doors, and for every kind of street-work. *Galileo*.—Do let us get among the dogs. *Milton*.—In France, they are finely combed, and pert, and pettish; ready to bite if hurt, and to fondle if caressed; without fear, without animosity, without affection. In Italy they creep and shiver and rub their skins against you, and insinuate their slender beaks into the patronage of your hand, and lick it, and look up modestly, and whine decorously, and supPLICATE with grace. The moment you give them any thing, they grow importunate; and the moment you refuse them, they bite. In Spain and England the races are similar; so indeed are those of the men. Spaniards are Englishmen in an ungrafted state, however with this great difference, that the English have ever been the least cruel of nations, excepting the Swedes; and the Spaniards the most cruel, excepting the French. Then they were under one and the same religion,—the most sanguinary and sordid of all the institutions that ever pressed upon mankind. *Galileo*.—To the dogs, to the dogs again, be they of what breed they may. *Milton*.—The worst of them could never have driven you up into this corner, merely because he had been dreaming, and you had disturbed his dream. How long had this endured? *Galileo*.—I sometimes ask

God how long. I should repine, and almost despair, in putting the question to myself or another. *Milton*.—Be strong in Him, through reason, his great gift. *Galileo*.—I fail not, and shall not fail! I can fancy that the heaviest link in my heavy chain has dropped off me since you entered. *Milton*.—Let me then praise our God for it! Those alone are not criminal who placed you here, but those no less who left unto them the power of doing it. If the learned and intelligent in all the regions of Europe would unite their learning and intellect, and would exert their energy in disseminating the truth throughout the countries they inhabit, soon must the ignorant and oppressive, now at the summit of power, resign their offices; and the most versatile nations, after this purifying and perfect revolution, rest for ages. But, bursting from their collegiate kennels, they range and hunt only for their masters; and are content at last to rear up and catch the offal thrown among them negligently, and often too with scourges on their cringing spines, as they scramble for it. Do they run through mire and thorns, do they sweat from their tongues' ends, do they breathe out blood for this? * * * *Galileo*.—

There are worse evils than blindness, and the best men suffer most by them. The spirit of liberty, now rising up in your country, will excite a blind enthusiasm, and leave behind a bitter disappointment. Vicious men will grow popular, and the interests of the nation will be intrusted to them, because they descend from their station, in order, as they say, to serve you. *Milton*.—Profligate impostors! We know there are such among us; but truth shall prevail against them. *Galileo*.—In argument, truth always prevails finally; in politics, falsehood always; else would never states fall into decay. Even good men, if indeed good men will ever mix with evil ones for any purpose, take up the trade of politics, at first intending to deal honestly; the calm bower of the conscience is soon converted into the booth of inebriating popularity; the shouts of the multitude then grow unexciting, then indifferent, then troublesome; lastly, the riotous supporters of the condescending falling half-asleep, he looks agape in their faces, springs upon his legs again, flings the door behind him, and escapes in the livery of Power. When Satan would have led our Saviour into temptation, he did not conduct him where the looser passions were wandering; he did not conduct him amid flowers and herbage, where a fall would have only been a soilage to our frail human nature; no, he led him up to an exceedingly high mountain, and shewed him palaces and towers and treasures, knowing that it was by those alone that he himself could have been so utterly lost to rectitude and benevolence. Our Saviour spurned the temptation, and the greatest of His miracles was accomplished. After which, even the father of lies never ventured to dispute His divine nature. * * *

Milton.—Suffer me still to bend in reverence and humility on this hand, now stricken with years and with captivity!—on this hand, which Science has followed, which God himself has guided, and before which all the worlds above us, in all their magnitudes and distances, have been thrown open. *Galileo*.—Ah my too-friendly enthusiast! may yours do more, and with impunity. *Milton*.—At least, be it instrumental in removing from the earth a few of her heaviest curses; a few of her oldest and worst impediments to liberty and wisdom—mitres, tiaras, crowns, and the trumpery whereon they rest. I know but two genera of men, the apical and

the perennial. Those who die down, and leave behind them no indication of the places whereon they grow, are cognate with the gross matter about them; those, on the contrary, who, ages after their departure, are able to sustain the lowliest, and to exalt the highest, those are surely the spirits of God, both when upon earth and when with Him."

We now turn to "The Dream," by Lady Blessington, which we cannot disturb by abbreviating or cutting down:—

"And ye love him still, Kathleen?" "Faith I do; and sore against my will, too, sometimes: but troth, mavourneen, for the life of me I can't help it." "Yet, sure, haven't ye told me, that he's as cross as may be when he hasn't the drop of drink, and as cross as can be when he has it, that he neglects the childer, and snaps his fingers in ye'r face, when you want to keep him from the Don Cow; and after all this ye love him? Well, for my part, I'm but a lone woman, to be sure, and never knew what it was—God be praised!—to have a man on my own floor, houlding out against me, ever since I lost my poor father—pace be to his soul!—last Christmas was eleven years; but I think I could no more bear with such treatment as you put up with, Kathleen, then I could fly." "Aragh cuishlamachree; it is because you've been a lone woman, and have not been used to have a man on your floor, houlding out against you, that it seems so hard to bear. One gets used to every thing in the course of time; and many is the thing that seemed disagreeable enough at first, that has come so pleasant at last, that sure one has got to like it." "That's what my poor ould granny used to say, in regard to the snuff." "When I began to take a snishen at first," said she, (may the heavens be her bed this blessed night!) "I didn't like it much; but after I had taken it for some time, faith I got used to it, and liked it; and many's the lonesome hour it has helped me over." "Well, thin, so it is with a husband's ways; one feels a sauncy word, or an impudent shake of the head, just ready to answer him: but if one has the luck to keep in both, sure 't will be a great blessing." "But how did ye find out the craft to keep 'em in, Kathleen? For, troth, they come so quick to me, whinever I'm vexed, that off they go, whether I will or no." "Well, then, Pegg asthore, I'll tell you how it all happened. Though, as 't was only a dream—a simple dream, mayhap you'll not think so seriously of it as I did. But dreams come direct from heaven; becase, as they appear to us when we are asleep, and can't help ourselves, it's clear that God, who always protects the helpless, sends 'em to us. Besides, sure, though the body is asleep, the soul is awake, and can better understand the thoughts that God sends when she is not bothered by the foolish rhaumeshe of the poor weak creature she is forced to lodge with for a time on this earth. Sure, Peggy, sleep is like death; it is a solemn and a holy thing, blessed be the Giver! And as in death the truth is shewn to us, so in sleep, the truth, or the shadow of truth, may be revealed, which, in our waking hours, we are too busy with bodily wants to listen to as we ought." "Then faith, Kathleen, it's yerself that's the quare woman to be believing in dreams! But tell me what it was you dreamt, avourneen." "'T was a fine summer evening, Peggy, as ever shone out of the heavens. The bees were flitting about from flower to flower, and saying, with their pleasant voices, 'What a sweet life we lade!' The birds were singing such music, that those

who have once listened to it with the ears of their hearts, want no better. And the red sun was going to bed, behind purple curtains, fringed with gold, richer than any king's, when I sat at the open window,—that same window, Peggy, that you now see. The sweet smell of the flowers came to me; the brown cuckoo hopped over the field, and repeated his cry as clear as could be; the cows lowed in the distance, and every bird and baste,—ay, and the little tiny crathurs, that are smaller than the birds, might be heard too—all was so still and calm. Oh! in such summer-nights one may hear the voice of God, if one keeps one's mind quiet, and looks up to heaven! But my mind—God forgive me!—wasn't quiet, for I was vexed and angry. 'Well,' says I to myself, 'here I am, this beautiful night, and Andy promised he would come home before the sun had gone to bed; and there, he has drawn his purple curtains, and put out his blessed light, and yet the man of the house does not come to me! Sure, 'tis to the Dun Cow he's gone, to drink with them limbs of the devil; and this is the way that a poor woman is kept, like a mhoonann,* watching the long hours, while he's spending the thrife he's airn'd!' With that, up gets the anger in my breast, and the heart of me began to bate, and my cheeks got as hot as a lime-kiln. 'I'll go afther him,' says I, 'to the Dun Cow, and give him a bit of my mind—that I will!' But then I began to remember that Biddy Phelan used to go afther Mick, her husband, until he got so used to it, that he would say he couldn't go till Biddy came for him; and I said to myself, 'It shall never be said that I, a dacent girl, wint afther my husband to a shibeen shop.' 'But, thin, 'twould sarve him right, and maybe taich him better,' whispered the Evil Spirit in my ears, 'if you were to spake to him afore the wild boys he's dhrinking with; and I up, and threw the tail of my gound over my shoulders, and crossed the threshold. 'If he should speak crossly to you, Kathleen, before all them chaps, wouldn't it be a terrible downfal to ye?' said a little voice in my heart, no louder than the humming of a bee. 'Faith, 'tis yerself that's right enough,' said I; and I let down the tail of my gound, and begun to cry like a child. Well, I cried till I fell fast asleep; for, though people say that sleep seldom comes to the eyes that have been shedding tears, I have always found the contrary; and I remember the last thought I had afore I slept was, 'What a baste my husband was to lave me alone, while he was spending his airnings at the Dun Cow! I slept, and I dhrreamt that I was so angry with him, that I prayed to God to take him to himself; for that I'd rather lose him intirely, than have him continually laving me to go to the Dun Cow to throw away his money. 'Well, you shall have your will, honest woman,' says Death to me; and mighty strange it was, Peggy, I did not feel in the laste afraid of Death then, though the thoughts of him ever makes me feel a could shiver when I am awake, and look at those I love. 'But remember,' says Death, 'that once I have granted your prayer, you'll never see your husband again, except a corpse.' With that I saw my poor boy laid in his bed—our bed, where I came to him a bride, and where my arm had supported his poor aching head through many a long weary hour when he had the typhus fever. His face was as pale as marble, Peggy, when the moon is shining on it in the churchyard. His hair was like the boughs of the willow, wet and drooping with

* A fool."

the heavy dews of night; and his lips were cold and silent as the grave. Oh, God! I shall never forget what I felt, when I looked at him in that moment. I threw my arms around him—my hot tears drenched his frozen face—I called him by every tender name—but he answered me not, he heeded me not. The memory of all our love—the happy hours of our courtship—and the more happy ones when I first stood on his floor as a wife, came back to me; and I thought I had never really truly loved him before, as I now did. And there he lay, with that beauty on his pale and lifeless face, that Death gives when he has struck the blow, just as if he wished to make us more sorrowful for what we have lost. I tried all I could to remember how often my poor boy had vexed me, in the hopes of its stopping my grief; but—would you believe it, Peggy?—I could call to mind nothing but all the fond words and the loving actions of him, until my very heart seemed breaking, and I prayed to God either to restore him to life or to take me with him. 'Remember, woman,' said a voice that sounded like the wind when it comes sighing through a wood, when first the leaves begin to fall, 'remember that I told you, if I granted your prayer for his death, you should never see him again but as a corpse.' Oh! how terrible did the words strike on my heart! and then I felt the fearful power of him the priest called the King of terrors. 'I'm thinking,' says he, 'tis yerself that's sorry enough for your wickedness in wishing for his death; but it's too late now. You couldn't bear to lose him for an hour or two at the Dun Cow, but now you must lose him for ever and a day. You'll see his playstant smile no more, nor hear his loving voice.' 'Andy, Andy, cuishlamachree, don't lave me! don't lave me!' cried I, like one that had lost all reason, and the big tears running down my cheeks! 'Faith, and I won't, my darlint,' said a voice, the sound of which I never expected to hear again in this world. 'Sure, here I am, my colleen dhas; and he hugged me against his warm heart, for it was no other than Andy himself that had come home from the Dun Cow, and all the trouble I was in about his death was a dhrream. From that night I have never scoulded him, nor said a cross word about his going to the Dun Cow; for, whenever an angry thought was coming into my head, I remembered my dhrream, and thanked God he wasn't dead. Oh, Peggy, dear! Such warnings as that are blessed things, and teach us to bare and forbare. Praise be to His holy name who sends 'em!'"

We give the two last stanzas of Miss Toulmin's "Maniac":—

"One eve I wandered to a rock which overhangs the sea,
And stands unshaken by the storm,—the dearest spot to me;
The sea-birds fled (all had their nests), for near the tempest's birth
Each mad wave kiss'd a lowering cloud, and all was noisy mirth.
I strove to mingle in the flood, but demons held me down,
And then, with regal pomp, they placed this heavy iron crown!
My throne an ebon cloud they made—I'd vassal subjects too;
The waves bowed in obeisance, and passed beneath my view;
And still uprose the hurricane, and heaved each snowy crest:
I thought the storm almost as wild as that within my breast!
And now it burns into my brain, and bows my spirit down;
Oh! Death will surely take away this heavy iron crown."

Of Mr. Milnes's poem our allotted space obliges us to make illiberal use:

The Scottish Highlands:—

"Our spirits followed every cloud
That o'er it, and within it, floated;
Our joy in all the scene was loud,
But one thing silently we noted:—
That though the glorious summer hue
That steep'd the heath and dale scarce be brighter,
The blue below was still more blue,
The very light itself was lighter."

A sweet train of thought:—

"There is a beechen tree,
To whose thick crown, a boy, I clomb,
And made me there a birdlike home,
To sing or ponder free.

There is a jasmine bower,
Whence you did see me, trembling, tear
One spray, to mingle with thine hair,
And loved me from that hour.

Nature has odours none
Like those in me: let some of each,
Of jasmine flowers and leaves of seech,
Adorn our house alone.

Where'er about the world we roam,
With heart on heart, and hand in hand,
Each dwelling has the face of home,
Each country is my native land.

With glad familiar looks, I greet
Places and sights unseen before;
And wandering brook, and winding street,
I follow as if past of yore.

But if some chance or duty calls
Thee from me, then how great the change!
I hardly know my father's halls,
My mother's very smile is strange.

Dead words become the books I read
With most delight while thou art near;
I seem thy present love to need,
My dearest friendships to endure."

For our finale we adopt Sir E. Bulwer's lines, entitled "The Wife to the Wooer":—

"Well, then, since scorn has failed to cure
The love you press so blindly,
For once your reasons I'll endure,
And answer follies kindly:

I'll grant that you, more fair and gay
Than Luke to some may be;
But light itself, when he's away,
Is never gay to me!
Then go—then go: for, whether or no
He's fair, he's so to me!

Its words your summer-love may wreath
In florid smiles and gladness,
His lips, more often, only breathe
The trouble and the sadness.

But, ah! so sweet a trust to truth,
That confidence of care!
More joy one grieve of his to soothe,
Than all your bliss to share.
Then go—then go: for, whether or no
He grieve, 'tis bliss to share!

You say that he can meet or leave
Unmoved—content without me;
Nor reck what maids Neglect may weave—
Too heedless ev'n to doubt me.

Ah, jealous cares are poor respect!
He knows my heart, my guide;
And what you deem is to neglect,
I feel is to confide!
Then go—then go: for, whether or no,
I'll think he does confide.

And Luke, you say, can sternly look,
And sometimes speak severely;
Your eyes, you vow, could ne'er rebuke—
Your whispers breathe austerely.

How know you of the coming cares
His anxious eyes foresee?
Perhaps the shade his temper wears
Is thought for mine and me!
Then go—then go: for, whether or no,
His frown has smiles for me!

But Luke, you hint, to others gives
The love that he denies me;
And hard, you say, in youth to live,
Without one heart to prize me!
Well, if the parent rose be shed,
The buds are on the stem;
My babes—his love can ne'er be dead,
Its soul has fled to them.
Then go—then go:—His rival? No:
His rival lives in them!"

Australiana: Thoughts on Convict Management, and other Subjects connected with the Australian Penal Colonies. By Captain Macnochie, R.N. K.H. 8vo. pp. 222. London, 1830. Parker. *Supplement to Thoughts on Convict Management.* Idem. Hobart Town. Pp. 16.

CAPTAIN MACNOCHIE'S position and intelligence render him an important authority

upon the great questions involved in this discussion; and it behoves all who are interested in them to afford this volume the attention its matter and observations so eminently claim. The almost single argument of the writer is "to urge the superiority of moral influence to physical coercion, where intelligent beings are to be controlled or guided; or, in other words, to recommend that it be sought to restrain men rather by making virtue easy and good conduct pleasant, than merely by making vice difficult and misconduct painful. To the error of reversing this process altogether,—making virtue almost impossible, vice easy, temptation irresistible, concealment consequently the chief object on one side, and mere detection and punishment on the other, I attribute almost exclusively the painful results of the existing system of convict management."

And the writer adds, "When a man breaks his leg, however rashly or carelessly, we have him into an hospital, and cure him as speedily as possible, without ever thinking of modifying his treatment so as to make his case a warning to others. We here think of the individual, not of society. But when a poor fellow-creature becomes morally dislocated, however imperious the circumstances to which he may have fallen a victim, we abandon all thought of his welfare, and seek only to make 'an example' of him. 'We think of society, not of the individual.' I am persuaded that the more closely and critically we examine this principle, and whether abstractly, analogically, or, above all, Christianly and politically, the more doubtful will it appear; yet it lies at the root of nearly all our penal institutions, and the reasoning on which they are founded. Moderate, certain, duly proportioned, and judicious punishment—enough, if accompanied by moral and religious instruction, to produce penitence, but not resistance—and especially if followed by circumstances moderately favourable to further improvement, not extravagantly opposed to them,—such a punishment must confer the greatest benefit on any criminal; and society will also derive benefit from it, in a small degree from the example which it will set of preliminary suffering consequent on crime, in a much greater degree from the example of its successful application, and directly also by the exchange of a bad citizen for a good one. And these are legitimate social benefits, because based on a benefit, not an injury, conferred on an individual member of the society obtaining them."

In these two short quotations we have exhibited the gist of Captain Maconochie's views; but, with our limited knowledge, we cannot take upon ourselves to decide upon their expediency and practicability. Of the first, however, we have little doubt: of the last, our information does not enable us to determine. One of the chief elements towards a right decision is adduced in the following:—

"On Degradation, as an element in Punishment.—There appears to me to be an essential, almost obvious, yet much overlooked error, in annexing unnecessary degradation to punishment, which cannot be too strongly pointed out and deprecated. It is Vice that degrades; and though punishment, as pre-supposing past vice and present subjection, is, by the prejudices rather than the reason of mankind, considered degrading also, yet, being of the nature of an atonement, it ought not, abstractly, to wear this aspect (any more than the payment of a just debt, or other compensation for wrong inflicted); and in the case of our children, and others in whom we are really interested, it does

not wear it, the natural impulse and principle of kind and judicious parents being not to aggravate the infliction of punishment by disdain, but, on the contrary, to prove, by concurring care and kindness, that it is awarded on principle, and not in passion. There is thus nothing in the theory of rightly understood punishment (viz. benevolent chastisement, to deter others, as well as the criminal himself, from a repetition of offence) which justifies the annexation of unnecessary degradation to it; and in its practice there is this unanswerable objection to such annexation, that it chiefly affects the best men, and has a direct tendency to reduce them to the level of the worst. It thus wants every quality which a good punishment ought to have, and seems to have every one which it ought not to have. It is unjust, unequal, oppressive in the inverse ratio of demerit, generally deteriorating, and productive of bad feeling both in the inflictor and sufferer. It creates and nourishes pride, self-righteousness, and supplies a field and occasion for the indulgence of arrogant and vindictive passions in the former: and, when felt at all, it bitterly wounds the latter, and gives every human sentiment within him a morbid and vindictive action. It is thus as opposed as possible to all that, in reverence, we can conceive of the moral government of the universe by its Great Creator; makes all parties worse; and, sowing the wind, we have only to look at the social condition of the penal colonies, in which it at present abounds, to see that it reaps the whirlwind."

Captain M. represents the punishments in the penal colonies to be very unequal, and the most severe falling upon the good instead of the bad; and he denounces domestic slavery as a certain means of demoralising both master and slave. He also points out the disadvantages arising from the numerous importation of free emigrant labourers, and mixing them up with thieves. The remedies suggested by Captain Maconochie are well sustained by his reasoning; but beyond that we can only conjecture the consequences. The difference of the sexes seems to offer some doubts of their applicability to both; but, again professing our incompetency to pronounce upon it, we can only earnestly repeat our recommendation of this volume to the consideration it so justly merits.

Palmario; or, the Merchant of Genoa. By the Author of "Tales of an Arctic Voyager," &c. &c. 3 vols. 12mo. London, 1839. Boone.

THIS is a production almost *sui generis*. A tale intended to illustrate the state of society in the twelfth century, when, after darker ages, a portion of the light of civilisation began to illuminate different quarters of the earth, and nowhere so much as Italy. The author supports his narrative by notes of much interest and value as miscellaneous reading; and if he does not thereby entirely make out his assertion that his facts are reconcilable with history, he certainly goes far to shew that they might consist with the romances and ideas accredited at the time.

Thus his merchant, Palmario, upon whom, in early life, Fortune pours her whole cornucopia, and then leaves him to be blasted by every shape of calamity, may be restored to greater affluence than ever by a ship-load of gold and diamonds brought from America; for such were the dreams of the age: but the actual truth would not admit of such a possibility. But, after all, the object of the writer is attained if he creates an interest for his

hero, and we peruse his various adventures with an eagerness to learn how they terminate. In this we think he has fairly succeeded, and there are many parts of his relation written with force and feeling. His character of Pelasgo, an Italian Dominie Samson of 700 years ago, is also well drawn; and as much may be said for that of the Lombard Baron of Tarentum, Ghisolfi, in whom is represented the turbulent, armed leaders of very lawless military bands. The general tone of the observations is also sensible and pertinent; and with the information conveyed throughout by the picture of Europe incidental to the story we would recommend *Palmario*, both as an entertaining and instructive publication.

We will select a few specimens of its merits. Speaking of the rising wealth of Palmario we are reminded:—

"The earliest bankers in Europe were the Jews of Lombardy, who, from mere money-changers seated on a banco or bench in market-places, had become extensive lenders of and dealers in money, and had spread themselves into every town of consequence in the then civilised world; and from them, as is universally known, one of the streets in London long inhabited by bankers took its name. This trade in money was too lucrative to escape the Genoese; they soon adopted it, and their bank of Saint George became, in after-ages, so rich, that the monarchs of the continent often depended upon it more than upon their revenues for fitting out their expeditions."

The description of the heroine, the sister of Ghisolfi, offers another example:—

"The person of Rosamunda was noble, and perhaps shewed more of the Lombard descent of her family than all the actions of her brother; the pure blood of the north circulated in her cheeks, and her high polished brow, her brilliant complexion, her mild blue eye, and her long fair hair, all denoted her Scandinavian extraction. She possessed also, in a high degree, those lofty ideas of female modesty and decorum, which distinguished the daughters of the northern conquerors so advantageously from the women of the degraded Romans; the introduction of which into the world was, perhaps, more than an equivalent for the arts and knowledge that were lost by the triumph of the barbarians, and to which modern society owes all the elegance and polish that raises it above the sensuality of antiquity. This delicacy and refinement of mind shed a thousand nameless graces over every thought and every action of Rosamunda, and Palmario had not been many minutes in her company, when he began to draw comparisons between her and the dames of Genoa, very little to the advantage of the latter; for, whatever may be the benefits of commerce, it certainly does not tend to refine the female mind from the impurities of human nature,—a circumstance that arises, probably, from seeing every thing measured by the standard of profit and loss. Nor is this deficiency of delicacy recompensed by the extended knowledge of worldly matters, that is sometimes found in the females of commercial nations; modesty, elegance, and strict propriety of sentiment, being the only virtues that can render the sex lovely and attractive, and divide them from their coarser male companions. Though Rosamunda possessed all these qualifications in a high degree, she was not deficient in knowledge; she had even acquired more of that kind of information dearest to Palmario than any other woman he had hitherto seen. But a few years had elapsed since Naples had ceased to form part of the

Eastern Empire; the language, therefore, and the learning of Greece, were familiar to many of the Neapolitans, and in the nunnery where Rosamunda had been educated, Greek was spoken and Greek books were read. She had, in consequence, acquired both the language and the information of the politest nation of antiquity; but happily the purity of the nuns, and her absence from that iniquitous theatre Constantinople, had guaranteed her from the corruptions of the then modern Greek females—corruptions, of the existence of which she was totally ignorant: for as she only knew their character through the medium of books, she believed that it included all that the poets have imagined of feminine virtue and loveliness. This, however, did not form all the accomplishments of Rosamunda. From the vicinity of Naples to the seat of empire, it reflected strongly the light of the sciences which yet found an asylum in that capital; and innumerable little arts were consequently known and practised there of which the rest of Italy was ignorant, and in all these she was extremely skilful. Such was Rosamunda Ghisolfi."

On Palmario's being reduced to bankruptcy, the author says:—

"It is too much the custom of commercial countries to impute crime where there is only misfortune. Palmario was no sooner known to be a bankrupt than all those who had fawned upon him, and all who had attempted to imitate him, began to discover some gross error in his conduct, from which they thanked Heaven their own was totally exempt. One blessed the saints that he had never learned Greek; and that, although a Levant merchant, he had contented himself with the simple *Lingua Franca*. Another declared that, for his part, he was happy he had no love of literature, and that he thought the capacity of keeping his books and reading his misal learning enough for a trader; and a third observed satirically, as he thought, that none but a man of Palmario's powerful intellect could comprehend the pleasure of retaining about his house a stupid clerk, who could scarcely draw a bill or write an invoice without committing some gross and palpable mistake—for poor *Pelagoso* now came in for his share of blame. But 'as the ship so the boat,' added these sagacious observers; and, indeed, it seemed to be the general opinion, now that the merchant was ruined, that he knew nothing of business. Others there were, who remarked that wine tasted as pleasant to their ignorant palates out of a horn or a cup of simple earth as from an antique drinking vessel decorated with bas-relief, and cooled as effectually at the bottom of a well as in an Egyptian sarcophagus; and that they were just as well pleased to see their walls hung with common cloth as decorated with pictures; their windows stopped with oiled paper as glazed with painted glass; and their shelves ornamented with a few shells, as adorned with statues and all the other trash of antiquity. The Greek and Oriental manuscripts, still in the house of Palmario, afforded matter of infinite jest to the malignant Genoese; but the grand subject on which all exalted their voices to his debasement, was his marriage with Rosamunda; and every one, however he might differ from the rest in his sentiments of the faults of Palmario, agreed to blame him here, and to laud himself that his bride had not been either the fairest or the most noble woman in Genoa. No, they all affirmed that the females of their own country, with their homely qualifications and large portions, were

good enough for them, and that they had not, or would not, sacrifice fortune to the vanity of possessing a woman whose only merit was that she understood Greek, that her hand was whiter than that of any other, or that she was the descendant of a barbarous Lombard with a hard name. Poor Rosamunda seemed to have attracted the whole fury of this storm of animadversion, and to her was laid every crime with which the ingenuity of malice could charge her husband. It was universally declared, that she had ruined him; and, as detraction is not over-correct in its assertions, the most contradictory causes were assigned for her conduct. Her retired habits were said to have originated either in pride of knowledge or in ignorance of good manners; her charity and liberality were said to be ostentation or want of knowledge of the value of money; in fact, all her actions were accounted for upon motives on which they had never been founded. At length, the accounts of Palmario were made out, all that was owing to him were called in, and his property sold by auction—a proceeding long common in Italy—to cover his deficiencies; and even at this sale an event occurred, which, though it ought to have pleased the Genoese, only served to embitter them against the unfortunate merchant. Nothing had excited more contempt and merri-ment among the creditors, than the antiquities and manuscripts in the possession of the bankrupt. At the sale several strangers appeared, who obstinately bade for them against each other, and great was the astonishment of the Genoese, when they discovered that the despised antiquities had brought a larger sum than several other things which they considered valuable; and their anger was highly excited when they learned that the purchasers were envoys from the richest merchants and nobles of the rival republics of Venice and Florence. They consoled themselves, however, by assuring each other, that the manuscripts must contain either magical or alchemical receipts; yet there were many who, forgetting that it had been in their power to retain them, declared that Palmario had been the means of reflecting disgrace upon his country, by having brought books into it to be treasured up by the Florentines and Venetians."

This is a good extract, and sufficient to test the quality of the work; but we will add and conclude with another, which is of a more touching nature. Palmario has been robbed, nearly murdered, plundered, and finally discharged, in a state of partial derangement, from a Calabrian hospital:—

"Palmario, the once grand and magnificent Palmario, issued from the great gate of the hospital in a condition as deplorable as could belong to a human being free from crime, and unconscious of any guilt that could deserve the miseries which pressed upon him. Those who had seen him in his better days would not have recognised the handsome features of Aluigi in the pale, withered, and cadaverous countenance of the hopeless pauper; nor would they have thought that his well-made and finely proportioned figure was now represented by a shrunken, stooping, emaciated, and decrepid being, who tottered along as if his limbs had been disjoined on the rack, and his body doubled on the wheel. There was now no fire in his eye, no manhood on his brow, no smile was ready to play upon his lips, no wit impatient to dart from his tongue. He crept slowly along the streets, supported

on a rude staff, the gift of one of the patients at his departure, and the rough blasts that blew aside the tatters of his garments, caused him to shrink beneath the walls for protection. But cold was not the only feeling that his forlorn situation occasioned. As he was passed by the young and giddy of either sex, they avoided him with contempt, and the more advanced in life looked severe and forbidding, as if they thought he intended to petition them for alms. Those who exposed various wares for sale on stalls followed his motions with their eyes, and shewed that they feared he would purloin their goods, and the beggars and *lazzaroni* abused him and called him an impostor. The children mocked at him, and pelted him with stones and dirt, and the very dogs smelt to him and ran off barking and howling, as from one infected. No one said a word of consolation; nor gave a look of pity, as he proceeded towards the gate of the town, which he reached just as it was about to be closed for the night, and he was ushered out by the porter, who told him that he was glad to see that such a scurvy, downcast, ill-looking scoundrel was not going to sleep again within the walls. Insult from such a wretch was almost enough to rouse the broken spirit of the merchant; he turned and frowned, as if he would instantly chastise him, but the remains of better feelings intervened, and he only repaid his abuse with a look of contempt. The world—wide, cold, and desolate, was now before Palmario. None of those fascinations which are universally connected with the idea of home drew him towards any particular spot. His mind revolted at the idea of returning to Genoa or Tarentum; for, though apparently dead to the past and the future, he yet had glimmerings of memory, and a sense of the forlorn contrast he now exhibited to his former splendid condition, which made his feelings recoil at the thought of exposing himself to the scorn of Ghisolfi, or the derision of the proud merchants who had risen upon his ruin. Besides, impressed with the belief that Rosamunda and his offspring were for ever lost, he cared for no one, and, with some of that perversity which attends a wandering intellect, he felt as if all the world were at enmity with him. He forgot his few faithful friends, and only recollected that he had been injured; and he hurried away from the haunts of man, like a wild animal whose instinct teaches it that it can never be safe but in a wilderness."

The Keepsake for 1840. Edited by Lady E. Stuart Wortley. London, Longman and Co. Paris, Fisher and Co.

UPON a similar plan with the "*Book of Beauty*," and filled by many of the same contributors, we would make this our *weekly* sheet a sort of *Annual* repository were we to go as equal length into its various contents. We will therefore only mention that there are a set of prose narratives of the usual class: "*Veronica of Castille*," by Lady Blessington; "*Count Rudiger*" (German), by J. W. Donaldson; "*Somnambulist*," by Sir J. Dean Paul; "*Windsor Dell*," by Miss Louisa Sheridan; "*Alice Mansfield*," by Lord W. Lennox; "*Lady Viola*," by Miss Camilla Toulmin; "*A Father's Malediction*," (from an Italian MS., and apparently "an owre true tale," by the Hon. Miss P.; "*The Invalid*," by Mrs. Norton; "*Beatrice*," by the Marchioness of * * *; and "*Eva, or the Slave Girl*," a natural tale of Jamaica, by the Hon. C. B. Phipps.

These are generally longer than in the "Book of Beauty," and quite forbidding any thing like illustration by extract. Lady Londonderry offers "Descriptions of Russian Palaces;" there is a graphic sketch of three days' Chamois hunting, by Lord Maidstone, and an "Adventure in Spain," with similar truth in its particulars, but without any striking point of interest.

There are also a number of brief poetical pieces by Lady Emmeline herself, Lord Gardner, Lord John Manners, Miss L. B. Smith, Mr. G. F. Berkeley, Mr. Milnes, Mrs. Fairlie, Mrs. Blackwood, Prince Rodolph Liechtenstein (lines in German), Mrs. Abdy, Lady Charlotte St. Maur, and Miss A. Farrer; of which it is altogether enough to say that they indicate refined and refining pursuits, good taste, and good feelings.

But the first and two last papers in the volume are the most novel and ornamental. It opens with some "Original Letters of Lady Rachael Russell," from the rich muniment-room of Belvoir Castle (to which our own columns have been indebted for curious and valuable papers), and concludes with a "Character of the Earl of Scarborough, by his friend the celebrated Earl of Chesterfield," from a MS. in the same collection. "An Account of a Visit to Khosrew Pacha, at his palace on the Bosphorus, and a banquet given by him to Lady E. Wortley at Constantinople, last year," is the third paper to which we have alluded; and from two of these three, with one exception, we shall confine our illustrations.

Lady R. Russell's letters are on homely subjects, with a dash or two of news. Thus to her daughter Lady Roos, at Haddon Hall, in 1700, she writes:—

"I'm glad you have got y^e picture for tho' I believe it may not be valuable from y^e goodness of y^e work, yet I doubt not but you prize it, as being y^e Grandmother, I spose you want no more tea, but if you do I can supply, for I bought one pound of the City tea, y^e bitter sorte, and being one day at Lady Sunderlands we drank tea was good I thought and saying soe she commended it highly, and then I asked her where she had, she said of Mr. Segworth t'was the best Keper in towne and she believed she could help me to a pound, but I took no notice of her saying soe, but however the day after her Lad^d was gone, hur servant brought me a pound, I asked what it cost he said 30 shil: so I found t'was not a present, I keep it close and t'other also, and if want not perhaps they shal be unopened, or at least halfe pound pots, when you come up."

A dreadful storm is thus described:—

"I have bin under great ankietie til y^e post came yesterday, for tho' Belvoir is so strong a building and I feared accidents ther as little as any where, yet so many dismal ons have fallen upon so many y^e w^od justifie a mighty apprehension. I besee God we are al wel, but the chimney where my son and his wife lay fel, and y^e bricks and soot coming downe y^e chimney made them rise at six a clock and come in my drawingroome; y^e wal of y^e garden fel next y^e field, and al y^e trees bent one side to y^e very ground. But at Stratton my losse is worse in al respects, by farmes tore to pieces, corne and hay dispersed seen hanging on y^e trees, and amongs y^e trees near the house the fir grove, as richard writes, intirely broke and tore up by y^e roots; I send Spenser tomorrow to sie if tis in nature possible to get up but a row round y^e ground. hampshire is al desolation. devon-house scapet better than any house I heare of. Many killed in country as wel as in

towne. Lady penelope wicklesse killed in her bed at ther country house, and he in y^e sam bed saved, a peice of timber falling betweene his legs, and keept of y^e bricks, but 'tis innumerable y^e mischiefs and y^e preservations; sea matters yet too uncertaine, so certaine beaumont lost, and wonderfully lamented, and 5 ships upon y^e sands, no newes yet y^e to be relyed on of Sir Shovel; I'm sorry y^e lord lost his match, but realy the present calamity takes up al my thoughts. 'Tis time to dine, so must end y^e from y^e affect. mother, R. RUSSELL."

"Tuesday 30 Nov."

The whole visit to Khosrew Pacha is too long for our purposes, but well worthy of perusal, as one of the best and most genuine accounts we have seen of Turkish high life; we can only, however, copy a few passages:—

"We found Khosrew Pacha awaiting us in the corridor. He received us with the greatest kindness and distinction, and led us to a beautiful apartment, overlooking the Bosphorus. The seraskier's costume and figure were singular and striking; the former was certainly a strange contrast to the ancient, beautiful, and magnificent dress of the Turks; it was not, however, by any means Europeanized—at least, in our eyes it assuredly appeared not to be so: it consisted of a dark blue blouse, very similar in form to the frocks worn by carters in England, and fullish trousers, with slippers, the everlasting fez of course upon his head. Khosrew Pacha's figure is certainly neither symmetrical nor imposing in itself: he is of very short stature, and is considerably bent with age, yet altogether there is something exceedingly venerable and impressive in his aspect. However chary Nature may be of her outward marks of favour, how true it is that where the stamp of glorious, God-like intellect is discerned, we at once own the influence of its mystic presence, the spell-like sway of its sublimity, and confess the human form divine:—Yes, even though the exterior be deficient in every other attribute of grace, in every other character of beauty or grandeur.

I was invited by Khosrew Pacha to pay a visit to his harem, where he informed me I should find the wife of the Prussian nobleman I have already alluded to, whom I had a previous acquaintance with, and also a Greek lady, who had been asked to join us in the capacity of interpreters. I joyfully acceded to this proposal, and the pacha immediately rose from his seat, and insisted on conducting me himself to the apartments of the ladies. I accordingly followed his highness (by which title I found he was invariably addressed by Namik Pacha and the rest) through magnificent suites of rooms, to the harem, which is generally—indeed, I believe universally—at a considerable distance from the other apartments, often separated from the rest of the mansion by an ample court. The seraskier, as he led the way through the various beautiful corridors and chambers, constantly addressed conversation to me, which he essayed to render intelligible by different signs and animated gesticulations; but, alas! I comprehended but very little, here and there a word only; however, as it appeared to me, he was chiefly attempting to explain to me the various uses and destinations of the several rooms, I answered in the best manner I was able, and we proceeded together on the most amicable terms, till I was at length consigned to the care of an exceedingly frightful-looking black slave, who wonderfully heightened his natural hideousness by a gorgon-like grin, which slowly spread over his dusk and dismal

features, like the troubled smoke of a steam-engine over the sooty monster beneath. In a few minutes I found myself at the doors of the mysterious harem, under the guidance of my singularly unprepossessing escort. As soon as the doors were opened, I was met by the seraskier's wife, who advanced with much grace and dignity to greet me, accompanied by the Greek lady I mentioned before: the seraskier's wife welcomed me in the kindest and most courteous manner imaginable. She was no longer young, but possessed the remains of very great and resplendent beauty; her features were exquisitely modelled; her complexion and skin still very fine; her eyes of Eastern darkness, depth, and softness, and her hair silky and glossy, and of a beautiful auburn hue. Her picturesque and superb costume it would be difficult to describe, and to the uninitiated in the complicated details of a Turkish lady's toilette, such description would only present a series of confused names, and afford no correct or distinct idea. I will, therefore, avoid dilating upon all the multifarious mysteries of robes, anteries, girdles, turbans, &c., and merely state that the *tout ensemble* was the perfection of magnificence and splendour, and would put all the professors of mortal millinery in modern Europe to the blush. My courteous hostess conducted me to the top of the room, and placed me by her side on a luxuriously cushioned throne-like seat, reaching along the whole length of the windows, which entirely occupied the upper end of that princely apartment, spreading from side to side, ascending from the floor to the ceiling. The Prussian baroness was seated on a chair placed on the side, and the Greek lady and her two daughters nearly opposite. As soon as I had leisure to look around me, I was struck by the brilliant appearance presented by a large semicircle of sumptuously attired slaves, who stood before us in graceful attitudes, motionless as a group of beautiful statues; no train of duchesses, and high-born damsels at court, ever displayed such wealth of matchless jewellery, I verily believe, certainly never such splendid variety of apparel; they all wore long flowing trains of most resplendent colours, and exquisite materials, loading the floor with a weight of richness. Their loose, sweeping, immense outer sleeves, hung down to their feet, finely fringed, bordered, and flowered, or starred all over with sparkling gold and silver, or wrought silk of vivid and various dyes: but have I not vowed not to be verbose on the subject of dresses and draperies, silks and satins, gold and gear? Still I must be allowed for one moment to break through the rigid rules I had shackled myself with, and to luxuriate for a few, a very few minutes, in the description of the turbans which glittered before my astonished eyes upon this occasion. The turbans!—Oh! how miserably poor, how wretchedly *jeune*, trivial, and abject are our ideas upon this fertile and fascinating subject,—the things, the petty, paltry, prosaic, flat, stale, unimaginative things we are accustomed to call by that much-abused name, are no more to be compared with the true, real, yet ideal-looking creations of Eastern fancy and taste, than the lame imitations of a London pastry-cook with the most delicate and faultless specimens of Greek or Roman architectural genius, displayed in their temples, arches, &c. How different were these aerial structures, woven by fairies and worn by hourii, from the ponderous, yet diminutive and lowly concerns, raised above the somewhat damaged foreheads of portly dowagers, or the twirled and twisted shawls, crapes, muslins, and taffetas of

most petty proportions, wreathed about the brows of Christian beauties in more civilised countries. Methought, while I gazed on the inimitable costume of these lovely Orientals, that their milliners and mantua-makers must be the butterflies; their hand-maidens and coiffeurs, the winged zephyrs,—so lightly did their fantastical head-dresses rest upon their polished brows, almost seeming to flutter around them, to tremble to every breath, to waver with every slight movement; they were composed of transparent gossamer-like stuffs; light as the mist of the morning—the foam of the fountain—dazzling and rainbowed with a hundred hues, of enormous size, yet so delicate, so fairy-like, that they rather seemed to float around the head, like sunny-tinged and fleecy clouds, than to be fixed upon it. No two turbans I saw in the room were alike, but all were adorned with bouquets, stars, clusters, &c. of beaming jewels, and interwoven with glossy tresses of hair, sometimes towering above the turban itself, in purposely dishevelled masses (which, however ill it may sound, produced a very striking and agreeable effect); and at other times braided among the folds and confined with knots of gems, and afterwards descending in burnished lengths of undulating beauty; in short, just as the fancy of the wearer might dictate. . . . I cannot express the kindness and attention which the lady of the mansion treated me with. Several divisions of the enormous windows had been thrown open, and she had given prompt orders to have them shut, being apprehensive that the air might be too much for me. It was not without many assurances on my part, of how much I enjoyed the refreshing breeze from the waters, instead of being desirous to exclude it, that she consented to have it again admitted into the apartment. She was constantly employed in arranging the embroidered cushions for me, and placing them in what she conceived to be the most comfortable positions, and seemed continually watching every look and movement of her guest, in her anxiety to please, and to shew her warm-hearted, kindly hospitality. She was much amused in examining my bracelets and other trinkets, among these was a heart containing some of my husband's hair. She inquired particularly concerning this; and when informed what it was, exclaimed, in an accent of astonishment, 'How much you English ladies, then, must love your husbands, to carry a little piece of their hair about with you! We Turkish wives would never think of doing such a thing!' I happened to wear that day a locket in the shape of an eagle, in which was enclosed some of Napoleon's hair; this excited her curiosity greatly, and she asked me whose hair that was. When I told her, she immediately said, 'Who is Napoleon? Is he a relation of yours?' The Prussian baroness burst out into exclamations of surprise at her ignorance (in French) to me, remarking that it was the more extraordinary, as her lord had commanded the Ottoman army against the forces of that distinguished personage. I was told, subsequently, however, that had I said Buonaparte, she would have known immediately who I meant, but that, in general, he is not known here by the name of Napoleon. I expressed a wish to see the dressing and sleeping apartments, and on this being repeated to her she smiled and said, 'We sleep in any of the rooms just as we happen to fancy at the moment. We lie down upon these couches in the same dresses we wear in the day-time.' The toilette of the Turkish ladies is always, I believe, made at the

bath; however, I could not help thinking, as I looked at the magnificent array of this stately princess, of her adopted daughter, and her attendants, with its wonderful profusion of ornament and decoration, how uncomfortable it must make their repose, at least, according to our notions of comfort."

The dinner was most lengthened and splendid—exquisite cookery, London bottled porter, and champagne included; but our fair writer returned to the harem, where the "Mistress" in sport almost tickled her to death, and she was glad to rejoin her husband, and take leave of the potent Khosrew.

"The conversation ended by Khosrew Pacha energetically observing to my husband, how ardently and anxiously he hoped that the relations between Great Britain and her ancient ally, Turkey, might daily be strengthened and improved; saying that this was the most constant wish of his heart, the fondest and most fervent of his prayers. He expatiated much on this subject, and seemed never weary of repeating how deeply he desired that these nations should be united by all the bonds of friendship and alliance. The venerable pacha then, apparently overcome by his emotions, folded my husband in a really paternal embrace, and bade us adieu with much feeling."

The exception we made is the following poetical one by Mrs. Blackwood:—

"The Lament of the Irish Emigrant."

I'm sittin' on the stile, Mary,
Where we sat side by side,
On a bright May mornin' long ago,
When first you were my bride:
The corn was springin' fresh and green,
And the lark sang loud and high,
And the red was on your lip, Mary,
And the love-light in your eye.

The place is little changed, Mary,
The day is bright as then,
The lark's loud song is in my ear,
And the corn is green again;
But I miss the soft clasp of your hand,
And your breath, warm on my cheek,
And I still keep list'nin' for the words
You never more may speak.

'Tis but a step down yonder lane,
And the little church stands near,—
The church where we were wed, Mary,
I see the spire from here;
But the grave-yard lies between, Mary,
And my step might break your rest;
For I've laid you, darling! down to sleep
With your baby on your breast.

I'm very lonely now, Mary,
For the poor make no new friends;
But, oh! they love the better still,
The few our Father sends!
And you were all I had, Mary,
My bleasin' and my pride;
There's nothin' left to care for now,
Since my poor Mary died.

Yours was the good brave heart, Mary,
That still kept hopin' on,
When the trust in God had left my soul,
And my arms' young strength was gone.
There was comfort ever on your lip,
And the kind look on your brow;
I bless you, Mary, for that same,
Though you cannot hear me now.

I thank you for the patient smile,
When your heart was fit to break,
When the hunger-pain was gnawin' there,
And you hid it, for my sake!
I bless you for the pleasant word,
When your heart was sad and sore;
Oh! I'm thankful you are gone, Mary,
Where grief can't reach you more!

I'm biddin' you a long farewell,
My Mary—kind and true!
But I'll not forget you, darling!
In the land I'm goin' to:—
They say there's bread and work for all,
And the sun shines always there;
But I'll not forget old Ireland,
Were it fifty times as fair!

And often in those grand old woods
I'll sit, and shut my eyes,
And my heart will travel back again
To the place where Mary lies;

And I'll think I see the little stile
Where we sat side by side,
And the springin' corn, and the bright May morn,
When first you were my bride!"

We have now only to speak of the engravings, twelve in number, and such as Mr. Heath is in the yearly habit of producing. We cannot very well make out the connexion of one or two of them with the text; and the fate of Ribiero is certainly a graphic curiosity, though by E. Corbould. The gentleman and his horse have tumbled over a precipice, the rider undermost, but keeping his seat in an uncommon style, whilst his sword has fallen, by its weight, considerably lower. We fear the laws of gravitation are sadly outraged by this group; which, but for its want of philosophy, is spirited and equal to any of the rest.

Reliques of Ancient English Poetry, consisting of old Heroic Ballads, Songs, and other Pieces of our Earlier Poets; together with some few of later date, and a Copious Glossary. By Thomas Percy, D.D. Bishop of Dromore. Large 8vo. pp. 307. London, 1839. Templeman; Russell Smith; and Miller.

A NEW and cheap edition of "Percy's Reliques" is a publication which we hail with satisfaction. We are the friends of useful knowledge, but we never can assent to the principle which would confine the instructive to dry information. On the contrary, we are of opinion, that the cultivation of the imagination is a great aid to the study of utility; even were we to deny to it its own inherent and noble qualities of exciting generous sentiments, improving the best feelings of our nature, and exalting humanity above the grovelling earthy portion of its composition nearer to the heavens to which it is akin. The heroism and pathos of these ancient compositions must ever produce very beneficial effects; and as pictures of life and manners, they possess striking attractions. But, as we have observed, the sentiments they are calculated to inspire may well go hand in hand with the most strict utilitarian system. The Epic of a Steam-engine, or the Pastoral of a Water-wheel, belong to poetry as well as to mechanics; and the labours of the workman are never more agreeably eased than by the burthen of a song. Thus the fire of the Muse may well relieve the scorching of the furnace, and the measure of verse the calculations of the craftsman and the contrivances of the artisan. Upon such grounds, we rejoice to see a new and cheap edition of these delightful ballads.

MISCELLANEOUS.

The Child's Book of Zoology; or, Gleanings from Natural History. By J. H. Fennell.

Pp. 230. London, 1839. Thomas; Tegg. This little piece of natural history is altogether in keeping, being printed in *Crane Court*, published in *Finch Lane*, and written by *Fennell*: with such advantages, indicating an intimate acquaintance with the subject; and we can assure our young friends that this is a capital book for them, teaching them much, interesting them much, and entertaining them much. The accounts of the animals are very pleasing, and the anecdotes respecting them very amusing and curious.

A Practical Treatise on the Human Teeth, &c. By William Robertson. 8vo. pp. 205. London, 1839. Hayward and Moore.

A SECOND edition of a work of this kind speaks well for its merits, and, in the present instance, seems well deserved. The author points out the danger of not attending to the beginning of caries at an earlier period of life than is

usually expected. His general views of the disease, and his advice to unprofessional persons, are valuable and practical, so that we can safely recommend his volume to all.

Planta Utiliores. Illustrations of Useful Plants, employed in the Arts, Medicine, &c. By Miss M. A. Burnett, Sister of the late Gilbert Thomas Burnett, Professor of Botany at King's College, London. No. I. London, 1839. 4to. pp. 6. Two Coloured Plates.

To those of our readers who knew that good botanist and good man, the late Professor Burnett, it would of itself be a recommendation of the work before us, that it is by his sister. It does not, however, require to be seen by this transmitted light; for it will gratify the most critical taste, and adds great cheapness to remarkable beauty. The present number contains the tobacco plant and the blue passion-flower, both admirably drawn and coloured with taste. The extracts from Professor Burnett's "Botany" and Hervey's "Meditations," are well chosen, and will amuse many who care but little for flowers; the fierce energy of King James's "Counterblaste," and the soft elegance of Hervey, form a curious contrast. The royal pamphleteer cries out that smoking is a custom loathsome to the eye, hateful to the nose, and harmful to the brain, and, in fact, places it pretty nearly on a level with the worship of devils; while the tender moraliser on flowers adopts the comparison of an imaginative Jesuit, and finding the circumstances of the crucifixion figured in the passion-flower, considers it as "a blooming religiouso."

It appears from the prospectus, that ornamental as well as useful flowers are to be introduced—as is the case, indeed, in the number before us; and thus the next two are to contain the deadly nightshade, the Chinese primrose, the Seville orange, and the ginger plant. We trust that the success of Miss Burnett's work may be equal to its merits.

A New Home: Who'll Follow? or, Glimpses of Western Life. By Mrs. Mary Clavers, an actual Settler. Pp. 317. 1839. New York, G. S. Francis; Boston, J. H. Francis; London, Wiley and Putnam.

This is a real view of the settlers in the far west, and, we imagine, gives a more minute and faithful account of their daily life than any book of travels that has been published. Some of the details are familiar enough, but the genuineness of the whole makes its worth as a picture of new society under new circumstances.

The Colony of Western Australia, &c. &c. By N. Ogle, F.G.S. 8vo. pp. 354. London, 1839. Fraser.

A COMPREHENSIVE account of the colony, and containing every information the emigrant would seek. There are some neat cuts of landscapes, maps, &c. The author takes a favourable view of the country and its prospects.

Rory O'More. Standard Novels. Vol. LXXVI. London, 1839. Bentley.

Now isn't it a treat to get *Rory O'More*, the celebrated Irish story, in song, in music, and on the stage, compute in a single volume? Complete did we say? nay more than complete; for the same hand which invented and traced the tale in so popular a manner, has also adorned it with all an artist's feeling and talents. "Rory's Return Home," painted by Lover, and engraved by Greathach, is a most characteristic frontispiece; and the "Farewell to the Land of the Wet" by the same, a vignette

of touching interest and beauty. Far and wide as *Rory* has travelled before, he will now greatly extend his limits.

The Encyclopedia of Rural Sports, by D. P. Blaine, Part II. (London, Longman and Co.)—Carries on the work fully in the spirit of the first number, and is replete with very various information in natural history, athletic exercises, field sports, and other subjects embraced in Mr. Blaine's comprehensive design.

Observations on the Disorder of the General Health of Females, by S. Fox, Surgeon, 8vo. pp. 132. (London, Highley.)—Mr. S. Fox maintains a curious theory on this subject; but the volume is only for medical review.

Christian Service, by the Rev. Plumptre Wilson, LL.B. Rector of Newmarket. (London, Murray.)—Dedicated to the queen, handsomely printed, and almost royally bound, the interior of this Christian work, tracing the Christian religion to its source, is not undeserving of the former patronage or the latter decoration.

Spirit of the Metropolitan Conservative Press, 2 vols. (London, Walter and Co.)—The talent and ability displayed by the newspaper press, raising its leading organs high in the scale of intellect and literature, are not undeserving of a more permanent record. It is surprising, day after day, to read such articles as the metropolitan press supplies on the very spur of the moment, independently of those graver investigations of important questions which from time to time enrich their columns. Of the present collection of Conservatism during 1839, we will only say that the party need not be ashamed of the pens by which it is supported.

ARTS AND SCIENCES. COMPRESSED PEAT FUEL.

So long ago as 1836, we called the public attention to the experiments carrying on by Lord Willoughby de Eresby, for the compression of Peat into a fuel, which should answer all the purposes of coal, in agriculture and manufactures, and become an article of immeasurable importance in vast sterile tracts of country, where the latter prolific source of industry and wealth could not be obtained. In 1837 we noticed the progressive success which had attended these operations; and in the present year reviewed a statement published by the noble lord, in which he detailed the course of his trials, alterations, and improvements, till he had reached the reward of his patriotic labours, by perfecting a machine and process of compression, fully adequate to the object he had so indefatigably and ingeniously pursued. This was a great triumph to his lordship, and one also (as we have previously shewn) of much national importance. But another result has ensued; for which, we confess, we were not prepared, and which still further demonstrates the value of this discovery. The partners of the house of Savigny and Co. in St. James's Street (so universally known and respected as one of the foremost in the Cutlery trade), have, it seems, been following up Lord Willoughby's experiments by the practical manufacture of the various articles which they produce—such articles as make English cutlery the admiration of the world, and spread them, from the finest lancet to the most ordinary knife or scissors, throughout every quarter of the habitable earth,—and what the consequence has been is so clearly and conclusively stated in the following announcement which they have issued, that we do not hesitate a moment in transferring it to our columns:—

"Improved Cutlery, Manufactured from Compressed Peat.—Messrs. Philp and Whicker (late Savigny and Co.), of 67 St. James's Street, having continued their experiments in the manufacture of cutlery, with the use of peat compressed by the machine invented by Lord Willoughby de Eresby, instead of coal, deem themselves called upon to announce the perfect success which has attended them. It is hardly necessary to say of a house so long and extensively established, and enjoying so high a public reputation, that it would not resort to such a step from selfish considerations alone, but rather for the sake of communicating the knowledge of a very valuable improvement in a class of articles in daily and universal request, and on the excellence of which so much of the comfort and well-being of society depends. Not to mention surgical instruments, instruments of science, and the more common necessities of life, it will be sufficient to apply the test to the important and indispensable production of razors, since superiority with them in-

volves superiority in every other description of cutlery. Messrs. Philp and Whicker have no hesitation in stating that such is the marked result of their experience. They have found the steel wrought from peat free from sulphur, which cannot be separated from coal, and, consequently, purer; whatever other dross or impurity there may be, working out in the process of forging. The metal, then, on being tempered, is capable of taking a finer and more permanent edge; and the trial of razors, for many months, has proved the advantage of this mode of manufacturing them over every other. Analysed by Professor Johnston, of Durham, this fuel, after drying at 300° gave, carbon, 58.663; hydrogen, 5.757; oxygen, 33.270; and ashes, only 2.310. And as the latter contained iron pyrites and other substances, it may be concluded that the presence of sulphur, if at all present, must be inconceivably small. To this fact Messrs P. and W. ascribe the admirable properties of all the steel articles, and especially razors, manipulated with the compressed peat; and they therefore venture, respectfully, to recommend them to the attention of the public."

This testimony shews how well-grounded were the anticipations on this subject which it was our good fortune first to communicate to the public, and which have also been fulfilled in other respects in foreign countries (Germany and the North of Europe); and will, we trust, stimulate further and active employment of such means of improvement and prosperity. The analysis of Professor Johnston, one among the ablest chemists of the age, goes far beyond that which was alone necessary for Messrs. P. and W. to adduce in support of their single purpose. We have read it with great satisfaction. By a careful comparison of the peat fuel with various coals; by ascertaining the properties of bulk, consumption, heat, &c. &c.; and indeed by every test to which a gentleman of his skill could subject the material, he has justified our conclusion, that for supplying motive power—for smelting, burning lime, steam-engines—for every sort of manufacture, from the most immense masses acted upon by the cunning of man to the most minute atoms which enter into his finest works—the use of this Compressed Peat is in almost all cases equal, and in many superior, to coal. Belonging to the latter is Messrs. Philp and Whicker's application of it to the execution of the most delicate cutlery; and we enjoy a sincere pleasure in disseminating the knowledge of it throughout the community at large. Dr. Buckland has expressed his apprehensions of the day (500 or 1000 years hence) when our coal-fields should be exhausted: let the learned geologist take comfort, our peat-bogs will remain and are inexhaustible!

LINNÆAN SOCIETY.

THE first of these well-attended meetings for the present season took place on Tuesday evening, Mr. Forster, V.P. in the chair.—Two papers were read; the first was descriptions of some remarkable and new insects—most gigantic—collected in Assam, by Mr. Griffith, assistant-surgeon on the Madras medical staff, and attached to the late scientific mission to Assam. The author of the paper is the Rev. F. W. Hope. The specimens from which these descriptions were taken are contained in a cabinet of insects, in the possession of Mr. R. H. Solly; the chief part of them belong to the *Longicorn* beetles, and to the group of *Lamiada* of Leach. They constitute the types of three new genera, designated by the author *Euoplia*, *Oplophora*, and *Anoplophora*. They are remarkable for their exquisite beauty of colouring, and the great length of their horns. The second paper was 'On *Cuscuta eplunum* and *Halophyta*,' by Mr. C. C. Babington. The first of these species has been recently added to the British Flora, having been gathered growing on flax near Trelydon Hall, Montgomeryshire, in August last, by Mr. Bowman. There were exhibited at the meeting a number of flower-

ing specimens of new plants from the Birmingham Botanic Garden; likewise, the young of the Fulmar, shot lately in Somersetshire; and a specimen of a rook with an elongated upper mandible. We ought also to mention specimens of a remarkable variety of *Typha angustifolia*, collected by the Rev. Prebendary Wood, in the extensive marshes situated between Deal and Sandwich. A vast number of valuable presents were placed on the table, amongst them were worthy of particular notice the continuation of Rüppel's "Fauna of Abyssinia,"—most beautiful; and Sir W. Jardine's "British Salmonide," by Lizars, equally so. Amongst the books presented was a copy of Smith's "Flora Britannica," curiously illustrated by drawings of the plants on the margin by the late Rev. Richard Dreyer, who, it appears, employed his moments of leisure in this elegant and amiable pursuit. The *Convolvulus*, and many others of our own dear old English flowers, are exquisitely delineated. This curious work was presented by the widow of the deceased clergyman.

ZOOLOGICAL SOCIETY.

CAPTAIN BOWLES, R.N. in the chair.—At the monthly meeting, held on Thursday afternoon, eleven new fellows were elected. Balance carried to November 1st, 446l. 18s. 6d. Many valuable donations to the library, menagerie, and museum, were laid on the table; amongst the more curious of the latter was the larva of an insect of the section *Lamellicornes*. In the body of which a kind of plant had taken root. Upwards of 9000 persons visited the gardens and museum during last month. The Council acknowledged a vote of thanks passed at the last general meeting, on the occasion of the favourable result of their negotiations with the Lords Commissioners of Her Majesty's Treasury, and the Commissioners of Woods and Forests, for a reduction of the rent payable on the Gardens; and also for the advantageous terms upon which the farm at Kingston had been sold. A scarcity of water having occurred in the early part of the last autumn, it was judged expedient to sink further into the chalk, for the purpose of at once securing a permanent supply. This was accordingly done, and a copious spring of excellent water has been found at the depth of fifty-two feet below the original well. Sundry works are in progress, and the collection in the Gardens at the Regent's Park is healthy.

ELECTRICAL SOCIETY.

TUESDAY, Nov. 5th. — Read, the second part of Mr. Griffin's paper, 'On the question, Why do Electrified Bodies recede from each other?' Also a paper by Mr. Gassiot, entitled, 'An Account of Experiments with an Extended Series of Zamboni's Piles.' The series employed by Mr. Gassiot consisted of 10,000, or 10 piles of 1000 each, connected together by copper wires. With this arrangement distinct sparks can be taken from either end, and a Leyden jar can be charged positively or negatively. When the connecting wires from each extremity were fastened to the inner and outer coatings of a Harris's unit-jar, the gas was charged and discharged at regular intervals, depending on the distance of the connexions of this instrument. A Leyden battery of nine one-gallon jars was charged to a considerable intensity, but not the slightest effect could be obtained on a delicate galvanometer, nor on a solution of iodine of potassium when introduced in the current. When a Harris's thermoelectrometer formed part of the complete circuit,

no action could be obtained on the liquid in this instrument; but when one of the connecting-wires was placed in one cup, and the end of the other wire brought within the striking distance, so as to produce a continued series of minute sparks, the liquid rose ultimately 4°. The sparks were passed, for some minutes, through a solution of iodine of potassium, with the view of obtaining chemical effect, but without success. Wet thread was attached to the ends of the pile, and the connexion made with platina wires; but no chemical effect could be produced with this apparatus. Whenever contact is made, or the circuit completed with a powerful voltaic battery, and the connexions are gradually separated, a beautiful and continued stream of the most dazzling flame is invariably produced—the length of the flame depending, to a certain extent, on the number of the elements used: for instance, with 360 series of the constant battery, Mr. Gassiot obtained a continued flame of 1½ inch in length, but no action could be observed until the circuit had been actually completed. With the extended series of Zamboni's pile described in this paper, a spark appeared when the connecting wires were approximated to about one-eighth of an inch; and a continued stream of minute sparks were invariably observed. In the latter arrangement, all the phenomena of the common electrical machine are obtained, without any of the properties of the voltaic battery. Mr. Walker stated that we were much in ignorance of the cause, more particularly the primary one, of the action of the dry piles. Mr. Pollock regretted that the examination of the dry piles had been so long neglected, as, otherwise, some mistaken views (especially that electric was founded upon chemical action alone) might have been corrected; and observed that the experiments of Dr. Faraday, upon induction, appeared to point out the connexion between insulating power and capacity for heat; that metals and oxide of manganese differed very much from air enclosed in the interstices of the paper, in their capacities for heat; and that such an arrangement must agree with the electric machine in having latent heat in excess, and differ from the voltaic battery, where latent heat was deficient. Mr. Gassiot's extended series was then exhibited, and also the effects above described.

BOTANICAL SOCIETY.

FRIDAY, Nov. 1. Mr. J. E. Gray, President, in the chair.—Exhibited, specimens of *Myriophyllum alterniflorum*, a plant new to the British Flora. They had been discovered at Twycross, Leicestershire, and thence presented to the Society by the Rev. Andrew Bloxam. Mr. D. Cooper handed round a specimen of the same plant found on Wimbledon Common, Surrey, in 1836. Read, a paper by Mrs. Riley, 'On the Genus *Cystea*.' The authoress has for several years cultivated the genus *Cystea*, side by side in the same soil and situation, and exposed to the alternations of the same seasons; under which circumstances they retain and display more clearly their characteristic differences, and afford a correct test of specific variety. And Mrs. Riley, having observed and carefully examined them in different stages of growth, is of opinion that Sir J. E. Smith has correctly divided them into four distinct species, viz. *C. fragilis*, *C. dentata*, *C. angustata*, and *C. regia*. In her description of the *Cysteas*, their arrangement according to Smith's "English Flora" was followed, and the remarks

of the subsequent authors were given, tending to their elucidation. The characters upon which Mrs. Riley grounded the claim of *C. angustata* to a specific difference, were—the form of the frond, in being broadest at the base; the different size of the opposite pinules, their deep acuminate divisions, with the position and permanent distinctness of the sori; and the uredosilicium being frequently found on this, but not on any other of the genus *Cystea*. We have thus selected the *C. angustata*, because, as Mrs. R. observes, it is most frequently confounded with the other species. The other three, however, were skilfully treated, and a tabular view represented the distinguished characteristics of the "four distinct species" of the genus *Cystea*, that beautiful family of Ferns.

METEOROLOGY.

To the Editor of the Literary Gazette.

Paris, October 28th, 1839.
SIR,—I have been frequently indebted to the pages of your journal both for amusement and instruction, and as you occasionally notice meteorological phenomena, I take the liberty of sending you the following account of an aurora borealis observed by me on the evening of Tuesday, October 23d, near the small town of Saverne in the Vosges Mountains, about twenty-five miles from Strasburg, in case you like to make use of it. During the whole morning there had been a heavy cold mist over Strasburg and the Valley of the Rhine, which partially cleared away towards sunset. Full moon rose without the slightest burr, white fleecy clouds passing rapidly over her face from E. to W. but scarce air enough to stir a leaf. 8 o'clock, 15 minutes, the blood-red light appeared shooting up from the horizon W. by S. to nearly the centre of the sky's arch: W. horizon cloudy, E. most brilliant greenish light. Colour of the aurora extremely vivid, till 8½, 30", when it crimsoned all the sky from W. by S. to N. but the colours less brilliant. 8 45" red arch about double the width of a rainbow, quite across the sky, from W. to E. most vivid at its W. extremity. 9 o'clock, fading away. 9 50" no trace remaining, sky cloudless. The brilliancy and intensity of the colour for the first quarter of an hour very remarkable. Weather since misty, raw, and cold.

Allow me to take this opportunity of expressing to you the high sense I entertain of the courage and perseverance you have manifested in the exclusion of all political bias from your literary criticisms.—I remain, &c.

R. GROSVENOR.

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, 31st October, the following degrees were conferred:—

Doctor in Civil Law.—W. F. White, Trinity College.
Masters of Arts.—G. Moyle; Rev. R. F. Humphrey, Lincoln College; H. S. Baker, Exeter College; D. C. Legard, Scholar of University College; J. W. Nicholl, Jesus College.
Bachelors of Arts.—The Earl of March, Christ Church; Hon. F. O. Liddell, Christ Church; R. M. Milne, Magdalen Hall; C. L. Royds, Wadham College; F. P. Round, Balliol College; Rev. J. C. Bentley, St. John's College, incorporated from Trinity College, Dublin.
24th Instant, W. H. Cope, of Trinity College, Dublin, B.A. was incorporated of Magdalen Hall.

ROYAL ASIATIC SOCIETY.

NOVEMBER 2. Professor Wilson, the Director of the Society, in the chair.—Valuable contributions were presented to the library and museum, and members were elected. General Briggs addressed the meeting on the subject of a paper which he held in his hand; and observed that it would be recollected that, at the close of the last session, a paper, by Mr. W. Morley, had been read, announcing the discovery of a part of a work, the "Jami-al-Tawarikh," which had been for some centuries lost to the world. That was sufficiently curious; but he had now to announce a matter much more extraordinary, and, in fact, almost incredible: which was, that very recently another portion of the same lost work had been found in London; and that the two portions found, although probably separated for centuries, had once actually formed the same individual volume. The way in which this was made out would appear in the paper he was about to read, and which was written by

D. Forbes, Esq., Professor of Oriental Languages at King's College. The notices already given of the first portion discovered (*Vide Lit. Gaz.* No. 1171) render it unnecessary to say more here of this second portion, than to give the account of its discovery as read to the meeting. Mr. Forbes, in his paper, stated that, in the course of his professional duties, he had visited a house in which was deposited a collection of Oriental MSS. which belonged to the late Colonel Baillie. One of these, a large Arabic MS. with many pictures, more especially took his attention. The title written upon it was the "Tarikhi Tabari;" but upon examination he found that the work came down to a date much more recent than the time of Tabari, and he requested an intelligent native of India to look at it. This gentleman, who has the Vakeel of the Raja of Sattarah, had, some time previous, been looking over the volume in the library of the Society before described; and he immediately declared that this was the very book he had been reading. This, it was evident, could not be the case, but the remark excited attention; the book in the Society's library, and the newly found MS. were brought together, and it was really evident that the two parts formed one book. It appears, however, that the two portions united would not yet complete the volume: several deficiencies still remain, which, we fear, there is small hope of supplying. It is too much to expect such another wonder; but at any rate we may congratulate Oriental scholars on the discovery of so large a portion of the lost work of Raschided-din. Prof. Wilson introduced to the meeting J. Vigne, Esq., a gentleman who has just returned from a journey of seven years' duration, during which time he had passed through Cashmere, Great and Little Thibet, the Punjab, Cabul, and other regions, some of which had never been visited by any European, or, at least, had never been fully described. Mr. Vigne left England in 1832: he went to Persia, passed through Teheran, Mazanderan, and Bushire; from whence he sailed to Bombay. He afterwards went by Jamba and Rajawar to Cashmere, where he resided a considerable time, traversing the province in many directions, and crossing into Thibet by several passes; so that he has been able to prepare a complete map, as far as the Indus to the north. From Cashmere, he crossed the table-land of Dassu to Iskardo, the capital of Baltistan (or Little Thibet), a town on the Indus; the position of which had hitherto been doubtful, and which, so far as we are aware, had not before been visited by a European. This town Mr. Vigne calls a wild and extraordinary place, and compares it to Gibraltar. The tradition of the inhabitants is, that they are descended from the Greeks who accompanied Alexander the Great, and that the name of Iskardo is derived from Alexander, called in the East Iskander. From Baltistan, Mr. Vigne returned to India through the mountains on the east of Cashmere, and visited several of the capitals of the Hill States in that part of the Himalaya Mountains. He then went to Ghizni, a place which recent events have made a subject of great interest; and a drawing of that celebrated city was exhibited to the meeting, and the spot where the attack of the British took place was pointed out. He then returned to Cabul, in the vicinity of which he made numerous excursions; and from thence travelled to Loodiana, early in the present year. From Loodiana he sailed down the Indus, reached Bombay, and from Bombay came to England by way of Egypt. A good

deal of this journey, Professor Wilson observed, was quite new; the Jesuits had written accounts of their journeys through parts of it; but their narrations were summary, and chiefly personal. Bernier was fuller, and more interesting; but his objects were less varied and extensive than those of travellers of the present day. Forster's accounts of Cashmere were valuable in the absence of any other; but his opportunities had been few, and his sojourn short. The account of Moorcroft, who had resided for ten months at the capital of Cashmere, was much fuller than any previous narration; and it had been for some time ready for publication, but the delivery of it was delayed by want of the completion of the map which is to accompany it. Moorcroft's tour in Cashmere was also limited to the southern portion; and was, besides, undertaken twenty years ago; and great changes had since taken place. The celebrated M. Jacquemont had also made Cashmere the scene of his investigations; but that part of his journal had not yet been published; and his inquiries, like Moorcroft's, were chiefly confined to the capital, and the valley in which it is situated; whilst Mr. Vigne has had the advantage of visiting places which had been shut up by physical or political obstacles both to Moorcroft and Jacquemont. The country N.E. of Cashmere is quite new ground; and the visit of Mr. Vigne to Iskardo cannot fail to be of very great interest. His observations in that quarter will add very materially to our knowledge of the geography of that lofty region, and to that of the course of the Indus from the frontiers of Ladakh to its issue on the plains of India. Professor Wilson finally observed, that it was to be regretted that Mr. Vigne had not been able to visit the district of Nobra, and to trace the course of the Shaynk, from its confluence with the Indus, to its source. Mr. Vigne had, however, visited a good deal of the lower part of this northern branch, and had also accurately traced the main body of the river on the west of Iskardo, to where it turns to the south, and breaks through the mountain-barrier which opposes it on that side. The Hill States of Chamba, and others in this quarter, had also been visited now for the first time; and the knowledge thus obtained had enabled us to complete the geography of the upper part of the Punjab. A most interesting display of drawings of places, persons, and scenery, made by Mr. Vigne, was laid upon the table; also various geological and zoological specimens collected by him, which were fully appreciated by the company present.—Adjourned.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Geographical, 9 P.M.
Tuesday.—Medical and Chirurgical, 8½ P.M.; Zoological, 8½ P.M.; Society of Arts (Illustration, Mr. Anger on Warming and Ventilating Buildings), 8 P.M.
Wednesday.—Society of Arts, 7½ P.M.; Medico-Botanical, 8 P.M.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.
Friday.—Astronomical, 8 P.M.; Botanical, 8 P.M.
Saturday.—Asiatic, 2 P.M.; Guy's Hospital Physical Society, 8 P.M.

FINE ARTS. ROYAL ACADEMY.

On Monday, the 4th instant, a general assembly of the Academicians was held in their apartments at Trafalgar Square, when Philip Hardwick, Esq. was duly elected an Associate of the Royal Academy of Arts. At the same meeting, Charles Robert Cockerell, Esq. R.A. was duly elected Professor of Architecture of

that Institution, in the room of William Wilkins, Esq. R.A. deceased.

ORIGINAL POETRY.

BLANK VERSE

Is dangerously easy to write, which is one reason why it is often so painfully difficult to read; nay, we sometimes blurt out a blank verse in talking, contrary to our best intentions; or, as the old example runs,

"We make such verse when we are writing prose.
We make such verse in common conversation."

Here is another remarkable instance—a bit of leading article, or a speech from a modern play, whichever you please; read it, young writers, and learn to tag your lines:—

We've just received, at four o'clock this morning,
An *eddyette* from Paris, briefly stating

That Louis Philippe, king and citizen,
Again was shot at, and again was missed;
But what nefarious hand had fired the pistol
Was not yet known, but most diversely guessed at.

Who can have instigated such a deed?
Some say the Carlists, full of spleen and rancour;
Others, more probably, the fell republicans;

While some, and those the deepest politicians,
Insinuate that 'tis the *juiste milice*.

Who play a most involved and crafty game,
And once or twice a year shoot at their king.

To throw the odium on the other parties.
The Buonapartists say 'tis English gold

(The hidden cause of all that's wrong in France),
Which, most profusely scattered over Paris,

Buys balls and pistols, powder and assassins,
While the arch contrivers quietly sit at home.

Ordering a plot, just as you would a carpet.
Is it not, they cry, most shamefully notorious,

That, bought by bags of clinking sovereigns,
Our shabby ministry retains Algeria?

The reason why they do't is plain enough;
The fox-like cabinet of foggy London

Hopes, in that dreadfully unhealthy country,
The whole French army may in time die out:

But is it right, we ask, that Pierre Bonhomme
Should lose his life by intermittent fever,

Only to gratify Lord Palmerston?
(*Cætera deunt.*) OSTRAGOTH.

SONNET ON CRAIGMILLAR CASTLE.*

In these deserted halls, now mantled o'er
With the oblivious ivy, where no sound
Save of the wailing blast is heard around,
Entering unbidden at each open door;—
Here revelry was rife in days of yore,
And jocund Dance, at Music's festive call,
Startled the echoes of each vaulted hall,
What time fair Mary Scotland's sceptre bore.
Here, too, would Chatelard awake his lute,
While love-sick Beauty o'er the minstrel lung;
Or breathless silence held each listener mute,
While Rizzio struck the lyre and Mary sung.
The pensive recollection of the scene
Is all that now remains of what hath been.

R.B.S.

BIOGRAPHY.

MR. CHARLES M. CURTIS.

It is with much regret we announce the death of this very clever artist. Though little known to the public, yet the loss of one who could with so much accuracy delineate and render permanent the observations and discoveries of the naturalist and the man of science, claims to be recorded. Mr. Curtis (brother to the author of "British Entomology") was a native of Norwich. For many years past he resided in town, devoting his time and talents to drawing objects of natural history; in which department, from his extreme correctness and conscientious adherence to truth, he greatly excelled. These qualities, so well appreciated by scientific persons, gave great value to his productions, and recom-

* Craigmillar Castle (the ruins of which still form a picturesque object in the scenery in the vicinity of Edinburgh) was one of the favourite residences of the lovely and unfortunate Mary Stuart.

mended him to the leading men of the day, in the illustration of whose works his name will be extensively found. Illness induced Mr. Curtis to visit the country, but change of air brought no improvement to his health; and, having gradually sunk under an overpowering consumption, he expired on the 16th of October, 1839. His unobtrusive character, and his courteous and gentlemanly manners, gained him the respect and goodwill of all who knew him; and his moral worth will be long and justly valued by his friends.

SKETCHES.

FRENCH CONSPIRACIES.

As a sequel to the history of French conspiracies, given in our last No. the following account of new plots and discoveries (received only on Monday) cannot fail to interest the reader:—

"In consequence of information which had reached the authorities that many persons, who had formerly belonged to secret societies, were in the habit of assembling clandestinely, and that they were manufacturing powder, cartridges, and balls, and a kind of bomb, containing balls and powder, warrants were issued for the apprehension of several of these persons, and a search was ordered in the places frequented by them. On Tuesday last the police entered a room at No. 52, in the Rue des Lombards, where they seized a trunk containing ninety-five parcels, containing each a pound of gunpowder, and another containing twelve pounds, with several utensils for the manufacture of powder and cartridges. Three persons who were in this room were arrested. At No. 30, in the Rue du Faubourg Montmartre, the police found a bale containing twenty bombs or projectiles, packed in oiled cloth, and carefully tied up; each containing a pound of powder in the first envelope, surrounded by a great number of balls, and forming a total weight of six or seven pounds. Each of these projectiles has a lance with a fuse. The two persons who occupied the room in which this seizure was made, were arrested. One of them had been long under the eye of the police. In the Rue de Reully, in the Faubourg St. Antoine, a seizure was made of twenty-five pounds of powder, a great number of cartridges, several instruments for the manufacture of powder, and a receipt for the making of it; and also a number of guns and pistols. At Creteil, a village two leagues from Paris, an individual, who has been manufacturing fuses such as those mentioned above, was arrested, as also his sister-in-law, who lives in the Rue St. Jacques. At the residence of this female, a great number of articles used in the manufacture of gunpowder were found. The ministerial evening journal adds that other seizures and arrests have taken place. The total number of arrests is eleven, all of whom belong, it says, to secret societies."

THE DRAMA.

Drury Lane.—Among the novelties at this theatre, Mr. Hackett has several times performed the difficult part of *Falstaff* in *Henry IV.* We have hardly ever witnessed this attempt without having to offer the same remark,—that *Falstaff* is so idealised by every reader of Shakspeare, every one creating a standard for himself, differing from the actor's conception, it is utterly impossible to play it up to the various opinions of the public. Mr. Hackett's personation appears to us to be hard. *Falstaff*, to our notion, is not merely a stuffed knight, but a fat knight. Oiliness and unction are as inseparable from him as life and motion; and these the performer wants. He is ruder and rougher, too, than our fancy portrait; for, though sometimes roystering with his inferiors, *Falstaff* is the companion of a prince, and himself a gentleman. The softness of the Sybarite is essential to his profligacy; his hands should feel like satin velvet; his frame like a bladder loosely blown up; and his speech and manners would match the dissolute effeminacy of his sensual career. In the finer touches of these qualities, we think his representative deficient; but, as we have observed, he may take a view of the subject widely distinct from ours, and consequently embody it as he has done in the case before us.

Whilst speaking of this theatre, we ought, before now, to have mentioned the charming

style in which, generally, two pieces of fine music are given nightly by the orchestra, led by Mr. Eliason. Overtures, &c. of the greatest masters, and most popular kind, are performed before and after the play with a precision and effect highly gratifying to musical taste. A French journal, we see, noticing the *Fairy Lake*, states that Auber's music is not produced in it for John Bull: now, this is a mistake; for we stated truly, on the first night, that more of Auber's score was given than at the *Strand*: in fact, there were eight or ten of his compositions.

Covent Garden.—On Monday, *Love*, "a play in five acts," by Sheridan Knowles, was produced here; and generally well acted to a house crowded throughout. Of the multitude, we were rather sorry to observe that a great proportion must have belonged to the free list; the crush at whose place of admission was, as on the opening night, a serious and almost dangerous nuisance. The liberality of the management in this respect ought, we think, to be met by a corresponding consideration on the part of those who enjoy the privilege; so that, on especial occasions, the full extent should not be put in requisition, to the excessive inconvenience of all who enter in this way, the pressure and confusion of the audience, and the injury of the theatre.

The production of the drama itself is honourable to the house; and it must be a gratification to the admirers of the stage, that within one week we have had two sterling plays brought forward, of a high order of literature and merit, and written by men whose genius will give delight to generations yet unborn. This, let us never forget, we owe to *William Macready*, who raised the drama from its lowest abyss, and afforded it another fair chance on English ground.

The entire scope of the play is to exhibit *Love* the "Lord victorious over all." The *Countess* (Miss E. Tree), only daughter and heir of a reigning *Duke of Carinthia* (Cooper), and as proud as Lucifer, struggles against or conceals a passion for *Huon* (Anderson), a serf, who, from her childish companion, has become her secretary and instructor. Him she treats with unmeasured scornfulness externally, till an accident of rather a pantomimic class, viz. seeing him struck by lightning whilst taking shelter beneath a tree,* betrays the secret of her affections to a penetrating courtier, *Ulrick* (Diddear), who proceeds to communicate his discovery to her father. He calls on *Huon* to satisfy his suspicions, and dooms him, on pain of death within an hour, to marry *Catherine* (Vestris), an enfranchised serf, and thus put an end to the hopes of either his mistress or himself. The *Countess* overhears this threat, and, in a passionate interview with *Huon*, confesses her love for him, and, as a proof of his for her, commands him to sign the marriage-contract with *Catherine*. With this he indignantly complies, goes secretly to the chapel, is married to one of two veiled ladies, and flies from the oppression. With this ends the third act, and with it the essence of the drama. A new interest is endeavoured to be created by conjuring up in the *Countess* a spirit of jealousy of the *Empress* (Mrs. Brongham), hitherto unseen; but it is impossible to take so wide a leap in the twinkling of a drop-curtain as to suppose the serf a hero elevated to nobility by an empress, and likely to be made the partaker of her throne. To accomplish this, Knowles has done his ut-

* A large oak-tree, which is blasted and split all to pieces: for *Huon* adheres to *Tress* throughout, and will not remove from the peril.

most; unexpected mystery after mystery succeeds, and it seems a mere toss whether the thing is to end happily or miserably. Equivokes are the spring of every scene; yet no one can ever fancy that the *Countess* has any sufficient cause of jealousy, or that she can herself believe that she has. An under-plot, in which *Catherine* and her lover, *Sir Rupert* (Vining), take the lead, is in like manner subjected to mysterious misapprehensions and disguises; which, being very long, help through and protract the last two acts, and at the close supersede the main story. These are the prominent errors in the dramatic construction of *Love*; and a considerable resemblance to the *Hunchback* may also be mentioned as another drawback. Considerable curtailment in these respects will greatly improve the effect.

But our pleasanter task is to speak of the poetry and sentiment with which the composition abounds. Abating some curious antique words which the author seems fond of using, and sometimes in a new sense, his style is very beautiful; and, after Shakspeare himself, we know not the dramatist who so felicitously draws the female character, and whose heroines are endowed with such perfect feminine feelings. Neither are we acquainted with one who has so eloquently and truly painted the master-passion of *Love*. Thus *Catherine*:—

"No telling how love thrives! to what it comes!
Whence grows! 'Tis e'en of as mysterious root.
As the pine that makes its lodging of the rock,
Yet there it lives, a huge tree, flourishing,
Where you would think a blade of grass would die!
What is love's poison, if it be not hate?
Yet in that poison, oft is found love's food.
Frowns that are clouds to us, are sun to him!
He finds a music in a scornful tongue,
That melts him more than softest melody—
Passion perverting all things to its mood,
And, spite of nature, matching opposites!"

Thus *Huon*:—

"Wedlock joins nothing, if it joins not hearts.
Marriage was never meant for coats of arms.
Hemlock flourishes on metal, silk,
Or wood. Examine as you will the blood,
No painting on't is there—as red, as warm,
The peasant's as the noble's!"

Thus *Ulrick* (in a strain resembling the description of "Queen Mab") :—

"I said it was a wilful, wayward thing,
And so it is—fantastic and perverse!
Which makes its sport of persons and of seasons,
Takes its own way, no matter right or wrong.
It is the bee that finds the honey out,
Where least you'd dream 't would seek the nectarous store."

And "It is an arrant misquiver—this same love—
That most outlandish, freakish face wears
To hide its own! Looks a proud Spaniard now;
Now a grave Turk; hot Ethiopian next;
And then phlegmatic Englishman; and then
Gay Frenchman; by and by, Italian, at
All things a song; and in another skip,
Gruff Dutchman;—still is love behind the masque!
It is a hypocrite!—looks every way
But that where lie its thoughts!—will openly
Frown at the thing it smiles in secret on;
Shows most like hate, 'em when it most is love;
Would fain convince you it is very rock
When it is water! ice when it is fire!
Is oft its own dupe, like a thorough cheat;
Persuades itself 't is not the thing it is;
Holds up its head, purses its brows, and looks
Askant, with scornful lip, hugging itself
'That it is high disdain—till suddenly
It falls on its knees, making most piteous suit
With hail of tears, and hurricane of sighs,
Calling on heaven and earth for witnesses
That it is love, true love—nothing but love!"

And again :—

"Oh, never did achievement rival *Love's*,
For daring enterprise and execution.
It will do miracles; attempt such things
As make ambition, fery as it is,
Dull plodding tameness, in comparison.
Talk of the miser's passion for his store—
'T is milk and water to the lover's, which
Defies the mines of earth and caves of ocean
To match its treasure! Talk of height, breadth, depth—
There is no measure for the lover's passion,
No bounds to what 't will do!"

Thus the *Countess* (to *Huon*):—

"Thy life was all one oath of love to me!
Sworn to me dally, hourly, by thine eyes,
Which, when they saw me, lighten'd up as though
An angel's presence did enhance their sense,
That I have seen their very colour change,
Subliming into lines past earthlyness.
Talk of the adoration of the tongue—
Compare love's name, a sound which any life
May pipe a breath! with holy love itself!
Thou'rt not forsworn, because thou took'st no oath?
What were thy accents then? thy accents, *Huon*?
O! they did turn thy lightest words to oaths,
Vouching the burden of a love-fraught soul!
Telling a tale which my young nature caught
With interest as deep, was count'd by heart
Before I knew the fatal argument!"

And thus the lovers:—

"*Countess*. Thou art rewarded, pride!
Meet'st thy deserts! Shew thy high breeding now!
Tread stately! throw thy spurning glances round!
And talk as mighty things as though the earth
Were made for thee alone! Where's thy domain?
Gone! and thy palace, what is it? a ruin!
And what art thou thyself? a beggar now!
Huon, you loved me once! (Bursting into tears.)

Huon. I loved these once!
Oh, tell me, when was it I loved thee not?
Was't in my childhood, boyhood, manhood? Oh!
In all of them I loved thee! And were I now
To live the span of my first life, twice told,
And then to wither, thou surviving me,
And yet I lived in thy sweet memory.
Then might'st thou say of me, 'He loved me once;
But that was all his life!'

"*Countess*. 'Twas heart for heart!
I loved thee ever! Yea! the passion now
Thrills on the woman's tongue; the girl's had told
thee,
Had I been as bold as fond."

Having so finely given evidence of the staple of the play, we must still select a few of its noble passages addressed to other subjects:—

"*Catherine*. Sir, I am
A young Diogenes in petticoats.
I have strings of axioms. Here are more for you.
They say that beauty needs not ornament;
But sooth she fares the better having it,
Although she keeps it in her drawer.

"*Sir Rupert*. Indeed?
Catherine. Indeed, and very dead. For I have known
Bracelets and rings do miracles, where nature
Play'd niggard, and did nothing, or next to it;
Best lotions in improving of the skin,
And mend a curve the surgeon had given up
As hopeless.

"*Sir Rupert*. Nay, you speak in irony.
Catherine. I speak in truth, speaking in irony:
For irony is but a laughing truth
Told of a worthless thing.

A lover is the dullest thing on earth.
Who but a lover—or his antipodes,
A wise man—ever found out that the use
Of his tongue was to hold it?"

Huon on being induced to sign the contract:—

"That I was dead!
Oh, what is death compared to slavery!
Brutes may bear bondage—they were made for it,
When Heaven set man above them; but no mark,
Definite and indelible, it put
Upon one man to mark him from another,
That he should live his slave. O heavy curse!
To have thought, reason, judgment, feelings, tastes,
Passions, and conscience, like another man,
And not have equal liberty to use them,
But call his mood their master? Why was I born
With passion to be free—with faculties
To use enlargement—with desires that cleave
To high achievements—and with sympathies
Attracting me to objects fair and noble—
And yet with power over myself as little
As any beast of burden? Why should I live?
There are of brutes themselves that will not tame,
So high in them is nature; whom the spur
And lash, instead of curbing, only chafe
Into prouder mettle;—that will let you kill them,
Kre they will suffer you to master them.
I am a man, and live!"

"The wounded body heals,
The pain is over, all is sound again.
A scar reminds you of it—nothing more!
Not so the heart, you lacerate it once!
Habit may dull, pursuit engross—divert—
But never are you ransom'd from the throes.
Live your meridian out it comes again,
Fresh as at first, to make you writhe anew."

When *Huon* is reminded that his blood is base, he replies with impressive dignity,—"

"Madam, men's natures are
Their blood; they have no other—high or low."

This was very effective, and so was the despair of the *Countess*, with which we close:—

"*Empress*. Girl, be direct with me,
Nor in the headlong passion of your soul,
That seem to joy in strife and wrack, forget
'Tis your liege lady that vouchsafes you audience.
Countess. That I forget, and every thing beside,
Except one thing, in still revolving which
The earth hath shrunk in estimation
Into a grain—the sun into a spark!
Nought hath kept substance but my desolation,
Which seems to me to fill up space itself
Till nothing else hath room."

To bestow our praise on passages like these would be a waste of panegyric. They speak for themselves (though we must critically confess there is more of rhetoric than of feeling to touch the heart throughout); and, we rejoice to add, were exceedingly well spoken in the representation of the play. Miss Ellen Tree has an arduous character requiring all (perhaps more than all) her physical powers, and she acquitted herself admirably wherever she was not called on for too much exertion. She is of the Kean school, and its foremost ornament. Mr. Anderson has also an arduous task, and performed it bravely and effectively. He is one of the Macready school, and its most promising élève. Vestris was arch and lively; her sweet and distinct enunciation is music to the ear. She is of her own school. Cooper ("whose business 'tis to die," sustains the part of the father with great discrimination and feeling; and by this means makes the long scene with *Huon*, followed by the entrance of the *Countess* and the result, worth nearly all the rest of the play put together. This is its stronghold. Mrs. Brougham looked most imperial in the *Empress*, and Miss Lee a becoming attendant for the *Countess*. The other knights, except *Ulrick*, well and clearly performed by Diddar, are little more than walking gentlemen; though *Rupert* may also claim a slight exception for two or three brief sentences he has to address to *Catherine*. The scenery is magnificent, and the costumes splendid and unexceptionable in point of correctness. Yet we might remark that Vestris's vizor, and such armour as the *Prince of Milan* (Selby) wears, have rather a ludicrous effect upon the stage, though perfectly true to models handed down from ancient Italy to Pratt's Exhibition and the Eglintoun Tournament. And talking of tournaments, *Love* ends with one which the audience does not see; Love, we suppose, being blind. We were thankful that this disappointment was not attended by a deluge of rain.

The play was given out for repetition amid shouts of applause. The author was called for, but he avoided this continental compliment (for which we thank him), and Miss Tree alone was clamoured into the presence to undergo this puerile and senseless ordeal.

Haymarket.—The *Sea-Captain* fulfils our prediction, and draws excellent houses every night. This, in spite of a great deal of criticism, which seems to us to be more directed against the political than the dramatic position of the author. It is a pity that the one should be allowed to interfere with the other; but the common sense and sound judgment of the public almost always rectifies the matter—sooner or later.

St. James's Theatre opened on Tuesday, with a slight opera altered from the *Woodman*, and well supported by Phillips, Allen, Mrs. Franks, and Miss Adeline Cooper, and the revival of

Monsieur Jacques, with Moses Barnett. *La Fille mal Gardée*, a French ballet, with French and foreign women, was, however, the principal novelty, and more congenial to the programme of this theatre's attractions. On a very large stage, more dimly and indistinctly seen, the gyrations of the *danseuses* often revolt the mind; but those whose habits of life lead them to take pleasure in such exhibitions will find every thing to gratify their appetites on these boards, with their *filles* unguarded enough, and almost undressed.

VARIETIES.

Magnets for the Antarctic Expedition.—Our readers will recollect that when a correspondent in "The Times" impugned the efficacy of the magnets employed in the expedition under Captain James Ross, we took upon ourselves to contradict the accuracy of that statement, and gave reasons for discrediting it. We stated that Major Sabine and Professor Lloyd (the individuals best qualified to set the matter right since the sailing of the vessels) being abroad, we were the more anxious to relieve the public anxiety on this account; and it now gives us great pleasure to observe, by a letter from Professor Lloyd, in "The Times" of Wednesday, that our view of the subject is completely borne out by the explanations of that very eminent and unquestionable authority.

Leipzig Autumn Book-Fair.—The sales, indicating the present condition of German literature and publication, state 4071 new works to have been published by 518 booksellers within the last half-year. During the same period in 1829, the number was only 3000; and in 1819, 1300; so that a prodigious increase, which seems to be continuing, has taken place between each decennial epoch.

Fulcher's Ladies' Memorandum-Book (Sudbury), with its pleasing poetry and miscellaneous contents, as usual greets the ensuing year, 1840. Bernard Barton is among its contributors, and has some companions not unworthy of his association. This is great praise for a provincial pocket-book, which is also well arranged for usefulness in other respects.

Pawsey's Ladies' Fashionable Repository (Ipswich) also claims our notice and approbation. It is on a similar plan, and, besides embellishments and poetry, all the divisions for almanack references and keeping housewife accounts, and other memoranda.

The Hailybury Observer (four Numbers, from 9th to 30th October inclusive) has reached us; for which we thank its editors, and at the same time congratulate them, and the important school to which they belong, on the manner in which they have thus exhibited promise of its talents; and still more on undertaking a course so likely to lead to effort, emulation, and improvement.

The "*Adamus Exul*" of *Grotius*, of which a well-executed translation has just appeared in "The Monthly Magazine," is certainly well, worth the attention of the literary world. Mr. Francis Barham (the translator) has achieved an interesting object by ascertaining a genuine copy of this work; and we have read with pleasure every line of a composition which so clearly establishes itself as the prototype of the noblest poem in our language, Milton's "*Paradise Lost*." Never did the genius of the old blind schoolmaster shine more brilliantly, than when we contemplate the manner in which it soared and expanded itself from this suggestive ground; which, from its importance and merit, ought certainly to be separately published.

LITERARY NOVELTIES.

Mr. C. Heath has announced a series of the principal scenes exhibited at Eglinton Castle during the late Tournament. The drawings in lithography, by E. Corbould, from sketches taken by himself upon the spot, and each plate accompanied by descriptive letterpress.

A new edition of "Piers Ploughman" is in the press, edited by Mr. Thomas Wright, whose "Anglo-Saxon Essay" was so largely quoted by us a few months ago.

In the Press.

Indian Orphans, a Narrative of Facts; including many notices of the Rev. H. Martyn, and of the Right Rev. D. Corrie, Lord Bishop of Madras, by Mrs. Sherwood.—The Former and the Latter Rain, by the same Author.—Essays, Addresses, and Reviews, by the Rev. R. Nesbit, Missionary of the Church of Scotland, Bombay.—By Dr. Humble, M.D., A Geological and Mineralogical Dictionary, including the terms generally used in Botany, Conchology, Comparative Anatomy, Entomology, Zoology, and the other branches of Natural History connected with the study of Geology.—Outlines to illustrate a moral allegory, entitled "The Fights of Freewill," by Richard Westmacott, jun. A.R.A.

LIST OF NEW BOOKS.

A Manual of British Beetles: a Description of all the Species found in Britain, by J. F. Stephens, F.L.S. &c. post 8vo. 14s.—Practical Treatise on the Diseases of the Eye, by William Mackenzie, M.D. 3d edition enlarged, 8vo. 25s.—Sandal in the Olden Time, a Historical Poem, 12mo. 4s.—Treatise on Poetry, Romance, and Rhetoric (from the "Encyclopædia Britannica"), post 8vo. 6s.—Historical Records of the British Army: Sixth Foot, or Royal First Warwickshire, 8vo. 8s.—Abstract of the Evidence on the State of Crime in Ireland, by D. Leahy, Esq. 8vo. 2s. 6d.—The Little Forget-me-Not, 2s. 6d. plain; 4s. coloured.—Emendations of the Authorized Version of the Old Testament, by S. Newman, 8vo. 4s.—Christian Services, by the Rev. F. Wilson, 8vo. 6s. 6d.—Memoirs of Harriot, Duchess of St. Albans, by Mrs. C. Baron Wilson, 2 vols. post 8vo. 34s.—Dodd's Church History, Vol. II. 8vo. 12s.—Gideon; or, the Humble Christian, by H. Watmuff, 2 vols. 12mo. 12s.—Sterne's Sentimental Journey, 8vo. with woodcuts, 6s.—Principles of Effect and Colour, by G. F. Phillips, 3d edition, oblong 4to. 21s.—The Vi- Fire-side Little Stories, 2s. 6d.—The Protestant's Armory, 12mo. 7s.—Rev. E. Bickersteth's Chief Concern of Man, 4th edition, 12mo. 5s.—Bishop Hurd on the Prophecies, by the Rev. E. Bickersteth, 12mo. 4s.—Sonnets, by Lady E. S. Wortley, post 8vo. 6s.—Perilous Adventures of Quintin Hawwood, square, 4s. 6d.—The Thorn in the Flesh, by the Rev. D. Bagot, 32mo. 1s.—Euclid's Elements, by W. D. Cooley, 12mo. 4s. 6d.—Figures of Euclid, by W. D. Cooley, 12mo. 1s. 6d.—Vernal Indulgences of the Church of Rome, by the Rev. J. Mendham, 12mo. 4s. 6d.—Cambridge Prize Poems, new edition, fcap. 6s.—Treatise on Obstetric Accoulation, by Dr. H. F. Naegele, translated by C. West, 18mo. 3s.—The Jesuit, from the German of Spindler, 2 vols. post 8vo. 21s.—The Eye, by J. C. A. Franz, M.D. post 8vo. 7s. 6d.—The Ball's live on; or, Sketches of the Earth, 12mo. 2s.—J. T. Smith's View of Ancient History, 12mo. 3s. 6d.—Peter Parley's Annual, 1840, square, 6s.—Select Memoirs of Young Christian Females, by a Lady, 32mo. 1s. 6d.—Sketches and Souvenirs, by E. F. fcap. 5s.—T. Whately's Remarks on some of the Characters of Shakspere, edited by Archdeacon Whately, fcap. 4s.—Sir J. E. Alexander's Life of Wellington, Vol. I. 8vo. 14s.—Viola, the Affianced; or, 'Tis an Old Tale and often Told, 2d edition, post 8vo. 2s. 6d.—Biographical Varieties, by J. Whitcrosse, 12mo. 2s. 6d.—C. Morrison on the Millennium, 12mo. 2s.—Memoirs of the Rev. J. Hessel, by the Rev. J. Priestley, 12mo. 4s.—Poems, by G. Beddow, 12mo. 4s.—Auree Sentences, 12mo. 2s. 6d.—Wilkinson's Scripture Maps, royal 4to. 7s.—The Churchman's Family Prayer-Book, by J. Porter, 8vo. 7s. 6d.—Tegner's Frithiof's Saga, 8vo. 13s.

METEOROLOGICAL JOURNAL, 1839.

Winds, N.E. and S.W.

Except the afternoon of the 4th, cloudy, with frequent showers of rain.

Rain fallen, .6875 of an inch.

November Meteor.—We have to remind our readers that the next periodic fall of these phenomena may be expected to take place from the 11th to the 15th of the present month.

Rimontom.

CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

The Office, No. 1, (Dublin, Doyle; London, Groombridge.)—A new monthly journal of political literature, and art, the receipt of which we have to acknowledge from our obliging contemporaries at Dublin. Some of the papers, especially those upon the most important subjects, display great ability.

ADVERTISEMENTS,

Connected with Literature and the Arts.

THE MODEL of the BATTLE of WATERLOO is now EXHIBITED at the Egyptian Hall, Piccadilly, from Ten in the Morning until Nine in the Evening. Admission, One Shilling each. If being the intention of Mr. Siborn, in compliance with a request to that effect, that the Soldiers of the different Regiments now stationed in London shall have an opportunity of studying the Model, it is hereby notified that they will be admitted in Companies, if attended by a Sergeant, so that no interruption shall be given to the usual Visitors.

PRIVATE PUPIL.—A Vacancy for a Pupil is now open in the Family of a Clergyman of long experience, residing twelve miles from London, he can offer the most satisfactory references to noblemen and gentlemen whose sons have been under his care, the number of his Pupils does not exceed five or six. Letters to be directed for the Rev. R. H. Post Office, Petersham, Surrey.

PRINCE ALBERT of SAXE COBURG GOTHA.—A most faithful Likeness in Miniature, beautifully engraved on Steel (uniform in neatness with the Bijon Portraits), of His Royal Highness, will be presented separately to the Purchasers of SCHLOSS'S ENGLISH BIJOU ALMANACK for 1840. Poetically illustrated by SAMUEL LOVER, Esq. Author of "Rory O'More." Acknowledged as the most curious and unique Christmas Present. Price 1s. 6d. plain; 2s. Morocco or vellum. Extra Cases and Microscopic Eye-Glasses may be had as usual. For Particulars see Prospectus. N.B. No extra charge will be made for the above Portrait. London: A. Schloss and Co. 13 Berners Street, Oxford Street.

1840. Just published, in a variety of elegant bindings, and embellished with highly finished Steel Engravings, price 2s. 6d.
FULCHER'S LADIES' MEMORAN- DUM-BOOK and POETICAL MISCELLANY for 1840. "Decidedly one of the best ladies' pocket-books that appears for the coming year." *Literary Gazette*, Nov. 1839. Sold by R. L. Lane, Esq. R.A. price 3s. G. Putnam and Co. London; G. W. Fulcher, Sudbury; and sold by all other Booksellers.

THE NEW BOOKS FOR PERUSAL, regularly supplied to Families, Reading Societies, and Book Clubs, throughout England, Scotland, and Ireland, in any quantity, upon the most advantageous Terms, by Mr. Bull, Public Library, 19 Holles Street, Cavendish Square; or, by post, may be had gratis, or sent by post at a single letter, full particulars, with a Select List, including all the valuable New Publications.

BOOKS IN THE PRESS.

MR. COLBURN will publish, during the present Month, the following NEW WORKS:—

Part I. has already appeared. Part II. will contain a detailed account of the late Excavations at Carthage. Sold by H. Baillière, 219 Regent Street.

8 New Burlington Street, Nov. 9.
MR. BENTLEY will immediately publish the following NEW WORKS:—

I. Memoirs of the Court of England during the Reign of the Stuarts, Including the Protectorate. By John Humeage Jones, Esq. 5 vols. 8vo. with numerous Engravings from original Paintings.

II. One Fault. By Mrs. Trollope, Author of "The Widow Barnaby," "Vicar of Wrethhill," &c. 3 vols.

III. Memoirs of Admiral Sir Sidney Smith, K.C.B. &c. By E. Howard, Esq. Author of "The Battle of the Clouds." 2 vols. 8vo. with Portrait of Sir Sidney Smith, engraved by Freeman, after Opie. New Works just published:—

Memoirs of His Own Time; Including the Ancient Régime, the Revolution, the Empire, and the Restoration. By Lieut.-General Count Mathieu Dumas. 5 vols. 8vo. with Portraits.

II. Jack Sheppard; a Romance. By W. Harrison Ainsworth, Esq. Author of "Rookwood," &c. Now complete, in 3 vols. post 8vo. bound, with Twenty-seven Illustrations by George Cruikshank, and Portrait of the Author, by R. L. Lane, Esq. R.A. price 3s. Richard Bentley, New Burlington Street. Publisher in Ordinary to Her Majesty.

In the press, in 5 vols. fcap. 8vo. with Original Portraits of Elliot, Pitt, Hampden, Cromwell; and a Historical Scene, after a Picture by Carmichael.
THE EARLY PATRIOTS of ENGLAND, and FOUNDERS of the COMMONWEALTH. (From the Cabinet Cyclopædia.) With a New Introductory Essay on the Religious and Political Influence of the Reign of Elizabeth. By JOHN FORSTER, Esq. of the Inner Temple. "This chain of biographies may be considered as constituting a complete narrative of the most extraordinary and eventful period in the history of England. . . . (they are) narrative in their form; philosophical in their spirit; and eloquent in their execution."—*Morning Chronicle*. London: Longmans, Orme, and Co.; and John Taylor.

In a few days,
WESTERN INDIA in 1838. By Mrs. POSTANS, Author of "Cath." With numerous Illustrations.

Also,
The Rook. By Major Hort. With Legends and Music, Illustrative of Gibraltar, and numerous Drawings taken on the spot, by Lieut. Col. Murray, in a beautifully printed oct. vol. Dedicated, by express permission, to Her Majesty. Price Two Guineas. Saunders and Otley, Publishers, Conduit Street.

LINGARD'S HISTORY of ENGLAND. On Tuesday, Nov. 18, will be published, complete, in 13 vols. fcap. price 18. 6s.

A HISTORY of ENGLAND from the Invasion by the Romans; to the Accession of William and Mary. By JOHN LINGARD, D.D. The fourth Edition with great Additions, and revised throughout by the Author. London: Baldwin and Craddock, Paternoster Row.

NEW AND SPLENDID EDITION of GULLIVER'S TRAVELS.

To be completed in Eight Monthly Parts. On the 1st of November was published, beautifully printed in large 8vo. price 2s. 6d.

PART II. of the New Standard Edition of GULLIVER'S TRAVELS. Illustrated by upwards of Four Hundred Woodcuts, after Designs by Grandville. With Notes and Elucidations from various Original and Manuscript Sources; An Essay on Philosophical and Satirical Fictions; A New Life of Swift.

By W. G. TAYLOR, LL.D. M.R.S. &c.

"A 'Pictorial Gulliver' was a desideratum; for, strange to say, this popular fiction, which has amused and will continue to delight thousands who have no idea of the satire lurking in its pages, has never received its due need of illustration.—Grandville, like most French artists, is a dexterous designer. Explanatory notes are added; the typography is excellent; and, altogether, this 'standard edition' is worthy of its title."—*Spectator*. "The text is correctly and elegantly given; the notes explain its political bearing, and the woodcuts give it vivacity as well as clearness."—*Atlas*. "When we mention that there are no fewer than fifty-eight engravings in the *Illustration* before us, all imitations of their kind, and that it is printed in a style which fits the work for any library, however splendid, we need not add another word in its recommendation."—*Traveller*. "This is a capital edition."—*London Times*. "The woodcuts in the part before us are capital in conception, and are engraved in a bold and effective style."—*Argus*. London: Heyward and Moore, 28 Paternoster Row.

Shortly will be published, in 1 vol. oblong folio, Outlines to illustrate a Moral Allegory, entitled—
THE FIGHT OF FREEWILLE.
 By R. WESTMACOTT, Jun. A.R.A. F.R.S.
 John Mitchell, Bookseller and Publisher to Her Majesty,
 33 Old Bond Street.

Will be published in a few days,
FRITHIOF'S SAGA. By ESAIAS TEG-
 NER, translated from the Swedish, revised and ap-
 proved by the original author, and illustrated with Seventeen
 Engravings, Twelve Musical Accompaniments, and other Ad-
 denda. 8vo. price 12s. bound in all leather.
 Black and Armstrong, 2 Wellington Street, Strand.

On Monday next,

 Waterloo Place, Pall Mall.

Mr. Holden's Exposition of the Old and New Testaments.
 In 1 large vol. 12mo. price 12s. in boards, the 3d edition, revised
 and improved.

THE CHRISTIAN EXPOSITOR; or,
 a Practical Guide to the Study of the New Testament.
 Intended for the Use of general Readers.

By the Rev. GEORGE HOLDEN, M.A.
 Though many Expositions of the Bible of great and deserved
 celebrity exist in our language, a Commentary sufficiently short to
 be read by those who have not leisure to consult learned works,
 yet sufficiently comprehensive to serve as a guide to the study of
 the Sacred Scriptures, appears to be still wanting. To supply
 this deficiency is the design of the present work, in which it has
 been the aim and study of the author to embrace, in a condensed
 form, such information as will enable the general reader to ac-
 certain the real meaning of the inspired writers.

J., G., F., and J. Rivington, St. Paul's Churchyard, and
 Waterloo Place, Pall Mall.
 Of whom may be had, by the same Author,
The Christian Expositor of the Old Testa-
 ment. Price 12s. 6d.

 Waterloo Place, Pall Mall.

In 12mo. price 4s. 6d. in boards, the 4th edition of
THE HAPPINESS of the BLESSED;
 considered as to the Particulars of their State; their
 Recognition of each other in that State; and its Difference of
 Degrees. To which are added, Musings on the Church and her
 Services.

By RICHARD MANT, D.D.
 Lord Bishop of Down and Connor.
 Rivington, St. Paul's Churchyard, and Waterloo Place,
 Pall Mall.

In small 8vo. price 6s. 6d. boards, the 3d edition, with
 Corrections and Additions, of
THE APOCALYPSE OF ST. JOHN; or,
 Prophecy of the Rise, Progress, and Fall of the Church of
 Rome; the Revolution of France; the Universal War; and
 the final Triumph of Christianity. Being a New Interpretation.
 By the Rev. GEORGE CROLY, LL.D.
 Rector of St. Stephen's, Walbrook.
 J., G., F., and J. Rivington, St. Paul's Churchyard, and
 Waterloo Place, Pall Mall.

With numerous Illustrations, price 6s. cloth lettered.
CHEMISTRY NO MYSTERY; or, a
 Lecturer's Request: being the Subject-Matter of a
 Course of Lectures, delivered by an Old Philosopher, and taken
 in Short-hand by one of the Audience, whose Name is not
 known. Arranged from the Original Manuscripts, and revised,
 By JOHN EDWARD ROBINSON, Esq., Surgeon,
 And late Assistant-Chemist at the London Hospital, and
 Aldersgate School of Medicine.

SKETCHES IN LONDON,
 By JAMES GRANT,
 Author of "Random Recollections," &c. &c.; with Twenty-
 four numerous and characteristic Engravings, by Phils. The 3d
 edition.

"Many people wonder at the love of London.—Why so? It is
 certainly the best summer residence—none other is so cool. The
 best abode in winter—for none other is so warm. The rich prefer
 it for containing every luxury; and the poor—where can
 money be made to go so far?" —*St. James Herald.*
 London: Printed for Thomas Tegg, 78 Chapsade; and may be
 had of all other Booksellers.

SOCIETY for the DIFFUSION of USEFUL
 KNOWLEDGE.—The following Works are published at

 sellers, price 14s. handsomely bound, and illustrated with Ten
 Engravings—Portraits of Distinguished Officers, Battlescenes,
 Maps, Plans, &c.—by Landseer, Heath, Warren, and Landells.
 N.B. The Second Volume, which completes the work, will
 appear very shortly.

"This book is likely to have a prodigious circulation." —*Bath Herald.*
 "Sir James Alexander's Life of Wellington has the treble ad-
 vantage of being the cheapest, of inserting a large portion of the
 original correspondence, and of condensing within popular
 limits the dry military details." —*Globe.*
 Henry Colburn, Publisher, 15 Great Marlborough Street.

In crown 8vo. 4s. 6d. cloth, with 250 Diagrams, engraved
 specially for the work,

EUCLID'S ELEMENTS of PLANE
 GEOMETRY, with Explanatory Appendix, and Supple-
 mentary Propositions for Exercise. Adapted for the Use of
 Schools, or for Self-instruction.

By W. D. COOLEY, A.B.
 "A neat and cheap edition of the universal introduction to
 mathematical study, divested of the difficulties with which the
 great Alexandrian clothed his expositions. Mr. Cooley has added
 an appendix of additional matter to exercise the student, and
 prefixed a very sensible preface on the utility of the study, and
 the best mode of pursuing it." —*Spectator*, Nov. 2, 1835.

In fcap 8vo. price 1s. 6d.
THE FIGURES of EUCLID; being the
 Diagrams of the preceding Volume, with the Enuncia-
 tions printed separately, for the Use of Scholars in the Class-
 room.

REVIEW OF NEW BOOKS.

A Chronicle of the First Thirteen Years of the Reign of King Edward the Fourth. By John Warkworth, D.D. Edited, from the MS. now in the Library of St. Peter's College, by J. Orchard Halliwell, Esq. F.R.S. F.S.A. &c. &c. 4to. pp. 106. London, 1839. Printed for the Camden Society.

This *Chronicle* richly deserves its place among the historical tracts revived by the Camden Society. Though it has been referred to and consulted by several of our national historians, the doubts and darkness which hang over the period upon which it sheds its light render it peculiarly desirable to have the whole before us; for, as Sir H. Ellis justly remarks in his "Original Letters" (Second Series), this portion of the reign of Edward, "though removed from us scarcely more than three centuries, is still among the darkest on our annals. Its records are confused, mutilated, and disjointed. They who wrote history in it had no talents for the task: and there was a ferocity abroad among the partisans of both the rival houses, which prevented many from even assembling the materials of history."

And Mr. Halliwell as justly adds:—

"The paucity of documents illustrating this period has, indeed, long been a matter of regret. To meet with one, then, so minute in particulars, abounding in new facts, and of indisputable authenticity, cannot but be a matter of congratulation to the historian."

A preceding volume gave us a Yorkist account of Edward's landing at Ravenspur, and march to York and London; and this Lancastrian view embraces not only that event, but all the previous and subsequent circumstances of the horrible struggle, the mutual reverses and triumphs, the murders, executions, and slaughters, which wasted this unhappy realm during these thirteen miserable years. The editor, after quoting various records and writings, seems to lean to the belief that Henry VI. was slain in the Tower on the night that Edward entered London, viz. 21st May, and that Richard, duke of Gloucester, was a party to the deed:—

"Here is (he tells us) to knowe that Kyng Edward made oute comyssyons to many schyres of Englonde; whiche in a x. dayes ther came to hym, where he was, to the nowmber of xxx. m^l., and came wiche the Kyng to Londone, and ther he was worshipfully receyvyd. And the same nyghte that Kyng Edward came to Londone, Kyng Herry, beyng inwarde in presone in the Toure of Londone, was putt to dethe, the xxj. day of Maij, on a tywesday nyght, betwix xj. and xij. of the cloke, beyng thenne at the Toure the Duke of Gloucetre, brothers to Kyng Edward, and many other; and one the morwe he was cheestyde and brought to Paulys, and his face was opyne that every maune myght see hym; and in hys lyinge he bledde one the pament ther; and afterward at the Blake Fyres was broughte, and ther he bledde new and fresche; and from thens he was caryed to Chyrchseye abbey in a bote, and buried there in oure Lady chapelle."

At any rate such was the popular opinion;

and, of course, it lost no force after the death of Richard, and the succession of the rival race to the throne. But we turn to our present authority:—

"The MS. which contains the *Chronicle* now printed consists of a folio volume of 225 leaves of vellum, the last being pasted to the cover, and written not long after the last-mentioned event, A.D. 1473. Leland errs in saying that the MS. is in Warkworth's handwriting, for it is evidently the work of a common scribe; we fortunately possess a note of presentation in Warkworth's autograph, and the facsimile of this, with a specimen of the scribe's calligraphy, will be found at the commencement of the volume. The sentence with which Warkworth opens his memoranda is curious; it is probable that he had two copies of Caxton's 'Chronicle,' in one of which he had written his own continuation, beginning with the words 'at the coronacyone of the forseide Edward,' and in the other, instead of making a second copy of the continuation, he simply made the reference 'as for alle thynges that folowe, resorte them to my copey, in whyche is wretyn a remanente [or continuation] lyke to this forseid werke' [i. e. written in the same manner as Caxton's 'Chronicle.']. The scribe who made the transcript of Caxton now preserved at Peterhouse, had been directed to refer from one manuscript to the other for the continuation, and in so doing he added Warkworth's note of reference by way of introduction to the new part, joining them together by means of the words, 'That is to wytt, that.'"

We pass to the tenth year of Edward, when, after subduing the insurrection in Lincolnshire under Lords Willowby and Wellys, and others, Lord Scales, the queen's brother, defeated the Duke of Clarence and the Earl of Warwick near Southampton, and forced them to flee for refuge to France: and we find here a singular proof how averse the popular feeling of the country has ever been to cruelty, seeing that even the horrors of these civil wars had not brutalised the people:—

"And after this (we are told) the Kyng Edward came to Southamptone, and commaundede the Erle of Worcestre to sitt and jure suche menne as were taken in the schyppes, and so xx. persones of gentylmen and yomenne were hangede, drawne, and quartered, and hedede; and after that thei hanged uppe by the leggy, and a stake made scharpe at bothe endes, whereof one ende was putt in att bottokys, and the other ende ther heddes were putt uppe one; for the whiche the peple of the londe were gretely displeyd; and evere afterwarde the Erle of Worcestre was gretely behatede emonge the peple, for ther dysordinate dethe that he used, contrarye to the laws of the londe."

From France the Lancastrians speedily renewed their attempts, and the tables were turned upon Edward, who had a very narrow escape, as is well related in the following:—

"A lyttel before Michaelmesse, the Duke of Clarence and the Erle of Warwyke londe in the west countre, and gadered there a grette peple. The Lorde Markes Montagu hade gaderyd vi. m^l. men, by Kyng Edwardes com-

mysyone and commaundement, to the entente to have recistede the seide Duke of Clarence, and the Erle of Warwyke. Nevere the latter, the seide Markes Montagu hatyde the Kyng, and purposed to have taken hym; and whenne he was withen a myle of Kyng Edward, he declarede to the people that was there gaderede with hym, how Kyng Edward hade fyrst yevyne to hym the erledome of Northumberlonde, and how he toke it from hym and gaff it Herry Percy, whos fadere was slayne at Yorke felde; and how of late tyme had he made hym Markes of Montagu, and yaff a pyes neste to mayntene his astate wiche: wherefor he yaff knoleage to his peple that he wulde holde wiche the Erle of Warwyke, his brothers, and take Kyng Edward if he myght, and alle tho that wolde holde with hym. But anone one of the ote went oute frome the fellowschippe, and tolde Kyng Edward alle manere of thyng, and bade hym avoyde, for he was not stronge enoghe to gyff batayle to Markes Montagu; and then anone Kyng Edward laysted hym in alle that he myght to the towne of Lynne, and ther he toke schyp-pyngs one Michaelmesse day, in the x. yere of his regne, with Lorde Hastynges, that was the Kynges Chamberleyne, Lorde Say, wiche diverse other knyghtes and squyers, passed and saylede overe the see into Flaunders, to his brother-in-lawe the Duke of Burgeyne, for socoure and helpe, &c. Here is to knowe, that in the begynnynge of the moneth of Octobre, the yere of oure Lorde a m.cccc.lxx, the Bisshoppe of Wynchestre, be the assent of the Duke of Clarence and the Erle of Warwyke, went to the toure of Londone, where Kyng Herry was in presone by Kyng Edwardes commaundement, and there toke hym from his keepers, whiche was not worshipfully arrayed as a prince, and not so clenly kepte as schuld seme suche a Prynce; thei hade hym oute, and newe arrayed hym, and dyde to hyme grete reverens, and brought hym to the palse of Westmynstre, and so he was restorede to the crowne ageyne, and wrott in alle his lettres, wryttes, and other recordes, the yere of his regne, *Anno regni Regis Henrici Sexti quadragesimo nono, et readempcionis sue regie potestatis primo*. Whereof alle his goode lovers were fulle gladd, and the more parte of peple."

The next and immediate turn of the wheel was Edward's* landing, already mentioned, and the ascription of his victorious progress to the treachery of his brother Clarence; of whom the chronicler says, with some simplicity, at the conclusion:—

"Thenne toke he his way to Levycetre, where were the Erle of Warwyke and the Lorde Markes his brother with iiij. m^l. menne or moo. And Kyng Edward sent a messyngere to them, that yf thai wulde come oute, that he wulde feght wiche them. But the Erle of Warwyke had a letter from the Duke of Clarence, that he schulde not feght wiche hym tyll he came hym self; and alle was to the distruction of the Erle of Warwyke, as it hapenede aftyward. Yet so the Erle of War-

* It is worth while to notice, on a much disputed point, that Dr. Warkworth states Edward, on this occasion, to have worn *one Edricke feler* (not three ostrich feathers), the livery of the Prince of Wales. —*Ed. L. G.*

wyke kept stille the gates of the tounne schet, and suffrede Kyng Edward passe towarde Londone; and a litle out of Warwyke mett the Duke of Clarence with Kyng Edward, with vij. m. men, and ther they were made acorde, and made a proclamacion forthewithe in Kyng Edwardes name; and so alle covandens of fydelyte, made betwix the Duke of Clarence, and the Erle of Warwyke, Quene Margarete, Prince Edward hir sonne, bothe in Englonde and in Fraunce, were clerly brokene and forsakene of the seide Duke of Clarence; whiche, in conclusion, was destruction bothe to hym and them: for perjury schall never have better ende, withoute grete grace of God. *Vide finem, &c.*"

Warkworth's version of the death of Prince Edward, at Tewksbury, does not countenance the Shaksperian drama. He says:—

"Edmund Duke of Somerset, and Sere Hugh Curtene, went oute of the felde, by the whiche the felde was broken; and the mooste parte of the peple fledde awaye from the Prynce, by the whiche the feld was loste in hire party. And ther was slayne in the felde, Prynce Edward, whiche cryede for secoure to his brother-in-lawe the Duke of Clarence."

When King Edward, in after years, despoiled the Archbishop of York, we have a curious and particular account of his proceedings:—

"George the Archebyschoppe of Yorke (we are informed), and brother to the Erle of Warwyke, was withe Kyng Edward at Wynsoure, and hunted, and hade there ryghte good cheere, and supposid he hade stonde in grete favour with the Kyng: for the Kyng seide to the sayde Archebyschoppe that he wuld come for to hunte and disporte with hym in his manere at Moore; whereof he was ryghte glade, and toke his leve and went home to make purvyvaunce therfore; and fett oute of Londone, and dyverse other places, alle his plate and othere stuffe that he hade hyde after Barnet felde and Tenkysbury feld; and also borowed more stuff of other menne, and purveyde for the Kyng for two or iij. dayes for mete and drynke and logyng, and arrayed as ryche and as pleasantly as he coude. And the day afore the Kyng schulde have comyne to the Archebyschoppe, to the seid manere of Moore, whiche the seide Archebyschoppe hade purchasshed and bylde it ryghte comoditously and pleasantly, the Kyng send a gentylman to the seide Archebyschoppe, and commaundyd him to come to Wyndsoure to hym; and asone as he came he was arested and apched of hye treysone, that he schuld helpe the Erle of Oxenforde; and anone ryghte he was put to warde. And forthewithe Sere William of Parre, knyghte, and Thomas Vaghan, squyre, with othere many dyverse gentilmenne and yomen, were sent to the seide manere of Moore; and ther by the Kynges comaundment seysde the seid manere into the Kynges handes, and alle the good that was therein, whiche was worthe xx. m. l. s. or more, and alle other lordschippes and landes that the seid byschoppe hade within Englonde, and alle his stuffe and rychesse within alle his lordschippes; and sent the same byschoppe overe the see to Caleis, and from thens to the castelle of Hammys, and ther he was kepte prisonere many a day; and the Kyng alle that seassone toke the prophete of the Archebyschopperyche, &c. And anone after the Kyng brake the seyd Archebyschoppes mytere, in the whiche were fulle many ryche stones and precious, and made therof a croune for hym self. And alle his other juels, plate, and stuff, the Kyng

gaff it to his eldest sonne and heyre Prynce Edward: for the sayd Archebyschoppe hade be Chauncelere of Englonde many dayes, and he and his brotheres hade the reule of the lande, and hade gaderyde grete rychesse many yeres, whiche in one day was lost; and alle be the hye judgement of ryghtwises (as many manne seide be hym) for his grete covetousenes, and had no pyte of Kyng Harry menne, and was cause of many mannys undoyng for Kyng Edwardys sake, if he myghte gete any good by hym. Wherefore suche goodes as were gaderyde with synne, were loste with sorwe. And also menne supposid for cause he was duble to Kyng Harry, and kepte hym in Londone, where he wulde a be at Westmynstere, he hade a lettere send from Kyng Edward to kepe hym oute of sanctuary, and he hade his charture send hym; where he had be a trewe manne to Kyng Harry, as the comons of Londone were, Kyng Edward hade not comene into Londone afore Barnet felde, &c."

When the Earl of Oxford made a stand at St. Michael's Mount, in Cornwall, the chronicler relates, that the besiegers and besieged were wont to make short truces, and interchange friendly communications; upon which, he quaintly remarks, it "was the undoyng of the Erle. For ther is proverbe and a seyenge, that a castelle that spekythe, and a womane that wille here, thei wille be gotene both: for menne that bene in a castelle of warr, that wille speke and entrete with the enemies, the conclusion therof [is] the losyng of the castelle; and a womane that wille here foly spokyne unto hyr, if sche assent not at one tyme, sche wille at another. And so this proverbe was prevede trewe by the seide Erle of Oxenforde."

To these historical extracts we shall add some passages which speak of portents and omens, and exhibit the superstitious feelings of the age:—

"And the viij. yere of the regne of Kyng Edward, a lytelle before Michaelmasse, there apperyde a blasyng sterre in the weste, a liij. fote hyghe by estymacyone, in evenyng, goyng fro the weste towarde the northe, and so endured v. or vij. weekes. And the same yere Sere Thomas Hungerforde knyght, sonne to the Lorde Hungerforde, and Herry Curteney, the Erle of Devynschyre of right, were taken for treasoun and behedede at Salisbury."

Another phenomenon, a year and a half after, introduces us distinctly to that contract which most dangerously threatened the crown of Edward. The whole deserves quoting:—

"Whenne the seide Duke of Clarence and the Erle of Warwyke were in Fraunce, there apperyde a blasyng sterre in the weste, and the flame therof lyke a spere hede, the whiche dyverse of the Kynges house sawe it, whereof thei were fulle sore adrede. And thanne in Fraunce whenne the seide lordes where, thei toke there counselle what was beste for to do; and thei coude fynde no remedy but to sende to Quene Margarete, and to make a maryage betwix Prynce Edward, Kyng Harry sonne, and an other of the seid Erle of Warwikys daughters, whiche was concluded, and in Fraunce worshippfully wedded. And there it was apoyntede and acordede that Kyng Harry schuld rejoyse the kyngdome of Englonde ageyne, and regne as well as he dyd before, and after hym hys Prynce Edward and his heyres of his body lawfully begotyne; and if it appenede that he disceyved withoute heyres of his body lawfully gotene, thenne schulde the kyngdome of Englonde, with the lord-

schyppes of Irlonde, remane unto George, the Duke of Clarence, and his heyre[s] for evere more. Also it was apoynted and agreede that Herry Duke of Excestre, Edmund Duke of Somerset, brother to Herry that was slayne at Hexham felde, the Erle of Devynschyre called Courtmayn, and alle othere knyghtes, squyers, and alle other that were putt oute and atayntede for Kynges Herry quarrelle, schulde come into Englonde ageyne, and every man to rejoyse his owne lyfode and inhabytauntes; whiche alle this poyntment aforeseide were wrytene, indentyde, and sealede, bytwix the seide Quene Margarete, the Prynce hire soune, in that one party, and the Duke of Clarence, and the Erle of Warwik, one that othere party. And moreover, to make it sure, thei were sworne, and made grete othis othe to othere, wiche was done be alle Kynges of Fraunce counselle."

But next year, the eleventh of the king, there occurred a still more appalling sight, for "in the begynnynge of Januarij, there apperyd the mooste mervelous blasyng sterre that hade bene seyne. It arose in the southe este, at ij. of the cloke at mydnyght, and so contynuede a xij. nyghtes; and it arose ester and ester, till it arose fulle este; and rather, and rather; and so whenne it roose playne est, it rose at x. of cloke in the nyght, and kept his cours flamynge westwarde overe Englonde; and it hade a white flaume of fyre fervently breannyng, and it flammede endlonges fro the est to the weste, and nost upryght, and a grete hole therin, whereof the flaume came oute of. And aftre a vj. or vij. dayes, it arose north-est, and so bakke and bakke; and so endured a xliij. nyghtes, fulle lytelle chaungynge, goyng from the north-este to the weste, and some tyme it wulde seme aqenchede oute, and sodanly it brent fervently ageyne. And thenne it was at one tyme playne northe, and thenne it compassed rounde aboute the lode-sterre, for in the evynyng the blase went ageynes the southe, and in the moonyng playne northe, and thenne afterwarde west, and so more west, flaumynge up ryghte; and so the sterre contynuede iij. weekys, tyll the xx. day of Feveryere; and whenne it appered yet in the fyrment, thenne it lasted alle the nyghte, somewhat descendynge with a grettere smoke one the heyre. And some menne seyde that the blasynges of the seide sterre was of a myle length. And a xij. dayes afore the vanyshynge therof, it apperyd in the evynyng, and was downe anone within two oures, and evyr of a colour pale stedfast; and it kept his course rysynge west in the northe, and so every nyght, it apperyde lasse and lasse tyll it was as lytelle as a hewylle styke; and so at the laste it waneschede away the xx. day of Februarij. And some menne seide that this sterre was seene ij. or iij. oures afore the sunne rysynge in Decembre, iij. days before Crystynmasse, in the south-west: so by that reassone it compassed rounde aboute alle the erthe, alle way chaungynge his cours, as is afore rehersed."

But other remarkable and strange omens were not wanting, and the annexed history of some of them is full of interest as a picture of the times:—

"In xij. yere of Kyng Edward, ther was a gret hote somere, bothe for manne and best;

• See an account of this comet in the 'Nuremberg Chronicle,' edit. 1493, fol. 284, r. 'Longum radium in modum flammæ ingentis ignis emittens.'—MS. Arundel, Mus. Brit. 290, fol. 275, v. This comet is a return of the one described in a manuscript of the fourteenth century, in the Sloane College Library (xix. 2, fol. 125, v. b.), and of which there is a drawing on fol. 155, v. a. Cf. MS. Trin. Cantab. R. xv. 18; Bib. Publ. Cantab. KK. IV. 7; MS. Cotton. Jul. F. xi."

by the whiche ther was gret dethe of menne and women, that in feld in harvist tyme men fylle downe sodanly, and unnyversalle feveres, axes, and the bloody flyx, in dyverse places of Englonde. And also the hets was so grette, that it brent away whete and alle other greynis and gresse, in southe parties of the worlde, in Spayne, Portyngale, Graunde, and others, &c. that a bowshelle of whete was worthe xx.; and menne were fayne in that cuntre to yeve away there chulderyne for to fynd them. But, blessed be Almyghty God, no suche derthe was nojt in Englonde, ne in Fraunce. Also in the same yere Womere watere ranne hugely, withe suche abundaunce of watere, that nevery manne sawe it renne so moche afore this tyme. Womere is called the woo watere; for Englyschmen, whenne thei dyd fyrst inhabye this lond, also some as thei see this watere renne, thei knewe wele it was a tokene of derthe, or of pestylence, or of grette batayle; wherefor thei called it Womere; (for we as in Englysche tonge woo, and mure is called watere, whiche signifieth woo-watere;) for alle that tyme thei sawe it renne, thei knewe wele that woo was comynge to Englonde. And this Womere is vij. myle frome Sent Albons, at a place called Markayate; and this Womere ranne at every felde afore specyfede, and nevere so hugely as it dyd this yere, and ranne styll to the xliij. day of June next yere folowyng. Also ther has runne dyverse suche other watres, that betokenethe lykewyse; one at Lavesham in Kent, and another byside Canturbury called Naylborne, and another at Croydome in Suthsex, and another vij. myle a this syde the castelle of Dodley, in the place called Hungerevale; that whenne it betokenethe batayle it rennyis foule and trouble watere; and whenne betokenethe derthe or pestylence, it rennyth as clere as any watere, but this yere it ranne ryght trouble and foule watere, &c. Also ther is a pytte in Kent, in Langley Parke; ayens any batayle he wille be drye, and it rayne nevere so myche; and if ther be no batayle towarde, he wille be fulle of watere, be it nevere so drye a weyther; and this yere he is drye, &c. Also this same yere, ther was a voyce cryenge in the heyre, letwyx Laicetere and Bambury, uppon Dunmothe, and in dyverse othere places, herde a long tyme cryenge, 'Bowes! Bowes!' whiche was herde of xl. menne; and some menne saw that he that cryed soo was a hedles manne; and many othere dyverse tokenes have beene sclewed in Englonde this yere, for amendinge of nennys lyvynge."

Preferment; or, my Uncle the Earl. By Mrs. Gore. 3 vols. 12mo. London, 1840. Colburn.

AMONG the most lively, acute, and successful painters of life and manners in our day, Mrs. Gore had deservedly taken a high place—so high a place, indeed, that she hardly needed *Preferment* to advance her higher. But as she has chosen to claim another title to our applause, it is but justice to award it. *Preferment* is an exceedingly clever and amusing production; and quite worthy of the author's reputation. The characters belong chiefly to the upper walks of society, and are drawn with distinct features, so as to afford much variety to the suntry affairs in which they speak and act. There is a verisimilitude about the whole which gives reality to the relation; and events follow each other in such rapid succession, that the interest is perpetually kept up, and we do not tire even of the brilliancy that sparkles throughout. We must endeavour to separate

a few pages from the rest, as a fair sample of the style and shrewdness of observation:—

"The notice bestowed by Lord Tiverton upon his brother-in-law's letter consisted in handing it across the breakfast-table to the countess, who marked her contempt by a pitying shrug of the shoulders. Since her accession of importance in the fashionable world, Lady Tiverton had, as far as possible, dropped the acquaintance of her Irish relations. Even her brother, Lord Holwell, was at times felt to be an incumbrance. There was a vulgar domesticity about him, a family-coach sort of way of going on, which often made him inconvenient and ridiculous. She had no reliance upon his judgment. At a place like Tunbridge Wells he was sure to pick up some tiger or other. 'No one but Holwell, however, would have shewn so little tact as to volunteer an acquaintance with such people as the Sprys; and it was quite absurd to fancy that because he found it convenient to sleep in a parsonage-house instead of an inn, Lord Tiverton's hands were to be tied by promises of a living to his host.' The earl, as was his wont, instantly coincided in her ladyship's view of the case. He had, in fact, no time to disagree with her. Between parliamentary business and private business, every hour of his day was spoken. One-half his life having been spent in getting into difficulties, the other half was to be spent in getting out of them. He had always three or four law-suits going on, and six or eight lawyers to manage them; and as Lady Tiverton chose that they should live to the full extent of their thirty thousand a-year, though nearly half their income was dissipated, nothing short of a Chancellor of the Exchequer, with a paper mint at his command, could possibly have cleared off their embarrassments. Could the kind-hearted William Egerton have beheld his brother, now that he had served a seven years' apprenticeship to the craft of aristocratic life, he would have grieved to observe that the cheeks he had noticed as lank and yellow were ten times more jaundiced than on his accession to rank and fortune. But in his own family, no one cared for his looks. Except when he was wanted to draw a cheque on the banker, Lady Tiverton seldom took the trouble of addressing a civil word to him; and as to his sons and daughters, they saw so little of him, except in company, that they held themselves excused from more than the ceremonial of filial respect. Lord Egerton, indeed, had his independent domicile, and avoided, as far as possible, all intercourse with his family; not from consciousness of their worthlessness, or love of independence, but because it was the habit of the set to which he devoted himself. Beyond the appearance of things Lord Egerton cared for nothing. His narrow mind was so absorbed in the ambition of passing for the most correctly fashionable young man about town, that he did not permit himself to indulge in a single natural taste. His life was a life of self-denial. He would have died of hunger and thirst rather than eat or drink at some spot under the ban of the empire of fashion; and condemned himself to a thousand pursuits extremely distasteful to him, because they were those of his gay associates. He was a timid, bad rider, yet had eight hunters at Melton; he detested music, yet had his stall at the opera; he disliked crossing the sea, yet spent a fortnight every winter at Paris; he abhorred cards, yet at the Travellers' never passed an evening without leaving a certain sum behind him at the whist-table. 'Egerton does a vast deal too much,' was the remark of his uncle Adolphus, one day, to his favourite

nephew. 'A thousand things highly becoming in you or I are *infra dig.* in an eldest son. There is no occasion for Egerton to distinguish himself by playing fine. People will be always ready enough to make much of him, whether in or out of fashion. Nothing provokes me more than to see a man in his position affecting airs that are indispensable to a younger brother; unless, indeed, to hear a fellow talking the same claptrap in the House of Lords he would in the Commons.' 'I don't perceive that Egerton does any thing different from the rest of the world,' replied Dick, taking his cigar from his mouth. 'The rest of the world, my dear fellow, is a generality that means nothing. The world is not such a handful as to be spoken of *en masse.* From the time of the serpent that tempted Eve, every thing has had a head and a tail, and gets on by moving them in contrary directions. If you were not to winter in Leicestershire, or if I were not to be seen at what in the course of the evening, people would ask what was become of us, and fancy we were hard up. But Egerton ought to be able to play or hunt, or let it alone, according to his whim and fancy.' 'Not now,—his day for that is over,' said Dick, with a significant nod. 'Privileges become obsolete, you know, for want of enforcement; and the world having once found out that Egerton stands in awe of it—that he is not master of himself—that he is the slave of opinion—a slave he must remain. Not a fellow in the club but knows he can annoy Egerton to death by sneering at his new carriage, or inquiring, with a significant smile, the name of his tailor. As to that brute, Sir Gordon Hilfield, whom I have seen drive him out of his senses by asking an explanation of his good things and listening with an incredulous look to his anecdotes, I call him Egerton's damper.' 'Nobody's fault but his own! What business has he to say good things, or relate anecdotes? It is going beyond his line; and Hilfield, who is nobody (a Guelphic knight, or some horror of that kind), is justified in resenting Egerton's encroachments upon his business. It is his duty to be agreeable; and of course, when the heir of a rich peer interferes with Sir Gordon's vocation, he is asked to the dinners and country-houses in preference to a man who has nothing else to recommend him.' 'You seem determined to reduce poor Egerton to a cipher!' cried Dick, amused by Adolphus Egerton's parliamentary manner of discussing trifles light as air. 'I suspect it was by your advice he gave up his seat to me.' 'Of course it was. So as I was upon the subject, I made it a point of conscience to suggest to him the line of conduct that Tiverton ought to have pursued in former days towards me. Family boroughs were intended for the protection of younger brothers. If a man be not able to provide suitably for his second son, he ought, at least, to secure him from the consequences of the debts which he has no choice but to contract.' 'Certainly, certainly,' replied Dick. But, trust me, it was any thing but a point of conscience that made Egerton give up parliament. The atmosphere of the old house was fatal to a fellow's complexion; and as my father was working his way to the marquise he made difficulties about slack attendance. So when Egerton found that it was a place of all-work, and that he should be quizzed to death by Hilfield or others if he consented to drudge, he proposed me to my father, and my father to the corporation, and there was an end of the business.' 'Not quite an end, for I'm told you make a capital member,' observed Adolphus, smiling upon his adopted heir. 'Only that you would find it a douse of a bore,

I should be almost inclined to advise you to stick to politics. Politics are looking up, my dear fellow. During the war, they were at a devil of a discount. Just remember what fellows got on and made a noise! But now that government is the only balloon for a man to rise in, places get dear and the company select. There are two or three really gentlemanly men in the present ministry.' 'I should not be satisfied with moderate success,' observed Dick, flipping the ashes of his cigar from his waistcoat. 'It is true that on the few occasions I have found it necessary to rise, I have carried away the house; which, considering that not one of the author-members but has proved a failure, I am a little proud of. But what is the worth of a speech or two in a political life? To distinguish oneself as a public man, one must do nothing else; and, thank God, I still find attractions elsewhere that are worth all the cheers of the ministerial or opposition benches.' 'You talk like a blockhead, my dear Dick,' replied Adolphus, in his usual imperturbable tone. 'The only good thing of public life is, that, like certain pieces of preferment, it can be held with something better.' 'Ay, ay, the public life of a middle-aged man, whose place gives him plenty of patronage and whose pleasures plenty of pretenders to it. But the politician, like the soldier, must work his way up; and I don't care to work.' 'Who does? But make yourself easy. A single brilliant speech on a popular question will do your business. After that, keep as still as death for a session or two; then, make a wavering speech, as if exceedingly perplexed in your conscience whether or not to oppose the measures of government; and, take my word for it, you will have a private visit from the minister's private secretary before twenty-four hours are over your head!' 'Likely enough; but that system is thorough-blow; and were I to take a part in public life, I should prefer one which might yield me some little credit. I am not yet in so desperate a plight as to make it necessary for me to dirty my fingers.' 'The deuce, you are not!—why, supposing Tiverton dies to-morrow, what becomes of you? Embarrassed as he is, you don't imagine he has laid any thing by for you or the girls?' 'But why suppose he will die to-morrow? He has as good a life as any one I know. And even were some accident to carry off the governor, be assured, Egerton would act otherwise towards me than he does now. It is *de mauvais ton* for two brothers about town to hang upon each other, or live in the same set; but it looks well for an Earl of Tiverton living at Tiverton Castle to be on the best terms with his younger brother.' 'I suspect he would be on all the better terms with him for seeing him under-secretary, or a junior lord,' observed Adolphus, with a knowing nod. 'No doubt—so would you. But, between ourselves, my dear Adolphus, your notions of getting on in political life are *rococo*. Let me alone. I neither expose my game nor publish my theory. Enough if I succeed!' 'Enough, indeed!—You talk exactly in the confident tone that Lady Tiverton used about bringing out *Imena*,—and look at the result!—Lady Tiverton fancied that though other manoeuvring mammas failed in fastening their hooks, her quack system must be infallible. She quarrelled with all her friends who had daughters to marry, for fear they should analyse her nostrum; and was as mysterious even to me, as if there were a secret to keep. God bless the woman!—not one of her stratagems but was as familiar at the clubs as the incidents (warranted new) of every fresh melo-drama brought by young authors to the

manager of a theatre, with—'This scene, sir, would be most effective on the stage.' 'It was hissed, sir,' replies the manager, 'in the Free-booter of the Tyrol.' 'But the catastrophe, sir, the catastrophe!' 'Was damned two years ago in the Inn of Guadenzell.' But the young gentleman is incredulous, and chooses his production to be damned over again.—So did Lady Tiverton."

Having complimented Mrs. Gore's talent for observation, we beg to protest against the following as giving any idea of good male society; the lady, not knowing any thing of it herself, must have been misinformed by some *mauvais sujet*:—

"Julius regretted to find the conversation, which he had hoped was about to take a literary turn, become gradually so warmed by the fumes of champagne and burgundy, that the jests, at first confined to his brother, Lord Storby, and the K.G., soon became general. Stories grew as broad as they were long, and jokes ensued, of which, like a gauger's stick, the point was invariably dirty! He was amazed to hear gray-bearded men talk so much like school-boys!—Silas Vivian seemed to have forgotten his presence, or he would have checked the license of his guests. But when, at length, the party, after growing boozey and talking itself sober again, broke up in order to enable several of those present to go and listen to the debates at L— House, and the division at the Commons, Julius was destined to experience a still further shock. As they successively received their hats from the butler, he stood aghast on discovering the reviewer's to be a shovel! Silas Vivian had only pointed him out in a whisper to young Egerton on entering, by his highest title, 'the author of that celebrated critique upon "Pepys's Diary." He now named him apart to the astonished young divine as both honourable and very reverend; and Julius instantly recognised a name of some notoriety in the church, as appended to certain politico-ecclesiastical pamphlets and polemical treatises. He felt inexpressibly humbled. He felt both himself and the national church degraded by the fact, that when dining in company with a man so prominent, the least objectionable part of the conversation should have consisted in a discussion upon learned canary birds."

The Gift: a Christmas and New Year's Present for 1840. Edited by Miss Leslie. Philadelphia, Carey and Hart.

WE have received with pleasure this Transatlantic Annual; and the more so, because we think it a decided improvement upon its three predecessors, as well as upon other publications of the same class. In truth, as the fine-art portion of our English Annuals has been gradually deteriorating into machinery, manufacturing, and mannerism, the Americans have brushed up and improved. With one exception (F. P. Stephanoff), and that not remarkable for superior merit, all the embellishments of this neat and handsome volume are, as they ought to be, by American artists. Sully has furnished four of the nine subjects, including "Childhood," a beautiful frontispiece, and a lovely vignette, and "Isabella," a charming female portrait (all engraved by John Cheney, in a manner worthy of the originals); and the rest are supplied by C. R. Leslie, W. S. Mount (2), and C. G. Comegys; their engravers being J. B. Forrest, J. B. Danforth, A. Lawson, Jos. Andrews, and J. I. Pease, all of whom do credit to their country's school.

With regard to the literary contents, they are pretty much on a par with our English

contributions in prose and verse; and we shall endeavour to shew it, by giving what we can of the introductory matter from "The Ghost Book," a story of the last century (with a clever engraving after Mr. Comegys), by the fair and accomplished editress:—

"One Saturday afternoon, on a cool pleasant day, such as sometimes chances to occur even in an American August, a country boy named Caleb Rowan came to the fence that separated his father's farm from that of Barzillai Brooks, whose two sons were sitting under the magnolias that shaded a running stream, and were hard at work with knives and sticks, making traps for the musk-rats that burrowed in the bank. 'Come here, Harman,' said Caleb; 'come here, Stacey. I've something to shew you, such as you never saw before in all your born days.' 'As you are but one, and we are two,' replied Harman, 'I guess it will be quite as easy for you to get over the fence and come to us. But what have you got—a double plum, or some gingerbread of a new pattern?' 'Neither one nor 't' other,' answered Caleb, jumping over the fence, 'but something pretty near as good, I can tell you. Think of my having a *written* book in my pocket! Maybe you don't know that books must always be writ before they're printed.' 'Yes, we do,' exclaimed both the brothers, 'we've known that all our lives.' 'Possible!' ejaculated Caleb, looking somewhat surprised, 'now that must be nateral smartness! For my part, when I was a little fellow, I remember supposing that the printers made all the books as they went along; that is, they thought of a word and printed it down, and then they thought of another word and printed that down, and so on till they got a whole book-full. To be sure, there's no doubt that of all men, printers must be the sensiblest; seeing how much learning they put out.' 'I don't know,' said Stacey, 'the last time I attended market with father, we put up at the Black Bear, and there was a printing-office right back of the tavern. I looked across at the windows, and saw the men at work; and they seemed to print it off so fast that I can't see how any of the sense could stick by them.' 'But about this written book of Caleb's,' said Harman, 'let me see it in my own hands.' Caleb Rowan then slowly drew from his pocket a manuscript volume in a reddish pasteboard cover. Some of its pages were torn out, and those that remained were much disfigured with blots and interlineations. 'Where did you get this book?' inquired Harman, turning over the leaves. 'I was rummaging about in the kitchen lof, as I often do,' replied Caleb, 'among the old bones, and things that are of no manner of use, only mother thinks it a shame to throw them away.' 'I know the place,' said Stacey; 'I've been there with you in the dark low corner—among the tea-pots without spouts, and the coffee-pots without handles, and the split cullenders, and the ragged sieves.' 'Well, no matter,' returned Caleb; 'I took a notion to scramble among the old papers that were heaped up in the broken churn that Peggy Poundage thumped the bottom out of, one cold day when the butter would not come. So I plunged my hand in among them, as far down as it would go, thinking I might fish up an old almanack that would have some good reading in it (such as new ways of making huckleberry puddin' or punkin pie), and there I found this book; and though it's wrote so bad that I could only make out a few words here and there I had wit enough to see that its mostly about ghosts, and sperits, and apparations.' 'Wel now, to me,'

said Harman, 'the writing is not bad at all—it's a most as plain as print. So let's go to the old stable, where we can be to ourselves, and I'll read it out loud to you. And there's David Gleason, just getting over the fence. He has come to spend his Saturday afternoon with us, so we'll take him along and let him hear the ghost-book. David's the scariest boy I know; so it will just suit him. I've seen his face turn as white as his hair, when we've been talking of such things.'

'As to Master Loomis,' pursued David, emboldened by the praise awarded to his observation, 'I've heard the neighbour-women say that wherever he boarded it seemed as if they could not help giving him the best bed-room, and using him like a gentleman, and not expecting him to wash at the pump. I heard mother telling Susan Wonderly, that, after our best room, that nobody ever sleeps in, was fixed for Master Loomis, she warned him that strange noises had been heard there at night in the dark closet by the head of the bed, and that she couldn't answer for it that something frightful wouldn't come out of the closet-door. And he laughed and said—he liked the room the better for being haunted, and that he would promise when the ghost came to take it peaceably, and make no noise to disturb the family. But mother made him give his word, that if he did see any thing he was never to mention it to any body breathing. And so after that, there was no getting out of him whether he had seen any thing or not, for he always said he had given his word not to tell. But there were them that thought he did see something, and more than once, too.' 'Well,' replied Harman, 'my father seems to think there a'n't no such persons as ghosts, and he won't allow nobody to talk about them; though, to be sure, they are what every body likes to hear of. For my part, I think I could stand a spirit as well as any thing else (even if I was to see one), for it's not easy to frighten me any way—nor never was.' 'Now, Harman,' said Stacey, 'don't brag too much. You know when we were little fellows and Dutch Teeny lived with us, and you and I used to slip out to her of evenings, and sit on the steps at the back door, and hear her tell about things that had been seen in Germany, nobody could creep closer or hold faster to her than you did; and often when it was quite dark and I went to hide my head under her apron, I found yours there already, and you quite as cold and trembling as I was.' 'I don't believe,' rejoined David, 'that Dutch Teeny could tell you any worse than I and my sisters was told by Black Katy, when she talked to us of the things that kept about her old mistress's plantation in Virginy. Well, Master Loomis never mentioned witches and ghosts to us; but I've heard mother and the neighbour women say that there was certainly something strange about him, for he often seemed as if he was seeking for spirits to appear.' 'When he boarded at our house he used to go off after supper, and rove about in the dark woods where the dead Indians walk; and in moonlight nights he would often stroll to grave-yards all alone by himself, and he has been known even to sit on graves. I dare say that book is full of his own written-down experience of the spirits he has met with.' The four comrades had now reached the ruinous and deserted stable, which was long since superseded by a better one, adjoining to the new barn. The floor of the old stable had been several times cleaned up by the boys, and they had furnished it with slabs by way of seats. It was now the favourite rendezvous of

Harman and Stacey Brooks and their neighbouring companions, for confabulations and other amusements. Harman having seated himself on one of the slabs, his comrades, with earnest faces, placed themselves near him to listen to the ghost-book, while the shadowy light of the afternoon sun streamed in at a large aperture in the dismantled roof."

We must leave the story itself to readers; but the framework is good American.

The Jesuit. A Picture of Manners and Character from the first Quarter of the Eighteenth Century. Translated from the German of C. Spindler. 2 vols. 12mo. London, 1839. Bull. THE greater portion of this book is what the title-page purports, a picture of German manners and character a century ago; and a considerable portion of the last volume takes us to Dominica, and wanders among Indian scenes. Another striking feature is the introduction of Jesuit agency, shewing the machinery and zeal with which that extraordinary body prosecuted the task of proselytism. The story itself is complicated with much dramatic effect; some of the characters possess great originality, and the incidents are often striking. The whole we think well calculated to please the readers of fiction; not to break in upon whose domain of mystery and *dénouement*, we must content ourselves with extracting an insulated passage illustrating the writer's powers.

Doctor Leopold (an emissary of the Jesuits) has just prevented the Senator from committing suicide by drowning, and the narrative proceeds:—

"The senator looked round in perplexity towards his new friend. His feet were rooted to the ground. He laid his hand on the old man's shoulder, and, after a lengthened silence, asked, 'In whom shall I confide, sir—in God? I am no pietist, and never shall be: enough of that. In Fortune? I have long been her favourite—but when one prop fails, the rest will soon give way. In my own courage? Explain yourself.' 'The will of man may accomplish much,' answered the doctor. 'The aid of the Most High resides in it—believe me, it governs fortune. Life is a perpetual contest, and the world the battle-field. He who strives the most manfully is sure to reach the goal. Mistaken sentiments of honour, and a vicious system of morals, will weaken the best of the combatants, and make him the scorn of his rivals. Let us, then, press along the path upon which we have been thrown, and dream of no other. Let us not tremble before danger, but trample it to the earth.' 'I don't understand you,' said the senator, and stooped in a listening attitude close to the doctor. 'I am fifty years old, and though I have often had a feeling of what your words seem to import, it was never spoken to me by mortal man.' 'You have only known the world of commerce,' replied the doctor, shrugging his shoulders, 'but you shall have an example forthwith. Here is an account of the sea-fight at La Hogue, when Admiral Russell destroyed the French fleet. This battle was one of the most extraordinary events of the period, and fought and won under the most discouraging circumstances. In despite of wind and storm, and regardless of the iron yoke of responsibility, the conqueror achieved his object, and victory hovered over the routed and dismayed enemy. So much can be effected by resolute will, and the strenuous exertions of mankind. And, mark me well, in citizen's life, as in war, the maxim is good,—Help thyself, and God is with thee.

Quit, then, the frail plank that will sink with thee, or resign thyself to a merited fate.' 'I am astonished at your language, learned sir,' said the senator, with more firmness than he had hitherto shewn; 'but how shall I put it in practice? Your words are mysterious. I am fearful of understanding their import.' The doctor smiled. 'Dream not of hobgoblins!' he answered, half in jest. 'I am about to prescribe only gentle methods. You are not carrying the bayonet or truncheon of command. To be brief: you must not timidly give up all for lost. Fortune changes her abode with every passing hour, and is, perhaps, even now, raining showers of gold on your neighbour's roof. Wear a mask. If Misfortune speaks in your brow, you will not find one friend more; while the show of confidence, even at the last minute, prevails with the most wary. Arm yourself against the approaching enemy, not with invectives and a dagger, but with the words of plausibility, and a countenance full of promise. Courtesy overcomes the most steadfast resolves. Every man has his weak points: every man is vain. Aim at the heel of Achilles: flatter his pride. The favourable moment once seized, and your object is gained. The respite is given; with time comes hope, and in hope lies all our treasure. What is possible, may happen; and Disaster ever gives place to Fortune. Cease not to reckon upon yourself, and on my discretion.' The doctor quitted the man of commerce with a respectful bow, and turned towards the city. Musinger gazed after him with astonishment, and then looked within his own bosom. No resource, no mode of action, presented itself to his thoughts; yet his heart was animated by a new courage, and his rash purpose of self-destruction seemed like a fantastic dream. The brilliant glow of morning had its share in tranquillising his mind. The first effect of this restored composure was a determination to adjust his disordered dress and appearance. He then stood up, raised his eyes to heaven, and murmured,—'Well, the lesson is not dearly bought; and, at the worst, the stream will be as deep as ever three days hence.'"

We have only to add a morning description:—

"It arrived, as brilliant as its predecessor had been gloomy and tempestuous. Justine bathed her fevered brows in the stream of refreshing air that rushed past the pinnacle of the tower. The clouds were dispersed, and had sunk in the horizon. The deep blue of the sky gleamed through the Gothic balustrades of the platform, and a transparent azure canopy was reared over the lofty summit. Troops of birds sportively fluttered around, or sailed past the building. The stork rattled in his nest, and the ring-dove chirruped in a joyous rivalry. The daylight presented a scene of unsurpassed beauty. The extensive plain in which the city lay, bounded by a line of distant hills, was enlivened by the autumnal tints. Village towers with their shining cupolas, hamlets with their cheerful tile-roofs, were seen across the peopled highroads; and the prospect was diversified by extensive woodland tracts, green meadows, and silvery streams, with cornfields, on which the golden ears were waving in the abundance of autumn. The noble city, encircled by gray bastions and ancient watch-towers, with its river sweeping past the walls, was a principal feature of the landscape. Justine had never enjoyed this view. She looked down on the gloomy streets, the crowded market, the roofs of the houses, and of other churches that lay far be-

neath. She sought out her paternal home, the cradle of her joys. She discovered the convent of St. John, the source of her father's errors and her misfortunes. Her eye was not turned towards the inn where her lover had harboured; it scanned the roads which ran in every direction from the gates. By which had her father emerged?—or was he yet breathing amid the dense mass of houses, whose inhabitants were banded for his destruction? She ran, she knew not why, to the door. Irresolutely she opened it, and heard steps on the narrow staircase, and a whisper of persons approaching. Pablers and the Frenchwoman had quitted the chamber, and in low confidential tones were talking—of herself."

Twelve Sermons delivered in the New Temple of the Israelites, at Hamburgh. By Dr. Gotthold Salomon. Translated from the German by Anna Maria Goldsmid. Pp. 247. London, 1839. Murray.

THESE sermons are selected from many published by the same learned and eloquent teacher, and are intended to make more generally known and illustrate the real tenets of those who hold the ancient Mosaic faith. Without entering upon its interesting topics, we quote, as a specimen, a passage from a discourse on the "Spirit of the Mosaic religion."

"What light is to the mind, love is to the heart; and as our spirits yearn for light, so do our hearts thirst after affection. A religion that should leave this thirst unslaked, might well be suspected, for it would be ill adapted to man (who possesses a feeling heart as well as a thinking mind), in whom not only a thinking mind, but likewise a feeling heart, is constantly demanding nourishment. But blessed are we, my brethren. The very life-breath of our religion is love; and the image of the Creator, which we bear in ourselves, can never manifest itself more worthily or more completely than in acts of love: for it is only by love that we can become like Him who loveth all. Our religion tells us that one God has created us, our text tells us that God is near—is closely related to us. Can there exist any closer relationship? He is our Father, and the Father of all living. One and the same dwelling-place is appointed for us and them here, one and the same is destined for us and them hereafter; the beginning and the end of all are alike. Shall that portion alone which lies between, that span of time which we call life, be unwarmed by the bright beams of love? Mankind are the companions of your journey; love them as you love yourselves. But you pause to reflect. Is it because, perchance, another town, another country, another continent, lies between you and your fellow-man? Ought a foreign city, or a strange land, or an unknown region, then, to be deemed an impassable barrier between hearts formed alike? Are not both they and you still the creatures of God? Are ye not still brethren? And though one may dwell where the sun rises, and another where he sets, is not God the God of the whole earth? Is not His name to be praised from the rising of the sun to the going down of the same? Love the stranger also as thou lovest thyself! Do you again hesitate? There lies between you, perhaps, something more than a continent—a different creed. But say, ye who have feeling hearts, suppose that of two born of the same parents, the elder is tall enough to embrace their father, while the younger can only clasp his knees, must not the elder and stronger assist him, who is as yet too little and weak to climb to the parental bosom? Should difference

in strength cause difference in fraternal love? The heart answers, No; and so speaks religion also. This love will assume every conceivable form that can serve to bless: it will be meek and ready to assist enemies and offenders, tender and compassionate to the wretched and unfortunate, forbearing and indulgent to the weak and infirm, gentle and kind to those of lowly condition, who have the more need of love from their fellow-men, the more they appear to be without the love of their Father in this, their earthly life.

"Religion disposes the heart to love, and thus satisfies man's most sublime natural want."

Speaking of dissentients or sectarians (for every profession has such), we find the following statement, and very Israelitish illustration, in the metallic shape:—

"There is another class, whose members are diametrically opposed to those just mentioned, who yet do not operate beneficially on our community. It is composed of men who are, indeed, acquainted with religion, but who mistake it in one of its most essential parts. You have heard that it is the aim of the Mosaic religion to make us good and useful members of society; so that we may, with all the powers we possess, labour for the welfare of the country to which we belong. These men, however, ignorant of the world and human life, act and speak as though Israel still formed a distinct and separate state; consequently, they observe as parts of the universal religion of Israel, institutions which possessed value in Palestine only, because there only they had spirit and life. They require and inculcate the strict observance of these, although by such observances, much of our power to act usefully as citizens must necessarily be destroyed. Besides this, they envelope the jewel of religion in so many folds, that numbers of our brethren cannot, or will not, penetrate the covering—see not the jewel itself. It is true that gold, when pure and soft, must be mixed with copper before it can be wrought; but, my friends, be moderate in the use of the ignoble alloy. Do you not consider that the gilded copper, or the coppered gold, must, by degrees, lose all its lustre? Do you not reflect that the impression that gives value to your coin will be corroded and eaten away by the *aqua regia* of the world?"

These brief quotations, taken almost hazard from the volume, will suffice to shew that it is well worthy of public regard, as being illustrative of Jewish doctrines and opinions, and shewing us more of the better feelings of this extraordinary people than is usually met with in publications addressed directly to these subjects.*

Forgotten Facts in the Memoirs of Charles Mathews, Comedian; recalled in a Letter to Mrs. Mathews, his Biographer. By S. J. Arnold, Esq. Pp. 52. London, 1839. Ridgway.

WE never had but one opinion of the statement hazarded by Mrs. Mathews, in giving her version of the agreement between her husband and Mr. Arnold. It was very natural that she should take a partial, and, therefore, erroneous view of the business: we should have wondered if she had not done so. The simple truth lies in small

* We may here mention *The Jewish Heroine of the 19th Century*, a tale founded on fact, and translated from the Spanish (pp. 94, London, J. Wasey), which relates the constant resolution of a beautiful Jewish maiden, Phoebe Rachel, not to deny her faith and embrace that of Mahomet; and who was consequently beheaded at Tangier two or three years ago. Mr. Lingo, author of the "Jewish Calendar," is the voucher for this case of martyrdom.

compass. Mathews, disappointed and discontented in consequence of being almost what players call *shelved* by the London managers, found in Arnold a man of prescient judgment in dramatic matters, and of bold enterprise. In Arnold's opinion the unrivalled talents of this unequalled mime were capable of being employed to great advantage, and he ventured to offer to him, for seven years' acting in a new fashion, the magnificent sum of 1000*l.* a-year for life. It was an experiment; and few people will be disposed to think, under all the existing circumstances, that it was not a daring risk. A few nights' performances proved that it was a wise one, and likely to be productive of a splendid fortune. And this was too much for dear Mat's philosophy: he repented of his engagement; he saw it would be far better for his partner than for himself; he was goaded by the remarks and advice of friends; and he became, at the end of six or eight nights, too ill to perform. Such is the plain state of the facts; and the consequence was that the original bond had to be torn up, and a new agreement entered into, upon which the parties continued to deal together for years.

The idea that Mathews was so silly a person as to enter into a serious legal engagement of this kind, after a year and a half's negotiations, without understanding its nature, is too absurd for belief; but even had it been so, as long as bargain is bargain between man and man, he was bound to fulfil his contract, however unfavourably to himself he might consider it to have turned out. We therefore regretted at the time, and expressed our regret, that his biographer had gone out of her way to impugn the conduct and character of Mr. Arnold,—a man upon whom heavy losses too had fallen, which ought to have saved him from any, and still more from unjust attack;—a man, whether in public life or in retirement, covered with the warm esteem and respect of many sympathising friends. Among these the individual who writes this notice is proud to be numbered; and he cannot call to mind the social and happy hours spent with them, when Mathews and Arnold were prosperous together, without feeling a deep sense of sorrow that time and the grave should have allowed a cloud to be cast back on a period of general and genial sunshine. With the world at large, and those who have not known Mr. Arnold, this pamphlet will completely establish his integrity throughout the whole of these transactions; and it will, we trust, be the last we shall hear upon so painful a subject.

Reply to Mr. Lockhart's Pamphlet entitled "The Ballantyne Humbug Handled." By the Author of a "Refutation of the Mistakenments and Calumnies contained in Mr. Lockhart's 'Life of Sir Walter Scott, Bart.' respecting the Messrs. Ballantynes." Pp. 125. Appendix, 97. London, 1839. Longman and Co.; Edinburgh, Blackie.

WE here approach another of those duties very repugnant to our feelings; but, as in the preceding case, we must get over it. Since the above *Reply* issued from the press, we declare that we have taken it up and laid it down hundreds of times, without being able to bring ourselves to notice it. In the first instance we did not hesitate to state our opinion that the Ballantynes, and particularly James, were unfairly and unkindly used in the view taken of their intercourse and transactions with Sir Walter Scott. Their vindication was demanded from their relatives and friends; and sorry were we to find that it only provoked a more severe

visitation from the keen and biting pen of Mr. Lockhart. To his second statement, under a very harsh name, this is a Reply; and a Reply so supported by figures and documents, that none who cherish the memory of the Ballantynes, the partners, companions, and friends of Scott, need blush for any part of their connexion with him. We abstain from saying more.

MISCELLANEOUS.

The Friends of Fontainebleau. By H. D. Burdon, author of the "Lost Evidence," and "Seymour of Sudley." 3 vols. London, 1839. Saunders and Otley.

THIS is rather a busy week in the novel line; or we should be able to devote more space to Miss Burdon's historical fiction than is, under the circumstances, in our power. Like her former productions, the *Friends of Fontainebleau* displays very considerable talent and power. Of a grave and disastrous character, her descriptions of human suffering are full of tragical interest. The period is of that eventful struggle and bloodshed which preceded the horrible massacre of St. Bartholomew; and of all the sights that can afflict humanity, there is none so shocking as that of barbarities, treacheries, murders, and executions, committed in the name and under the profession of the religion of peace and good-will to all men. Miss Burdon has set such miseries in a striking light: her narrative is animated and touching, and her fair dames and noble cavaliers are drawn aptly and truly in the garb of the times to which they belong. The story is altogether well told, and will enchain the attention of readers to the end. It is impossible, by any extract, to give a taste of its quality.

A Practical Description of the Daguerrréotype. Translated by J. P. Simon, M.D. London, 1839. Churchill.

AN inferior and inadequate translation. Dr. Simon seems to have no idea of arrangement; for instance, in the midst of M. Gay de Lussac's Report he introduces, without any indication to the reader of the commencement or conclusion of the passage, an account of his having been defrauded of forty pounds by some countryman of his own, who pretended to communicate to him the whole secret of the photogenic art, of which it afterwards appeared the professed instructor had no knowledge except that which he had derived from M. Daguerre's publication.

The Life of Christ. Illustrated by Choice Passages from One Hundred and Thirty-eight Eminent British and Foreign Divines; and Embellished by Severely Wood-Engravings after Celebrated Masters. Small 4to. pp. 288. London, 1839. Ball, Arnold, and Co.

THE title-page sufficiently explains the nature of this work, which is embellished and bound so as to take the handsome form of an Annual, devoted to pious thoughts and religious instruction. The selections are made with great judgment, and the beautiful pictures from admirable painters are exceedingly well executed in the wood-engravings. For the serious portion of the public, this is a very reasonable and desirable publication.

Standard Edition of Gulliver's Travels. Parts I. II. London, 1839. Hayward and Moore. EIGHT monthly parts, illustrated by four hundred wood-engravings by Grandville, are announced to complete this popular edition of one of the most popular works ever written. The parts before us do great credit to the artist and

publisher, and already give us Lilliput complete, and introduce us to Brobdingnag. When finished, it will be a capital publication, and is well deserving of public encouragement.

Cuvier's Animal Kingdom. Part I. Mammalia. 8vo. pp. 80. London, 1839. Orr and Co.

A MORE desirable republication, in a convenient form and at a moderate price, could not be named, than Cuvier's justly celebrated *Animal Kingdom*; and we rejoice to see it undertaken, as in the present instance, with spirit, and confided to the editorial abilities of Mr. Edward Blythe, Mr. R. Mudie, Dr. George Johnston, and Mr. J. O. Westwood. These gentlemen have severally undertaken the mammalia, birds and reptiles, the fishes, the mollusca, and the crustacea and insects; and this first part, as far as it allows us to judge, promises a complete work of high merit and value.

Short Sermons for Little Children, by an Elder Sister. Pp. 178. (Edinburgh, Fraser and Crawford.)—A well-meant little book, to inculcate the duties incumbent on childhood. Each sermon has a pretty hymn attached.

The Populist's Repository, or, *Conventioneer's London.* Part XIII. Pp. 448, double col. (Glasgow, Blackie and Son.)—This part concludes the work in 187 pages; and a Supplement, carrying us to the word "Dulwich," supplies recent and useful additions.

An Abstract of the Evidence taken before the Committee of the House of Lords upon the State of Crime in Ireland. Digested under several heads, by D. Leahy, Esq. Barrister-at-Law. 8vo. pp. 162. (London, Longman and Co.)—This appears to us to be an able and impartial abstract: a production of great labour.

The Sporting Almanack, 1840. (London, E. Churton.)—This is a capital almanack for persons fond of the turf, besides full of all sorts of information connected with it, besides having all the usefulness of an almanack, being appropriately embellished and enlivened by congenial essays and papers on various subjects.

Euclid's Elements of Plane Geometry, &c. by W. D. Cooley, A.B. Pp. 184. (London, Whittaker and Co.)—A useful school-book: plain, and as easy and concise as the subject admits.

Lockhart's Life of Sir W. Scott. Vol. VIII. (Edinburgh, Cadell; London, Whittaker.)—A View of Abbotsford, and a likeness of Scott from Chantrey's fine bust, are the ornaments of this volume.

A Challenge to Phrenologists, by A.M. of the Middle Temple. Pp. 306. (London, Hodson.)—A stout challenger though incognito. The phrenologists will have enough ado to meet him in the field. We are tired of the combat.

The German Self-Teacher, &c. by H. Meldinger. Pp. 288. (London, Whittaker and Co.; Dulau and Co.)—A very simple and excellent mode of acquiring the German language is laid down in this volume; which is otherwise well worthy of notice for its views of the affinity of the English tongue with that of Germany. The writer appears to have a comprehensive knowledge of the Gothic-Teutonic language; of a dictionary of which, we believe, he is also the compiler.

Berger's Moral Tales for Children in German. Pp. 161. (London, Nutt; Dublin, Milliken; Edinburgh, Smith.)—A nice and judicious selection, both of ancient matter and sketches of every-day life.

Marianne, the Lady of the Amosene Prince. A Historical Novel of Palestine. Pp. 442. (London, Fraser.)—A republication of an interesting work which appeared some fourteen years ago, and did not, owing to circumstances, meet with the attention it deserved. We trust the second venture will be more prosperous. The subject, both as regards the people and the country, is one of the best that could be chosen.

The Guide to Trade. The Joiner and Cabinet-maker. Pp. 115. (London, Knight.)—One of those useful little books which affords valuable instruction and advice to the workman; and a considerable degree of insight to the employer.

Plain Abstracts for Popular Use of all the Acts of Public Interest, passed in the Session 2 and 3 of Victoria, 1839, by J. H. Brady. Pp. 66. (London, Washbourne.)—The Police Acts alone are enough to give value to this useful little manual; but it contains much more of serviceable matter.

The Child's Library. Peter Wilkins, by R. Paltocke. Pp. 180. (London, Thomas; Tegg; Simpkin and Marshall.)—A nice little edition of a famous story, and divulging for children the name of its author, which literary men did not know. He had twenty guineas, twelve copies, and some of the cuts, for his labour. What did Doddsley make by it?

Incidents of Travel in the Russian and Turkish Empires, by J. L. Stephens, Esq. Pp. 136, double columns. (London, Smith.)—One of the very cheap editions of a work upon which we bestowed just eulogy when it appeared in a much more expensive shape.

A Treatise on the Art of Preserving the Eye, &c. &c. by J. C. A. Franz. Pp. 286. (London, Churchill; Edinburgh, Cadell; London, Hodges and Smith.)—The eye, though apparently the most delicate organ in

the human frame, costs us less trouble than the hard and enamelled tooth. The perihæal beats the imperishable altogether. Nevertheless, it is well to know how to use it; for which purpose this is a very laudable volume.

Robinson Crusoe. Parts I. II. III. (London, Tya.)—This new edition is laden with wood-engravings from designs by Grandville, who promises 300 in all. Who would not have such a Crusoe? There are to be seven more parts. The artists have fairly and cleverly done their duty.

A Manual of British Coleoptera, or Beetles, &c. &c. by James W. Stephens, F.L.S. &c. &c. Pp. 443. (Longman and Co.)—A very complete manual of all our beetles hitherto ascertained, with a notice of their localities, periods, and places of appearance. In short, of all the scientific intelligence necessary to the subject. Many new species appear.

Preliminary Lessons in the History of England. Pp. 76. (Taunton, F. May.)—A thirteenth edition speaks the utility of this little book for juvenile classes.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

New Mode of Medal-Copying, &c.

MR. AINGER, 'On Warming and Ventilating Buildings.'—This was the first illustration of the season, and for the middle of November was surely quite appropriate. Mr. Ainger was not distinctly heard. He noticed the various modes of warming apartments, from the simplest—that in the Irish cabin, with the fire of peat in the middle, down to the most scientific, including all manner of stoves.—Dr. Arnott's, Joyce's, &c. Stoves, the lecturer considered well applied to the warming of halls and staircases. Mr. Ainger adverted to the ancient mode of warming by horizontal flues; next, by heated air; then, by steam conducted through pipes; hot water; Perkins's plan; also by hot water under great pressure; and lastly, by air having been previously in contact with hot water. From what was advanced it was easily to be seen that a good coal fire after all is the best, as it is certainly the most social mode of counteracting the effect of cold within doors. The remarks on ventilation were postponed.—Mr. Aikin directed attention to some exquisite copies of medals, taken by the new process of the Rev. Thomas Spencer, of Liverpool. The copies were placed on the table. The principle which Mr. Spencer employs to obtain copies is briefly this:—He immerses the metallic surface to be copied in a solution of sulphate of copper; and then, by a small voltaic battery, causes hydrogen gas to be evolved against it. The hydrogen reduces the copper to the metallic state, and thus the surface soon becomes coated with copper, which may be separated when it has acquired sufficient thickness. When a medal or coin is thus operated on, a cast is obtained, in which the figures are sunk as in a die. It is therefore requisite, if we wish to obtain a copy of the medal in relief, either to employ two processes, the first to obtain a die, and the second to form a medal. Or we may simplify the process by first forming a die (by passing the medal either in lead or fusible metal), which may then be employed to precipitate the copper into, by the voltaic process. Dies of this kind are very easily formed, and may be used many times for forming medals. For small coins leaden dies are best, because easily formed and very sharp; but for large medals, or those in high relief, fusible metal is perhaps preferable: for, though more difficult to make, there is far less chance of injuring the medal. The specimens exhibited were much admired.

ROYAL GEOGRAPHICAL SOCIETY.

Nov. 11. Mr. W. R. Hamilton, F.R.S. Vice-President, in the chair.—This being the first meeting for the season, a long list of donations to the library was announced, exceeding one hundred and seventy books, and eighty maps,

including the fourth volume of the "Pilote Français," presented by the Dépôt de la Marine; and the twelve just published sheets of the "Carte Topographique" of France, presented by the Dépôt de la Guerre, at Paris. Sixteen members were proposed. Extracts from the following papers were read:—1. 'On the recent Establishment at Port Essington on the North Coast of Australia, by Captain Sir Gordon Bremer, R.N.' Communicated by Sir John Barrow.

"Port Essington, 8 March, 1839.

"On the 27th October, 1838, I reached this place, and, after due consideration, fixed on this spot for the settlement. Our operations commenced on the 3d November, and have proceeded with so much vigour that we have now a very admirable little town. The position is on a considerable piece of rising ground, midway on the western side of the inner harbour. The soil around is of the finest description; and we have already four wells sunk, which afford abundance of water. A finer harbour is scarcely to be met with in the world. The Alligator and Britomart lie in eighteen feet at the lowest water of spring-tides, within hail of an excellent pier, which extends one hundred feet. On Point Record and Spear Point are wells where ships can water most expeditiously, while around our settlement are large ponds and many running streams, all excellent. The rains have fallen but slightly this season, and our gardens in consequence have not made that progress I had hoped for; nevertheless, the orange, lemon, banana, plantain, and cocoa-nut trees, are in beautiful order; while the pumpkins, melons, &c. give ample promise. As regards climate, I have no hesitation in expressing my opinion that it is as fine as any tropical one in the world. We have had very hard labour, and been constantly exposed to the sun; occasionally the thermometer in the shade has been 98° and 100°; yet not one serious case of sickness has occurred. Some disposition to scurvy in two individuals had manifested itself, but by timely means it has been overcome. We have now a stock of cattle for a month, and I look for a further supply on the return of the schooner Essington from Timor. That vessel sailed in December last for the islands to the northward, for the purpose of opening a trade; and on board her I sent Mr. G. W. Earl, whose interesting account of his voyage is amongst my other reports. He found a considerable Christian population, under the guidance of some intelligent Dutch missionaries, and has given me so much information, and caused such a desire on my part for more, that I purpose proceeding to Little Moa and Kissa in the Britomart about the end of this month. In concluding this brief despatch, I feel that I am abundantly warranted in congratulating the British government on their having caused the occupation of this noble harbour, and on the acquisition to the country of a colony which must answer all the purposes contemplated by her majesty's government in its formation; nor can I entertain a doubt but that, with the due encouragement it will receive from home, its admirable geographical position will excite attention, its capabilities for mercantile purposes be appreciated, and its soil, which evidently will produce the most valuable articles, be speedily and successfully cultivated." The paper was accompanied by a chart of Port Essington, by Captain Owen Stanley, R.N.; from which it appears that the site of the new town of *Victoria*, on the western side of the harbour, lies in 11° 20' 30"

south latitude, and 132° 9' longitude east of Greenwich.

2. 'Notes on Two Journeys from Baghdad to the Ruins of Al Hadhr, in Mesopotamia, in 1836 and 1837.' By Dr. John Ross, Surgeon to the British Residency at Baghdad.—"After numerous failures for nearly two years, in endeavouring to get Beduins to escort me to the ruins of Al Hadhr, I have at length succeeded in persuading Salâh-el-Mezzeini, a well-known 'Ajili, to make the attempt. The ruins themselves, and the country round them, are looked upon by the Arabs with superstitious awe, as the haunts of evil spirits; moreover, the roads to them are always infested by plundering parties of the Shammâr and Aneizah, passing to and from forays: so we determined to proceed with as few attendants and as little display as possible.

"May 7, 1839.—Our preparations being completed we left Baghdad, and continuing along the western bank of the Tigris, in a general N.N.W. direction, we passed through the towns of Istâbolat, Tekrit, Kharneinâh, to Kalah Sherkat, where we examined the ruins. After waiting here some time for our donkeys with the barley for our horses, we found that they had given us the slip; finding ourselves in this condition, Salâh called a council of war, and after commenting very strongly upon the treachery of the Tekriti, and the revenge he should have on his return, he told old Shif'al the object of our coming, and said that, as Al Hadhr was only a day's journey off, it would be a disgrace to turn back, and proposed that, as the horses were good, and a chance of green grass inland, and that as we could see the ruins and return to Tekrit in five days, we should trust in God and go on. We unanimously agreed to his proposal, and, after the Arabs had repeated a short prayer aloud for safety and Divine protection, we, at 7h. 30m. A.M. mounted and struck off N.W. $\frac{1}{2}$ W., first over undulating ground, then along the bed of a brackish stream in a small valley called Wâdi-el-Mehêih. At 9h. 30m. halted at a plot of fine green grass to give the horses a feed. Here I observed the Arabs were evidently not at ease; each got on the top of a small kuoll, and, lying flat on his face, kept scanning the horizon in all directions for upwards of an hour, looking for smoke or any signs of human beings being about. At noon we mounted; the country now consists of long, low, undulating ridges, like the waves of the sea, and we can see nothing beyond the one we happen to be on. Between each undulation is a valley, which in winter must have abundance of water. The Arabs are now gloomy and silent, looking suspiciously about; their very features are changed, and as I happen to have the best eyes of the party, they are constantly reminding me to make good use of them. At 4h. 15m. I saw ruins far distant W. by S. which the Arabs instantly pronounced to be Al Hadhr, and we changed our course straight for them. The distant ruins soon appeared with an awfully grand effect; a thick black cloud, behind them, was darting out the most vivid flashings of lightning, and we could distinctly hear the peals of thunder. Old Salâh shook his head and said, 'Sir, I do not like this, we should not have come here; this ground belongs to Iblis.' I confess I myself felt a sort of creeping sensation coming over me. At 5h. 15m. having reached grass and water, and finding it impossible to arrive at the ruins to-night, we halted, and had barely time to fasten the cattle and huddle together, when there burst over us the most terrific storm I

ever beheld; we were ankle deep in water in a few minutes, though on a slight declivity. The storm lasted for about four hours, and the water settled into the valley; yet, in less than an hour afterwards, the Arabs, to my astonishment, contrived to light a fire and boil a little coffee.

"14th.—At 4h. 30m. A.M. mounted and made straight in the direction of the ruins. At 6h. 40m. got to the Tharthar, in a wâdi about two hundred yards broad, covered with grass. The Tharthar itself is here about fifty feet broad, deep, and the water just drinkable. We wandered up and down, but could find no ford; at last Salâh and I stripped to our shirts, and I tied my watch, compass, and note-book on my head, and, being sure of my horse, plunged in, followed by Salâh, at 7h. 45m. The current was rapid, but a few strokes landed us in safety. We reached Al Hadhr at 8h. 10m. We had been about two hours among the ruins, taking rough sketches, measurements, &c., and I was just proceeding to measure the diameter of the city walls, and to count the bastions, when I saw, on a rising ground in the distant horizon to the north, a horseman. I called Salâh, but he could not distinguish him; while pointing out the direction, I saw another join the first. Salâh still doubted, saying it must be a wild hog or a bush, as no human being could be there: for if the Aneizah were out, they must appear from the south, or if the Shammâr, from the west. The appearance of a third, though still invisible to Salâh, settled the business. He said, with a hollow, changed voice, 'We must be off. Allah! Allah! what brought us here?' And off we went, as hard as our horses could, to join our people. I had just time in passing to observe that the general course of the Tharthar is S.E. and S. by E. On getting to our people we instantly saddled, and at 10h. 40m. we were on our return, flying by the same route which brought us. I told Salâh to be more calm—we were five, the enemy only three; he called out, 'Oh, sir, where you see dogs you will find fleas.' At 11h. we heard the horrible war-howl of Arabs behind us. Salâh called out to us to stand fast together while he went to meet them. If they are Shammâr we shall be plundered, but if Aneizah, my party may get off, but the Beduins must fall. I ordered my people to be cool, and not on any account to fire unless I ordered. We were in a hollow, and our speeches were cut short by the appearance of about a hundred horsemen coming over the low ridge behind us at full gallop, and about the same number on our flank. The sight, though far from pleasant, was very grand; the wild disorder, loose flying robes of every colour, spears with round tufts of ostrich-feathers; the howling and yelling, had a most romantic effect. When within about one hundred and fifty yards, my camel-man called out that they were Shammâr (he himself was of that tribe), and told us not to attempt resistance. In another instant they were upon us, and I found myself alone, separated from my people, whose horses had started, perfectly jammed up by the Arabs, and their spears within a few inches of every part of my body. One called to me to dismount and throw down my gun. I asked, 'And if I do?' he answered 'Safety; fear not.' I uncocked my gun, and laid it across the saddle; they at the same time shouldered their spears. One seized me by the clothes, and, my horse having kicked out at his, the part gave way; another then seized my gun, and pulled me off, and in the fall the gun remained with him. My old

horse appeared to take the matter up, and by kicking and fighting cleared an open space; in the meantime, Saláh had been undergoing the same treatment; but, getting a hearing, said he was an Ajel and a Shammárí. The chief asked what he did here? Saláh said, 'By Allah, we were going from 'Alí Páshá to Mahommed Páshá of Mósul; and that I was an Albanian.' The chief answered, 'Oh, Bedufu, do not lie: first, this is not the road; and, secondly, your backs are to Mósul, and your faces to Baghdád.' All called out, 'They are from Reshíd Páshá: cut the dogs' heads off.' A second scramble took place, our camel was made to kneel, and the baggage thrown off; I was knocked down, and in an instant was nearly naked, when an old man (for they were still galloping up by dozens) pushed them all aside with an air of authority, calling out in a thundering voice, 'Avast (awáh), that is no Turk, that is the Bályóz; I saw him two years ago in Sheikh Zebáid's tent: let no one touch him, I protect him.' An immediate calm ensued, when Saláh, now nearly naked, advanced, and said, 'Now that you know us, I shall tell you the truth; that is the Bályóz, we came here to see Al Hadhr, and we are now going back.' Every thing was now set right, an order was given to restore every thing taken, even to a hair, if one had fallen from our heads, and duly obeyed. We sat on the ground good friends. Their chief told us we had done a very foolish thing in coming here without their knowledge, as it was dangerous ground; they never see any one here except themselves or their enemies, and for the latter they had taken us. He then said, in the most beautiful Arabic style, 'If we had in the hurry killed you all, what answer could we give your friends, or what satisfaction could they expect? When we find strange people here, it is not the time to ask who they are, or whence they have come. Allah has saved you.' He then told us that all was in confusion, that Reshíd Páshá had, in a most treacherous manner, seized their sheikh, Sufúk, while a guest in the Turkish camp, on the most solemn pledge of safety, and had sent him prisoner to Constantinople; consequently the Shammár had all rebelled, and come to the desert. They then invited us to their camp, and I was inclined to go, but Saláh whispered to me that we must get off as soon as possible; for as soon as the seizure of Sufúk was known, there would be a great outbreak in Mesopotamia. The ruins of Al Hadhr occupy a space of ground upwards of a mile in diameter, enclosed by a circular, or nearly circular wall, of immense thickness, with square bastions or towers at about every sixty paces, built of large square cut stones. The upper portions of the curtains have in most places been thrown down, as have been also some of the bastions, but most of the latter may still be said to be in very fair preservation, each having towards the city vaulted chambers. Outside the wall is a broad and very deep ditch, now dry, and a hundred, or a hundred and fifty paces beyond it is a thick rampart, now only a few feet high, going round the town; and at some distance beyond the fortifications stand two high mounds with square towers upon them, one on the eastern side, the other on the north. In nearly the exact centre of the town stands the grand object of curiosity, whether temple or palace, I shall not pretend to say, enclosed by a strong, thick, square wall (partly demolished), with bastions similar to those of the city wall, fronting the four cardinal points, each face measuring three hundred long paces inside. The square is in its centre intersected

from north to south by a range of buildings greatly damaged, a confused mass of chambers, gateways, and one built pillar reduced to about thirty feet. Between this range, and the eastern wall appears to have been a clear space. The principal buildings occupy the western side, and consist of a huge pile fronting the east, and part of a wing fronting the north. The ground-story only remains perfect, and consists of a range of vaulted halls of two sizes. The whole city is built of a brownish-gray limestone, so closely fitted that if cement has been used, it cannot be seen; and almost every stone in the great pile has cut upon it one or more letters or marks, seemingly the builder's number, as they are seen in the midst of broken walls, where they could not have been exposed when the structure was perfect. During both visits to these ruins I endeavoured, by looking into every hole and corner, to discover the statues said by the Arabs to be there, but could find none. The last time, I brought from the camp a Beduin who was to point out the statue of the woman milking the cow, so much spoken of by them, but he took me direct to one of the monsters in No. 7. I now much doubt the existence of any statue at all, at least above ground."

3. 'Note upon a newly discovered River in the Southern Island of New Zealand,' by T. H. Nation, Esq. Surgeon, Royal Navy. On the 1st September, 1838, H. M. S. Pelorus entered a river falling into Cook's Straits, on the north side of the island of Tawai Poënammu, and sailed up it in a southerly direction for about forty miles; the ship's launch, or large-boat, then continued ascending for about twenty miles further, when, owing to the freshes from the mountains, banks of gravel prevented her proceeding without difficulty. The river is described as a fine stream, the banks covered with ilex and magnificent tree-ferns, the hills covered with forests of the Cordie pine, large tracts of alluvial land spread around, and in the distance the mountains rose to at least 2000 feet above the sea. The position of the ship's anchorage in the river was $41^{\circ} 16' S.$ $173^{\circ} 50' E.$ Its outlet is on the shores of a bay partially examined by Captain Dumont d'Urville in the Astrolabe, in 1823, the Admiralty Bay of Cook.

4. 'Discoveries' in the Antarctic Ocean in February 1839, from the Log-book of the Eliza Scott,* communicated by Charles Enderby, Esq. In July 1838, two small vessels, belonging to the Messrs. Enderby and some other merchants, sailed from London on a sealing voyage to the South Seas, with special instructions to push as far as possible to the southward in search of land. Touching at Amsterdam Island, Chalky Bay in New Zealand, and Campbell's Island, the vessels proceeded to the southward, and reached their extreme south latitude, 69° , in $172^{\circ} 11'$ east longitude, full two hundred and twenty miles further to the southward than the point which Bellingshausen, in 1820, had been able to reach in this meridian. Continuing to the westward, on Feb. 9, in latitude $66^{\circ} 44'$, longitude $163^{\circ} 11'$ east, they discovered five islands, since named the Balleny Islands, from the name of the master of the Eliza Scott: one of these was estimated at the height of 12,000 feet above the sea; on another island two volcanoes emitted smoke. Continuing their voyage to the westward, the vessels were beset by icebergs; they saw numerous whales, penguins and other sea birds, and occasionally

had a magnificent display of the Aurora Australis. In latitude $61^{\circ} S.$, longitude $103^{\circ} 40' E.$, they passed within a quarter of a mile of an iceberg two hundred and fifty feet high, bearing a fragment of rock; and continuing their course northward, they reached England on the 17th September, just in time to supply another Antarctic Expedition, then on the eve of departure from England, with the information they had been able to obtain of a newly discovered group of islands, lying on the western verge of the circle, within which there seems to be every probability that our gallant countryman, Capt. James Ross, may find the southern magnetic pole.—5. 'Note on a Rock seen on an Iceberg in 61° south latitude,' by C. Darwin, Esq. In this paper the author has collected together all the facts relative to the fragment of rock seen on an iceberg, and points out the value of such an evidence of the transporting power of ice. The part of the rock visible was estimated by Mr. M'Nab, mate of the vessel, who made a sketch of it at the time, at twelve feet in height, and from five to six feet in width; the remainder was buried in the ice. The iceberg was distant 1400 miles from the nearest certainly known land, but it is highly probable that land may exist not above three hundred miles immediately to the southward.

"If, then," concludes Mr. Darwin, "but one iceberg in a thousand, or in ten thousand, transport its fragment, the bottom of the Antarctic Sea, and the shores of its islands, must already be scattered with masses of foreign rock, the counterpart of the erratic boulders of the northern hemisphere."—Among the illustrations to the above papers was a beautiful chart of the South Polar Sea, just published at the Hydrographic Office of the Admiralty; and a trigonometrical survey of the river Tigris, from Ctesiphon to Mósul, by Lieutenant Lynch, Indian Navy, communicated by Sir John Hobhouse, President of the India Board.

GEOLOGICAL SOCIETY.

Nov. 6. The first meeting of this Society for the season was held on Wednesday evening, the Rev. Professor Buckland, D.D. President, in the chair.—The following communications were read:—1. 'A Notice of Showers of Ashes which fell on board the Roxburgh, off the Cape de Verd Islands, in February last,' by the Rev. W. B. Clarke. On Tuesday, February 4th, the latitude of the ship at noon was $14^{\circ} 31' N.$; longitude, $25^{\circ} 16' W.$ The sky was overcast, and the weather thick and insufferably oppressive; though the thermometer was only 72° . At three P.M. the wind suddenly lulled into a calm; then rose from the S. W. accompanied by rain, and the air appeared to be filled with dust, which affected the eyes of the passengers and crew. At noon, on the 5th of February, the latitude of the Roxburgh was $12^{\circ} 36' N.$; longitude $24^{\circ} 13' W.$; the thermometer stood at 72° , and the barometer at 30° , the height which it had maintained during the voyage from England. The volcanic island of Fogo, one of the Cape de Verdes, was about forty-five miles distant. The weather was clear and fine, but the sails were found to be covered with an impalpable reddish brown powder, which Mr. Clarke states resembled many of the varieties of ashes ejected from Vesuvius; and evidently was not sand blown from the African deserts. The author also mentions the following instances of similar phenomena, chiefly on the authority of the officers of the Roxburgh. In June 1822, the ship Kingston of Bristol, bound to Jamaica, while passing near Fogo, had her sails

* These discoveries we described in our statement of Captain J. Ross's proposed route. See *L. G. No. 1182*.

covered with a similar brownish powder, which, it is said, smelt strongly of sulphur. In the latitude of the Canaries, and longitude 36° W. showers of ashes have been noticed two or three times. At Bombay, dust, on one occasion, fell on the decks of the vessels to the depth of an inch; and it was supposed to have been blown from Arabia. In January 1838, dust was noticed by the crew of a ship navigating the China Sea, and at a considerable distance from the Bashee Islands, one of which had been previously seen in eruption. In 1812, ashes fell on the deck of a packet bound to the Brazils, and when 1000 miles from land.—2. A Letter from Mr. Caldcleugh, dated Santiago de Chili, 18th February 1839, containing the declaration of the master and part of the crew of the Chilean brig Thily, of the discovery, during the evening of the 12th of February, of three volcanic islands about thirty leagues to the east of Juan Fernandez. The island which was first noticed, appeared, at the time of its discovery, to be rising out of the sea. It afterwards divided into two pyramids which crumbled away, but their base remained above the level of a violent surge; and in the course of the same evening the height of the island was, for a time, again considerably increased. The other two volcanic islets bore further southwards. During the night the crew of the Thily noticed, at intervals, a light in the same direction.—3. A letter addressed to Mr. Lyell, by Mr. Buddle of Newcastle, 'On Depressions produced in the Surface of the Ground by the Excavation of Beds of Coal.' The effects described in this paper are stated to depend on the four following conditions: 1. The depth of the seam of coal below the surface; 2. The thickness of the seam; 3. The nature of the strata between the seam of coal and the surface; 4. Whether the pillars of coal are wholly or partially removed. If the depth from the surface does not exceed thirty fathoms, and sandstone forms the greater part of the mass overlying the stream, the subsidence is nearly, if not quite, equal to the thickness of the coal removed; but if "metal-stone," or shale, constitute the bulk of the beds, the hollow produced by the settling of strata is less. This rule, depending on the nature of the intervening mass, is said to be maintained at all depths. Of the proportional effect produced in the surface, Mr. Buddle has not been able to obtain any accurate information, the amount depending on the four conditions enumerated above; but the depth of the depression depends less on the thickness of the seam than on its entire removal. In the Newcastle pits, where large pillars of coals are left, in the first instance, and when these are subsequently removed, blocks, or "stooks," of considerable strength, are suffered to remain, for the purpose of protecting the colliers from the exfoliation of the roof; the sinking of the superincumbent mass is retarded, and several years sometimes elapse before the excavation is completely closed, or the overlying strata are finally settled down. In the Yorkshire system, by which all the coal, with the exception of small temporary pillars, is removed in the first instance, the roof being supported by wooden props and stone pillars, the overlying strata subside immediately after the coal is removed. It is only where water occurs on the surface, or a railway traverses a coal-field, that the amount of depression can be accurately ascertained. In one instance the removal of a bed of coal six feet thick, one fourth having been left in "stooks," the depth being 100 fathoms, and the overlying strata principally sandstone, a

pond of water accumulated to the depth of rather more than three feet, by the settling of the strata. In another instance, where a railway crossed a district from beneath which three beds of coal had been successively removed, it had been found necessary to restore the level of the railway three times. The aggregate thickness of the seams of coal was nearly fifteen feet; the depth of the lowest, one hundred and seven fathoms; of the highest, seventy-three; and the mass of the overlying strata consisted of shale. The extent of each settlement was not measured, but the total was five feet six inches; and this comparatively small amount Mr. Buddle explains by the railway passing near one end of the excavated tract. A still higher seam is now in progress of being worked, and it affords an excellent opportunity for ascertaining the effects produced by the pressure of the superincumbent mass. Innumerable vertical cracks pass through the seam, as well as the pavement and roof, or the beds immediately above and below it, but they are perfectly close except around the margin of the settlement; along this line the seam is splintered, the pavement and roof are fissured and bent down, and the cracks are frequently open. Within the area of the settlement, the pavement, on the contrary, is as smooth as if it had not been disturbed, the cracks are close, and the coal is not splintered, but rendered tougher, or, in the language of the collier, more "woody." This effect Mr. Buddle ascribes to the escape of gas by the cracks, and the same changes are sometimes produced by other causes when the coal is said to be winded.—4. On the relative Ages of the Tertiary and Post-Tertiary Deposits of the Basin of the Clyde, by James Smith, Esq. of Jordan Hill. In former communications, Mr. Smith shewed that deposits in the basin of the Clyde had been elevated above the level of the sea during very recent geological epochs; and that some of these beds contain testacea, which indicate the prevalence, during the period of their accumulation, of a colder climate in Scotland than exists at present. In this paper he confines his remarks to subsequent observations, which afford most satisfactory evidence that these comparatively modern deposits are divisible into two distinct formations, differing in their fauna, and separated by a wide interval of time. In the older of these formations, Mr. Smith has found from ten to fifteen per cent of extinct or unknown species of testacea; but in the newer, only such shells as inhabit the British seas. He accordingly places the former among the newest pliocene or pleistocene deposits of Mr. Lyell, and the latter among the post-tertiary series. Both of these accumulations he nevertheless considers to be older than the human period. In the lowest part of the pleistocene formation of the basin of the Clyde, Mr. Smith places the unstratified mass of clay and boulders, locally called "till;" and in the upper, which rests upon it, the beds of sand, gravel, and clay, containing marine shells, a portion of which are extinct or unknown. He is of opinion that some of the similar accumulations in the basins of the Forth and the Tay will probably prove to be of the same age, as well as the elevated terraces of Glenroy, recently shewn by Mr. Darwin to be of marine origin. He is also convinced that a very great proportion of the superficial beds of sand, gravel, and clay, will be ascertained to be tertiary, although the absence of organic remains must render it difficult to obtain, on all occasions, satisfactory evidence. During the post-tertiary epoch, or while the beds containing only existing

testacea were accumulated, changes of level in the basin of the Clyde must have taken place to the amount of forty feet; but during the human period, no change appears to have occurred. The paper concludes with a list of the fossil shells obtained by Mr. Smith, and not found living in the British seas, or of doubtful existence in them. The number of the species is twenty-four—six of which occur in the crag of England, three in the most recent tertiary strata of Sweden, and seven in a living state in the North Seas.—5. 'On the Noxious Gases emitted from the Chalk and overlying Strata in sinking Wells near London,' by Dr. Mitchell. The most abundant deleterious gas in the chalk is the carbonic acid; and it is said to occur in greater quantities in the lower than the upper division of the formation. The distribution of it, however, in that portion of the series is very unequal, it having been found to issue in considerable volumes from one stratum; while from these immediately above and beneath, none was emitted. Sulphuretted hydrogen and carbonated hydrogen gases sometimes occur where the chalk is covered with mud and London clay, as well as in other situations. In making the Thames Tunnel, they have been both occasionally given out, and some inconvenience has been experienced by the workmen; but in no instance have the effects been fatal. In the districts where sulphuretted hydrogen gas occurs, the discharge increases considerably after long-continued rain, the water forcing it out from the cavities in which it had accumulated. The paper contained several cases of well-diggers having been suffocated from not using proper precautions.—The tables of the meeting-room and the library were covered with donations of specimens and books.

ASHMOLEAN SOCIETY.

At the Ashmolean Society, Nov. 7th, after receiving presents, and electing members, a letter was read from Mr. J. A. Rowell, of Oxford, containing a statement of his theory of the formation of rain and other meteorological and electrical phenomena. His hypothesis is—that, in order to rise in the air, each particle of vapour must be expended at least eight hundred and sixty times its bulk; that it carries with it its proportion of electricity according to its expanded surface; that if condensed within the electrical attraction of the earth, the extra quantity of electricity is withdrawn, and the vapour falls and becomes dew; but if it rises out of the electrical attraction of the earth, and is then condensed, the electricity, being insulated, forms an atmosphere around each particle of vapour, which surcharge of electricity not only suspends the vapour by its buoyancy, but also repels the neighbouring particles of vapour, and prevents the formation of rain; and on the removal, by any cause, of the electricity inclosing the vaporous particles, the repulsion is removed, and the particles of vapour then attract each other and form rain. Several proofs were brought forward in support of this hypothesis, and its competency was shewn to account for various unexplained phenomena, the aurora borealis, the variation of the needle, &c.—*Oxford Herald*.

LITERARY AND LEARNED.

ROYAL SOCIETY OF LITERATURE.

On Thursday, the first meeting of the season, Mr. L. Hayes Pettit in the Chair.—Several new members were proposed, and the secretary

commenced reading a paper by Mr. Cullimore, 'On the Early Egyptian Dynasties.'

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Statistical, 8 P.M.; Medical, 8 P.M.
Tuesday.—Linnæan, 8 P.M.; Electrical, 8 P.M.; Architectural, 8 P.M.
Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.
Saturday.—Westminster Medical, 8 P.M.; Mathematical, 8 P.M.

FINE ARTS.

NEW PUBLICATIONS.

A Distinguished Member of the Humane Society. Painted by Edwin Landseer, R.A.; Engraved by Thomas Landseer. Moon. "NOBLE," as well as "distinguished;" for certainly a finer or more aristocratic specimen of his kind never barked or swam. Every body who visited the Exhibition of the Royal Academy in 1838 must recollect the picture, by Edwin Landseer, of a magnificent Newfoundland dog, stretched upon the extreme point of a small jetty, nearly surrounded by the laving waves; his limbs in perfect repose, but his countenance animated, watchful, and benevolent; indicating his readiness to lend his instant and powerful aid in any sudden case of distress or danger. Such an animal itself, few persons can be so fortunate as to possess; but the united talents and labours of the brother-artists have enabled any one to procure a portrait of him; which, in beauty and spirit, can be excelled only by the reality. No engraver but one who is himself so excellent an animal designer and painter as Thomas Landseer, could have been half so successful in transferring to steel the exquisite character and execution of the original work. It is the most superb print of the kind that we ever met with.

Outlines to Illustrate a Moral Allegory, entitled "The Fights of Freewill." By Richard Westmacott, jun. A.R.A. F.R.S. Mitchell.

WE are not very fond of allegory, but the simple beauty of that before us disarms us of all hostility against it. It is comprehended in eight plates; and we cannot more briefly, and at the same time more adequately, describe them, than by copying their titles. Plate 1. A voice, like the sound of a trumpet, announces that a human soul has entered upon the earth. A good spirit, hearing it, kneels; but the spirit of evil, frowning, stands aloof. The soul is to fulfil its pilgrimage, attended by these influences, but having freewill to choose between the good and evil.—Plate 2. Religious instruction in Infancy. The influence of the good spirit paramount. The spirit of evil anxiously awaits an opportunity to destroy or weaken the virtuous principle early inculcated.—Plate 3. Temptation in Poverty. The soul (or freewill) tempted by the spirit of evil to rob a sleeping traveller, in order to be able to join in the pleasures of the world; but, still under the influence of the good principle, hesitates before committing an act of sin.—Plate 4. Study. The spirit of evil, in order to weaken the religious principle, instils doubts, and the doctrine of chance. The good spirit weeps to see *Freewill* lending attention to the suggestions of Evil.—Plate 5. Charity. The good spirit rejoices to find that the counsels of the spirit of evil have not destroyed the tendency in *freewill* to acts of virtue.—Plate 6. Love. The influences are here inactive. The good spirit regards with complacency the development of pure affection, while his antagonist watches

his moment of ascendancy.—Plate 7. Passion. The influence of the evil spirit paramount.—Plate 8. Repentance of Evil. The good spirit triumphs at the restored purity of the soul, while the spirit of evil, in disappointment and despair, withdraws his baneful influence.—Of these plates, the second and the sixth are our favourites; but they are all replete with sentiment, expression, and delicacy; and do Mr. Westmacott's taste the highest credit.

Proofs of the Plates of Ackermann's Forget-me-not, 1840.

AMONG the acknowledgments to correspondents in the *Literary Gazette* of the 12th ult. was one of the receipt of "a set of small plates, very sweetly executed, and apparently intended as the embellishments of some forthcoming Annual." We now find that we were right in our conjecture, and that the Annual was the *Forget-me-not*; and we have the satisfaction to add, that the favourable impression which the plates made upon us at first sight is by no means diminished by a second inspection. They are ten in number, and have as their frontispiece a characteristic whole-length portrait of Her Majesty, in the royal robes, drawn and engraved by H. B. Holl. The remaining nine are most of them exceedingly pleasing compositions; painted by Miss Adams, and Messrs. Nixon, Herbert, Leslie (R.A.), Jenkins, Farrier, Keyser, Corbould, and Colin; and engraved by Messrs. Simmons, Scriven, Gibbon, Rolls, Stocks, Adcock, and Bacon.

ORIGINAL POETRY.

LAYS OF A DREAMER.—NO. IV.

A Vision of News.

ON, for a nap in an easy chair!
Strange the dreams that come to us there!
I went to sleep on Wednesday night,
November the month, and the moon at its height;
I had been reading, almost to satiety,
A luminous work of entrancing variety;
But I can't give the name of the broad, broad sheet
That filled my head with the odd conceit.
It might have been that great diurnal,
Conservatives call "the leading journal";
The paper they read at their morning meal,
To teach them the way
To think, and to talk, and to act, and to feel,
For the rest of the day.
It might have been, I'm not ironical,
That honest paper—the "Morning Chronicle,"
Which, so to speak,
For Radical readers does much the same,
As that thundering print I won't venture to name,
For the Tory clique.
Or, perhaps, 'twas "The Sun," which, with rapid translation,
Becomes either morning or evening edition;
And thus if you fear its strong day-beams may freckle you,
Perhaps after dinner you'll let the rogue tickle you.
Or, perhaps, 'twas "The Standard," or "Globe," good
As any,
Except that these fight like the cats of Kilkenny;
Or, perhaps, 'twas a paper just new on the town,
Quite sure to succeed,—till six months puts it down;
Or, perhaps, 'twas a paper of only last Sunday,
That a miracle saved from being torn up on Monday.
The name of the paper I've really forgot,
And which one it was doesn't matter a jot;
But I sunk into slumber a pleasant repose,
With that newspaper bobbing against my nose.
Oh, the devil and Doctor Faustus!
What a sight has our reading cost us!—
Morning is breaking, dirty and dim,
Over a printing-house large and grim;
There's a whiz, and a squeak, and a barr, and a bang,
And an opening, and shutting, and stoking, and clang;
And the whole of the racket can tell you no less,
Than the fact that a newspaper's "gone to press";
And every minute will turn out a ream
Of sound information got up by steam.
Alack! alack! what a horrible crack!—
'Twas as if St. Paul had broken his back:
The office is rent from bottom to top.
For the boiler's gone off like ginger-pop.
And now amid steamy, gauzy clouds,
The newspaper matter comes out in crowds.
Riding a high horse, rather a fast,
Heading the foremost a leader paced;
Brawling his armour to his chin,
And there did his human face begin;

Red was his hair, but no helmet made,
The warrior's suit of mail complete,
For the mighty boss of self-conceit
Stuck out as big as a hand-grenade.

And so said I,
'Tis plain that's the matter;
And I thought, by the by,
He must puzzle his hair.
We are bold in our dreams if we're towards awake,
Not a nerve in my frame did the warrior shake,
Though he ranted, and blustered, and called upon names,
And the horse at each nostril was breathing forth flames;
But the man and the beast did not shake me a particle,
For I knew them at once as "THE LEADING ARTICLE."
"Room, lordlings!" as Sir Walter sings,
Room for a couple of Europe's kings.
Louis Philippe is crowned, but Don Carlos, the hero,
Has nought on his head save a ragged ambergris;
But that's not a sceptre of regal command,
The King of the French has just now in his hand!
Though the fact is improbable, plainly I scan
No sceptre it is, but a large warming-pan.
Tell you I'm right! why the deuce should you doubt it?
Only I seen while and he'll tell you about it!—
Says Carlos, "To lose thus my kingdom and crown,
Good cousin, I cannot bear it."
Says Louis, "My throne is no bed of down,
You need not wish to share it;
You're lucky, my lad, to get off with your head;
Just see what last night was stuffed into my bed—
'Tis hard that one can't go to rest but one meets
An "infernal machine" between blankets and sheets.
Ye, Carlos! I found sticking close to my ribs,
This damnable warming-pan crammed full of squibs!
By very good luck the queen chanced to be out,
Detained very late at a quality rout."
Says Carlos, "Your talking of routes gives me pain,
What a rout we all had when we started from Spain!"
Then says Louis, "My boy, do not go back again."
The king has passed on—they could not well stay,
For Mr. O'Connell is coming this way.
Unto the Union, he stretches across
From London to Dublin, and, ne'er at a loss,
He wades his long tail 'twixt an ocean of foam;
There's a shower of volumes, all popular books,
And a man rushes out, who, to judge by his looks,
Is really astounded, and pleased beyond measure,
To find in each work intellectual treasure.
Only hear what he says—"We're delighted to find
Mr. Folio has published a novel called 'Mind.'
'Tis said that the greatest anxiety's shewn
Among certain persons, who've minds of their own;
To discover who's meant by the Marquis Fitznook;
We have heard, with surprise, 'tis a certain gay duke.
Now listen again, with a start and a stare,
Hands stretched out before him, and chamber-broom hair;
He announces a rumour!—"A book's coming out
That puts an historical crime beyond doubt."
'Tis said the new work, by Sir Timothy Bobbin,
Proves the tragical death of, and who killed, Cock Robin."
Strange! A glance at the phiz of the speaker declares
'Tis Folio, the publisher, puffing his area.
Still the paper spreads out its personified matter;
And oh! what a rumpus, a row, and a clamour;
There's a dreadful cab accident tumbles the driver,
And the fare's running off without paying a stiver;
There's a gentleman paid by the newspaper press
At the cost of a penny a line, and no less,
Who has driven a cart from the heart of "the shires"
To fill the odd corners that such news requires,
With three old women, and three old men,
All older than threescore years and ten,
Whose ages united (including, of course,
The age of the driver, the cart, and the horse,
If you toss in the little dog running before),
Will amount to six hundred years and more.
There's a pickpocket dressed like a Regent Street dasher,
"Prigging the wiper" of a worthy "hell-smasher,"
Who sees his swell cousin put under the pump, he
Forgetting the coin that he deals out for "stumpy."
There's a violent row, in which every one's right;
Six men with their coats off, but no one will fight.
And an unlucky publican, quite in a fright,
Is indicted for opening his mouth—late at night.
But now for advertisements—see what a score
Are jostling to rush from the printing-house door.
There's an old woman anxious to part with a "caul,"
"Warranted genuine, though it looks small;"
Her son being "in trouble" and likely to die,
Has no further use for it,—who wants to buy?
There's Mr. Smith dragging a porter along,
Such a chest on his shoulders—"tis well he is strong;
And further, to load the poor wretch, I declare,
On the top is a stool, with three legs, and a chair;
The whole of the goods being Patrick O'Demey's,
"If not fetched away, they'll be sold for expenses."
There's an old miser acting a poor errand boy,
"Who's sure to be turned from his only employ,
For having, in Holborn, by shocking disaster,
Lost two five-pound notes that belong to his master.
Whoever will return them this poor lad will thank;
Nota bene—The notes are both stopt at the Bank."
"No piracy!" cries a sea-captain,—"don't think
'Tis that piracy under a flag black as ink,
Or yet of Red Rover, the scourge of the seas;
Ah, no, my good sirs, it means neither of these,
But pray do not pirate the gentleman's Teas.
Now, old women, led by a tin-leaf-green spectre,
Cry out, "He's run aw," just as if it wereectar;

And they drink till a few have begun to complain,
That their "nerves will be never worth twopence again."
When a gentleman dressed in full mourning, like Kumble
Performing in Hamlet, exclaims, "Do not tremble!"
And catching an old woman just as she faints,
Declares he will conquer her "nervous complaints;"
For he's skilled in such cases, and knows what to do,
Having cured himself—nearly—of tic douloureux.
Then oh! what a crowd of warts cry aloud;
Fifty young persons, by no means proud,
Who have no objection to travel:
There are twenty housemaids all of a row,
With sixteen bermaides,—a beautiful show,
And these at nothing cavil.
There's a fussy cook, with a very red face,
Who bawls in my ear, "Sir, I'm wanting a place;
Fifteen guineas a-year, will you take us?
I'll tell you what I have in view,
An elderly gentleman, just like you,
And the dinners all done at the baker's."

Keep her off! keep her off! don't let her come nigher,
Her cheeks are red hot with Saint Anthony's fire;
I want to look at those placards they raise
To give us a hint of this evening's plays.
Cook! cook! you've set me all in a blaze!
And so she had,—or so I thought,—
For the flare of the candle my paper had caught;
And the columns had turned into columns of flame,
For 'twas blazing from title to printer's name;
And I'd scorched my wig, and my breeches were burnt
In one or two places, and all I had learnt,
Amid all this dreaming, and flaming, and vapour,
Was never again to nap over the paper.

R. J.

MOTHER, COME BACK!

"MOTHER, come back!" This is the cry
When some rare pleasure fills my heart,
When laughing Joy lights up my eye,
And Impulse wakes with throbbing start.
I know thou would'st exult to see
The flash of sunshine on my track;
And faithful memory clings to thee
With burning words,—Mother, come back!

Tidings, perchance, may reach my ear,
Cold, false, and bitter in thy tone;
Till the low sigh and falling tear
Burst from a spirit sad and lone.
Then do I breathe in accents wild,
With heartstrings stretched on feelings' rack,
Thou who didst ever love thy child
With changeless faith,—Mother, come back!

Faint languor shades my drooping face,
My pulses flutter swiftly weak;
The fading lily takes its place
And hides the rose-leaf on my cheek.
Then do I call upon thy name,
When stranger hands support my brow;
My pining soul still asks the same,
"Mother, come back! I need thee now!"

When Fortune sheds her fairest beams,
Thou art the missing one I crave;
I ask thee, when the whole world seems
As dark and cheerless as thy grave,—
I ask, but with a dreamer's brain,—
For no,—ah no! it cannot be,
Thou'lt never come to me again,
But, Mother, I will come to thee.

ELIZA COOK.

SKETCHES.

OBSERVANCE OF SUNDAY.

A PARAGRAPH having appeared in a Sunday paper, reprehending the lord-mayor for preventing carriages and all other vehicles driving past churches on Sunday, during Divine service, we are reminded of former times. Thus—James the First published a "Book of Sports," by which the populace were tolerated to exercise certain recreations and pastimes on the Sabbath-day—such as, dancing round the May-pole, drinking, and every kind of debauchery; and all parochial incumbents were

* On the 10th of May, 1643, this book was burnt by the common hangman in Chesapeake, in pursuance of an ordinance in both houses, by which all persons having any of the said books in their hands were required to deliver them forthwith, to be burnt according to order.

enjoined to read the same in their respective churches, on pain of the king's displeasure: so much so, that those who would not consent to read this book were brought into the High Commission, imprisoned, and suspended. This new encroachment upon the Sabbath gave both king and people more liberty to profane the day with authority. For if the court had occasion to remove on Monday, the king's carriages must go out the day before—all times were alike to the king. The court being about to remove to Theobalds* the next day, the carriages of the king went through the City on Sunday, with a great clatter of noise, during the time of Divine service. Notwithstanding the license given by this Book, the then lord-mayor (Sir George Bolles) had the courage to order the king's carriages to be stopped as they were driving through the City during church-time. This threw James into a great rage, as he "vowed that there had been no more kings in England but himself." He issued a warrant to the lord-mayor, commanding him to let the carriages pass, with which the prudent magistrate complied, saying, "While it was in my power I did my duty, but that being taken away by a higher power, it is my duty to obey."

JACK SHEPPARD.

As the exploits of the above celebrated character are nightly attracting many thousands of her majesty's lieges, it may not be unsatisfactory to some of our readers to give a few extracts from the periodicals of the day in which our hero flourished.

The "British Journal" of 28th November, 1724, has the following:—

"I do not remember any felon in this kingdom whose adventures have made so much noise as Sheppard's. He was for a considerable time the common subject of conversation. I have seen six or seven different histories of his life; and several copper-plates, representing the manner of his escape out of the condemned hold, and the castle in Newgate; besides other prints of his effigies. The principal of these last was a mezzotinto,† done from the original picture painted by Sir James Thornhill; on which occasion the following stanzas were printed, and appeared in the 'British Journal' of the date above stated:—

* Thornhill, 'tis thine to gild with fame
Th' obscure, and raise the humble name;
To make the free elude the grave,
And Sheppard from oblivion save.
Though life in vain the wretch implores,
An exile on the furthest shores,
Thy pencil brings a kind reprieve,
And bids the dying robber live.

* The great Lord Burleigh built a magnificent seat here, where he entertained Queen Elizabeth; twelve several times—each visit cost from two to three thousand pounds, as she remained generally from four to five weeks at a time. His silver plate was from fourteen to fifteen thousand pounds in weight; and the value was forty-two thousand pounds sterling, which (besides the fashion of it) exceeded that possessed by any other nobleman. He devoted his seat to his youngest son, Sir Robert Cecil, afterwards Earl of Salisbury. James the First, paying a visit there, was so delighted with the place, that he gave him Hatfield Regis in exchange for Theobalds. In the civil war it was plundered—† being the place whence Charles the First set out to erect his standard at Notting-ham. Charles granted the manor to George Monck, duke of Albemarle, but it reverted to the crown for want of male issue; and King William the Third gave it to the Earl of Portland; from whom it descended to William Henry, third duke of Portland, 1806, who sold it to George Prescott, Esq.; by which proprietor the park was converted into farms; and the small remains of the house being demolished in 1765, a building lease was granted, and a family mansion was erected on another part of the estate, which is now the residence of Sir George B. Prescott.

† This is the likeness, we believe, so finely and faithfully preserved throughout the illustrations by G. Cruikshank.

: "Tempora mutantur et nos mutamur in illa."

This piece to latest time shall stand,
And shew the wonders of thy hand;
Thus former masters grac'd their name,
And gave egregious robbers fame.
Appelles Alexander drew,
Cæsar is to Aurelius due,
Cromwell in Lilly's works doth shine,
And Sheppard, 'Thornhill, lives in thine."

Sheppard was even thought a proper subject for the stage. Mr. Thurwood then contrived a pantomime entertainment, called "Harlequin Sheppard: a night-scene in grotesque characters." It was acted at the Theatre Royal in Drury Lane. The scenes were painted from the real places of action.

Then a farce of three acts was printed, under the title of "The Prison Breaker; or, the Adventures of John Sheppard." This was never acted at any of the theatres; but after it had lain a long while neglected, it was intermixed with songs and catches at Bartholomew Fair, by the name of "The Quaker's Opera."

And what is yet more singular, Jack's adventures have been spiritualised in the pulpit, as related by a witness, whose words we repeat:—

"One Sunday evening," said he, "as I was returning home from t'other end of the town, I somehow missed my way, and, passing by a porch, I heard the sound of a preacher's voice, upon which I turned back and stepped in. He was pretty near the conclusion of his sermon; what I heard was so small a part, and so remarkable, that I believe I can repeat it almost verbatim. These were his words, or at least to this effect:—

"Now, my beloved, what a melancholy circumstance it is, that men should shew so much regard for the preservation of a poor perishing body, that can remain at most but a few years; and at the same time be so unaccountably negligent of a precious soul, which must continue to the ages of eternity! Oh, what care, what pains, what diligence, and what contrivances, are made use of, and laid out upon, these frail and tottering tabernacles of clay; when, alas! the nobler part of us is allowed so very small a share of our concerns, that we scarce will give ourselves the trouble of bestowing a thought upon it! We have a remarkable instance of this in a notorious malefactor well known by the name of Jack Sheppard! What amazing difficulties he has overcome!—what astonishing things he has performed, for the sake of a stinking, miserable carcass hardly worth hanging!—how dexterously did he pick the padlock of his chains with a crooked nail—and how manfully he burst his fetters asunder, climb up the chimney, wrench out an iron bar, break his way through a stone wall, and make the strong doors of a dark entry fly before him, till he got upon the leads of the prison, and then, fixing a blanket to the wall with a spike, he stole out of the chapel!—how intrepidly did he descend from the top of the turner's house—and how cautiously pass down the stairs, and make his escape at the street door! Oh, that ye were all like Jack Sheppard!—mistake me not, brethren, I don't mean in a carnal, but in a spiritual sense—for I purport to spiritualise these things. What a shame it would be if we should not think it worth our while to take as much pains, and employ as many deep thoughts, to save our souls, as he did to preserve his body! Let me exhort you, then, to open the locks of your hearts with the nail of repentance; burst asunder the fetters of your beloved lusts; mount the chimney of hope; take from thence the bar of good resolution; break through the stone wall of despair, and all the strongholds in the dark entry of the valley of the shadow of death; raise yourselves to

the leads of Divine meditation; fix the blanket of faith with the spike of the church; let yourselves down to the turner's house of resignation, and descend the stairs of humility, so shall you come to the door of deliverance, from the prison of iniquity, and escape the clutches of that old executioner the devil, who goeth about like a roaring lion seeking whom he may devour."

SECRET SOCIETIES OF GERMANY.

The Report of the Central Committee of the Germanic Diet upon the Machinations of the German Revolutionists since 1830, discusses the agitation occasioned by the revolution of July; revolutionary press; foundation and progress of the "Patriotic Union;" history of the "Association of Students" (Burschenschaften), until the meeting of Burschen, at Frankfort-on-the-Maine; "Armenians and Germans;" meetings of Burschen; feast of Hamburg (57th of May, 1833); meeting of Schumann at Neudorf; the Haritz; consequences of the feast for the instigators; Rauchenblatt and Venedey, commissioners; progress of the revolutionary spirit; resolutions of the Diet (June 28th and July 5th, 1833), and intrigues of the faction to create an opposition to those resolutions; removal of the central committee of the "Union of the Press" to Frankfort-on-the-Maine; revolutionary plots in the summer of 1833; military conspiracy of Koseritz, in Wurtemberg; correspondence with the revolutionists in France; occurrences anterior to the plot of April; understanding between bookseller Frankh, Dr. Gurth, and Koseritz (his journeys of inspection, projects: Frankfort chosen as the place of their execution); report of the Burschenschaften; meeting of the revolutionists in Wurtemberg; endeavours of Breitenstein to seduce the soldiers of Hesse Homburg; meeting at Grossgartach, 31st of March, 1833; journeys, plans of attack, armaments, previous to the explosion; hesitation respecting the choice of the place for raising the standard of revolt; arrival of the conspirators at Frankfort-on-the-Maine; meeting at Bokenheim (April 2, 1833); projects and preparations to revolutionise at once and simultaneously several states of the Confederation; revolutionary plots, after the riots at Frankfort-on-the-Maine; the union, or alliance of men; intrigues in the Grand Duchy of Hesse; unions at Gussen and Butzbach; "Young Italy;" "Young Germany;" "Young Europe;" projected armed expeditions; intervention of the authorities; continuation of the union.

THE DRAMA.

Drury Lane.—On Tuesday the opera of *Cinderella* was produced here, the heroine by Miss Deley, a pupil, and we believe the daughter, of Mr. Rophino Lacy. The *débütante* is young, apparently about seventeen or eighteen, girlish, with small features, and a merry, expressive, dark eye. As is too generally the case in England, she has been hurried upon the stage rather prematurely; and, therefore, we must rather speak of her great promise than of her finished performance. She has an organ of great power and compass. The lower and middle notes are excellent, and it was only when she strained her voice to its highest pitch that she became harsh and unpleasant. In the last scene this was peculiarly the case, and she was consequently *encored*! All the rest was good, and we have seldom or never witnessed a *débüt* of one so young, from which we could augur a more brilliant future. A few years of sound cultivation and practice, and Miss Deley (already well taught and capable of fine execution) bids fair to be one of the chief musical ornaments of our stage. Her acting was graceful and ladylike; and, altogether, she well merited the favourable reception she experienced. Miss Betts and Miss Collett sang in the concerted places with much skill and effect. Mr. Frazer was a laudable *Prince*; Mr. Lefler, a laughable *Pompolino*; Mr. Morley, a clever *Dandini*; and Hammond, a humorous *Pedro*. The fairy transformations were capitally done, under the wand of Mrs. Alban Croft (her first appearance); and the whole went off with an *éclat* quite reviving at this theatre, hitherto so indifferently attended.

Covent Garden.—There is nothing here but Love, except a little *Scandal* once a-week. A farce called *Don't be Frightened*, which seems to

have been a sort of speaking pantomime, was brought out; but, alas for critics who do not write after first or second nights, Bartley, Matthews, Harley, and Meadows, could not, with all their exertions, bring it down to our date! A week is an age for ephemera.

The *Adelphi* is running away with Jack Sheppard. Crowds suit pickpockets best, and assuredly they submit to be spoiled nightly here with the greatest good-humour. The piece is capably acted.

St. James's.—A nondescript thing, called a *Lord in Pawn*, was brought out here; and, such is the benevolence of the public, was heard to the end. But there it ended.

VARIETIES.

H.B. has issued three more of his effusions, numbered 618, 19, 20; and they shew no falling off in fertility and humour. On the contrary, the first, "An Irish Wake," is one of his most successful hits. The Ministers, O'Connell, the Duke of Wellington, &c., are waking Lord Brougham, who, stretched on his pseudo death-bed, is asking, "What are they saying of the departed?" Lord Melbourne praises his greatness at "a faction-fight;" and every one has some lament for the "funny fellow," &c. The next treats the same subject, representing the Premier and Dan as Friar Tuck and the Sacristan, holding a "devil's mass" on the supposed death of Athelstane (Brougham), who is watching them behind the door. The last is another of the cleverest groups. The great O as a vagabond at a fair, with sticks to throw at others in the ground, topped by the church, crowns, mitres, &c. instead of the usual toys. Lord Melbourne is having a shy at the church; but the Queen, Prince Albert, and others, entertain some apprehension that he may knock down the crown. The attitudes of the figures are excellent.

£100 Reward.—The Entomological Society having granted their great medal to the Rev. Dr. Hawtrey, of Eton, for his ingenious application of the High-pressure Steam-engine to the destruction of the small Fire-fly, the Glow-worm, and common House-fly, the Society are authorised by Dr. Hawtrey to offer the above reward for the best plan of applying the more simple and elegant old Block Machinery and Thrashing Machine to the same useful purpose.—N.B. The above Reward is offered in consequence of the Dr. having severely injured himself by the use of his own discovery.

Masquerade.—Symptoms of "Life in London" are beginning to display themselves. On Wednesday, Mr. Obbard had his first masquerade at the English Opera House, and it was fully and merrily attended.

Patent Candle-Extinguisher.—A very ingenious little instrument, to extinguish candles at any desired time, invented by Mr. Jones of the Strand, has just been submitted to our inspection. It is self-acting, and consists of a small circular tube surmounted by two flaps, which being put open on the candle an inch or half-a-dozen inches down, to the extent intended to burn, collapse when the flame has descended to the extinguisher. It snaps together sharply, and completely fulfils its purpose.

Statement of Facts relating to Steam Communication with India on the Comprehensive Plan (pp. 15, Smith, Elder, and Co.), is a warm

* This squib is handed about in consequence of the Master of Eton having expelled some offender or offenders, for letting off squibs on Guy Faux' day. Surely the "old block" alluded to, would have been a more consistent punishment for such an offence.—Ed. L.C.

remonstrance by "James Barber, Agent to Bengal Steam Committee," in which he censures the East India Company for not adopting a plan for intercourse with all the Indian Presidencies by steam, instead of employing partial and inefficient means of conveyance. The subject is one of deep interest to a large proportion of the community, as well as to England and her colonies; and, in these days, we should think it would hardly need a pamphlet to enforce the expediency of doing every thing possible to perfect this important intercourse.

The Rector's Progress, by Clericus, No. I. is acknowledged. Another to the mass of the imitations of "Boz" which have of late inundated the press; and, from its mistaking the coarse and dirty for humour, we are inclined to think not likely to rival "Oliver Twist" or "Nicholas Nickleby."

LITERARY NOVELTIES.

In the Press.

Discourses on Special Occasions, by the late Rev. Dr. M'All, of Manchester, with a Sketch of his Life and Character by the Rev. Dr. Wardlaw.—By Dr. Johnston, a History of the British Sponges and Corallines.

LIST OF NEW BOOKS.

Henry of Guise; or, the State of Blois, by G. P. R. James, Esq. 3 vols. post 8vo. 31s. 6d.—Poems by Mrs. Boddington, Author of "Sketches in the Pyrenees," with Illustrations, 8vo. 21s.—Yorkshire Calendar, or Pocket-Book with Almanack and Diary, fcap 8vo. 4s. roan tuck: 2s. 6d. common; 3s. cloth.—Illustrations to "Nicholas Nickleby," by P. Palette, 8vo. 9s.—History of England, Vol. VII. by a Clergyman, with Index (completing the work), 12mo. 10s. 6d.—Church Catechism of Rome, translated by Rev. R. J. CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

"M. D. 1839" is not to be inserted in the title of any article.
"R. B. S." There is a note addressed to our office.

ADVERTISEMENTS,

Connected with Literature and the Arts.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY, founded A.D. 1815, on the Original Basis of the London Equitable.

Head Office, No. 5 St. Andrew Square, Edinburgh.
 Present Accumulated Fund, upwards of £245,000. Annual Revenue, upwards of £150,000. Whole Profits belong to the Assured. Divisible every Seven Years.

President.

The Right Honourable the Earl of Rosebery.

Vice-Presidents.

Sir Thomas Dick Lauder, Bart.

The Hon. Lord Moncreiff.

The Right Hon. the Lord Justice General.

The Right Hon. Lord Francis Egerton.

(All of whom, as well as the Directors, Ordinary and Extraordinary, are permanently connected with the Society by Assurance of more than three years' standing.)

The Surplus Profits ascertained at 31st December last were sufficient to secure—

1. A Retrospective Bonus of Two per cent. per annum, or 10 per cent. for the Septennial Period, not only on the original sum assured, but likewise on the Bonus additions previously declared.

2. A Contingent Prospective Bonus of Two per cent. per annum, to be paid from and after 31st December last, on all Policies of five years' standing that may emerge before 31st December 1846, when the next Investigation, and consequent Declaration of Bonus, takes place.

The Directors are authorised, by a by-law of the Society, passed in 1827, to grant Loans to Members on the security of their Policies (without any expense except the Stamp for a Promissory Note), to the extent of nine-tenths of their calculated value at the time. They are likewise empowered to allow Members to commute their Bonus Additions; i.e. to have their Bonus applied towards reduction of their future Annual Premiums.

Thus, for example,—

A, in the year 1850, being then forty years of age, insured his life for £3000, paying an annual premium of £30 3 0
 He is now fifty-nine years of age, and has an actually vested Bonus or Addition, declared and attached to his Policy, of 1025 12s., which, with the £3000, the original sum assured, shows the full amount of the sum presently contained in the Policy to be £4025 12 0

Were A to die in 1845, after payment of his premium for that year, the sum payable under the Policy would be £4025 12 0
 Or, if it were an object to him to reduce his present Annual Contributions, he might, by giving up his Bonus, reduce his future premium from 30s. 3d. to £30 3 0

Or, if he preferred receiving immediately the present value of his Bonus, he would, by surrendering it, be entitled to a sum of £563 10 0
 If he were desirous at present of having a loan on his policy, he might borrow to the extent of £1420 0 0

The above example will probably be admitted to be perfectly sufficient to show, in a practical point of view, the great benefits to be derived by parties insuring with this office.

The Directors are at all times ready to entertain Proposals for Loans, either on Redeemable Annuity, or on their Heritable Security. Every information on this or any other subject connected with the Society may be obtained on application (by letter, post paid) to the Head Office in Edinburgh, or to any of the Society's Agencies.

JOHN MACKENZIE, Manager.

Edinburgh, 5 St. Andrew Square.
 N.B.—Tables of Rates and Forms of Proposals to meet any particular contingency, or effect any specific object, will be transmitted to parties desirous of obtaining them; and all official communications of this nature are considered as strictly confidential.

Agencies in England:—

London.—Hugh McKean, 7 Pall Mall West.
 Bradford.—Geo. Rogers, Horton Road.
 Huddersfield.—Hugh Watt, banker.
 Leeds.—William Ward, attorney.
 Liverpool.—Arthur Doughton and Co. Exchange Street East.
 Manchester.—Thos. Boothman, jun. Cross Street, King Street.
 Newcastle.—Charles Borthman, 12 Sandhill.

BOOKS IN THE PRESS.

DEDICATED TO THE RIGHT HON. LORD LYNCHURST.
 In 3 vols. post 8vo. 8vo. beautifully printed, and handsomely bound in embossed cloth, upwards of 1000 pages.

THE SPIRIT OF THE METROPOLITAN CONSERVATIVE PRESS; being a Selection of the best Leading Articles which have appeared in the London Conservative Journals during the year. With an Introductory Preface by an EMINENT POLITICAL WRITER.

"The talent and ability displayed by the newspaper press, raising its leading organs high in the scale of intellect and literature, are not underscoring of a more permanent record. It is surprising day after day to read such articles as the 'Metropolitan Press' supplies on the very spot of the moment, independently of these greater investigations of important questions, which from time to time enrich their columns. Of the present collection of Conservatism during 1838, we will only say that the party need not be ashamed of the press by which it is supported."—Literary Gazette, Nov. 5.

As a list of the Nobility and Gentry who have honoured the work with their patronage will shortly be published, Water and Co. respectfully suggest that Subscribers, who wish their names to appear in the list, should give instructions to that effect to their respective Booksellers when ordering the work.
 James Walker and Co. 15, and Crown Publishing Warehouse, 91 Fleet Street.

FRENCH TESTAMENT.

A neat pocket edition, for Schools or Private Families,
LE NOUVEAU TESTAMENT, royal
 8mo. price 2s. roan, lettered. May also be had in superior bindings.
 London: Duncan and Malcolm, 37 Paternoster Row; and Whittaker and Co. Ave Maria Lane.

In 15 vols. 8vo. (being the third collected edition), price 7l. 17s. 6d. boards,
THE WHOLE WORKS of the Right
 Rev. JEREMY TAYLOR, D.D. Lord Bishop of Down, Connor, and Dromore; with a Life of the Author, and a Critical Examination of his Writings.
 By the Right Rev. REGINALD HEBER, D.D. Late Lord Bishop of Calcutta.
 Also may be had, separate, by the same Author, in 8vo. 12s. boards.

Holy Living and Dying; together with Prayers, containing the Whole Duty of a Christian, and the parts of Devotion fitted to all Occasions, and furnished for all Necessities.

London: Longman, Orme, Brown, Green, and Longmans; J. Richardson; Hatchard and Son; J. G. P., and J. Rivington; J. Bohn; Hamilton, Adams, and Co.; Duncan and Malcolm; Simpkins, Marshall, and Co.; E. Hodgson; B. Fellowes; H. Bohn; C. Dolman; H. Bickers; J. H. Parker, Oxford; J. and J. J. Delighton, Cambridge; G. and J. Robinson, Liverpool; and W. Strong, Bristol.

BURROWS CONCHOLOGY.
 Third edition, in 1 vol. 8vo. illustrated by 58 plates, drawn from Nature, price 10s. boards, or beautifully coloured by Bowyer, 12. 11s. 6d.

ELEMENTS OF CONCHOLOGY,
 according to the Linnæan System.
 By the Rev. E. J. BURKOW, A.M. &c.
 London: Duncan and Malcolm, 37 Paternoster Row.

A NEW WORK BY THOMAS HOOD, Esq.
THE Laughing Admirers of "THE COMIC ANNUAL" will not, it is believed, look particularly grave at the promise this year held out to them of a Continental Variety. But for the information of the public generally, Messrs. A. H. Baily and Co. have the pleasure to announce an entirely New Work, entitled
UP THE RHINE;
 Being a Collection of Letters from a Family Party, with numerous original Engravings, sketched from Nature and without Art, by THOMAS HOOD, Esq. The Work, price 1s. will be published on the 25th.
 London: A. H. Baily and Co. 25 Cornhill.

THE SACRED GIFT.
THE LIFE OF CHRIST ILLUSTRATED.
 The REDEEMER, his Humiliation, Exaltation, Miracles, Discourses, Parables, and Example. Illustrated by choice Passages from One Hundred and Thirty-eight Old and Modern Pictures, embellished with Seventy Engravings on Wood after the great Masters, and forming a Sacred Gift of Perpetual Interest. Price, elegantly bound in cloth, gilt edges, 18s.; and may be had of all Booksellers.
 London: Ball, Arnold, and Co. 24 Paternoster Row.

WATERTON'S WANDERINGS. NEW EDITION.
WANDERINGS IN SOUTH AMERICA,
 the North-west of the United States, and the Antilles; with Original Instructions for preserving Birds for Cabinets of Natural History.

By CHARLES WATERTON, Esq.
 "Every page of his book breathes a spirit of kindness and benevolence, of undisturbed good humour and singleness of heart, that we know nothing to compare with it, except the little volume of that prince of pleasers, the amiable Isaac Walton. His book we may safely pronounce to be full, not of anecdote only but of curious and useful information regarding the Natural History of South America."—Quarterly Review, N. S. 25.

B. Fellowes, Ludgate Street.

WHATELY ON SHAKSPEARE.
 Edition, price 4s. cloth, issued.

REMARKS ON SOME OF THE CHARACTERISTICS OF SHAKSPEARE.
 By THOMAS WHATELY, Esq.
 Edited by Richard Whately, D.D. Archbishop of Dublin.
 B. Fellowes, Ludgate Street.

In 1 vol. fcap 8vo. 8s. cloth.
HYACINTH O'GARA, HONOR DE LANY, IRISH PRIESTS, and ENGLISH LANDLORDS.

By the Author of "Mothers and Sons, Irishmen and Englishmen," &c. &c.
 A new edition, corrected by the Author.

PERUSAL OF NEW BOOKS.

MESSRS. SAUNDERS AND OTLEY

Have the pleasure to announce the completion of their Arrangements for supplying

THE POPULAR NEW PUBLICATIONS FOR PERUSAL IN TOWN AND COUNTRY,

and that they have succeeded in adopting a Plan (in connexion with their long-established Publishing Business) by which Subscribers in the most remote Parts of Great Britain may be furnished with all the New Works in the various Departments of Literature. The attention of Literary Circles and Book Societies is most especially requested, the great cost attending the purchase of New Books being reduced to a small Annual Subscription from each Member, entitling them to select any Work they may desire.

The Catalogue of this extensive Library consist of—

1. All Modern Works in History, Biography, Travels, Divinity, Moral and Political Philosophy, Poetry, Fiction, &c.
2. All the Standard Works in the various Branches of Literature of an earlier date.
3. The best Periodical Literature, generally from the Commencement of each Series.
4. A large Collection of French, Italian, and German Works, the New Publications being constantly added.
5. A splendid Illustrative Library, consisting of Architectural Views, &c.

The whole being reserved exclusively for the Use of Subscribers, who are assisted in the choice of New Works by the Publication of select Monthly Lists. Families may unite in a Single Subscription. Boxes are forwarded by Steam or Sailing-Packets, Vans, Wagon, or Coach, at the option of the Subscribers. Terms and Particulars, as a Single Letter, on application (post-paid) to Messrs. SAUNDERS and OTLEY, Publishers, Conduit Street.

Next week, 1 vol. 8vo.

LETTERS ON PALESTINE.

Written during a Residence there in the Years 1836, 37, 38. By the Rev. J. D. PAXTON.

APPROPRIATE CHRISTMAS PRESENT.

Handsomely bound in cloth, price 6s. 6d. with Ninety-Three Wood Engravings,

ILLUSTRATIONS OF THE BIBLE,

And Confirmations of Sacred History from the Egyptian Monuments.

By W. C. TAYLOR, LL.D.

"An elegant, and well-executed little work, on a most interesting subject."—*British Magazine*.

Belford Regis, &c.; each Work complete in One Volume, with Engravings, price 6s.

RICHARD BENTLEY, NEW BURLINGTON STREET,

Publisher in Ordinary to Her Majesty.

REVIEW OF NEW BOOKS.

Western India in 1838. By Mrs. Postans, author of "Cutch." 2 vols. 12mo. London, 1839. Saunders and Osley.

Mrs. POSTANS is one of the most intelligent lady-travellers and pleasant lady-writers of the day. Her account of Cutch was lively and interesting; and her present descriptions of various parts of Western India, some of them rarely visited by Europeans, and not hackneyed in publications, is certainly not less worthy of the attention of the reader, whether in search of general information, or of an agreeable acquaintance with minor particulars connected with national customs, feelings, and manners. The narrative has also the merit of bringing us down to a very late period, and we can ascertain from it something of the important changes which have taken, and which are taking, place in India; which, as the writer truly says, "is making very rapid advances in general improvement; and although the mass of the people yet unhappily remain sunk in the deepest barbarism, a change is taking place among the gentry, which will produce results of the highest interest."

The work sets out with an excellent view of Bombay and its inhabitants, of various climates and religions; and one of the chief features relates to the schools founded in that flourishing presidency, from which great results may be anticipated:—

"The native society," we are told, "is elevating itself by means of newly acquired intelligence, to a point which must soon lead to the desirable object of mutual appreciation between European and native talent; and a desire on the part of the most intelligent among the people that their sons should obtain, by means of an English education, similar information to that which, through the medium of unreserved intercourse with us, they discover we possess. The groundwork for so desirable a superstructure as the perfect civilisation of the native gentry is already laid, by the college and schools which have lately been so warmly protected by the general society of Bombay."

The number of boys admitted to the Society's schools is about four hundred; with fifteen hundred in branch and infant schools, connected with the institution; the only qualification for admission being a knowledge by the applicant of the vernacular dialect. Eighteen scholarships, endowed by Lord Clare and Sir Edward West, are in the gift of the Society; the lads who enjoy these distinctions are allowed a grant of ten rupees a month; but at the expiration of three years it ceases, although clever boys are frequently retained as monitors after that period, and their services rewarded with good salaries. The regulations require that four endowed scholars should leave the school annually, when two fresh candidates are admitted. Pupils from the schools of Dharwar and Poonah are eligible for scholarships, but applications for them are not frequently made.

The lads who now form classes in the Society's schools are many of them Brahmins by caste; the descendants of men whose tenets, religious and moral, formed the very acme of intolerance, and who would

have been considered polluted for days, had the mere shadow of an European fallen across their path. Yet now, a Brahmin youth, still wearing the triple cord, his garments of a fashion similar to those worn by his forefathers some centuries since, stands with folded arms, and eyes sparkling with all the eagerness of newly awakened curiosity, to receive instruction from his European master, and become initiated into those mysteries of science of which his fathers dreamt not."

Upon these things Mrs. Postans observes:—

"Objections are frequently made to the description of studies pursued in the schools; general opinion seeming (to support the idea, that abstract learning might be well exchanged for information of a more practical and useful kind. These objections would seem more important, but for the existence of the infant branches of the institution, where reading, writing, and the common rules of arithmetic, are taught, together with the vernacular dialects and the rudiments of the English language. The aim of education must be to civilise, and, through the medium of civilisation, to Christianise the natives of India. If so, the first object would seem to be, to prepare the mental faculties of the students to judge and reason of such facts as a knowledge of the various branches of natural science will place under their consideration. The pupils of the Society's schools are members of the native aristocracy; were they tradesmen or artisans, the features of the case would alter; but these are the lads who, endowed with wealth and influence, in after years may effect much by example and opinion over all the classes who form the general native community of Western India. Many amiable and excellent persons also desire that the Scriptures should be made a considerable study in the schools, with a view of introducing a knowledge of their truths and a conviction of their value. To this the natives object with a very mild and rational argument: 'We,' say they, 'make no effort to introduce our *bedas* and *puranas*; why, therefore, do you urge the study of your holy books?—let this matter alone; make us as learned as yourselves, but do not seek to instruct our youth to despise the religion of their ancestors.' There is little doubt, but that the present generation of these educated natives will become deists; but having taken one step away from the altars of Paganism, we may hope that their posterity, having no prejudices or priestcraft to combat, may arrive, assisted by a higher influence, at the fair truths of our Christian faith."

Of the increase and prospect of increasing prosperity in other respects, the author speaks as follows:—

"That the material exists for restoring freedom and wealth to the people of India, there can remain no doubt. We see the bazars of the native town of the most interesting presidency rich and populous, teeming with an enterprising and mercantile people, and abounding with productions of natural wealth, rich gems, and precious metals. The neighbouring bay is animated with rude and foreign crafts, laden with curious manufactures, or the exu-

berant produce of the most fertile soils. The dockyards, justly considered the finest in the world, send forth their teak-built vessels, to enrich with their cargo the isles of the far distant west; and the raw and unpolished material is exported from a land which possessed a knowledge of those arts calculated to improve the condition of a people, and whose fine linens, brilliant dyes, costly wools, and glittering jewels, awakened the admiration of the civilised nations of the west, while yet the inhabitants of our remote and sea-girt isle roamed wild and unclad among the fastnesses of their mountain homes. We look on the East, and her desert lands seem to whisper a reproach that they are not now teeming and fruitful as of old; we see that in the crowded and busy ways of the Buraah bazars is accumulated the rich produce of such localities as are calculated to afford increased revenue to our several civil and financial departments, but the art of the weaver and the lapidary is forgotten. We, the consummately civilised, have brought ignorance in the wake of our conquests; and this to a people 'old in arts and literature before the primeval forests of Britain had started from their ancient silence at the voice of man.' The sinews of war are again strained for territorial protection and acquirement; but the influence of public opinion will, it is to be trusted, change the object of the struggle. The splendid scheme of navigating the noble Indus will probably become the means of introducing industry and manufacture among isolated thousands, and of bringing justice and wisdom to the courts of their barbarian princes. In exchange for these benefits, monuments more durable than the altars of the triumphant Greek will record the dominion of British power; and where the great invader of Eastern freedom first felt the strength of an arm determined to support its rights, the rude descendants of the princely Porus may again esteem the arts and elegancies of civilised existence."

Among the elements contributing towards the consummation so devoutly to be wished, we may notice one prominent body:—

"Year by year the importance of the Guebre strangers has increased in Western India, until their wealth has become incalculable. The number of Parsee inhabitants of Bombay alone is estimated at 40,000. They are an enterprising and public-spirited people, devoting their riches to worthy and beneficial purposes. To the most influential of this class, the presidency is indebted for its greatest improvements; and the liberality of the Parsee merchants is conspicuous, when public subscription is required for any object tending to promote the common good."

As an amusing specimen of Persian habits and style, for we regret we only barely mention Mrs. Postans' details respecting the Parsees in their families, &c., we shall copy a page or two about a native of that country:—

"Abdool Kureem had not where to lay his head, or wherewithal to satisfy the cravings of a Persian appetite: but, like all his class, his manners were pleasing and mild, which won for him our commiseration. He accompanied us from the presidency, and, although a professional Moonshiee, he was soon discovered to be

grossly ignorant of even the construction of his native language. His leisure was devoted to inditing verses, which, execrable as they were, he imagined equal to Firdousi's: such was our poor poetaster's opinion of his own talents, that whenever any of his Mohammedan friends came to visit him, in lieu of conversation, he commenced by drawing out a long roll of closely written paper, and spouting his own verses, constantly pausing to ejaculate expressions eulogistic of his genius, which were courteously re-echoed by the deep-drawn bismillahs of the listening coterie. The prose of Abdool was as highly inflated as his poetic style; he delighted in the most flowery and wordy pomp of the Persian school. The following note, written by him, and translated by a Hindoo, is an amusing specimen of the unavoidable bathos inseparable from this style of composition. It may be prefaced, that Abdool had been requested, during his morning walk, to inquire what time would be desirable for our gardener to send for some shrubs, promised us by a native, as transplants from his parterre. Some circumstance preventing his return at the time proposed, we received this specimen of epistolary grace:—'As long as the garden of the world is adorned with tender cypresses, statues of beautiful mistresses, and roses which are the cheeks of beloved ladies, so long may the garden of wishes, which belongs to the great Captain — (may his prosperity be perpetual!) who is a bud of the tree of chiefship and a sprout of that of greatness, be flourishing and green by the watering of Divine goodness! Your servant (i. e. I) after presenting you the nose-gay of his solicitous prayers to God for your advantage, which is gathered by the hand of well wishing and sincerity, and united with the threads of those prayers which are performed at dawn and midnight, wishes that your sacred mind may know, that when your servant (i. e. I) requested from Gopal Josee, son of Radha Josee, the plants of Neem, which he agreed to give yesterday, he answered, that to-morrow, at noon, when the gun fires, you may send your servant to his garden, and he will give the plants which are required.

“(Signed) ABDOL KUREEM,
“Moonshie of Shiraz.”

Leaving Bombay, Mrs. Postans visited the Surashtra Peninsula, the most westerly side of Guzerat, and the Syrastra Vicus of Ptolemy, where the temple of Somnath, the hill and temples of Girnar, and a short sojourn with the Nuwaub of Junagarh, supply her with materials for many an amusing and interesting page. Having lately gone over some of these places, and referred to their Jain treasures of antiquity and literature, we shall only select from our present author such matters as are rendered more graphic by her pencil, or new domestic illustrations which her sex enabled her to draw from the interiors of harems and family circles. Among the least known of these we find the court of Nuwaub of Junagarh, near the sacred mountain of Girnar:—

“Junagarh is a Mohammedan town, containing about sixteen thousand inhabitants; the streets are narrow and dirty, and the houses ill-built. It forms the capital of the territories of a Mohammedan independent prince, who oppresses his subjects, and drains the resources of a fine country, to support bands of Natchwomen, musicians, and mummets of every variety. The nuwaub only quits his couch at sunset, and passes the night in the most degrading dissipation. His highness has only four wives, which is the allowed complement of Mohammedan connubiality, but

a seraglio of about fifty ladies. The character of a prince gives its tone to the court, and the ministers pander to their master's vices; in addition, the nuwaub entertains a large number of chelabs, or favourite attendants, all worthless and dissipated men. A party of these people, attired in the first style of Mohammedan dandyism, made their salaams to us the day after our arrival, and offered all sorts of attention and service, conveying also the request of his highness that we would attend his durbar the same evening, when I should be afforded the much desired gratification of an introduction to the harem.”

His entertainments to the British party are described with much vivacity, but we can only pick out a few of the most curious passages. The first visit:—

“About nine in the evening, a party of the nuwaub's attendants, torch-bearers, and others, accompanied us to the palace, which is situated in the centre of the town. After passing the Arabs guarding the entrance, we were introduced to a verandah on the ground-floor, where sat his highness the nuwaub, surrounded by crowds of Mohammedan courtiers, torch-bearers, and chob-dars, the last loudly rehearsing the qualities and dignity of the prince. The nuwaub, a short stout man of about forty years of age, with a peculiarly fair complexion, slightly marked with small-pox, was simply attired in a fine white muslin turban and ankrika. His heir, the young Prince Ahmed Shah Bawamere, a fine, intelligent-looking boy of twelve years old, sat on a cushion at his father's feet; and with his sword smartly sheathed in green velvet, his crimson and gold turban, and a military swagger, which his attendants had laboured to produce, he really appeared a miniature prince of considerable promise. The nuwaub placed me on his right hand; but the heat, the glare, and the din of Natchwomen and attendants, was altogether so overpowering, that I could with difficulty understand the dignity of my position. A Natchwoman of considerable skill, but most particularly hideous, was, with a voice ‘which clove through all the din,’ screaming out some verses of a Persian song, in most discordant and ear-piercing tones. However, as the perfection of good natching consists in the perfect unity preserved between the feet and hands of the dancer, and the time of her accompaniment, and as it was in this case admirable, the danseuse gained proportionate applause. After an hour passed amidst the stunning diversions of his highness's durbar, I requested permission to enter the harem. Emerging from the verandah into the open court-yard, a slave conducted me up a flight of steps into a room fitted up to resemble a tent, and from thence into the apartments appropriated to the harem. The first was a spacious hall, surrounded with lights, but otherwise unfurnished; and from this I was ushered upon a spacious terrace, prepared for my reception. The floor was covered with fine scarlet cloth, and the low parapet wall hung with Persian carpets. Chairs were ranged along the centre, and slaves bearing torches stood upon the edge of the carpet. The wives of his highness advanced to meet me, magnificently dressed, and blazing with innumerable jewels. Seating me upon the centre chair, they drew the others round, and began to chat on various subjects, with great good-nature, and much courteousness of manner. The principal wife, the Rahit Buktè, was good-looking, and about four-and-twenty years of age; her manner was lively, her conversation unusually intelligent, and her

round fat face irradiated with good-humour. The second lady, the Dosie Beebe, had the airs of a coquetish and spoilt beauty, her dark languishing eyes rendered still more attractive by a very judicious application of the radiance-giving soormay, and her henna-tinted and delicate little feet appearing to sustain with difficulty the weight of her pearl-embroidered slippers. The Amser Buktè was a staid person, richly dressed, but without any personal attractions; and the Beebe Bhoë was absolutely frightful. The ladies were attired in a similar costume, of Kincarb trousers, tight at the ankle; a full, richly embroidered sash petticoat, with a little cholah or boddice, and a saree of coloured gauze, embroidered with gold flowers. Their glossy hair, simply braided across the forehead, was adorned with strings of fine pearl: about a dozen costly necklaces hung over the cholahs of each, and the ear-rings, toe-rings, nose-rings, bracelets, and anklets, were innumerable. The Beebees had not, on any previous occasion, met a European lady, and they perplexed me with questions upon our manners and habits of passing time. They expressed particular interest about our fancy works, of which Mohammedan ladies are great admirers. The Rahit Buktè desired her slave girls to bring some cholahs of her own embroidering, which displayed great ingenuity, neatness, and taste. After chatting for some time, I suggested the necessity of a return to my party, who I concluded were weary of the nuwaub's method of showing them attention. On this hint, pân suparrees appeared, upon snapperly chased silver trays, covered with crimson and purple velvet napkins, embroidered with gold, and edged with a deep gold fringe. The usual quantity of dry suparrees nut, pân leaves, and spice, having been deposited on my lap, and my luckless apparel deluged with sandal oil and rose-water, each of the ladies threw a wreath of Mogree flowers on my neck, and pressed me to visit them on the following day, proposing to accompany me to the nuwaub's favourite garden, at the foot of the Girnar.”

This was a charming Oriental scene:—

“Sheik Mahmoud having informed us of the readiness of the escort to accompany us to our fête champêtre in the royal garden, we descended to the court-yard; the Rahit Buktè, the Dosie Beebe, and Dada Bhoë, all scuffling along, as rapidly as the prospect of an agreeable visit could induce them to do, despite the inconvenience of toe-rings, anklets, and high-beeled slippers. Awaiting us was [were] a rutt and a gally painted palankeen. Dada Bhoë, with her infant, occupied the palkee; and the Beebees, with Bhawamere, took possession of the rutt, bestowing themselves upon piles of cushions. The rutt is a small description of cart, without springs, commonly used by native women in travelling. The Beebees, however, was an unusually splendid equipage. Its covering was of crimson cloth, embroidered in white silk. The bullocks, pure white, and of the gigantic Guzerat breed, were in the highest order; and the already enormous horns of each lengthened by silver tips, from which depended bunches of silver bells. Silver peacocks surmounted their broad foreheads, and their bridles were boxed with plates of the same metal; each leg was surrounded by a bangle of silver bells, and large sheets of crimson satin, embroidered with gold, covered them from the shoulders to the tail, and descended nearly to the ground. All this splendour was admirable to behold; but I did not envy the curtailed occupants of the rutt, as I

“Anthrax.”

saw its springless frame jolted over the huge stones lying across the road, whilst I reclined commodiously in my little travelling palanquin, borne rapidly along by the hummalls or hooies of the nuwaub. Arab guards, horsemen, chobdars, and musicians, formed our escort; and glad, indeed, was I, when etiquette forbade the advance of these people further than the entrance of the garden.

On returning to the Serai, I found the nuwaub's bird-catcher in waiting, to make his salaam. His highness patronises all artists of this description, and delights in the exhibition of their skill. Fighting rams, buffaloes, and even exasperated birds, form the usual amusement of this dissipated prince, before the closing in of evening introduces his taifas, musicians, and players. The bird-catcher brought a cage full of fighting partridges, and a little parrot of very finished education. As we desired to see what really were the accomplishments of the little bird, and whether the feathered tribes of Junagarh were addicted to gambling, and played dominoes and piquet as well as those of Germany, I begged the exhibitor to afford us a proof of his pupil's skill. Placing the parrot upon the cross perch of a small stand, the bird-catcher offered him a rod, with a wick attached to either end. This the bird grasped in the centre, with his beak, and suffered the wicks to be lighted, closing his eyes during the process, to avoid the glare. Holding the rod firmly, he began to turn his head slowly from side to side, as if to ascertain the correctness of the balance. At length quickening the motion, he twirled the rod so rapidly, that its form became lost to the eye, and nothing was distinguishable, but a circle of revolving light playing round the head of the bird. It was cleverly done, but the man assured me that a month's practice was sufficient to perfect any parrot of moderate capacity. I had never before seen so mischievous a little creature as a parrot deserving to be classed with either the educated or the industrious working classes; their gay plumage, their clamorous voices, and the gay sunny life these little plunderers lead, among the richest fruit-trees of the country, mark them as the most luxurious idlers of the feathered tribe."

Passing much for the present we must conclude with some anecdotes of animal sagacity:—

"The elephant is, perhaps, the strongest instance to be found in the animal kingdom of the power of fear in controlling the will. The mahout governs a trained elephant, simply by means of a small iron crook, which, when he requires the animal to turn, he presses against the opposite ear. If he intends the elephant to stop, the driver presses the instrument on the centre of his head; and the regulated force of this action comprises his power. Of the docility and instinct of the animal, many anecdotes are recorded, and I shall enlarge them by one, for whose authenticity I have the authority of the owner of the intelligent creature of whom the story was told. My friend, an officer in the Bengal service, possessed a handsome elephant, which he was accustomed to see fed with a certain allowance of grain daily; business requiring his absence, he confided the care of his favourite to a worthless keeper, who, in the interim, stole and appropriated a large proportion of the grain intended for the elephant's use. The poor animal daily grew more spare and feeble, missing at his usual feeding-time the abundant feast supplied by his kind and generous master. My friend returned, hastened to his stable, observed the emaciated state of his favourite, and having had no previous reason to

suspect the honesty of the servant, was at a loss to discover a cause for the evident alteration. The poor elephant, delighted at his master's return, trumpeted his welcome, raised his trunk as a salaam, and moved about, affording in his mute but expressive manner every demonstration of joy. His feeding-time approached, and the full allowance of grain was placed at his feet by his dishonest and cruel keeper. The elephant, satisfied of his master's attention, industriously separated it into two distinct heaps, and having eagerly devoured the one, left that which remained, and quietly walked to the opposite side of his stable. The truth thus conveyed by the gestures of the intelligent brute, flashed upon the mind of his master; the keeper, on being accused of the theft, and finding his unworthiness exposed, fell at the feet of his employer, acknowledging the aggression. An elephant belonging to his highness the Nuwaub of Junagarh, was usually driven daily, into the neighbouring jungles of Girnar, to collect green boughs to serve for fodder; with these, the animal would return to the court-yard of the Serai, and carefully unloading himself pack them together for use, in the smallest and most compact manner. If his stable-door remained closed after the labour was concluded, he would pick up again one of the lightest and freshest boughs, and continue waving it in his trunk, to protect himself from the attacks of the numerous flies and mosquitoes buzzing around. The Mahout who had the care of this intelligent and docile creature, frequently placed a little infant, about four months old, at the elephant's feet, with the injunction of 'Kubbur dah' (take care), and the command was never disregarded. The animal would wave a bough over the little child as it laid smiling on the ground; and if attempting to roll away beyond the spot where the father had placed it, the elephant would gently move it back again with his trunk, menacing meanwhile every creature who approached. The native keepers of elephants will not allow that the animals are influenced by the passion of fear; but declare their obedience to be an impulse of gratitude, and believe them to possess the reason peculiar to human nature. A gentleman, late in command of the Bheel Corps of Guzerat, possessed a fine elephant, to which the Mahout was accustomed to relate bhāts, as they are called, or long stories, which he declared his favourite animal understood, as perfectly as himself. The natives are celebrated for their talents as raconteurs: and since the time of Scheherazade, this seems to have been the favourite Indian, as well as 'Arabian Nights' Entertainment. All native princes entertain bhāts, as our sovereigns of olden time did jesters; and among the labouring classes, it is common to see half-a-dozen half-nude people, with bare backs, but gaudy turbans, squatted, cowering round a bright wood fire, telling bhāts to each other, until gun-fire in the morning. The most absurd legends are remembered for the occasion, and if these fail, the hiatus is filled up with treasured anecdotes of the 'Saib Logue,' a fertile source of recounting to such of the peasants as may have been brought into communion with European residents. Gossip is certainly one of the dearest privileges of the natives of India. One of the most uncommon pets I have heard of, during my residence in the East, was a young lion, which my friend, Captain S—, found as a cub in the jungles of Kattiwar. As the little creature grew in stature and beauty, he displayed so large a portion of gentleness and affection, that no means were used to restrain him; and wandering

about the bungalow and compound as a domestic favourite, he won the attachment and confidence of every one around him. True, a stranger sometimes started, on being ushered alone into the drawing-room, and observing a young lion quietly reposing upon the Persian rug; but his character was soon known, and all admired the gentle qualities of the noble brute. On occasions of defection and backsliding in his usual behaviour, Capt. S— would strike him slightly with a little riding-whip, on which the poor creature would rush into the dressing-room of his mistress, and cling round her feet for protection. When Captain and Mrs. S— were returning from their evening drive, 'Snap' would spring forward and leap into the buggy, half-mad with delight of a reunion. A little bull-puppy was an especial favourite with Snap; yet sometimes, as they both lay basking in the sun, the little lion would lift his royal paw, and administer the same to the poor pup, with an empressment which sent him rolling along the grass. Thus matters remained until the highly favoured native of the jungle wastes attained some eighteen months of age; when his master, having occasion to leave the station of Malligaum, directed Snap to be secured on a cart with luggage. Poor little fellow!—unfortunately, a few miles from the camp, Captain S—, in his buggy, passed him, and the attached and excited little creature, springing forward to follow him, hung himself in his securing chain."

[To be continued.]

Henry of Guise; or, the States of Blois. By G. P. R. James, Esq. author of "The Robber." &c. &c. 3 vols. 12mo. London, 1839. Longman and Co.

No writer is better, perhaps none so well, acquainted with French history as Mr. James, who has here chosen one of the most extraordinary epochs of that history, viz. the years 1588, 89, when the Duke of Guise rose to dictatorial powers after the 12th of May in the former year, "the day of the Barricades" of the sixteenth century, till his assassination at Blois under the personal direction of Henry III. Upon, and complicated with, the distracted state of the country, the lawlessness and bloodshed of that time, the author has connected the story of Marie de Clairvaux, a niece of the Guise; and of three aspirants to her hand, two brothers of the noble family of Montmoreau, and their ambitious tutor and relative, the Abbé de Boisguerin. This story is full of action and interest; involved in the perplexities which excite the minds of readers, and alternately prompt, depress, and revive their curiosity and expectation to the end. We will not meddle with it to deprive them of a single evolution which the constructive skill of Mr. James has prepared to enchain them from the first chapter to the last.

The historical characters are drawn with great spirit and fidelity: the lofty Guise; the debased Henry; the strong-minded Catherine de Medici; the dashing favourite, Epernon; the cruel and crafty minister, Villiquier; the courtiers and the partizans of both factions in Paris; besides others of lesser note, are all wrought into this literary piece of tapestry so as to furnish a vivid representation of the age and the events which record it in sanguinary pages, though the illuminations are brightened with pictures of chivalrous gallantry and individual honour, patriotism and devotedness.

Among the ideal actors, an Italian page, an

Italian bravo, Gondrin a faithful huntsman, and one or two others, take the lead; and conduce to the plot and various movements.

Our author is too popular to render it necessary for us to extract any lengthened examples from his new work, which is sure to be in so many hands even before this notice of ours can reach them; and we have besides so restricted ourselves by excluding the staple mystery, that we could not, if we would, dip deep without infringing our own rule. We must, therefore, rest satisfied with a very few and very short selections. But an able writer can say much in little space. Thus the description of a wintry day:—

"A dull gray expanse of leaden cloud shut out the blue heaven, a hard black frost pinched up the ground, the blades of grass stood stiff and rugged on the frozen soil, and vague gray mists lay in all the hollows of the ground. The forests, the manifold forests that then spread over the fair land of France, shewed nothing but bare branches, except where here and there the yoke-elm or tenacious beech retained in patches its red and withered leaves; while beneath the trees again, the ground was thickly carpeted with the fallen honours of the past summer, mingled with hoar frost and thin snow. A chilliness more piercing than mere frost pervaded the air; and the aspect of the whole scene was cheerless and melancholy."

Observation on the intellectual capacity of women—half instinct, half observation of life:—

"The mind of a pure and high-souled woman is the most terrible touchstone which the conversation of any man can meet with. If there be baser matter in it, however strong and specious may be the gilding, that test is sure to discover it. We mistake greatly, I am sure, when we think that the simplicity of innocence deprives us of the power of detecting evil. We may know its existence, though we do not know its particular nature, and our own purity, like Ithuriel's spear, detect the demon under whatever shape he lurks."

Just and philosophical remarks on local attachments:—

"Our local attachments, indeed, are in themselves almost all made up of associations; the pleasures that we have tasted—the happy hours that we have known—the friends that we have loved—the sports, the pastimes, the little incidents—ay, even some of the pains of life, are woven by memory and association into ties to bind our affections to certain places. Our loves and our friendships almost always derive the vigour of their bonds from the present and the past together; the ties of local attachments are all found in the past."

Similar observations on the value of time:—

"In our dealings with each other, there is nothing which we so much miscalculate as the ever-varying value of time; and, indeed, it is but too natural to look upon it as it seems to us, and not as it seems to others. The slow idler on whose head it hangs heavy, holds the man of business by the button, and remorselessly robs him on the king's highway of a thing ten times more valuable than the purse that would hang him if he took it. The man of action and of business, whose days seem but moments, forgets, in his dealing with the long-expecting applicant and the weary petitioner, that to them each moment is far longer than his day."

After the first volume, events follow events so fast, that there is little opportunity for studied writing. We are borne on by the

tide, and have not leisure to look at the waves. If we venture to differ from so competent an authority in any of his portraits, we should say that we doubt that of Catharine as exhibited in her interview with Marie; and we must tell our prolific friend, that in his first volume there are many instances of carelessness in style.

The Bells of a Season. By the Countess of Blessington. Illustrated by A. E. Chalon, R.A. 4to. pp. 93. London, 1840. Longman and Co.

SINCE the fashion has become prevalent of making literature illustrate the arts, instead of the old time-immemorial practice of getting the arts to illustrate literature—since authorship has become a task of writing to pattern—since mistress and attendant have changed places, we have seen no production better suited to the altered state of the case than the present volume, in its gorgeous plumage of scarlet and gold, and its ten gay and fanciful designs from the tasteful pencil of Chalon, sweetly and cleverly engraved by several very competent artists. They represent a youthful beauty of rank, in her transit from her father's rural hall, through the pleasures or business (whichever may be the proper phrase) of her first season (such as presentation at court, balls, at homes, fêtes, operas, &c.), to the fortunate consummation reached by so few candidates, within so short a period, of securing a husband every way "eligible" to make her happy with himself and a suitable Establishment. She is certainly a very pretty creature, and her dresses are of the finest quality and *ton*; but, as we are no judge of the mysteries of muslin, we must leave the details, and the tails too, to be admired in the pictures, only noticing that whoever may wish to be informed about the most sumptuous dressings and undressings, required for a bride of wealth and nobility, will find the "*rich corbeille*" pointedly described by the accomplished author of the accompanying verse. (See pages 88, 89, and 90.)

The unity of purpose in the pictorial subjects, and her acquaintance with the fashionable world in its costumes, amusements, occupations, pursuits, and feelings (if genuine and healthy feelings can be attributed to the artificial class), have enabled Lady Blessington to expound Chalon in the most appropriate and consonant manner. And she has done more. With the good sense which marks all her publications, she has contrived, even out of these materials, to distil some lessons which our fair countrywomen of every order may read with benefit and instruction. Among them the observations on the Opera dancing may be specified; but our extracts will exhibit others no less worthy of attention. Take, for instance, the following tribute to that grace above all female graces—a grace almost equal to a virtue, and a sure sign of its possession—Modesty:—

"O Modesty!—which angels yield
To helpless woman for a shield,
What diamond from Golconda's mine
Adorns her brow, like blush of thine?
Worthless the form, and coarse the face,
(However fair) thou dost not grace;
The sweetest voice is like a lute
Strung with harsh chords, when thou art mute;
The heart, a stained and ruined shrine,
Thou dost not enter to refine:
The eye but shoots a meteor gleam
Noxious and keen, without thy beam;
How vainly beauty, lacking thee,
Would chain men's love—Sweet Modesty!"

The versification is throughout familiar and unlaboured (perhaps a little of the latter might

have been bestowed upon it here and there with advantage);* and the whole, with the exceptions of the graver observations, breathes a fluttering liveliness accordant with the theme. Thus, when the fond father speaks of bringing his darling Mary out, and mamma hints some objections on account of her extreme youth, they are overcome in a very characteristic and naïve manner:—

"'Nay, as you will—perchance you've reason;
Well, then, we keep at home this season.
That last election thinned my purse,
Which, truth to say, requires a nurse;
Though on dear Mary's pleasure bent,
I should not count how much I spent.'
The Lady hears—and from her spouse
Hides sudden fears, she knits her brows,
And o'er her features still most fair,
Calls up a bland, persuaded air;
'Reflection falls—you may be right,
I would not stand in Mary's light;
And to her pleasure, I my own
Would sacrifice—let's go to town!
She uttered not her thought of wo,
'How rapidly one's daughters grow!'"

The freaks of Fashion are painted in a tone which combines the two styles to which we have alluded, viz. the playful and (if we may coin a word) the *advisive*:—

"'Hail Fashion! thou mysterious queen!
Whose reign omnipotent hath been:
Ay, since the times remote and dark,
When Mistress Noah left her ark!
Sovereign, whose subject ne'er rebel,
Though of tyrants away they tell!
Thy sceptre, Queen, whom all adore,
Hath strange and elephantine power,—
Can rout an army with its strength,
Or raise a pin an atom's length!
The young, the noble, and the gay,
Hear thy loved voice, and straight obey.
What though the Spring with open arms
Spreads to their gaze her wealth of charms,
With primroses and with king-cup glides
The hedge-row banks, the sunny fields,
Thou callest—and from these scenes they part.
To mingle in thy busy mart,
And thought, and health, and pleasure drows,
In the dull mazes of a town!
Then, when the dog-star rages high,
Thou bidd'st the obedient throng to fly
To coasts where not a leaf of green
Their beauty from the blue sea may screen.
Let scorched-up eyes, and sun-browned faces,
Declare thy might at watering places!
Then, when rough Winter's frost and snow
His dismal coming makes them know,
And all is gloom, and storm, and rain,
And bowers are stripped, and hill, and plain,
And garden path, and sheltered wood,
Are carpeted alike with mud,
Thou drivest the herd, most potent of queens,
To the repose of country scenes;
O prithe! for one little season,
Rule this poor weary world by reason!"

We will only add Mary's early maiden rural song before she beamed on London, as a specimen of the author's lyrical talent:—

"O Nature! let me dwell with thee,
The happy playmate of the bee;
Thou bringest back the golden Spring,—
I cannot choose but gaily sing!
Old Winter's gone with clouds and rain,
And flowers are on the earth again,
And birds fly forth with gladome wing:—
I cannot choose but gaily sing!
The insects chirp as blithe they pass
Among the dew-gemmed waving grass,
Fresh verdure clothes each fairy-ring:—
I cannot choose but gaily sing!
O Nature! let me dwell with thee;
Thou ne'er art stern and harsh to see,
But mark'st each day by some bright thing,
That makes thy children gaily sing."

Perhaps we should mention that the court scene represents Mary kissing the hand of our youthful Queen, and that the latter is a portrait—a charming portrait. The finale is a delightful picture of two love-birds on a bouquet of roses, &c. Altogether, the volume is most worthy of the Fashion to which it is addressed.

* For instance, p. 7, where four consecutive lines terminate with the words *this, blue,—bliss, governance*. And Lady B. is too polished a writer to signify of such slips passing unnoticed, even in a composition of this kind.

Memoirs of Admiral Sir Sidney Smith, K.C.B. &c. By the Author of "Rattlin the Reefer," &c. 2 vols. 8vo. London, 1839. Bentley.

THERE is much in this book we like, and much that we dislike. No memoirs of Sir Sidney Smith could be without the former ingredient; and they might have been with far less of the latter. People seem to fancy that biography is an easy task; whereas there is hardly one more difficult to do well in the whole circle of literature. It does not, to be sure, require the genius of a great poet, or the comprehensive philosophy of a first-rate historian; but it does require the patient investigation of facts, dates, and circumstances, a very acute judgment, a knowledge of men and of life, a habit of thought and comparison, impartiality and truth, intelligence of a high order, access to all the best sources of information, skill in literary composition, and the rare talent of telling all that is necessary to be told, and no more—in short, a round unvarnished tale, plain and straightforward, without extenuation, repetition, involution, flummery, or malice. That "Rattlin the Reefer" does not possess all these qualities will speedily be apparent to the reader; who must, therefore, take this publication, such as it is, as an account of the leading events in the interesting and adventurous life of the Hero of Acre, accompanied by many statements and documents which are of small worth, and by no means new to the world.

William Sidney Smith was of a respectable old family, and born in 1764. At eleven years of age, we are told, "he shewed symptoms of that refined and graceful gallantry to the softer sex that has always marked his character. In fact, he divided his attention with a tolerable impartiality between a young lady of his own age (eleven years), this piece of water, and a large washing-tub."

"This piece of water" was in his father's grounds at Midgham, Berkshire, and we have a story of his going to sea on it in the tub, with the young lady, instead of going to evening prayer, and being almost drowned. This is a tale of a tub!! In eight years after he was a post-captain, having obtained very rapid promotion, in consequence of his gallant services during the short time he had been afloat (not in the tub, but in various ships), and the influence of his father, who held a situation at court. On peace taking place, he served in the Swedish navy, and afterwards with the Turks; but on war breaking out in 1793, he returned from the Orient in a small vessel with a picked crew of his own, and joined in the famous siege and evacuation of Toulon. Throughout all these years his services were dashing and brave; and our author deems it expedient to furnish us with his whole-length at the epoch. Portrait, No. 1:—

"At this period, when the Diamond came into harbour to refit for service after her various cruises, Sir Sidney Smith used frequently to come up to London, and mingle with the abounding festivities of the metropolis. Though he had his peculiarities, yet, with many and strong temptations, he might justly be denominated 'a steady man.' At this time he was decidedly handsome, and, though not tall, of a compact, well-built, symmetrical frame, with a dark and somewhat Hebraical countenance, and a profusion of jet-black curling hair. Notwithstanding the fierce bravery of his character, his features were always remarkable for a degree of refinement, not often found either in the pale student or the

silken courtier. In his character, mind predominated. He had his singularities, and where is the thorough-bred seaman who has not? He had himself trained a beautiful and docile horse into an amusing playmate, as well as a valuable servant. When told to give a prance for 'King George,' he would rear on his hind legs, and dance like a well-educated dog. When requested to pay the like compliment to Buonaparte, he would take the request as an insult; stiffen out his limbs into an attitude of defiance, and snort indignantly. When mounting his favourite Bucephalus at the door of his hotel, Captain Smith would do it in the most approved style of the fashionable equestrians of the day, and preserve all the proprieties of equitation, until he was fairly clear of the suburbs. Then would he fling the stirrups across the back of his horse, settle himself sailor-fashion in his saddle, and ride as if he were chasing the wind, and the wind chasing promises of amendment."

One of his exploits, the cutting out of a French lugger near Havre, soon after cost him his liberty; for he was drifted by the tide into the Seine with his prize, taken prisoner, and conveyed to Paris. In the Temple there he was confined for two years, but ultimately escaped after several bold attempts, and reached England in safety. He was now appointed to the Tigre, and sent to the Sublime Porte, politically accredited also as a joint ambassador. In the events which ensued he took a very prominent and distinguished part; but the glorious repulse of Buonaparte at Acre, the subsequent wars in Egypt, the famous treaty of El-Arisch, &c. are too well known in all their circumstances to render it expedient for us to follow the author into them. We will only give Portrait No. II. with which he now presents us:—

"We have described Sir Sidney Smith's appearance as the fresh, amiable, and rosy-cheeked boy. We now, upon the testimony of one who was in daily communication with him, portray him in the vigour of his manhood, shortly after he had effected the expulsion of the French from Acre. Then, though small in stature, he had all the appearances that indicate a brave and generous-hearted man, with a fine dark countenance, and eyes that sparkled with intelligence. His very appearance shewed that he possessed an ardent imagination, which naturally prompted him to form and execute bold and important enterprises: he seemed, as it were, to be born to deserve glory and to acquire it. This testimony to the dignity of his presence is from a Frenchman, and, so far as his public character was concerned, an enemy; and as the narrator was allowed, on all hands, to be a person of probity and honour, we must place implicit belief that he has put upon record the actual impression that Sir Sidney Smith made upon him. But let us have recourse to other and less refined evidence. It is that of a worthy old Greenwich pensioner, who held an office about our officer's person, and who had the fullest opportunities of seeing him in all situations and in all moods, in full dress, in undress, and in no dress at all; and such is nearly the words of the veteran. 'Why, sir, after we skivvered the mounseers away from Acre, Sir Sidney was looking as taut set up as the mainstay by a new first-lieutenant; but, for all that, Sir Sidney was a weaselly man,—no hull, sir,—none; but all head, like a tadpole. But such a head! it put you in mind of a flash of lightning rolled up into a ball; and then his black curly nob—when he shook it, it made

every man shake in his shoes.' 'Was he then handsome?' 'Blest if I can tell! You know, sir, as how we don't say of an eighteen-pounder, when it strikes the mark at a couple of miles or so, that's handsome, but we sings out 'beautiful;' though, arter all, it's nothing but a lump of black iron. You're laughing, sir. And so you think I'm transmogrifying Sir Sidney's head into a round lump of iron shot! Well, I'm off like one. All I can say is, that he was the most handsome when there was the most to do.' This worthy old sailor's notions of the line of beauty being rather tortuous, we have only to endeavour to reconcile the two accounts, which may be done by the single word 'soul.' It predominated in the expression of his features, and that, we conceive, is the noblest kind of beauty."

Sir Ralph Abercromby's expedition and the final evacuation of Egypt by the French afforded Sir Sidney many opportunities of signalling his abilities and intrepidity; but we find here a story which we think had better been left out, as too apocryphal for any belief:—

"After the surrender of the French army, Sir Sidney Smith seized the opportunity of visiting the holy city of Jerusalem, where the following anecdote of Buonaparte was related to him by the superior of a convent. People may place what reliance they choose upon its authenticity, and either conceive it to be of no more value than is generally affixed to a monkish tale, or give it full credence, on the score that, at that time, so strong was the current of infidelity among the French people, that Buonaparte, who wished to float to power on its stream, might well have been guilty of the ascribed impiety. When his general, Damas, had advanced with a detachment of the army, within a few leagues of Jerusalem, he (Damas) sent to his commander-in-chief for permission to make an attack upon the place. Buonaparte replied, that 'when he had taken Acre, he would come in person, and plant the tree of liberty on the very spot where Christ suffered; and that the first French soldier who fell in the attack should be buried in the holy sepulchre.' At this period, when men's minds are less excited, such fanaticism of infidelity as is here displayed seems altogether incredible. However, whether this anecdote be true or not, as it was uttered to suit the temper of those times, it is a curious record of the exasperation that was entertained, either by the one party or the other. That much of this kind of senseless bravado on the score of religion was promulgated by Buonaparte in his Egyptian career is but too certain, yet this man died a certified good Catholic, and in a faith the most credulous that ever existed."

But Buonaparte was not a fool, and he could have no motive for so blasphemous a piece of folly; his pretending to turn Mahometan was a widely different affair.

On his return to England, Sir Sidney was received with many marks of popular applause and honour. The City presented him with its freedom and a sword—he was elected M.P. for Rochester,—and family-arms and other distinctions were showered upon him from various quarters. But he was never raised to the peerage, or even created a baronet. The truth is, that however beloved by those under him, he was always personally disliked by those over him. He was a great egotist, and occasionally took more upon him (as at El-Arisch, and afterwards at the Brazils) than he had authority for, or was agreeable to his immediate commanders or the government at home. The same spirit which led him into actions which

have immortalised his name, betrayed him into imprudences which certainly interfered with his obtaining the higher preferments, bestowed, perhaps, on not more brave and successful, but on more restrained and steady officers.

His next employment was at Naples, where, as every where else, he made himself and his brilliant achievements heard of throughout Europe; and coming from that dissolute court, our "Reefer" favours us with his version of the scandal touching an improper intimacy with the Princess of Wales. We are told that, independently of his being courted into society in consequence of his fame,—

"To these advantages he added a graceful vivacity of manner, tinctured at times with an eccentricity as engaging as it was original. These physical advantages, and the fluency of his conversation, replete with anecdote, made him a dangerous man in female society; to which, we are bound to state, he was always most chivalrously partial. His high connexions, and his deserved reputation, at length brought him within the circle over which Caroline, Princess of Wales, presided with so much imprudence and good-heartedness. His conduct, at that period, will ever be involved in an impenetrable darkness—a darkness made the more deep and inscrutable by the solemn and yet ridiculous attempts of commissioners and privy counsellors to dispel it. We have carefully perused and re-perused all the depositions sworn to, as affecting the continence of that unfortunate princess during her residence on Blackheath, and the only safe conclusion at which we can arrive is, that the laxity of morals, and the licentiousness of the manners of almost all concerned in that investigation, made us feel ashamed for the conduct, with but a few exceptions, for all the parties concerned. Whether the attractions of Sir Sidney Smith were only incitements to, or actually the cause of, criminality with the princess, he now only knows. That he was much in her society, that his conversation amused, and his attentions pleased, this unfortunate woman, cannot be doubted. It is also no less certain that he was discovered in her company at times, and in situations, that neither befitted her rank nor his position as a future subject to the heir-apparent. This intercourse, of whatever nature it might have been, continued with unabated strictness for several months. To render it the more uninterrupted, Sir Sidney went and partly resided with his old companion-in-arms, Sir John Douglas, the husband of that Lady Douglas who throughout these transactions procured for herself an unenviable notoriety. Having thus made himself conveniently proximate to the princess, he was seen for weeks daily in her society; and being thus unguarded in his conduct, he gave too much scope for the voice of scandal to breathe guilt upon the fame of a person already too much open to suspicion, and, as moralists, we are bound to say, to leave a stain of no very light dye upon his own. We wish to tread lightly upon the ashes of the dead, who, when living, we think was hardly dealt with. We shall, therefore, not go into details of the evidence which imputed criminality to our officer, but merely state that, first, a coldness, and then a quarrel, having occurred between him and the object of his attentions, he shortly after forsook her society altogether, and was soon after found most actively employed in that scene so natural to his genius, and so conducive to his own fame and his country's glory."

And to this we have superadded Portrait No. III. :—

"The following is a description of Sir Sidney's appearance at the time of his acquaintance with the princess, to whom the world so generally gave him as a favoured lover. He had an air of general smartness, and was extremely gentlemanly in his deportment. He had a good-humoured, agreeable manner with him, with a certain dash and turn of chivalry that was very taking with the ladies. We are not using our own words,—but the very expressive ones of a good judge upon these matters. He used then to wear mustachios; they were not then vulgarised as now; which fashion he had adopted when so much associated with the Turks. He was about the middle height, rather under than over, and of slender construction, which much helped his activity. He was generally very showily dressed, perhaps with some singularity: but there was not a particle of coxcombry about him. In features, he something resembled Bernadotte, though with not so prominent a facial angle. The countenance of Southey the poet still more closely resembled that of Sir Sidney Smith, when both were in their younger days."

We should like to see Southey in Sidney's mustachios! But we must come to the conclusion of Vol. I.—a conclusion about as extraordinary as we ever perused from the pen of a biographer.

"We may (says the "Reefer") just now observe, that to write a good life, in the extended sense of the word, of the gallant veteran, would be a matter of no small difficulty, were it rigidly a true one; and a biography, however amusing, if not true, could not be good. It is in this that the difficulty lies,—the impossibility to find a person sufficiently impartial. Were Sir Sidney himself to attempt it, much of it would appear, from him, like gasconade, simply because his adventures have been so singular, that it would be hazardous for a man to publish them of himself; and, unfortunately, such are his qualities, that his friends are very friends indeed, and verge too much upon idolaters; and his enemies are contemning sceptics of any thing good or great about him. Whilst the one party would extol him as the *se plus ultra* of heroism, the other would designate him merely as a successful charlatan; brave, but without conduct; cunning, without being sensible; arrogant and supercilious in his youth; and, in his after-life, immersed in the vapours of his intolerable vanity;—that all that ever was sterling in the man is totally evaporated, and that nothing remains of him but a gaudy shell, tricked out with ribands and stars, and all the blazonry of which beggarly monarchs are so lavish, and fools so greedy."

The second volume is occupied with the passage of the Dardanelles under Duckworth, and Sir Sidney's share in that unfortunate business; upon which, however, he wrote some poetry. Then we have his mission to the Brazils, his dealings with the government, his warm espousal of the cause of the Infanta, and his consequent supersession and recall. Still he was as popular at home as ever. He enjoyed honorary degrees conferred on him by Oxford and Cambridge; was hailed by important commercial bodies; made a vice-admiral in 1810; and appeared brilliantly with stars of British knighthood, as well as the dazzling foreign insignia which adorned his person. He invented some nautical improvements, which do not appear to have been perfected into adoption; and (in 1814) projected the formation of a Union of all Orders of Knighthood, for the abolition of white slavery, which, after struggling for some years, fell to the ground.

Having gone to Paris at the restoration of Louis XVIII., he was there, in 1815, invested with the Order of the Bath by the victorious Duke of Wellington (the two chief actors being the first and last men who had defeated the abdicated emperor); and, in 1821, he became a full British admiral. The second volume, like the first, concludes with a curious specimen of biographical writing. After expatiating on his better qualities, the "Reefer" says:—

"Now to the graver consideration of his faults,—they are mostly those of the sanguine temperament, and are but a little worse than virtues exaggerated into failings. Shall we be thought severe when we say that a pride to which he is justly entitled was sometimes sublimated into vanity—that his greediness for glory compelled him to attempt to gather it in fields where he ought not to have been found? This zeal led him into interferences that were inimical to his own interests; and thus, through his eagerness to do too much, his country suffered from his being permitted to do nothing. This desire of being continually seen under a triumphal arch induced him, at one time, to affect a little singularity of dress, and has, at all times, attracted about him a crowd of flatterers,—a train that is always attendant upon the eminent. After all, they are but the gilded settings of a glorious portrait. Than Sir Sidney Smith, no one ever inscribed on the pages of history, and even of romance, more emphatically deserved the title of hero. That he had not the requisites to become a truly 'great man' we will not say, for he was denied the opportunity."

The mysterious and cruel case of Captain Wright, some anecdotes not worth repeating, and various documents, complete the work, of which we take our leave with little reluctance.

Friendship's Offering, and Winter's Wreath, for 1840. 12mo. pp. 384. London: Smith, Elder, and Co.

"FRIENDSHIP'S OFFERING" is one of the best titles going for an Annual, for "What is friendship but a name?" and this year's edition appears as usual, under a plain, suitable binding, without those gay external embellishments which strike the eye more in the generality of its competitors. Some of these productions have lopped off, very quietly and unceremoniously, a portion of the other attractions with which they were wont to seduce the public preference: here and there a plate has been diminished yearly, and occasionally a slight affair been made to pass muster in the stead of a highly finished engraving. Occasionally, too, very inferior artists have been employed, and where formerly we had works an honour to the English school, as far as this species of effort "in little" could be carried, we have now rather sorry affairs, which would do no credit to the arts in any country, and which are in fact mere engine performances and manufacturing. In these respects we are sorry to observe the *Friendship's Offering* to have sinned quite as much as any of the rest. There are this year only nine plates and an engraved title-page; and several of them are of a very ordinary character. Such, for example, as the black view of Yanakeni.

By thus cutting down the expenditure on the embellishments, one might think that the price to the purchasers might be lowered; but this has not happened: and we should add, besides, that originally considerable sums were paid to literary contributors of high reputation for papers, which under the new system are usually obtained by the lower class of Annals

from inferior writers for nothing; or in the higher class, from a sprinkling of authors of repute through editorial influence.* Such savings, whilst they have of necessity deteriorated the value of the publications, have not diminished their cost; and our remarks are not applied particularly to the volume under review, but to others also among its rivals. We will venture to assert, that five times the amount has been spent upon the binding of this year's *Annals* as upon their literature.

With regard to the *Friendship's Offering*, if the inside has cost any thing, the disproportion will not have been so great as in the average of all; for its outside is, as we have stated, neat and unexpensive. The contributors, however, do not seem of an order to have exacted much, as many of them are *in cop*, and most of the others were known volunteers. In the preface the editor "points to its poetical contents" with a boast somewhat invidious towards its prose articles, but which directs attention in the first instance to these contributors, and especially to the productions of a certain "J. R. of Christ Church, Oxford,"† who has supplied "The Scythian Guest" and "The Broken Chain" for the present volume. We should confess, that without this puff we should have turned to "J. R.'s" compositions for reasons which our readers will find in last year's *Gazette*, where, pointing out as rocks to be avoided obscurities in sense, and something like vague ideas lost in "words, words, words," we also pointed out striking beauties, and confidently anticipated that this young aspirant would become a poet! We lament to say that our disappointment is complete. All that promised of good has vanished; and, spoilt by facility in verbiage, and compounds seasoned with silly and perpetual alliteration, poor "J. R." (the bepraised of the preface) has committed as considerable a quantity of meaningless trash as could readily be measured off in the same given number of lines and pages. Hoping that censure will have a better effect upon him than undeserved panegyric, and thus restore him to the fold, we will take the trouble to exhibit a few of his errors.

The "Scythian Guest" is a piece of some two hundred or two hundred and fifty lines, founded on the custom mentioned by Herodotus, that when the master of a family died he was installed in his state chariot, and carried to visit every one of his relations, who gave him and his attendants a splendid entertainment, the dead man being seated at the top of the table, and having his plate supplied like the other guests. A custom more honoured in the breach than in the observance; and only so far tolerable that the parties were not expected to return the visit. But the corpse comes, and:—

"Behold—like showers of silver sleet,
His lines of lances wind and wave:
He comes as he was wont to ride
By Hypanis' war-troubled tide,
When, like the west wind's sternest stoop,
Was the strength of his tempestuous troop,

* "Beyond question (observes the last No. (10) of the 'Art-Union'), the character of the *Annals* has deteriorated; the fashion, we might almost say the passion for them, gradually declined. In proportion as they became unprofitable, exertions were relaxed; and if we look through any of the volumes published within the last five or six years, we shall perceive only mediocre engravings from mediocre paintings; while among the contributors to their literary contents, we shall now find scarcely a single name of eminence. Publishers who used to pay largely for the assistance of both authors and artists, have been compelled either to abandon their speculations, or dole out recompense very sparingly; and their value as literary works, or as works of art, has nearly, if it have not altogether, vanished."

† The author (says the preface) of "The Scythian Banquet Song," a poem which was largely quoted from last year's volume, by the periodicals of the time."

And when their dark steeds' shadows swift
Had crossed the current's foamless drift,
The light of the river grew dim,
With the flash of the hair and the flight of the limb."

"Showers of silver sleet;" "lines of lances;" "wind and wave;" "when west wind's sternest stoop;" "troubled tide;" "tempestuous troop;" "steeds' shadows swift;" "crossed the current;" "dazzled and dim;" "flash and flight."—We hope here be enough of the fine figure of alliteration in ten lines. And the worst of it is, when a writer is betrayed by mere words into such folly the sense is sadly sacrificed to such silly sounding. The winding of sleet, and the stern stoop of the west wind, are sheer absurdities, and the last four lines nonsense. It runs thus:—when, *i.e.* after the swift shadows of their dark steeds had crossed the current, (whose drift, we cannot tell why, was foamless?) its light (we presume clear or shining surface) grew dim,—and with what? why with the *flash* of the hair, and what we do not comprehend at all, "the flight of the limb!" The whole poem runs on in a similar strain; there is hardly a couplet without a misused epithet, hardly a simile not incongruous, and hardly a passage not ridiculous.

The "Broken Chain" is a longer composition, and marred by the same faults, forced and unnatural:—

"It was within a convent old,
Through her lips the low breath sighing,
Which the quick pains did enfold
With a pale calm, but cold,
Lay a lovely lady dying."

The which to explain we acknowledge our utter inability. But it is unpleasant to execute a task like this. We will not pursue the criticism of these poems; and shall only add that if the writer contemns our advice, and to a fervid imagination will not join intelligible imagery and language, he must become a laughing-stock instead of an ornament to our poetic literature. Of the other poetical pieces, "The Song of the Besieged," by the author of "The Provost of Bruges" (Mr. Lovell), is a singularly spirited and stirring anacreontic; but it has been much and deservedly quoted, and no eight verses more deserve to be so, though we do not follow the example of *imitatores servum pecus*. "The Bride," by Octavian Blewitt, is also a brief but sweet and touching theme; and "The Renegade's Daughter," by T. K. Hervey, worthy of his muse. Here is a specimen of its charming numbers:—

"Oh! hope is like the cuckoo's song,
Upon its high and leafy spar,
Heard ever from there, though never long,
And ever from afar!
But then, the cuckoo singeth still
Amid the blaze of light,
While hope is like the nightingale,—
It singeth in the night:—
And now, beside her sire unblest,
That bird is whispering in her breast.
And love hath spoken to her heart,
(That love should ever speak in vain,
When, like the aloe that has bloomed,
It never blooms again!)
Love, covered all with roselike flowers,
A fragrant, but an early thing,
The spirit's almond-tree that buds
And blossoms in its spring."

An anonymous poem "To . . ." also deserves our warm commendation; as do T. Miller's "Lines to Melrose Abbey," though we could have looked for more from him on the subject. In conclusion of the noticeable versifying, we have to mention "The Poet's Heritage," stated to be by a university man, who had gained the prize of his year for the best English poem; and if it resembled this, we should express our opinion that it must have been fairly and justly earned. It is so tempting that we cannot help quoting it all:—

"The Poet's Heritage."

Poor and a Poet!—why, the king of old,
Who turned whatever he touched to purest gold,
And she of fairy land, the favoured girl,
Whose every word was frozen in pearl,
Were only types of me—come tell me where
In earth, deep sea, or universal air,
Where flowers may blow, light fall, or rainbow shine,
One spot, one speck exists, which is not mine?
Let the worm peering from his bed of clay
Conjecture of the eagle, when his way
Is paved with splendour; let the hermit mole,
That blind old sophist, in his learned hole,
Take the bright stars to task; but do not thou,
With that earth-stained and lucre-loving brow,
Look scorn on one, who, privileged to be
Near unto heaven, is far removed from thee!
Spirit of beauty! Nature! mother mine!
If well my soul hath worshipped at thy shrine;
If of the myriad children of thy birth
I was the last intrusted to the earth,
And sheltered longest in thy parent breast,—
Thence grew, like Joseph, loved beyond the rest,—
Oh! help me now with words of fitting scorn,
Bright as the slanting splendour of the morn,
That I may pierce this upstart earth-worm through
With winged arrows such as those which flew,
When, like a stricken lyre, Apollo's bow
Twang'd the old dragon's death-song long ago!
Talk'st thou of wealth? Alas! poor human gnome,
Whose dwarfish soul hath made itself a home
In some closed money-chest as in a mine,
Look, if thou canst, one moment towards the shrine
Of those immortal rays, which from the sun
Gush earthward ever:—know, there is not one
Of those bright atoms, which, when it hath lain
Within the tried alembic of my brain,
Turns not to precious thought—a costlier stream
Stole not on youthful Danaë's nuptial dream,
When, like a new Pegasus over-board,
The wanton tide engulfed her in its gold!
Say hast thou pearl? For me the Nereids keep
The hoarded treasures of the tranquil deep.
Hast emerald?—To bid my forehead weave
The deathless laurel all her wealth of leaves.
Hast rubies?—Pr'ythee, scorne, turn and see
What crimson tears the vine hath wept for me.
Hast coins?—Oh! tell me when they numbered are,
And for each one I'll reckon thee—a star.
Hast castles, lordships, towns?—I do not fear;
Behold in me the ruler of a sphere,
Which want can neither snatch, nor wealth impart—
The guiltless empire of a trusting heart:
A world that has its bright blue heaven above,
Yet owns below an atmosphere of love;
An earth inhabited by earthly things,
Yet blessed with heavenly thoughts, like angels' wings.
Then scorn the bard no more; he is above
At once thy hate, thy pity, or thy love;
His world is not thy world, nor hast thou wings
To follow to that sphere, whose charmed springs
Can, like Medea's magic bath, restore
The form of youth, when youth itself is o'er.
Ashes to ashes—living earth to earth!
Here have at once thy dwelling and thy birth:
For me my soul shall build a palace home,
Blue-roofed above by ether's ample dome,
Where flowers shall drink the rainbow's tearful ray,
And silver fountains warble night and day.
Bright shapes of love shall throng around me there,
Incarnate visions of the wise and fair;
There Lesbian Sappho, fresh from out the surge,
Shall oft repeat, poor swan! her ocean dirge;
And ministering spirits round me flock,
Like those which soothed Prometheus on his rock.
The stars shall make me music as they roll,
And Jove's own nectar mantle in a bowl
Fresh dewed by Hebe's lip! Oh, who would lie
Among the shards of earth, and never try
One bold and skyward flight? Poor spirit bird,
Whose dust-defiled plumes have never stirred
Toward their ether-home! say, wherefore build
Thine own eternal prison cage, and gild
Its bars thus gaily? Know'st not even he,
The small mechanic of the mulberry tree,
Who spins around, in many a patient fold,
His filmy shroud of vegetable gold,—
Dreams of some future time, when, from the gloom
That curtains round his ante-natal tomb,
The sun shall wake to life a gorgeous thing,
With robe of feathered snow and Psyche wing,
A child of light and air, an insect dove,
Whose all of life is dedicate to love?

Open to all the application lies,
Go to the worm, thou sluggard, and be wise!"

Of the *prose*, "My Cousin and the Curate" is the best-invented tale of fiction, though there are two or three clever Eastern narratives by Mr. St. John, and several respectable contributions by others. One from the classic pen of the editor, Mr. Harrison, is not unworthy of notice, for the fine original and natural simplicity of the incident on which the development turns. The story is called "The Painter," who is a peer in disguise, and his crisis with a

lovely country girl, between whom and himself a devouring mutual passion has sprung up, is brought on by a briar, thus:—

"It happened one evening that Caroline encountered the painter alone in the park, while he was endeavouring to select a spot from whence to sketch a scene which he had heard her express a wish to see transferred to canvass. At the moment, a part of her dress became entangled in a briar, and the artist stepped hastily forward with the intention of disengaging it; but, in so doing, his foot slipped into a cart-rut which had been concealed by the overgrowing grass, and, being unable at the moment to withdraw it, he fell on his side, and so severely sprained his ankle, that he lay without motion on the ground, while a deadly paleness passed over his countenance. With a shriek and a bound, which left the entangled portion of her dress in the safe custody of the bramble, she was in an instant at his side. The injury, although it did not amount to a dislocation, was attended by such acute agony, that he was unable to articulate a word in answer to her hurried inquiries. Severe, however, as was the pain he endured, the expressions of tenderness which the agitation of the moment extorted from her lips, fell not unregarded on his ears."

The reader may guess the result. As he limped slowly home he declared his love, got a confession in return, and ever after the happy couple had reason to bless the cause of their enjoyments as a Sweet Briar (not to say any thing of the rut), and one that had not made their wedded home a Bramble-tie House!

Schloss's English Bijou Almanack for 1840.

By S. Lover, Esq.

THIS tiny Annual and great favourite has this year been confided to the author of "Rory O'More," whose muse has done every justice to its fairylike subjects. And who, indeed, could treat any thing of fairy form, even though representing human beings, so well as Lover? The portraits are those of the Duchess of Sutherland, Mrs. S. C. Hall, Madame Persiani, T. Moore, Sir M. A. Shee, and W. Macready. But the chief grace of the poet will be found in the expression of a natural sorrow for one to whose kindness of heart and genius, this little work owes its rise.

TO THE MEMORY OF L. E. L.

"How many the tear will shed,
When on this page they look,
And thy cold doom is read
In thine own tiny book!
The little gem, while thine,
With graceful joy was bright;
The fearful task is mine,
With grief to dim its light.
Untimely was thy fall,
Embitter'd was thy fate—
Oh, that a leaf so small
Should tell of grief so great!"

Among the other poems, we delight in that upon the effigies of Moore; for it is a pleasant thing to contemplate the *laus a laudato*, and a brother-bard thus lavishing his tribute of praise and admiration upon another:—

"Oh, Erin! my Mother!—unrival'd in song,
Thine, thine are the melodies cherished so long,
Once heard, ne'er forgotten—to memory clinging,
And passion's deep spell o'er the ravish'd soul flinging,
So deep—without words we interpret the feeling,
Be it sorrow or joy, thy sweet notes are revealing.
We interpret the feeling: but words are not given
To music like thine, unless sent us from Heaven!
And Heaven to thy wishes a bright poet bore,
To interpret, as none did interpret before:—
Oh, Moore—thou wert best with such strains to
inspire,
While the music hath caught a fresh charm from thy
lyre!"

The lines on Sir M. Shee and Macready are also worthy of quotation:—

"Sir Martin Archer Shee, P.R.A.

A gift from Vulcan Theos won,
Shee ask'd the god to arm her son.
In happier hour, thy mother, Shee,
Won from the Muses gifts for thee:
And pencil bright and brilliant pen
The smiling Sisters gave thee then.
A twin-wreath twine we for thy brow,
Painter and Poet; well canst thou
Example give—advice impart,
In silver verse and glowing art:
(Climbing to fame, with generous might
Thou'st taught the way to win the height."

"W. C. Macready, Esq.

Gifted master of thine art!
Bearing best the noblest part:
With lofty thought or depth of feeling,
Nature's varied traits revealing,
Moulding in the mimic scene
The forms of deeds that once have been.
Enough in this for human pride,
But prouder cause hast thou beside:
In mimic scene thou'st honour won;
More honour'd, what thou'st really done—
Restored the glory of the stage;
Redeem'd what stigmatised an age."

But, besides its general attractions, the *Bijou* of this year possesses a new and striking feature of popular interest—no less than a portrait of Prince Albert, the elected of our young Queen. It represents a handsome man, of an intelligent and pleasing presence. This alone is enough to sell hundreds of *Bijoux*. We should have liked to have seen with it an impression of the beautiful sapphire seal, with his arms, &c., which his royal mistress presented to him on leaving England.

MISCELLANEOUS.

The Game of Billiards: Scientifically explained, and practically set forth, in a Series of novel and extraordinary Strokes; and Illustrated by numerous appropriate Diagrams. To which is added the Rules and Regulations which govern the numerous Games, as they are played at the Present Day, in all the Countries of Europe. By Edwin Kentfield, of Brighton. Small folio, pp. 48. London, 1839. Smith, Elder, and Co.

THE ample title-page so fully explains the design of this costly work, that we have little else to do than notice the manner of its execution. To say that it deserves great praise is no more than its merits demand. The letterpress is sanctioned by the name of the highest authority on the subject of billiards, for the player is not to be found who can contend with Edwin Kentfield, or as he is more popularly known, with Jonathan the Brighton Marker, who has long been confessed to stand alone in having reduced the game to the greatest mathematical certainty. The illustrations, ninety-three in number, are executed with much spirit and fidelity; they are from the zincographic press of Mr. Chabot. The work as a whole is highly creditable to the enterprise of the proprietor, Mr. Thurston; and we have no doubt it will become the standard for reference in every billiard-room in the kingdom, whether found in the mansions of the wealthy, or kept as a source of livelihood for the amusement of the more humble player.

Commentaries on the Historical Plays of Shakspeare. By the Right Honourable T. Peregrine Courtenay. 2 vols. London, 1839. Colburn.

WHEN the greater part of these Essays was published, from time to time, in the "New Monthly Magazine," we read the papers with pleasure, as the production of a scholar ("and a ripe one") and a gentleman of refined taste and acute judgment. The many new points

of view which he took, and the many light which he threw upon passages of the immortal bard, commanded our lively interest; and the pains which he has taken to rescue real and actual history from the overwhelming magic of the dramatist deserve the thanks of every lover of truth, however much also the lover of works of the imagination. His investigation of the authorities on which Shakspeare leans for his historical facts is both curious and instructive; and the whole deserves the attention of the public as an almost inseparable companion to Shakspeare's Plays, and the Histories, Rome, France, England, and Scotland. Indeed, it is a work without which we do not look to see a respectable library, or collection of polite literature. Extracts would be inconvenient and are unnecessary.

An Apology for Cathedral Services. Pp. 170. (London, Bohn.)—A high-church and well-written apology for what is not much impugned in our day. It is a pleasant work, showing much reading, and no small degree of taste.

A Few Minutes' Advice to Deaf Persons, &c. by a Surgeon of nearly Thirty Years' extensive practical Experience. Pp. 180. (London, Hodson.)—A rather amusing exposure of some of the quackeries exercised in this branch of the medical profession, and containing a good deal of matter which the deaf would not be the worse of its hearing.

A Guide to the Study of the Pentateuch &c. by J. Thomas. M.A. Pp. 322. (London, Houlston and Stanswell.)—Mr. Thomson has displayed both diligence and judgment in collecting together references to the five books of Moses, which must be very useful to the young divinity students.

The Scheme of Prophecy from Daniel. Pp. 182. (London, Simpkin, Marshall, and Co.)—An almost similar service rendered to the extraordinary and important prophecies of Daniel.

Aids to Preaching and Hearing, by the Rev. T. I. Skinner, D.D. Pp. 238. (London, Tegg.)—Another volume, of which the same parties to whom we have alluded in the foregoing notices will do well to suit themselves,—we mean the students of divinity, and the deaf,—and to them we accordingly recommend it.

Gleiss: a Tragedy in Five Acts, by J. J. H. Pp. 2. (London, J. Lee.)—We fear that the impulse given to dramatic writing does not always lead to the production of plays which either the closet or the stage can highly prize. In *Gleiss* we can only speak of a wretched effort.

A Manual for Mechanics' Institutions, published under the Superintendence of the Society for the Diffusion of Useful Knowledge. Pp. 322. (London, Longman and Co.)—With all the information necessary to promote the formation of Mechanics' Institutions, and lead to the improvement of those already in existence. Those interested in the subject will find much matter for reflection in this volume.

The Elements of Algebra, by the Rev. Philip Edmund. M.A. &c. 8vo. pp. 400. (Edinburgh, Black; London, Longman and Co.)—The mathematical professor in the University of Edinburgh has done credit to himself and his school by this publication; which is as plain and straightforward a guide as we have seen, from simple arithmetical to high analytical reasoning.

ARTS AND SCIENCES.

LAW OF STORMS.

Hurricane at Bermuda.

THE Bermuda Gazette of the 17th and 24th September last contain accounts of the destructive effects of a furious hurricane, which visited the Bermudas on the night of Wednesday and morning of Thursday the 11th and 12th September. Every house in Hamilton, on Ireland Island, at St. George's, and other parts of the islands, was more or less injured, and the loss of property sustained by private individuals alone has been estimated at nearly eighty thousand pounds sterling. Provisionally no less of life occurred. Great exertions were making to relieve the distress of the sufferers; Colonel Reid, the governor, heading the subscriptions with the munificent sum of one hundred pounds from his private purse. For the details of the devastations, and the exertions of the charitable, we refer our readers to the Bermuda Royal Gazette, and to the London daily journals, in which such particulars have appeared; our object in the present article being to select such portions of the accounts only as tend to

develop the "law of storms," and further to illustrate the wonderful phenomena of atmospheric convulsions,—those merciful, although awful, dispensations of Providence by which the equilibrium of the atmosphere is restored, the oppressive heats of those climates dissipated, and nature renewed. Since the meeting of the British Association at Newcastle, where Colonel Reid, the present governor of the Bermudas, first explained his views, and afforded the data collected by him with unwearied labour and skill, and afterwards published by him in his work entitled "An Attempt to Develop the Law of Storms," great and general interest has been directed to this subject. And therefore have we undertaken our present pleasing task. First, then, the "Bermuda Gazette" thus describes the general appearances, character, and accompaniments, of the dreadful gale:—

"In the early part of Wednesday, and, in fact, for several days before, the appearances of the heavens indicated, in the opinion of many, that some great change was about to take place in the weather: on the Sunday previous, the sea on the south side of the island was in a most agitated state, and the roaring and bursting of the waves against the reefs and on the beaches were heard for miles distant. On the evening of that day a very singular luminous appearance, resembling somewhat the pale light of the aurora borealis, was observable for one or two hours in an E.S.E. direction: it seemed to emerge from a common centre, spread itself to a width of about 10°, and rise to an altitude of about 15°. On the south and north sides of this singular light the clouds were of a purple colour; whilst, at the same time, those further to the south emitted frequent and vivid flashes of lightning. On Monday, the sky was mostly clear, but the stars were lustreless, and looked hazy. On Wednesday morning, the wind, which had on the previous day been at N.E., changed more to the E. At about noon, it was intimated throughout Hamilton that a sudden fall had taken place in the barometer, and from that time till near seven o'clock, when the gale commenced, it was at frequent intervals made known that the barometer was still falling. Notwithstanding these indications by that most valuable instrument, and the threatening appearances of the heavens, which too truly indicated some violent disruption in the atmosphere, a gale was not seriously anticipated; or, rather, the hope was with cupidly indulged in, that the long-continued and distressing drought, with a more than usually hot and oppressive summer, was to give place to copious showers of rain and strong refreshing breezes. True it is that we did have rain and wind,—the former in torrents, and the latter with such violence, that there is scarcely a spot of one hundred feet square throughout the islands, on which there was an erection of any description, or where a tree grew, that does not exhibit marks of its devastating influence. At about seven o'clock on the evening of Wednesday, as we before said, the gale commenced. Dense clouds, which had been gathering, burst suddenly into a violent storm of wind, rain, and lightning. This lasted till about nine, when the weather moderated a little, and the sky became partially clear. The wind then seemed to be to the southward of east, but subsequently, as we understand, backed. Soon after ten the wind increased, and continued with more or less force till about three o'clock on the following morning, when it shifted from E.S.E. to S., and on to S.W., and blew with, if possible, greater fury than it had done during

the night, till near seven, when it again moderated slightly for about two hours. The gale was then renewed, and raged for a considerable period with much vehemence: but it seemed as if the spirit of the tempest had, in this last effort, exhausted its strength, for in a short time the wind began to subside, and at noon, having veered to the westward, it settled down into moderate breezes."

From the weekly reports of the weather we extract at some length, in order to shew more particularly the condition of that valuable instrument and unerring guide, the barometer,—that work which Science has achieved to warn man against impending evils. In many cases previously to this hurricane, where it was consulted, precautions were prudently and successfully adopted. Another reason, also, why our extract embraces the periods prior and subsequent to the storm, is to point out the state of the weather, notwithstanding the fineness of which, heavy seas were breaking on the island. The numbers used to denote the wind's force, and symbols to express the state of the weather, are those now in use in the royal navy. The report is from the centre signal station at Bermuda: height above the sea being one hundred and thirty-four feet.

Date	Hours	Direction of Wind.	Wind's force.	Weather.	Barometer.	Thermometer.	General Remarks.

The "Bermuda Gazette," of the 24th Sep-

tember, says, "Several gentlemen of the colony, having interested themselves in procuring for the governor extracts from the log-books of vessels which have arrived here since the late violent storm, his excellency has forwarded these extracts to us, and expressed a wish that we should give them publicity, in the hope that by continuing the inquiry the nature of the Bermuda hurricanes and their courses may be better understood. By these extracts, it appears that the centre of the late storm passed over the brig Vincennes, in lat. 28° 35', long. 63° 30', at midnight, between the 10th and 11th September; whilst the Ketch Lottery was becalmed, although experiencing a heavy swell, at the same period of time, eight degrees to the westward of the Vincennes. No doubt the heavy swell felt by the Lottery, and that which broke with so much grandeur on the south side of Bermuda, originated in one and the same cause."

"The schooner Damsel, coming from the westward, met the wind in this storm northerly. Whilst the schooner Governor Reid, coming from the eastward, met the wind in the same storm southerly. The account given by the master of the Scott shows that it also passed over lat. 25°, long. 60°. There seems cause to hope that this tempest originated eastward of the West Indies, and that it may not have affected any of them."

"Extract from the Log-book of the Brig Vincennes, Captain Humphreys; with additional Narrative from Recollection.—Tuesday, 10th Sept.—Lat. 28° 35', long. 63° 30', about midnight of the 9th and 10th of civil time, the gale commenced from about E., and continued to blow from that point till about six o'clock of the morning of Tuesday, when it began to back to the N.E., and increasing in violence, with constant rain. At ten, forenoon, had our sails all secured, and hove-to under three-reefed mainsail on the larboard tack. At noon, the wind inclined more to the northward, say to the N.N.E. continuing to increase. About four o'clock in the afternoon, balance-reefed the mainsail in consequence of the increase of gale. [Beginning.] At six, or sundown, no alteration; between eleven and twelve at night we had, for about half an hour, a violent gust, which nearly threw the brig on her beam-ends; soon after, it lulled for about half an hour; during this time the wind began to back to the westward of north."

"Wednesday, 11th.—About one o'clock the wind (S.W.) set in with increased fury. At two, the wind about south. At this time, a violent gust threw the vessel on her beam-ends, where she lay till near three o'clock, when to right her the topmasts were cut away. The wind continued on this point without abatement till about eight o'clock in the morning, when it began to moderate, but without shift; at noon it continued to rain and blow strong from the south. At six afternoon, or sundown, the wind becoming more moderate at south, but continuing to rain. At midnight it cleared up."

"Extract of Log kept on board Ketch Lottery, from the 9th to the 14th September, from Kingston, Jamaica.—Sept. 10, at noon, commencing with light winds and clear weather; at three P.M. tacked ship to S. and eastward, ending with calm, and heavy swell heaving from N.E.; lat. 27° 1' N., long. 71° 52' W. 11th, at noon, commencing with light airs from N. and eastward; at six P.M. increasing breeze, clear weather, all sail set at advantage. Lat. by observation, 29° 43' N., long. 70° 41' W. 12th, at noon, first part steady breezes from N. and westward, all sail set."

"Extract from the Log-book of the Schooner *Daniel*, converted into Civil Time, from Baltimore bound to Bermuda.

Hours.	Wind.	Remarks.
		Left the Capes on the 6th September, and had the wind S.S.W. until the 10th, 11th September, noon, lat. 33° 31' N., long. 67° W. P.M. commenced with light breezes from the eastward.

"Extract from the Log-book of the Schooner *Governor Reid*, J. W. Musson, Commander.—Sept. 3.—Having observed twice in Bermuda the aurora borealis, and each time followed by very strong winds, causes me to apprehend now much more stormy weather than I should do in winter. At half past seven o'clock, civil day, it became visible, extending to an altitude of about 36° from E.N.E. to N.W., producing a brilliant light, which lasted till eleven o'clock P.M. 4th, light wind, all sail set. 5th, light wind; sympleometer 30° 1-4. 6th, calm, caught several small fish; took a swim. 7th, cloudy, passing squalls. 8th, moderate breeze, but cloudy. 9th, fine breeze, cloudy, with passing showers: the wind S.E., the sympleometer 30°. 10th, Strong gale, sympleometer falling; a very heavy swell. The weather looking dismal, with every appearance of an approaching storm; at four o'clock P.M., sympleometer having fallen to 28° S-4, deemed it advisable and prudent to leave her to. At five P.M. a tremendous sea struck us on the weather bow, striking also the second mate with great force, seriously disarranging his apparel, and not a little discomposed the gravity of his muscles; ordered the maintop-mast to be hoisted, and the fore yard sent on deck. The ship being under two-reef foresail, stemmed the sea within four points of the wind, falling to S.S.W. At twelve o'clock, midnight, sympleometer 29° 1-2, wind S.S.E., cloudy, with a little rain, stars occasionally visible, a terrific swell; but the little bark rode majestically these awful seas; one no sooner touched her sides and broke, than a new follower rose, and swelled as proudly; watched closely, without fear of trembling, the sympleometer being lower, too, than I had ever seen it; at three A.M. it rose a little. I do not think she could have escaped, had it fallen to 20°. At three A.M. the wind blew from the south, with little, if any, diminution of force. At nine A.M., wind S.S.W., the sea being too much on our beam, veered ship; headed about S.E. by S., bringing her head more to the sea; lat. 31° 46', long. 62° by chronometer, but the heavy sea that was running prevented my obtaining a good sight; Bermuda being about one hundred and fifty-five miles distant. At twelve, on Thursday, the clouds passed less rapidly, but the sympleometer varied little until six P.M., when it rose suddenly to 30°. I then had the fore-yard sent up, together with the top-mast, and made all sail for 'L'Isle du Diable,' which I made at six A.M. on Sunday morning, bearing N. by E. about eight miles. A strong current had been running to the south; lat. by polar star, on the evening of the 14th, put me fifteen miles south of dead reckoning: had a light-house been on any part of the southern shore, I must have seen the light. At nine o'clock, the time I wrote to, I put her under easy canvass, and stood to the S.E. till

two A.M., then tacked ship and stood to the N., and but for a very good look-out, would have passed the land, which we must have been within four miles of the night before. A country under the government of Great Britain, which encourages civilization and improvement, should not allow islands like these to remain without a beacon to save the anxious and wearied mariner!"

From a careful and attentive perusal of the foregoing, and on reference to the diagram in Colonel Reid's work, explanatory of the general progress of these storms, it will be seen that this hurricane has been fully conformable to the law of storms. We subjoin the particulars of the appearances of a water-spout, and of the aurora borealis as seen at Bermuda. The gyrations of the former are equally interesting with the rapid rotations of the wind in the storm and in the hurricane, and probably reducible to the same law.

"A water-spout formed under the signal station on the 15th August, and was observed by several persons with the aid of spy-glasses; all agreed that the water at the surface of the sea was carried round in the same direction as the hands of a watch move. This water-spout was north of the signal station, and the spray was distinctly seen to fly from the right hand towards the left, whilst from the height of the station over the sea, a portion of the upper part of the spray raised was observed to return from the left hand to the right, completing the whirl. On the night of Tuesday, the 3d September, 1838, there was a fine display of the aurora borealis for upwards of three hours. A fine, strong, white light extended, during the whole of the time, from N.E. to N.W., filling up the whole of that quarter of the heavens to a considerable altitude; from thence arose numerous shifting streams extending towards the zenith, at times considerably above the polar star, or to an altitude of full 40°: these were first of a bright white light, stronger than the fixed light whence they arose, and changing frequently to a lurid red tint, like the reflection in the sky of a distant and extensive fire. The streams were most numerous, and higher up in the sky about ten P.M., and soon after the whole gradually subsided, and quite disappeared before eleven. A calm, or very light air from the west, prevailed during the whole time; sky mostly clear, excepting a few small cumulus clouds, and near the northern horizon some light cymoid clouds."

LINNEAN SOCIETY.

MR. FORSTER in the chair.—There were exhibited flowering specimens of a series of varieties of the *Chrysanthemum Sinense*, from the chairman's garden at Lambeth. Read, 'A Monograph of the Genus *Disporum*,' by Professor Don, Libr. L.S. To Mr. Brown is due the merit of having first pointed out the chief character of this genus, namely, its binary ovula; which, doubtless, suggested to Salisbury the name of *Disporum*, subsequently given to it by that botanist. There are eight species, all natives of Asia, described by Mr. Don, which have been incorrectly referred by most botanists to the American genus *Uvularia*. Appended to the paper is the description of a new and nearly related genus, which is founded upon a plant introduced into the Royal Botanic Gardens at Kew, from New Holland, by that eminent traveller and botanist, Mr. Allan Cunningham. This plant Mr. Don has named *Tripladenia Cunninghamii*; it is remarkable for possessing singular fringed appendages to the petals, resembling those of the

well-known *Parnassia*. Amongst the donations was a copy of Mr. Stephen's valuable manual of the British Coleoptera, or Beetles.

STATISTICAL SOCIETY.

MR. HEYWOOD in the chair. First meeting of the season.—The paper read was 'On the Present State of Education in Belgium,' by Mr. Rawson. The writer draws his information chiefly from a recent pamphlet on the subject, by M. Dupétiex, of Brussels. His object is to show the necessity there is for the important subject of education being under the inspection of the government of a country. After a few general remarks, he notices in detail the various primary schools in Belgium, their size, number of scholars, teachers, &c. The number of scholars in these schools in Belgium is as follows:—

In Brabant	62,306 or 1 scholar in	9-6 inhabitants
Antwerp	35,371	10
E. Flanders	60,667	12-7
W. Flanders	47,063	13
Liege	36,807	16
Limburg	33,389	10-4
Namur	33,567	7
Hainault	66,425	96
Luxembourg	48,733	7-6
Total	429,498	10

After some other details, which we necessarily must pass over, the author goes on to show that the abolition of the Dutch code, and the introduction of the principle of non-interference in the education of the people, have retarded instead of advanced popular instruction. The experiment has been tried for nine years, as facts which cannot be disputed sufficiently attest its signal failure. Of this the Belgians are themselves convinced, and the provincial deputations in their reports do not attempt to conceal the fact; on the contrary, they all loudly for the interference of government, as for the introduction of a law to regulate public instruction, as they formerly existed in the overthrow of the Dutch code. They have tried both systems, interference and non-interference, and now declare in favour of the former. It is well known that the draft of a law has long been under the consideration of the Belgian government, and the declaration of the provincial deputations will probably hasten its introduction. Many of the evils which we deplore as the fruit of non-interference exist in this country (England), sprung from the same causes, and producing the same effects. We are in a state very much resembling Belgium as regards popular instruction; we have always had liberty of teaching, and freedom from inspection, but it has not raised us much above the level of that country, and our eyes are now opening to a knowledge of our destitution. The example of Belgium may perhaps be useful to us; the Belgians who have had experience of the system which we dread beg that it may be restored to them, and the freedom which we are unwilling to relinquish, they have found productive of evil in almost all its consequences. We may learn at least from it that non-interference in matters of education may be an evil, and has proved an evil to Belgium; a few years' patience, and a return to the common system, which will probably soon take place in that country, will enable us to examine more closely its effects, and to appreciate with certainty its value.

ELECTRICAL SOCIETY.

TUESDAY, NOV. 19.—Read, the conclusion of Mr. Griffin's paper 'On the Question. What do electrified bodies recede from each other?' Constant reference, throughout, was made to diagrams, without which, and greater space

than we can afford, no adequate idea of Mr. Griffin's theory of electrical recession could be formed.—Read, also, an 'Account of some Experiments made for the purpose of passing a Voltaic Current across the Thames,' by Mr. C. Walker. The object was, if possible, to pass the electricity from a voltaic battery across the river, the water forming part of the circuit. In this, however, the experiments failed, although preparatory operations were successful; the description of which was submitted to the Society in the hope that the cause of failure may be pointed out.—Read, also, a paper by Mr. Pollock, to prove 'The Current in the Secondary Wire, the Result of the Disturbance of the Equilibrium of its Latent Heat.' The subject was treated under the following heads:—1st. Primary current generates the secondary current; not directly, but indirectly. 2d. Secondary current and thermoelectric current, identical with latent heat. 3d. Opposite direction of the secondary current, the legitimate result of the disturbance of the latent heat in the secondary wire. 4th. Change of capacity in the secondary wire, the immediate cause of the secondary current. 5th. Secondary current transient, not permanent. 6th. Equilibrium of the latent heat in the secondary wire restored on breaking contact in the primary wire. 7th. Secondary spark, the effect of the return of the latent heat in the secondary wire to a state of equilibrium. Mr. Pollock indefatigably works out every phenomenon of the battery and the electrical machine to illustrate his views in regard to the identity of latent heat and electricity. The inferences he draws from the present investigation are,—that the action of the battery upon the secondary wire is dependent upon its power of imparting its latent heat to it; not abstracting from it,—that the properties of the secondary wire are dependent upon its containing latent heat in excess, similarly with the electrical machine,—that the secondary wire possesses the property of the striking distance, owing to its containing latent heat in excess,—that the secondary current is constituted of the latent heat of the secondary wire in motion,—and that the latent heat of the primary wire produces expansion of the secondary: if it should not produce expansion, but be absorbed, it tends to weaken the secondary current.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

OXFORD, 14th November.—The following degrees were conferred:—

Masters of Arts.—Rev. F. J. H. Reeves, Merton College; C. M. Collins, Exeter College; Rev. C. E. Harwood, Oriel College; Rev. J. S. Finch, Brasenose College; Rev. G. W. B. Wills, Wadham College; Rev. H. N. Maddock; Rev. W. W. Rowley, Queen's College; Rev. C. Burney, late Demy of Magdalen College; Rev. J. Rump, Trinity College; Rev. J. C. Harris, Worcester College; H. Holden, Balliol College.

Bachelors of Arts.—R. Champenove, Christ Church; J. H. Waugh; W. Gill, Magdalen Hall; E. Peel, Brasenose College, Grand Compounders; J. L. Roberts, J. White, New Inn Hall; E. Trollope, R. Tomlins, St. Mary Hall; C. Goodden, Exeter College; G. Sandbach, J. Gordon, E. C. Holt, Brasenose College; W. Lempiere, Christ Church; H. A. S. Bence, J. A. Hamilton, P. L. Powys, Balliol College; J. H. Spry, D. P. Thomas, Jesus College; R. Mance, Trinity College; R. T. Kent, Wadham College; R. W. Mayow, A. G. Newbold, P. Green, T. W. West, Magdalen Hall; W. J. Wise, Fellow of St. John's College; R. A. Bathurst, C. Bedford, Fellows of New College; H. Sweeting, C. D. Kebbel, J. A. Yates, University College.

CAMBRIDGE, 13th November.—The following degrees were conferred:—

Doctor in Divinity.—The Rev. B. Chapman, Master of Corpus College, by royal mandate.

Bachelor in Divinity.—Rev. J. Chapman, Fellow of St. John's College, by royal mandate.

Honorary Master of Arts.—Sir C. W. C. De Crespigny, Trinity College.

Masters of Arts.—R. Wood, H. Clarke, Caius College. *Bachelors of Arts*.—J. B. Marriott, Corpus Christi College; G. Neville, A. Woodward, Catherine Hall; J. Limbrey, St. John's College; C. G. Taylor, Emmanuel College.

ROYAL SOCIETY.

BEFORE the breaking up of the Meetings of the Royal Society in June last, the dispute between that scientific body and Mr. Panizzi, upon the subject of remuneration for making the catalogue of their library (which became the subject of more than one pamphlet), was referred to an arbitrator agreed upon by both parties. The award has been just made; it declares 328*l.* to be *justly due to Mr. Panizzi*. Mr. Panizzi's claim, when the catalogue was taken out of his hands, was for three hundred guineas. The first meeting of the season was held on Thursday evening, the Marquess of Northampton in the chair.—Dr. Roget read the abstracts of ten papers communicated at the last meeting of the last session: the reading of these, the announcement of a long list of presents made to the Society during the adjournment, and other routine business, occupied the whole of the sitting. No new paper was read.

ROYAL SOCIETY OF LITERATURE.

WE are this week enabled to present our readers with the following more complete and circumstantial report of the first meeting of the Society for the season, which was briefly noticed in our last Number.—A long list of presents was announced, including the Transactions of several learned Continental societies. The names of many candidates for election were proposed. The Secretary read a part of an elaborate memoir, by Mr. Callimore, 'On the Principles and Relations of the Monumental and Historical Successions of the Pharaohs, in the times preceding the Eighteenth Dynasty.' The part read comprised the numerical relations—a comparison of the hieroglyphic lists of succession—viz. sixty-two shields in the tablet of Thothmes III. at Karnak; twenty-six in the fragment of the tablet of Ramses II. from Abydos; and four in the list of Ramses III. at Medinet-Abou; in all ninety-two shields, augmented by Rosellini to one hundred and seventeen, by placing uncatalogued shields before the tablet of Karnak, and by separating that record from the list of Abydos, and interposing other uncatalogued shields between them.—The Secretary likewise read a paper 'On the Ancient Festival of St. Valentine's Day,' by the Baron Hammer Purgstall. The origin of this celebration has excited much attention, but hitherto without any satisfactory result; it is to be looked for neither in the calendar of the Ramesh church nor in the Roman festival of the goddess Februa, but in the oldest of existing calendars, the festivals of which have passed successively into the Roman and Christian ones. Among the ancient Persians the month of February bore a name corresponding to that which is bore in the Roman calendar (from *februare*, because it was the period of purification and instigation). It was the intercalary month; and the intercalary days were called by the Persians *Forodian* or *Poordin*, which is the same with the Hebrew *Purim* or *Poorim* (as is the Persian plural, and *im* is the Hebrew). A second festival of the month of February is Candlemas, answering to the ancient Persian festival *Sade*. These festivals were celebrated, the former at the end, and the latter at the beginning, of February. The 14th, St. Valentine's day (on which day, according to the popular custom still prevalent in England, young persons choose their partners), is dedicated in the Indian calendar to *Ganesha*, the

god of matrimony. In agreement with the rural tradition in this country, that birds select their mates on this day, there exists the following ancient calendar tradition of the Arabs and Persians. In the month of February three drops fall from heaven—the first on the 7th, the second on the 14th, and the third on the 21st day, the effect of which is to reanimate nature at the return of spring. The first drop evaporates in the air; the second falls on the water; the third mingles with the earth;—the first awakening the generative power in the atmospheric regions; the second in the animal, and the third in the vegetable, kingdoms. This tradition is exactly noted down in the Persian and Arabic calendars, and is recorded in the almanack annually printed at Constantinople. The festival of Valentine, therefore, agrees with the most ancient festivals of the Indians, Persians, and Arabs, celebrated on the same day, consecrated to the god of matrimony, to the rise of generative power, and perhaps also to Valentia, the goddess of strength and vigour. With regard to the custom of writing love-letters on this day in particular, the Baron Hammer Purgstall, in the absence of all previous information on this point, makes the following suggestions:—This custom is, most likely, the remains of a very ancient usage, which the Persians practiced, not on the 14th of February, but nine days later, on the 23d. On this day (which answers to the 5th *Sapendomad*), Feridoun is reported to have written the first talisman against impure beasts and noxious animals; and ever since, spells and talismans were written in Persia on this day,—a practice which appears to be perpetuated in England by the spell and talismanic virtue of amatory epistles.

SOCIETY OF ANTIQUARIES.

ON Thursday this Society commenced their sittings for the season, Mr. Hallam in the chair.—A very long list of presents was announced. A paper was read from Mr. Godwin, jun. 'On the Ancient Buildings of Lower Normandy,' many of which were described as sinking fast into decay, though some are being properly restored. It was illustrated by two sketches from the Cathedral of Bayeux, where, Mr. Godwin incidentally mentioned, the famed tapestry remains in good preservation.—Mr. Kemble communicated 'An Essay on the Runes of the Anglo-Saxons,' which being partly read, the remainder was postponed.

ROYAL ASIATIC SOCIETY.

NOVEMBER 16. The Right Hon. Sir Alexander Johnston, Vice-President, in the chair.—The Honorary Secretary read a letter from the governor of Ceylon, accompanying a donation of ancient Hindu coins found on that island. A paper was then read by General Briggs, 'On the Cotton Trade of India.' One of the principal objects of this paper was to show that the people of Hindustan are as capable of furnishing Europe with cotton as the inhabitants of the United States of North America; and that, under proper arrangements, both the quantity and quality of their produce would fully suffice for all the requirements of our manufacturers, without the necessity of our relying on the slave-labour cotton of America. The paper began with a calculation of the quantity of cotton actually used in dress by the natives of India. Specimens of the several articles of costume were exhibited; and it was shown, that the dress of the male Hindu contained 24½ square yards, and that of the female about 8½ yards, which, allowing that they were

renewed, on an average, at least once a-year, the consumption would amount, among the whole population, to 375,000,000 lbs.; and it might be fairly inferred, from the various other domestic uses to which cotton was applied in India, that as much again was so employed, making a total annual consumption, by the natives themselves, of 750,000,000 lbs. The quantity imported into England is from four to five hundred millions of pounds annually, and this is chiefly raised by slave-labour in America, not more than one-tenth coming from India. The question naturally arises, Why should this be? The causes of the deficiency of the supply from India, General Briggs stated, were closely connected with the administration of the country. He should not further allude to them in that place, but would proceed to demonstrate his position, that India might supply cotton sufficient for the manufacturers of England, and, if necessary, for the whole world. It is not possible, in our limited space, to follow the details presented to the meeting; but the result of a great number of statements and reports from the best sources shewed very evidently, that scarcely any portion of the surface of India was unfit for the growth of some kind of cotton. The great table-land of the Dekhan, the soil of which is formed of the *débris* of trap mountains, is the cotton soil *par excellence*, and is perfectly suited to the *gossypium herbaceum*, the indigenous cotton of India. This soil lies upon lime-stone. It is rich in vegetable matter, and is retentive of humidity; but in hot, dry weather, it cracks into large fissures. It is at that season hard and clayey, and brittle like coal. This clayey soil, so fit for the indigenous plant, is unsuited to that of America, which grows best in a light, dry, siliceous soil; and as most former attempts to introduce the American cotton into India have been made upon the rich trap soil of the country, they had necessarily failed. But the soil best adapted to American seed is also found in India, near the coasts, where the aboriginal plant does not succeed. This was proved at the various experimental farms established by the East India Company; and on which the American plant was growing to perfection. In order to point out the differences which existed between the various sorts of cotton in use, a diagram was exhibited, shewing the comparative lengths of the fibres of different kinds. An excellent microscope was placed on the table by Mr. E. Wilson, for the examination of the shape and structure of the fibre. In many specimens of cotton the fibre had a flat, tape-like appearance; while in others it looked like a string of oval beads, pointed at each extremity. Some kinds were more cylindrical than others; and the Surat and Sea-island cotton is thinnest and narrowest; the Tavoy and New Orleans, flattest and thinnest. In length of staple, the American surpassed the East Indian; but the latter was the finest. Some idea of the extreme minuteness of the fibres of cotton might be formed from the fact that it required thirty-five fibres to make the smallest thread spun at Manchester—three hundred and fifty hanks of which weighed only a pound, and would measure one hundred and sixty-five miles in length. But it had been shewn that the natives of India could spin thread with the hand—four of which would be required to make up the bulk of one made by machinery at Manchester.—Mr. E. Solly read a short report on some sugar, manufactured at Dindoree under the superintendence of Dr. Gibson, from the juice of the Mauritius or Otahete sugar-cane. Mr.

Solly stated, that ever since the year 1792, when, from the limited supply and high price of West India sugar, the attention of the East India Company was drawn to the importation of East India sugar, numerous attempts had been made to improve the cultivation and manufacture of East India sugar, so as to bring it into competition with the West India. Notwithstanding this, its quality remained very inferior; and till latterly, it was believed that India could not supply good sugar: lately, however, sugar has been brought over from India of a very superior quality, similar in kind to some of the better sorts of West Indian. Mr. Solly exhibited the sugar manufactured by Dr. Gibson, and read a report on it from Mr. Travers, the eminent wholesale grocer, who described it as being of superior quality, good grain, desirable complexion, and likely to find a ready market in this country. Mr. Solly stated that he had analysed a portion of it, and found it to contain a very fair per-centage of crystallisable sugar; but that its colour was difficult of separation: this, though objectionable for its uses by the refiner, would not interfere in its ordinary uses.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Geographical, 8 P.M.; Medical, 8 P.M.
Tuesday.—Medical and Chirurgical, 8½ P.M.; Zoological, 8½ P.M.
Wednesday.—Society of Arts, 7½ P.M.; Medico-Botanical, 8 P.M.
Thursday.—Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.; Numismatic, 7 P.M.
Friday.—Botanical, (Anniversary), 8 P.M.
Saturday.—Royal (Anniversary), 8 P.M.; Westminster Medical, 8 P.M.; Guy's Hospital Physical Society, 8 P.M.

FINE ARTS.

BRITISH INSTITUTION.

Studies from the Old Masters.

THE labours of the artists in this branch of study closed on Saturday the 16th; and the examples were inspected by the governors and subscribers to the Institution on Wednesday the 20th. Whatever may be thought of these copies individually, we look rather to the results of the practice in our future exhibitions, where originality of design may be found united with the adopted style of the favourite master. From the paintings left by the kindness of their noble and liberal possessors, there are a few tolerably fair specimens; and first, and far the best, is after the picture of Bassano (in the possession of Samuel Rogers, Esq.), by Le Jeune; another clever study from the same is by H. Clifford. Numerous are the copies after the Titians (in the collection of Lord Francis Egerton, M.P.); among them those by H. Riviere, S. Drummond, A.R.A., C. Brocky, and Miss M. Drummond, display considerable talent. There is a clever copy after Le Nain (in the possession of Sir Robert Price, Bart. M.P.), by Elizabeth Setchel. From the picture of a Spanish Nobleman, by Vandyke (in the collection of W. R. Cartwright, M.P.), are also some able copies by Charlotte Sharp, J. Rhodes, T. Clater, jun., Elizabeth Cole, and J. C. Hook. A Jew Rabbi, Rembrandt (in the collection of G. Wilbraham, Esq. M.P.), has been copied by H. Johnston, J. Newton, and J. Fennel. A portion of Pythagoras Addressing his Pupils, Rubens (collection of Dr. Stockoe), has been very judiciously taken, in separate studies, by E. Hulme, Mrs. Riddle, Miss L. Corboux, &c.

SACRED PICTURES.

It is impossible not to admire the heroic self-devotion which induces an artist in the present day, undeterred by the fate of his immediate predecessors and his contemporaries, to

continue to walk in the highest paths of his profession. It is impossible not to wish him success, however strongly one may feel the improbability on various grounds that that wish will ever be realised. Such were our reflections on viewing a small collection of pictures now exhibited at No. 34 Gerrard Street, Soho. They are eight in number, four of them compositions, with figures the size of life; and the subjects are taken from the most striking incidents in the New Testament. The painter has evidently made Correggio his model; and, in point of colouring and execution, has benefited greatly from his study of the works of that mighty master. We strongly recommend the encouragers of the arts, and more especially those who are disposed to foster the efforts of talents struggling against difficulties, to call and see this collection.

THE WESLEYAN CENTENARY PICTURE.

THIS exceedingly clever and interesting picture has been produced by Mr. H. P. Parker, of Newcastle-upon-Tyne, in commemoration of the centenary of Wesleyan Methodism; and, having been extensively shewn in the country, is now going through a course of gratuitous exhibition at the various vestries of the Wesleyan chapels in the London district. We had the pleasure of seeing it the other day at the vestry of Spitalfield's Chapel.

When the pious, excellent, and celebrated John Wesley was only six years of age, he was rescued, under circumstances of extreme peril, from a fire which, in the middle of a winter's night, burnt down the house of his father, the rector of Epworth. Being once saved, in after-life, if there was any particular event in his personal history which he would wish to have recorded more than any other, he paused, and then said, "Yes, I was saved from being burnt to death when a child, and was indeed 'a brand plucked from the fire.'" "On this hint" Mr. Parker has "painted;" and a better choice of subject could not have been made. We can with justice add, that the felicity of the execution of the picture equals that of the conception. It has frequently been our pleasing duty to speak in terms of high commendation of Mr. Parker's powers as an artist. The work under our notice is, however, unquestionably his masterpiece. It represents the moment when, all the rest of the inmates having escaped, and "Little Jackey," as he was called, having shewn himself at the window of the chamber, from which the destruction of the staircase prevents his interior descent, a kind of human ladder is formed by means of a stout fellow, who, fixing himself firmly against the wall, rears on his shoulders a man of lighter weight, who stretches forth his arms, into which the boy is about to leap. On the opposite side Mrs. Wesley and her other children, half-clad, are hastily proceeding to take shelter in a neighbouring cottage; while Mr. Wesley is on his knees, fervently returning thanks to Providence for the preservation of his family. In the background persons are seen liberating cows from their shippin, a horse from its stable, and a mastiff from its kennel. A principal feature of the distance is the parish-church of Epworth, faintly illuminated by the moon. Mr. Parker has managed the details with his usual breadth and spirit; the general effect is admirable; and we have no doubt that Mr. Reynolds, in whose hands the picture is eventually to be placed, will produce a print that will be eagerly sought for, not only by members of the Wesleyan persuasion, but by all lovers of the fine arts.

NEW PUBLICATIONS.

The Picture: a Noesgay for Amateurs, Painters, Picture-Dealers, Picture-Cleaners, Liners, Repairers, and all the Craft. By C. H. 8vo. pp. 78. London, 1837. Hatchard and Son.

It appears from the above date, that this clever little *jeu d'esprit* has been published two years; but it was only by accident that we the other day met with it. We have read it with great pleasure. It is the "Autobiography of a Holy Family, by Raphael," tracing the history of the picture from its origin to its present alleged position in the gallery of an English nobleman; and relating the various transformations and other adventures which it has undergone in its career. Although the treatise is but a sketch, it is a spirited one, and contains matter which in our opinion "C. H.," who seems well-informed on such subjects, would do wisely more fully to develop; for, as he observes,—"many have affirmed that the acmé of cunning is to be met with in the practised horse-dealer; let them become purchasers of pictures!" We were much amused with the following anecdote:—

"A rich amateur from beyond the sea had heard of a Wouvermans, of the highest quality, in the possession of my owner. By description, the composition was so familiar to him, that there appeared no chance of mistake; besides, he had the print actually engraved from the very subject. Still he added the precaution of bringing with him a connoisseur who could not be deceived; and so fortified, came by appointment to inspect the picture. The proprietor had an accurate copy, that had been made two or three years before, over the face of which he strained the original canvass, and replaced it in its frame. In this state of things the strangers arrived, and passed a long examination of the picture. Seeing but one, it was finally approved, and purchased at no inconsiderable price. At the suggestion of my owner, the purchaser then placed his seal at the back of the canvass as a security against fraud; and it was packed and shipped for its destination, after the true one had been carefully removed! Though the picture does not obtain credit for originality universally, yet it certainly still exhibits the seal at the back,—an unquestionable evidence with some."

BIOGRAPHY.

JOHN LANDER.

We have this week to record the death of this most amiable and estimable individual. He died at his residence in Wyndham Street, Bryanstone Square, on Saturday the 16th; and died as became a good man and a sincere Christian. Three hours before he breathed his last, he called his affectionate wife and three infant children (from two to nearly six years old) to his bedside, and poured into their ears his latest words of consolation and counsel. Taking a single glass of wine, which they partook with him, he committed them fervently to the keeping of the Almighty, and expressed his hope that they would meet again in another and a better world. He then met his fate with the utmost composure. John Lander was born on the 31st of December, 1806; and during his early years was very partial to reading and such studies as were accessible to him. He began soon to write on different subjects, and shewed a poet's devotion for the beauties of nature with which his native county, Cornwall, abounds. Some of his later productions, of high merit, have appeared in the *Literary Gazette*. On the return of his brother Richard after the

death of Captain Clapperton, he entered with enthusiasm into the cause of African discovery, and when it was determined to send out the second expedition to explore the Niger, he joyfully agreed to accompany him on his perilous undertaking. At this time his constitution was strong and robust, and gave promise of a long and healthful life. They sailed from England in the *Alert*, on the 9th of January, 1830, and our readers are aware of the important services they rendered to African geography, and to their country, by opening and pointing the way to extended traffic and rich resources. They returned on the 9th of June, 1831, and the narrative of their voyage, published by Mr. Murray (who with noble liberality presented Richard Lander 1000*l.* for his MS.), is one of the most interesting books of travels in the English language. Of Mr. Murray, neither of the brothers ever spoke but in terms of the most grateful attachment; and John, at one of the Literary Fund anniversaries, publicly expressed their sense of obligation to him. Lord Ripon, then at the head of the Colonial Office, gave Richard an appointment in the Custom-House, which, when he resolved on another expedition, was, at his intercession, transferred to his brother, and held by him till his death. In the discharge of its duties he was most zealous, exemplary, and efficient. But soon after his return he began to complain much of an affection of the chest, brought on by repeated colds during his exposure to the night airs in the fatal climate of Africa. He married his now unhappy widow in July 1832; and two girls and a boy are left with her to deplore their irreparable loss. Richard, it will be recollected, sailed again with Mr. Laird, Captain Allen, and others, on a commercial expedition in 1832, and perished in the prosecution of the design; and, if we are not misinformed, another effort is on the eve of being made to follow out the discoveries of the two Landers' voyage. If so, and national advantages are reaped from it, as appears most probable they will be, from Beacroft's excursions up the Quorra, we need not observe how strong a claim it affords them and theirs to the sympathy and succour of their country.* Upon the widow of Richard Lander, and his only daughter, a small annuity has, indeed, been settled from the privy purse—an act honourable to her majesty and her advisers. A person of finer disposition than John Lander we never knew. He possessed talents of a superior order; and in not one of

* A statement, by Alexander Fisher, of the Atholl, which was inserted in our Gazette at the time, will remind the public how much they accomplished:—

"His Majesty's Ship *Atholl*, at Sea,
"Bight of Biafra, Feb. 2, 1831.

"Dear Sir,—I take the opportunity of writing you a few lines by a vessel that we have just now met on her way to England. My object in writing in this hasty manner is to acquaint you that the grand geographical problem respecting the termination of the Niger is at length solved. The Landers, after having reached Youri, embarked in a canoe on the Niger, or, as it is called there, the Quorra, and came down the stream until they reached the sea, in the Bight of Biafra. The branch by which they came to the coast is called the Nun, or Brasse River, being the first river to the eastward of Cape Formosa. On their way down the river they were attacked by the Hibboos (a fierce nation that inhabit its banks), and made prisoners, or rather captives; but the King of Brasse happening to be in that country buying slaves, got them released, by giving the price of six slaves for each of them. In the scuffle that ensued at the time they were taken, one of them lost his journal. Whilst at Youri they got the prayer-book that belonged to Mr. Anderson, the brother-in-law and fellow-traveller of the celebrated Mungo Park. They were upwards of a month at Fernando Po, whence they embarked, about ten days ago, in an English merchant-vessel bound to Rio Janeiro, on their way to England. From their taking that circuitous route, I am in hopes that this will reach you before they arrive, by which you will probably have it in your power to give the first news of this important discovery."

the relations of life, official station, friendly intercourse, and domestic affections, could his character be surpassed. His death was occasioned by inflammation of the lungs, and he was ill during only a few days. On Thursday his remains were committed to the grave in the cemetery at Kensal Green. The funeral was attended by several of his brother and superior officers, by whom he was greatly beloved; and by other friends, among whom were Mr. Murray, Mr. Brockenon, and the writer of this slight tribute to his memory, Ed. L. G.

ORIGINAL POETRY.

WHISKEYANA.

—"*Montano*
"Macidus rore."—CATULLUS.

Wi' mountain-dew weel moistified.—Free Translation.

LET Teos' hard with roses bind
His brows, on lotus-flower reclined,
And sing the praises of the vine,
Inspired by draughts of Chian wine;—
Or, 'neath the tender myrtles' shade,
In wanton dalliance idly laid,
To Love his "amorous decant" sing,
To Love his softest incense bring.
Nor Love nor wine my verse inspire,
Another theme demands my lyre;
August the theme, though sung by few,
The praises of the *Mountain-dew*.

What vintage of the earth may vie
With this elixir of the sky?—
Not Mastic, nor Falernian juice,
Nor all the Isles of Greece produce,
Nor those illustrious twin châteaux—
Renowned Lafitte and famed Margaux;—
Not proud, imperial Tokay,
Nor Chamberlin, nor Silleray,
Nor rich Constantia's luscious must,
Nor mellow Port with ten years' crust;
Not Malaga, nor Xerez old,
Nor warm Madeira's molten gold,
Nor that celestial, balmy wine,
Blest by St. John, the famed divine!*
Of these the best at times will pall,
One cup of dew is worth them all!
Still redolent of life and joy,
Its mountain odours never cloy;
But as we quaff each brimming glass,
The next doth still the last surpass,
Till rapt, inspired, we climb the spheres,
Behind us far this vale of tears;
Roaming with demigods at will
The meads of blooming asphodel!
Then bind my temples with a wreath
Of harebell blue and purple heath,
And on the heather let me lie
(The cloudless blue my canopy)
Quaffing, near some romantic stream,
Whose murmurs wild provoke to dream,
A chalice of that fragrant dew
Fellucid as the diamond's hue:—
It is a drink might tempt e'en Jove
Down from Olympus high to rove,

* *Johannisberger*.—This celestial vintage (the growth of *Johannisberg*, or Mount St. John, a hillock of trifling size in the heart of the Rheingau) owes its name, and, perhaps, a share of its divine qualities, to the blessing of its patron saint, St. John, the *Evangelist*, or Divine. Certainly, if in the all-engrossing suit—Wine v. Dew—the plaintiff has the slightest chance of success, it must be from the powerful advocacy of the Saint:—

"Si Pergame dextra
Defendi possent, etiam hac defensa fuissent."

Indeed, with the superb bouquet of the "Gold Lark," still lingering on my raptured senses (like the "sweet south-breathing o'er continents of violets"), I know not whether, if I had the free spirit to France Metternich's cellar, I might not in the end turn my heaviest, on the mantle of the Hospitallers, and turn orthodox Knight and true of the Order of Saint John.

Though Ganymede or Hebe there
Doth fill the cup with nectar rare;
And long as earth such dew supplies,
I wish no other Paradise! R. B. S.

THE DRAMA.

Covent Garden.—*The Beggar's Opera* has been revived here in the costume of its age, and with signal success. Miss Austin, as *Polly*, grieves us by not articulating the words of her songs, without which the music of such a part, if sung by an angel, would be unacceptable. Madame Vestris, as *Lucy*, is in this respect a perfect contrast. As *Macheath*, Mr. Harrison confirmed the high opinion we formed of him in *Artaxerxes*: the chief songs were admirably given. Farren, Barclay, and Mrs. C. Jones, made an excellent trio in *Peachum*, *Lockit*, and *Mrs. Peachum*.

The Haymarket.—*The Sea-Captain* holds on his voyage most prosperously. We observe that Sir E. Bulwer has written a new preface to the fourth edition; in which he replies to some of the absurd criticisms with which the hostile press teemed upon his production. We should hardly have thought it worth while.

Adelphi.—*The Knight of the Dragon and Queen of Beauty* has been produced here with éclat, and with all the gaiety and splendour of the Eglintoun Tournament. The scenery, dresses, stage decorations, and, in fact, every portion of the representation and acting, are such as we have not seen equalled in any theatre, and quite surprising for this small house. The contrast with *Jack Sheppard* makes both go off with more remarkable effect; and as the place is crammed every night, we may well say that Yates plays *All Fours*, with *High, Low, Jack*, and *Game* in his hand.

VARIETIES.

H.B. has given us, in his 621st caricature, "A distinguished Tee-totalist," viz. the Attorney-general at the Edinburgh breakfast, with the Irish chancellorship before his eyes, boasting of having put down Chartism without bloodshed. Behind him are details of the rising at Newport. The likeness is not good, but the design is one of his best party caricatures.

A New Reading.—A foreign gentleman lately requested his English stockbroker to secure certain monies in some favourable securities; his agent thought that Danish bonds offered a good investment, and wrote to his correspondent to say what he had done: he received an early and alarmed answer from the foreigner, saying that he feared for his property, as he had lately seen in the English papers that there was "something rotten in the State of Denmark."

Chatterton Monument.—The foundation stone of Chatterton's monument was laid on Wednesday morning, nearly under the clock of Redcliffe Church, in the angle formed by the tower and the muniment-room. It will be completed about Christmas.—*Bristol Journal*.

Anglo-Gallic Coins.—The numismatic world will have much interest in being informed that the valuable and important collection of Anglo-French coins collected by the late eminent antiquary General Ainalle, whose work on the subject excited so lively an interest (see *Literary Gazette*), have been transmitted by his representatives to the care of his publisher, Mr. Hearne, for the purpose of being disposed of by auction, which will probably take place early in spring. Many of the specimens we have seen in the possession of our late friend, and can testify to their being rare and unique.

Hooper's Post-Office Letter-Weights.—Under

this name a most useful little brass instrument has been sent for our notice. By putting letters into a balance on a graduated beam, you mark in an instant their exact weight, and consequently ascertain their postage under the new regulations, which come into effect on the 5th of December.

The Lunar Almanack, by St. John, Oxford (Painter), is another which has entered the lists for prophesying next year's weather.

Improvvisi.
Last week Prince Albert left our land,
"Attended by the Firebrand!"
When he comes back, court gossip say,
'Tis Hymen's torch will light his way.

LITERARY NOVELTIES.

LIST OF NEW BOOKS.

Lexicon of the Greek Language for the Use of Colleges and Schools, by the Rev. J. A. Giles, LL.D. 8vo. 21s.
The Belle of a Season, a Poem, by the Countess of Blessington, illustrated with Designs by Chalton, imp. 8vo. 1l. 11s. 6d.; India Proofs, 2l. 11s. 6d.—Proceedings of the Zoological Society of London, Part VI. 1838, 8vo. 6s.—Advice to Mothers on the Management of their Offspring, by Pye H. Chavasse, fcap. 5s.—Elements of Algebra, by the Rev. P. Kelland, 8vo. 7s.—The Poetical Works of Thomas Pringle, 8vo. 9s. 6d.—The "Adams Exult" of Grotius, by F. Barham, Esq. 8vo. 2s. 6d.—Reminiscences of Past Experience, by the late Mrs. G. Soper, 24mo. 2s. 6d.—Western India in 1838, by Mrs. Postans, 9 vols. post 8vo. 24s.—What De Fellenberg has done for Education, fcap. 4s.—Poems by Henrietta Prescott, 12mo. 8s.—The Book of Knock from the German, by J. Baty, 12mo. 1s. 6d.—Influence, by the Author of "Miriam," 3d edition, 12mo. 7s.—The Trials of Margaret Lindsay, new edition, fcap. 6s.—Chitty's Forms, 5th edition, 2 Parts, post 8vo. 21s.—The Death of Demosthenes, and other Poems, by G. C. Fox, fcap. 6s.—Manners of the Bards, and other Poems, by H. Gilpin, 2d edition, fcap. 6s.—Langard's History of England, Vol. XIII. (completing the work), fcap. 6s.—The Family which Jesus Loved, by the Rev. J. H. Stewart, 12mo. 6s.—Commentaries on the Historical Plays of Shakspeare, by the Right Hon. T. P. Courtenay, 2 vols. post 8vo. 12s.—Some Account of the Field of the Cloth of Gold of Eglintoun, by H. Curling, post 8vo. 3s.—Leach's Introduction to the London Pharmacopoeia, 3d edition, 18mo. 5s.—Voyages of the Douga, translated from the Dutch of Kolff, by G. W. Earl, 8vo. 10s. 6d.—Lord Brougham's Eminent Statesmen, new edition, 9 vols. 8vo. 21s.—British India: Decline of Hindooism, and the Progress of Christianity, by the Rev. W. Campbell, 8vo. 12s.—Bacchus: Prize Essay on Intemperance, by R. B. Grindrod, fcap. 6s. 6d.—Progress of Intemperance: Engravings, with Poetical Illustrations, by J. Dix, fcap. 6s.—Discovery of America by the Northerners, by J. T. Smith, post 8vo. 8s. 6d.—W. H. Maxwell's Life of the Duke of Wellington, Vol. I. 8vo. 21s.; royal 8vo. 1l. 11s. 6d.—Billard on Diseases of Infants, translated by J. Stewart, M.D. royal 8vo. 14s.—Elements of Natural Philosophy, by G. B. Rind, M.D. post 8vo. 12s.—Outlines to Illustrate a Moral Allegory, entitled "The Fights of Freewille," by R. Westmacott, Jun. 21s.—Memoirs of Admiral Sir S. Smith, by the Author of "Rattlin the Reelfer," 9 vols. 8vo. 36s.—The Lord's Table, by H. Thomas, D.D. 12mo. 5s.—Poetical Works of Percy Bysshe Shelley, 1 vol. 8vo. 12s.—Cyclopedia of Practical Husbandry, by M. Doyle, 12mo. 12s.—Latin Syntax and Delectus Minor, 12mo. 1s. 6d.—Three Hundred Ordination Questions and Answers, 12mo. 3s. 6d.—Rev. J. Milner's History of Winchester, new edition, 9 vols. royal 8vo. 24s.—Domestic Animals, by R. Mudie, fcap. 5s.—Glimpses of Glory, by A. SONNETS, &c. written on a Tour through Holland, Germany, Italy, Turkey, and Hungary. With a short Prefatory Account of the Journey.
By LADY EMMELINE STUART WORTLEY.
Also, just published, by the same Author, 6s. post 8vo. boards.
The Visionary.—Canto III.

"Lady E. S. Wortley evinces much originality of thought, great power of expression, a wide command of poetic diction, and a nice discrimination in her views of nature. We close the volume with deep admiration of the accomplished authoress."
Conservative Journal.
"We could adduce passages from 'The Visionary' that few modern writers could excel, if they could equal."—*Sunday Times.*
"Lady Emmeline's poetry is eminently that of the imagination. She lives in a poetical sphere of her own creation, which she has peopled with the inspirations of a wild and teeming fancy."
Parthenon.

A MOTHER'S REMINISCENCES of a COURSE of READING and INSTRUCTION. Addressed to her Daughters.
By MRS. MORRIS.

With Eight Illustrations, price 2s. cloth gilt, square 18mo.
What is an Egg worth? or, the Blessings of Providence. A Tale for Children.

BISHOP HURD ON THE PROPHECIES.

Stamped Edition, 9d.

REVIEW OF NEW BOOKS.

Gatherings from Grave-Yards; particularly those of London: with a Concise History of the Modes of Interment among different Nations, from the Earliest Periods. And a Detail of Dangerous and Fatal Results produced by the Unwise and Revolting Custom of Inhuming the Dead in the Midst of the Living. By G. A. Walker, Surgeon. 8vo. pp. 258. 1839. London: Longman and Co.: Nottingham; Hicklin.

THIS is a long title-page, but it describes a volume on a subject of universal interest. Next after the concern for living eligibly, every people seem to have agreed that the most touching earthly consideration was to die well and be buried decently. The savage and the civilised have only varied in their ideas concerning the most befitting accomplishment of this object; and very strange it is that in the highest state of civilisation we have the examples of the most objectionable and pernicious practices. In England, at this day, there are modes of sepulture which would almost disgrace, as they would certainly disgust, a cannibal; and to some of these our author has, we trust so as to produce a thorough reform in them, pointed the public attention:—

“Burial-places (he strongly tells us) in the neighbourhood of the living are, in my opinion, a national evil—the harbingers, if not the originators, of pestilence; the cause, direct or indirect, of inhumanity, immorality, and irreligion. These remarks may appear extravagant and untenable. I have to request an attentive and impartial perusal of the following pages: the proof will be found convincing—the justification complete. The peculiar character and virulence of diseases in the proximity of grave-yards first excited my suspicion: evidence, positive and circumstantial, has established the fact—that the miasma from animal putrescency may occasion not only the instantaneous loss of human existence, but increase the intensity of pestilential diseases. Every member of society is interested in the statement—that in the metropolis, and in very many towns and villages of the empire, the abodes of the dead are insecure. By far the greater number of grave-yards are crowded to excess: many, indeed, have been in this condition for an indefinite period; so that additional interments could not have taken place without a very questionable disturbance and displacement of previous deposits.”

He proceeds to his proofs, and his descriptions of almost every burial-ground in London are shocking to humanity. While we read them we cannot help feeling intense regret that so many of the cemetery companies projected for the metropolis should have been retarded in their progress, or defeated by the jobbing iniquities of sordid speculators, intriguing directors, and attorneys of that low grade who are a curse to the community wherever they can interfere with the dealings of men. Well would it have been, and be, for the public interest, were government not to leave such national concerns to private enterprise, but take them up on public grounds, and

see that done which ought to be done for the benefit of the people. It would not cost one guinea of public money; but might, on the contrary, be a source of revenue. Before we follow Mr. Walker into some of his distressing statements, let us contrast our apathy in this respect with better feelings. In the valley of the Mohawk, on the heights of the Alleghanies, in the centre of the north-western Prairie, wild and afar, and apart from population, wherever there is a solitary dwelling, there is a family grave-yard,—a domestic burying-place. Full as the settlers' hands may be, and however rude the aspect of the dwelling of the living, it is delicately kept, and witnesseth to the respect that is felt for those once dear, who are dead and gone before. The new cemeteries near new towns are all beautiful as such places can be; and that at Auburn is the most beautiful in the world. They are what they ought to be throughout the British Isles, safe, wholesome, and cheerful. Emblems of the future hope should mingle with those of grief and mourning; and having performed our duty towards those who had left us for awhile, we should be able to learn a sweet, though solemn, moral lesson from the grave.

Going over the burial-places of London, Mr. Walker says:—

“It is demonstrable that the centres of infection are found principally in crowded neighbourhoods and a vitiated atmosphere; here they are propagated and nourished by the action and reaction, the cause and effect constantly in operation; for, in many of these very districts, the so-called burying places, the receptacles for the dead, are situated; their insatiable appetite, yet unglutted, is constantly devouring fresh victims, and these again are ejected, after a slight sojourn, to make room for the succeeding occupants, who retain their situation only by the interest or caprice of a hiring grave-digger.”

He sets before us a sketch of the modes of interment among different nations, chiefly the publications of S. Piattoli and M. Vicq. d'Azyr; but we must come nearer home, and to present circumstances. Mr. W. observes “that the exhalations from animal putrescency are productive of typhus fever, and fevers marked by a diminution of power in all the functions of the body, and a general disposition to putrescency both in the solids and fluids.” And with this statement before us, among other hideous accounts, he informs us of

“*Enon Chapel.*—This building is situated about midway on the western side of Clement's Lane; it is surrounded on all sides by houses, crowded by inhabitants, principally of the poorer class. The upper part of this building was opened for the purposes of public worship about 1823; it is separated from the lower part by a boarded floor: this is used as a burying place, and is crowded at one end, even to the top of the ceiling, with dead. It is entered from the inside of the chapel by a trap door; the rafters supporting the floor are not even covered with the usual defence—lath and plaster. Vast numbers of bodies* have been

placed here in pits dug for the purpose, the uppermost of which were covered only by a few inches of earth; a sewer runs angularly across this ‘burying-place.’ A few years ago, the Commissioners of Sewers, for some cause, interfered, and ultimately another arch was thrown over the old one; in this operation many bodies were disturbed and mutilated. Soon after interments were made, a peculiarly long narrow black fly was observed to crawl out of many of the coffins; this insect, a product of the putrefaction of the bodies, was observed on the following season to be succeeded by another which had the appearance of a common bug* with wings. The children attending the Sunday School held in this chapel, in which these insects were to be seen crawling and flying, in vast numbers, during the summer months, called them ‘body bugs.’ The stench was frequently intolerable: one of my informants states, that he had a peculiar taste in his mouth during the time of worship, and that his handkerchief was so offensive, that immediately upon his return home his wife used to place it in water. The parish authorities interfered upon the subject of poor-rates, proposing to impose a mere nominal one if the place were closed; this was done for about twelve months. In defiance of opinion, however, it was again employed for the purposes of interment, and has been so used up to the present time. I am acquainted with many who have been seriously affected by exhalations from the vault, and who have left the place in consequence. Some months since, handbills were circulated in the neighbourhood, ‘requesting parents and others to send the children of the district to the Sunday School,’ held immediately over the masses of putrefaction in the vault beneath. Residents about this spot, in warm and damp weather, have been much annoyed with a peculiarly disgusting smell; and occasionally, when the fire was lighted in a house abutting upon this building, an intolerable stench arose, which it was believed did not proceed from a drain. Vast numbers of rats infest the houses; and meat exposed to this atmosphere, after a few hours, becomes putrid. This place is familiarly known among undertakers by the appellation of the ‘Dust Hole;’ and is a specimen of one of the evils which sprang up during the operation of certain laws that were hostile to the cultivation of anatomical science, which have happily now been repealed. The professed security of the dead was made the pretext; individual advantage was the real object for depositories of this description. The health and comforts of the living were entirely disregarded, and the annoyance and dangers resulting from the proximity and effluvia of decaying animal substances were submitted to, and hazarded by survivors, rather than subject themselves to the tormenting anxieties which arise from the apprehensions of a brutal exhumation. I have several times visited this Golgotha. I was struck with the total disregard of decency exhibited,—

to believe that, since the establishment of this place, from ten to twelve thousand bodies have been deposited here, not one of which has been placed in lead.”

* “I have not been able to obtain a scientific description of these insects.”

* “From the most authentic information, I have reason

numbers of coffins were piled in confusion—large quantities of bones were mixed with the earth, and lying upon the floor of this cellar (for vault it ought not to be called), lids of coffins might be trodden upon at almost every step."

All round this neighbourhood are equally monstrous receptacles of the dead; upon which our author remarks:—

"Enough, nay, more than enough, has now been stated, to shew the dangerous state and deleterious influence of the 'grave-yard;' the exposition I have given will, it is presumed, awaken even the inert from their dreams of security, and stimulate the active and benevolent to assiduous and persevering efforts to eradicate, from the proximity of their dwellings, one of the many, perhaps the most, fruitful causes of disease, impairing or destroying the health, and, consequently, the happiness of their fellow-men."

He continues:—

"Can we then wonder that disease and death are making frightful ravages, when millions of human bodies are putrefying in the very midst of us? In the description of many of the metropolitan burying-grounds, it will be seen that by far the greater number are crowded even to excess; this certainly ought not to have been permitted—the moment it appeared that the space allotted for interment was occupied, that moment the ground should have been closed, and other asylums set apart for the interment of the dead: an infringement upon the occupancy of the unresisting tenant violates the property of survivors, and desecrates the sanctity of the sepulchre. Men pay funeral dues under an implied assurance that the 'dead' shall be 'respected.' It is well known that formerly considerable alarm was manifested that the grave would be robbed of its deposits by the intrusion of the 'resurrectionist.' An act of the legislature had the effect of destroying the temptation to purloin the dead, but the grave is still insecure. Grounds, accustomed to be held sacred, are unceremoniously cleared under official superintendence; and that too with such ruthless indifference and wanton publicity, that even passers-by complain of the indecent profanation.

Great expense is frequently incurred in funerals; the encasement is often strongly made and highly ornamented; it is not difficult to account for the fact that second-hand 'coffin furniture,' nails, more especially, may be found by the hundred-weight at many of the 'dealers in marine stores;' nor can we wonder that coffin-wood has been extensively used as an ordinary fuel in low neighbourhoods—this fact I lately proved. The products of ordinary combustion are sufficiently poisonous. The gases produced by the decomposition of the dead are partially soluble in water; and a fatty pellicle is instantly formed in large quantity. The wood, saturated with these dissolved gases, and used as fuel, must diffuse, in addition to the exhalations constantly given off from bodies in vaults, and on the earth's surface, vast volumes of gaseous poison."

In another respect we are told:—

"It is well known to those engaged in burying the dead, that when leaden coffins are employed, the expansive force of the gas,* and the

consequent bulging out of the coffin, compels the workmen frequently to 'tap' it, that the gas may escape; in some instances, the coffin may be turned round upon its axis by the slightest touch of the finger within a few hours after the lid has been soldered down, and holes are frequently bored through all the cases, over which the plate and the outer coffin is fastened; so that the gas may gradually escape into the room or vault in which it is deposited. When the coffin is not well secured, the lead will burst, and the gas become generally diffused. * * * The following statement will prove, if proof, indeed, be wanting, the neglected condition of many of the vaults employed for burials, and the evils resulting from it:—The vaults of a church in the city were in a most revolting and dangerous condition, and had, for some years previously, occasioned considerable uneasiness to many of the parishioners; and in the more immediate vicinity of the church the inhabitants complained of the nuisance: one of the churchwardens, thinking the cause of complaint might arise from external agencies vitiating the atmosphere, ordered the windows, the roof, and every part of the building to be examined and made secure, and double doors to be made at the entrance of the church; notwithstanding these directions were obeyed, the stench became insupportable; many of the congregation were, at various times, compelled to leave the church, and some were seized with illness during service, and conveyed home. The churchwarden, above alluded to, anticipating the source of the mischief, caused the vaults to be examined, when upwards of one hundred bodies were found in an active state of putrefaction. The workmen employed on this occasion, upon first entering the vault, were almost instantly prostrated upon the floor; one poor fellow who had advanced further than the rest was with difficulty saved; he was dragged out by his companions, almost lifeless. The vault was ultimately cleared, and all the putrescent bodies were buried in a common pit, dug in the church-yard."

But why should we dwell on these noisome matters, or multiply examples of the brutal condition of our London places of sepulture? the whole system of either ground or underground vault deposit of the dead is senseless, abhorrent, and injurious. The details, for which we refer to Mr. Walker, ought to awaken the mind of the inhabitants of the metropolis especially, to their shocking nature, and lead, we should hope, to a speedy and effectual remedy.

One Fault: a Novel. By Frances Trollope. 3 vols. 12mo. London, 1840. Bentley.

WE hardly think *One Fault* a correct name for this novel, as it seems to us its hero, Mr. Wentworth, is possessed with a legion of faults, though Mrs. Trollope tries to merge them all in a single common source—a shocking bad temper. But the faults, in a truly philosophical point of view, are only aggravated by this infirmity; and vanity, pride, cruelty, selfishness, stand out by themselves quite sufficiently to make a very uncompanionable man, even without the annoying accession alluded to. Still the proposed lesson is a salutary one, and we could only have wished that it had been

a glass window was made in the top of the lead coffin. These were enclosed in a handsome mahogany coffin, 'with a lid that opened and shut.' The day after the corpse was put in, the glass in the lead coffin broke; it was replaced by another, which also broke; and then a thick plate glass was put into an iron frame, soldered to the lead, which stood, and is now in the vestry of — church!"

read to us in a more brief and natural manner. Mrs. Trollope no doubt draws forcibly, but there is a rigidity in her characters which removes them from ordinary life, and thus renders their examples less effective; for people reason, "How could any body in their senses behave in such a way?" Again, to have three long volumes devoted to the development of one ingredient, and confined to the effects of the conduct of a husband upon a wife, with the aid of an overbearing and tyrannical mother, is too much. The perpetual repetition of the same causes, with the same results, grows tiresome; and we feel that a tithes-part of them would have wrought out the design more impressively than the whole. To be generally useful, instruction ought to be drawn from common persons, and every-day occurrences: we are ill-taught by singular beings and rare events.

Having said so much on the prominent "faults" of this novel, we shall give an extract or two to shew that parts of it are worthy of the writer's reputation. Wentworth, through his waywardness, inflicts every pain upon the wife he loves, till he alienates her affections and destroys his own happiness. Even during the honey-moon at Paris he inflicts his first wounds, and whilst he lectures her, is guilty of the very wrongs he imputes. He is thus described:—

"And did Mr. Wentworth, the gentleman-like, the dignified, the wealthy Mr. Wentworth, happy in his love, happy in youth, health, and a powerful understanding,—did he on quitting the presence of his offending wife use his recovered leisure in the manner he intimated to her? Did he seek any of the elegant friends whom he knew to be in Paris?—Or did he employ the interval in executing the business he talked of? After rapidly descending the stairs, he paused for a moment on the steps of the hotel to decide in which direction he should turn when he quitted it, and this moment brought to his side a bowing and white-napkin official, requesting to know his pleasure respecting the important matter of dinner. This was not a question to be totally neglected, even at that moment of distorted feeling; and Wentworth so far recovered himself as to say, '*Une table à deux convives—un bon dîner de quatre plats à dessert—et le meilleur vin*;'—but this uttered, he hastened onward with the step of one who, having bestowed all the patience he has to spare, is eager to get beyond any further call upon it. Yes the question, and the train of ideas it suggested, did him good. It carried him forward to the hour of dinner, and to the sight of his lovely Isabelle, seated opposite to him; and though he was by no means distinguished for any undue attachment to the pleasures of the table, the picture his fancy presented could hardly fail of softening, in some degree, the asperity of the humour that had taken possession of him. The effect of it, however, was by no means sufficiently powerful to take him back to the presence of his wife; on the contrary, it rather made him more keenly sensible of the necessity of keeping out of her sight till he had fully recovered himself, in order that the hour he anticipated might be quite unclouded. All this would have been very well had the habits of his mind permitted him to turn aside for a moment, from the study of himself and his own feelings, to meditate a little upon what hers might be during his absence. But this did not occur to him; so he walked rapidly forward, as if by so doing he could escape the annoyance that dogged him; and passing through the gardens, across the Place de Louis Quinze, he reached the Champ

* The expansive force of the gas formed during the process of decomposition is illustrated in the following instance:—The beloved daughter of a clergyman having died, he was anxious to preserve the body above ground, that he might have the melancholy satisfaction of viewing this 'mouldering piece of clay.' The body was first embalmed by a surgeon, one of my personal friends, and then put into a shell; a leaden coffin received these, and

Elysée, determined to pace their remotest alleys till he felt capable of meeting the soft questionings of Isabella's eye with composure. Of all conceivable situations, perhaps his must have been that in which ill-humour would find the greatest difficulty in maintaining its ground. By degrees he forgot, or almost forgot, the unfortunate jest which he presumed she had so fully dilated upon in her long letter; and by degrees Isabella's sweet undoubting look of love came back upon his memory. He did not feel ashamed of himself;—that was totally impossible, such a state of mind being altogether incompatible with the judgment he had formed of his own qualities from the earliest moment of his sentient existence;—but he felt that his love for her, and hers for him, might well excuse whatever weakness there was in the wish, which, after nearly two hours of absence he began to feel pretty strongly, of being again beside her. So having at the last turn wandered nearly to the *Barrière de l'Étoile*, he suddenly veered about, and began to walk homewards. There may be observed in some characters a species of inconsistency that looks as if we had a court of conscience within us, of which we were not aware. And thus Wentworth, who neither did, nor, by the nature of things, could, believe himself to have been wrong, nevertheless felt that his reappearance in the presence of his bride would be more agreeable if he brought with him something to talk about, and which might in some degree account for his absence. Quickening his steps, therefore, he sought the box-office of the *Théâtre Français*, and, by great good luck, was in time to secure such places as he thought might be occupied without in any great degree compromising his dignity. This was well thought of, and was well done; yet even this did not fully satisfy the strong but unacknowledged sensation within, which told him, as if by signs and not by words, that he owed some further offering to atone for the long and dreary hours of his absence. To obtain this, he now entered a jeweller's shop, and chose from among its glittering confusion a pair of costly bracelets. Poor Isabella! How much more valuable to her would have been such an expedition as we have imagined her sister to have taken! It was but two hours or so since she had fallen asleep in the very act of contemplating another splendid pair of bracelets, while thinking how very little she cared about them, or about any thing else in the world, except pleasing her beloved and most elegant husband. When Wentworth reached the saloon in which she had passed the miserably long morning, he found her looking pale and languid, but without a trace of resentment or ill-humour in her sweet countenance. His entrance was indeed the greatest possible comfort to her; and though there was at the first moment a little—a very little—embarrassment in his manner, the tender air with which he substituted with his own hands the ornaments he bought for those she was previously wearing, could not fail to set her heart at rest, and convince her that however unfashionable or troublesome she might have been, she was forgiven. Her husband certainly mistook the bright smile with which this conviction was welcomed, for a young girl's pleasure in 'gauds and toys.' But he had wished to please her, and she was pleased; thus all was once more right between them, and his announcement of the places taken at the theatre was almost as gaily received as if it had not been preceded by a long interval of joy-consuming weariness and anxiety."

We may note that Wentworth's more solemn plagues were always administered in the form of long letters; which the servants knew so well that they called them "the papers." This trait, though rather prolix in execution, and not very probable in sentiment, is well pictured throughout. We now copy some wholesome remarks:—

"When moralists, religionists, and philosophers of all sorts, set about reasoning on the phenomena of the world we live in, and, contemplating the mass of human misery to be found therein, trace it to all the fearful crimes that since the fall of man have found their way into the heart, they overlook one little cause of suffering, which blights more happiness, and neutralises a greater portion of God's bounteous favours, than all the other heinous enormities of our depraved race put together. This hateful, stealthy, heart-destroying blight, is often found where every thing like atrocious vice is utterly unknown, and where many of the very highest virtues flourish. Probity, liberality, temperance, observant piety, may all exist with a sour temper; yet many a human being has been hung in chains whose justly punished deeds have not caused one hundredth part the pain to his fellow-men which a cross temperament is sure to give. How often has a bright sunny day risen upon a healthy, prosperous, gay-spirited race, each hour of which,

'Though blessed with all that Heaven can send,'

has been poisoned, mildewed, and rendered hateful to every member of it, by the habitual ill-humour of its head! Yet all the reprobation cast on such an one is summed up in the gentle phrases, 'He is a tiresome man,' or, 'She has a disagreeable temper, poor woman!' Fulminate your bolts, ye moral teachers, against the unschooled self-indulgence that generates this domestic curse! Let men see, as in a glass, the hideous contrast between their crooked, crabbed natures, and the sweet image of Him who taught the doctrine of perfect love! Do this, and your preaching may not be in vain."

The divertissement attempted in the persons of an overdone "Blue" aunt of the Martineau school, a sempstress ditto bent upon stitchwork, and the families of Worthington and Reynolds, is not enough to relieve the monotony of the main design; and thus, with all its vigour and talent, we are sorry to say, we finished *One Fault* with considerable ennui and fatigue. A scene near the end between the heroine and her brother has almost tempted us to expunge this sentence: but upon a careful review we could not; and we were confirmed in our severity by having met with such phrases as the following, instead of plain English, in the mouths of all conditions:—"de si longue main,"—"en vrais héros,"—"à prétention,"—"quitté pour la peur,"—"beaux yeux de sa Casette,"—"une femme à prétention," &c. &c. &c. the necessity for which we do not recognise.

Excursions in Denmark, Norway, and Sweden.

By Robert Bremner, Esq., author of "Excursions in the Interior of Russia," &c. 2 vols. 8vo. London, 1840. Colburn.

THOUGH Mr. Bremner has not, in this tour, possessed the advantages which belonged to his preceding work, viz., an exceeding interest attached to the existing condition of the country visited, and considerable novelty in some of the matters presented to his observation, he has, nevertheless, so exercised the same sagacity and acuteness as to give us a very fair and comprehensive account of the

present state of the northern nations, or at least of those parts through which his travels led him. We have, in the *Literary Gazette*, so frequently accompanied able authors over these grounds, that we will not do more now than make a few miscellaneous extracts from Mr. Bremner's pages, to shew that they are written with the same spirit and intelligence which rendered his preceding publication so justly popular. We could, perhaps, have done with less on the subject. People cannot afford in these days to compress, abridge, concentrate, and—so produce books of size suited to their character and originality!

Our first notice is of Copenhagen, and a sketch of national manners:—

"As a contrast with this out-of-doors crowd, we may next describe the impression produced upon us on mixing with one chiefly composed of the higher classes. The first opportunity which we had of seeing Danes of the better ranks assembled together in any considerable numbers, was a few evenings after that above referred to, at the Great Theatre, which we were induced to visit on this particular occasion in consequence of an intimation from a grave professor, for whom we had brought an introduction, and who was at great pains to keep us from losing any sight that could interest a stranger. Our obliging friend accordingly wrote us a long letter in excellent English, for the express purpose of informing us that part of the amusements was to consist of a very striking portion of Danish history turned into a pantomime, or ballet, or some other dancing entertainment. To have absented ourselves on such an interesting occasion would have been insulting the country whose hospitality we were enjoying: besides, Danish history, illustrated by *pas-seuls* and *entrechats* from France, would probably be much more intelligible to us than when expounded in the good Danish of the most eloquent professor. And of dancing truly there was enough. There were sword-dances, and wrestling-dances, dances of peasants, and dances of courtiers, dances by pretty young women, and dances by ugly old ones—in short, dances of every description; besides rival kings, and rival lovers, armies marching, women screaming, drums, flags, pikes, and hauberts—all the ingredients that theatrical usage requires for concocting one of its grandest efforts. Yet, with all this, thanks to our dulness of comprehension, we left the house as ignorant of Danish history as before the rising of the curtain. The Danes, however, seemed greatly delighted. We have never seen an audience enter more eagerly into the spirit of such a frivolous performance. In fact, the Danes have a great love for all kinds of theatrical amusements; no nation in Europe, not even excepting the French, have this passion in greater strength. This theatre is always full, and the smaller ones, in the outskirts of the town, are equally well attended. Every part was so densely packed, that six were glad to get into boxes never intended to hold more than four. Here again, however, we had to admire the love of order which so strongly characterises the Danes; during the many hours we attended, there was neither a loud nor an angry word from any portion of the audience; every one glided into his place without disturbing a creature—all was quiet mirth and good-humour. Of mob—that monster of large towns—there was none; in fact, we do not think there is any in Copenhagen. We were particularly struck with the politeness and good-nature of the ladies. (A merry member of our party, who had not one word of their language, nor of any other foreign language, was soon as

much at home among our gentle neighbours as if he had known them for years. His English compliments—compliments, it is said, are intelligible to the fair in every language—made his apologies about incommode, &c., as welcome as if offered in the choicest Danish. The display of beauty in the principal boxes was most dazzling. The attendance of the higher ranks, as is always the case when the royal family are present, was very numerous; and we must honestly admit, that in no part of Europe have we ever seen so many beautiful women assembled on one occasion. Oval faces and dark ringlets are not characteristics of Danish loveliness, yet even of these we saw more than we had expected. Good-nature and amiability—which, after all, have much to do in influencing our judgments of beauty—beamed so generally among the fair young creatures around us, that, if unhappy homes are frequently in Denmark, we shall have no more faith in our philosophy. The noisy ballet was preceded by a little comedy, the dialogue of which was as unintelligible as the dancing. The style of acting is exceedingly natural, and belongs to the modern French school. We were much struck with the pleasing effect of the Danish language when thus heard continuously. It does not ring so harsh as the terrible German, which needs very pretty lips to make it musical. There are fewer of the thundering *r r r*'s, and throat-stretching *ech*'s; it sounds soft and gentle, like the national character."

The language of a country is always an interesting subject; and the following short notice is itself interesting:—

"With the help of a grammar for Germans, we acquired, in a short time, just enough of words to express our more common wants, and of the principles of the language only as much as enabled us to see that it is but remotely allied to the German. For, though many Danish words are the same as in German, or rather have the same roots, yet the language strictly belongs to the great Scandinavian family, which, it is well known, has many characteristics quite distinct from the Teutonic. To illustrate these distinctions, it may be stated that the Swedish, Danish, &c., differ from the German, by employing the definite article after the noun, by having a passive and middle voice regularly inflected (while the German has only a passive), by wanting the syllables prefixed by the German to the participles, &c. The modern Danish appears to be directly sprung from the Norse, or ancient Danish language. The resemblance which many Danish phrases bear to broad Scotch is very striking. A native of Angusshire, who has long resided in Denmark, told us that when he first settled at Copenhagen he made a very liberal use of his native dialect, and always found that good Scotch made bad (that is, intelligible) Danish. The sound of Danish, as spoken by all classes, is exceedingly like that which characterises the Scotch of the lower classes of Edinburgh."

Our next relates to the famous sculptor Thorvaldsen:—

"To learn something of this eminent statuary, therefore, is an object which few foreigners will neglect while here; nor will their curiosity be long ungratified; for his fame is a favourite theme with all the intelligent of Copenhagen; and in this city are to be found nearly all his best works. The appearance of a sculptor from the ungenial north was an event which might well excite wonder among those who had long believed that all genius of this description could be nursed only by the warm south. Many, however, to make the

marvel greater, assign him a more northern birth-place than facts will justify—placing his cradle among the frozen peaks of Iceland, in place of the mild plains of Zealand. His father was originally from Iceland, but came in early life to Copenhagen, where he worked as a modeller and carver in the royal dock-yards. In this capital, accordingly, was Bertel (Albert) Thorvaldsen born, in the year 1770. Though sprung, as fame asserts—and although aware, too, that he was sprung—by the mother's side, from one of the royal Harolds of old, the young Albert did not disdain his father's humble occupation, which he followed for a time with perseverance and success, the peaceful tenour of his days flowing undisturbed by any incident more romantic than a narrow escape from matrimony. It was one of those attachments which make an epoch in the lover's life. The object of his passion being in the humble station of servant to a respectable family in the quarter where he lived, we might have expected that, here at least, 'the course of true love' would, for once, 'run smooth.' Here, surely, we might have said, 'There can be no bickerings about settlements—no fear of descending too low, on the fair one's part—no 'family feeling' to be 'got over' in short, none of those hinderances which, in higher stations, so often keep hands from confirming what hearts have already vowed.' But, alas! obstacles arose precisely where they were least to be expected; the mother of the 'young lady' refused her sanction,—and Thorvaldsen was given to the Arts."

He is said to have felt no second love. Perhaps he would, if he had gone where we are now going with our readers—to some romantic Lake Scenery in Norway.

"After passing this point, the openings in the shore become much more frequent: the cliffs no longer rise sheer from the lake—bits of pasture find room on its rough margin; and at some places, among detached rocks, close by the shore, or high up on a green and lonely ledge, are perched a few huts for the hardy natives, so dwarfish, so unlike the dwellings of human beings, that we for a long time supposed them to be stacks of firewood prepared for transport down the lake. But if men really live in these cabins, in what way do they hold intercourse with the world? How can they ever climb that iron barrier rising to the clouds behind them? Round the whole of these inhabited patches the rocks are so steep on every side that not even a footpath can be formed from one hamlet to another; some children, creatures from eight to ten years old, were paddling away to visit their nearest neighbours, in a fairy boat; for this it seems is the only way in which the inhabitants can communicate with each other; they appeared to think it as natural to be rowing about under these huge cliffs as to walk on land. We have never seen houses that looked so lonely and wretched. In such places winter must be worse than dismal. Yet the people are lively and social in the highest degree—fond of the dance and the song, swift in the chase, too, and bold in the fray. The cold air of the lake now fell heavy on us; but we still advanced without making any other pause till we reached the hamlet where orders were to be left for sending horses to meet us next day. Though the people had gone to rest, we found the door of the best house wide open, and were allowed to wander through the rooms, without let or hinderance. Once more embarking, we reached about midnight the houses at the mouth of the river where our land journey was to commence in

the morning. Instead of open doors, however, we here had difficulty in getting the people to answer, even when summoned. The old mistress at last appeared, but wished to make us trudge far up the valley to a kind of post-house, where she told us we might find beds, and, at all events, shelter under a roof, which she herself could scarcely promise us, every corner of the house being occupied by the family. These were no welcome tidings in our wearied condition. We, therefore, employed all our eloquence with the matron, and finally persuaded her to let us have some hay to sleep on, and the use of the most singular bed-room that ever travellers were sheltered in. We were sent to a sort of out-house, literally on the water, it being raised on piles driven into the mud of the river. This mansion looked much more inclined for a sailing trip down the lake which we had just left, than to remain steadily here, and give us quiet rest. It was reached by what may be called a drawbridge of steps: but, unhappy men that we are! is it a shambles, a poultry-house, or a hide-loft, that we are entering? We have no candle to aid us in our survey; and, judging by the smell, it must be one or, perhaps, the whole of them together; for of all dreadful odours, that which now saluted us was the most nauseous. Legs of horrid cows or gigantic sheep are dimly seen adorning the outer division; within are raw hides, barrels of strong meal, barrels of rancid butter, barrels of sour-smelling bread; barrels of every thing atrocious, to make up such a concatenation of villanous smells as never assailed human nostrils till this cage was filled. Its dimensions scarcely surpassed ten feet by seven; yet, in addition to the things enumerated, this small space was already crammed with so many inconceivable utensils, that it was long before we could discover where the ingenious lady meant us to stretch our limbs. Some choice preserves, however, were turned out of the way—one odorous vessel was put above another—some of the worst, happily, were removed altogether—still at last a space, rather larger than that which a cat and her kittens would need to curl in, was opened in the centre of all these unutterables. Coarse grass from the fens, dried, and called hay—but more like rushes armed with needles—was strowed on the boards—a canvass sheet was spread over—one bristly rug was brought as a blanket—and there, gentlemen, there are you to sleep side by side, with a place for your Swede across your feet at the door! Shall we still fly from this killing atmosphere? It would be to no purpose—the whole glen are asleep—there are ten miles to the next station—the kind woman has done her best—we are worn out—can scarce move a limb, after seven hours' cramp in the boat—decidedly we must turn in. Brief was our toilet, where nothing but the coat had to be taken off—merry too was our down-lying: we were thankful even for this rude bed. Admiration of our strange lodging—nay, laughter that must have startled the fishes swimming below—kept us long awake; but sleep at length came, and held us captive till the sun brought morning and our horses, when we were off for the Fall as fresh as if we had rested on the Bishop's-down."

With one more quotation, descriptive of Dalecarlia, we conclude:—

"It startled us in these unfrequented regions to be addressed in English by one of the natives. He had been a sailor many years before, and long traded to London. The little fellow's heart warmed at the recollection of what even he loved as 'Old England.' He vows that all

the Swedes love us dearly, only they would like us still more if we did not drive their horses so hard. 'What tearing fellows they are, those Engliaks!'—such are the sentiments expressed by many a Swedish farmer; 'there should be a law passed that not one of them shall be allowed to take a whip in his hands: but then we would get none of their money; they would not look near us; for it is evidently for no other purpose that they come here but to drive through the country, night and day, like mad people. The Germans are the quiet folks: they never touch a horse, nor look at him either. They come here to hammer at our rocks, not to belabour our poor steeds. Give them bags of tobacco and loads of stones, and they never care how slowly we drive. Oh, the good Germans! pity that they haven't more money. The English are the best fellows after all. They talk such funny Swedish, and pay us so well. Success to the English!' However severe the English may be on the Swedish horses, they can scarcely be more so than the peasants themselves: we see them every hour flying along in their carts with one horse, much faster than we ever do with two. To the lover of nature, these forests are not without interesting sights of other kinds. It is a soft and quiet region. The magnificent rivers of Norway are replaced by small voiceless streams. Little sheets of water are very abundant—lonely and beautiful, generally with a clear sandy bottom, a cottage or two among trees by the distant shore, a little skiff to convey the occupants to church or merry-making, and sometimes a water-fowl rippling the wave in its undisputed progress from shore to shore. Now, that we were almost as far north as the most northerly point of the British Islands, we expected that vegetation would become dull and flowerless: but nothing could be more delightful than the richness and variety of the wild blossoms that still adorn the way-side or gem the margin of every lake. The splendid water-lily (*Nymphaea alba*), among the most lovely of all the floral ornaments of the north, is seen in great profusion; and if we understand aright, the natives give it a name whose signification is not unlike that of the appellation by which it is known among the Highlanders of Scotland, who, in Gaelic, speak of it always by the very appropriate name of 'drowned blades.' The wild myrtle, with its waxen leaves, was now also in full splendour; it grows in such abundance that the woods, in many spots, are one blush of flowers. This plant and some of its allied shrubs usurp the place occupied by our heaths in Scotland and England, little of these being seen here."

Remarkable Case of the Effects of Lightning on the Human Body; with General Observations on the Nature and Phenomena of Lightning. By John Davies, Surgeon to the General Infirmary at Hertford. Pp. 24. London, 1839. Longman and Co. Hertford, Staughton and Cobb.

THE statement of this singular case of accident from lightning is, we observe, published for the benefit of that benevolent institution to which the author is surgeon; and dedicated to one of its friends, Mr. Henry Cowper, who, from what we have been informed, seems to be to Hertford something like what the Man of Ross was to Ross. We are assured that Mr. Cowper, though not coming under the description of very rich, has had this pamphlet published at his own expense, and within the last six years given no less a sum than 12,000*l.* to the Infirmary. When we meet with such

good Samaritans, it is one of our most pleasant duties to set their example in the light of the world. Having done so in this instance, we shall simply refer to Mr. Davies for the particulars of the curious phenomena he describes.

"Many persons suppose that the most dangerous parts of a room during a storm are near a fire-place and near a window. There is some ground for such an opinion; but the increased danger does not arise, as is supposed, from the lightning running down the chimney, or coming in at the window. So far as that is concerned these places would be the safest in the house, for the electric fluid will not penetrate glass, so that it cannot enter at the window, if the window be shut; and, as the chimney is always full of atmospheric air, and air being a bad conductor of electricity, it is very unlikely that the lightning would run down the chimney. But the danger of those places arises from two different causes. About the fire-place there is usually a considerable quantity of iron, forming the grate, poker, tongs, &c., so that the lightning is attracted by these from the wall, along which it descends towards the earth; and, which is still a stronger cause, the bell-wire generally terminates near the fire-place, so that the electric fluid discharges itself from the point of termination of the wire, either in a direct line towards the ground, or else in an oblique current towards the grate and fire-irons; thus rendering such a situation highly dangerous. The risk of being situated near a window is not so much that of being struck by the lightning, as of its occasioning a *loss of sight*. The electric light, in an accumulated quantity, is so intense that in many cases it has instantly destroyed the function of the optic nerve which forms the immediate organ of vision. Similar effects have been caused by looking at the sun with the naked eye. The retina of the eye is adapted for only a certain degree of light, so that any refulgence suddenly applied to it is calculated to produce instant blindness. The safest place in a house during a storm doubtless is the cellar, for the chances are that the lightning will disperse itself in the ground before it arrives at that part of the house, unless there be some metallic substances to conduct or to attract it there."

The Rock. Illustrated with Various Legends, and Original Songs and Music, descriptive of Gibraltar. By Major Hort, 81st Regiment. With Drawings taken on the spot, by Lieutenant W. Lacey, 46th Regiment. Dedicated, by special permission, to the Queen. 4to. pp. 171. London, 1839. Saunders and Oiley.

WERE a regimental Mess stationed at Gibraltar to indulge in the young ladies' privilege of having an *Album*, the contents of this pretty quarto are very nearly what might be expected from the fact; provided always that proper critical discipline were enforced upon the contributors, and the more racy jokes of the service rigidly excluded. We have three Spanish stories, ten songs (several set to rather sweet airs), a dozen of illustrations of interesting places on stone, the whole set in a good-humoured dialogue among two or three officers walking about to make observations, and besides a good long *Latin* quotation from Burnet's "Theory of the Earth." To any position in the paths of literature the volume cannot aspire; but as a pleasing local record of circumstances connected with the Rock, it may be acceptable to those who have, like Major

Hort, spent some time on that memorable spot.

The Comic Latin Grammar; or, a Facetious Introduction to the Latin Tongue, for the Use and Amusement of Schoolboys. With divers Illustrations. 12mo. pp. 163. London, 1839. Tilt.

THIS is, indeed, a very amusing *jeu d'esprit*; and from both the text and the illustrations we have enjoyed several hearty laughs. It is a volume of fun; and we cordially agree with its writer, who says,

"The *Comic Latin Grammar* can certainly never be called an *imposition*, as another Latin grammar frequently is. We remember having had the whole of it to learn at school, besides being—no matter what, for pinning a cracker to the master's coat-tail. The above hint is worthy the attention of boys; nor will the following, probably, be thrown away upon school-masters, particularly such as reside in the north of England. 'Laugh and grow fat,' is an ancient and a true maxim. Now, will not the *Comic Latin Grammar* (like Scotch marmalade and Yarmouth bloaters) form a 'desirable addition' to the breakfast of the young gentlemen intrusted to their care? We dare not say much of its superseding the use of the cane, as we hold all old-established customs in the utmost reverence and respect; and, besides, have no wish to deprive any one of innocent amusement. We would only suggest, that flagellation is now sometimes necessary, and that whatever tends to render it optional may, now and then, save trouble."

In defence of his anti-lugubrious propensities we hear further:—

"It is not in literature alone that the tendency to the ludicrous is shewn. In many recent scientific speculations it is strikingly and abundantly obvious—some of those on geology may be quoted as examples. The offspring of the sciences—those pledges of affection which they present to art, almost all of them, come into the world with a caricature-like smirk upon their faces. Air-balloons and rail-roads have something funny about them; and photographic drawings are, to say the least, very curious. The learned professions are all tinged with drollery. The law is confessedly ridiculous from beginning to end, and what is very strange, is that no one should attempt to make it otherwise. Medicine is comical—or rather tragico-mical—the disparity of opinion among its professors, the chaotic state of its principles, and the conduct of its students being considered. No one can deny that the distribution of church property is somewhat odd, or can assert that the doings, at least of those who are destined for the clerical office, are now and then of rather a strange character. Political meetings are very laughable things, when we reflect upon the strong asseverations of patriotism there made and believed. The wisdom of the legislature is by no means of the gravest class, particularly when it offers municipal reforms as a substitute for bread. The debates in a certain House must be of a very humorous character, if we may judge from the frequent 'hear hear, and a laugh,' by which the proceedings there are interrupted. Our risible faculties are continually called into action at public lectures of all kinds; and indeed, no lecturer, however learned he may be, has much chance nowadays of instructing, unless he can also amuse his audience. Nor can the various public and even private buildings, which are daily springing up around us like so many mushrooms, be contemplated

without considerable emotions of mirthfulness. The new style of ecclesiastical architecture, entitled the Cockney-Gothic, affords a good illustration of this remark; but the comic Temple of the Fine Arts, in Trafalgar Square, is what Lord Bacon would have called a 'glaring instance' of its correctness. The occurrences of the day bear all of them the stamp of facetiousness. The vote of approbation lately passed on a certain course of policy is a capital joke; the tricks that are constantly played off upon John Bull by the Russians, French, Yankees, and others, though somewhat impertinent to the aforesaid John, must seem very diverting to lookers-on. The state of the drama may also be brought forward in proof of our position. Tragedies are at a discount; farces are at a premium; lions, nay, goats and monkeys, are pressed into the service of Momus. Even the various institutions for the advancement of morals have not escaped the influence of the prevailing taste. To mention that respectable body of men, the Teetotallers, is sufficient of itself to excite a smile. In short, look wherever you will, you will find it a matter of the greatest difficulty to keep your countenance. The truth is, that people are tired of crying, and find it much more agreeable to laugh. The sublime is out of fashion; the ridiculous is in vogue."

So, *vive* hilarity; even though, as in this instance, it stretches through and illustrates the entire grammar of the Latin tongue, beginning with the letters, and going right along the nouns, verbs, and all parts of speech, to rules of construction and prosody.

But a production of this kind must, like a schoolmaster of the olden stamp, depend as much upon *cuts* as upon other modes of inflicting instruction; and we have accordingly successfully endeavoured to have a sample of them "come again" for us. Only look how the adjectives agree with the substantives in *macer puer*, a lean boy; and *pinguis puer*, a fat boy: the first a miserable companion of Oliver Twist, and the last worthy of his namesake in "Pickwick."

And then "the differ" between *unus* and *alius*, though "*tu es unus alius*" is bad Latin for "you're another;" a phrase better expressed by *Tu Quoque*, or by the following graphic identification:—

But we are quoting Latin too soon for our very juvenile readers. To begin at the beginning, we must insert the (not their) first lesson:—

"*Is, es, id.*"

Always do as you're bid:—

which every donkey can decline, as may be heard any day on Hampstead Heath, or Wimbledon Common, in the sonorous

"*E-o! e-a! e-o!*"

Here it is, we can only do it sideways:—

And now we conclude with a moral lesson on *Concordia*, though we fear there is little morality in the illustration *how pleasant it is to see Relatives agree*:—

These are fair samples of a very amusing set of cuts, some of them not unworthy of a Cruikshank or a Hood.

Mrs. Postans' Western India.

[Concluded.]

In one of the visits to a native authority, viz. the Syud Abdoola, a very handsome fellow, and quite an Eastern dandy, we have an amusing touch of manners:—

"Some hours (says our author) were delightfully passed in taking numerous drawings of the temple and its remaining ornaments. And then came the necessity for refreshment before proceeding on our journey of research in Puttun antiquities. The baskets produced, we asked our cicerone, the graceful Abdoola, to join us. This he declined, but shewed many symptoms of curiosity on the appearance of a bottle of Hodgson's ale. After a thousand protestations that it contained no alcohol or aught else forbidden to a good Mohammedan, the Syud consented to make a trial of its virtues. Abdoola raised the tumbler

to his lips, and, after two sips, with a long-drawn inspiration between each, fairly emptied it at a draught, making a sufficient number of wry faces in conclusion, and charging his some not to touch the obnoxious beverage. Of the sincerity of his facial distortions we had a future opportunity of judging. Mohammedana fancy all wine, of whatever growth, must be madeira; of which scandal asserts their inordinate fondness. Abdoola denied having any in his cellar, but confessed to the possession of brandy, which he used, he said, to steep his gun-caps in."

But he did not so use Hodgson's admirable pale ale, the universal and favourite beverage of our vast Indian territories. On the contrary, Mrs. P. afterwards relates:—

"Having seen and admired all the wonders of Puttun, we took leave of the graceful and courteous Abdoola, with mutual expressions of regard and remembrance, and returned to Varrawal. We had scarcely retired, when an Arab horseman galloped up to our tents with 'Syud Abdoola Sahib's salaam, the ale had proved so extremely serviceable to his health, he should feel grateful for any we could spare.' Unfortunately, our canteen was en route; but, with all sorts of good wishes, we promised an early compliance with the Jemmedar's request."

We have no doubt the handsome Jemmedar, as soon as he reads this, will enter upon the needful correspondence with our friend, Mr. Abbott, under whose direction this most wholesome and palatable of drinks, especially for a tropical climate, is brewed and distributed over all the warmer regions of the earth which we inhabit. But another worshipped thing at Puttun is also deserving of a notice; though kept in a cave and not in a cellar:—

"An hour's ride (we are told) brought us to a sweet shady spot canopied with the broad leaves of numerous sacred trees, between whose leafy coverts glimpses might be caught of the cool waters. It was a retreat a Hamadryad might have envied. The early Buddhists of Puttun had probably anticipated us in our admiration of this quiet and secluded spot. We found near it two caves; one almost too small to admit the most attenuated ascetic: so the other, the descent is by three low steps, which lead to a dark apartment containing a rudely sculptured image of Devi. The first cave, we understood, led to a succession of small chambers, each descending lower than the other. Its darkness was impenetrable; yet I felt considerable anxiety to fathom its mysteries. A lad, bearing a small light floating in a saucer of oil, with difficulty entered the cave; and Abdoola, with infinite compression of his fashionable attire, followed him with a gallant desire of satisfying my curiosity by his personal observations. On his reappearance, gasping and half suffocated, I anxiously enquired what he had seen. 'Jehannum, was the curt, monosyllabic answer; 'A name we never mention—never to ears polite.' On inquiry, I found the only idol of this dark and dank receptacle was a circle of stone, resting on what seemed intended to personify a pair of human legs. Whether this circle had originally any reference to the worship of the Lord of the Moon, in ancient Puttun, would be difficult to determine."

Although, as we stated in our last, we had not long since gone over the grounds of Girnar with a most intelligent writer, yet are Mrs. Postans' sketches and observations so interesting that we must make room for a few selections:—

"Without the large temple of the Nann-

nath are the beautiful columns of an unroofed sacred building; and the eye, travelling between them, rests upon one of the most remarkable features of this magnificent scene. From a perpendicular scarp, which rises from the plain to the very summit of Girnar, juts a single block of granite, slightly inclining towards the precipice. As the Bhiru Jhup,* or 'leap of death,' this is the chosen spot from which zealous devotees cast themselves, in the assured hope of the doctrine of transmigration, that they will enter their next state of being in the enviable rank of powerful rajahs. The ascent to this fatal point is made from the back of the rock; but its steepness renders it apparently inaccessible. The poor devotee, however, determined upon self-destruction, climbs from point to point of the slippery granite, grasping every irregularity to assist his progress, when, having gained the summit, he places a cocoon (unstable support!) with mantras,† upon the rock, and, standing on it for an instant, with outstretched arms, leaps joyfully to his doom. But a few days before our arrival, a devotee had cast himself from this spot into the ravine, where his body was found nearly devoured by eagles and beasts of prey. Fearful is the height and position of the Jhup, considered as a spot marked for self-sacrifice; but magnificent is its fine and clearly distinguished outline, as it appears in bold relief against a calm blue sky or is crowned with a lurid and glowing thunder-cloud, when the torrents rush down from the mountains, and the roar of falling waters mixes with the wild scream of the soaring eagles. As if to contrast with the rugged and defined outline of the 'leap,' two small and fairylike temples crown the height immediately behind, surmounted with gaily streaming flags. Below it is a well, celebrated for the purity of the water, called the Hasti Pat, or Elephant's Foot. This name is derived from an octagonal stone in the centre, bearing some faint resemblance to this substantial member. A few plantain-trees are planted near it, and flourish well amidst the blocks of granite. * A Gosaen inhabits the temple at the summit of the Guru Dattara; but, notwithstanding the steps are continued, the ascent was considered too dangerous to be attempted by our party, who were more particularly disinclined, by a knowledge of the fact that, only five days before, the body of a pilgrim was seen, who had fallen in an attempt to gain the temple. A little grain was found, tied in a cloth, about his waist, the only store for his long journey; his body was sadly macerated, and too much decayed for removal. The Gosaen said he was alone when ascending the peak, and fell from near the summit. Notwithstanding the danger of the ascent, and its fatal results, pilgrims may be seen, crowding the way towards the Guru Dattara, from all parts of the Peninsula of India. A small tablet, let into the side of the temple, records that the steps were the work of a wealthy Banian, from the town of Boondee, in Rajpootana. Below the first peak is a valley, rich in wild mango-trees. Amongst their leafy coverts rises a temple sacred to Huniman; and the attendant Gosaen feeds flocks of monkeys, who, morning and evening, with all the appetite of mountaineers, literally cover the dome of the temple. Charity, however, is not confined to the monkey tribe of Girnar; near the temple of Neemnath is a sadowut, or store, from which pilgrims receive a gratuity of half a pound of parched grain each. A Surashtra Banian subscribes three hundred rupees annually to this benevolent

* "Bhiru, the son of time." † "Prayers."

object. Many of the poor devotees, who visit Girnar, depend upon this as their only sustenance, combined with wild figs, and a berry, of pungent quality, which grows on the wild peepul-tree. The natives sometimes complain of this berry producing headach; and the corinda is usually eaten with it as a corrective. The Girnar is the resort of numerous ascetics, who, resigning the world, pass years in its still solitudes. Hearing, in one of my walks, the shrill sound of a shunk, I looked long on the scene around me ere I could observe the player. At length, my eye caught a naked ascetic, perched upon a projecting rock, immediately in front of a small cave, hewn in the granite scarp. His name, he told me, was Ramdasjee: he had lately travelled alone to Girnar, from Jugger-nath, in Orissa; he intended to remain on the sacred mount during the monsoon, and should then travel onwards, he knew not where, but 'wherever it pleased God.' I inquired whether he had no personal wishes connected with the matter, and he said, None; his wishes were, to act in accordance with the commands of God. This poor creature offered a very enviable instance of resignation and contentment. A few roots, piled in a corner of the cave, sufficed for his provision; a lotah, for water, and a little firewood, gathered in the jungle, comprised his property; and when he, at any time, received trifling alms, he himself contributed to the sadowut of the fort. Another ascetic resides near the Bhiru Jhup, with a brother hermit, lately arrived from Dwakanath. The forehead of this man is marked with the trisool of Siva, in the sacred chalk of Bate. His long black hair is plaited curiously with Tulsi beads, and his arms bear marks of the sacred lotus, bestowed by Surashtra brahmins. All this religious array causes him to be regarded as an individual of especial sanctity, and having acquired a little sum by begging, he had laid his property out in flour, and established a minor sadowut for the benefit of his poorer brethren. This man is a Gooroo, or teacher of his sect, and during my visit to him a Chelah came to make his offerings. Setting a few grains of rice upon the threshold of the temple, he blew a large shunk, made pooja to his Gooroo, and departed with a blessing."

In the neighbourhood of Junagarh (see our last No.) is a spot held sacred by the Mahomedans, and known by the name of Datar, or the Giver.

"The power of the Datar is supposed to be peculiarly shewn upon this spot; and his aid is here, it is believed, most successfully entreated. Numerous poor people, from all parts of Western India, when afflicted with leprosy, travel hither, and enter into vows to remain until the merciful Datar vouchsafes a cure. If their sufferings from this cruel disease are of long continuance, suicide is commonly the result; the belief being general, that in the event of a leper dying a natural death, the disease descends to his posterity. A few days before we visited the sacred hill, an aged leper desired permission from the British authorities to cast himself into the sea at Mangrore; this being refused, he left Junagarh, and about three miles from the city, the aged sufferer caused himself to be buried alive; his only son, for whose immediate sake the act was committed, covering the gray hairs of his afflicted parent with an earthen water vessel."

How difficult it is, whilst also risking much by offending their religious opinions and prejudices, to interfere with the superstitions of the natives, is demonstrated by this simple fact—a more horrible death and parricide substituted for

an act of self-immolation. But we have done enough to direct the attention of our readers to these very agreeable volumes; and we have only to add, that the concluding chapters on "Fortune-hunting in India," on the "Hindoo Festivals," "Dusrah" "Dewalli," "Hooli," &c. are quite worthy of the rest. "Scenes in the Deccan" are traced with much spirit; and a "View of the present condition of Western India" is full of enlightened remark and information.

MISCELLANEOUS.

A Gift from Fairy-Land: Tales and Legends. One Hundred fanciful Engravings. Pp. 174. Tilt.

THE engravings are quite charming, from the embellished title to the "Good Night." We have seen nothing of the kind really more full of fancy or more playful and pleasing. The tales are the product of America; but, in spite of an ingenious and clever preface, we are obliged to say that the Fairies have not yet made a settlement in the Far West. No, they belong to the Old World, not to the New. They are loath to emigrate, to forsake their ancient haunts, to leave the silent nooks and rustic dells, for expansive forests, oceanic rivers, and trade and population pushing right a-head. We fear that steam and railroads may ultimately drive them from England; but even then they will eschew the United States, and probably seek some retreat in some odd corners of the Continent, the furthest from the highroads of tourists, fashionable watering-places, civil wars, and the conflicts of politics and antagonist principles. Meanwhile their pictures in this little volume will be a treat to those who love them and the graceful arts.

The British Almanack of the Society for the Diffusion of Useful Knowledge for 1840. Pp. 359. London: Knight.

THE care bestowed upon the useful portions of this Almanack, which are consulted with reference to public business of all kinds, lists of official interest, and ample information on the usual topics which find place in such publications, displays so much diligence and accuracy, that it merits our most cordial approbation. To these matters ninety-six pages are given; and to the Companion, or Year-book, bound up with the Almanack, two hundred and sixty-three pages. In the latter division, we find a mass of intelligence connected with the Calendar, the natural phenomena of the period, with chronology, geography, statistics, legislation, and public improvements. The details are brought down to the latest period; but we have, in consequence, a curious example of the changeability of our legislation; for, at p. 261, we have the Treasury minute for the regulation of the postage dated 12th November, the editor not having time, before publication, to tell his readers that the whole of that has been rendered nugatory, null, and of none effect, by the promulgation of a later minute. The paper on public buildings, &c., is temperately and judiciously written. We wish sincerely there had been fewer things to find fault with, and more to praise; but truth would not allow of it. The most important paper, however, is on the approaching census of 1840, which alone is worth more than the price of the volume.

ARTS AND SCIENCES.

ROYAL GEOGRAPHICAL SOCIETY.

NOVEMBER 25. Mr. Greenough, F.R.S., President, in the chair.—The Earl of Grosvenor and seventeen members were elected.

The following communication was read:—
 'Outline of a Route through the Panjab, Kábul, Kashmir, and into Little Tibet, in the Years 1834–8.' By G. T. Vigne, Esq. Quitting England in October 1832, Mr. Vigne proceeded to Bombay, where his health induced him to seek the north of India. He informs us, "After travelling a little in the mountains between Simlah and Misúri, I descended into the plains to visit the Taj, at Agra; whence having at last, after a great deal of delay, obtained leave to cross the Sutlej and proceed to Kashmir, I started direct for Lud'yannah. Crossing the river at Belaspúr, below the fortress of Maláun, and attended by a servant of the Mahá-Rájah Ranjit Singh, to whose kind treatment of me I am happy to bear testimony, I proceeded along the skirts of the lower mountains to Jambú and Rajawar, where I joined the great road of the Moguls, and entered Kashmir at Shapiyán. Altogether I have had the good fortune to reside a much longer time than any other European in this valley; have passed through it three times in my visits to Tibet, and may say generally that I have seen all that is to be seen there, having traversed the greater part of it several times. I am in possession of a large map of Kashmir, on a scale of two miles to an inch, connected with the Indus on the north, and shewing many of the passes which I have traversed two or three times. Having received a most cordial invitation from Ahmed Shah, the king, or 'Ergylo,' of Little Tibet, I struck over the passes from the Wulur lake; met him close to the elevated plain of Deosoh, or Deosáih; was conducted to his capital by him, and treated with the greatest kindness and respect, as having been the first Englishman who had paid him a visit. So fine a field induced me to pay him a second and a third. I made an attempt to reach the Nubra Tsoh, whence flows the great northern branch of the Indus, but was (although I entered the valley of Nubra) foiled by the treatment I experienced from the insolent servants of Gulab Sing, of Jambú, one of the rajahs, who, having been raised from the rank of common soldiers by Ranjit, have eventually become too powerful for their master, and prevented my moving forward, in the teeth of the positive orders of the Mahá Rájah. A second attempt about this time last year to reach the source and the frontiers of Yar-kand, by another path, failed in consequence of the new snow falling upon the passes three weeks earlier than the usual time. I returned to India through Kashmir and the mountain states and towns on the north of the Panjab, some of which, such as Chamba, Badrawar, Dodah, &c., have never been, I believe, previously visited by any European traveller. I have also, to the best of my ability, mapped the whole of the last-mentioned country, and connected it with Lud'yannah; so that the map I have made is that of the whole of Alpine India on the north of the Panjab, including Kashmir, Great and Little Tibet, the course of the Indus, more or less correctly, from Ladak to the plain of Peshawar, and the whole of the hill country between Kashmir and Lud'yannah. The foss and ruins on the Sikander-ke-Dhar, or Hill of Alexander, mentioned by Mr. Moorcroft, I seriously believe to be the remains of the altars of Alexander. The Rájah of Mandeh assured me that, although the place has frequently been used as a fort, yet that the ditch, ruins, &c., had always existed there from time immemorial. I found there on a stone an ornament which might have passed for a roughly-carved Grecian rosette, which I

copied. I went to Ghazni with the Lohani caravan, along the course of the Gomul river, and thence proceeded to Kábul by a by-road, seeing the famous dam built by Mahmúd, and called the Bund-i-Sultan. I remained at Kábul three or four months, and received every civility from Dost Mohammed Khán, and his brother, the Nawab Jubar Khán, whose guest I was. I made several excursions in the neighbourhood of Kábul, but did not cross the Hindú Kush; the requisite permission from Murád Beg, of Kundús, not having been obtained, chiefly because the present for him, which I ordered from Calcutta, was unfortunately not forwarded from Lud'yannah till two months after it should have been. Upon my arrival at Lud'yannah, in last March, I immediately descended the Indus to Bombay, and reached Europe by the overland route through Egypt. Having thus given a general outline of my travels, I proceed to relate something about the Dardú country. The valley of Kashmir lies about N.N.W. and S.S.E.; if its greater axis were continued, it would cut right through the Dardú country; the snowy ranges seen in my panoramic view of Kashmir are, I believe, those which rise between the Indus and the Krishn Gangá, the Dardú country lying at their feet on the left or eastern bank of the Indus. Its latitude, that is, the latitude of its centre, may be about twenty or twenty-five miles below the junction of the Astor, or Hasorah river, with the Indus, which will make it about 34° 48', probably. I have seen it from a mountain immediately overhanging the junction of the Astor river with the Indus; and whence, in fact, I traced with great ease the whole course of the Indus, nearly down to the plains. The stream itself is visible for not less than fifty or sixty miles. Astor is, strictly speaking, in the Dardú country; but, as Astor belongs to Ahmed Shah, it is always specified by its name when speaking of it. The country of Dardú proper, when spoken of, consists of three or four of the numerous wild states that border on the Indus from Astor downwards. I have the names and positions of all of them, but Chilas (in particular, I believe), with Tor, Jelkot, Palas, and Koli, form the Mulk-i-Dardú. As to their towns, I am not aware they have any, I should think nothing but small villages; they are a wild and lawless set; and, whilst a portion are employed in agricultural pursuits, the others are known and feared as marauders. The thieves whom Ahmed Shah of Iskardó cut up immediately before I met him, just below the plains of Deosoh, were plunderers from Palas, who had penetrated through the mountains, and were carrying off men, women, children, and a large number of cattle, from one of his villages. They own no authority but that of their mullahs; are quite independent of each other; and are Sunni Mohammedans. They wear a large ring of iron on the wrists, round which the fingers are doubled, and then used in general battles in the same manner that the ancients used the cestus. The Dardú country lies to the south of the great Himalaya chain. The direction and distance of Iskardó from the Wulur Lake is about N.E. sixty miles. The direction of Iskardó from Durás itself will be northerly; it is about a fortnight's march from it; the Sind pass being much longer than that by Bunderpúr and Gurás, which occupies but eleven days. Iskardó itself, like the other valleys in Tibet, is an open sandy flat, eighteen miles long, by actual survey, surrounded by enormous mountains, and washed by the Indus. The rock, or kalah, is about eight hundred feet high, and was once evidently washed on both sides by the

Indus, but now only on the western and northern. I have once thought it was the rock of Aornos, but it is too far in the mountains, and too barren of trees, to warrant belief of it. Kamlah Ghar in the Mandeh country, washed by the deep Biyas, answers the description of Aornos better than any place I know (singularly so, I may say), but it is on the wrong side of the Indus. Tara Ghar (that is, Satara Ghar, or the Star's House), near Napúr, in the Panjab, is another such fort. Dair will, I think, be found to be Aornos, if we are to believe it to be on the west of the Attak. It is a strong mountain fort, down which runs a river of the same name, which joins the Kábul river at the Haht Nagar on the plain of Peshawar. I obtained four small vocabularies of different languages, Kashmirian, Little Tibetan (which differs considerably from the Ladakí), Chitrali, and the Gangri or Ghilghití, which, I am told, much resembles the Hindustani. The mountains of Tibet are usually of much the same elevation, from 15,000 to 16,000 feet; but from any open summit, such as that at the junction of the Astor valley with the Indus, whence there is one of the finest views in the world, several mountains are seen in different parts that rise far above them, such as would make Mont Blanc look small beside them. The Haramosh (all sides) mountain, in the valley of the same name on the Indus; the Mus Tak range, which is seen in the distance; and the stupendous peak of the Nangí Parbet (the naked mountain), or Di'yarmal, as it is called by the Little Tibetans, between Astor and the Dardú country, are of this description. I have seen the same magnificent view from the summit of the passes between Ladak and Nubra, whence the Mus Tak presents a most noble appearance. There is a pass from Little Tibet towards the Mus Tak, up which Dr. Falconer ascended for several days further than I have been; and poor Dr. Henderson visited Nubra before I did, and arrived at about the same distance. He was obliged to travel as a Sayyid, and the fatigues and privations that he underwent were too much for him, and he died in my presence at Lud'yannah. The public are great losers by his death."

Mr. Vigne's paper was illustrated by his map of the valley of Kashmir; by various specimens in zoology and mineralogy; and a portfolio of beautiful drawings, consisting of portraits of the most eminent natives; figures of animals and fishes; and characteristic sketches of scenery, including a panorama of the vale of Kashmir, and another of the city of Kábul.

GEOLOGICAL SOCIETY.

NOVEMBER 20. Rev. Dr. Buckland, President, in the chair.—Four communications were read.—1. 'An Extract from a Letter addressed to Dr. Andrew Smith by Mr. A. G. Bain, dated Graham Town, Cape of Good Hope, Feb. 21, 1839,' announcing the discovery of the skull and piths of the horns of an ox in an alluvial deposit on the banks of the Modder, one of the tributaries of the Orange River, and forty feet below the surface of the ground. The piths measured, in the direction of their curvature, and including the breadth of the os frontis, eleven feet seven inches, but it is calculated that about five inches had been broken off each point. Their circumference at the root was eighteen inches; and the orbits are described as situated immediately under the base of the horn. Other portions of the head and five molar teeth were found at the same time.—2. 'On the Origin of the Vegetation of our Coal-fields and Wealdens,' by J. T. Barber Beaumont,

Esq. F.G.S. "A visit which I made during the last summer to the fossil trees recently discovered apparently standing as they grow, and rooted in an upper seam of coal in the line of the Bolton and Manchester Railway, has confirmed me in an opinion which I have always entertained, that the adopted theory of our coal-fields and wealdens being ancient deposits of trees in rivers and estuaries is erroneous. The visible appearances to the contrary are now so many, and the anomalies they form to the doctrine taught are so puzzling to young geologists, that I think it high time that this theory should be reconsidered. I think the facts prove that in no instance is it likely that these formations arise from drifted trees sunk to the bottoms of mighty rivers and estuaries, but, on the contrary, that the coal vegetations grow where they are found, and that these places were the surfaces of small islands. The adopted theory supposes that the coal-fields occupy the bed of 'a mighty river or estuary,' into which trees have been drifted and deposited; and that the alternating strata of coals and shale have resulted from successive deposits of plants, and of clay, sand, &c. Drifted trees in the deltas of some of the largest rivers are referred to, as typical of these ancient masses of vegetation; and it is observed that the coal formations and wealdens extending over Great Britain and the north of France do not much exceed the extent of the delta of the Mississippi or the Niger. The first observation that strikes me on this theory seems fatal to its existence *in toto*. A mighty river or delta could only have existed in a mighty continent; a small continent would not do. There is no very mighty river or delta in Europe. Then the coal strata (near Newcastle), with the intermediate shale, are collectively three hundred and eighty yards in thickness. The first deposit must therefore have been in a river or delta of that depth, which is about six times the mean depth of the German Ocean! What a continent there must have been to have produced a river or delta so wide and so deep! Such a continent, we might reasonably expect, would leave an abundance of fossils on its surface as well as at the bottom of its great river. We ought to see fossilized timber trees and bones of continental quadrupeds for hundreds of leagues around; but, with a few exceptions of small extent, not a single timber tree, not a trace of a land animal, is anywhere discovered. This absence of land fossils, I submit, is proof positive, geologically speaking, that there could have been no extensive continent within which the supposed river or delta was formed. But the proof goes further: all this land, for hundreds of leagues around the coal and the wealden vegetations, swarms with the remains of marine animals in addition to marine plants, and nothing else. It is visibly ancient sea-bed. But let us look at the composition of the actual coal-fields,—not a large timber tree or bone of a land quadruped is to be found in them; all that we see are masses of fern, rushes, canes, and the like, except in the upper strata, in which coniform trees are found, some of them in their growing position; but the principal beds extend for many miles nearly of a uniform thickness, generally of only a few feet, and sometimes of only a few inches. It is truly stated, 'The surfaces of these strata shew the bending branches, with their delicate apparatus of foliage, almost in the beauty and vigour of their primeval life.' But if the strata were formed from drifted and sunken timber trees—and such, I submit, would not have failed to be supplied by an extensive continent—some mas-

sive trunks of trees would have occurred to disturb the uniformity of the thin coal-seams. The superincumbent pressure did not flatten 'the festoons of graceful foliage' or 'bending branches,' for they arise above the coal strata and mingle with the shale over them. That pressure, therefore, could not have crushed the trunks and roots of timber trees to obliteration, had any existed, within the thickness of the coal-seams. But the evenness of the coal strata is unbroken by any trunks and roots of timber trees. This, I think, completes the proofs that the coal-seams could not have been composed of drifted trees sunk in the depths of a mighty river. There is also natural evidence against the vegetations being formed from sunken trees of any kind, in the vigour and freshness of their appearance. While in that state they would not have sunk at all, but have floated out to sea; as at the present day, timber trees from America drift on our own coasts. To have sunk in the deep river, they must have first rotted! But this could not have been, for the foliage is found with the 'freshness and vigour of primeval life.' Moreover, drifted trees are stopped in deltas, from the shallowness of the water being insufficient to float them on. We know of no deposits of trees in deep water. An eminent geologist, seemingly aware of the necessity of providing a continent for this great river or estuary, supposed that it might have been in the German Ocean; while another eminent professor, to whose labours the public are greatly indebted, finding that area too small, crosses to the other side, and speculates on the possibility of its having been in the Atlantic Ocean. But the speculation of there having been a mighty continent in an ocean far off to the east or to the west of our great river or estuary is of no use whatever. To help the case, the continent must actually have encompassed the river or estuary; but all around the supposed river deposits for hundreds of leagues has been visibly sea-bed. There can be no river, mighty or minute, in a sea-bed. Further evidence and argument in disproof of this theory therefore seems unnecessary. In offering an opinion upon what really has been the origin of the coal-fields and wealdens, I shall be more diffident and very brief. To my understanding they appear to have been swampy islands. It is reasonable to believe, that on the first elevation of the rocks, while some stood high above the ocean, others would be nearly level with its surface, and that disjointed fragments and drifted clay, sand and shells, would accumulate into islands. These would give rise to a profuse growth of marsh plants, which decaying and regenerating, others would accumulate, in the manner of peat-bogs, to various heights; and ferns, palms, calamites, and coniferous trees, in some positions, would acquire a gigantic growth. It seems not unreasonable, also, to conceive, that after the great bursting up of the crust of the earth, large cavernous hollows would be left, and that there would be many settlements in the broken crust before it finally subsided. An island sunk beneath the ocean's surface by one of these settlements would be covered with drifted clay, sand, and shells, and the tall cane trees upon it, if any, be broken down by the waves and detritus. New accumulations would again raise its surface above the ocean, somewhat like our coral islands. A fresh growth of plants would then take place, and then another settlement, and so on, to the number of coal-seams and shale that compose a formation. The coal-seams and shale in some places, as near Newcastle, are unusually repeated; but

repeated settlements of the surface would be no more than consistent with the extraordinary uplift they succeeded. In some cases, also, depressing of the surface may have been followed by partial uplifts. Of such sightings of the earth we have examples even in our own time. The temple of Serapis is not one of the most modern. The wealdens are still more easily recognised as ancient islands raised after the coal-making heat and influence had gone by. We have only to suppose the coal and wealden herbaria to be as they most frequently present themselves to our eyes—the growth of the lands where we find them, instead of imagining them to be drifted deposits from an inconceivable continent, to the bottom of a mighty but impossible river, and all the appearances about them will cease to perplex."

3. 'On the Fossil Fishes of the Yorkshire and Lancashire Coal-fields,' by Mr. W. C. Williamson. Within the last four years, the coal measures of these counties have assumed a zoological importance, which previously they were not supposed to possess. In Lancashire, ichthyolites have been lately found to pervade the whole of the series, from the Ardwick limestone to the millstone-grit; and in Yorkshire they have also been obtained in great abundance. On comparing the specimens procured at Middleton Colliery, near Leeds, with the fossil fishes of Lancashire, the author detected the following as common to both coal-fields—viz. *Diploodus gibbosus*, *Ctenoptichus pectinatus*, *Megalichthys Hibbertii*, *Gyracanthus formosus*, also remains of apparently species of *Holoptichus* and *Platysomus*; but he has obtained some ichthyolites in the Yorkshire field, which he has not seen in the Lancashire; and he is of opinion that the latter deposits are characterised by the greater prevalence of Lepidoid fishes, and the former, by Sauroid. These remains, except in the case of the Ardwick limestone, always occur in highly bituminous shale, and they are most abundant where it is finely grained, and, in general, where plants are least numerous. This distinction in the relative abundance of ichthyolites and vegetables, Mr. Williamson conceives, may throw some additional light upon the circumstances under which the coal formations were accumulated. The fishes are found chiefly in the roof of the coal, rarely in the seam itself, and not often in its floor. Mr. Williamson, in conclusion, makes some remarks on the manner in which ichthyolites are associated with the other fossils of the coal measures. At Burdighouse they occur in the midst of fresh-water shells and cypris; at Coalbrook Dale, with marine testacea; in the lower coal measure of Lancashire, not far from the beds containing *Goniatites*, *Listeri*, and *Pecten papyraceus*; higher in the same field, and in Yorkshire, they are associated with fresh-water shells; at Middleton, with *Singula*; and at the top of the series in Lancashire and Derbyshire, with *Mytili* and *Melania*.—4. A paper 'On the Geology around the Shores of Waterford Haven,' by T. Austin, Esq. As the object of this communication is to describe topographically the structure of the shores of Waterford Haven, its details do not admit of abridgement. The formations composing the district are mountain limestone, a conglomerate, clayslate, and trap; the limestone and conglomerate constituting the greater portion of the east side of the haven, and the conglomerate the opposite.

ROYAL ASTRONOMICAL SOCIETY.

SIR JOHN F. W. HERSCHEL, Bart. President, in the chair.—Communications were read:—1. 'On the Determination of the Orbits of

Comets, from Observations,' by G. B. Airy, Esq. Astronomer Royal. The author begins by remarking, that the generality given by Laplace to the investigation of the orbits of comets is so complete, and the variations on the method introduced by other writers so numerous, that, as regards generality and facility, the subject may probably be considered as exhausted. The method which is developed in the present memoir professes to be merely a modification of Laplace's method, directed by considerations of a purely practical nature, which are known to the working astronomer; but which, probably, have not occurred to the distinguished mathematicians who have laboured on the theoretical difficulties of the problem.—2. 'Extract of a Letter from Professor Schumacher to the Astronomer Royal, relative to the Determination of Differences of Longitude, by Observations of Shooting Stars.' M. Schumacher states that, although observations of shooting stars have long since been proposed by Mr. Benzenberg as a means of determining differences of longitude, no attempt has yet been made to carry the plan into practice. With a view to ascertain the degree of exactness with which such observations can be made, he resolved to make some trials on the night of the 10th of last August. He preferred to observe the extinction of the meteor, because its apparition gives warning, and in some measure prepares the observer for the phenomenon. Having given no notice of his intention to other astronomers, he had no expectation of obtaining corresponding observations; but was agreeably surprised when he subsequently obtained them from Bremen, Breslau, and even Königsberg. They did not give very accurate differences of longitude, because the observers at those places had observed the apparition and not the extinction; and because, not having the same object in view, they did not ascertain the equation of the clock with precision. Nevertheless the observations gave approximate differences, and shewed that the method is practicable.

Asiatic Society, November 18.—Professor Daubeny explained the new views with respect to the foundation and development of plants, which have been brought forward by Brown, Mirbel, Schleiden, and other botanists of the present day.—1st, On what precise method do the stamens operate upon the pistils when they cause fecundation to take place? And, 2d, What is the analogy subsisting between the mode of fecundation and development in flowering plants where sexes exist, and in cryptogamous ones where they are not discoverable? The first of these inquiries has been elucidated by the researches of Brown, of Brongniart, of Ehrenburg, and others, and is well known. The second inquiry, as to the analogy subsisting between flowering and cryptogamous plants in these particulars, has been investigated by Mirbel, in France, and more lately by Schleiden, in Germany. The former observed new cells originating out of those already existing, in the case of the *Marchantia*; whilst the latter appears to have shewn that a process, the same in kind, takes place in the pollen-tubes, emitted from flowering plants at the very time they reach the ovary and impregnate it, as well as in the cells of the plant in the subsequent stages of its existence. According to him, each cell, whether it be in the pollen or in the plant generated from it, contains a portion of starch, which is capable of being converted into nutritious matter at the time it is required. This conversion having

taken place, a dark spot is perceived in the coats of the cell, and from this spot a new cell is seen to be protruded. This dark spot being, therefore, the germ of the cell, is called by Schleiden the *cytoblast*. The new cell, when generated, gives birth in its interior to new cytoblasts, which again generate new cells; and thus a series of cells is produced, one within another, until the external one is ruptured, and its contents are enabled to escape, and thus to obtain their natural development. The newly formed cells are of extreme tenuity, but new matter is afterwards deposited within the interstices of that originally formed, until they gradually acquire firmness and consistency. According to this view of the subject, the reproduction and subsequent development of the more perfect plants would appear to be conducted fundamentally on the same plan as that of cryptogamous ones: in both instances the process commencing by the generation of a new cell in the interior of one already existing, each cell maintaining, as it were, an individual existence, and differing only in possessing, in a higher or lower degree, a principle of independent vitality. From Schleiden's researches, too, another inference would seem to follow: namely, that the embryo exists in the pollen, and not in the ovary; the office of which latter organ would therefore seem to be merely that of furnishing to the young individual a receptacle and nourishment. This position, however, is disputed by Mirbel, who adheres to the old doctrine on this subject.—*Oxford Herald*.

METEOROLOGY.—STORM AT BERMUDA.

To the Editor of the Literary Gazette.

SIR,—Permit me, through the medium of your valuable journal, to call the attention of your meteorological readers to the interesting circumstance that the aurora borealis observed at Bermuda on the 3d of September of this year, and described in the *Literary Gazette* of the 23d instant, was also seen in London and its vicinity on the same occasion, presenting precisely analogous phenomena, and (allowing for the different meridians) having been apparently simultaneous.

The same "fine, strong, white light, extending from N.E. to N.W.," occurred in both places; the same "shifting streams of bright white light," the same "change to a red tint," and appearance "like the reflection in the sky of a distant and extensive fire." In our metropolis, indeed, according to the public prints, several fire-engines issued forth in quest of a supposed distant conflagration. The duration of the aurora was longer with us than at Bermuda, having lasted for six hours; but the time of its first appearance here was before sunset in the meridian of Bermuda. It commenced at this place at nine P.M., at which hour I observed the "northern dawn" gradually rising, of a pale greenish hue, and resembling a fine morning dawn. Coruscations shortly afterwards made their appearance, not, however, remarkable for their brilliancy, until about midnight, when they became much more vivid; though the aurora was most splendid from one to two A.M. on the morning of the 4th, and at three A.M. it faded away. At Bermuda, where it commenced at eight P.M., the greatest brilliancy appears to have been at ten P.M., and the whole to have faded before eleven. Thus, as far as these rather vague observations enable us to decide, the time of its appearance closely agreed with the difference of four hours in the meridians of the two stations.—I am, &c.

Clapham, November 26th, 1838.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

Oxford, 21st November.—The Rev. J. Pest, M.A. of St. Peter's College, Cambridge, was admitted of audience Bachelor in Civil Law, by Commutation.—F. Nicholas, Esq. Wadham College.

Doctors of Arts.—Rev. M. Mills, Christ Church; W. Cope, Trinity College; C. Mitchell, Wadham College; Rev. J. S. Utterson, Oriel College.

Bachelors of Arts.—R. Dawson, Wadham College, Grand Compounder; S. H. Northcote, Scholar; R. Hobhouse, Balliol College; G. W. Hutchins, E. Bradley, Magdalen Hall; W. Kay, Scholar of Lincoln College; M. Ametie, Exeter College; W. H. Anderson, Scholar of University College; G. O. Hughes, Worcester College; W. J. Bennett, St. Edmund Hall (incorporated from Trinity College, Dublin.)

EGYPTIAN PAPYRI.—BRITISH MUSEUM.

Anastasi Collection.

THE Anastasi Collection, which was formed by Signore Anastasi, consul in Egypt, and has lain some time at Leghorn, has at length been unpacked. It was purchased by the Trustees of the Museum at the price of 1500*l*. The principal objects for which it was acquired were the historical papyri, which are now in the process of unrolling, and which, there is every reason to suppose, were written during the reign of Menephtah the Second, the successor of the Rameses the Great. These are written in a bold, legible, hieratic character, and, although deficient in part, apparently contain a kind of chant or strain in celebration of the victories of this King of Kings; they record his conquests over the Ethiopians and the Negroes, and the divisions (query, metrical?) are indicated by red dots placed over the tops of the lines. In their tenour they are analogous to the papyri of M. Salvolini, which have been analysed by M. Salvolini, although not in so satisfactory a manner as the importance of the subject demands.

The value of these historical papyri was not known to the proprietors of the Collection while it was at Leghorn, and they were actually given in, although they are well worth the whole sum paid; and the Museum may now boast of being the first in the world for Egyptian collections: it possesses the Rosetta Stone, the Tablet of Abydos, and all the historical papyri in Europe. May not the hope be held out that some savant, who possesses time and taste for their search, will apply himself to the elucidation of these documents? Besides the historical papyri and several others of minor interest—some Greek—the Collection comprises two sarcophagi, one of a personage named Savaki, a sacerdotal functionary, probably of Memphis; and the other of a high officer of state, athlophoros, &c., named Pihon, probably made during the epoch of Rameses the Great; these monuments, with a double calcareous statue of a man and his wife or sister, in the best style of Egyptian art, now remain in the anteroom of the Phigaleian Room. The other calcareous objects of the Collection consist of steles of funeral tablets of functionaries and individuals, deceased during the reign of the sixteenth and seventeenth dynasties, many of them bearing the names of the monarchs during whose reign the person died; among them are the monuments of Osertasen the First, Osertasen the Second, and the Ammonemeh. These monuments, which the visitor easily distinguishes by an archaic cast of work, must have been probably excavated from Abydos when the kings of the sixteenth and seventeenth dynasties were driven to Upper Egypt by the irruptions and conquests of the Shepherd races; they are supposed to be contemporaneous to the bondage of the Jews, and they exhibit the purest specimens of the Egyptian art. Some of the steles in bas-relief manifest a delicacy of execution and a purity

of colouring which approach in their way the effects of Greek art; and no one, with any feeling for the progress of the arts, can regard these masterpieces, from which the early Greek sculptors avowedly took their ideas, till they far outstripped their instructors by the identity of their unrivalled performances, without the most solemn emotions. Four thousand years have elapsed—a nation become extinct—its language lost and recovered, while the documents with which the melancholy affliction of the human race endeavours to palliate the stillness of death, and the uncertainty (to Egyptians) of future existence, are fresh as from the hands of yesterday. Many of the functionaries, whose names and offices are now recovered, were military commandants of the south, were chancellors (attached to the signet), attached to the weights and measures, royal tutors, priests, prophets, loving their lords, seated in the hearts of their monarchs; the eyes of the king, in the metaphorical language of their simple panegyrics; they are represented seated with their wives, and receiving offerings from the hands of their surviving children. The hieroglyphical inquirer will here find much food for his researches, as several of them connect the Enneads with their successors, or contemporaries, of the sixteenth and seventeenth dynasties. The texts are principally dedications to Osiris, the lord of Tat and Abydos, and the deities of that town, for a manifestation of offerings of various viands, &c.; in different panegyrics, or cyclical festivals; as of Haraphen, the manifestation of the dog-star; the eyes of Horus, &c.; that the deceased may be enrolled among the servants of Osiris. Some of the objects, however, are of a period more recent, being executed during the reign of the eighteenth dynasty; and among these, the most important is a magnificent tablet for an official functionary who flourished about the epoch of the Pharaoh Horus (Haremhab). This stands about seven feet high, and is dedicated to Ra and Thoth. The style, though far inferior to the earlier works, exhibits much of the richness which characterises the florid and magnificent period of the great Rameses, who was the Louis XIV. of the Egyptian race. Along with this are two sides of the entrance of a tomb belonging to the same functionary. How different are the pompous titles of this officer from the early simplicity! They contain "the acts of adorations to Osiris pethempantes, the king of eternity, the revealer of good, the lord of Toser, and to Anoup, lord of Rosatou, and to the other gods; may they give bread, unguents, flesh, fowl, libations of water, wine, and milk, to the military chief attached to the body-guard of the lord of the world, the royal scribe, scribe of the revenues, athlophoros, or yeoman of the guard, on the left hand of the king, contending with the world, exalted with his honorific titles . . . the eyes of the king, resident in the heart of the Horus in his propylons, filling the heart of the king with his constructions, attached to the charge of the excavations from the quarries, military officer of the king, named Haremhab." And then follow several short acts of adoration; as, that the deceased abominates his faults, &c. The next objects that claim the attention are the mummies: these, however, are not so remarkable as to deserve a specific notice; while, among the smaller objects, some rank high on account of material, execution, and device. A small silver figure of Nofre Thumos, or Nofre Thom, may be instance; a small bronze statue of a Pharaoh, magnificently inlaid with silver, and a box carved out of ivory.

It is in the form of a goose, who has just caught a fish, which it passes over to two young geese, who eagerly fly across its back to catch it, and is alike elegant in design and execution; and has probably formed part of the objects of the toilet of an Egyptian beauty; the model of a house in stone; four cylindrical lead vases from the Isle of Delos, with covers, and the usual proportion of alabaster, porcelain, and other objects, form the remainder of this Collection, which may justly rank as one of the most valuable acquisitions recently made by the Museum to its department of antiquities.

SOCIETY OF ANTIQUARIES.

MR. HAMILTON in the chair.—A further portion was read of Mr. Kemble's dissertation 'On the Runes of the Anglo-Saxons,' and the remainder postponed.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Entomological, 8 P.M.; British Architects, 8 P.M.; Medical, 8 P.M.
Tuesday.—Linnæan, 8 P.M.; Horticultural, 3 P.M.; Electrical, 8 P.M.; Architectural, 8 P.M.
Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.
Thursday.—Royal, 8½ P.M.; Antiquaries, 8 P.M.; Zoological, 3 P.M.
Friday.—Botanical, 8 P.M.
Saturday.—Astric, 2 P.M.; Westminster Medical, 8 P.M.; Mathematical, 8 P.M.

FINE ARTS.

Portrait of Sir Robert Peel, Bart. Painted by John Linnell; Engraved by James Scott. Boys.

THERE are some countenances of which a skilful artist can, with two or three strokes of his pencil, convey a strong resemblance; there are others of which the most elaborate representation fails to be satisfactory. We imagine that the features of the right hon. member for Tamworth belong to the latter class; for we confess we never saw a portrait of him which forcibly reminded us of the original: nor, with all our admiration of Mr. Linnell's talents, can we flatter him by saying that the work before us affords an exception to our general remark.

Recollections of the Scenic Effects of Covent Garden Theatre, 1838-9. By G. S. No. VII.—X. Pattie.

WE noticed the former No. of these clever performances, to which the young artist has now added "Coriolanus," "Macbeth," "Werner," and "Othello;" all executed with equal freedom and spirit. Some of the scenes preserve good likenesses, as well as the striking effects of attitude and general interest.

Ancient Buildings at Tewkesbury, in Gloucestershire. Drawn from Nature, and on Stone, and published by Rowe, Cheltenham.

THE picturesque beauty of these venerable edifices well entitled them to be rescued by the pencil of the artist from the oblivion to which they were hastening. Mr. Rowe's style of lithography is singularly pleasing. His markings are spirited, and his flat tints tender and transparent.

St. John. Painted by N. Poussin; Engraved by W. Taylor.

If we wished to give a beginner in the arts a clear idea of that estimable quality called "breadth," we do not know where we could find a better example for the purpose than the simple and magnificent head under our notice.

New Method of Copying Medals.—The medal is impressed upon soft lead, and the lead

being placed within the circuit of a galvanic battery in a solution of copper, the spark is passed through, and the copper is precipitated in the form of a thin plate, taking a perfect facsimile copy of the original medal. We have seen a specimen of this most curious invention, than which nothing can be more accurate in its effects. What will the fine arts come to next?

ORIGINAL POETRY.

FAREWELL TO POETRY.

"Dear charming Nymph! neglected and decried,
 My shame in crowds, my solitary pride;
 Thou guide by which the nobler arts excel,
 Thou nurse of every virtue, fare thee well!"

GOLDAMITH.

FAREWELL, loved mistress of my heart!
 A long, a last farewell!
 From thee, and from thy charms, to part,
 The cruel fates compel.
 Yet ah! how shall I part from thee,
 My joy, my life, my all?
 Or how, Enchantress, shall I flee
 The magic of thy thrall?

From earliest youth, dear charming maid,
 For thee my bosom sighed;
 To thee my first fond vows were paid,
 My own, my chosen bride!
 With thee when roaming hand in hand,
 Swift flew the happy hours;
 Where'er I came 't was fairy-land,
 Elysian fields and bowers!

Ay me! it was a blissful hour;
 Too blest!—it could not last!—
 E'en now I feel its soothing power,
 When musing on the past.
 But now, the cruel fates compel
 That we, for aye, must part—
 Then let me, ere I say farewell,
 First strain thee to my heart.

Yes, let me cool my fevered brain
 Upon thy snowy breast,
 There let me lie but once again,
 My aching heart to rest!
 One last long kiss!—one only more!
 And now, for aye, we sever:—
 Yet still for thee still life be o'er
 This heart shall throb for ever!

R. B. S.

LINES.

I WANDER, when Night's guardian orb by fitful clouds is chased,

To where their nests the eagles rear, far in the rocky waste;

Or where to hear the seagull scream, or where the jacksal moans.

And I feel my heart is comforted—I, I that am alone!

But when Reflection's rule returns to chase this joy away,
 My dreary solace vanishes, as clouds drive out the day;

My lot, as dawn when others do, till what they do is done—

The gull, the eagle, all have mates, save me, who am alone.

Forlorn since my day of birth, unheeded and forgot,
 Through years of apathy mankind has left me to my lot;

My lot, as dawn when others do, till what they do is done—

To dream what I too might have done, had I not been alone.

I've none to wake to energy, I've none to hush to rest,
 I've none to whom to tell the hopes that glide in my breast;

To love, to hate, to hope, to fear, are bills to me unknown;

I have not friend nor enemy—I, I that am alone.

If I am sick, the medical train by lust of lucre led,
 Who mete by gold their thanksless aid, see all that watch

my bed:

None ask me to relieve their wo; my name is blest by none;

Supervisors unaided decay:—I feel I am alone.

Yet still my thoughts are all my own; I have my reason still,
 Whose office is to check and guide the over-eager will.

And what of will have I, to whom the future and the gone
Are but an equal burden, since I always am alone?
No! Heaven that formed the heart to love, and made its
passions free,
Could never mean it to exist in lonesome apathy:
The human race should all be friends: his heart must be
as stone,
Could wish like me to linger on, unheeded and alone.
J. N. O.

THE DRAMA.

THOUGH there has been several novelties in the drama since our last, we do not feel it necessary to expatiate upon them.

At *Drury Lane* the *Beggar's Opera*, in the costume of its time, both on the stage and in the orchestra, has been produced with deserved applause. The new *Polly*, Mrs. Alban Croft, is a pretty woman and a charming songstress. We have not seen or heard a Miss Peachum to compare to her for a long while: and if we look at looks and singing in conjunction, we do not know that we ever witnessed the part more to our satisfaction. On the first night there was an occasional redundancy of ornament; but having as a *débutante* shewn us what she can do, the good sense of the actress will lead her to delight us with greater simplicity, where simplicity of style is most appropriate. Mrs. Waylett warbled and wrangled as *Lucy Lookit* in the most pleasing and provoking manner; and *Captain Macheath* had, on the whole, an adequate representative in Mr. Frazer. W. Bennett's *Peachum*, Dowton's *Lookit*, Hammond's *Filch*, and the *Mrs. Peachum* of Mrs. Selby, were all good; and the ragamuffin parts, with a characteristic dance, were sustained to the life by the ladies and gentlemen of the company. The latter was uproariously applauded, and the whole received with the favour it so well merited.

On Wednesday, a new melo-dramatic play in three acts, by Mr. Parry, we believe, called *Woman's Trials*, with but doubtful success, notwithstanding the exertions of the performers, and particularly of Mrs. Stirling, who seems to have suffered from them, as a new piece has been postponed till next week in consequence of her indisposition. The introduction of a baby upon the boards is always a precarious affair; and the frequent appearance of such a doll or bundle of rags invariably becomes ludicrous. We have no especial objection to Mrs. Stirling's child in this instance; but it raised a laugh where the interest was meant to be deepest, and in spite of its mother's moving efforts to touch the feelings of the audience.

At *Covent Garden* the only novelty has been *The Rivals*, performed in good style, with Farren as *Sir Anthony*, and Mr. Meadows as *David*. We name these because they seemed to us to be perfection, but without disparagement to the talents displayed by Mrs. C. Jones in *Mrs. Malaprop*; Vestris, *Lydia Langwath*; Julia, Mrs. Nisbett; *Lucy*, Mrs. Humby; *Captain Absolute*, Anderson; *Acres*, Harley; *Sir Lucius*, Brougham; *Faulkland*, Cooper; and *Fag*, T. Green. The revival was well received.

Haymarket.—The farcical comedy of *The Rivals* has also been brought out here in the costume of 1775, and under the most cheering auspices; and from the strength of the cast, fairly competes with any rivalry elsewhere. Power's *Sir Lucius* is a grand feature, and Mrs. Glover's *Malaprop* another; and when we repeat the bill,—*Sir Anthony*, Strickland; *Faulkland*, Phelps; *Captain Absolute*, W. Lacy; *Acres*, Webster; *David*, Buckstone; *Lydia*, Mrs. W. Lacy; *Julia*, Mrs. Warner; and *Lucy*, Miss P. Horton, we have done enough to intimate that

the play is altogether excellently performed. We have not entered into critical remark upon any of the characters, because we think very few of them come strictly within the limit and under the dominion of the "veritable" comic muse, and therefore there is a sort of *ad libitum* allowed to the actors who personate them. In this point of view if they divert us, it is all we require.

St. James's.—The veteran and inexhaustible Braham has appeared here in *Maaniello*; but even his attraction does little for this unlucky and out-of-the-way theatre.

VARIETIES.

American Periodicals.—The weekly parts of the *American Miscellany*, collected together for last month, have amused us with their medley selections from transatlantic journals which we only see irregularly. One of the critics upon Captain Marryat's late publication, for instance, tells us it is an "amusing quiz with some very slight quantity of truth and reality, mingled with a multitude of impudence." Other little humours are purely American:—"Fate of Poets."—There are (vide a New York paper) 5023 poets in the United States. Of these, ninety-four are in the state prisons; five hundred and eleven, in lunatic asylums; and two hundred and eighty, in the debtor's prisons."—"Here are the banisters, but where the d—l are the stairs?" as the drunken fellow said when he felt his way round the bedstead in the dark."—"I'm not fond of catnip," as the girl said when pussy bit a piece off her nose."—"A gentleman was at his banker's, and observed a little boy present a check at the counter. The clerk put the usual question to him—'How will you take it?' to which the boy answered, 'In my pocket, sir.'"—"Ain't I a burster?" as the boiler said to the steam-boat captain, when it blew him sky-high."—"Are you looking for any one in particular?" as the rat said to the cat when she was peeping down his hole."—"A sea officer, who had lost his hand by a grape-shot, was in company with a young lady who remarked that it was a cruel ball which deprived him of his hand. 'A noble ball, madam, for it bore away the palm.'"—

The Land of Canaan. (Knight and Co.) A specimen map in the new style, called illuminated. It is clearly printed and very cheap, two great recommendations in a work intended for the use of schools.

Geological Curiosity.—A beautiful specimen of the fir tribe has just been dug from the Stevenson freestone quarry. The trunk, stems, and leaves, are as perfectly formed and portrayed in this piece of solid rock as those now growing in the neighbourhood. This tree, along with a cluster of nuts, five in number, which composed part of the stone, was thirty feet from the surface, being twenty feet below the present level of the sea. The nuts and the leaves, stem, and trunk, are of a dark-brown colour; while the surrounding body of the stone is a bluish-white, which gives these fragments the appearance of the finest fresco painting.—*Ayr Observer*.

The Schoolmaster Abroad (in Tennessee).—I breakfasted one morning at the tavern of a late senator of Tennessee, when his son, a youth of eighteen, was setting out to join his school-fellows in turning the master out of doors, until he should treat them to a barrel of cider! I was also told of a case, a few years ago, on the Cumberland. The boys tied their teacher to a board, and ducked him in the river till he pro-

mised to treat!—*American Southern Literary Messenger*.

North Seas.—Captain Penny, of the Neptune whaler, reports, from his late voyage to Davis's Straits, on the very doubtful authority however of an Esquimaux, that up Cumberland Straits, on the eastern side, sixty miles round from Cape Easterly, there is a spacious bay and firth, full of whales, and the shores numerous inhabited by Esquimaux!

"Illustrations of the Permanence of communicated Motion."—It is in the case of a revolving body that we can most effectually diminish these resistances to motion, by causing it to be supported and to turn on a very small surface, as compared with the dimensions of the body itself; as, for instance, a large wheel round a slender axle, or a large spinning-top on a fine point, by which contrivance the resistance of friction is made to act at a great mechanical disadvantage, as compared with the force of the body's rotation; and we may, further, remove the resistance of the air, almost to any degree we choose, by placing the revolving body under the receiver of an air-pump. Now, if we thus remove the air from the receiver of an air-pump, and then, without re-admitting it, by some mechanical contrivance, put rapidly in motion under the receiver, a large wheel with an exceedingly small axis, or, better, a large spinning-top with a fine hard point; we shall find that motion, which would, under other circumstances, soon cease, lasting, apparently unaltered, for hours. And a pendulum, delicately suspended on knife edges, and having thus yet greatly less friction to contend with than either the axis of a wheel or the point of a top, when once a motion has been given to it, will retain the force of that motion, and continue to oscillate with it for more than a day. Mr. Roberts, of Manchester, is said to have constructed a body which is of such a form, and so truly balanced upon a fine point, that, having put it in motion round that point, it would not lose the force of its motion, but continue to spin with it for forty-three minutes. These are all proofs of a tendency to the permanence of motion, and the force of motion which accompanies it, when causes of retardation from without are more or less removed; that is, of its tendency to absolute permanence, so far as any cause within itself is concerned. It does not die or diminish of itself; there is within it no principle of death or decay,—to cease, it must be operated upon by causes external to itself. The proofs hitherto given shew, however, only the probability of this truth. It is probable that, since when we continually diminish the external causes of a body's retardation, its motion approaches to a state of permanence, if we were completely to take away those causes of retardation, that permanence of motion would be completely attained. But we cannot take away these causes of retardation—we cannot completely take away friction and the resistance of the air: we can, therefore, only speak of what would probably happen if these were completely removed. To complete the proof, we must look out for some case of motion, in which there is no friction, and no resistance of the air. Such a motion we cannot find on or near the earth's surface, but we do find it in the heavens."—*Mosley's "Illustrations of Science."*

Numismatics.—The *Courier de Lyons* states that recently, near Vienna, a collection of gold and silver coins and medals, ranged in perfect order, in an iron casket, bearing on its top in Roman ciphers the year 802, and the letter A, has been discovered. Besides those of the twelve Cæsars, which are in perfect preserva-

tion, it contains those of the Roman emperors down to Constantine, Chlorus inclusive. Then follow those of the Merovingian kings of France, distinguished by their diminutive dimensions. The value of this treasure is estimated at 100,000*fr.*; and it is conjectured to have been formed by the learned Alcuin, the friend of Charlemagne, who lived in the monastery of St. Marcel at the period of the date of the casket.

LITERARY NOVELTIES.

In the Press.

Illustrations of the Breeds of the Domestic Animals of the British Islands: consisting of a Series of Coloured Lithographic Prints from Oil Paintings executed for the Agricultural Museum, Edinburgh, by Mr. Shiel; with Descriptive Memoirs. By David Low, Esq. F.R.S.E.—Also, by the same Author, a Treatise on the Domestic Animals: comprehending the Subjects of Species and Varieties, of Food, Rearing, General Treatment, and Diseases; with Observations on the Principles and Practice of Breeding.

LIST OF NEW BOOKS.

The Governess, by the Countess of Blessington, 2 vols. post 8vo. 2*ss.*—Elements of Agricultural Chemistry, by Sir H. Davy, Bart. 6th edition, 8vo. 1*ss.*—Lives of the English Poets, by R. Bell, Esq. Rain fallen, 6 of an inch.

CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

We are sorry to have received "The Governess," by Lady Blessington, too late for review this week. Several Almanacks are deferred, being too late and too comic to be hastily dismissed. "The Doctor's" amiable letter received. He is thanked, therefore, as the saviour of the best of Cut-throats. "T. H.'s" Lasse to Pleasure we cannot have the pleasure to insert.

ADVERTISEMENTS,

Connected with Literature and the Arts.

SCOTTISH WIDOWS' FUND AND LIFE

ASSURANCE SOCIETY, founded A.D. 1815, on the Original Basis of the London Equitable.

Head Office, No. 5 St. Andrew Square, Edinburgh. Present Accumulated Fund, upwards of £45,000. Annual Revenue, upwards of £150,000. Whole Profits belong to the Assured. Divisible every Seven Years.

President, The Right Honourable the Earl of Rosebery.

Vice-Presidents,

Sir Thomas Dick Lauder, Bart.

The Hon. Lord Moncreiff.

The Right Hon. the Lord Justice General.

The Right Hon. Lord Francis Agerton.

(All of whom, as well as the Directors, Ordinaires, and Extra-Ordinaires, are permanently connected with the Society by Assurance of more than three years' standing.) The Surplus Profits ascertained at 31st December last were sufficient to secure—

1. A Retrospective Bonus of Two per cent. per annum, or 14 per cent. for the Septennial Period, not only on the original sum assured, but likewise on the Bonus additions previously declared.

2. A Contingent Prospective Bonus of Two per cent. per annum, to be paid from and after 31st December last, on all Policies of five years' standing, that may expire before 31st December 1845, when the next Investigation, and consequent Declaration of Bonus, takes place.

The Directors are authorized, by a by-law of the Society, passed in 1837, to grant Loans to Members on the security of their Policies (without any deduction of the Stamp for a Fore-allowance), to the extent of nine-tenths of their calculated value at the time. They are likewise empowered to allow Members to commute their Bonus Additions; i.e. to have their Bonus applied towards redemption of their future Annual Premiums.

Thus, for example,—

A, in the year 1830, being then forty years of age, insured his Life for £2000, paying an annual premium of £400 5 0

He is now fifty-nine years of age, and has an assured vested Bonus or Addition, declared and attached to his Policy, of 10*ss.* 1*ss.*, which, with the 20*ss.*, the original sum assured, gives the full amount of the sum presently contained in the Policy to be £4005 13 6

Were A to die in 1845, after payment of his premium for that year, the sum payable under the Policy would be £4005 13 6

Or, if he were an object to him to reduce his present Annual Contributions, he might, by giving up his Bonus, reduce his future premium from 40*ss.* 5 to £300 1 1

Or, if he preferred receiving immediately the present value of his Bonus, he would, by surrendering it, be entitled to a sum of £4005 13 6

If he were desirous at present of having a loan on his policy, he might borrow to the extent of £1400 0 0

The above example will probably be admitted to be perfectly sufficient to show, in a practical point of view, the great benefits to be derived by parties insuring with this office. The Directors are at all times ready to entertain Proposals for Loans, either on Redeemable Annuity, or on First Heritable Security. Every information on this or any other subject connected with the Society may be obtained on application (if by letter, post paid) to the Head Office in the City of Edinburgh, at the Office of JOHN MACKENZIE, Manager.

Agencies, Edinburgh, 5 St. Andrew Square. N.B.—Tables of Rates and Forms of Proposals to meet any particular contingency, or effect any specific object, will be transmitted to parties desirous of obtaining them; and all official communications of this nature are considered as strictly confidential.

Agencies in England:—

London,—Hugh McKean, 7 Pall Mall West. Bradford,—Geo. Rogers, Horton Road. Huddersfield,—Hugh Watt, banker. Leeds,—William Ward, attorney. Liverpool,—Arthur Overton and Co. Exchange Street East. Manchester,—Thos. Boothman, jun. Cross Street, King Street. Newcastle,—Charles Bertram, 15 Sandhill.

CASE OF GREAT DISTRESS.

"He gives twice who gives quickly."—By a Fire, which took place early on Sunday morning last, in Lombard Street, Whitefriars, Two Families had a narrow escape from death, and have lost everything they had in the world; they are now in the extremity of destitution and fit and deserving objects of public sympathy. The names of the sufferers are James Mansell and wife with three children; and John Jones and wife with seven children, all under ten years of age—the latter poor woman having been confined with twins only about a month before; her husband, too, forced from a sick bed, where he had lain helpless for six weeks.

The smallest Subscriptions will be thankfully received in their behalf by Mr. C. Hicks, at Messrs. Bradbury and Evans's Printing Office, Lombard Street, Whitefriars.

BOOKS IN THE PRESS.

To-morrow will be published, a 2d edition of THE QUARTERLY REVIEW, No. CXXVIII. containing Articles on Life-Assurance, Mendicity, Post-Office Reform, and British Policy. John Murray, Albemarle Street.

PETER PARLEY'S TALES ABOUT PLANTS. In 1 handsome vol. square 16mo. embellished with Ninety Engravings. Price 7s. 6d. bound in cloth.

TALES ABOUT PLANTS, By PETER PARLEY.
Edited and prepared for press by Mrs. A. London.
"Botany is in itself a very comprehensive science, and one which it will require much time and study to understand; but this little book will show you the first steps towards acquiring some knowledge of it."
London: Printed for Thomas Tegg, 73 Cheapside; and may be procured, by order, of all other Booksellers.

BEALE'S SOUTH SEA VOYAGE. In post 8vo. price 12s. cloth.

THE NATURAL HISTORY of the SPERM WHALE, and a Sketch of a South Sea Whaling Voyage.

By THOMAS BEALE.
This is the only work on a subject of much national importance, and the only account of whaling as practised in the South Sea. "Contains a vast variety of curious facts, the result of practical experience scientifically digested."—*Atlantic Journal, Dec.*
See also a review of the work in the last number of the *Quarterly Review*.
John Van Voorst, 1 Paternoster Row.

Price 6s. 18mo. embossed cloth.
LECTURES on the HEATHEN GODS, adapted to the School-room.

By the Author of "Insect Histories."
This book has been prepared for the express purpose of giving the necessary information respecting Mythology, free from those details which have generally rendered the subject objectionable. Extracts from the Classic Fables form a part of the plan, and the reflections which naturally arise from the subject have led to rather extensive observations on the need as well as the blessing of Revealed Religion.
London: J. Hatchard and Son; Hamilton, Adams, and Co.; and J. Seacombe, Chester.

No. XXIV. price 6s. of the New
STATISTICAL ACCOUNT of SCOTLAND.
Containing Part of the County of Edinburgh, and Conclusion of the County of Roxburgh, with Map of the Orkney Islands.

OBSERVATIONS upon the HAND-WRITINGS of PHILIP MELANCTHON and MARTIN LUTHER.

By S. LEIGH SOTHERBY.
Of this Work, which is dedicated, with permission, to the Right Reverend Samuel Butler, D.D. Lord Bishop of Lichfield, only Two Hundred and Fifty Copies have been printed. It is illustrated with Thirty-three Plates of Facsimiles, comprising many hundred specimens of the various styles of writing adopted by Melancthon in his Commonplace Book; his Marginal Annotations upon Printed Works; his Epistolary Correspondence; and other Documents preserved in the Library of the British Museum, the Royal and National Library at Munich, and other Collections. The Facsimiles of the Autograph of Luther are taken from documents in the British Museum, at Munich, and in the possession of the author of the work.
A few copies are published, with the Plates on India paper, Price Four Guinea.
Printed and Published for the Author, 3 Wellington Street, Strand, and sold by the principal Booksellers.

In post 8vo. with 23 Illustrations, 12s. cloth.
RURAL SKETCHES.
By THOMAS MILLER, Author of "Beauties of the Country," "Roxton Gower," &c.
"We have never met with any thing of a similar character to 'Home Revelled,' the opening paper, which has touched and delighted us so much."—*Literary Gazette*.
"This volume is in its style as 'fresh as hawthorn buds.' It is a pleasant book and some specimens of qualification. Some of the woodcuts deserve great praise, equally for the design and execution."—*Athenæum*.
John Van Voorst, 1 Paternoster Row.

In 3 vols. 8vo. price 11. 4s. in boards, the Second Part of
THE REMAINS of the Rev. R. H. PROUDE; containing Essays on Theological Subjects, and History of the Contest of Archbishop Becket and Henry the Second.
Rivingtons, St. Paul's Churchyard, and Waterloo Place.
Of whom may be had,
The First Part, in 2 vols. 8vo. price 11. 1s.

In 8vo. price 10s. 6d. in boards,
THE PROSE WORKS of the Right Rev. Father in God, THOMAS KEN, D.D. some time Lord Bishop of Bath and Wells. To which are added, some of his Letters (never before published), and a short account of his Life, by WILLIAM HAWKINS, Esq. his Executor.
The whole collected by JAMES THOMAS ROUND, B.D. Rector of St. Runwald's and St. Nicholas, Colchester, and late Fellow of Balliol College, Oxford.
J. G. F., and J. Rivington, St. Paul's Churchyard, and Waterloo Place, London; and W. B. Barker, Colchester.

FISHER, SON, AND CO. LONDON; AND 1 HUNTER STREET, LIVERPOOL.

New ready, beautifully bound and richly gilt, price One Guinea, the 2d edition of
FISHER'S DRAWING-ROOM SCRAP-BOOK

For 1840, containing a Portrait of the lamented L. E. L. and Thirty-five other Engravings.

With Poetical Illustrations by L. E. L. and MARY HOWITT.

"The favourite task of one whose work on earth is done—the latest strains of L. E. L. enrich and sanctify these pages. The embellishments (thirty-six) are beautifully executed, various, and interesting."—*Literary Gazette*.

"This richly and variously embellished work is illustrated by poet L. E. L. and Mary Howitt, whose poetry has a pure current of human feeling running through it, that finds a response in every breast."—*Spectator*.

"We have not examined an Annual more to our taste, or one that will justify higher encomium and stronger recommendation."—*The Art-Union*.

"An collection of beautiful engravings, this volume has long been a favourite with the public, and has consequently held on its course, while many of its rivals have passed into oblivion."—*Eclectic Review*.

"The embellishments are very elegant; it is a splendid volume."—*Methodist Magazine*.

With 16 Engravings, tastefully bound and gilt, price 8s.

THE JUVENILE SCRAP-BOOK FOR 1840.

By Mrs. ELLIS, Author of "The Women of England."

"Sixteen varied and very pretty engravings, with stories attractive as well as instructive, comprising botany, chivalry, old customs and sports, moral lessons enforced by living examples, foreign scenery," &c. &c.—*Literary Gazette*.

"Parents need have no fear of putting this beautiful volume into the hands of their children; it will amuse without exciting the passions, and teach the best moral lessons without supplanting the principles on which true morality can alone rest."—*Evangelical Magazine*.

"While furnishing materials for thought, it is adapted to cherish all social virtues, and to spread over the domestic hearth a cheerfulness and hilarity, which, amusing the young, may also gratify and warm the aged heart."—*Eclectic Review*.

With Thirty-two Engravings, richly bound, One Guinea,

THE SHORES AND ISLANDS OF THE MEDITERRANEAN.

Illustrated in a Series of Views from Drawings on the Spot, by Major-General Sir Grenville T. Temple, Bart. and W. L. Leitch, Esq.; with Descriptions by the Rev. G. N. Wright, M.A.

"This is the season for beautifully embellished publications, and few can be more beautiful, either in subject or execution, than this series of plates, representing the picturesque scenery and interesting objects which adorn the shores of the lovely Mediterranean. To these views the Barbary States, visited by Sir G. Temple; Sicily, with its Norman and Saracenic remains; Malta, Italy, and Greece, have all contributed their quota; and the whole is a collection of above thirty as charming engravings as can well be imagined. Some are rich in architecture, some lively in figures and costume; others sweet in the landscape of nature, and others curious in ancient ruins."—*Literary Gazette*.

In 4to. elegantly bound in Morocco, price 11. 11s. 6d.

THE TURKISH EMPIRE ILLUSTRATED.

Comprising Constantinople and the Seven Churches of Asia Minor, &c. &c.: a Series of Forty-eight large and highly finished Engravings, from Drawings made expressly for the Work, during a recent tour, by Thomas Allom, Esq.; with an Historical Account of Constantinople, and Descriptions of the Places.

By the Rev. ROBERT WALSH, LL.D.

"The drawings bring before us every thing that is most peculiar in Eastern habits and costume, and most striking in Turkish scenery and architecture."—*The Art-Union*.

REVIEW OF NEW BOOKS.

The Governess. By the Countess of Blessington. 2 vols. 12mo. London, 1839. Longman and Co.

In this publication, Lady Blessington appears to have entertained a double object: firstly, the essential one of amusing her readers; and, secondly, the benevolent one of interesting society for the class of persons of whom her *Governess* is the type. And no class more deserves the general sympathy. Where one belonging to it is comfortable or happy, fifty are the reverse,—subject to many caprices, mortifications, and insults, and rendered miserable by the struggles of a sensitive spirit to endure an anomalous position of apparent equality and real dependence. Well educated, or at least taught those acquisitions which are deemed the female accomplishments of our day;—in nine cases out of ten superior to the parties by whom they are employed;—often subjected to vulgar, purse-proud tyranny;—in some instances exposed to the insults of seduction; and seldom, indeed, treated with the feeling and consideration their relative condition ought to secure, there are no individuals within the whole circle of domestic and family arrangements so much to be pitied as the mis-called governesses, who are ruled by mammas, if they are not also by spoilt, headstrong, and tormenting children. Under the most favourable circumstances the labour of tuition is irksome enough, but attended by extraneous inconveniences and troubles, it must be most intolerable. We never could fancy what mistaken notion inspired the bard who described it to be a

“Delightful task to rear the tender thought,
To teach the young ideas how to shoot,
To pour the fresh instruction o’er the mind!”

Alas! the poet was a visionary, not a teacher; what he knew of study was gathered in the breathing green fields, under the blue and voiceless canopy of heaven, not in the close school-room or the noisy nursery, with their abused furniture and dingy roofing. Lady Blessington has taken a more just and accurate view of the subject; and her work is calculated, we trust, to produce beneficial impressions where they are so much and so widely wanted.

The beautiful portrait of the Governess by Parris, and engraved by Mote, as a frontispiece, predisposes us in the cause of the heroine. But much annoyance and wrong as she suffers in this fiction, she is fortunate when compared to the mass of her actual companions.

Well born, and having received a really good education, and, better than all, being blessed with a fine disposition, Clara Mordaunt, an orphan, and reduced to poverty, undertakes the office of a governess for subsistence, and passes through the ordeal of several families. The diorama of their moving figures is replete with talent and observation. The mercantile Williamsons, with three girls, are succeeded by Mrs. Vincent Robinson, an absurd and heartless pseudo Blin, who, through her cruel affectations, murders a grand-niece whom she adopts for the sake of interesting *état*; and she is, in turn, followed by the noble house of Axminster,

and it by the selfish and abominable Manwarrings. The other leading characters are Mrs. Waller, the aunt of Clara, and a pattern of all that is estimable in the sex; Abraham Jacob, a truly benevolent Quaker, and his affectionate daughter Rachael; Mrs. Marsden, a wealthy Creole, with her son Hercules, a gentleman who stands upon no ceremonies in the pursuit of what may be personally agreeable to him; O’Leary, a capital Irishman in a low station; and the hero, Clarence Seymour. But, beyond these, we have the servants’ halls, and such a variety of the high-life-below-stairs gentry—so amusing and so true, that we must confess our surprise where Lady Blessington could pick out the information she has herein so skillfully exhibited. There is no caricature; and whilst the fantastic tricks of the order, from butler and housekeeper to scullion and housemaid, are whimsically traced, the allowance of good human feelings is fairly made, and the weaknesses counterbalanced by the better qualities which are to be found in every station of life. The Marsdens, mother and son, are the most original characters: the former a mighty favourite with us, the latter, perhaps, a little *outré*; but his extravagances are so indispensable to the story, that they could not be dispensed with. When the governess is despatched to the country-house of the Williamsons, an extract will afford some idea of the manner and matter of the whole:—

“On arriving at the White Horse Cellar, whence the stage-coaches depart, the vehicle in which Miss Mordaunt sat was quickly surrounded by three or four men vociferating their offers of service to assist her, and remove her luggage to another coach. One seized her trunk, and another grasped her carpet-bag, but their possession was contested by two or three of their companions, who one and all vehemently asserted that each had first opened the coach-door, and consequently had the best right to remove the lady’s luggage. The coachmen of various stages came up, with cigars occupying one corner of their mouths, and both hands placed in the pockets of their huge coats, and asked if ‘miss would please to go by their coach?’ ‘Take her to Staines, Hounslow, or Bagshot, in less than no time—best coach on the road—would have her and her luggage stowed away in a jiffy.’ ‘Going to Windsor or Ampton Court, ma’am?’ asked a second; ‘start in five minutes—go ten miles an hour.’ ‘Healing or Hacton, miss?’ inquired another; ‘capital coach—just going.’ Clara shrank back affrighted and confused, her auricular faculties stunned by the din of so many rough voices, and her olfactory ones no less disagreeably assailed by the mingled odours of spirituous liquors and tobacco. Lucky for her was it that Betsey [her companion, the housemaid] was not a novice in such scenes, for, with a self-possession that evinced her experience in them, she named the coach to which she gave the preference, dismissed the rival disputants for the removal of the luggage, consigning it to one of whom she had some previous knowledge. She then helped Miss Mordaunt through the noisy crowd, and pertinaciously resisted every attempt to extort a larger sum

than the regulated fare for the coachman and the person who moved the luggage. Betsey was in the act of assisting Clara into the stage-coach, when Mr. Seymour came forward from the crowd, and, respectfully bowing, offered his arm to Miss Mordaunt to enter the coach; and having performed the same service towards Betsey, followed, and seated himself *vis-à-vis* to the former. They had scarcely been seated in the coach, when the voice of Mr. Hercules Marsden was heard, loudly demanding in which coach Miss Mordaunt was? No satisfactory answer being given to this question, he added—‘I mean a devilish pretty girl, though rather pallid in the face, with a pair of eyes so full of fire, that I might light my cigar at them!’ This refined compliment drew a peal of laughter from the assembled crowd of cads and coachmen, and induced Clara to shrink instinctively into the corner of the coach, in order to avoid observation. Meanwhile, Mr. Hercules Marsden, having protruded his head into several of the vehicles, at length advanced it into that in which our heroine was seated, and, discovering her, uttered an exclamation of delight, somewhat between a laugh and a shriek. ‘So I have found you at last, my pretty one! and, judging by your looks, you don’t seem overjoyed to see me! I judged you could not be very far off, when I spied this gentleman,’ pointing to Mr. Seymour; ‘for I noticed yesterday that you seemed to understand each other pretty well, though you did not exchange as many words as looks; and I dare be sworn you had settled together to travel down in the same coach—eh! I have not guessed amiss, have I? Your blushes, my pretty one, convince me of the fact!’ While this observation was uttering, accompanied by sundry winks and smiles, Mr. Hercules Marsden stood on the coach step, and the cad having come to ask if he was to take a seat, as they were going to start, he answered—‘To be sure I will take a seat; why, you spooney, this,’ pointing to Clara, ‘is the lady I have been in search of, and now I have found her, I will not easily lose sight of her again, I can tell you! How much am I to pay, eh?’ ‘Vone pound height shillings, sir, is the fare.’ ‘Here’s two sovereigns; and hark ye, pay all the expenses and keep the change; but let me have no bother, d’ye hear?’ The cad bowed low, pulled the front lock of his hair, shewed a set of very yellow teeth, and retreated, muttering to some of the bystanders, ‘I say, youder’s a prime chap, ain’t he? Vy, he’s given me a matter of seven and sixpence for myself, though, dang me, if I can tell for what! He’s as comical a blade as I’ve clapped my two good-looking eyes on these seven years!’”

A piece of fun, descriptive of the mamma of this precious whelp, who arrives long after her dutiful cub and the rest of the party, will entertain our readers. After some conversation about her mischances on the road, Mrs. Marsden remarked:—

“Well, you English are the drollest people in the world, though represented to be naturally grave, and more prone to giggle than even the niggers are with us. Why, at every inn where we changed horses, and through every village

where we passed the folk did nothing but grin, shout aloud with rude mirth, and point to Cupid and Venus on the coach-box, as if they never had seen two people of colour before; and the poor creatures were so mortified and ashamed, that I quite pitied them.' 'I thought how it would be, mother,' said her hopeful son to Mrs. Marsden, 'when you were making such ridiculous figures of the two blackies; and here he indulged in a peal of laughter at the recollection of the dresses she had provided for them in London. 'Hercules, you ought to be ashamed of yourself to laugh in the face of your own mother—that you ought; and as for the dresses, what could be more genteel?' 'Why, didn't I tell you that Cupid's black face, peeping out from a flaxen wig, would set the whole country laughing?' 'And didn't I see with my own eyes all the smartest carriages in London driven by servants in flaxen wigs? And, therefore, as Cupid was to sit on the box, why not have him dressed as well as those I had seen?' 'Mother, you will be the death of me,' interrupted Mr. Marsden, still continuing to laugh most boisterously. 'Only fancy, Mr. Seymour, a nigger with a white wig, a silver-laced hat, a sky-blue coat lined with scarlet, a waistcoat and unmentionables of scarlet likewise, white stockings, and shoes and silver buckles, and a gold-headed cane in his hand to complete the picture!' 'And what could be more genteel, I should like to know?' demanded Mrs. Marsden; 'why, it was exactly, and in every particular, like the dress that I saw worn by a nobleman's coachman in London, except that in place of a gold-headed cane he had a whip. The whole dress pleased me so much, that I ordered Cupid's to be precisely like it.' Even Mr. Williamson, though little given to mirth, could not resist laughing at the naive acknowledgment of Mrs. Marsden; and his hilarity was increased when Mr. Marsden related, that not only did his mother copy the livery of a nobleman in London, but absolutely wanted to have the arms and coronet on his carriage painted on hers. 'And why not, if it pleased me?' demanded she. 'Wasn't my money as good as his? and so I told the jackanapes of a coachmaker, when he objected to copy them. I've no notion of the Harry-stockryc, as these same noblemen are called, thinking no one is to have a crown on his carriage except them; for, to my thinking, all who can pay for it ought to have what they liked painted on their chaises.' 'And so you carried the point about the crown as you call it?' asked her son. 'To be sure I did,' replied the lady, triumphantly. 'And when the coachmaker asked me if I was a wife or a widow, saying that that made a difference, for if I was a widow, I must have the arms in a lozenge, I told him I'd have no such thing, for I couldn't abide lozenges, though they might be good for a cough, but that I'd have a sugar-cane painted instead, as 't was by sugar-canes I had come by my fortune. He stared like a stuck pig, and began to grin; but I told him I'd have no carriage from him unless he painted the crown and sugar-cane on it. Then he asked 'if I had no arms?'—'Why, are you blind, man?' said I, 'don't you see 'em?' and I held out mine, and then he grinned again, and I got angry. So says he, 'Madam, it is the general custom for widows to have their arms painted in a lozenge on their carriages, or else to have their cipher.'—I couldn't make head or tail out of all this; so then he asked me what was my name, and I told him Bessy Marsden. Then said he, 'I will put the letters B. M. under the crownnet,' I think he cal-

led it; 'but I once more beg leave to inform you, madam, that no ladies have a right to a crownnet except ladies of rank.' 'Right, or no right, I will have it,' says I. 'Yes,' interrupted her son, laughing loudly, 'and I told you before his face that the cipher B. M. would stand for Betty Martin; which, as your right to a coronet was all in my eye, would be very appropriate.' 'You need not remind me of your rudeness,' said Mrs. Marsden, 'for I remember it full well, and also how the coachmaker began to giggle at your speech. He must have thought you a nice dutiful son, that he must; but what would people say if they knew that ever since that day you seldom call me by any name but Betty Martin?' 'But you have not told us, mother, how Venus was dressed to take her seat on the box?' asked Mr. Marsden, winking at Mr. Seymour, who, disgusted at seeing his endeavours to turn his parent into ridicule, looked unusually grave and repulsive. 'She was dressed quite genteelly, I can tell you,' replied the lady. 'She wore a straw-coloured silk bonnet, with pink roses inside, a pea-green silk gown, a crimson China crape shawl, a pair of mosaic gold bracelets, and had a pink parasol in one hand, and a bright yellow reticule in the other.' 'Oh! ye gods, ye gods, hear this!' exclaimed Mr. Hercules Marsden; 'a straw-coloured bonnet with red roses, coming in delicate contact with a nigger's face; and, seated by this delectable creature, fancy Cupid in a flaxen wig, and sky-coloured and scarlet livery! Oh! I shall die with laughing at the mere notion;' and, suiting the action to the words, he indulged in the most uproarious mirth. 'And yet my mother sees nothing ridiculous in all this, and is astonished that the people laughed outright at every village and post-house they passed on their route.' 'How can you be so unfeeling as to laugh at what gave these poor faithful creatures pain?' said Mrs. Marsden. 'You ought to be ashamed of yourself, Hercules—that you ought. I'm sure I quite felt for them when they came whimpering to me, complaining at the inn where we stopped to dine, that while they were partaking their repast all the people of the house came around them laughing and giggling in their faces.'

Miss Mordaunt is dismissed by Mrs. Williamson, and when she "was on the point of leaving the house, she was surprised by a visit from Mrs. Marsden, who addressed her in the following words:—"So, you are going, miss—what's your name?—I never can recollect it." 'Mordaunt, madam,' said Clara, 'Well, you are turned away, I find,' resumed Mrs. Marsden. 'Mrs. Williamson is very angry, as well she may be; but, as I told her, it was not your fault if her husband chose to take a fancy to you, and a fancy he has taken to you, beyond all doubt; for, afraid of her as he generally is, he boldly took your part in my presence an hour ago, and declared you had never given him the least reason to suspect your virtue. 'Then why did she write to you?' asked, naturally enough, Mrs. Williamson. 'Because I had written to her,' replied he. 'What! you shocking, wicked man! you dare to acknowledge that you have written to her!' 'Yes, I prefer incurring your unjust anger,' said he, 'to concealing the truth, or allowing any misinterpretation to be given to the conduct of an innocent young woman.' Now this I thought very good-natured of him,' said Mrs. Marsden, *en parenthèse*, 'and very different from what my husband, poor dear Mr. Marsden, used to do; for whenever I found him out in his tricks, and that was, goodness knows, very often, he

always declared that he was an innocent man, but that it was those wicked jades, the young negresses on the plantation, that were always falling in love with him. Ah, bless my soul! how angry I used to be, and how many times I have been to the Obeah woman to procure fetich to punish those artful tempters of my poor husband. But all that is past and gone, and I now think so little about it, that I am even surprised poor Mrs. Williamson can be so angry at her husband falling in love with you.' 'Madam, I must entreat you to dismiss this erroneous impression from your mind,' interrupted Clara. 'Of course you deny it,' answered Mrs. Marsden; 'and as for me, I don't care a pin whether it be true or false.' Clara looked the astonishment she felt. 'Only,' resumed Mrs. Marsden, 'don't try to deceive me, for it's no kind of use; you won't get me to believe that a sensible man, like Mr. Williamson, who knows the value of money as well as any one, would send you a present if he was not in love with you. He swears you returned it immediately, and has even shewn his wife a letter in which he says you enclosed it; but she says this is a story got up between you to deceive her, and she won't believe a word of it.' Clara looked distressed and impatient, and was about to indignantly assert her own and Mr. Williamson's innocence, but Mrs. Marsden foiled the attempt by adding—'Don't interrupt me; it is perfectly immaterial to me, whether the story is true or false; what I wish to say is, that as you are dismissed from this situation, and are to be sent away without a character, I renew the offer I before made you through my son, and will take you as my companion, give you a good salary, good living, and not too much to do; and if you continue to please me, take you back with me to Jamaica when I return, where you may marry a rich planter, and become as well to do in the world as some of those who now turn up their noses at you. I liked you from the first; for, whatever people may say, I think you a pretty-behaved young person, and Hercules has taken such a fancy to you, that he has made a point of my engaging you.' 'This very circumstance, madam, did no other obstacle exist, would form an insurmountable one to my accepting your offer. To the continued persecution of your son do I owe the false and humiliating position in which I have found myself placed, ever since he commenced it; and I hardly expected, madam, to find you willing—nay anxious, to receive under your roof a young person towards whom you were aware your son entertained dishonourable sentiments and intentions.' 'How can you blame me for wishing to have under my roof a person whose presence there would induce my son to remain at home with me? If you were a mother, and of an only son, like my Hercules, you would not be surprised at this. Now, there's a good little pickaninny, don't be obtinate, but agree to come and live with us. Hercules will be in such a passion with me if you persist in refusing; and who knows to what rash act he may be driven! for the poor dear soul has not been used to have his wishes crossed.'

This is humorous enough, but we must be chary in our long extracts: here is a short one, and very characteristic of the man of business—the benevolent Abraham Jacob, who has saved our heroine from much evil:—

"I have caused (he tells her) the furniture of thy departed aunt to be sold, and have vested the produce in the three per cent funds, in thy name. Thou shalt see the account when thy health is re-established." 'O! I do not

require to see any account," exclaimed the still weeping Clara; "I am sure that all which you, my kind, my excellent friend, have done, is right." "Nay, maiden, but this is not wise, nor businesslike. Even between the dearest friends a strict examination of all pecuniary transactions should take place; for it satisfies both parties, and thou must acquire habits of business and circumspection. It was the want of these essentials, nay, these indispensables in business, I should say, that led to the ruin of thy poor father. He trusted to others, which served not them (for injudicious confidence seldom does), and lost himself. I require even my daughter Rachael to render me an account, every week, of all disbursements made through her; so that thou, who art even as another daughter unto me, seeing that thou hast no other earthly father, must become punctual and regular in all pecuniary transactions."

This is genuine *City*, and often much insisted upon on the eastern side of Temple Bar. It must be owned, most generally by the wealthier members; but, nevertheless, the principle is not amiss to be observed by all sorts of people, in trade and out of it.

Mrs. Vincent Robinson, with her patched-up publications, her toadies, and her follies, will, we fear, be recognised by most folks who move in the literary circles of the metropolis. Her grand *soirée* with the King of Oude, and his apposite and satirical remarks, is a scene which Hogarth might have painted. Her "I'd be a Sparrow" as a companion to "I'd be a Butterfly," is a "love" of a hit; but the whole is no less ludicrous than possible.

The perilous example of Lady Axminster, the glories of the Reward-hunting O'Leary, the gourmandism of the beastly Manwarrings, are all to the purpose and clever; and the invention of Ascot Heath for the winding up, is one of the best contrivances we ever met with for effecting that difficult point in a probable manner.

Altogether this is a lesson not to be lost on those who have families and *hirs* governesses. The application is somewhat biting, but if rightly understood, it will produce very beneficial effects.

1. *The Comic Almanack for 1840.* With Twelve Illustrations of the Months by G. Cruikshank. London, Tilt.
2. *The Weather Almanack for 1840.* By P. Murphy. Whittaker and Co.
3. *The New Explanatory, &c. Almanack.* By J. Rowbotham, F.R.A.S. Harvey and Darton.
4. *The Historical, Moral, and Weather Almanack.* Orr and Co.
5. *The New Weather Almanack, &c.* By Albert Kenchen. Groombridge.
6. *The Lunar Almanack.* By St. John Oxford. Painter.

If we are not now weatherwise, we must be otherwise; for here are predictions snow to set up a prophet even in his own country. And then, after foreseeing all the ways the wind shall blow,—all the tornadoes, breezes, airs, and zephyrs, which are to predominate over the twelve months of 1840, have we not George Cruikshank's laughing gas, which is always welcome, summer or winter, spring or autumn? In his this year's *Comic*, the story of the "Barber and his Family," raised to sudden wealth, is humorous and characteristic; and the twelve engravings which illustrate it, full of all the artist's humour. "A Drop-scene at the Opera;" "A finishing touch at Billiards;" "The Tournament;" "Notice to Quit;" "Overboarded

and Underlodged," are excellent: but all are good and laughable. As a piece of the "Literary," we shall only give "The Eglintoun Tournament," under the month of August:—

"Oh! that Ayr tournament in that *ere* shire;
With lots of gentlemen in male attire;
And many a Don and many an Skvire!
Took several days and lots of *knights* to mount;
And a great many pages to recount
Its deeds of glory—Chivalry their fount!
Though lances *staved* (and no wonder, for
'Twas cold and rainy), no sword flesh'd its hilt;
And we'd pass all unnoticed: but, O, lor!
We draw our own existence from a Tilt!"

Besides the principal embellishments we have noticed, every body is aware, for every body sees the *Comic*, that there are also headings to the months, little border cuts, and the grand hieroglyphic for the approaching year. The last being of a serious, mysterious, and highly important order, it becomes our duty (which, as loyal subjects and lovers of the fine arts, we perform with joy and alacrity) to lay it before the public. See, as the soothsayer (and in sooth he says well) tells us:—

"Now, high in the mid-heaven, behold *Albertus Sagittarius* as the Cupid Archer, driving his love-dart through the window of that constellatory hotel, known in great and little Britain by the sign of the *Virgo* and *Crown*. Behold the *Miss* is *hit*. This is portentous of Hymen; but other high men, lo! are typified in those dejected falling stars, pursuing their downward decadence from the court-yard of

the palatial Inn. Now, then, shall marriage spread wide its pinions among people of all opinions, and the cord of Concord shall be tied. See that gorgeous hecatomb of *hearts*, which the young *trump*, *Love*, fires and inspires with fame and flame. He, behold, is the rightful Duke of *Victoria*; *husbanding* his resources, and yet setting the tide of conquest through the world. Baby linen becomes shortly at a premium, and my art foresees a prevalence of *Sun* and *Air*! *Whirled* into fire, see the political *world*, and *ire* burst from the soil of *Ire*-land. In fancy, I behold the flames, now in *in*-fancy, mount and swell. Jack *Frost* sits melancholy mad, and burns his fingers by the blaze he essays to raise; but there are other *Jacks* that want *roasting*, which the courteous reader will *smoke*. The *broils* are not over; and though the fierceness of the fire of politics will not evaporate the Thames, yet, from Westminster to the Tower, it shall send forth a *missing noise*. But sit thou lightly on thy throne, *Victoria*! for the tumult shall be *tumultum in parvo*; and thy people, convinced that it was *infra dig*. to abandon the *spade* for the pike, and assume the habits of the *rake*, will leave the fields of speculation for those of agriculture; and their sons and daughters, emulating thy good example, will betake them to arts of *husbandry*, cast away their *divisions* for *multiplication*, and thus enjoy the Irish *sunshine* of a genial reign."

As the symbol of the greatest event in the month nearest to us,—for what is the meeting of parliament, or the dismissal of ministers, to the truck system and the dismissal of the dogs?—we here insert the "Jolly Dogs" of January 1st. From that era, and for a long season,

sausages, polonies, &c. &c. will, it is supposed, be cheaper;* and the office of the dog's-meat man a sinecure. They are almost mad with pleasure: not so the unhappy man who looks so scaly.

October has its bier, and is naturally devoted to "Medical Students," who are painted to the life—in London. Behold the scientific ragamuffins!—

* The fall in price, in consequence of railroads throwing so many post and stage-coach horses out of employ, did not last above seven months. See "Statistics of Europe," published by Google.

As samples of the side-blows, we find place for a fine conception of "Red Deer, after Landseer;" and the "Brougham Butterfly," a sweet piece of metempsychosis, after a late, we rejoice to add, most ground-less rumour.

With regard to our other friends, whose lucubrations head this notice, we have to state that—2. *Murphy Primus* sticks to his text. He insists upon it that his principles for calculating the weather and its changes are well founded, and only require time to carry them to a degree of perfection which will leave nothing more to be desiderated. 3. *Rowbotham's* is adapted for persons in trade, and useful in that respect. 4. *The Historical* is by the Marquess Moecati, and, if true, Heaven help the Whigs next year! 5. *The New Weather* is meteorological and Murphytic,—with what success, time must determine; and *The Lunar* follows in the same track with equal pretensions, though smaller bulk.

Upon the whole, one thing is evident to us; and it is, that if we pin our faith to these guides we shall be sure to be right: for if one fails us another will not; if one misses, another must (probably!) hit. For example, on New Year's Day, Cruikshank (funny fellow!) assures of nipping frosts and driving snows (thick-soled shoes and double hose); *Murphy*, is "Changeable;" *Moecati*, "Light fog and rain;" *Kenchen*, "Fair;" and *Oxford*, "Fine and dry." The odds, one in favour of its being one or t'other. February 1st is in the same succession of oracles (omitting Cruikshank): "Fair and frost;" "Overcast, light clouds;" "Hard frost;" and "Overcast, hazy, rain or sleet." March 1st—"Changeable;" "Rain and snow;" "Fair;" and "Cloudy, cold winds, and showers." April-fool day—"Changeable;" "Fine, and light clouds;" "Changeable;" and "Fair, partial showers." To conclude the year—"Hazy;" "Thick fog, and then frosty;" "Fair and frosty;" and "No settled frost, though very cold." And so good night to 1840 and its Almanacks.

Yet not quite:—*The One Sheet Sporting Almanack* (Baily and Co.) has since come to hand, with a clever head-piece of "Ascot new Stand" and the races. It is capably filled with all sorts of sporting intelligence for the ensuing year; and speaking of which, reminds us how much we have been pleased with a paper by Lord W. Lennox, giving an account of the origin and progress of the celebrated Goodwood races (at his brother's, the Duke of Richmond), in the December No. of the *Sporting Review*. What with that well-written article, and the contributions of the clever editor, "Craven,"

and the mighty Nimrod, this periodical flourishes highly.

The Landscape Gardening and Landscape Architecture of the late Humphrey Repton, Esq. &c.; with a Biographical Notice, Notes, &c. By J. C. Loudon, F.L.S. &c. &c. 8vo. pp. 619, with 253 Engravings on Wood. London, 1840. Longman and Co.

A WORK on landscape gardening, with the names of Repton and Loudon appended to it, cannot fail to arrest the attention of every one interested in the subject; and, in fact, the volume before us might almost be called a manual of the art.

Landscape gardening may be considered, to a certain extent, as one of our oldest arts; for as soon as mankind began to enclose land, the idea seems to have arisen of so decorating it as to distinguish it from the wild natural scenes that were as yet unappropriated. Thus landscape gardening, in its first stage, consisted in making the ground on which it was exercised as unlike nature as possible; and hence we have the hanging gardens of Babylon; the straight walks and endless fountains of the Athenians; and the geometric gardens and closely clipped trees of Pliny. It is true that some glimpses of a different taste presented themselves from time to time,—such as the gardens which Tacitus tells us were laid out for Nero, &c.,—but these appear to have been only dictated by caprice, and to have had very little effect on the great mass of mankind.

A taste for formal gardens thus generally prevailed from the earliest times of which we read till the commencement of the eighteenth century, when, in the reign of Anne, a new spirit seemed to spread itself abroad. This remarkable change is generally attributed to the ridicule thrown on the topiary art and its accessories, the formal walks and parterres of the geometric style, by the wits of the age; but the fact is, that its cause was more deeply seated. The face of the country was changed; straight woods, and the clipped hedges of enclosed fields, were to be found every where; and a formal garden presented only a miniature picture of the surrounding farm. An imitation of wild nature, such as was now rarely to be seen, became, therefore, the distinguishing mark of a pleasure-ground; and it became, also, a mark of wealth, as only the rich could afford to leave ground undivided into fields. This, then, was the real cause of the introduction of the natural style of landscape gardening; and its first professors, Kent, Brown, &c., instead of leading the public taste, only followed it.

It is the natural consequence of any sudden change, that its first professors should fall into extravagance: as when men become disgusted with any habits in which they have long indulged they rush as far from them as possible. This was pre-eminently the case with the first landscape gardeners, who practised the natural style; and the places they laid out bore about the same relation to the real perfection of the art, as prose run mad does to poetry. It is,

however, equally natural for all extravagance to cure itself in time; and about the period when Repton first began to practise the art of landscape gardening, the taste for it was sufficiently sobered down to allow him to shake off the trammels of precedent, to bring his own good sense and good taste into play. This then it is that renders the works of Repton so truly valuable to all who wish to study landscape gardening; and Mr. Loudon deserves the thanks of his compatriots for having put them in a cheap and accessible form.

Having said thus much of the nature and purport of the work, we have only to give an example of its style; and for this purpose we shall make a few extracts, taken almost at random, from its pages:—

"Where the ground naturally presents very little inequality of surface, a great appearance of extent is rather disgusting than pleasing, and little advantage is gained by attempts to let in distant objects; yet there is such infinite beauty to be produced by judicious management of the home scenery, as may well compensate the want of prospect. There is always great cheerfulness in a view on a flat lawn, well stocked with cattle, if it be properly bounded by a wood at a distance, neither too far off to lessen its importance, nor too near to act as a confinement to the scene, and which contributes also to break those straight lines that are the only causes of disgust in a flat situation. Uneven ground may be more striking as a picture, and more interesting to the stranger's eye; it may be more bold, or magnificent, or romantic, but the character of cheerfulness is peculiar to the plain."

"Vastness of extent will no more constitute greatness of character in a park, than a vast pile of differently coloured building will constitute greatness of character in a house. A park, from its vast extent, may perhaps surprise, but it will not impress us with the character of greatness and importance, unless we are led to those parts where beauty is shewn to exist, with all its interest, amidst the boundless range of undivided property."

The following observations will shew the good sense and good feeling of Mr. Repton, and how thoroughly he identified himself with the sentiments of those whose grounds he was employed to embellish:—

"In this country there will, I hope, for ever exist different orders and degrees of society, which most generally depend on the proportion of property, either inherited by individuals, or procured by fortune; and so long as such distinctions remain, it will be proper that the residence of each should be marked by such distinct characters as may not easily be mistaken. Before the introduction of modern gardening, there always existed a marked difference betwixt the residence of the landlord and that of his tenant, not only in the size and style of the house itself, but in that also of the land immediately adjoining. The importance of the mansion was supported by a display of convenience, rather than of beauty; and thus the hall-house was distinguished from the neighbouring cottage, not by the extent of lawn, or the variety of landscape, but the quantity of barns, stables, and offices, with which it was surrounded; and, as our ancestors thought a certain degree of gloom and confinement necessary to greatness, the views from the windows were confined by lofty walls, surrounding quadrangular courts, or the kitchen-garden, which being felt as an object of the greatest convenience, was deemed the properest object of sight from the principal apartments. This taste

in gardening continued long after the vaulted kitchen, the buttery-hatch, the carved cellar-door, and other internal marks of hospitable splendour had been banished by modern improvements in architecture. It is now acknowledged that gloom is not necessary to magnificence, that liberty is 'not incompatible with greatness, and that convenience is not the sole object of ornament; for though such things as are useful may occasionally be ornamental, it does not follow that ornaments must always be useful; on the contrary, many of those productions of the polite arts which are most admired, are now merely considered ornaments, without any reference to their original uses. This is confessedly the case with works of painting and sculpture (except in that inferior branch of each which relates to portraits), for whatever might be the original uses of pictures or statues, they are now only considered as ornaments, which, by their number and excellence, distinguish the taste, the wealth, and dignity of their possessors. To use these internal marks of distinction only, might be prudent in those countries where it would be dangerous to display any external ornaments of grandeur: but rank and affluence are not crimes in England; on the contrary, we expect to see a marked difference in the style, the equipage, and the mansions of wealthy individuals; and this difference must also be extended to the grounds in the neighbourhood of their mansions, since congruity of style and unity of character are amongst the first principles of good taste."

We shall now extract one of Mr. Loudon's notes, as a specimen of the manner in which that gentleman has executed his task. Mr. Repton had quoted with approbation Burke's assertion that "No work of art can be great, but as it deceives; to be otherwise, is the prerogative of nature alone." On this proposition Mr. Loudon observes:—

"This is, unquestionably, a false principle, though laid down by so great a master. It is possible, indeed, that Burke may have intended it to be taken in some sense which we do not clearly perceive; but whether we consider it as an isolated sentence, or take it in connexion with what goes before and after in the 'Essay on the Sublime,' &c., it appears to us alike false. A marble statue is a work of art, and one which all allow to be great; but in what respect does it deceive? If coloured so as to resemble nature, it might possibly 'deceive,' and be mistaken at a distance for a living being; but it would cease immediately to be admired as a work of art, and be looked on as an attempt to deceive the spectator, by making him believe it a work of nature. If, by the word 'great,' the idea of magnitude is intended, the principle appears to us to be equally false. The Doric columns at the London entrance to the Birmingham Railway, and St. Paul's Cathedral, are, undoubtedly, great objects—that is, objects of great magnitude; the columns are great as compared with other columns, and St. Paul's is great as compared with other churches; but surely they are not the less great to those who know their real height, than to those who are ignorant of it, or who imagine it to be greater than it is."

In conclusion, we have only to give our warm commendation to the getting up of the book and the execution of the wood-engravings; some of which, particularly those of the Pavilion at Brighton, are very beautiful.

CAPT. MARRYAT'S AMERICA.

Vols. III. and IV. Longman and Co.

THE nature and contents of this continuation

cannot be very accurately defined, from we late and hurried glance we have had of it; but its spirit may be partly guessed from the only extract we have been able to choose out of its varied pages. It is seldom we, of pacific dispositions, like to interfere in belligerent affairs, and especially in those in which our contemporaries may be engaged. There is, however, so much of pluck and bottom in the stand-up fight between Capt. Marryat and the "Edinburgh Review," that we fancy a peep at the fray will amuse and interest the reader, and the literary world in general, as much as it has done ourselves. The gloves are fairly off, and the set-to both vigorous and scientific. As bottle-holders, it is our office to afford the aid of a clear stage and no favour:—so we offer the following piece of hitting right and left; and hope our friend, Miss Martineau, will take example by us; and if she cannot bring the "Edinburgh," *alias* Auld Reeky, to the scratch again, act upon a hint, to be found in this paper, and give the Captain a sound towelling.

"The art of reviewing may be compared to French cookery; it has no medium—it must either be first-rate or it is worth nothing: nay, the comparison goes much further, as the attempt at either not only spoils the meat, but half poisons the guests. The fact is, good reviewing is of the highest order of literature, for a good reviewer ought to be superior to the party whose writings he reviews. Such men as Southey, Croker, and Lockhart, on the one side; Brougham, Fonblanque, and Rintoul, on the other, will always command respect in their vocations, however much they may be influenced by political feelings, or however little you may coincide with them in opinion. But, passing over these, and three or four more *cordons bleus*, what are reviewers in general? men of a degree of talent below that of the author whose works they presume to decide upon; the major portion of whom, having failed as authors, are possessed with but one feeling in their disappointment, which is to drag others down to their own debased level. To effect this, you have malevolence substituted for wit, and high-sounding words for sense; every paltry advantage is taken that can be derived from an intentional misrepresentation of your meaning, and (what is the great secret of all) from unfair quotations of one or two lines, carefully omitting the context—an act of unpardonable dishonesty towards the author, and but too often successful in misleading the reader of the 'Review.' By acting upon this last-mentioned system, there is no book, whatever its merits may be, which cannot be misrepresented to the public: a work espousing atheism may be made to appear wholly moral; or the Holy Scriptures themselves condemned as licentious and indecent. If such reviewing is fair, a jury may, upon a similar principle, decide upon a case by the evidence in favour of the prosecution; and beauty or deformity in architecture be pronounced upon by the examination of a few bricks taken out from different portions of a building. That, latterly, the public have been more inclined to judge for themselves, than to pin their faith upon reviews, is certain; nevertheless, when what is termed a 'slashing article' upon a popular work makes its appearance, the public are too apt to receive it without scrutiny. Satisfied with the general effect, as with that produced in a theatrical representation, they do not bear in mind that that which has the appearance of gold would prove, upon examination, to be nothing more than tinsel. Were all reviewers to be reviewed by authors, as well as all authors

by reviewers, the authors would have the best of it in the *mille*. Again, were reviewers obliged to put their names to their several articles, there would be a great difference in their style; but, secure in their incognito from the disgrace of exposure, they make no scruple to assert what they well know to be false, and, coward-like, to assail those who have seldom an opportunity, whatever may be their power, to defend themselves. Never, perhaps, was there a better proof of the truth of the foregoing observations than is afforded by the article in the 'Edinburgh Review' upon the first portion of my work on America; and as I have some pages to spare, I shall now take the unusual liberty of reviewing the reviewer. First, let me introduce to the public the writer of the article—Miss Harriet Martineau. My readers may inquire how I can so positively make this assertion? I reply, that it is owing to my 'craft.' A person who has long dealt in pictures will, without hesitation, tell you the name of the painter of any given work: a shepherd with a flock of three or four hundred sheep under his charge will know every one of them individually, although to people in general one sheep is but the counterpart of the others. Thus, there are little varieties of style, manner, and handling of the pen, which become evident to practised writers, although they are not always so to readers. But even if these peculiarities were not sufficient, the manner in which the article is managed (the remarks of Miss Martineau upon the merits of Miss Martineau), in my mind establishes conviction, that the major portion of the article, if not the whole, has proceeded from her pen. This is a matter of no consequence; and I only mention it that my readers may understand why Miss Martineau, who forms so prominent a feature in the Edinburgh article, will also occasionally appear in mine. My reply, however, is not addressed to her, but to the Edinburgh reviewer. I have no doubt the reviewer will most positively deny that Miss Martineau had any thing to do with the review of my work: that of course. With his permission, I will relate a little anecdote. "When the Royal George went down at Spithead, an old gentleman, who had a son on board, was bewailing his loss. His friends came to console him. 'I thought,' observed one of them, 'that you had received a letter?' 'Yes,' replied the old gentleman, 'but it was from Jack himself.' 'Well, what more would you have?' 'Ah,' replied the old gentleman, 'had it been from the captain, or from one of his messmates, or, indeed, from any body else, it would have consoled me; but Jack—he is such an incorrigible liar, that his very assertion that he is safe, convinces me that he has gone to the bottom.' Now, my opinion of the veracity of the 'Edinburgh Review' may be estimated by the above anecdote; the very circumstance of its denial would, with me, be sufficient to establish the fact. But to proceed. The 'Review' has pronounced the first portion of my work to be light and trifling, and full of errors; it asserts that I have been hoaxed by the Americans; that I am incapable of sound reasoning; cannot estimate human nature; and, finally, requests as a favour that I will write no more. Such are the general heads of the 'Review.' Now, here we have a strange inconsistency, for why should the 'Edinburgh Review,' if the work be really what he asserts it to be, 'light and trifling,' &c., waste so much powder and shot upon a tomtit? Why has he dedicated twenty-seven pages of ponderous verbosity to so light

and trifling a work? How seldom is it that the pages of the 'Quarterly' or 'Edinburgh' condescend to notice even the very best of light literature! Do they not, in their majesty, consider it *infra dig.* to review such works, and have not two or three pages bestowed upon them been considered as immense favour on their part, and a high compliment to the authors? Notwithstanding which, we have here twenty-seven pages of virulent attack upon my light and trifling work. Does not the Edinburgh reviewer at once shew that the work is not light and trifling? Does he not contradict his own assertions, by the labour and space bestowed upon it? Nay, more, is it not strange that he should think it necessary to take the unfair advantage of reviewing a work before it is half finished, and pounce upon the first portion, with the hopes of neutralising the effects which he evidently dreads from the second. I will answer the question for him. He indulges in his precipitate and unmeasured attacks, because he feels that the work is written in a style that will induce every one to read it; because he feels assured that the occasional, and apparently careless hits at democracy, are only preparatory to others more severe, and that these will come out in the second part, which will be read with as much avidity as the first. He perceives the drift of the work; he feels that it has been purposely made amusing, and that it will be more injurious to the cause which the 'Edinburgh Review' upholds than a more laboured treatise; that those who would not look at a more serious work will read this, and that the opinions it contains will be widely disseminated, and impressed without the readers being aware of it; moreover, that it will descend to a class of readers who have hitherto been uninformed upon the subject: in short, he apprehends the greater danger to his cause from the work having, as I have said, been made amusing, and from its being in appearance, although not in reality, 'light and trifling.' I candidly acknowledge that the reviewer is right in his supposition: my great object has been to do serious injury to the cause of democracy. To effect this, it was necessary that I should write a book which should be universally read—not merely by the highly educated portion of the community, for they are able to judge for themselves; but read by every tradesman and mechanic; pored over even by milliners' girls, and boys behind the counter, and thumbed to pieces in every petty circulating library. I wrote the work with this object, and I wrote accordingly. Light and trifling as it may appear to be, every page of it (as I have stated) has been the subject of examination and deliberation: it has given me more trouble than any work I ever wrote; and, my labour having been so far crowned with success, I trust that I shall have 'done the state some service.'* The review in the 'Edinburgh' will neither defeat nor obstruct my purpose, as that publication circulates chiefly among those classes who have already formed their opinions; and I have this advantage over it, that, as for one that reads the 'Edinburgh Review,' fifty will read my work; so will fifty read my reply who will never trouble themselves about the article in the 'Edinburgh Review.' And now let us enter a little into detail. The reviewer finds great fault with my introduction, as being

wholly irrelevant to the 'Diary' which follows it. I admit, that if it were an introduction to the 'Diary' alone, there then would be some justice in his remark. But such is not the case: an introduction is, I believe, generally understood to refer to the whole of the work, not a portion of it; and now that the work is complete, I leave it to the public to decide whether the introduction is suitable or not, as bearing upon the whole. I believe, also, it is the general custom to place an introduction at the commencement of a work; I never heard of one being introduced into the middle or at the end of it. The fault, therefore, of its imputed irrelevancy is not mine: it is the reviewer's, who has thought proper to review the work before it was complete. He quotes me, as saying, 'Captain Marryat's object was to examine and ascertain what were the effects of a democratic form of government upon a people which, with all its foreign admixture, may still be considered as English;' and then, without waiting till I have completed my task, he says, that the present work 'has nothing, or next to nothing, to do with such an avowal.' Whether such an assertion has anything to do with the work now that it is completed, I leave the public to decide. The reviewer has no excuse for this illiberal conduct, for I have said, in my Introduction, 'In the arrangement of this work, I have considered it advisable to present to the reader first, those portions of my 'Diary' which may be interesting, and in which are recorded traits and incidents which will bear strongly upon the commentaries I shall subsequently make;' notwithstanding which, the reviewer has the mendacity to assert that, 'not until the last paragraph of the last volume, does he learn for the first time that the work is not complete.' I will be content with quoting his own words against him,—'A habitual storyteller prefers invention to description.' The next instance of the reviewer's dishonesty is, his quoting a portion of a paragraph and rejecting the context. He quotes, 'I had not been three weeks in the country before I decided upon accepting no more invitations, charily as they were made;' and upon this quotation he founds an argument that, as I did not enter into society, I could of course have no means of gaining any knowledge of American character or the American institutions. Now, if the reviewer had had the common honesty to finish the paragraph, the reason why I refused the invitations would have been apparent; 'because I found that, although invited, my presence was a restraint upon the company, and every one was afraid to speak.' Perhaps the sagacity of the reviewer will explain what information I was likely to gain from people who would not open their mouths. Had he any knowledge of the Americans, he would admit, that they never will venture to give their opinions in the presence of each other; it was not that they were afraid of me, but of each other, as M. Tocqueville has very truly pointed out in his work. Moreover, I have now, for the first time, to learn that the best way of arriving at the truth is to meet people who are on their guard, and whose object is to deceive. There is a malevolent feeling in the assertion, that I have treated all other previous writers on America with contempt; and here again he intentionally quotes falsely. My words are 'the majority of those who have preceded me.' As nearly as I can reckon, there have been about fifty works published on America, out of which there are not ten which deserve attention; and the ample quotations I have made

from M. Tocqueville, Captain Hamilton, and others, in corroboration of my own opinions, fully evince the respect I have for their writings. In fact, the whole article is a tissue of falsehood and misrepresentation, and so weak that hardly one of its positions is tenable. Can any thing be more absurd, or more shallow, than to quote the Mississippi scheme and Mr. Law as a proof that the French are, as well as the English and Americans, a speculative nation: one solitary instance of a portion of the French having, about sixty or seventy years ago, been induced to embark their capital, is brought forward, while the abject supineness of the French population of Lower Canada, in juxtaposition with the energy and enterprise of the Americans, has for half a century stared us in the face! The reviewer has the kindness repeatedly to inform me that I have been hoaxed by the Americans, and, most unfortunately for himself, he has brought forward the 'Original Draft of the Declaration of Independence' as a proof of it. That he would be very glad to prove it to be a hoax, I believe; as it is a sad discovery, and one which the American democrats should have kept secret. That the Americans did hoax Miss Martineau, and that they would have hoaxed me if they could, I admit; but even the reviewer must acknowledge that they would not hoax themselves. Now it so happens, that this document, which has not long been discovered, is in the splendid public library of Philadelphia: it has been carefully preserved in a double plateglass frame, so as to be read on both sides without handling; it is expensively mounted, and shewn to every visitor as a great curiosity, as it certainly is, the authenticity of it being undeniable, and acknowledged by the Americans. The paragraph which was expunged is verbatim as I gave it—a paragraph which affords more proof, if further proof were necessary, that Jefferson was one of the most unprincipled men who ever existed. The reviewer recommends my perusal of the works of this 'great and good man,' as Miss Martineau calls him. I suspect that I have read more of Mr. Jefferson and other American authors than ever the reviewer has; and I consider the writings of this Father of Democracy, opposed to his private life, to be a remarkable type of democracy in theory and in practice. To borrow a term from the reviewer, those writings are 'brave words,' to proceed from an infidel, who proved his ardent love of liberty by allowing his own children to be put up to auction at his death, and wear away their existence in misery and bondage. I cannot help here observing a trifling inconsistency on the part of the reviewer. After lauding the Father of Democracy, and recommending me to read his works; after sneering at our aristocracy, by observing, 'that no kind of virtue that we have heard of can suffer much from the loss of a court and of a hereditary nobility;' after, in short, defending and upholding democracy in every page, all of a sudden the reviewer turns round and says, 'We are no general admirers of democracy.' Indeed! if not general, you certainly appear to be particular admirers; and if neither general nor particular, may I inquire what the 'Edinburgh Review' has been frothing, fizzing, hissing, and bubbling about, like a tea-kettle in a passion, for these last twenty years? Never was there a more convincing proof of the boldness and arrogance which reviewers (trusting to the irresponsibility arising from their concealment) assume, than is afforded by the following passage in the Edinburgh article:—'An ardent pursuit of wealth and deep

* "A very acute reviewer has observed of my first portion, that there always appeared as if there was something left behind and not told. He was right; I have edited into every subject just as deeply as I dared to venture, without wearying the class of readers for whom, although not avowedly, yet in reality, the work has chiefly been written. The second portion will, therefore, be found almost as light and trifling as the first."

religious feelings go very well together.' It is not for me to reply to the reviewer in this instance; I must hand him over to higher authority. I must oppose the everlasting doctrines of inspiration to the cold, heartless, and arrogant philosophy of an Edinburgh reviewer. In vain are we again and again forewarned in the Scriptures against the love of money; in vain has our Saviour denounced it; in vain have the apostles followed in his steps. Let the reviewer, if he ever has looked into the Bible, refer to the epistles to the Colossians and to the Ephesians. St. Paul declares that covetousness is idolatry. Hear also what he saith to Timothy: 'But they that wish to be rich fall into temptation and a snare, and into many foolish and hurtful lusts, which drown men in destruction and perdition.' 'For the love of money is the root of all evil.' Our Divine Master is even more explicit, for he says: 'No servant can serve two masters; for either he will hate the one, and love the other; or else he will hold to the one, and despise the other. Ye cannot serve God and Mammon.' Thus says our Lord—now hear the Edinburgh reviewer: 'An ardent pursuit of wealth and deep religious feelings go very well together.' Here the Edinburgh reviewer has placed himself on the horns of a dilemma. The Holy Writings assert most positively and repeatedly one thing, while he asserts another. If, therefore, he acknowledge the Scriptures, he must at the same time acknowledge his own grievous error, and, I may add, his deep sin: if, on the contrary, he still hold to his own opinion, hath he not denied his faith, and is he not worse than an infidel? The reviewer sneers at my observation, that 'Washington had no power to control the nature of man.' It may be, as he observes, a very simple remark; but, at all events, it has one advantage over his own, which is, that it is a very true one. Miss Martineau makes an observation in her book, which is quite as great a truism as mine; for she also says that 'Human nature is the same every where.' How far I have succeeded in my analysis of human nature it is not for me to decide; but that it is the same every where I will now venture to support by something more than assertion on the part of Miss Martineau. When I was at Boston, in company with some of the young ladies, the conversation turned upon Miss Martineau, with whom they stated that they had been intimate. Naturally anxious to know more of so celebrated a personage, I asked many questions. I was told much to interest me, and, among other little anecdotes, they said that Miss Martineau used to sit down surrounded by the young ladies, and amuse them with all the histories of her former loves. She would detail to them, 'how Jack sighed and squeezed her hand; how Tom went down on his knees; how Dick swore and Sam vowed; and how—she was still Miss Martineau.' And thus would she narrate and they listen until the sun went down, and the fire-fly danced, while the frogs lifted up their voices in full concert. And I said to myself, 'Who would have supposed that this Solon in petticoats would ever have dwelt upon her former days of enthusiasm and hope, or have cherished the reminiscences of love? How true it is that human nature is the same every where.' Once more: I was conversing with a lady at New York, who informed me that she had seen a letter from Miss M., written to a friend of hers, after her return to England, in which Miss M. declared that her door was so besieged with the carriages of the nobility,

that it was quite uncomfortable, and that she hardly knew what to do. Thinks I to myself I recollect an old story. 'Oh! grandmother,' cried Tom, running in; out of breath, 'there's at least a thousand cats in our garden.' 'No, no, Tom,' quickly replied the old lady; 'not a thousand, Tom.' 'Well, I'm sure there's five hundred.' 'No, nor five hundred,' replied the old lady, not taking her eyes off her knitting. 'Well, then, grandmother, I'm sure there's fifty.'—'I don't think there are fifty, Tom.' 'Well, at all events, there's our cat and another.' 'Ah! Tom,' replied the old lady, 'that may be.' I believe that the carriage of Lord Brougham is occasionally to be seen at the door of Miss Martineau. But when I heard this I was pleased, for I said to myself, 'So, then, this champion of democracy—this scorner of rank and title, is flattered by the carriages of the nobility crowding at her door;' and, again I said to myself, 'Human nature is the same every where.' But the reviewer, in his virulence, has not been satisfied with attacking me; he has thought it necessary to libel the whole profession to which I have the honour to belong. He has had the folly and impertinence to make the following remark: 'No landsemen can have been on board of a ship a week, without coming to the conclusion that a sensible house-dog is more like the people he has left at home than most of his new companions, and that it (the house-dog) would be nearly as capable of solving problems on national character.' Indeed!! Is it possible that the reviewer should still remain the dupe of such a vulgar error! That at one time it was the custom to send to sea the fool of the family, is certain, and had the reviewer flourished in those days, he would probably have been the one devoted to the service—but *tempora mutantur*. Is the reviewer aware that one-half, and certainly the most successful half, of English diplomacy, is now carried on by the admirals and captains, not only in the Mediterranean, but all over the world. Is he aware that when the Foreign Office wishes to do its work cheaply and well, it demands a vessel from the Admiralty, which is made over to that office, and is set down as employed on 'particular service:' that during that service the captain acts from instructions given by the Foreign Office alone, and has his cabin piled with voluminous documents; and that, like the unpaid magistracy of England, we sailors do all the best of the work, and have nothing but our trouble for our pains. Nay, even the humble individual who pens this remonstrance was for months on this very service, and, when it was completed, the Foreign Office expressed to the Admiralty its satisfaction at his conduct during his short diplomatic career. House-dogs! Hear this, ye public of England! A sensible house-dog is to be preferred to St. Vincent, Nelson, Collingwood, Exmouth, and all those great men who have aided their country as much with their pen as with their sword; as much by their acuteness and firmness in diplomacy as by their courage and conduct in action. Now, Mr. Reviewer, don't you feel a little ashamed of yourself? Would you really like to give up your name as the author of this barefaced libel? Would you like openly to assert that such is your opinion, and that you will stand by it? No liberal, high-minded man, whatever his politics may have been, has ever refused to do justice to a service which has been the bulwark of England. Lord Brougham has lately published a work containing the lives of celebrated persons in the reign of George III.; I will just quote a few passages from his life of

Lord St. Vincent: 'The present sketches would be imperfect if Lord St. Vincent were passed over in silence, for he was almost as distinguished among the statesmen, as the warriors of the age. A statesman of profound views and of penetration, hardly equalled by any other man of his time. But the consummate vigour and wisdom of his proceedings during the dreadful period of the mutiny, are no less a theme of wonder and of praise. When the Addington ministry was formed, he was placed at the head of the Admiralty; and now shone forth in all its lustre that great capacity for affairs with which he was endowed by nature, and which ample experience of men, habits of command, and an extended life of deep reflection, had matured. The capacity of a statesman and the valour of a hero, outshone by the magnanimous heart which beats only to the measures of generosity and justice.' Here, again, the reviewer is in what the Yankees would call an 'everlasting awkward fix;' for he contradicts Lord Brougham, the patron and sole supporter of his fast-waning Review, without the aid of whose admirable pen, it would long ago have gone to its proper place. He must now either admit that he is himself wrong, or that it is Lord Brougham who is in error. He has but to choose. I have but one more remark to make upon the review itself. At the close of it the reviewer observes, that my remarks upon the marine are interesting and useful. How does he know? Upon his own argument, if we house-dogs are not competent upon shore matters, he must be equally ignorant of any thing connected with our profession; and I therefore consider it a piece of unpardonable presumption on the part of a land-lubber like him to offer any opinion on the subject. The reviewer, whoever it may be, has proved himself wholly incompetent to his task. He has attacked, but has yet to learn the art of parrying, as has been proved by his laying himself so open. His blows have been stopped, and, without giving, he has received severe punishment. I am the more surprised at this, as I really considered that there was a certain tact in the 'Edinburgh Review,' which enabled it to know where to direct the blow so as to make it tell; a species of professional knowledge proper to executioners, reviewers, and cab-drivers, and which may be summed up in the following axiom: 'The great art of flogging is, to know where to find a bit of raw.' So little have I felt the castigation intended, that I have had some compunction in administering this discipline to the reviewer in return. Surely the 'Edinburgh Review' can put a better head on when it takes notice of this second portion of my work? I will give it an anecdote. A lady of my acquaintance was blessed with a son, then about three years old. She was very indulgent, and he was very much spoiled. At last he became so unmanageable that she felt it was her imperative duty to correct him. She would as soon have cut off her right arm, but that would not have mended the matter nor the child. So one day, when the young gentleman had been more than usually uproarious, she pulled up his petticoats and administered what she considered a most severe infliction. Having so done, with a palpitating heart she sat down to recover herself, miserable that she had been compelled to punish, but attempting to console herself with the reflection that she had done her duty. What, then, was her surprise to have her reveries interrupted by the young urchin, who (appearing only to have been tickled) came up to her, and laying down his head on her lap,

pulled up his coats, and cried, 'More whipping, ma; please, more whipping.' So weak has been the wrist, whether it be feminine or not, that has applied the punishment, that I also feel inclined to exclaim with the child, 'More whipping (Miss Martineau?), please; more whipping.' The reviewer has pronounced, that 'no author is cleverer than his works.' If no author be cleverer than his works, it is equally certain that no reviewer is cleverer than his review. Does the reviewer recollect the fable of the jackass who put on the lion's skin? Why did he not take warning from the fabled folly of his ancestor, and hold his tongue? He might still have walked about and have been supposed to be a reviewer. He asserts that I am not capable of serious reflection. He is mistaken. I have seldom cut the leaves of the 'Edinburgh,' having been satisfied with looking at its outside, and thinking how very appropriate its colours of blue and yellow were to the opinions which it advocates. But at times I have been more serious. I have communed with myself as it lay before me, and I have mentally exclaimed, 'Here is a work written by men whom the Almighty has endowed with talents, and who will, if there be truth in Scripture, have to answer for the talents committed to their keeping; yet these men, like madmen, throw about fire, and cry it is only in sport. They uphold doctrines as pernicious as, unfortunately, they are popular; disseminate error under the most specious guise; wage war against the happiness of their fellow-creatures, unhinging society, breeding discontent, waving the banner of infidelity and rebellion, and inviting to anarchy and bloodshed. To such prostitution of talent to this work of the devil, they are stimulated by their pride and their desire of gain!' And I have surmised that hereafter they will have their reward; but, remembering that we are forbid to judge, I have checked my thoughts as they have turned upon what might hereafter be the portion below of an Edinburgh Reviewer."

Hood's Tour up the Rhine. London, 1840.
—Baily and Co.

INSTEAD of his usual "Comic Annual," our facetious friend has this year produced, by way of variety, a trip up the Rhine. Not that such a trip is a novelty in our literature—far from it; but, as in all his performances, Hood has treated it in a manner different from his precursors, or rather pre-steampers, and given us new character and remark, though upon the old scenes. The book is after the fashion of "Humphrey Cliker," in a series of letters from the Rhenish party, consisting of a hypochondriac uncle, with dying twinges every day, yet living prettily merrily on and on; a widowed aunt, who cannot forget her poor dead husband George, yet attends tolerably to all common matters; her maid, a Winifred Jenkins; and Frank Somerville, the Nepos of the drama, a clever, observant, and well-educated young man.

Having only a portion of the publication before us (and Captain Marryat's lesson in our eye, see a preceding page), we shall not deliver a critical opinion upon this work, and only observe that it is full of those originalities which mark all the author's publications. The sketch of the hypochondriac is a fair example of this:—

"As jovial a man, between his paroxysms, as you shall find in a chimney-corner; the next moment, he sees a coffin, as the superstitious call it, fly out of the fire, and fancies

his death-watch standing on the domestic hearth. But, as Shakspeare says, 'A man dies many times before his death,' and my uncle is certainly no exception to the canon. On an average he has three or four attacks a-week,—so that at the end of the year his 'dying moments' would probably amount to a calendar month, and his 'last words' to an octavo volume. As you may suppose, it is sometimes difficult to preserve one's gravity during such solemn leave-takings at Death's door, at which you know he is only giving a runaway knock. Like the boy in the fable, he has cried 'Wolf!' too often for those about him seriously to believe that the destroyer is at hand; though, at the same time, being thoroughly in earnest himself, and long habit and frequent rehearsals having made him quite at home in the part, he performs it so admirably and naturally, that even his familiars are staggered, and look on and listen with a smile and a tear. As yet I have never seen the stranger who was not horrified by what appeared so sudden a visitation, as well as edified by the manly fortitude, good sense, and Christian spirit, with which the victim invariably prepares for his departure. He has made his will, of course; and I verily believe every member of the family has his instructions for his funeral by heart. Amongst other memorials, there is an old family watch, nick-named, *entre nous*, the Death-watch, which he has solemnly presented to me, his unworthy nephew, a hundred times over. On such occasions, I always seriously accept the gift, but take care to leave it about on some shelf or table in the way of the owner; who, when the qualm is over, quietly fobs the time-piece, without any remark on either side, and Nunky, Nevy, and Watch, go on as usual till another warning."

The "Voyage across to Rotterdam" is very amusing, though scarcely over-nice in some of the images conjured up; and the accounts of the places visited and the incidents connected with them, as impressed on the different minds of the four correspondents, are also entertaining, and spiced with a number of those quaint terms which are so peculiarly Hoodish. But before copying a few of them we shall submit a sample song:—

"Ye tourists and travellers, bound to the Rhine,
Provided with passport, that requisite docket,
First listen to one little whisper of mine—
Take care of your pocket!—take care of your pocket!
Don't wash or be shaved—go like hairy wild men,
Play dominoes, smoke, wear a cap and smock-frock it;
But if you speak English, or look it, why then
Take care of your pocket!—take care of your pocket!
You'll sleep at great inns, in the smallest of beds,
Find charges as apt to mount up as a rocket,
With thirty per cent as a tax on your heads—
Take care of your pocket!—take care of your pocket!
You'll see old Cologne,—not the sweetest of towns,—
Wherever you follow your nose you will shock it;
And you'll pay your three dollars to look at three crowns:
Take care of your pocket!—take care of your pocket!
You'll count Seven Mountains, and see Roland's Eck,
Hear legends venacious as any by Crockett;
But oh! to the tone of romance what a check—
Take care of your pocket!—take care of your pocket!
Old castles you'll see on the vine-covered hill,—
Fine ruins to rivet the eye in its socket—
Once haunts of baronial basillit,—and still
Take care of your pocket!—take care of your pocket!
You'll stop at Coblenz, with its beautiful views,
But make no long stay with your money to stock it;
Where Jews are all Germans, and Germans all Jews,
Take care of your pocket!—take care of your pocket!
A fortress you'll see, which, as people report,
Can never be captured, save famine should block it;
Ascend Ehrenbreitstein—but that's not their forte,
Take care of your pocket!—take care of your pocket!
You'll see an old man who'll let off an old gun,
And Lurley, with her hurly-burly, will mock it!
But think that the weeds of the echo thus run—
Take care of your pocket!—take care of your pocket!"

You'll gaze on the Rheingau, the soil of the vine!
Of course you will freely Moselle it and Hock it—
Perhaps purchase some pieces of Humberghem wine—
Take care of your pocket!—take care of your pocket!

Perchance you will take a frisk off to the baths,
Where some to their heads hold a pistol and cock it;
But still mind the warning, wherever your paths,
Take care of your pocket!—take care of your pocket!

And friendships you'll swear most eternal of pacts,
Change rings, and give half to be put in a locket;
But still, in the most sentimental of acts,
Take care of your pocket!—take care of your pocket!

In short, if you visit that stream, or its shore,
Still keep at your elbow one caution to keep it;
And where Schindlerhannes was robber of yore,
Take care of your pocket!—take care of your pocket!"

We now subjoin specimens of the morsels that enliven the narrative:—

"At Cologne," writes the uncle, "I have seen the famous cathedral, which is a fine building, but not half finished, and as such, an uncomfortable sight, for it looks like a broken promise to God.

On my way home, I looked in at several Catholic places of worship. In most of them service was going on, in which I joined; for, although it was in a foreign tongue, I felt it was in praise of the Almighty, just as well as I knew that the music was a psalm tune, and not a jig. Thank God, Popery is none of my bugbears. I am not like old Mrs. Twisleton of Beckenham, who never closed her eyes for a week after Catholic Emancipation, for fear of being converted in her sleep."

His report of a John Bull fellow-traveller:—
"At last I fairly expected to see him go into convulsions like a mad dog, for he got a sprinkle of the holy water on his coat-sleeve, but he brushed it off in as great a hurry as if it had been drops of vitriol. 'Renounce me,' says he, 'if I can put up with it!' and off he flounced into the aisle, which only made matters worse. 'Here's more of their humbug,' says he, pointing up at a black board that was hung to a pillar, and covered all over with little legs, and arms, and hands, and feet, in wax-work. 'All miraculous cures, of course,' says he; 'but mayhap, sir, you believe in miracles?' I don't, and no more did my father before me; and what's more, sir, he wouldn't have knelt down with a Papist on the same pavement—he wouldn't to save his soul."

German Punctuality.—"Remark on this subject to an English gentleman on board, he told me the following anecdote in point:—"During a temporary residence," said he, "at Mayence, I made a slight acquaintance with one of the inhabitants, of the name of Klopp. He had much of the honesty and conscientiousness attributed to his countrymen; and, though in practice a plain, straightforward, matter-of-fact person, was nevertheless addicted, like Germans in general, to abstruse studies. Subsequently, for the sake of the baths, I shifted my quarters to Ems, and was one morning sitting at breakfast, when a rapping at the door announced a visitor, and in walked Herr Klopp. After the usual compliments, I inquired whether he had come to Ems for pleasure merely, or on account of his health? 'For neither,' replied the honest German: 'my errand is to you; and I shall return home directly I have paid off a little debt.' I was not aware, I told him, that we had any pecuniary transactions whatever. 'No,' replied Herr Klopp, 'not in money; but if you remember, on such a day (giving me the day and date) we passed each other on the Mayence Bridge. I had recently been reading Fichte, and my head was full of speculations; so that, though conscious of your howling to me, I omitted to return your salute. It is true that I recollected myself in the cattle-

market, and indeed pulled off my bat, but that hardly satisfied my conscience. So the end is, I have come to acquit myself of the debt: and here it is —' And, will you believe it, sir? with all the gravity of a Prussian sentry pre-

senting arms, the scrupulous German paid me up the salute in arrears!"

It is so difficult, however, to pick out these plums and currants, that we must leave the rest in the pudding; and only noticing that a

romance of Bonn in prose, a legend of a knight and a dragon in verse, and other miscellanies, are introduced, finish by giving our spectatorial readers a view of some of the capers cut by Hood in the wood way.

"The First of March."

"Cavallers and Roundheads."

"The Poms and Vanities of this wicked World."

Elements of Natural Philosophy; being an Experimental Introduction to the Study of the Physical Sciences. By Golding Bird, M.D. F.L.S. F.G.S. &c. &c. Pp. 407. London, 1839. Churchill.

To the letters which are appended to his name on this title-page, and which shew Dr. Golding Bird's connexion with science, as well as his professional distinctions; his vice-presidency of the Westminster Medical Society, lectureship on natural philosophy at Guy's Hospital, and being physician to the Finsbury Dispensary, indicate an active and useful life, and a thorough practical acquaintance with the various important subjects to which he has dedicated his talents in this admirable volume. That it teaches us the elements of the entire circle of natural philosophy in the clearest and most perspicuous manner is only a just portion of its praise, for there is not a division of this circle which it does not elucidate so ably, as to make us feel we have been informed of nearly all that can be told, to the very latest improvements, theories, and discoveries, touching the many interesting inquiries which occupy the attention of the scientific world. Light, magnetism, dynamics, meteorology, electricity, &c. &c., are all briefly discussed, or rather we should say axiomatically set before us, in such simple forms, and so forcible a way, that we cannot help understanding them, their action, their laws, their operation, and the remarkable phenomena by which they are accompanied or signified. Not only as a class-book therefore,—as a volume of useful and beautiful instruction for the young,—but as a work of general value to both sexes and all ages, we cordially recommend this *Experimental Introduction* as one which ought to be in the hands of every individual who desires to taste the pleasures of divine philosophy, and obtain a competent knowledge of that creation in which they live, move, and have their being. It is indeed a production which cannot be over-estimated, and does infinite honour to the comprehensive acquirements and instructive talent of Dr. Golding Bird.

ARTS AND SCIENCES.

Meeting preparatory to the Assembly of the British Association in Glasgow.

ON Saturday last, a meeting of the inhabitants was held in the Town-Hall, for the purpose of hearing the report of the deputation sent to Birmingham to invite the British Association to hold its next meeting in Glasgow, and to make arrangements for the reception of the members of the Institution. The Lord Provost was called to the chair, and the meeting, though not a numerous one, was highly respectable in point of character.

Mr. Strang proceeded to give a detail of the proceedings which had already taken place, with a view of obtaining for Glasgow the honour of receiving a meeting of the Association [which we need not repeat].

Mr. Leadbetter, as one of the deputation who had proceeded to Birmingham, stated, that upon him had been imposed the duty of urging the claims of Glasgow to receive the honour of a meeting of the Association. He had represented to the Committee the importance of Glasgow as a great commercial and manufacturing city; urging that, in point of population, it was the second town in the British empire; it was situated in a rich mineral district, affording an ample and most interesting field for the inquiries of the geologist; it was placed on an estuary which had witnessed the early triumphs of steam navigation; and it was the site of an ancient University, many of whose professors were favourably known to the world, and had contributed largely to the march of literature and science; and, in fine, there was no town in the kingdom where the British Association would realise more readily and decidedly the object for which it was instituted than in Glasgow, viz. the advancement of science. Further, he stated, that he could ensure to the Association a kind and most hospitable welcome. The deputation having been heard, the Marquess of Northampton rose, and moved that the British Association should hold its next meeting in

Glasgow, on Thursday, the 17th September, 1840; and this motion having been seconded, was carried unanimously. These were the details connected with their mission to Birmingham; but as the present meeting had assembled for the purpose of making the necessary preparations for the reception of that body in this city, he would beg to state, in connexion with it, that as a citizen of Glasgow he felt interested, not only in its prosperity, but in its reputation. The cordial manner in which the British Association had been received in all the cities and towns at which it had held its meetings was known to every one; and he was aware that, on the approaching occasion, the meeting was expected to be the largest that had yet been held, bringing together at least two thousand of the most illustrious men connected with literature and science, not only from England, but from the Continent of Europe. He, therefore, did feel anxiety that the reception of these gentlemen should be such as became the greatness, the intelligence, and famed hospitality of the city. They were now met to prepare for that reception, and certainly it would not be realised in the manner they wished, or in the manner which would be creditable to them, unless a portion of the community were ready to be at a little trouble and expense in forwarding the preliminary arrangements. It was true that a portion of the press had made an attempt to deprecate the value of these meetings, and to cast ridicule upon them. He had attended some of their meetings, and glanced at their reports, and he had no hesitation in saying, that but for the existence and efforts of the British Association, many matters most interesting and important to science would never have been gone into or opened up. They had induced government to fit out an expedition, having for its object researches of the most important nature; and they had also induced the government to institute magnetic observations in different parts of the world. To deny the value of the Association, was equal to asserting that men like Herschel, Buckland, Faraday,

Arago, and Humboldt, would countenance a society which was useless; or it was equal to asserting that the presence of these men was not capable of exerting a most exalted and beneficial effect upon the public mind. He would say that it was impossible for any man of aspiring mind to take part in these meetings, without being benefited in all that gives dignity and elevation to our nature. He hoped, therefore, that the same feeling would animate the public mind of Glasgow, and that this meeting would reflect credit and honour upon the city. He had only formally to announce that the General Committee had accepted of the Glasgow invitation in the most flattering manner.

Mr. Liddell (also a member of the deputation to Birmingham) stated that their wishes had been responded to by the General Committee in the most frank and cordial manner. He conceived that the meeting in Glasgow would be a larger one than any which had been held elsewhere; and it depended upon the citizens of Glasgow to meet in a corresponding spirit the cordial feelings and sentiments with which these illustrious strangers would come amongst them. He might state, that upon the return of the deputation from Birmingham, meetings had been called, and invitations transmitted to a number of noblemen and gentlemen to attend, and allow themselves to be nominated as the local honorary committee; and from most, if not all of them, answers had been received expressing their willingness to act. Invitations had also been sent to many distinguished foreigners to attend, and acquiescing answers received from many of them.

The appointment of the Honorary Committee was cordially affirmed by the meeting; and Mr. Strang read notes in reply from his Grace the Duke of Hamilton, the Duke of Argyll, the Earl of Glasgow, the Earl of Eglintoun, Lord Douglas, Sir James Graham, and many other gentlemen, including the members of parliament for the districts; and, in fine, all those who are intimately connected with Lanark, Renfrew, Dumbarton, and Glasgow.

Principal Macfarlan alluded in happy terms to the sensible speech of Mr. Leadbetter, and the important hints conveyed in it; he detailed the encouraging results of such meetings as those of the British Association, and concluded by moving a vote of thanks to the gentlemen who had officiated as the deputation to Birmingham. The proposition of the Very Rev. Principal was most cordially responded to.

Mr. Liddell then moved the adoption of the Local Committee; it included about one hundred and sixty names, and amongst these were found all the gentlemen of the west who are celebrated for their scientific knowledge, research, or inquiry. The committee, on the proposition of Mr. Liddell, was allowed to be an open one.

Mr. Liddell alluded to the importance of appointing corresponding societies in the west and south of Scotland. He stated that many of the gentlemen had expressed their readiness to officiate, and those who had not written might, from their silence, be considered to have linked themselves to the interest and prosperity of the meeting. He also moved the admission of corresponding societies, viz. one from Edinburgh, one from Greenock and Port-Glasgow conjoined, one from Renfrew and Paisley conjoined, one from Kilmarnock, one from the northern district of Stirlingshire, including Stirling, one from Falkirk and the southern district of Stirlingshire, one from the town and county of Ayr, and one from the town and county of Dumfries; and concluded by moving for the appointment of a large com-

mittee from the citizens of Glasgow to meet at an early date, and subdivide itself into committees of finance, &c.; and, above all, to make exertions to institute a museum for the reception of articles of *verità* and curiosity.

Mr. Strang then read the names of a distinguished class of foreigners who had been invited to attend the annual festival of the Association. Amongst those enumerated there were the names of celebrated men from all the States in Germany, from Sweden, France, and Spain. The general Committee will meet on Saturday first, in Hutcheson's Hospital.—*From the Glasgow Herald.*

LINNEAN SOCIETY.

MR. FORSTER, V.P. in the chair.—Read, 'A Notice of some Remarkable Deviations in the Number of the Parts of Flowers in certain Plants,' illustrated by specimens, by the Rev. William Hincks, F.L.S. These deviations are the result of the concretion or union of two or more flowers. Among other examples was a remarkable one in a specimen of *Scrophularia nodosa*, in which a flower had twenty stamens, resulting from the union of four flowers; the barren filament in each flower being fertile. There were several examples of adhesion and union of parts of flowers in *Oenothera* and *Iris*.—Read, also, 'A Monograph of *Streptopus*, with a Description of a new Genus now first separated from it,' by Professor Don, Libr. L.S. Three species of the former genus are described, two of them natives of North America, and the third of Nepal. The new genus is founded upon the *Streptopus lanuginosus* of Michaux, and a second species from the north-west coast of America. A specimen of a curious hybrid, between the wild duck and the pintail, was exhibited by the Rev. R. Hoare.

BOTANICAL SOCIETY.

Anniversary Meeting.

FRIDAY, November 29th. Mr. J. E. Gray, President, in the chair.—Read the reports of the Council and Curator. The Society now consists of one hundred and eighteen members, twenty-six having been elected during the past year. The number of British plants received for distribution to each member, as he may select from the herbarium, in proportion to his contribution, consisted of 24,860 specimens, 1291 species, 491 genera, 101 natural orders. Mrs. Riley had presented every species of British fern. The foreign plants received amounted to between five and six thousand specimens, for the greater portion of which, the members were indebted to the good feeling and liberality M. Schomburgk has always evinced in promoting the interests and objects of the Society. Mr. J. E. Gray was re-elected president, and the vice-presidents appointed by him were Mr. J. G. Children and Dr. Macreight. From December to April the rooms of the Society will be open every Saturday evening, in order to extend the advantages which the herbarium and library afford.

ELECTRICAL SOCIETY.

TUESDAY, December 3.—Read 'Memoir on the Formation of Tables, of the Relations subsisting between the Force of an Electric Current, and the Deviations of the Needles of Galvanometers; followed by Researches on the Causes of Derangement in Thermo-electric Pairs, and on the Means of Obviating them when Applied to the Measurement of Mean Temperatures,' by M. Peltier. Translated from the "Annales de Chim. et de Phys." tom. lxxi. pp. 225-313. An abstract would not enable our readers to

form a just opinion of M. Peltier's researches; we, therefore, refer those who may be interested in these branches of the science to the work above named.—Read, also, 'An Account of an Experiment,' by Mr. Mackrel, the result of which is the perfect inverted copy of any engraved copper-plate, employed as the electrode of a common constant voltaic arrangement. The copy consists of the metal thrown down by electrical action from the sulphate, and deposited on the copper electrode. In former experiments conducted by Mr. Mackrel, relating to the lamination of clay, he had observed this effect produced in the deposition upon a piece of a visiting-card plate, which he had accidentally used for his voltaic arrangement. For the production of lamina in the amorphous clay, by the electrical current, it was necessary to place the voltaic plates in a perpendicular position, in consequence of which the deposited metal was unequally arranged on the copper electrode, in much greater abundance on the lower than on the upper part of the plate. To obviate this, Mr. Mackrel constructed the following simple arrangement: "In a white earthenware pot, of about eight inches in diameter and four inches in depth, he placed a seiditz powder-box, over which was secured a covering of thick brown paper; in the former, containing a solution of sulphate of copper, was placed horizontally, the copper plate previously engraved, and to which was soldered a wire connecting it with the zinc plate,—this plate was placed also horizontally in the box which contained a solution of muriate of soda,—the box was supported by two pieces of wood placed across the pot." The engraved plate employed contained the announcement of genuine double distilled lavender-water, &c. surmounted by the royal arms; and although subjected to only five days' action, the edges of the deposited metal-plate were of considerable thickness; towards the centre, however, the plate was much thinner, and when held up to the light numerous minute holes could be detected. The impression was most perfect, the faintest line was transferred. Whether this interesting result will be utilised, future experiments can alone decide. At present, from the specimen we examined, its apparent brittleness and almost crystalline arrangement involves considerable doubt of success. But the cry is up, and where's the check to human ingenuity? Professor Jacobbi, Mr. Spencer, and others, have produced results similar to those of Mr. Mackrel's:—*Palmam qui meruit ferat.*—It gives us great pleasure to announce that owing to the individual liberality and exertions of a member of the Electrical Society five gymnasts, or electrical eels, are on their passage to England. Advice of their shipment has been received by the Society, and they are daily expected.

ZOOLOGICAL SOCIETY.

At the monthly meeting on Thursday, Mr. Yarrell in the chair, the usual report was read. Balance carried to December, 1431. 18s. 7d., making allowance for 500*l.* in Exchange bills. The number of visitors to the Gardens and Museum, during November, was considerably over 2000. A new building has been constructed for the reception of the various specimens of the simia tribe in the possession of the Society. Three great objects have been kept steadily in view in the construction and arrangement of this building:—1st, to preserve the health of the animals; 2d, to approximate their present condition, as nearly as the circumstances of confinement will permit, to the habits which characterise them in a state of

nature; and, 3dly, to arrange them, as near as may be, according to their natural affinities, and to those principles of scientific classification which are founded upon the necessary relations subsisting between their organic structure and the habits and economy of their lives.

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, 28th November.—The following degrees were conferred:

Doctor in Civil Law.—F. Nicholas, Wadham College.
Masters of Arts.—Rev. J. S. Brodrip, Balliol College; T. D. Wintle, Pembroke College.
Bachelors of Arts.—C. H. Aitkens, New Inn Hall; F. Hinde, W. B. Stevens, W. Ewing, Lincoln College; W. B. Graham, W. C. Rawlinson, E. Lane, Magdalen Hall; F. J. Taylor, Christ Church; E. R. Jones, Scholar of Brasenose College; J. D. Dalgaime, Scholar, T. Preston, Exeter College; T. Pearce, E. K. Burney, Demys of Magdalen College; B. Jowett, Fellow, E. D. B. Estcourt, G. Hadon, Balliol College; T. C. Maule, Fellow, J. W. Deane, St. John's College; P. H. Dod, Worcester College; W. S. Oke, Wadham College; W. Y. Smythies, Trinity College.

CAMBRIDGE, 27th November.—The following degrees were conferred:

Bachelors of Arts.—J. Kitton, R. Blanchard, Queen's College.

ROYAL SOCIETY. (Anniversary Meeting.)

NOVEMBER 30th. The Marquess of Northampton in the chair.—The following were elected the new Council. Those Fellows whose names are in Italics, not belonging to the last. The Marquess of Northampton, President; John William Lubbock, Esq. M.A. Treasurer; Peter Mark Roget, M.D., and Samuel Hunter Christie, Esq. M.A., Secretaries; and John Frederick Daniell, Esq. Foreign Secretary. Other Members of the Council:—*Sir John Barrow, Bart.*, Francis Baily, Esq., *Thomas Bell, Esq.*, *John Davy, M.D.*, *Bryan Donkin, Esq.*, *Edward Forster, Esq.*, Thomas Galloway, Esq. M.A., Thomas Graham, Esq., Sir John F. W. Herschel, Bart. M.A., Francis Kiernan, Esq., *John Lindley, Esq.*, *Phil. D., Richard Owen, Esq.*, *Richard Phillips, Esq.*, *Major Edward Sabine, R.A.*, Robert Bently Todd, M.D., *John Taylor, Esq.*

ROYAL SOCIETY OF LITERATURE.

Nov. 28th.—A further portion was read of Mr. Cullimore's 'Memoir on the Monumental and Historical Successions of the Pharaohs,' referring chiefly to the respective order and arrangement of the series of shields in the tablets of Abydos and Karnak. This was followed by the 'Life of Columbanus,' by Mr. Wright, intended for the Society's "Biographia Literaria Britannica."

SOCIETY OF ANTIQUARIES.

MR. HALLAM in the chair.—Mr. Windus exhibited a large piece of crystal, engraved in intaglio, with a crucifix. Mr. Colburn, of Norwich, exhibited a small ancient cup of silver, gilt, of elaborate workmanship, probably used for the sacrament. Henry Howard, Esq. of Corby, exhibited drawings, collected on the Continent, of several relics of Charlemagne. Mr. Waller exhibited an engraving, and six very elaborate and beautiful drawings, by himself and brother, of monumental brasses of the fourteenth and fifteenth centuries. The reading of Mr. Kemble's 'Observations on the Runes of the Anglo-Saxons' was concluded.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Geographical, 9 P.M.; Medical, 8 P.M.
Tuesday.—Medical and Chirurgical, 8½ P.M.; Zoological, 8½ P.M.; Society of Arts, 8 P.M.
Wednesday.—Society of Arts, 7½ P.M.; Medico-Botanical, 8 P.M.

Thursday.—Royal, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.

Friday.—Astronomical, 8 P.M.

Saturday.—Westminster Medical, 8 P.M.; Mathematical, 8 P.M.; Guy's Hospital Physical, 8 P.M.

FINE ARTS.

NEW PUBLICATIONS.

Findens' Royal Gallery of British Art. Part IV. Containing, The Sheep-Washing, after Sir David Wilkie; The Battle of Trafalgar, after C. Stanfield, R.A.; and, The Procession to the Christening, by P. Williams.

WE have here the fourth part of the finest series of engravings that, in this form, has ever appeared in this or any other country. Single prints, excellent in art and worthy of all praise and encouragement, are occasionally published, and deserve the patronage they obtain; but there are few in the higher department of art, and, with a great deal of talent in England, it has been too much trifled away in animals and such unimportant productions. The present work is one which Messrs. Finden, eminent in their art as engravers, have boldly ventured upon, in the full confidence that great care and taste in the selection of the pictures to be engraved, and grace, beauty, and skill in the execution of the engraving, would be rewarded by distinguished patronage. Their spirited undertaking has obtained this extensively; but the price at which the work is published—twenty-five shillings, for three large and exquisitely engraved prints, which, twenty years ago, would have cost five guineas—ought to place it in the hands of every man who admires what is beautiful in art and has the means of possessing it; and there are few, if they have the taste and inclination, who have not the means of possessing it at this low price, which has made it accessible to nearly all. Its successful continuance, however, can only be supported by numbers. When the early parts were published, we spoke well of them, as we felt that they deserved to be so noticed: even then we praised the size, for they were large enough to do justice to the character and expression of the heads; but though several plates were prepared on the same scale, these spirited artists and publishers decided upon enlarging the future plates, and the engravings of this number are one-fourth larger than those in the earlier numbers: and Millar's splendid engraving of Stanfield's "Battle of Trafalgar" is nearly double the surface of the earlier prints. This zeal in conducting the work, and regardlessness of expense in its production, must and will obtain further encouragement. How such costly and beautiful engravings can be sold at the price is a marvel to us; but we repeat, that numbers alone can sustain such an undertaking.

Among the prints in the present number, we have an engraving from the only landscape Wilkie ever painted, and a beautiful scene it is for his subject—"Sheep-washing." It is charmingly engraved by Finden, and is alone worth the whole cost of the part, especially to the collectors of prints after this eminent painter. Another subject is a picture painted by Penry Williams of Rome—"The Procession to the Christening." When it was exhibited it drew much attention. It is an interesting and delightful picture, and great praise is due to Mr. Stocks for the ability with which he has engraved it, and so well preserved the sweetness of character and expression in the figures. But our favourite (we cannot help having one) in this number is Millar's brilliant and beautiful engraving from Stanfield's "Battle of Trafalgar." We believe the picture to have been

the finest of a naval action ever painted; but we are sure that this is the finest engraving of this class of subjects that has ever been executed. Its scale, seventeen inches long, makes it large enough to frame with an imposing effect, and every naval man ought to possess it. The moment chosen by Stanfield is when—about an hour after Lord Nelson received his death-wound—the Victory is disengaging herself from the Redoubtable, and the enemy's ships have nearly all surrendered. With what truth the scene has been represented, is proved by the acknowledgment of the gallant survivors of that glorious day; and we remember nothing in art more skillful than the engraving from it, to which our praise has done such inadequate justice.

We could not dismiss this beautiful and national work in the common terms of admiration, or the usual brevity which the limit of our columns necessarily compels us to adopt. One of the chief objects of our journal when it was established was to encourage and protect the Fine Arts of our country, by directing the attention of men of taste and affluence towards them, so that they might become purchasers of such new productions as they approved; and to vindicate the claims of our artists to the patronage which they were fully entitled to receive from their country, when their merits were fairly reported.

SKETCHES.

COURT ANECDOTE.—ROYAL COURTSIPS. It is not easy to say why Court anecdotes should appear in the *Literary Gazette* instead of the fashionable columns of the "Morning Post," the court news of the other papers, or the columns of the "Court Journal," or "Court Gazette;" the proper authorities for much that does happen about the court, and much more that does not. It can only be to furnish matter for some future memoir-writer, and thus, as it were, anticipate, instead of review facts, of such universal and popular interest! Well, as we hear, our young and gracious queen has, from her lofty station in the world, been of late rather curiously embarrassed for a lady under her peculiar circumstances. It became necessary for her to indicate her preference for Prince Albert sufficiently to make him acquainted with the royal partiality, and so put affairs in train for the arrangements which we now officially know are in progress. This was a delicate task, but the queen acquitted herself of it with equal delicacy and tact. At one of the palace balls she took occasion to present Prince Albert with her bouquet, and the hint was not lost on the gallant German. His close uniform, buttoned up to the throat, did not admit of his placing the Persian-like gift where it would be most honoured; and he immediately drew his penknife and ript a slit in his dress nearest his heart, where he gracefully deposited the happy omen! Again, to announce the projected union to the Privy Council was an easy duty to that of intimating it to the principal party concerned; and we understand that here also our Sovereign Lady displayed unusual presence of mind and female ingenuity. The prince was expressing the grateful sense he entertained of his reception in England, and the delight he had experienced from the kind attentions shewn to him during his stay, when the queen naturally put the question upon which their future fates so much depended—"If your highness is pleased with the country, would you wish to remain in it?" Who can doubt the reply? And thus it is, according to the accounts which descend from

the perfumed atmosphere of royalty, even to the lowly haunts of literature, that reigning Queens are wooed and wedded ! !

THE POST AND PENNY POST.

THE Penny Post is not a novel, but only a revived feature in the annals of England. To the curious, the following historical facts may not, at this time, be uninteresting.

Commercial intercourse must always have required some method of conveying letters from one place to another, but how that was accomplished, is not easily determined; it is probable that the vehicle of communication between great towns was a common employment, as the carriage of goods is in the present day. Whatever may have been the mode of conveying letters, it seems to have been attended with uncertainty; for, upon referring to correspondence of the olden times, we find letters superscribed with the admonition,—“immediate,” and with “care and speed;” a caution by the which is often resorted to, even in our days. A species of Post existed as far back as the reign of Edward III. The first mention of a postmaster-general is made in Camden’s “Annals,” in which he relates that “Randolph, so much employed by Queen Elizabeth in foreign embassies, held this office.”

The earliest account we meet with of regular Posts is in the year 1462, when Louis XI. finding the mercantile fairs at Genoa drew much money out of France, instituted those fairs at Lyons which afterwards became so famous; and he also established regular Posts and couriers in France, for the more speedy communication of commercial intelligence.

Formerly the management of the foreign mails was under the direction of a stranger chosen by the foreigners in the city, who even assumed to themselves the right by prescription of choosing their own postmaster. James I. erected the first office for the conveyance of letters to and from foreign parts, which he placed under the control of one Matthew de Jurster, or del’ Equester. This office was afterwards claimed by Lord Stanhope, but in 1632 was confirmed and continued to William Frizet and Thomas Witherings by Charles II.

The importance of this mode of communication does not seem to have received much attention till the Commonwealth, when an outline of a more regular and extensive system was suggested by Edward Prideaux, the attorney-general, who was appointed postmaster-general by an ordinance of both Houses of Parliament; in the execution of which office he first established a weekly conveyance of letters to all parts of the kingdom. In 1653, the Common Council of London endeavoured to set up a post-office in opposition to that of Prideaux, but they were checked by a resolution of the House of Commons, declaring the office of Post-master to be in the sole disposal of Parliament. In 1656, a new and regular general post-office* was erected by the Protector; this office was in Lombard Street, and on its site stood a celebrated tavern called the King’s Head, which was destroyed in the great fire of London. Sir Robert Vyner replaced it with a large house, for his own habitation: of whom the well-known story—Sir Robert, during his mayoralty (1676), was honoured with the presence of Charles II.; the king was for retiring after staying the usual time, when Sir Robert, with his skin full of wine, laid hold of the king, and said, “Sire, you must have another bottle.”

* The Emperor Cyrus erected post-houses throughout the kingdom of Persia.

The airy monarch looked over his shoulder at the jovial mayor, and, with a smile, repeated the line of the old song,

“He that is drunk is as great a king,”

and immediately turned back, and complied with the request of his host. Upon Charles II.’s restoration he confirmed the establishment of the post-office, and the regulations continued till the year 1784. A new mode of transferring letters by mail was suggested and carried into effect by Mr. John Palmer, of Bath, in 1782. Before the adoption of this plan, letters were taken by boys on horseback, or with carts. Upon referring to a pamphlet, 1681, called the “Flying Courier,” we find it mentions, “If any gentleman desires to ride post to any principal town, post-horses are always in readiness (taking no horse without consent of his owner), which in other king’s reigns was not duly observed,” and only 3d. was demanded for every English mile, and for every stage to the post-boy * 4d. for conducting. “Besides the excellent convenience of conveying letters and news on horseback,” it continues, “there is of late an admirable accommodation both for men and women of better rank, to travel from London to almost any village near the great city, that the like hath not been known in the world; that is, by stage-coaches, wherein one may be transported to any place sheltered from foul weather and foul nags, and free from damaging one’s health by hard jogging, and this at the very low price of one shilling for every five miles, but with such velocity and speed, as that the posts in foreign countries make not more miles in a day as from London to Oxford † or Cambridge, and that in the space of twelve hours, not counting the time for dining, setting forth not too early, nor coming in too late.”

The useful method of the Penny Post ‡ was projected by one David Murray (1683), an upholsterer in Paternoster Row, who communicated the scheme to Mr. David Dockeora, a searcher in his majesty’s Customs of the Post of England, who carried it on for some time with great success. The government, discovering that this system produced an immense annual income, laid claim to it as part of the crown revenue. Mr. Dockeora was compensated with a pension of 200*l.* a-year, and the receipts of the penny post were granted to the Duke of York by letters patent. The penny post is not mentioned in the statute book till the year 1711, upon the union of England and Scotland.

E. W.

THE DRAMA.

Drury Lane.—Mr. Hammond evinces great enterprise, and is, we trust, improving so much as to bid fair to give him a reward for his perseverance. *Romeo and Juliet*, on Monday, introduced a Mr. Maddocks as *Romeo*, and Miss Emmeline Montague as *Juliet*. The former was very grotesque and galvanic, and gave rise to great laughter. The young lady, on the other hand, who is very young, and has since repeated the part with Elton as *Romeo*, made quite a favourable impression. She is a charming creature, with a voice of music and melody, and if she has heart and feeling must become a bright ornament to the stage. *A Night in the Bastille*, an adaptation from the French, in three acts, is a capital acting piece, and extremely well acted

* The emperor Augustus introduced the system of the post among the Romans, and employed post-chaises.

† “Mr. Thomas Dye’s coach comes to the Crown, in Holborn, Monday, Wednesday, and Friday; and leaves London, Tuesday, Thursday, and Saturday.”

‡ This was made a twopenny post in 1801.

by Vining, Elton, Miss Pettifer, Mrs. W. West, and, above all, Mrs. Stirling, who is the main prop of the drama. When it is shortened (which is the only thing necessary), it must be very popular.

Covent Garden goes on rejoicing.

The Haymarket and the *Adelphi* go on most prosperously.

The St. James’s has brought out a burletta called the *Pupil of Da Vinci*, with some of the sweetest music by Mr. J. A. Wade. Mr. Braham has also been performing in different characters nightly.

VARIETIES.

VIRGIL’S EPITAPH.

To the Editor, &c.

THE inscription which Virgil is said to have prepared for his tomb,

“Mantua me genuit; Calabri rapuere; tenet nunc Parthenope; cecini pascua, rura, duces,”

has been tersely translated as follows:—

“I sung flocks, tillage, heroes. Mantua gave Me life, Brundisium death, Naples a grave.”

This, I believe, is the accepted translation; but it has always occurred to me, that one more euphonious, even if a little extended, would be preferable. I therefore offer the following:—

I, who at Mantua received my birth,
Died at Brundisium, and returned to earth
At Naples. I have sung the country’s charms,
The cares of tillage, and the clash of arms.

Lambeth, December 24, 1838.

J. P., M.A.

Fletcher, the faithful attendant of Byron, died lately; and his son, married to a daughter of L. Zambelli, also formerly attached to his lordship, is in business in Brunswick Square.

LITERARY NOVELTIES.

LIST OF NEW BOOKS.

Robert Liston’s Elements of Surgery, 8vo. 2d. edition, 1*l.* 5*s.*—Repton’s Landscape Gardening, by J. C. London, Esq. 8vo. 1*l.* 10*s.*; coloured, 3*l.* 6*s.*—Sandal in the Olden Time, an Historical Poem, 12mo. 4*s.*—W. E. Walker’s Tailors’ Philosophy; or, Science Complete in the Art of Cutting, royal 8vo. plates, 1*l.* 7*s.* 6*d.*—Wodderspoon’s Historic Sites in the County of Suffolk, plates, 8*s.* 6*d.*—Jarman’s Voyage to the South Seas, 12mo. 4*s.*—Defer’s Novels and Miscellaneous Works, Vol. 11. 5*s.*—Parley’s Tales about Plants, 16mo. 7*s.* 6*d.*—Parley’s Lives of Franklin and Washington, 16mo. 4*s.*—Mr. Ellis’s Poem of the Soil, a Poem, post 8vo. 10*s.* 6*d.*—Flindley’s History and Progress of the Law of England, 8vo. 8*s.*—Finlind’s Introduction to Conveyancing, 8vo. 1*l.*—Seymour’s Sketches, illustrated by A. Crowquill, 3 vols. 8vo. 12*s.*—The Fright, by the author of “Nan Darrell,” 3 vols. post 8vo. 1*l.* 11*s.* 6*d.*—Naturalist’s Library, Vol. XXV.: Dogs, by Colonel H. Smith, 6*s.*—W. H. Willshire’s Principles of Botany, 12mo. 6*s.*—Cornaro’s Sure Methods of Life, 38th edition, 18mo. 3*s.*—Corporator’s Manual, by F. Higson, 12mo. 2*s.* 6*d.*—Champ de Roses, par A. Duhamel-Fauvet, 12mo. 5*s.*—Buried Bride, &c. (Poems), post 8vo. 7*s.* 6*d.*—Gleanings, Historical and Literary, 2d series, 8vo. 12*s.*—Townshend’s Sporting Excursions in the Rocky Mountains, 2 vols. post 8vo. 18*s.*—Glossary of Provincial Words used in Herefordshire, 12mo. 3*s.* 6*d.*—Historical Eloges of James Watt, by M. Arago, translated by J. P. Murehead, 8vo. 8*s.* 6*d.*; 4to. 1*l.* 1*s.*—Hope’s Doctrine of a Triune God, 12mo. 6*s.*—Felltham’s Resolves, new edition, 1*l.* 4*s.* 8*s.* 6*s.*—Professor Smyth’s Lectures on Modern History, 2 vols. 8vo. 1*l.* 1*s.* 6*d.*—Anglo-Saxon Homily, new edition with notes, 8vo. 6*s.*—Pratt’s Statutes relating to Justice of the Peace, 3d and 4th Victoria, 8vo. 7*s.* 6*d.*—James’s Christian Professor, 4th edition, 1*l.* 4*s.*—Sir W. Walker’s Divine Meditations (1680), 12mo. 4*s.*—Daily Lesson, Book No. III. by Dunn and Crossley, 1*l.* 6*d.*—Catalogue of London Periodicals, Law Reports, and Newspapers, for 1840, 1*l.*—Tyas’s Illustrated Napoleon, Vol. I. royal 8vo. 15*s.*

TO CORRESPONDENTS.

This sheet of the *Lit. Gaz.* differs somewhat from our common form; what with Marryat, Cruikshanks, and Hood, there are cuts enough till our readers come again.

When we noticed Mr. Rogers’s volume of “And-protestantism,” we stated that it was a singular work; which opinion being questionably expressed, as it might seem singularly good or singularly bad, we beg leave to set the matter right; by stating, in our opinion, it is not only a curious production, but displays so much learning and originality, as to be well worthy the attention of the public.

ADVERTISEMENT,

Connected with Literature and the Arts.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY, founded A.D. 1815, on the Original Basis of the London Equitable.

Head Office, No. 5 St. Andrew Square, Edinburgh.
 Present Accumulated Fund, upwards of £264,000. Annual Revenue, upwards of £150,000. Whole Profits belong to the Assured. Divisible every Seven Years.

President.

The Right Honourable the Earl of Rosebery.

Vice-Presidents.

Sir Thomas Dick Lauder, Bart.

The Hon. Lord Menzies.

The Right Hon. Lord Justice General.

The Right Hon. Lord Francis Egerton.

(All of whom, as well as the Directors, Ordinary and Extraordinary, are permanently connected with the Society by Assurance of more than three years' standing.)

The Surplus Profits ascertained at 31st December last were sufficient to secure—

1. A Retrospective Bonus of Two per cent. per annum, or 14 per cent. for the Septennial Period, not only on the original sum assured, but likewise on the Bonus additions previously due.
2. A Contingent Prospective Bonus of Two per cent. per annum, to be paid from and after 31st December last, on all Policies of five years' standing that may emerge before 31st December 1865, when the next investigation, and consequent Declaration of Bonus, takes place.

The Directors are authorized, by a by-law of the Society, passed in 1857, to grant to or loan to Members on the security of their Policies (without any expense except the Stamp for a Preliminary Note), to the extent of nine-tenths of their calculated value at the time. They are likewise empowered to allow Members to commute their Bonus Additions; i.e. to have their Bonus applied towards reduction of their future Annual Premiums.

That, for example,—

A, in the year 1850, being then forty years of age, insured his life for £2000, paying an annual premium of £260 5 0
 He is now fifty-nine years of age, and has an actually vested Bonus or Addition, declared and attached to his Policy, of 10352 12s., which, with the 2000 of the original sum assured, shows the full amount of the sum presently contained in the Policy to be £4035 12 0

Were A to die in 1865, after payment of his premium for that year, the sum payable under the Policy would be £4500 11 9
 Or, if it were an object to him to reduce his present Annual Contributions, he might, by giving up his Bonus, reduce his future premium from 260s. 5d. to £200 1 1

Or, if he preferred receiving immediately the present value of his Bonus, he would, by surrendering it, be entitled to a sum of £4035 12 0

If he were desirous of having a loan on his policy, he might borrow to the extent of £4180 0 0

The above example will probably be admitted to be perfectly sufficient to show, in a practical point of view, the great benefits to be derived by parties desiring to insure with this Society. The Directors are at all times ready to entertain Proposals for Loans, either on Redeemable Annuity, or on first Heritable Security. Every information on this or any other subject connected with the Society may be obtained on application (if by letter, post paid) to the Head Office in Edinburgh, or to any of the Society's Agencies.

JOHN MACKENZIE, Manager.

Edinburgh, 5 St. Andrew Square.
 N.B.—Tables of Rates and Forms of Proposals to meet any particular contingency, or effect any specific object, will be transmitted to parties desirous of obtaining them; and all official communications of this nature are considered as strictly confidential.

POLARIZATION OF LIGHT.

E. M. CLARKE begs to inform the Scientific Public that the Third Edition of his Catalogue (designed to embody the announcement of some new and important Apparatus for the Illustration of Polarized Light) will be delivered gratis with the ensuing No. of the *Philosophical Magazine* for January 1860.

Full descriptions are given of every instrument, and it will be perceived that the arrangement of each apparatus is complete in itself, and calculated to exhibit all the varied and interesting phenomena lately discovered.

Gentlemen who honour E. M. Clarke with their orders are assured that, in purchasing any instrument of his construction, they will obtain at the same time all its objects and accessories included in its price, and have no occasion to make supplementary disbursements to complete their apparatus.

No. 48 Strand, opposite Court's Bank.

 By FRANCIS DOUCE. A New Edition.
 "He who, at this day, can entirely comprehend the writings of Shakspeare, without the aid of comment and of laborious illustration, may be said to possess a degree of inspiration almost commensurate with that of the great bard himself."
 London: Printed for Thomas Tegg, 73 Chesapeake; and sold by all other Booksellers.

EXPERIMENTAL INQUIRIES in
CHEMICAL PHYSIOLOGY.
 By HORATIO PRATER, Esq.
 "A work which, though by no means free from material defects, displays considerable patience and experimental dexterity on the part of the operator."—*Lancet*.
 "On ruins, nature can teach us nothing, for nature is not a man; she is a machine, and she is made of matter."—*Review of Medicine*, Paris, 1838.
 S. Highley, 28 Fleet Street.

Also, by the same Author, neatly bound in cloth, price 2s.
Thoughts.—I. On the Sensibility of the
 Imagination, with Practical Illustrations from the Lives of Petrarch, Sterne, and Byron. (In reference especially to the Opinions of Thomas Moore, Esq.)
 2. On the Final Cause for the Love of Posthumous Fame.
 3. On Utilitarian Ethics. (In reference especially to the Opinions of Jeremy Bentham, Esq.)
 4. On Indecency.
 5. On the Law of Copyright.
 "The author professes his object to be the search after Truth; and if that retiring and mysterious lady has not thought proper to withdraw her veil at his bidding, there is at least some merit in looking for her, instead of taking her existence on trust, as is the wont of nine-tenths of the world."—*New Monthly Magazine*, 1839.
 Simpkin, Marshall, and Co. Stationers' Hall Court.

LISTON'S ELEMENTS of SURGERY, greatly enlarged.
 In 8vo. with nearly One Hundred Engravings by Bagge, and Three Copperplates, the Second Edition, thoroughly revised and greatly enlarged, price 25s. cloth, lettered.

LONDON: C. TILT.

Just published, price 2s.

THE DRAMA;**A TREATISE ON PROSE AND VERSE, DRAMATIC COMPOSITION, DRAMATIC AUTHORS,**

AND THE

EFFECTS OF DRAMATIC AMUSEMENTS.

TO WHICH IS ANNEXED,

THE POET'S DEATH; A BALLAD.

By GEORGE NASH, Author of "The Outcast."

"'The Outcast,' a poem possessing great merit, and such deep interest pervading the whole, as would furnish materials for any novelist. It is modelled after the dark productions of Byron, and contains all the fiery feelings of the 'Laras' and 'Glaours,' teeming with raging revenge and wild adventure, and shewing how a great and honourable spirit may become vicious, from circumstances over which it has no control. 'The Outcast' is a fine production, and whoever the author may be, we hesitate not (in spite of a few faults) to pronounce him a man of genius. It is long since we have read a poem so full of energy and soul-stirring interest. There is an earnestness about it which all who peruse will acknowledge."—*Literary Gazette*.

SAUNDERS AND OTLEY, PUBLISHERS, CONDUIT STREET.

A NEW WORK BY THOMAS HOOD, ESQ.

THE laughing Admirers of "THE COMIC ANNUAL" will not, it is believed, look particularly grave at the promise this Year held out to them of a Continental Variety. But for the information of the Public generally, Messrs. A. H. BAILY and Co. have the pleasure to announce an entirely New Work, entitled

UP THE RHINE;

Being a Collection of Letters by a Family Party, with numerous original Embellishments, sketched from Nature and without Art,

MR. COLBURN

WILL PUBLISH DURING THE PRESENT MONTH THE FOLLOWING NEW WORKS.

I.

EXCURSIONS IN DENMARK, NORWAY, AND SWEDEN,

With Notices of the State of Public Opinion in those Countries, and Anecdotes of their Courts.

By **ROBERT BREMNER, Esq.**

Author of "Excursions in the Interior of Russia, &c." 2 vols. 8vo. with Portraits, 28s. bound. (Now ready.)

II.

THE SPITFIRE; A NAUTICAL ROMANCE.By **CAPT. FREDERIC CHAMIER,**

Author of "The Life of a Sailor," "Ben Brace," "Jack Adams," &c. 3 vols.

III.

COMMENTARIES ON SHAKSPERE.By the Right Hon. **T. P. COURTENAY.** 2 vols. post 8vo. 18s. (Now ready.)"An almost inseparable companion to Shakspeare's plays."—*Literary Gazette.*

IV.

SPORTING EXCURSIONS IN THE ROCKY MOUNTAINS,

WITH A VISIT TO THE SANDWICH ISLANDS.

By **J. K. TOWNSHEND, Esq.** 2 vols. post 8vo. 18s. (Now ready.)

V.

MRS. TROLLOPE'S MICHAEL ARMSTRONG, COMPLETE.

The complete edition, in 3 vols. post 8vo. price 25s. bound, of

THE LIFE AND ADVENTURES OF MICHAEL ARMSTRONG, THE FACTORY BOY,By **MRS. TROLLOPE,**

With all the Illustrations by Hervieu, Buss, and Onwhyn, will be ready for delivery on the 9th instant.

N.B. The publication of the Monthly Parts of this Work will be continued as usual, until it is completed.

VI.

A SUMMER IN BRITTANY.Edited by **MRS. TROLLOPE.** 2 vols. 8vo. with 14 Illustrations.

VII.

THE DIARY OF A NUN.

2 vols. post 8vo.

"Friendship is constant in all other things,
Save in the office and affairs of love."—*Shakspeare.*

VIII.

MARIAN; OR, A YOUNG MAID'S FORTUNES.By **MRS. S. C. HALL.**

Author of "Uncle Horace," "Lights and Shadows of Irish Life," &c. 3 vols.

IX.

The Court and Camp of Runjeet Sing.By the Hon. **G. W. Osborne,**
Military Secretary to the Governor-General of India.
8vo. with 16 original Sketches, taken on the Spot.

X.

The Marine Officer.By **Sir Robert Steele, Bart. K.C.S.**
Deputy-Lieutenant of Dorset.
3 vols. post 8vo. with Portrait. (Now ready.)

XI.

A Pilgrimage to Palestine.By **Marie Joseph de Geramb,**
Monk of La Trappe.
2 vols. post 8vo. with Illustrations.

XII.

Preferment; a Novel.By **Mrs. Gore,**
Author of "Mrs. Arnytage," "Bakenhill Place," &c.
3 vols. (Now ready.)

XIII.

Diary of the Times of George IV.Being Vols. III. and IV.
Cheaper edition, in post 8vo. price 16s.

XIV.

The Duchess of St. Albans' Memoirs.3 vols. post 8vo. with Portrait.
(Now ready.)**HENRY COLBURN, PUBLISHER, 13 GREAT MARLBOROUGH STREET.**

*• Orders received by all Booksellers.

REVIEW OF NEW BOOKS.

Memoirs of the Court of England during the Reign of the Stuarts, including the Protectorate. By John Heneage Jesse. 2 vols. 8vo. London, 1840. Bentley.

Who wants a book to take into the country, to read during the Christmas recess? or, if it come to that, who wants a book to read during the holydays in town? Whoever they are, let them procure this agreeable chronicle, this social history of our progenitors, during a period remote enough to be curious, and near enough to be interesting. Mr. Jesse truly tells us, that though we have in our literature many a volume filled with the public acts and events that belong to national records, we are almost destitute of such works as the present, so abundant in France, which set before our eyes the personals of our sovereigns, their courtiers, and associates. Written in an unassuming and pleasing style, our author has collected together the anecdotes floating in a hundred streams, and knitted them together in a narrative of most popular attractiveness. He tells us what has been handed down without dogmatism or lengthened disquisition. The sense of the reader is generally left to determine the probability or improbability of the story; and where Mr. Jesse offers an opinion, it has the merit of being briefly and modestly done. With these qualities, his *Memoirs* are well calculated to amuse every class; and we surely anticipate that they will find their way, as they deserve, into very extensive circulation. To promote this, we shall now make a few selections from the reign of the first James of England, who was characteristically declared to be the wisest fool in Christendom.

"The king's love of buffoonery never deserted him, even when age and vexation were pressing hard upon him. But what he most delighted in was any burlesque, however caricatured, on the incidents of real life: the more ridiculous they were, says Arthur Wilson, the more they pleased him. A story is told, by this writer, of a profane expedient, adopted by Buckingham and his mother, to divert the royal melancholy at the most dismal period of his reign. A young lady was introduced, carrying in her arms a pig, in the dress of an infant, which the countess presented to the king in a rich mantle; one Turpin, dressed like a bishop, in a satin gown, lawn sleeves, and the usual pontifical ornaments, commenced reading the ceremony of baptism from the Book of Common Prayer, while an assistant stood ready with a silver ewer filled with water. The king, to whom the joke was intended to convey a pleasing surprise, hearing the pig suddenly squeak, looked more closely about him, and recognised the face of Buckingham, who was intended to personify the godfather. 'Away, for shame,' he cried: 'what blasphemy is this?'—extremely indignant at the trick which had been imposed upon him.* We must not, however, attribute his displeasure, on this occasion, to any other cause than the accidental melancholy which happened to have mastered him at the time. It is extremely improbable that such artful politicians

* "Wilson, in Kennett, vol. ii. p. 760."

as Buckingham and his mother should have ventured on such 'blasphemies,' unless persuaded, by the success of former puerilities, that their impious buffoonery would not be displeasing to the weak-minded monarch. It may be proper, too, to mention, that a pig was an animal of which James had a more than Judaical abhorrence; he tells us, in his 'Counterblast to Tobacco,' that were he to invite the devil to dinner, he would place three dishes before him: first, a pig; secondly, a poll of ling and mustard; and thirdly, a pipe of tobacco to assist digestion.* His dislike to tobacco was only equalled by his horror of the pig; a fact well known by the fame of the celebrated tirade above alluded to. There was an order issued during his reign, prohibiting the members of the University of Cambridge from smoking tobacco in St. Mary's church. Considering how frequently references are made by contemporary writers to the king's dislike to pigs, we are surprised to find his favourite Buckingham more than once addressing him, in his letters, by the familiar appellation of 'Sow'; but the following curious letter, addressed by the Earl of Pembroke to Sir Edward Zouch, is even more startling:—

"'Honest Ned,—I know you love your master dearly, and his pleasures, which makes me put you in trust with this business, myself not being able to stay in the town so late. I pray you, therefore, as soon as it grows dark, fail not to send the close cart to Basingborn for the speckled sow ye saw the king take such liking unto this day; and let her be brought privately to the man of the wardrobe, by the same token, that I chide him for letting the other beasts go carelessly into the garden while it was day, and he will presently receive her into his charge. Some may think this a jest, but I assure you it is a matter of trust and confidence, and so assuring myself of your secret and careful performance of it, I rest your affectionate friend, Pembrooke.'†

"On other occasions, we find the king familiarly addressed by his minions as 'your sowship.' The following lively letter of the period contains a more graphic picture, and will afford a more accurate notion, of the manners of the court, than could be effected by a more elaborate description. That the wit is of a lighter kind, and the language less ponderous, than is generally the case with the familiar epistles of the period, must be taken as an additional reason for its insertion: it is addressed by Sir John Harrington‡ to Mr. Secretary Barlow, and dated London, 1606:—

"'My Good Friend,—In compliance with your asking, now shall you accept my poor account of rich doings. I came here a day or two before the Danish king § came, and, from the day he had come to the present hour, I

‡ "The epigrammatist, and translator of the 'Orlando Furioso.' He was made a Knight of the Bath by King James, and died in 1612, aged 51."

§ "Christian, king of Denmark, brother to the queen, arrived in England 17th June, 1606, and departed on the 14th of August following.—LAMB. His curiosity led him occasionally to wander about the streets of London in disguise; but it did not prevent him from shewing a repugnance to visit the Tower of London, when he happened to be informed that it was a prison.—SANDERSON."

have been well nigh overwhelmed with carousal and sports of all kinds. The sports began each day in such manner and such sort, as well nigh persuaded me of Mahomet's paradise. We had women, and indeed wine too, of such plenty, as would have astonished each beholder. Our feasts were magnificent, and the two royal guests did most lovingly embrace each other at the table. I think the Dane hath strangely wrought on our good English nobles; for those whom I could never get to taste good English liquor, now follow the fashion, and wallow in beastly delights. The ladies abandon their sobriety, and are seen to roll about in intoxication. In good sooth, the parliament did kindly to provide his majesty so seasonably with money; for there has been no lack of good living, shows, sights, and banqueting from morn to eve. One day a great feast was held; and after dinner the representation of Solomon's temple, and the coming of the Queen of Sheba, was made, or (as I may better say) was meant to have been made, before their majesties, by device of the Earl of Salisbury* and others. But, alas! as all earthly things do fail to poor mortals in earthly enjoyments, so did prove our presentment thereof. The lady who did play the queen's part did carry most precious gifts to both their majesties; but, forgetting the steps arising to the canopy, overset her caskets into his Danish majesty's lap, and fell at his feet, though I rather think it was in his face. Much was the hurry and confusion; cloths and napkins were at hand, to make all clean. His majesty then got up, and would dance with the Queen of Sheba; but he fell down and humbled himself before her, and was carried to an inner chamber, and laid on a bed of state, which was not a little defiled with the presents of the queen, which had been bestowed on his garments; such as wine, cream, jelly, beverage, cakes, spices, and other good matters. The entertainment and show went forward, and most of the presenters went backward, or fell down; wine did so occupy their upper chambers. Now did appear in rich dress, Hope, Faith, and Charity; Hope did assay to speak, but wine rendered her endeavours so feeble that she withdrew, and hoped the king would excuse her levity. Faith was then all alone; for I am certain she was not joined to good works, and left the court in a staggering: Charity came to the king's feet, and seemed to cover the multitude of sins her sisters had committed; in some sort she made obeisance, and brought gifts, but said she would return home again, as there was no gift which Heaven had not already given his majesty. She then returned to Faith and Hope, who were both sick in the lower hall.† Next came Victory, in bright armour, and presented a rich sword to the king, who did not accept it, but put it by with his hand; and, by a strange medley of versification, did endeavour to make suit to the king. But Victory did not triumph long; for, after much lamentable utterance, she was led away

* "Robert Cecil, earl of Salisbury, the celebrated secretary."

† "The whole account, and especially the disgraceful state of the cardinal virtues, is no doubt somewhat overcharged."

by a silly captive, and laid to sleep in the outer steps of the antechamber. Now did Peace make entry, and strive to get foremost to the king; but I grieve to tell how great wrath she did discover unto those of her attendants; and, much contrary to her semblance, made rudely war with her olive-branch, and laid on the pates of those who did oppose her coming. I have much marvelled at those strange pageanties; and they do bring to my remembrance what passed of this sort in our queen's days, of which I was sometime an humble spectator and assistant; but I never did see such lack of good order, discretion, and sobriety, as I now have done. I have passed much time in seeing the royal sports of hunting and hawking, where the manners were such as made me devise the beasts were pursuing the sober creation, and not man in quest of exercise and food. I will now, in good sooth, declare unto you, who will not blab, that the gunpowder fright is got out of all our heads, and we are going on hereabouts as if the devil was contriving every man to blow up himself, by wild riot, excess, and devastation of time and temperance. The great ladies do go well masked, and indeed it be the only show of their modesty to conceal their countenances: but, alack! they meet with such countenance to uphold their strange doings, that I marvel not at aught that happens. The lord of the mansion* is overwhelmed in preparations at Theobald's, and doth marvellously please both kings with good meat, good drink, and good speeches. I do often say (but not aloud) that the Danes have again conquered the Britons; for I see no man, or woman either, that can command herself. I wish I was at home:—*O rus! quando te aspiciam?* and I will before the Prince Vaudemont† cometh.‡

"Wine was always palatable to James. It was, therefore, not unnatural that the visit of his jovial brother-in-law should have led to more than one scene of inebriety.§ The Danish monarch, indeed, seems to have been somewhat famous for disordering his faculties with the juice of the grape. Howel tells us of an instance of his excess, which occurred when, some years afterwards, this author accompanied the Earl of Leicester on his embassy to Denmark. The Earl was invited to dinner by the Dane, who did the best in his power to make the ambassador drunk. They sat down to

their meal at eleven o'clock, and continued drinking till the evening, during which period the king proposed thirty-five healths,—first, the emperor, then the king of England, and so on, till he had exhausted all the kings and queens in Christendom. The consequence was that his majesty was eventually carried off in his chair. The same considerate attention was offered by two of the guards to the ambassador, who, however, was fortunately able to reach his chamber without their assistance."¶

This is a fair example of the pleasing character of the work; what follows is another, and relates to the king's literary pursuits:—

"The 'Doron Basilicon,' containing advice to his son respecting his moral and political conduct, is undoubtedly the best of King James's productions. It was first published in 1603, and went through three editions in that year. It has less of pedantry, and more of good sense, than are to be found in the writings of his contemporaries: moreover, it exhibits no slight knowledge of human nature, and no common capacity. We regret, however, that he did not himself act up to the principles which he endeavoured to inculcate. Had this work proceeded from the heart,—had it been softened by any pleasing traits of real affection for his son, it would probably have continued popular to the present day. Unfortunately, it was written to attract admiration, and not to benefit a child whom he is known to have disliked. His work on 'Demonology' is less meritorious, but more remarkable. James had at one time doubted the existence of those 'detestable slaves of the devil, the witches,' as he himself styles them, though he afterwards adopted a different opinion, and dignified the subject with his pen. The following extract will exhibit how little superior he was to the idle superstitions of the day. Discussing the probability of innocent persons being accused and unjustly punished:—'There are two good helps,' he writes, 'that may be used for their trial: the one is the finding of their mark, and trying the insensibleness thereof; the other is their fleeing on the water: for, as in a secret murder, if the dead carcass be at any time thereafter handled by the murderer, it will gush out blood, as if the blood were crying to Heaven for the revenge of the murderer: so it appears that God hath appointed (for a supernatural sign of the monstrous impiety of witches) that the water shall refuse to receive them in her bosom, that have shaken off them the sacred water of baptism, and wilfully refused the benefit thereof.' It is amusing, in these enlightened times, to find his majesty inveighing against the 'damnable opinions of one Scot, an Englishman, who,' he informs us, 'is not ashamed to deny in public print, that there be such a thing as witchcraft, and so maintains the old error of the Sadducees in denying of spirits.' Such were the arguments of our forefathers. Because a sensible individual disbelieved that an old woman had the power of diseasing a pig, or blighting an apple-tree, the evidence that he was a materialist was considered as damning and conclusive. The king's translation of the Psalms, in which he endeavoured to rival the far-famed Sternhold and Hopkins, was never finished, and is the least known of any of his compositions. The eleventh verse of the seventy-fourth psalm, 'Why withdrawest thou thy hand?—why pluckest thou not thy right hand out of thy bosom, to consume the enemy?' is thus paraphrased by

James, and may be taken as a specimen of the whole:—

'Why dost thou thus withdraw thy hand,
Even thy right hand restrain?
Out of thy bosom for our good,
Draw back the same again.'

The translation of the same verse by Hopkins is still more solemnly ludicrous:—

'Why dost thou draw thy hand aback,
And hide it in thy lap?
O pluck it out, and be not slack
To give thy foes a rap.'

James again paraphrases the first verse of the same psalm as follows:—

'Oh why, our God, for evermore
Hast thou neglected us?
Why smokest thy wrath against the sheep
Of thine own pasture thus?'

Altogether, from the specimens of the king's muse, which have been handed down to us, it is very clear that, as a poet, he has not the slightest claim even to the doubtful credit of mediocrity.

"There are (continues Mr. Jesse, a few pages on) two points, his wit and conversational talent, on which James deserves some credit. There seems reason to believe that he was a very companionable personage. Weldon, who rarely says a word in his favour, informs us that 'he was very witty, and had as many ready jests as any man living, at which he would not smile himself, but deliver them in a grave and serious manner.' When one of the Lumleys was, on one occasion, boasting of his ancestry rather beyond the limits of good breeding,—'Stop, man,' said the king, 'you need say no more: now I know that Adam's surname was Lumley.' The House of Commons he styled, with some humour, 'the five hundred kings.' It was one of James's sayings that 'very wise men and very fools do little harm: it is the mediocrity of wisdom,' he added, 'that troubleth all the world.' Pope has re-echoed this sentiment in the well-known line,—

'A little learning is a dangerous thing.'

'Men, in arguing,' said James, 'are often carried by the force of words further asunder than their question was at first; like two ships going out of the same haven, their landing is many times whole countries distant.' In a letter, also, from Mr. Mead to Sir Martin Stuteville, we have an instance of his conversational humour. 'His majesty, at Theobald's,' says the writer, 'discouraging publicly how he meant to govern, was heard to say he would govern according to the good of the common-wealth, but not according to the common will.' On another occasion, a certain courtier, on his death-bed, expressing the utmost remorse that he had formerly cheated the easy monarch,—'Tell him to be of good courage,' said James, 'for I freely and lovingly forgive him; and he added with some humour, 'I wonder much that all my officers do not go mad with the like thoughts; for certainly they have as great cause as this poor man hath.' There is a curious little work in the British Museum, entitled 'Witty Observations of King James, gathered in his ordinary discourse,' from which I have extracted the following specimens:—'I love not one who will never be angry; for he that is without sorrow is without gladness, as he that is without anger is without love.' 'Parents may forbid their children an unfit marriage, but they may not force their consent to a fit one.' 'No man gains by war but he that hath not wherewithal to live in peace.' 'It is likely that the people will imitate the king in good; but it is sure they will follow him in ill.' 'I wonder not so much that

* "The Earl of Salisbury."

† "Francis, prince Vaudemont, son of the Duke of Lorraine. He arrived in England 23d September, 1606, about six weeks after the departure of the King of Denmark.—CAMDEN'S *Annals*."

‡ "Nugæ Antiquæ," vol. I. p. 342."

§ "The arrival of the boisterous Dane in England, and the manner in which, with homely jocularities, he surprised his sister the Queen of England, are amusingly described in a letter of the period. 'He landed here at Yarmouth, and then took post-horses here to London, where, dining at an ordinary inn, near Aldgate, he hired a hackney-coach, and presently addressed his course to the queen's court, and entered the presence before any person had the least thought of him. I hear Cardel, the dancer, gave the first occasion of his discovering him, by saying that that gentleman was the likeliest King of Denmark that ever he saw any in his life; which a Frenchman, one of his majesty's servants, hearing, and viewing his countenance well, confident that it was he; and presently ran to carry the news thereof to the queen, who sat then at dinner, privately, in her gallery at Somerset House. The queen at first scorned him for his labour, so vain it appeared, and thought it some fantastic caprice of a French brain. But the king, following close after, and begging silence with the beckoning of his hands as he entered, came behind her and embraced her ere she was aware, and, saluting her with a kiss, taught her the verity of that which before she believed to be a falsehood. Presently she took off the best jewel she wore about her, and gave it to the Frenchman for his tidings, despatched a post to his majesty, who was then well onward on his progress, and then intended the care of his entertainment.'—Letter from Mr. Lorkin to Sir T. Puckering, Bart. BISHOP GOODMAN'S *Memoirs*, vol. II. p. 371."

¶ "Howel's Letters," p. 240."

women paint themselves, as that when they are painted, men can love them.' 'Much money makes a country poor, for it sets a dear price upon every thing.' 'Cowardice is the mother of cruelty; it was only fear that made tyrants put so many to death, to secure themselves.' There is another work, entitled the 'Witty Aphorisms of King James,' which affords a still higher notion of his intellectual powers; but it has been more frequently selected for quotation. There have been many writers who have amused themselves with the king's wearisome folios and pedantic frivolities, who have been, in fact, greatly his inferiors in real learning and natural capacity."

The following remarks will, we fear, not meet with universal accord in our day, when rigid sabbatical observances have so many advocates:—

"One act of James's life can never be sufficiently commended. During the progresses made through his kingdom, he had noticed the pernicious effects which a puritanical observance of the Sabbath was producing on the health and happiness of the lower classes of his subjects. With the certainty that religious bigotry would be every where arrayed against him, he issued a proclamation, that after the performance of divine service, his subjects should be allowed to indulge in all legitimate sports and amusements. Without entering into any theological discussion as to the proper observance of the Lord's day, there are few who will deny to James the real credit which he deserved on this occasion. Surely that monarch stands high among the thrones of the earth, who willingly turns from his own pomps and vanities to the sufferings and discomforts of the poor and unprotected; and who readily encounters obloquy and discontent, in order to throw a gleam of sunshine over the broad shadows of human wretchedness."

When we read daily in the newspapers discussions about the morality of persons with whom our young sovereign is surrounded, it may not be amiss to take a glance back at the court of James's queen, Anne of Denmark, whose memoir succeeds that of her husband.

"For her splendid entertainments, those magnificent masques which made the 'nights more costly than the days,' she has been often and sufficiently celebrated. They appear, however, to have been conducted with but little attention to decorum. The Countess of Dorset mentions, in her memoirs, that there was 'much talk of a mask which the queen had at Winchester, and how all the ladies about the court had gotten such ill names, that it was grown a scandalous place; and the queen herself was much fallen from her former greatness and reputation she had in the world.' Peyton's censure is far stronger: 'The masks,' he says, 'and plays at Whitehall were used only as incentives for lust; therefore the courtiers invited the citizens' wives to those shows on purpose to defile them. There is not a chamber nor lobby, if it could speak, but would verify this.' Whatever share the queen may have had in effecting a kind understanding between the courtiers and the citizens' wives, it is certain that she herself was far from being averse to the tender passion. Carte tells us that she took a great delight in making the king jealous, and with this view took liberties which were very improper, and were the cause of some excitement at court. It is to be feared, however, that Anne had less her husband's jealousy at heart than her own gratification. According to the chronicles or scandal of the time, she was far from being satisfied with the

cold attentions and ungainly form of her pedantic spouse. The first person on whom the queen is reported to have fixed her affections was the brave, the beautiful, and unfortunate Earl of Murray. This is the 'Bennie Earl' of Scottish song; a name dear to those whose hearts have ever kindled with poetry, or sympathised with misfortune. A well-known ballad of the period concludes with an allusion to the queen's attachment:—

'O, the bonny Earl of Murray!
He was the queen's love.'

The earl is also celebrated in the still popular ballad of 'Childe Waters.' James has been accused of having sacrificed the earl's life to his jealousy of the queen. This supposition we should be extremely inclined to doubt, had not our suspicions been already aroused by the circumstances attending the tragical fate of the Gowries. Murray was accused, whether wrongfully or justly is not known, of having abetted the Earl of Bothwell in his famous attack upon the king's person in Scotland: James, instead of making use of legitimate means to insure the apprehension of the suspected earl, commissioned the Earl of Huntley, Murray's hereditary and deadly enemy, to bring him into his presence. Murray was not exactly the man to submit tamely to be made the prisoner of his feudal foe. A shot from his castle killed one of Huntley's followers. The storming party became furious, and succeeded in burning the fortress. Murray, finding further opposition hopeless, endeavoured to effect his escape by rushing through the flames: unfortunately, however, his long hair caught fire, which enabled his enemies to follow him in the darkness to the rocks by the sea-shore, among which he probably expected to find a hiding-place. He defended himself as long as he was able, but fell at last covered with wounds. One Gordon, of Buckie, who had been the first to strike him, insisted that Huntley should implicate himself in the odium, by joining in the bloody work, and stabbing his defenceless enemy before he died. Huntley consented, and stabbed Murray in the face. The dying earl fixed his eyes on his hereditary foe: 'You have spoiled,' he said, 'a better face than your own.' Huntley had actually alighted from his horse to perform the dastardly act. Murray's friends refused to bury him till they had avenged his death. Huntley, after the execrable deed, continued for some time in real or affected concealment. During his flight, he applied for refuge and hospitality at Lord Sinclair's castle of Ravenscraig. Lord Sinclair told him that he was welcome, but that he would have been much more welcome if he had passed on. However, notwithstanding this rough reception, Lord Sinclair entertained him kindly, and conducted him in safety to the Highlands. Huntley, shortly afterwards, returned to Edinburgh, where he escaped with a brief imprisonment. A suspicion certainly rests upon James. In the Advocates' Library, in Edinburgh, are preserved the MS. annals of Sir James Balfour, Lyon King at Arms, who was living at the time, and who inserts among his papers the following curious annotation:— 'The seventh of February this year, 1592, the Earl of Murray was cruelly murdered by the Earl of Huntley, at his house in Dumbrissel, in Fifeshire; and with him Dunbar, sheriff of Murray. It was given out and publicly talked, that the Earl of Huntley was only the instrument of perpetrating this fate, to satisfy the king's jealousy of Murray, whom the queen, more rashly than wisely, some few days before, had commended in the king's hearing, with too

many epithets, of a proper and gallant man.' The story is in some degree corroborated by Oldmixon. 'I have it,' he says, 'from the best authority, that the king conceived a mortal hatred against the Earl of Murray for an expression of his wife Queen Anne, who, looking out at a window and seeing that lord entering the court, said he was the handsomest man she ever saw. 'What,' said the king, 'handsomer than I?' and swore he would have his life.' A supposition has long existed that the unfortunate John, earl of Gowrie, was a favoured lover of Queen Anne. There is, however, every reason to believe, that it was not the earl, but his younger brother, Alexander Ruthven, the sharer of his tragical fate, on whom the queen's affections were in reality fixed. More than one writer has endeavoured to trace the secret history of the Gowrie conspiracy from the existence of this romantic amour. They assert that the whole plot was a mere counterfeit, contrived by James himself, in order to revenge himself by the destruction of his rival. This supposition, though contrary to the king's well-known character for timidity, is, nevertheless, consonant with his ideas and system of king-craft; and though it requires confirmation, is not altogether unsupported by correlative circumstances."

We give our quotations without question of the relative value of the authorities on which the facts rest; for it would betray us into much more lengthened argument than our page has room for, and intelligent readers can easily distinguish the likely from the prejudiced. Of Prince Henry the account is interesting, and he, on account of his high Protestant principles, is a favourite with the author. Mr. Jesse was probably not aware, or he might have mentioned it, that the residence of this most popular prince in Fleet Street still retains his blasonings and ensigns. His principal room is now a billiard-room—"To such base uses we may come at last"—the house is opposite Chancery Lane, and much ornamented with the feathers of the Prince of Wales and other armorial bearings.

For the present we must content ourselves with not going out of the royal family, and conclude with a portion of the memoir of Elizabeth the Queen of Bohemia; and as her wedding may furnish something of precedent for a ceremony to which the country is looking forward with great interest, we shall copy part of it:—

"The marriage ceremony was finally performed in the Banqueting-house at Whitehall, on the 14th of February, 1613, and appears to have been really magnificent. The heart of the good Sir John Finett, the master of the ceremonies, evidently warmed, as he describes minutely the gorgeous dresses, and the 'draughts of Ippocras out of a great golden bowl.' 'The bravery,' he adds, 'and riches of that day were incomparable; gold and silver laid upon lords', ladies', and gentlewomen's backs, was the poorest burthen: pearls and costly embroideries being the commonest wear. The king's and queen's and prince's jewels only, were valued that day by his majesty himself at nine hundred thousand pounds sterling.'

"Finetti Philoxenis,' p. 11. The marriage of his daughter must have cost the king nearly a hundred thousand pounds.

The following are given by Rapin as the items:—
For the Palgrave's diet at his standing house . . . £2000
For his diet at his instalment of the gates . . . 4000
For diet at his marriage . . . 3000
For lodging for his servants . . . 850
To the wardrobe for apparel for the Princess Elizabeth . . . 6000

Carried forward . . . £19000

Brought forward.....	£19082
For furnishing her chamber.....	3023
Apparel and necessaries for her to my Lord Har- rington's.....	1829
Jewels and apparel for her servants.....	3914
For divers merchants for silk, &c.....	986
The Lord's Mask at her marriage.....	400
For the naval work of fireworks on the Thames at her marriage.....	4800
More fireworks on the Thames at her marriage.....	5889
To Sir Edward Cecil as Treasurer, for her jour- ney from hence to Heidelberg, and for her pursue.....	9000
For settling her jointure, and charges to some of the gentry to go thither, and to take the assurance.....	800
The charges of her journey.....	9800
For her transport to Flushing.....	5555
Paid over to the Palgrave's agent for her portion	40000
Total.....	£19082

The appearance of the bride has been minutely and fondly described by more than one writer of the period. She was arrayed in white, the emblem of innocence; her long hair, as the ornament of virginity, falling in full length down her back. On her head was a crown of pure gold, ornamented with pearls and diamonds; and supporting her train were twelve young ladies, also clothed in white, and so adorned with jewels, that we are told her passage looked like a milky way. During her progress to the chapel royal she was supported by two single men: her brother, Prince Charles, on the right, and the Earl of Northampton on the left. On her return, she was escorted by two married noblemen, the Duke of Lennox and the Earl of Nottingham. The marriage ceremony was performed by the Archbishop of Canterbury."

We have but one notice more:—

"Among the original letters to King James from his family, preserved in the Advocates' Library in Edinburgh, are several in French, Italian, and English from the princess to her father. James seems to have taken a considerable pleasure in receiving these juvenile compositions from his children; and it was probably owing to her knowledge of this taste that we find several letters from the princess's own children, after she had become Queen of Bohemia, preserved in this collection, and affectionately addressed to their royal grand-aire. One childish epistle from her son, Frederick Henry, is amusing enough to record:—

"S^r,—I kiss your hand. I would fain see yo^r Ma^{ty}. I can say nominativus hic, hæc, hoc, and all five declensions, and a part of pronomen, and a part of verbum. I have two horses alive, that can go up my stairs, a black horse and a cheeunt. I pray God to bless your Ma^{ty}.

"Yo^r Ma^{ty}'s obedient grandchild,
"FREDERICK HENRY."

"To the King."

The Good Match, the Heiress of Drosberg, and the Cathedral Chorister. By Lady Chatterton, author of "Rambles in the South of Ireland." 3 vols. 12mo. London, 1840. Bentley.

ENCOURAGED by the marited success which attended her former production, Lady Chatterton has ventured again into the field of literature, and given us three tales of fiction in these three volumes. Tales of fiction, however, we can hardly call them; for there is a truth, simplicity, and naturalness about them which seem to remove them from the realms of invention into the inhabited precincts of reality. *The Good Match* occupies Vol. I.; *The Heiress of Drosberg*, Vol. II., and two-thirds of Vol. III.; and *The Cathedral Chorister*, the rest. With regard to the general effect of all, we have but another observation to make, and it is that,

they earnestly inculcate the purest principles of virtue and religion. As we never break in upon the plots of such productions, we shall merely illustrate Lady Chatterton's by a few brief passages. Her remarks are often very pertinent:—

"It is, more or less, the system of most people who have been educated in the wide, yet selfish, world of foreign travel, without local attachments, or any of those ties of country, place, or family, which formerly contributed to make Englishwomen domestic and well-principled. Yet there is undoubtedly a great charm and fascination in this sort of ever-sunny character, which render the English of the present day, who have lived much abroad, the pleasantest and most captivating people in the world."

On looking for the last time on the old place, its well-known terraces and sloping gardens, Laura was spared the most painful of all those regrets which are experienced when bidding adieu to the home of our youth—the conviction that we have not valued the blessings and affection which have surrounded us under the paternal roof. No painful remembrance of alighted kindness or neglected advice was recalled in Laura's mind by those beloved objects; no unkind words nor peevish ill-temper towards the dear ones who were gone, rose up, as is too often the case, like ghosts, to scare away and embitter the thoughts of past joys, and to render the parting from a former home more painful still. Oh, what a blessing is a well-regulated and religious mind! How often have I felt, when gazing on the old familiar objects endeared by the memory of those I loved best,—how often have I felt that some kind word from their beloved lips has come with fearful distinctness to reproach me for either disregarding it, or for not having at the time been fully aware of the inestimable value of being so loved! I know that my feelings are morbidly sensitive on this point, and that I suffer the regrets of not having made the most of my former happiness to haunt me like spectres; yet, though I do it to an almost sinful degree, and by thus poisoning other and present joys, sow over again the seeds for future repining, yet I would address a word of warning to others, to beware—to try and remember, that the remorse excited by knowing that we have not enjoyed the past, is worse than the simple, though poignant sorrow of thinking on departed joys when they are gone for ever. Unless mingled with this remorse, I do not agree with Dante, that there is 'Nessun maggior dolore che di ricordarsi del tempo felice nella miseria.' I think that the remembrance of real pure joy is always pleasant, even if those are dead who were the sources of it."

The Heiress of Drosberg possesses the most romantic features, and offers some touching description of the fatal events which marked the life of Joanna of Naples; but perhaps our favourite is the unaffected and unambitious tale of the blind *Cathedral Chorister*. It is unlike anything of the same class we ever read; and though extraordinary in incident, has so much of the *verisemblable*, that we never for a moment doubt it. A single sentence will speak for its execution:—

"One weary day after another passed away, but brought no alleviation to Julia's sufferings. She was still in that depressed state of woe in which we seem to dream more than to exist; when, as yet, we can scarcely believe that our misfortunes are real; when we live, as it were, in expectation of something, we know not what, and can do and resolve on nothing."

Sporting Excursions in the Rocky Mountains, including a Journey to the Columbia River, and a Visit to the Sandwich Islands, Chili, &c. By J. K. Townshend, Esq. 2 vols. 12mo. London, 1840. Colburn.

FROM little boys shooting sparrows and one another, to mighty Nimrods hunting lions in Africa, or elephants in India, there is something in the sports of the field, the excitement, the exercise, the variety of success and disappointment, the triumph of skill, the danger, the fatigue, the retrospect, all of which contribute to render them the delight of every class of men, in every country, and in every age. There is an approximation to more perfect freedom in the chase, a possession of power and independence, and a gallant venture of litch and limb, which endears it to the manly breast, and causes an enjoyment hardly to be excelled by any other human pursuit. In our cultivated land we have only the timid hare and the feline fox to stimulate us (for we count not on the carted stag, and the glorious red deer of the Highlands is but rare, even for the highly-privileged and fortunate few); yet, with how much eagerness and gratification are these done to the death, let the sure beagles of many a locality, and the hounds of Melton Mowbray, bear witness. Rising nobly in the scale, the panther, and the buffalo, and the grizzly bear, present themselves to the woodman's rifle in the Rocky Mountains; his life is one of daring enterprise; his railroad the back of his steed; his hotel, the tent or bended boughs of the forest tree; his feast, the produce of his skill and courage; and his Ude, an appetite sharpened by toil and hunger. Of such matters are Mr. Townshend's volumes the records; and, after Lloyd in Norway, Murray in those same American wilds, Scrope in Scotland, Hawker at home, and others who have wielded the goose-quill equally well with the gun, his observations will find favour in the sight of the sportsman, wheresoever he roams in search of health, and seeking the nearest approach he can reach to his original savage state of warfare against the fowls of the air, the fishes of the waters, and the beasts of the field.

From Saint Louis to the Columbia River is the route we follow in the first volume; and we camp out among Sâques, Otton, Pawnees, Nez Percés, Blackfeet, Snakes, Bannocks, Chinooks, and other red men, till we end among the Klikatatz, who thus treat their heirs and successors (a wonder that, after such usage, they ever are so!)

"A custom prevalent, and almost universal, amongst these Indians, is that of flattening, or smashing in the whole front of the skull, from the superciliary ridge to the crown. The appearance produced by this unnatural operation is almost hideous, and one would suppose that the intellect would be materially affected by it. This, however, does not appear to be the case, as I have never seen, with a single exception (the Kayouse), a race of people who appeared more shrewd and intelligent. I had a conversation on this subject, a few days since, with a chief who speaks the English language. He said, that he had exerted himself to abolish the practice in his own tribe; but although his people would listen patiently to his talk on most subjects, their ears were firmly closed when this was mentioned; 'They would leave the council fire one by one, until none but a few squaws and children were left to drink in the words of the chief.' It is even considered among them a degradation to possess a round head; and one whose caput has happened to be neglected in his infancy, can never become

even a subordinate chief in his tribe, and is treated with indifference and disdain, as one who is unworthy a place amongst them. The flattening of the head is practised by at least ten or twelve distinct tribes of the lower country, the Klikatata, Kalapooyahs, and Multnomahs of the Wallamet, and its vicinity; the Chinooks, Klatsaps, Klatsonis, Kowaltaks, Katlammetas, Killemonks, and Chekalis of the Lower Columbia and its tributaries, and probably by others both north and south. The tribe called Flatheads, or Salish, who reside near the sources of the Oregon, have long since abolished this custom. The mode by which the flattening is effected, varies considerably with the different tribes. The Wallamet Indians place the infant, soon after birth, upon a board, to the edges of which are attached little loops of hempen cord, or leather; and other similar cords are passed across and back in a zigzag manner through these loops, enclosing the child, and binding it firmly down. To the upper edge of this board, in which is a depression to receive the back part of the head, another smaller one is attached by hinges of leather, and made to lie obliquely upon the forehead; the force of the pressure being regulated by several strings attached to its edge, which are passed through holes in the board upon which the infant is lying, and secured there. The mode of the Chinooks, and others near the sea, differs widely from that of the upper Indians, and appears somewhat less barbarous and cruel. A sort of cradle is formed by excavating a pine-log to the depth of eight or ten inches. The child is placed on it, on a bed of little grass mats, and bound down in the manner above described. A little boss of tightly-plaited and woven grass is then applied to the forehead, and secured by a cord to the loops at the side. The infant is thus suffered to remain from four to eight months, or until the sutures of the skull have in some measure united, and the bone become solid and firm. It is seldom or never taken from the cradle, except in case of severe illness, until the flattening process is completed. I saw to-day a young child from whose head the board had just been removed. It was, without exception, the most frightful and disgusting-looking object that I ever beheld. The whole front of the head was completely flattened, and the mass of brain being forced back, caused an enormous projection there. The poor little creature's eyes protruded to the distance of half an inch, and looked inflamed and discoloured, as did all the surrounding parts. Although I felt a kind of chill creep over me from the contemplation of such dire deformity, yet there was something so stark-staring, and absolutely queer in the physiognomy, that I could not repress a smile; and when the mother amused the little object, and made it laugh, it looked so irresistibly, so terribly ludicrous, that I and those who were with me burst into a simultaneous roar, which frightened it, and made it cry: in which predicament it looked much less horrible than before."

Of the party, the following affords a tolerable idea:—

"We have amongst our men a great variety of dispositions. Some who have not been accustomed to the kind of life they are to lead in future, look forward to it with eager delight, and talk of stirring incidents and hair-breadth 'escapes. Others who are more experienced, seem to be as easy and unconcerned about it as a citizen would be in contemplating a drive of a few miles into the country. Some have evidently been reared in the shade, and not

accustomed to hardships: many are almost as rough as the grizzly bears, and not a little proud of their feats, of which they are fond of boasting; but the majority are strong, able-bodied men. During the day, the captain keeps all his men employed in arranging and packing a vast variety of goods for carriage. In addition to the necessary clothing for the company, arms, ammunition, &c., there are thousands of trinkets of various kinds—beads, paint, bells, rings, and such trumpery, intended as presents for the Indians, as well as objects of trade with them. The bales are usually made to weigh about eighty pounds, of which a horse carries two. I am very much pleased with the manner in which Captain W. manages his men. He appears admirably calculated to gain the good will, and ensure the obedience, of such a company, and adopts the only possible mode of accomplishing his end. They are men who have been accustomed to act independently; they possess a strong and indomitable spirit which will never succumb to authority, and will only be conciliated by kindness and familiarity. I confess I admire this spirit. It is noble; it is free and characteristic; but, for myself, I have not been accustomed to seeing it exercised; and when a rough fellow comes up without warning and alaps me on the shoulder, with 'Stranger, what for a gun is that you carry?' I start, and am on the point of making an angry reply; but I remember where I am, and check the feeling instantly, and submit the weapon to his inspection. Captain W. may frequently be seen sitting on the ground, surrounded by a knot of his independents, consulting them as to his present arrangements and future movements, and paying the utmost deference to the opinion of the least amongst them. We were joined here by Mr. Milton Sublette, a trader and trapper of some ten or twelve years' standing. It is his intention to travel with us to the mountains, and we are very glad of his company, both on account of his intimate acquaintance with the country, and the accession to our band of about twenty trained hunters, 'true as the steel of their tried blades,' who have more than once followed their brave and sagacious leader over the very track which we intend to pursue. He appears to be a man of strong sense and courteous manners, and his men are enthusiastically attached to him. Five missionaries, who intend to travel under our escort, have also just arrived. The principal of these is a Mr. Jason Lee (a tall and powerful man, who looks as though he were well calculated to buffet difficulties in a wild country), his nephew, Mr. Daniel Lee, and three younger men of respectable standing in society, who have arrayed themselves under the missionary banner, chiefly for the gratification of seeing a new country, and participating in strange adventures."

Of the manner of their proceedings, and the condition of the country, our next extract gives an example:—

"The next day we rode thirty-four miles, and encamped on a pretty little stream, fringed with willows, running through the midst of a large plain. Within a few miles, we saw a small herd of buffalo; and six of our company left the camp for a hunt. In an hour, two of them returned, bringing the meat of one animal. We all commenced work immediately, cutting it in thin slices, and hanging it on the bushes to dry. By sunset, our work was finished; and, soon after dark, the remaining hunters came in, bringing the best parts of three more. This will give us abundance of

work for to-morrow, when the hunters will go out again. Richardson and Sansbury mention having seen several Blackfoot Indians to-day, who, on observing them, ran rapidly away, and, as usual, concealed themselves in the bushes. We are now certain that our worst enemies are around us, and that they are only waiting for a favourable time and opportunity to make an attack. They are not here for nothing; and have probably been dogging us, and reconnoitring our outposts, so that the greatest caution and watchfulness will be required to prevent a surprise. We are but a small company; and there may be, at this very moment, hundreds within hearing of our voices. The Blackfoot is a sworn and determined foe to all white men; and he has often been heard to declare, that he would rather hang the scalp of a 'pale face' to his girdle, than kill a buffalo to prevent his starving. The hostility of this dreaded tribe is, and has for years been, proverbial. They are, perhaps, the only Indians who do not fear the power, and who refuse to acknowledge the superiority, of the white man: and though so often beaten in conflicts with them, even by their own mode of warfare, and generally with numbers vastly inferior, their indomitable courage and perseverance still urges them on to renewed attempts; and if a single scalp is taken, it is considered equal to a great victory, and is hailed as a presage of future and more extensive triumphs. It must be acknowledged, however, that this determined hostility does not originate solely in savage malignity, or an abstract thirst for the blood of white men; it is fomented and kept alive, from year to year, by incessant provocatives on the part of white hunters, trappers, and traders, who are at best but intruders on the rightful domains of the red man of the wilderness. Many a night have I sat at the camp-fire, and listened to the recital of bloody and ferocious scenes, in which the narrators were the actors, and the poor Indians the victims; and I have felt my blood tingle with shame, and boil with indignation, to hear the diabolical acts applauded by those for whose amusement they were related. Many a precious villain and merciless marauder was made by these midnight tales of rape, murder, and robbery; many a stripling, in whose tender mind the seeds of virtue and honesty had never germinated, burned for an opportunity of loading his pack-horse with the beaver-skins of some solitary Blackfoot trapper, who was to be murdered and despoiled of the property he had acquired by weeks, and perhaps months, of toil and danger. Acts of this kind are by no means unfrequent, and the subjects of this sort of atrocity are not always the poor and despised Indians: white men themselves often fall by the hands of their companions, when, by good fortune and industry, they have succeeded in loading their horses with fur. The fortunate trapper is treacherously murdered by one who has eaten from the same dish and drank from the same cup; and the homicide returns triumphantly to his camp with his ill-gotten property. If his companion be inquired for, the answer is that some days ago they parted company, and he will probably soon join them. The poor man never returns—no one goes to search for him—he is soon forgotten, or is only remembered by one more steadfast than the rest, who seizes with avidity the first opportunity which is afforded of murdering an unoffending Indian, in revenge for the death of his friend."

Again, utilized by Google
"This evening, the roaring of the bulls in

the gang near us is terrific, and these sounds are mingled with the howling of large packs of wolves which regularly attend upon them, and the hoarse screaming of hundreds of ravens flying over head. The dreaded grizzly bear is also quite common in this neighbourhood; two have just been seen in some bushes near, and they visit our camp almost every night, attracted by the piles of meat which are heaped all around us. The first intimation we have of his approach is a great grunt or snort, unlike any sound I ever heard, but much more querulous than fierce; then we hear the scraping and tramping of his huge feet, and the snuffing of his nostrils, as the savoury scent of the meat is wafted to them. He approaches nearer and nearer, with a stealthy and fearful pace, but just as he is about to accomplish the object of his visit, he suddenly stops short; the snuffing is repeated at long and trembling intervals; and, if the slightest motion is then made by one of the party, away goes 'Ephraim,' like a cowardly burglar as he is, and we hear no more of him that night."

The details about the Snake Indians are remarkable:—

"Early in the morning I strolled into the Snake camp. It consists of about thirty lodges or wigwams, formed generally of branches of trees tied together in a conic summit, and covered with buffalo, deer, or elk skins. Men and little children were lolling about the ground all around the wigwams, together with a heterogeneous assemblage of dogs, cats, some tamed prairie wolves, and other 'varmints.' The dogs growled and snapped when I approached, the wolves cowered and looked cross, and the cats ran away and hid themselves in dark corners. They had not been accustomed to the face of a white man, and all the quadrupeds seemed to regard me as some monstrous production, more to be feared than loved or courted. This dislike, however, did not appear to extend to the bipeds, for many of every age and sex gathered around me, and seemed to be examining me critically in all directions. The men looked complacently at me—the women, the dear creatures, smiled upon me, and the little, naked, pot-bellied children crawled around my feet, examining the fashion of my hard shoes, and playing with the long fringes of my leathern inexpressibles. But I scarcely know how to commence a description of the *tout ensemble* of the camp, or to frame a sentence which will give an adequate idea of the extreme filth, and most horrific nastiness, of the whole vicinity. I shall, therefore, but transiently glance at it, omitting many of the most disgusting and abominable features. Immediately as I entered the village, my olfactories were assailed by the most vile and mephitic odours, which I found to proceed chiefly from great piles of salmon entrails and garbage which were lying festering and rotting in the sun, around the very doors of the habitations. Fish, both fresh and half-dried, were scattered all over the ground, under the feet of the dogs, wolves, and Indian children; and others which had been split, were hanging on rude platforms erected within the precincts of the camp. Some of the women were making their breakfast of the great red salmon eggs, as large as peas, and using a wooden spoon to convey them to their mouths. Occasionally, also, by way of varying the repeat, they would take a huge pinch of a drying fish which was lying on the ground near them. Many of the children were similarly employed; and the little imps would also have hard contests with the dogs for a favourite morsel, the former

roaring and blubbing, the latter yelping and snarling, and both rolling over and over together upon the savoury soil. The whole economy of the lodges, inside and outside, was of a piece with every thing else about them—filthy beyond description—the very skins which covered the wigwams were black and stiff with rancid salmon fat, and the dresses—if dresses they may be called—of the women, were of the same colour and condition, from the same cause. These dresses are little square pieces of deer-skin, fastened with a thong around the loins, and reaching about half way to the knees; the rest of the person is entirely naked. Some of the women had little children clinging like bull-frogs to their backs, without being fastened, and in that situation extracting their lactiferous sustenance from the breast, which was thrown over the shoulders. It is almost needless to say, that I did not remain long in the Snake camp; for although I had been a considerable time estranged from the abodes of luxury, and had become somewhat accustomed to, at least, a partial assimilation to a state of nature, yet I was not prepared for what I saw here. I never had fancied any thing so utterly abominable, and was glad to escape to a purer and more wholesome atmosphere." More next week.

Voyages of the Dutch Brig-of-War Dourga, through the Southern and little-known Parts of the Moluccan Archipelago, and along the previously unknown Southern Coast of New Guinea, performed during the Years 1825 and 1826. By D. H. Kolff, Jun., Luitenant ter Zee, 1^e Klasse, en Ridder van de Militaire Willems Orde. Translated from the Dutch by George Windsor Earl, author of the "Eastern Seas." 8vo. pp. 365. London, 1840. Madden and Co.

THOUGH a dozen of years have elapsed since these voyages were performed, they possess considerable interest for the geographer, the merchant, and the general reader. They notice lands very imperfectly known; they point out sources of trade hitherto unsought; and they disclose the views of the Dutch government in these parts: while, at the same time, they convey various intelligence of a new and curious character. Lieutenant Kolff was sent by the King of Holland to visit the Moluccan Archipelago, and restore, as far as he could, the relations of the various islands with Holland, which had been interrupted or ceased in consequence of those events in Europe that benumbed the commercial and colonial energies of this State:—

"The numerous islands (says the translator's preface) lying between the Moluccas and the northern coasts of Australia, have hitherto been very little known to the world; indeed, we cannot discover that any account of them has yet been made public, with the exception of some observations in Valentyn's 'Oude en Nieuw Oost Indien,' a work published in Holland more than a century ago: we are, therefore, induced to offer a few particulars concerning their early history, as an introduction to M. Kolff's narrative. We cannot discover that these islands were ever visited by Europeans previous to 1636, in which year Pieter Pieterzon, a Dutch navigator, touched at the Arru Islands during his voyage to examine the northern coasts of Australia, which had been discovered thirty years previously by a small Dutch vessel, called the Duyfhen. Six years subsequently the Arru group was again visited by F. Corsten, when several of the native chiefs were induced

to acknowledge the supremacy of the Dutch East India Company, binding themselves to trade with no other Europeans, and investing them with the monopoly of the pearl banks, the produce of which the Dutch conveyed to Japan, and there found a ready market and a lucrative return. Transactions, with similar views, subsequently took place at the adjacent islands, on which small bodies of troops were placed; to whose control the simple natives willingly submitted, and viewed with indifference the destruction of the spice-trees, which were vigorously sought for and uprooted by the new-comers. As it was the object of the Dutch to restrict the trade in spices within narrow limits, in order to enhance the value of this commodity, of which they enjoyed the monopoly, the East India Company did not permit even their own countrymen to carry on a commercial intercourse with these islands; indeed, the only advantages the Company derived from their possession consisted in their affording slaves to cultivate the clove and nutmeg plantations of Banda and Amboyna, the only settlements in which they allowed spices to be grown. Notwithstanding these restrictions, an extensive contraband trade was carried on with the islands; for the Europeans who were, from time to time, encouraged by the Company to settle in the Moluccas as planters, although receiving bounties in the shape of free grants of land, with advances of slaves and provisions on credit and at original cost, under the sole condition that they should supply the Company with the produce at a fixed price, soon abandoned their plantations, and embarked in the more exciting and lucrative trade with the islands to the southward, sending confidential slaves in charge of their prahus. It is recorded, that many individuals collected enormous fortunes by this traffic; which, indeed, was nearly all profit, as the goods sent there were of very small value. The trepang fishery, now the principal source of wealth to these islands, then scarcely existed, and the return cargoes of the prahus consisted chiefly of less bulky articles, such as amber, pearls, tortoiseshell, and birds-of-paradise."

The enterprise of other European nations in cultivating spices, &c. elsewhere towards the close of last century, and, above all, the establishment of Singapore by Sir S. Raffles, led to a new condition of things: and the translator says:—

"It was chiefly to establish an intercourse with the natives of these parts, by presenting to them a more convenient mart for their produce, that a British settlement was formed on Melville Island, near the coast of Australia, in 1824, by Captain, now Sir J. J. Gordon Bremer; and if this, and the settlement subsequently formed at Raffles Bay, proved unsuccessful, it is more to be attributed to our want of information concerning these islands than to any other cause. Two small vessels successively were sent among them by the authorities of Melville Island, neither of which returned. It will be seen by M. Kolff's narrative, that, unhappily, both these vessels directed their course to parts previously unvisited by foreigners, and that the natives, unable to resist the temptation of acquiring more valuable property than they had ever before contemplated, attacked and plundered them, killing the greater portion of their crews. Had they visited the parts of these islands which were frequented by the traders, they might have done so with comparative safety, as the natives there would have been too well aware

of the value of commerce to risk the danger of putting a stop to it by an action likely to draw upon them the vengeance of a powerful people. From M. Kolff's voyage having been undertaken so soon after our occupation of Melville Island, there is some reason to believe that the formation of that settlement had considerable influence in inducing the Dutch government suddenly to take a deep interest in the islands adjacent to it, which had been almost totally neglected for half a century previously."

The jealousy of England is, indeed, sufficiently evident in several portions of Kolff's journal; where the "plain seaman" lets out a little of the diplomatist. Thus every island is represented as most anxious for the restoration of Dutch rule, and at one of the Tenimber Islands we are told:—

"On making inquiries concerning the trading vessels which came here, I learned, among other things, that during the previous year a vessel under the English flag had arrived at the east extremity of Timor-laut, the master of which sent his boat on shore to purchase provisions, giving out that he had been necessitated to visit the place from a great mortality and sickness having occurred among his crew. In how far this was the case, I will leave to the judgment of those who are aware of the artifices of the English, in order to carry on a smuggling trade in these parts," and, above all, to import prohibited goods, such as gunpowder and ammunition. Thus was the brig, in name (dakleijen), loaded only with roofing slates and iron, but, in fact, she had a large number of muskets, swords, and other weapons on board. The captain agreed with the natives to give weapons in exchange for stock, and went on shore with half his crew, which consisted of ten Europeans. In the meantime the natives considered this to be a fine opportunity to overpower those who remained on board, and gain possession of the vessel. They therefore boarded her unexpectedly in great numbers, and murdered the people in her, while at the same time those on shore were made away with, with the exception of two boys, who owed their preservation to the interposition of the women. After this crime had been committed, they hauled the brig on shore, stripped her of all they could carry away, and burned her. The plundered goods were shared out among the inhabitants, and part of them sold to the traders who visited them, the remainder being kept, and now, perhaps, serving as finery for the inhabitants of the east coast of Timor-laut. One of the village chiefs stated to me on this occasion, that he had himself seen the chain cable of the brig hanging around the village, and that two iron carronades which had belonged to her lay there upon the ground, the natives not having yet mustered sufficient courage to fire them off."

Again:—

"The English, during their short possession of the Moluccas, sent a British flag to the people of Watidal, who had preserved it well, but without making any use of it. When I demanded the reason of this, I was answered that they plainly perceived that this was not a Company's flag, and that they would not recognise any other nation than the Dutch as their allies. Their ideas of the different European nations are very singular. From their

questions, it appeared that they considered the *Orang Compania* (the Dutch) only as true white people, and that they were unacquainted with other Europeans. They asked me if the English were not the inland mountaineers, or *Orang Gunung*, like the inhabitants of Timor-laut, and other barbarous people."

But we will leave this topic, to afford our readers some insight into the more satisfactory accounts of remarkable native manners and habits in the Serwatty,* Arru, Tenimber, Ceram-laut, and Goram Islands, in the Molucca and Java seas. But first a natural phenomenon:—

"For two nights since the waters of the sea had had a curious white appearance, which at first excited little notice, but on the night of the 13th, as the breeze freshened from the east-south-east, this peculiar appearance increased until the sea possessed the colour of milk. This phenomenon was accompanied by thick drizzling rain, so that by ten o'clock P.M. nothing was visible but the dismal brightness of the waters around us. On board the brig the atmosphere was so dark, that we could not distinguish each other at a distance of three paces, and never having seen a like phenomenon, we were not a little surprised. The wind continued to blow strongly until two o'clock A.M., when the atmosphere began to clear up, so that at length we began to recognise one another's countenances. The strange appearance of the water continued until the break of day, and even afterwards it continued white and troubled. During the night, and also on the subsequent day, I took up some of the water in a clean glass, that I might examine it with a microscope; but I found it to be entirely free from dirt or animalcules, though it still retained a clear, sparkling whiteness. On several subsequent occasions, especially during the night, we remarked a similar appearance, but not to so great an extent as on the one above-mentioned; I am, therefore, led to suppose that the strength of the wind materially contributed to it. The pilots, who had been acquainted with these seas for several years, informed me that they had never previously witnessed this appearance to so great an extent as at present; which may, perhaps, be owing to their never performing their voyages when the monsoon is blowing its full strength."

"The Arafuras (the aboriginal inhabitants of the Arru Islands) form a numerous body of people. They are not, as is generally supposed, entirely uncivilised, since they live in villages, containing ten or twelve houses each, under the control of their elders. Their food consists chiefly of fish and hogs, which they shoot with iron-pointed arrows. They also grow excellent vegetables, Indian corn, *labu* (a sort of pumpkin, resembling the turnip in flavour), sugarcane, together with a little red and white rice. Their clothing is not more costly than their food. The men wear a strip of white, blue, or coloured calico round the waist, one end being brought between the legs, and fastened on one side with a knot; and adorn themselves with armlets made from white shells, with small pieces of brass wire in four or five holes, pierced above one another in the ears, and with beads around the neck. Their hair is usually black, and strongly curled. As I have remarked elsewhere, they wash it with ash or lime-water, which imparts to it a lightish colour, and causes

it to appear rough; both these peculiarities being considered very tasteful by the Arafuras, and also by the Papuas (the inhabitants of the coasts of New Guinea). Some of these, who have very long hair, twist it up into a knot at the back of the head, confining it by means of a bamboo comb. Nearly all their head-dresses are adorned by some strings of coral beads extending from both ears, and meeting over their forehead. They always carry a chopping-knife thrust through their waistcloth. The women wear a chain-girdle, made of thick brass wire, round the waist, the ends fastened by a hook, from which a small piece of cloth, generally of Macassar *sarong* stuff, hangs down in front, a square piece of fine matting depending in like manner from behind; these forming their sole covering. The numerous strings of coral beads which they wear round the neck, hang down upon the breast, and are triced up to each ear, which has by no means an ungraceful appearance. The entire lobe of the ear is pierced with numerous holes; through which are drawn pieces of copper and tin, and sometimes a species of marine plant, this last being also often used as armlets. Under the knee and above the elbow they wear bands of fine plaited cane, through which they often draw the leaves of a certain plant. The hair of the women is very long and fine, and in general but slightly curled. They plait it in different sections, and twist the whole up into a knot on the top of the head. Their colour is black or transparent brown (*doorschijnend bruin*). Among the Arafuras the greater portion of the labour is performed by the women; they carry water, cut wood, cure trepang, catch the crabs and shell-fish, and prepare the meals, carrying their young children at their back while pursuing their avocations."

One of Kolff's officers, who had formerly been among these islanders, gave his commander the following account of them:—

"Although," says he, "I found in a house at Old Affara (a village on Vorkay, one of the southernmost of the Arrus) an image rudely formed of wood, together with a post on which different figures, such as snakes, lizards, crocodiles, and human forms, were carved, and which the owner stated to be intended for preserving the house from evil spirits (*Suwangi*), yet it is evident that the Arafuras of Vorkay possess no religion whatsoever. There are no sacred groves or similar places on the island. They certainly hold a feast at the time in which they have perceived that the Christians of Wama hold one also, namely, at the commencement of the year; when they, in imitation of the Christians, celebrate the advent of the new year by arraying themselves in their best clothes, and drinking a considerable quantity of arrack. Of the immortality of the soul they have not the least conception. To all my inquiries on this subject they answered, 'No Arafura has ever returned to us after death, therefore we know nothing of a future state, and this is the first time we have heard of it.' Their idea was, *Mati, Mati sudah* (When you are dead there is an end of you). Neither have they any notion of the creation of the world. They only answered, 'None of us are aware of this; we have never heard any thing about it, and therefore do not know who has done it all.' To convince myself more fully respecting their want of knowledge of a Supreme Being, I demanded of them on whom they called for help in their need, when, far from their homes, engaged in the trepang fishery, their vessels were overtaken by violent tempests, and no human power could save

* In 'Marsden's Malayan Grammar,' among the letters given in the Appendix, will be found a remarkable example of these English tricks. An English captain came to the King of Tringanu, with a pretended letter of recommendation from the governor-general of India; asked permission to enter the river to repair, and smuggled several chests of opium on shore!"

* This group is named in our charts the Serwatty Islands, probably a native corruption of the Dutch term 'Zuid-wester' (south-western). As this name has long been recognised, we have continued it here to avoid confusion.—*Trans.*

them, their wives and children, from destruction. The eldest among them, after having consulted the others, answered that they knew not on whom they could call for assistance, but begged me, if I knew, to be so good as to inform them. I was at length tired of asking questions, and did my best to give them a notion of the creation of the world, and of a future state. I remarked to them how wonderful it was that a small grain of seed sprang up into a spreading tree; that the different sorts never mixed; that every thing which surrounded us was in a constantly progressive state of creation and decay; and that all these things could never have taken place but for the superintendence of an all-wise Providence. The Arafuras nodded their heads, to shew that my words appeared to them to have much truth in them. At length one of them, who had listened with particular attention, demanded of me where this all-ruling Being took up its abode. I answered, that the Deity was present every where, not only among us, but in every plant that, through his goodness and power, he has furnished us for our food. This idea was too abstruse for the Arafuras; for one of them answered, 'Then this God is certainly in your arrack, for I never feel happier than when I have drunk plenty of it.'

This certainly was worshipping in the spirit, if not in the truth. Other examples of their ways and customs are related; but we must keep them for another Gazette.

MISCELLANEOUS.

Six Years' Residence in the Australian Provinces, ending in 1839. By W. Mann, Esq. Pp. 360. London, 1839. Smith, Elder, and Co.

To all who wish to have the means of forming competent opinions respecting New South Wales, Van Dieman's Land, South Australia, Port Philip, and New Zealand, this volume is indispensable. So many and so contradictory are the accounts that have been published of these settlements—so warped by self-interest, and so directed to the promotion of jobbing—that the evidence of a long-resident and observant individual is of great consequence to the questions involved, no matter what view of them he may take. His favourable notion of New Zealand is declared; but it is to the general mass of recent intelligence which he has collected that we would point the attention of the public. There is a good map.

The Trials of Margaret Lindsay. By the Author of "Lights and Shadows of Scottish Life." A New Edition. London, 1839. Edinburgh, Blackwoods; London, Cadell.

A NEW edition of this exquisite and pathetic story. Surely it ought never to be out of print.

Dodd's Church History of England, from the Commencement of the Sixteenth Century to the Revolution in 1688. With Notes, Additions, and a Continuation. By the Rev. M. A. Tierney, F.S.A. 8vo. Vols. I. and II. London, 1839. Dolman.

THIS publication is so universally known, and has been so much the object of controversy, that until we see its conclusion (if then) we would not trouble our readers with any remarks upon it. These volumes contain so much of the original work published at Brussels above a century ago, and Mr. Tierney promises not only a sequel, but something at the end of the continuation; which, if as strange as this bullish announcement, may require our more particular attention. Dr. Lingard and other Roman

Catholic writers have been under the greatest obligations to this reverend and most laborious defender of their faith.

The Catholic Family Library, No. 1.: Sir Thomas More, his Life and Times. By W. J. Walter. Pp. 402. London, 1839. Dolman; Liverpool, Booker and Co.; Dublin, Cumming.

AMONG the lively signs of Roman Catholic exertion at the present time, we may notice the commencement of a Family Library, the object of which is to propagate opinions favourable to that faith. Among these it is assuredly not an illegitimate method to set forth the lives of worthies who have adorned the religion they professed, and the human nature to which they pertained. With these views, the editor of the volume before us has given us the great and amiable Sir Thomas More, in the best possible light which his own writings, contemporary documents, the accounts by his family, and the researches of Lingard and other writers, of the same way of thinking, have enabled him to paint the portrait of this illustrious man. Cranmer, Cromwell, Anne Boleyn, the King, and all that party, are, of course, represented as the dark (the black) shadows of the picture. With regard to the general effect aimed at, by the proof that there have existed Roman Catholics of the noblest character, pious, sincere, constant, just, liberal, and every way deserving of love and admiration, it is, we presume to say, a demonstration of what nobody denies. Sir T. More is one of the brightest examples, and judiciously chosen for the *début*.

Domesticated Animals. By Robert Mudie. Pp. 254. London, 1839. Orr and Co.; Winchester, Gilmour.

A POPULAR view of the structure, habits, localities, distribution, natural relations, &c. of all kinds of domestic animals; and a little volume at the same time useful and amusing, especially for persons living in the country.

A Course of Lectures on Dramatic Art and Literature. By A. W. Schlegel. Translated from the original German by John Black. 2 vols. 12mo. London, 1839. Templeman; Smith.

THIS well-known, well-translated, and well-worthy to be still more widely read work, has done so much for our dramatic literature on the Continent, and led the way to so much greater attention being paid to it among ourselves, that we need do nothing beyond intimating its appearance in a very neat and cheap second edition. To recommend it would be surplusage, for its merits and celebrity are every where acknowledged.

What Should the Church Do? &c. By Henry Butterfield, M.A., of Her Majesty's Chapel Royal, Windsor. Pp. 28. 1839. Windsor, Brown; London, Whittaker.

MR. BUTTERFIELD of Her Majesty's Chapel Royal is a reformer. He says that half the people of Great Britain, viz. some seven and a half millions of souls, are destitute of spiritual instruction, that the revenues of the church are three and a half millions of pounds sterling, and from these data he argues, that the clergy ought to tax themselves five per cent per annum, to build and endow churches sufficient for the edification of the entire population of the empire?

ARTS AND SCIENCES.

SOCIETY OF ARTS.

THE second illustration of the present season took place on Tuesday evening: it was 'On

Salt,' by Mr. Aikin—an interesting subject, and rendered doubly so by the manner in which it was treated by the lecturer. After noticing the antiquity of salt, and its important uses in the present economy of nature, he briefly gave an account of the natural history of salt; the great reservoir of which is the ocean, and all the smaller seas connected with it: 1000 parts by weight of sea-water, of average quality, contain 25 of common salt, and 8-5 of magnesian salts, to which its bitterness is owing; it also contains very small quantities of sulphate of carbonate of lime. The origin of salt contained in our present ocean is a question which has been discussed with more ingenuity than success. The most obvious answer is that it has been derived from the solution of previously existing beds of salt. It is perfectly well ascertained that there exist large masses of solid salt in mineral strata, the formation of which goes back several geological eras previous to the present arrangement of the earth's surface; we have, therefore, only to suppose a sufficient quantity of this salt to have been contained in the bed of the present ocean, and the problem is resolved. This way, however, of viewing the question, presupposes a state of the earth when the ocean did not exist, and that it was at first a mass of fresh water; neither of which assumptions are consistent with acknowledged facts. The sources whence our supplies of salt are obtained are rock salt, certain earthy beds impregnated with salt in small and hardly visible particles, brine springs, and sea-water. None of these, except small portions of the first, can be used in the state in which nature offers them. Methods of purification, therefore, must be had recourse to, with the view of obtaining the salt in a solid state, and freed wholly, or as nearly so as is possible, from impurities. These are of several classes: first, those that are merely mechanically mixed with the salt; second, those that are dissolved in the same water as the salt, but separate before the salt itself does; third, those which being more soluble in water than the salt remain in the liquor after the greater part of the salt has been extracted; fourth, the water in which the salt is dissolved, and which must be got rid of by evaporation. After some further observations, Mr. Aikin stated that the quantity of salt exported by Great Britain in 1836 was 240,560 tons, of which about 90,000 tons were rock salt; the internal consumption has been computed at about 240,000 tons, making in the whole 480,560 tons: of this, probably, at least 360,000 tons were furnished by the county of Chester.

THE ASTROLABE AND ZÉLÉE.

THE literary supplement to the "Quotidienne" of November 6th contains a letter from M. Dumont d'Urville, detailing the further progress of the Astrolabe and Zélée in their exploration of Australia. M. d'Urville congratulates himself on having accomplished much more than he anticipated in his surveys of the Moluccan Archipelago, many of the islands in which, he says, are but indifferently laid down even in the best maps. While the Astrolabe and Zélée were anchored in Raffles Bay, where the English had formerly an establishment, of which the ruins are still visible, M. d'Urville was surprised by a visit from Capt. Bremer, who informed him that the English were again about to colonise Port Essington, at which place he was then staying. He pays a high compliment to our gallant countryman, whom he visited on board H.M.S. Alligator, and speaks of their parting as if they had been old

friends. M. d'Urville afterwards proceeded along the coast of New Holland, New Zealand, &c. &c., and talks of returning to France in about fifteen months with accurate plans of the coasts of continents and islands, hitherto but imperfectly known. The crews of both vessels were in good health and spirits, and M. d'Urville speaks most warmly of the officers under his guidance, for the unwearied zeal and ability they have shewn in aiding to carry out the noble intentions of the French government.

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, 8th December.—The following degrees were conferred:—

Bachelor in Divinity.—Rev. I. Williams, Fellow of Trinity College.

Masters of Arts.—Rev. C. Thorp, Magdalen Hall; Rev. H. Teush-Hecker, Rev. F. G. Jackson, Trinity College; J. N. Tyndall, Wadham College.

Bachelors of Arts.—St. John Mitchell, Edmund Hall; W. A. Faulkner, Magdalen Hall; T. G. Clarke, E. P. Hathaway, Queen's College; T. C. Price, Postmaster of Merton College; R. Joyner, G. C. Swayne, Scholars of Corpus Christi College; P. H. Morgan, Scholar of Jesus College; H. A. Giraud, Scholar of Worcester College; J. G. Sheppard, J. Sayre, Scholars, H. W. Fox, Wadham College; R. Mynors, University College.

ROYAL SOCIETY.* (Anniversary Meeting.)

Address of the Most Noble the President.

GENTLEMEN,—A year having now elapsed since you conferred upon me the highly honourable office of your President, it becomes my duty, in accordance with the example of my predecessors, to address you. The first and most agreeable part of my task is to express my feelings of gratitude to those gentlemen whom you were pleased to select as my Council. I am most highly indebted to them for the zealous co-operation and hearty assistance which I have ever received at their hands. It is to them that I have looked to aid my inexperience, and to supply my manifold deficiencies, and I have not been disappointed. To those who are the more permanent officers of the Society, the Treasurer and the Secretaries, my obligations are particularly great; and I will venture to add, that to them, as well as to the other members of the Council, your thanks are due as well as mine. The past year has indeed been to that portion of the Royal Society which takes an active part in its affairs, one of more than usual labour and exertion,—of labour and exertion destined, as I hope, to produce rich and ample fruit. The great and marking peculiarity which has attended it, has been the sailing of the Antarctic Expedition. The importance of following up in the southern regions of the globe the magnetic inquiries so interesting to men of science in Europe, was strongly felt by one of our distinguished fellows, Major Sabine, and by him brought before the notice of the British Association, at their meeting at Newcastle, as he had also previously done at Dublin. That great assemblage of men of science, concurring in the views of Major Sabine, resolved to suggest to her majesty's government the propriety of sending out a scientific expedition; and the Royal Society lost no time in warmly and zealously seconding the recommendation. It would, gentlemen, be an idle inquiry to ask whether the success of the application be owing to the British Association or to the Royal Society. It would seem, indeed, probable, that, considering the financial difficulties of the time, the government might have hardly considered itself justified in yielding to the prayers of either body separately

on this occasion; and if to the British Association be the glory of the first proposal of this expedition, to the Royal Society belongs the praise of perseverance in seconding the recommendation, and of laborious and earnest endeavours to aid in rendering it in every respect as efficient as possible. It is my duty as your President to return my thanks and yours to Lord Melbourne, Lord Minto, Lord Montague, Sir Hussey Vivian, and Sir Richard Jenkins, the Chairman of the Board of East India Directors, for the urbanity and kindness with which they have received and acted on the suggestion of your Council, and for the confidence which the government reposed in us, when they asked for our assistance in instructing the officers to whom the expedition has been intrusted. In compliance with the request conveyed to us by the First Lord of the Admiralty, the Council transmitted to the government a body of hints and instructions in different branches of science, which I trust are likely to be of material use both to the principal and to the subsidiary objects of the Antarctic Expedition. These hints and instructions would have been far less extensive and efficient if the Council had not been able to have recourse to the several scientific committees, of whose formation the Society is already aware. The expedition has now sailed, amply provided with the best scientific instruments, and furnished with ample scientific instructions: it is commanded by one well acquainted both with magnetic inquiry and nautical research. We may therefore hope that, with the blessing of Providence, it will return with a store of knowledge valuable to the geographer, to the geologist, to the meteorologist, and to him also who studies the marvels of vegetable and animal life. In addition to all this, we may hope that the main object of the expedition will be accomplished, by additional light thrown on the obscure problems which still attend the magnetism of the earth; and that, by such discoveries, Captain James Clark Ross may not only add to his own reputation and his country's glory, but also give to the adventurous mariner increased facility and security in traversing the pathways of the ocean. The Antarctic Expedition was not the only measure recommended by the Royal Society and the British Association to her majesty's government. Another important recommendation, which had previously been brought forward by Baron Humboldt, was the establishment of fixed magnetic observatories for the purpose of making simultaneous observations in different parts of our colonial possessions. These recommendations have been readily acceded to, both by the Government and by the Directors of the East India Company; and, probably, ere many months shall have elapsed, the observatories will be in full activity. This ready acquiescence in the wishes of men of science appears to me highly creditable to our statesmen; and I feel confident, that while science belongs to no party, on the other hand, every party in this country is fully aware of the importance of science, and of the numerous benefits conferred by it on the human race. I have stated, gentlemen, that your Council had recourse to the scientific committees for assistance in drawing up instructions for the expedition in different branches of knowledge; those committees, who were named only two years ago, were at first apparently more a matter of form than substance; they have now been found capable of doing excellent service. Not only has your Council consulted them on the questions already alluded to, but also, observing

that the several committees are composed of the most competent judges of the merits of the memoirs in the respective departments of science communicated to the Society, they have, in general, referred the papers to them to report upon, previously to coming to a decision regarding their publication. The Royal Society, from its character of pursuing every branch of physical science, is evidently in a different position from other societies, professing some one science alone. It may be reasonably expected, that in the Botanical or Geological Society, for instance, the whole Council should possess a certain degree of botanical or geological knowledge. This, however, cannot be the case with us. Our Council will comprise a few astronomers, a few zoologists, a few botanists, and a few persons well acquainted with geology and medicine; but no single science can monopolise a large number of its members. In difficult questions we have therefore felt that it is more satisfactory to ourselves, and we think probably more so to the general body of the Society, and to those who have favoured us with papers, that we should ask the opinion of a larger number of men, conversant with the immediate sciences in question. At the same time, the Council retains its responsibility for its acts, and the chief officers of the Society are officially members of each of the scientific committees. The Council have derived a further assistance from these committees in the adjudication of our medals. In naming these committees, the Council has had both a difficult and a delicate task. Convinced that bodies, when too numerous, are little adapted for business, they have also felt that the power of giving their attendance might be more important than absolute superiority of scientific attainments. Some members have, however, been selected, though really non-resident, because it was believed that their colleagues might wish to consult them by letter. With these objects and views, the Council have done their best; but they have little doubt that some gentlemen have been overlooked and omitted, whose presence in the committees might have been very desirable. The Society must consider this as in some degree a new system, to be perfected and improved by experience alone. Another question has occupied a share of the time of the Council during the last year. We have felt that the testimonial of recommendation for new fellows has scarcely been sufficiently definite and precise in stating the grounds on which the candidate was recommended to the body of the Society. We have therefore thought it desirable to draw up forms of testimonial, some one of which may be adopted as most fit for each individual so recommended. We have thought this more fair, at the same time, to the meritorious candidate, and to those electors who are otherwise left in the dark with respect to his claims for their suffrages. We hope and trust that this new regulation will not stand in the way of any candidate who would be a desirable addition to our number. The labours of our tried and valuable officer, Mr. Robertson, having materially increased, partly in consequence of the establishment of scientific committees, and partly from other causes, and those labours having also become more valuable from the lengthened experience of many years spent in our service, it has appeared to us an act of mere justice to augment his salary from 160*l.* to 200*l.* per annum. The Society are doubtless aware, that, at the time of the last anniversary, no final settlement had taken place of the pecuniary claim of Mr. Panizzi, who had commenced the catalogue of our library,

* It is due to the importance of this document, and the admirable manner in which it has been composed and delivered by the Marquess of Northampton, to print it entire.—Ed. L. G.

though that gentleman had received a considerable sum on account. Feeling that it was very desirable to bring this question to a termination, we agreed to a reference; and Mr. Drinkwater Bethune having been proposed by Mr. Panizzi, and agreed to by us, that gentleman has decided that a balance of 328*l.* is still due by us. The vacancies in the list of our foreign members have been supplied by the election of M. Savart, of Paris; Signor Melloni, of Parma; M. Quetelet, of Brussels; M. Hansteen, of Christiania; Prof. Agassiz, of Neuchâtel; and M. von Martius, of Munich; as those fellows who were present at their election will remember. I have to announce to you, gentlemen, with great regret, the retirement of Captain Smyth from the office of foreign secretary, in consequence of his leaving his present residence for one at an inconvenient distance from London. I shall not detain you by any observations of the finances of the Royal Society, as you will shortly hear the report of the treasurer on that subject. I have the honour, gentlemen, to inform you that the Council have, by an unanimous decision, awarded the Royal Medals to Dr. Martin Barry and Mr. Ivory, and the Copley Medal for the year to Mr. Robert Brown: and I shall now beg leave to address myself to those three gentlemen.

Dr. Barry, it gives me sincere pleasure to bestow this medal on a gentleman who has so well deserved it, by researches in a difficult and important portion of animal physiology.* Your merits have been appreciated by men much more capable of understanding the subject than I can pretend to be—by men selected by the Council of the Royal Society for their physiological science, who have felt the great value of the discoveries you have made by accurate and diligent research, aided by the skillful use of the microscope. I trust that the award of this medal will encourage you to persevere in the same course, and that future discoveries may add to your reputation and to that of the important profession to which you belong.

Mr. Ivory, it is not the first time that you have been addressed from this chair, and it gives me great satisfaction to follow the steps of my predecessors, Sir Joseph Banks and Sir H. Davy, by again bestowing a medal on one who is an honour to the Royal Society, and pre-eminently distinguished for his mathematical attainments. The labours of your life are too well known to the scientific world to require any eulogium from me, and I consider that in this tribute to your paper on astronomical refraction, we are rather doing an honour to ourselves than to you.

Mr. Brown, in conferring the Copley Medal

* These researches are the subject of Dr. Martin Barry's papers 'On Embryology,' communicated to the Royal Society in 1838 and 1839. In these memoirs the author has brought to light many new and interesting facts, and has repeated and confirmed previous observations regarding the nature, formation, and development of the ovum in the vertebrata, and especially in the mammalia. The importance, under the establishment of facts previously known extremely acceptable to physiologists. But the novel matter contained in Dr. Barry's memoirs forms a considerable proportion of them. Without entering into unnecessary detail, we may mention that the author has determined the order of formation of the different parts of the ovum, and the nature and mode of development of the vesicle (ovisc), in which these processes take place. He has, in like manner discovered the nature, and traced the development, of the so-called disc of M. Baer, and has detected in it the mechanism which mainly regulates the transit of the ovum into the Fallopian tube. The second series of Dr. Barry's observations makes known the changes which the ovum undergoes in its passage through the Fallopian tube; the earliest and most interesting stages of development being, for the first time, described in this memoir.

on you for your valuable discoveries in vegetable impregnation,* I am quite sure that the voice of scientific Europe will respond to the decision of the Council of the Royal Society. The Académie des Sciences has already pronounced on your merits, as also on those of Mr. Ivory, by electing you, as well as that gentleman, to a seat among their foreign members; and the University of Oxford has, also, by an honorary degree, given you a similar testimonial. That you are one of our fellows is to myself a circumstance peculiarly agreeable, as it must be to the whole body over whom I have the honour to preside. Your discoveries in the particular botanical question, for which I have to give you the Copley Medal, are so important, not only in a botanical, but also in a general scientific point of view, by shewing the close analogies of animal and vegetable life, that the Committee of Zoology have felt it as much their province as that of the Committee of Botany, to recommend that the Copley Medal should be bestowed upon you; and the Council have come to an unanimous resolution to give it, though at the same time other gentlemen were recommended by other scientific committees, with whom even an unsuccessful rivalry would be no mean praise. I hope, Mr. Brown, that you may long enjoy life and leisure to pursue researches so valuable to science, and so honourable to the country of which you are a native.

[To be continued.]

ROYAL SOCIETY OF LITERATURE.

THURSDAY, after the meeting of the Publishing Committee (on the *Biographia Literaria*) and the Council, the ordinary meeting of the Society was held, Thomas Tooke, Esq. in the chair, and four new members were balloted for and elected. No paper was read; and an adjournment over the holidays took place.

SOCIETY OF ANTIQUARIES.

MR. HAMILTON in the chair.—Mr. Almack presented an impression from the seal of St. Mary, Lichfield. Dr. Bromet presented an impression from the memorial stone of Fastradana, the favourite wife of Charlemagne, in the church of St. Albans at Mayence, which she founded. It was accompanied by some observations, in which Dr. Bromet stated reasons for believing this impression to be an original one. A copy of the inscription had been exhibited at the previous meeting by Mr. Howard. Mr. Birch communicated a description, with a drawing, of the entrance to an Egyptian tomb, with observations on the architecture, figures, and hieroglyphic inscriptions; part of which being read, the remainder was postponed.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Statistical, 8 P.M.; British Architects, 8 P.M.; Medical, 8 P.M.
Tuesday.—Linnean, 8 P.M.; Electrical, 8 P.M.; Architectural, 8 P.M.
Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.
Thursday.—Royal, 8½ P.M.; Antiquaries, 8 P.M.
Friday.—Botanical, 8 P.M.
Saturday.—Westminster Medical, 3 P.M.; Mathematical, 8 P.M.

* The following are the discov-eries referred to: viz. the organization of the vegeta-ble ovule, immediately before fecundation (published in 1837); and the direct action of the pollen, manifested by the contact established between it and that point of the ovum where the embryo subsequently first becomes visible, and published in papers in the years 1832 and 1833, and communicated to the Linnean Society.

FINE ARTS.

ROYAL ACADEMY.

On Tuesday, the 10th instant, being the seventy-first anniversary of the foundation of the Royal Academy of Arts, a general assembly of the Academicians was held at their apartments in Trafalgar Square, when the following distributions of premiums took place, viz.:—

To Mr. William Edward Frost—for the best Historical Painting, the gold medal and the Discourses of the Presidents Reynolds and West.

To Mr. Thomas Earle—for the best Historical Model, the gold medal and the Discourses of the Presidents Reynolds and West.

To Mr. Edward Falkener—for the best Architectural Design, the gold medal and the Discourses of the Presidents Reynolds and West.

To Mr. Henry Le Jeune—for the best Copy made in the Painting School, the silver medal and the Lectures of the Professors Barry, Opie, and Fuseli.

To Mr. Richard Dadd—for the next best Copy made in the Painting School, the silver medal.

To Mr. Thomas Pitts—for the best Drawing from the Life, the silver medal and the Lectures of the Professors Barry, Opie, and Fuseli.

To Mr. Thomas Heaphy—for the next best Drawing from the Life, the silver medal.

The third medal—for a Drawing from the Life, was awarded to Mr. Henry Le Jeune, but he having received last year a superior prize on the same class, it was adjudged to the next, the work of Mr. Richard Dadd.

To Mr. John Henry Foley—for the best Model from the Life, the silver medal and the Lectures of the Professors Barry, Opie, and Fuseli.

To Mr. Charles Crookford—for the best Drawings of the University Club-house, Pall Mall West, the silver medal and the Lectures of the Professors Barry, Opie, and Fuseli.

To Mr. Thomas Hayter Lewis—for the next best Drawings of the University Club-house, Pall Mall West, the silver medal.

To Mr. Frederick Stapcoole—for the best Drawing from the Antique, the silver medal and the Lectures of the Professors Barry and Fuseli.

To Mr. Abraham Solomon—for the next best Drawing from the Antique, the silver medal.

To Mr. James Price—for the next best Drawing from the Antique, the silver medal.

To Mr. Joseph Edwards—for the best Model from the Antique, the silver medal and the Lectures of the Professors Barry and Fuseli.

To Mr. Henry Cardwell—for the next best Model from the Antique, the silver medal.

After which, the President addressed a discourse to the students.

The General Assembly afterwards proceeded to appoint officers for the ensuing year, when Sir Martin Archer Shee was unanimously re-elected President.

Council, *New List*—John Peter Deering, Esq., Sir Robert Smirke, Edwin Landseer, and Richard Cook, Esqrs. *Old List*—Thomas Uwins, Frederick Richard Lee, William Wyon, Esqrs., and Sir Richard Westmacott.

Visitors in the Life Academy, New List—Edward Hodges Baily, Abraham Cooper, Charles Lock Eastlake, Esqrs., Sir David Wilkie, and Clarkson Stanfield, Esq.

Old List—Thomas Uwins, William Hilton, Charles Robert Leslie, and William Mulready, Esqrs.

Visitors in the School of Painting, New List—Charles Robert Leslie, Charles Lock Eastlake, Clarkson Stanfield, and Thomas Uwins, Esqrs.

Old List—Henry Paronet Briggs, William Collins, William Etty, and Edwin Landseer, Esqrs.

Auditors re-elected—William Mulready, J. M. W. Turner, Esqrs., and Sir Richard Westmacott.

NEW PUBLICATIONS.

Picturesque Architecture in Paris, Ghent, Antwerp, Rouen, &c. By Thomas Shotter Boys. Boys.

THE acorn of lithography has indeed become an oak. Who that recollects the crude and meagre efforts of the art in its infancy, could have anticipated the production by it of so splendid and beautiful a work as that before us?

"The whole of the drawings composing this volume," says the descriptive notice attached to it, "are produced entirely by means of lithography; they are printed with oil-colours, and come from the press precisely as they now appear. It was expressly stipulated by the publisher that not a touch should be added afterwards, and this injunction has been strictly adhered to. They are pictures drawn on stone, and reproduced by printing with colours; every touch is the work of the artist, and every impression the product of the press. This is the first, and, as yet, the only attempt to imi-

tate pictorial effects of landscape architecture in chroma-lithography; and in its application to this class of subjects it has been carried so far beyond what was required in copying polychrome architecture, hieroglyphics, arabesques, &c., that it has become almost a new art. The difference may be thus explained: in mere decorative subjects the colours are positive and opaque, the tints flat, and the several hues of equal intensity throughout; whereas in these views, the various effects of light and shade, of local colour and general tone, result from transparent and graduated tints. The atmospheric appearance of the skies giving daylight brightness to the out-door scenes, is the best evidence of the purity and brilliancy of the tints of colour; which, being printed in oil on paper, combine solidity with transparency."

The subjects, in choosing which it is stated, "the artist has been actuated by a desire to rescue from neglect and oblivion some fine relics of picturesque ancient architecture, known only to the curious, as well as to present edifices, known to the tourist under a new point of view, so as to bring out some peculiar features of their respective character," are twenty-six in number. Among the most striking are, "Fish-market, Antwerp;" "Belfry, Ghent;" "Byloke, Ghent;" "Hôtel de Ville, Arras;" "Rue de Rivage, Abbeville;" "St. Laurent, Rouen;" "Hôtel Cluny, Paris;" "Church of St. Severin, Paris;" "Porte Rouge, Notre Dame, Paris;" "Rue Notre Dame, Paris;" "St. Etienne du Mont, with the Pantheon;" "Pavillon de Flore, Tuileries;" and "The Institute, Paris."

Roslin Castle. Drawn from Nature, and Executed on Stone. By W. Owen.

THIS ancient and interesting fragment is seen through a vista of light and beautiful foliage, and together with its accompaniments of rock and stream making up one of the most picturesque scenes that can well be imagined: its effect is brilliant and sparkling, and withal a desirable acquisition to the folio of the collector or amateur.

BIOGRAPHY.

ALLAN CUNNINGHAM, Esq. (the Botanist.)

WITH sincere regret we state that accounts have been received of the death of this excellent individual, which melancholy event took place at Sydney, New South Wales, on the 27th of June. The late Mr. Cunningham was a botanist and geographer of no ordinary character; and his researches were carried on with unremitting ardour for upwards of twenty-five years. The ultimate cause of his death was a series of colds caught during the rainy season in his last unfortunate travels in New Zealand.

Mr. Cunningham left England in 1814, as botanical collector for the Royal Gardens at Kew, under the auspices of that patron of science, the late Sir Joseph Banks. His first stage of operations was Rio di Januario, and thence he proceeded into the interior as far as St. Paul's, where he collected many valuable, and, at that period, unknown botanical gems. He resided about two years in Brazil, and then departed for Sydney. Shortly after his arrival, Mr. Oxley, the surveyor-general, commenced his exploration of the course of the Lachlan Rivers, and on this expedition he was accompanied by Mr. Cunningham. In 1818 he joined Captain Philip Parker King, who was appointed to survey the north and north-western coasts of New Holland; which voyages of survey continued till 1822, when Mr. Cun-

ningham commenced a series of journeys into the interior with considerable success, reaping a rich harvest of plants, many of which are now the adornment of our greenhouses and conservatories. He also visited Norfolk Island, New Zealand, and Van Dieman's Land; and in 1830 returned to England with the rich fruits of his long and varied wanderings. Whilst at home he resided in a pleasant house on the banks of the Thames, at Strand-on-the-Green. In the year 1836, Mr. Cunningham received the appointment of Colonial Botanist at Sydney, and once more departed for New South Wales; whence, unhappily, he was never fated to return.

THE BISHOP OF LICHFIELD.

THE death of Dr. Butler has placed another mitre at the disposal of the government. The rev. prelate was universally known to the literary world as the editor of classical works, and principally those employed in tuition. As a scholar, he stood high in the estimation of his contemporaries. His collection of Greek and Latin MSS. is, we believe, very extensive and curious; and we trust it will be secured for the British Museum.

THE DRAMA.

Drury Lane.—On Tuesday, *Love in a Village* was produced here, and with some features of considerable merit and attraction, though there was a general dampness and want of spirit throughout the whole, which detracted greatly from the effect. *The Rosetta* of Mrs. Alban Croft was a sweet performance, not so much in acting as in the graceful singing of the airs, and the fine expression of a countenance which lights up with much intelligence and beauty. Miss Betts, in *Lucinda*, introduced several songs, which she gave very correctly, and was honoured by a call for repetition; and Mrs. Waylett, as *Madge*, fretted her hour upon the stage against the *Hodge* of Hammond, and chanted her ballads charmingly. We fancied they were over-accompanied, or, at least, we should have liked to hear more of her pleasing voice. Mr. Frazer was a very melodious *Young Meadows*, but partook of the tameness to which we have alluded; and Leffler's musical tones were not lost in the business of *Hawthorn*. Of Dowton, in *Justice Woodcock*, we regret to say we had but slight glimpses of his pristine humour. He appeared to be lame and enfeebled, yet the small bits of light were of the right sort. Mrs. Selby was so good-looking a *Deborah*, that her old-maidism reflected a disgrace on the county. This theatre is now shut on the Wednesdays and Fridays. Let us hope that the pantomime of *Harlequin and Jack Sheppard*, with the accessions of talent in January, will yet bring it up with a wet sail.

Adelphi.—*H. B.*, a quaint, conceited, and laughable little piece by Peake, who never does any thing that is not full of fun and oddity, has been produced here with perfect success. From the beginning to the end one hears nothing but giggling and tittering at the whimsical situations of the *dramatis personæ*, and the ludicrous points in the dialogue. Every thing is *H. B.*'d. The lodger's initials are *H. B.*; the prize-ox gained by one of them is marked *H. B.*; the vessel run down by the captain has *H. B.* upon her bows; in short, no two letters ever involved so much confusion. The acting is excellent. Mrs. Keeley, after shewing us the very acme of dramatic talent in her personation of *Jack Sheppard* (for, what-

ever critics may say of the *morale* of the character, there can be no question of its performance being one of the finest things ever seen upon the stage), steps into the vulgar housemaid of all-work with a skill and reality which is literally astonishing. Her large lustrous eyes which so exquisitely express the depths of pathos and nature, her tones which on occasion reach and melt the heart, are no longer the sources and communicants of feeling: the former roll in listless, dull complaint, and the latter breathe the veriest commonplaces in a mixture so serio-comic, that it is impossible to refrain from bursts of applause. The blackened face, the gait, the slouch, the disfiguring dress, the *ensemble*, are but adjuncts to a lesson in the dramatic art, well worthy of being studied and copied by every actress on the boards. Another very clever part, *Capt. Funnell*, of the Greenwich steamer, by Paul Bedford, deserves particular notice. Bedford has lately had opportunities of treading somewhat in the steps of Jovial John Reeve; and he has deserved the compliment of being told that he has nowhere failed, even when comparison was most invited. Mr. Yates in a Jewish character, Mr. Wilkinson a provincial journalist, and Mr. Wright as a "county Guy," keep up the drollery of the scene in the merriest of moods; and the slighter female parts are well sustained by Mrs. Gover, Mrs. Fosbrooke, and Miss Cathie. Let us add, that minor characters by Sanders, King, and Master Collins, added to the general hilarity.

St. James's.—Poor St. James's, after trying reduced prices for a few nights, has shut up. We were sorry to have anticipated this from the opening; but there was something so rotten in the state of Denmark, that neither the stage nor the public can have aught to regret on this subject.

VARIETIES.

Literary Retreat.—It is only at the anniversary meetings of that excellent institution, the Literary Fund Society, that the extensive claims of industrious and deserving authors are made known to the world. This Society possesses an annual income of 2000*l.* with a funded property of 26,000*l.* and since its establishment has relieved a total of eight hundred and ninety-two applicants.* An idea has been suggested by which the beneficial operations of this institution shall be extended, by providing an institution similar to Morden College, or others of a benevolent nature, for persons of respectability in decayed circumstances. Such a refuge for literary men in their declining years would, no doubt, meet with great popular support. The suggestion, which has emanated with some of the leading members of the Literary Fund Society, is likely soon to be brought before the public in a tangible shape.—*Correspondent of the Morning Herald.* Something like this, it is true, has been discussed within the last few years, but not in the Committee of the Society, although it has been frequently and eloquently urged by two or three of the leading members of its most useful adjunct, the Literary Fund Club, which dines together on the days when the Committee meet to alleviate the wants of those deserving claimants who come within its operations. There is a well-grounded belief, that if such a plan were undertaken the Woods and Forests would give a site for the

* Though the Fund is considerable, this amount is exaggerated, and the Society relies much for its efficacy on the annual support it receives from the friends of literature, and the public at large.—*Ed. L. G.*

building gratis; and two gentlemen belonging to both the Club and the Committee have promised extensive donations of books, to form the nucleus of a library.—*Globe*.

New Gas Light!—The daily journals of yesterday give an account of some *soi-disant* experiments by a Count Val Marino, for the production of a superior gas from tar and water, &c. If we are not much mistaken, very similar experiments were performed by Mr. Rutter, near Lymington (a gentleman well known to Mr. Mackinnon and other respectable persons), several years ago, and described in scientific periodicals of the day. If this be so, we must be on our guard against the pretensions of our foreign Count, whose appearance at the British Association, Birmingham, did not conclude in a manner to give a high idea of his science.

H. B. of the Print Shop (not of the Adelphi) has this week given us a merry group, playing at "Pope Joan, as lately played at Court." The Queen, helped to hold her cards by Lord Melbourne, and with Prince Albert on her right, "has got Matrimony." Lord Normanby claims "Intrigue," and O'Connor, holding up the nine of diamonds, says, "They are so taken up with their *Intrigue* and *Matrimony*, they don't perceive that I have got the *Game* in my hand." Lord Grey has cards, but does not appear to be playing; and Wellington and Peel are standing behind, grumbling at the length of time the game lasts. This is, altogether, one of the best of the whole series.

M. Schomburgk, the celebrated botanist, whose researches in Guiana have produced so many interesting results, has been presented by the Emperor of Austria (through his ambassador here) with a splendid gold medal, representing, on one side, the profile of his Imperial Majesty finely executed, with the legend, *Ferdinandus I.*, &c.; and, on the other side, the name of the individual thus highly honoured. This is as it should be, merits on one hand and royal distinction on the other.

Earthquakes.—From notices in our papers of December 4th and November 27th, it would be observed that earthquakes occurred in Savoy and at Reggio in Calabria, contemporaneously with those in Perthshire, Fife, and the Lothians. At Reggio, there were no less than nineteen shocks on the 23d of October, the very day on which the motions were most severe at Comrie, and were felt besides over all the middle region of Scotland. It is worthy of notice, that the three localities, Perthshire, Savoy, and Calabria Ultra, are ranged nearly in a straight line, and that the chief seat of the movement in each case was in a primary region; for St. Jean de Maurienne and Reggio are in districts of primary rocks, as well as Comrie. The distance from Comrie to Reggio is 1550 English miles, or 1-16th part of the earth's circumference. The tremor was felt at the two extremities of this line on the same day, and very probably at the same hour. When we receive more precise accounts, it will probably be found that some of the shocks in the intermediate locality, St. Jean de Maurienne, agreed in time with the others. The simultaneousness, or at least near coincidence, of movement at places so distant, seems to indicate that the cause is at a great depth under the surface, and that the outer solid crust of the globe is much thicker than some have supposed.—*Scotsman*.

A Hint to Mourners at Funerals.—I am convinced that many attendants at funerals pay a fearful tax in the depreciation of their health, the almost inevitable result of their

exposure to the exhalations of the dead. If these persons could be tracked to their homes, very frequently disease would be found the result of exposure to a "malaria," whose dangerous effects, in this country at least, seem neither to be understood nor appreciated.—*Gatherings from Graveyards*.

M. Mulot, who has the contract for boring the Artesian well at Grenelle, and has now arrived at a depth of 505 metres (1645 English feet), has just made a new agreement, by which he undertakes to bore to the depth of 600 metres, if the water should not previously make its appearance. At this moment the boring instrument is traversing a bed of greenish clay filled with iron pyrites. It is the opinion of Messrs. Arago, Constant Prévost, Elie de Beaumont, and of M. Mulot himself, that the water will soon appear,—perhaps in a few days,—as the boring indicates the proximity of the sand in which the water is known to lie. The thermometrical observations, made from time to time, shew that the temperature continues to increase with the depth. At a depth of 3000 feet, Paris would possess a permanent thermal spring.—*Galignani's Messenger*.

Malta, Oct. 31.—The remains of an ancient temple, supposed to be of Phœnician origin, has very lately been discovered at about two hours' walk from Valetta, near Casal Crondy, which promises to afford much room for curious speculations among the scientific, as there are tombs and hieroglyphics amusingly troublesome to decipher, being defaced by time and decay. A small part only of these remains are yet cleared, but the governor has ordered the place to be excavated, and the work is going on as rapidly as fifteen or sixteen persons can effect it. On the other hand, our government has listened to the representations of a Sicilian, who maintains that from the appearance of a certain herb found growing in the Island of Gozo, indicative of the presence of sulphur, there must be considerable veins of that substance to be found there, and in consequence some excavations and boring are going on in that direction, also under authority.—*The Times*.

LITERARY NOVELTIES.

In the Press.

Life of Thomas Bishopp, Bishop of Salisbury, with Correspondence, by J. S. Harford, Esq. D.C.L. F.R.S.—*Travels in the West—Cuba*, with Notices of Porto Rico and the Slave Trade, by D. Turnbull, Esq.—*Theory of Hæmiplegia*, by John Lindley, Ph. D. F.R.S. &c.—A new edition of *Horæ Paulinæ* of Dr. Paley, by J. Tate, M.A. Canon Residentiary of St. Paul's.—*Visits to Remarkable Places*, by William Howitt, with Illustrations by S. Williams.—*New Eton Greek Grammar*; or, the Eton Greek Grammar in English: with Practical and Philosophical Notes, by C. Moody, Editor of the "New Eton Latin Grammar."—*The Book of Archery*, by G. A. Hansard, Esq. Gwent Bowman: with numerous Engravings from F. P. Stephauff and W. H. Brooke.—*The Scientific and Literary Treasury*: a New Dictionary of the Arts and Belles-Lettres, by Samuel Mauser, Author of "The Treasury of Knowledge," &c.—*Loiterings of Travel*, by N. P. Willis, Esq. Author of "Pencilings by the Way," &c.—*Bunyan's Pilgrim's Progress*, illustrated by George Cruikshank: with a Biographical Introduction, by the Rev. H. Wilberforce, M.A. To be published in Monthly Numbers.

LIST OF NEW BOOKS.

Captain Marryat's Diary in America, 2d series, 3 vols. post 8vo. 11. 11s. 6d.—T. J. Pettigrew's *Bibliotheca Suxsexiana*, Vol. II. Imperial 8vo. 11. 11s. 6d.—*Hints on Etiquette*, 18th edition, revised by a Lady of Rank, f.cup. 2s. 6d.—*Short Whist*, by Major A***, with additions by Mrs. B***, f.cup. 3s.—*Arago's Life of James Watt*, 3d edition, f.cup. 4s. 6d.—*Observations on Heresy and Orthodoxy*, by the Rev. J. B. White, 2d edition, 12mo. 4s.—*Chapters of the Modern History of British India*, by E. Thornton, 8vo. 21s.—*The Christian Lady's Magazine*, edited by C. Elisabeth, Vol. XII. f.cup. 7s.—*The Court Favourite*, by Jane Roberts, 3 vols. post 8vo. 11. 11s. 6d.—*Walker's Manly Exercises*, new edition, by Craven,

f.cup. 6s. 6d.—R. Maudslayi's *Manual of Mensuration*, 8s.—R. Maudslayi's *Social Man*, f.cup. 5s.—*Christian's Book of Gospels*, a Selection of Sacred Poetry, f.cup. 5s.—*Deuce's Illustrations of Shakespeare*, new edition, 8vo. 14s.—*Tosque's Diversions of Purley*, new edition, 8vo. 14s.—*A Good Match*, &c. &c., by Lady Chatterton, 8vo. 12s. 6d.—*16. 11s. 6d.*—*Utilitarianism Defended*: Lectures at Liverpool, 8vo. 15s.—*Life and Adventures of Michael Armstrong*, by Mrs. Trollope, 3 vols. post 8vo. 25s.—*Liagre's Account of the Martyrs*, 12mo. 5s. 6d.—*List of France on Conducting a Trigonometrical Survey*, 8vo. 12s.—*De Porquet's Histoire de France*, f.cup. 4s. 6d.—*Bishop Jewel on Scriptures and Sacraments*, 12mo. 5s.—*The Poets of America*, edited by John Keese, post 8vo. 14s.—*Shabbat Patrick on Repentance and Fasting*, by F. E. Page, 12mo. 3s. 6d.—*The Decameron of the West: a Series of Tales*, post 8vo. 10s. 6d.—*Alkman's Account of the Tournament at Eglington*, 4to. 10s. 6d.; plain, 15s. coloured.—*Lunar Observations*, post 8vo. 10s. 6d.—*Dr. Hawker's Evening Portion*, 12mo. 4s.; 32mo. 2s. 6d. new edition.—*Sutcliffe's Psephismata*, folio, 4s.—*A French Delectus*, 12mo. 3s. 6d.—*Narrative of Revivals of Religion*, 12mo. 12s. 6d.—*Exercises for Latin Prose Composition*, by the Rev. B. W. Headson, 12mo. 4s. 6d.—*Outlines of Church History*, square, 4s. 6d.—*Rev. W. Jewett's Christian Visitor: Acts and Epistles*, 12mo. 3s. 6d.—*Book of Gems*, 3d Series, 1833, 21s.—*Tropen-Enger's German Grammar*, 3d edition, 12mo. 5s.—*Pictorial Architecture in Paris*, Ghent, &c. by T. S. Boys (printed in colours), folio, 6s. 6d.—*Historical Memoirs of the Queens of England*, by Hannah Lawrence, Vol. II. 8vo. 12s.—*Greece*, Pictorial, Descriptive, &c. by C. Wordsworth, D.D. Imperial 8vo. 11. 11s. 6d.—*Animal and Vegetable Productions of America*, by Mary Roberts, 12mo. 3s. 6d.—*Bishop Mant's History of the Church of Ireland*, 8vo. 17s.—*Naval and Military Almanack*, 1840, by W. H. Maxwell, 3s. 6d.

Prevailing wind, east.

Except the 7th, generally cloudy, rain fell on the 8th, 9th, and two following days.

Rain fallen, 1.4 of an inch.

Edmonton.

CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

Royal Society.—After printing the annual Address of the noble President, we are sorry to find, on making up our sheet, that it would occupy nearly four pages, and so decompose our other divisions: we have been reluctantly obliged to divide it, and also postpone reports of the Geological and Geographical Societies, and the transactions for the British Association at Glasgow.

To "J. N. O." for his last communication we must say N. O.

The lines to Rhoda are very pretty, but not polished enough in their construction for us.

ERRATA.—In our last, p. 773, col. 2, line 1, for "we," read "the." P. 779, col. 1, line 15 of critique on "Piedmont's Royal Gallery," for "grace, beauty, and skill," read "great beauty and skill;" and line 9, for "Annals," "animals" was misprinted: which, by the by, need not be much wondered at, since the inimitable Landseers have made *Animals* so important a feature in our fine art. Speaking of whom, let us seize the occasion to impart a very appropriate tribute to the latest production of these admired artists:—

To the Landseers' "Distinguished Member of the Humane Society."

Thou noble dog! as the bold warrior gazeth
Upon the war-path which my strength has proved,—
So dost thou watch each angry wave that misseth
Its crest of foam; thy soldier mind unmoved
E'en by the sea-bird's cry, or billow's heave,
Shaking the granite pier where thou hast lain
With shaggy breast; methinks amid the gloom,
Betokening tempest o'er the troubled main,
Thy instinct shaming reasonable creatures,
Thou watchest to be useful, whilst thine eye
Illumes with grave benevolence thy features:
Thou ocean-battler that man may not be!
Peace to thy saviouring—Yes! I should have caught
From niggard sense the privilege of thought.
Minister.

R. J.

ADVERTISEMENTS,

Connected with Literature and the Arts.

SCOTTISH WIDOWS' FUND LIFE ASSURANCE SOCIETY.

Head Office, 5 St. Andrew Square, Edinburgh; 7 Pall Mall, London.

The Books of the Society are closed Annually on the 31st of December. Parties insuring before that date are entitled to share in the profits of the current year.

JOHN MACKENZIE, Manager.

HUGH M'KEAN, Agent, 7 Pall Mall, London.

Nov. 1839.

LITERARY INSTITUTIONS, BOOK SOCIETIES, READING AND NEWS ROOMS, CLUBS,

are informed, that No. 1. of the COLONIAL MAGAZINE, a new Monthly Periodical, price 2s. 6d. will be published January 1st. Prospectuses and a Specimen Number will, with pleasure, be forwarded, if address, post-paid, are furnished to the Publishers.

Fisher, Son, and Co. Newgate Street, London.

ADVERTISERS.—The COLONIAL

MAGAZINE (No. 1. price 2s. 6d. on January 1st) offers a superior medium for announcements amongst the most influential classes. Members of both Houses of Parliament—East and West India Proprietors, Merchants, Ship-owners, and Traders. The orders already received exceed the most sanguine expectations of the Proprietors. Advertisements for No. 1. must be sent not later than the 18th inst.; Bills, 3000, by Dec. 30th.

Fisher, Son, and Co. Newgate Street.

CHEAP MODERN PUBLICATIONS;

being the Duplicates (in every department of Literature) withdrawn from ANDREW'S CIRCULATING LIBRARY, 187 New Bond Street. The Catalogue is now ready for delivery, gratis. It is printed on a large sheet of paper, and can be sent by post, the weight not exceeding the new regulations. The Books are in the best condition, and, in very few instances, do not exceed one-third of the original published price; and, in numerous instances, 50 and 60 per cent less. These books are sold from the Library to make room for the multiplicity of new publications announced, which are supplied in unlimited numbers to the Subscribers to this Library. Terms of Subscription, &c. to be had on application, or forwarded to any part of the country.—N.B. Persons desirous of establishing Book-Clubs, or Circulating Libraries, will find the above worthy their attention. All letters must be post-paid.

NEALE'S VIEWS OF NOBLEMEN AND

GENTLEMEN'S SEATS.—Subscribers having imperfect sets of this work are recommended to complete them without delay, or they will lose the opportunity of so doing.

This magnificent work consists of Seven Octavo Volumes, and contains upwards of Eight Hundred Views, engraved in the first style of art, of the Seats of Noblemen and Gentlemen in England, Wales, Scotland, and Ireland. A very few copies, with early impressions of the plates, originally published at £27 10s. now remain unissued, and are offered at the price of £12 12s. London: Sherwood, Gilbert, and Piper, 33 Paternoster Row.

TO COLLECTORS OF WATER-COLOUR DRAWINGS.

R. JENNINGS has consigned to him for Private Sale a considerable Collection of Drawings in Water-Colour, by various Artists, with the whole Original Sketches (at home and abroad) of an Eminent Artist. On View at 63 Chesham.

ORNAMENTAL DESIGN.

Under the Patronage of the Honourable the Commissioners, Trustees for the Encouragement of Scottish Manufactures.

No. 1. price 3s. and Part I. price 10s.

THE ORNAMENTAL DESIGNS OF WATTEAU; Painter to Louis XIV. Collected from his Works and Lithographed.

By V. BICHOL, Edinburgh. These Designs, which were published in Paris along with the other Pictorial Works of Watteau immediately after his death, have always been accounted unique in grace and elegance of composition. Though originally intended as schemes for Interior Decorations, their utility is by no means confined within this sphere of Art, for there is no pursuit connected with Design which may not be advanced and elevated by suggestions from this graceful and fertile source.

To all Tradesmen engaged in these Arts or Manufactures dependent for their attraction upon Design, this work must be a treasure altogether invaluable. The House and Ornamental Painter, the Cabinet Maker, the Printer of Cotton and other fabrics, the Shawl Manufacturer, the Carpet Weaver, the Brass-founder, and the Silversmith, are a few of those to whom the work will be peculiarly useful; while, at the same time, it possesses claims on gentlemen of taste, not only as a handsome drawing-room volume, but also as a source from which hints may be derived for the decoration of their dwellings.

The Work will consist of One Hundred Sheets, super-royal folio, and will be published in Monthly Numbers, each containing Five Sheets, price 3s. 7 and in Paper every alternate Month, each Part containing Ten Sheets, price 10s.

Adam and Charles Black, Edinburgh; John Weale, and Ackermann and Co., London.

MUSIC.

In 6 vols. 8vo. price 3s. 12s. 6d. a new edition, with copious Notes and Illustrations of the Lyric Poetry and Music of Scotland, of **JOHNSON'S SCOTS MUSICAL MUSEUM.**

In this publication the original simplicity of our ancient National Airs is retained, unimpaired by useless accompaniments and gratuitous, depriving the hearers of the sweet simplicity of their native melody.

"Your work is a great one. I will venture to prophesy, that to future ages your publication will be the text-book and standard of Scottish song and music."—From a Letter of Robert Burns to the author, of which a facsimile is given with this edition. Edinburgh: W. Blackwood and Sons; and Thomas Cadell, London.

EDITED BY THE REV. ROBERT JAMIESON.
Elegantly bound, 4s. 6d.

THE EXCITEMENT FOR 1840; or, a Book to induce Young People to Read. Being the Eleventh of the Series.

Edited by the Rev. ROBERT JAMIESON, Minister of St. Andrew's.
Illustrated with Engravings on Steel in the finest style of the art, from Drawings expressly designed for this Work, by Montague Stanley, A.R.S.A. Edinburgh.

Notices of the previous Volumes.
"One of the very best gift-books of the season."—*Athenæum*.
"An admirable companion for the young."—*Evangelical Mag.*
"It is our deliberate conviction that the present volume, the Tenth of the Series, is not only calculated to maintain the well-earned reputation of its predecessors, but is decidedly superior to any of them. The engravings, we must add, are really very beautiful specimens of art."—*Edinburgh Advertiser*.
"The best Annual for Youth, without any exception, that we have ever seen."—*Aberdeen Constitutional*.
"From its commencement, it has proved itself one of the most instructive books ever put into young hands."—*Dundee Courier*.
"Rich in stories, and in amusing and instructive matter."—*Dublin Statesman*.
"The former volume was decidedly superior to its predecessors, and the present is in several respects more elegant than the last. The plates and binding are really beautiful."—*Scottish Guardian*.

Several of the previous Volumes of the Series may still be had.
John Johnstone, Edinburgh; and Whittaker and Co. London.

NATURAL HISTORY OF DOGS, Wild and Domestic Species.

By Colonel HAMILTON SMITH.
Vol. I. The Wild Species—embracing the Wolf, Fox, Jackal, &c.

British Birds,
Lions, Tigers, &c.
British Quadrupeds,
Goats, Sheep, &c.
Pigeons.
"Perhaps the most interesting, the most beautiful, and the cheapest series, yet offered to the public."—*Athenæum*.

ILLUSTRATED EDITION OF LALLA ROOKH.

In royal 8vo. price One Guinea; or with India proof plates, Two Guineas.
MOORE'S LALLA ROOKH.
19th edition, splendidly illustrated with Thirteen highly finished Engravings, handsomely printed in 1 vol. royal 8vo. bound in fancy cloth, lettered, with ornamental gilding.
"The union of poetry and painting has rarely before produced so costly and so charming a volume."—*Monthly Chronicle*.
Also, an edition of the above Poem in fcap 8vo. with Four Engravings, after Westall's designs, price 10s. 6d. cloth, lettered.
Lately published, the 13th edition of
Moore's Irish Melodies.

By JOSEPH KING, Liverpool.
Longman and Co. and Tilt, London; Robinsons, Liverpool.

8vo. 5th edition, 10s. 6d. cloth.
BAYLTON'S ART OF VALUING RENTS AND TILLAGES, and the Tenant's Right of Entering and Quitting Farms, explained by several Specimens of Valuations; and Remarks on the Cultivation pursued on Soils in different Situations. Adapted to the Use of Landlords, Land Agents, Appraisers, Farmers, and Tenants. Fifth Edition, rewritten and enlarged, by JOHN DONALDSON. With a Chapter on the Tithe Commutation Rent Charge, by a Gentleman of much experience on the Tithe Commission.
London: Longman, Orme, and Co.

COMMENTARIES ON SHAKSPEARE.

In 9 vols. post 8vo. 12s.
By the Right Hon. T. P. COURTENAY.
"We have read this work with pleasure, as the production of a scholar, and a gentleman of refined taste and acute judgment. The many new points of view which he takes, and the many lights which he throws upon passages of the immortal bard, command our lively interest; and the pains which he has taken to rescue real and actual history from the overwhelming magic of the dramatist, deserve the thanks of every lover of truth. This investigation of the authorities on which Shakspeare leans for his historical facts, is both curious and instructive; and the whole deserves the attention of the public, as an almost inseparable companion to Shakspeare's plays. Indeed it is a work without which we do not look to see a respectable library, or collection of polite literature."—*Literary Gazette*.
Henry Colburn, Publisher, 13 Great Marlborough Street.

A CYCLOPÆDIA OF PRACTICAL HUSBANDRY AND RURAL AFFAIRS IN GENERAL.

By MARTIN DOYLE.
"It is the most valuable and complete manual for the Irish farmer that has ever fallen under our observation."—*Dublin Evening Post*.
"In all that relates to practical husbandry it ought to be an authority. As a comprehensive index to all the operations of the farm, the dairy, the stable, the pasture, the sheepfold, and even the poultry yard, no one whose wealth lies in these, will, on perusal, deny that it is an invaluable publication."—*Northern Whig*.
Dublin: Wm. Curry, Jun. and Co. Upper Sackville Street; S. Holdsworth, London; Fraser and Co. Edinburgh.

MRS. TROLLOPE'S MICHAEL ARMSTRONG COMPLETE. THE LIFE AND ADVENTURES OF MICHAEL ARMSTRONG, THE FACTORY BOY.

By MRS. TROLLOPE.
With all the Illustrations of Horne, Bosc, &c. now ready, and may be had of all Booksellers and at all the Libraries.
"We must frankly confess that this is not only a most delightful work, but that in the present day it is likely to be pre-eminently successful. The authoress is sounding the tocsin in behalf of the poor factory children; and she infinitely merits credit for any thing that was done by Wilberforce for the Negroes. But setting aside these higher considerations, and looking at the 'Factory Boy' simply as a novel, it will bear a comparison with any of the most popular novels that have appeared in the periodical form."—*Parthenon*.
Henry Colburn, Publisher, 13 Great Marlborough Street.

TREATISES ON POETRY, MODERN ROMANCE, AND RHETORIC; including the Articles under those Heads in the Seventh Edition of the "Encyclopædia Britannica."

By GEORGE MOIR, Professor of Rhetoric in the University of Edinburgh, and WILLIAM SPALDING, Esq. Advocate.
"Learned, able, and elegant."—*Edinburgh Advertiser*.
"Well fitted for a class book in English classical literature, and as such we recommend it to the attention of teachers, and to the reading public generally."—*Argus*.
Adam and Charles Black, Edinburgh; Simpkin, Marshall, and Co.; Whittaker and Co.; and Hamilton, Adams, and Co. London.

"JACKSON ON WOOD ENGRAVING." Literary and Artistic Imposture exposed.

Price 1s.
A THIRD PREFACE to a Book advertised by Messrs. Charles Knight and Co. under the following fallacious title:—"A Treatise on Wood Engraving, Historical and Practical, with upwards of Three Hundred Illustrations engraved on Wood; by JOHN JACKSON, Esq. being an account of Mr. John Jackson's actual share in the Composition and Illustration of that Work."
By WM. A. CHATTO, Author of the first Seven Chapters, comprising, in six hundred and thirty-four pages, the History and Fortitude of the Work; and the Writer of the whole as originally printed.
"A cheat exploded is a cheat no more."—*G. Chalmers' Apology for the Believers*.
"Convey the wise it call."—*Merry Wives of Windsor*.
"When the aye is true."
Their well-known plumes shall challenge back againe,
The naked daw a general game shall be,
Spoiled of his grace and pilfered bravies."—*Misc of Menie Combes*.
Walter Spiers, 289 Oxford Street.

AN INTRODUCTION TO THE CRITICAL STUDY AND KNOWLEDGE OF THE SCRIPTURES.

By the Rev. THOMAS H. HORN, B.D.
Of St. John's College, Cambridge; Rector of the United Parishes of St. Edmund the King and Martyr, and St. Nicholas Acon, Lombard Street; Prebendary of St. Paul's.
Illustrated with numerous Maps and Facsimiles of Biblical Manuscripts.
Also, lately published,
1. Supplementary Pages to the Seventh Edition, containing the Completion of the Account of Biblical Manuscripts collated for the New Testament (in fulfillment of the promise made to the possessors of that edition in Vol. II. p. 159), and such Bibliographical and other Additions as can be detached, so as to be bound up with the several volumes. Price 3s. 6d. sewed.
2. A Manual of Biblical Bibliography, handsomely printed in 1 vol. 8vo. This Manual constitutes the Appendix to the 3d vol. of Mr. Horne's "Introduction." In consequence of very numerous applications made for it in a separate form, since the publication of the 7th edition of that work, a limited impression has been taken off, for the accommodation of booksellers, and others who are engaged in bibliographical researches. Price 12s. cloth, boards.
London: Printed for T. Cadell, Strand; W. Blackwood and Sons, Edinburgh; and R. Milliken and Son, Dublin; of whom may be had all Mr. Horne's other works.

THE SCHOOL-BOY. A Poem.

In 12mo. price 4s. a new edition of
By THOMAS MAUDE, M.A.
"It is replete with the best feelings, expressed in very harmonious metre. It is divided into two parts, the country and the town school, both of which are written with that most enthusiastic truthfulness that is so pleasing. The frequent allusion of the school to the members of its family, and to his personal friends, is very graceful, and gives a stamp and a locality to his poem which we greatly admire."—*Metropolitan Magazine*.

"We have read this poem with unalloyed pleasure. It reflects the feelings natural to the subject, and conveys on the interest of the season it describes with truth and pathos. The verse is very unaffected, and often recalls the melodious flow of Cowper and Thomson."—*Atlas*.

"This is a very graceful poem, full of those touches of quiet and unassuming beauty which are the sign of greatness, and the best passports to the heart of the reader whose taste has not been debauched by the tawdry and meretricious efforts of certain modern versifiers. Mr. Maude is a scholar, and a man of taste, as well as a poet."—*United Service Gazette*.

"The 'School-Boy' has merit enough to make it acceptable under any circumstances."—*Athenæum*.

"This is a poem indeed full of the fresh breathings of tenderest, fondest, purest recollections, from a mind of high culture, an imagination of fine compass, and one whose taste for the nobler beauties of the muse cannot be questioned."—*Monthly Review*.

"These sketches of school-boy scenes are given with much of the natural ardour and joyousness so characteristic of the morning of life, and which bring such a charm over its sunny landscapes in the imagination of the boy and the memory of the man."—*Morning Post*.

"We are much pleased with the amiable feeling and pure and healthful tone of this composition."—*York's Edinburgh Magazine*.

"It is written in a style familiar, yet by no means vulgar; the sentiments are natural, and flow from the subject; the descriptions such as the mind dwells upon with satisfaction and delight; it is fresh, fresh with the morning dews of life."—*Goodman's Magazine*.

"In a poem abounding with so many rich passages as this work contains, we are almost at a loss to transfer portions of it to our pages; for, when we have gathered a few flowers, so many are left behind that they even appear to be left behind. We cannot but better than recommend our readers to take a survey of this delightful garden, and all gather to please their fancies."—*Edinburgh Review*.

"The 'School-Boy' contains some of the graphic touches of a genius, the skill of a painter, the skill of a sculptor, the perfect picturing of a landscape, and the minute grouping of a bloomfield."—*Lit. Gazette*.
London: Longman, Orme, Brown, Green, and Longmans; and to be had, by order, of every Bookseller in Town or Country.

REV. H. STEBBING'S CONTINUATION OF MILNER.

In 3 vols. 8vo.
Volume the Second, price 12s. in boards.
THE HISTORY OF THE CHURCH OF CHRIST, from the Diet of Augsburg to the 18th Century, in continuation of "Milner's History of the Church of Christ."

By the Rev. HENRY STEBBING, D.D.
London: T. Cadell, Strand; and W. Blackwood and Sons, Edinburgh.

HORNE TOOKEN'S DIVERSIONS OF PURLEY.

In 1 vol. 8vo. price 14s. cloth boards.
EPIEA ITEPOENTA; or, the Diversions of PURLEY.

By JOHN HORNE TOOKEN.
With numerous Additions from the Copy preserved by the Author for republication; to which is annexed, his Letter to John Dunning, Esq. A new edition, revised and corrected, with Additional Notes by RICHARD TAYLOR, Esq. F.R.S.
London: Printed for Thomas Tegg, 75 Cheapside.

THE AGAMEMNON OF ÆSCHYLUS.

A new edition of the Text, with Notes, Critical, Explanatory, and Philological. Designed for the Use of Students in the Universities.

By the Rev. THOMAS WILLIAMSON PRILE, M.A. Senior Fellow and Tutor in the University of Durham, &c. formerly Fellow of Trinity College, Cambridge.
John Murray, Albemarle Street.

EXPERIMENTAL INQUIRIES IN CHEMICAL PHYSIOLOGY.

By HORATIO PRATER, Esq.
"A work which, though by no means free even from material defects, displays considerable patience and experimental acuteness on the part of the operator."—*Lancet*.
"Du ruse, malgré ces taches légères, l'ouvrage n'en est pas moins un des plus intéressants qui aient été publiés jusqu'à ce jour sur la matière."—*Revue Médicale*, Paris, 1852.
B. Highley, 23 Fleet Street.

Also, by the same Author, newly bound in cloth, price 5s.
Thoughts.—1. On the Sensibility of the Imagination, with English Illustrations from the Lives of Petrarch, Werter, and Byron. (In reference especially to the Opinions of Thomas Moore, Esq.)
2. On the Final Cause for the Love of Pothemus Fame.
3. On Utilitarian Ethics. (In reference especially to the Opinions of Jeremy Bentham, Esq.)
4. On Indecency.
5. On the Law of Copyright.
"The author professes his object to be the search after Truth; and if that retiring and mysterious lady has not thought proper to withdraw her veil at his bidding, there is at least some merit in looking for her, instead of taking her existence on trust, as is the wont of nine-tenths of the world."—*New Monthly Magazine* 1850.
Simpkin, Marshall, and Co. Stationers' Hall Court.

STRIVE AND THRIVE, BY MRS. MARY HOWITT.

In One Pocket Volume, embellished with Two Engravings, price 2s. 6d. half bound.
STRIVE and THRIVE; or, Heaven helps Those who help Themselves. A Tale; forming part of a Series entitled "Tales of the Heart and the Hand."
By MRS. MARY HOWITT.
London: Printed for Thomas Tegg, 75 Cheapside; and sold by all other Booksellers.

SPLENDID ANNUALS FOR 1840.

Now ready, elegantly bound in morocco, 2l. 2s.

FINDENS' TABLEUX;
PROSE, POETRY, AND ART, FOR 1840.Embellished in a new and unique style.
Edited by MISS MITFORD.

Imperial 4to. India Proofs, 3l. 3s. A few Copies, coloured after the original Drawings, 3l. 3s.

"We know not in what terms to commend this magnificent work. It is the most splendid of all the Annuals. There is a novelty in the designs, the framework on which they are set being composed of smaller sketches from the story, prettily helping out the main idea."—*Atlas*.

"We have not seen more appropriate and characteristic accompaniments. The tableaux are worthy of the high names of the Findens."—*Literary Gazette*.

"The most attractive Annual of the season."—*United Service Gazette*.

II.

Price One Guinea, in morocco,

THE ORIENTAL ANNUAL;
TALES, LEGENDS, AND ROMANCES.

By THOMAS BACON, Esq.

With Engravings by W. and E. Finden. A few India Proofs, royal 8vo. 2l. 12s. 6d.

"In addition to the usual sprinkling of Tales and Romances, glowing all over with Eastern images, enchantments, and picturesque costumes, there are several very close and accurate descriptions of scenery, little peeps into towns, mountains, and valleys, and as much topographical and roadside information as any one can reasonably demand."—*Atlas*.

"The engravings are greatly superior to any thing we have met with in this work."—*V. S. Gazette*.

"The embellishments are of the most exquisite kind."—*Herald*.

"Mr. Bacon has introduced more of life and interest into the literature, and the illustrations are more varied than usual."—*Athenaeum*.

CHARLES TILT, FLEET STREET.

On the 1st of January, 1840, and to be continued Monthly, price 2s. 6d. No. I. of

THE COLONIAL MAGAZINE,
AND
COMMERCIAL-MARITIME JOURNAL OF THE BRITISH EMPIRE.

Including our Possessions in the East and West Indies, North and South America, Asia, Australasia, Africa, and Europe.

Edited by ROBERT MONTGOMERY MARTIN, Esq.

Author of "The History of the British Colonies," &c.

England, possessed of Colonies in every part of the globe, has no Magazine devoted to their peculiar and nationally momentous interests.

Relying, therefore, on the obvious want of such a work, on the high reputation of its Editor, and his personal acquaintance with our Colonies, the Proprietors look with confidence for the support of every individual who reflects on the intimate connexion between colonial legislation and the prosperity of manufactures and commerce in England.

Colonists of every class, at home and abroad; emigrants, rich and poor; merchants, ship-owners, and traders; all who possess

friends or relatives in the Colonies, will find ample and authentic intelligence, arranged and classified under distinct departments.

Detailed Prospectus may be had of all Booksellers and

News-vendors.

Contents of No. I.

(To be published at the end of December), complete, with Engravings, from Designs by George Cruikshank, price 6s.

As a List of the whole of the Works now included in the Standard Novels can be had (gratis) of all Booksellers.

RICHARD BENTLEY, NEW BURLINGTON STREET,

Publisher in Ordinary to Her Majesty.

REVIEW OF NEW BOOKS.

A Diary in America: with Remarks on its Institutions. Part II. By Captain Marryat, C.B. 3 vols. 12mo. London, 1839. Longman and Co.

A FORTNIGHT ago we put in our thumb and pulled out a plum from the close of these volumes, and most maliciously held it up for the "Edinburgh Review" to snap at. We have now to pay the attention due to the whole publication; and, from what we have noted in the first of these volumes, we find that all we can do this week is to confine ourselves to it, and leave its followers to follow hereafter as may be.

A map of aboriginal America, when covered by its own red people, is prefixed, and the eye glances over the vast tracts of territory where the Adirondacks, Ottawas, Pokanokets, Pequods, Cherokees, Pawtuckets, Mohawks, Oneidas, Cayugas, Onandagas, Senecas, Creeks, Delawares, Mannahoes, Monacans, Tuscaroras, Catawbas, Yamapees, Choctaws, Chicaws, Yazoes, Cumanches, Shawanees, Pawnees, Sances, Foxes, Peorias, Kaskasias, Kickapoos, Illinois, Miammes, Menonomies, Chippeways, Sioux, Snakes, Blackfeet, Crow, Toways, Osages, Kansas, Tetons, Mandans, Winnebagoes, Minnataries, Arickarees, Assinaboins, Crees, Pawhatans, Wyandots, Hurons, and Florida Indians, hunted the elk, the bear, and the buffalo, and wild in his woods the noble savage ran. A feeling like that with which Cicero beheld the ruins and desolation on his right hand and on his left, when he so eloquently bewailed the once flourishing cities of antiquity, creeps over the breast when we survey a record like this. Where are these tribes and nations now? Alas! the very names of many of them are forgotten, and of all the places which knew them so short while ago, know them no more. Another race has driven them from their native haunts and possessions; and the sword, and disease, and demoralisation, and treachery, and oppression, have all but exterminated the denizens of a quarter of the habitable globe. It is, say the politician and statistician, "the course of things," but to the moralist and philanthropist it brings a most melancholy reflection. What deluges of blood must have been poured forth, and inconceivable measure of human misery endured, before this dreadful consummation was effected! The mind sickens at the thought, and we look for contrast and comfort to that other world where the blest Indian shall (like the Norseman of old), enjoy his paradise of the chase unmolested by the pale stranger, and again in happier realms smoke the calumet of peace—of everlasting peace.

In the stead of those who have nearly vanished from the Atlantic to the Pacific Ocean, this mighty continent is peopled by a mixed white race, chiefly of British descent. Their grand characteristics are restless activity, enterprise, and energy in the pursuit of fortune. Their own quaint phrase, to "go right a-head," describes the nation and almost every individual member who composes it. "Dash forward" is the cry and mainspring of action; and though individuals meet with

many a reverse and the country many a check in this career (as even at the present moment), yet still there cannot be a doubt but that the principle must ultimately lead, by almost a regular advance, to immense and incalculable results.

All that our author relates tends to this conclusion: the waters are turbid and troubled as yet, but with time they must purify and settle, and a wonderful futurity awaits the continent of America. At present, for instance, Capt. M. observes:—

"The railroads in America are not so well made as in England, and are therefore more dangerous; but it must be remembered that at present nothing is made in America but to last a certain time; they go to the exact expense considered necessary and no further; they know that in twenty years they will be better able to spend twenty dollars than one now. The great object is to obtain quick returns for the outlay, and, except in few instances, durability or permanency is not thought of. One great cause of disasters is, that the railroads are not fenced on the sides, so as to keep the cattle off them, and it appears as if the cattle who range the woods are very partial to take their naps on the roads, probably from their being drier than the other portions of the soil. It is impossible to say how many cows have been cut into atoms by the trains in America, but the frequent accidents arising from these causes has occasioned the Americans to invent a sort of shovel, attached to the front of the locomotive, which takes up a cow, tossing her off right or left. At every fifteen miles of the railroads there are refreshment rooms; the cars stop, all the doors are thrown open, and out rush the passengers like boys out of school, and crowd round the tables to solace themselves with pies, patties, cakes, hard-boiled eggs, ham, custards, and a variety of railroad luxuries, too numerous to mention. The bell rings for departure, in they all hurry with their hands and mouths full, and off they go again, until the next stopping place induces them to relieve the monotony of the journey by masticating without being hungry."

A considerable portion of the volume under notice is devoted to the subject of travelling; the rest to the press and the condition of the Mississippi, &c. The terrible loss of lives by the explosion of steamers and railroad accidents, furnishes matter for some remarkable and most tragical statements; but these we shall pass by for the more miscellaneous choice of some travelling anecdotes. Capt. M. speaks highly of the general accommodation at the hotels, and the moderation and honesty of the charges. Some of the adjuncts, however, are not of the most pleasing kind:—

"He who is of the silver-fork school will not find much comfort out of the American cities and large towns. There are no neat, quiet, little inns, as in England. It is all the 'rough and tumble' system, and when you stop at humble inns you must expect to eat peas with a two-pronged fork, and to sit down to meals with people whose exterior is any thing but agreeable, to attend upon yourself, and to sleep in a room in which there are three or four other beds (I

have slept in one with nearly twenty), most of them carrying double, even if you do not have a companion in your own. A New York friend of mine travelling in an extra with his family, told me that at a western inn he had particularly requested that he might not have a bed-fellow, and was promised that he should not. On his retiring, he found his bed already occupied, and he went down to the landlady, and expostulated. 'Well,' replied she, 'it's only your own driver; I thought you wouldn't mind him.' Another gentleman told me, that having arrived at a place called Snake's Hollow, on the Mississippi, the bed was made on the kitchen-floor, and the whole family and travellers, amounting in all to seventeen, of all ages and both sexes, turned into the same bed altogether. Of course this must be expected in a new country, and is a source of amusement rather than of annoyance.

Amongst other points upon which the Americans are to be pitied, and for which the most perfect of theoretical governments could never compensate, is the misery and annoyance to which they are exposed from their domestic slaves. They are absolutely slaves to them, especially in the western free states; there are no regulations to control them. At any fancied affront they leave the house without a moment's warning, putting on their hats or bonnets, and walking out of the street-door, leaving their masters and mistresses to get on how they can. I remember when I was staying with a gentleman in the west, that, on the first day of my arrival, he apologized to me for not having a man servant, the fellow having then been drunk for a week; a woman had been hired to help for a portion of the day, but most of the labour fell upon his wife, whom I found one morning cleaning my room. The fellow remained ten days drunk, and then (all his money being spent) sent to his master to say that he would come back on condition that he would give him a little more liquor. To this proposition the gentleman was compelled to assent, and the man returned as if he had conferred a favour. The next day, at dinner, there being no porter up, the lady said to her husband, 'Don't send — for it, but go yourself, my dear; he is so very cross again that I fear he will leave the house.' A lady of my acquaintance in New York told her coachman that she should give him warning; the reply from the box was, 'I reckon I have been too long in the woods to be scared with an owl.' Had she noticed this insolence, he would probably have got down from the box, and have left her to drive her own cattle. The coloured servants are, generally speaking, the most civil; after them the Germans; the Irish and English are very bad. At the hotels, &c., you very often find Americans in subordinate situations, and it is remarkable that when they are so, they are much more civil than the imported servants. Few of the American servants, even in the large cities, understand their business, but it must be remembered that few of them have ever learnt it, and, moreover, they are expected to do three times as much as a servant would do in an English house. The American houses are much too large for the number of

servants employed, which is another cause for service being so much disliked. It is singular that I have not found in any one book, written by English, French, or German travellers, any remarks made upon a custom which the Americans have of almost entirely living, I may say, in the basement of their house; and which is occasioned by their difficulties in housekeeping with their insufficient domestic establishments. I say custom of the Americans, as it is the case in nine houses out of ten; only the more wealthy, travelled, and refined portion of the community in their cities deviating from the general practice. * * *

I was on board of a steam-boat from Detroit to Buffalo, and entered into conversation with a young woman who was leaning over the taffrail. She had been in service and was returning home.—“You say you lived with Mr. W.?” “No, I didn’t,” replied she, rather tartly; “I said I lived with Mrs. W.”—“Oh! I understand. In what situation did you live?” “I lived in the house.”—“Of course you did, but what as?” “What as? As a gal should live.”—“I mean what did you do?” “I helped Mrs. W.”—“And now you are tired of helping others?” “Guess I am.”—“Who is your father?” “He’s a doctor.”—“A doctor! and he allows you to go out?” “He said I might please myself.”—“Will he be pleased at your coming home again?” “I went out to please myself, and I come home to please myself. Cost him nothing for four months; that’s more than all gals can say.”—“And now you are going home to spend your money?” “Don’t want to go home for that, it’s all gone.”—“I have been much amused with the awkwardness and nonchalant manners of the servants in America. Two American ladies who had just returned from Europe, told me that shortly after their arrival at Boston, a young man had been sent to them from Vermont to do the duty of footman. He had been a day or two in the house, when they rang the bell and ordered him to bring up two glasses of lemonade. He made his appearance with the lemonade, which had been prepared and given to him on a tray by a female servant; but the ladies, who were sitting one at each end of a sofa and conversing, not being ready for it just then, said to him, ‘We’ll take it presently, John.’ ‘Guess I can wait,’ replied the man, deliberately taking his seat on the sofa between them, and placing the tray on his knees.”

The Americans are represented as being most injuriously addicted to drinking, as the following extracts will shew:—

“The bar of an American hotel is generally a very large room on the basement, fitted up very much like our gin-palaces in London, not so elegant in its decorations indeed, but on the same system. A long counter runs across it, behind which stand two or three bar-keepers to wait upon the customers, and distribute the various potations, compounded from the contents of several rows of bottles behind them. Here the eye reposes on masses of pure crystal ice, large bunches of mint, decanters of every sort of wine, every variety of spirits, lemons, sugar, bitters, segars, and tobacco; it really makes one feel thirsty, even the going into a bar.* Here you meet every body and every body meets you. Here the senator, the member of Congress, the merchant, the store-keeper, travellers from the far West, and every other part of the country, who have come to pur-

chase goods, all congregate. Most of them have a segar in their mouths, some are transacting business, others conversing, some sitting down together whispering confidentially. Here you obtain all the news, all the scandal, all the politics, and all the fun; it is this dangerous propinquity, which occasions so much intemperance. Mr. Head has no bar at the Mansion-House in Philadelphia, and the consequence is, that there is no drinking, except wine at dinner; but in all the other hotels, it would appear as if they purposely allowed the frequenters no room to retire to, so that they must be driven to the bar, which is by far the most profitable part of the concern. The consequence of the bar being the place of general resort, is, that there is an unceasing pouring out and amalgamation of alcohol, and other compounds, from morning to late at night. To drink with a friend when you meet him is good fellowship, to drink with a stranger is politeness, and a proof of wishing to be better acquainted. Mr. A. is standing at the bar, enter B. ‘My dear B. how are you?’ ‘Quite well, and you?’—‘Well, what shall it be?’ ‘Well, I don’t care: a gin sling.’—‘Two gin slings, barkeeper.’ Touch glasses, and drink. Mr. A. has hardly swallowed his gin sling, and replaced his segar, when in comes Mr. D. ‘A. how are you?’—‘Ah! D. how goes it on with you?’—‘Well, I thank you: what shall we have?’ ‘Well, I don’t care; I say brandy cocktail.’—‘Give me another;’ both drink, and the shilling is thrown down on the counter. Then B. comes up again. ‘A. you must allow me to introduce my friend C.’ ‘Mr. A.’—shake hands.—‘most happy to make the acquaintance. I trust I shall have the pleasure of drinking something with you?’—‘With great pleasure, Mr. A., I will take a julep. Two juleps, barkeeper.’ ‘Mr. C. your good health—Mr. A. yours; if you should come our way, most happy to see you,—drink. Now, I will appeal to the Americans themselves, if this is not a fair sample of a bar-room. They say that the English cannot settle any thing properly without a dinner. I am sure the Americans can fix nothing without a drink. If you meet, you drink; if you part, you drink; if you make acquaintance, you drink; if you close a bargain, you drink; they quarrel in their drink, and they make it up with a drink. They drink because it is hot; they drink because it is cold. If successful in elections, they drink and rejoice; if not, they drink and swear;—they begin to drink early in the morning, they leave off late at night; they commence it early in life, and they continue it until they drop down into the grave. To use their own expression, the way they drink is ‘quite a caution.’* As for water, what the man said, when asked to belong to the Temperance Society, appears to be the general opinion, ‘It’s very good for navigation.’ So much has it become the habit to cement all friendship, and commence acquaintance by drinking, that it is a cause of serious offence to refuse, especially in a foreigner, as the Americans like to call the English. I was always willing to accommodate the Americans in this particular, as far as I could (there, at least, they will do me justice); that at times I drank much more than I wished is certain; yet still I gave most serious offence, especially in the West, because I would not drink early in the morning, or before dinner, which is a

general custom in the States, although much more prevalent in the South and West, where it is literally, ‘Stranger, will you drink or fight?’ This refusal on my part, or rather excusing myself from drinking with all those who were introduced to me, was eventually the occasion of much disturbance and of great animosity towards me—certainly, most unreasonably, as I was introduced to at least twenty every forenoon; and had I drunk with them all, I should have been in the same state as many of them were—that is, not really sober for three or four weeks at a time. That the constitutions of the Americans must suffer from this habit is certain; they do not, however, appear to suffer so much as we should. They say that you may always know the grave of a Virginian; as, from the quantity of juleps he has drunk, mint invariably springs up where he has been buried. But the Virginians are not the greatest drinkers, by any means. I was once looking for an American, and asked a friend of his where I should find him. ‘Why,’ replied he, pointing to an hotel opposite, ‘that is his licking place (a term borrowed from deer resorting to lick the salt): we will see if he is there.’ He was not; the barkeeper said he had left about ten minutes. ‘Well, then, you had better remain here, he is certain to be back in ten more, if not sooner.’ The American judged his friend rightly; in five minutes he was back again, and we had a drink together, of course. I did not see it myself, but I was told that somewhere in Missouri, or thereabouts, west of the Mississippi, all the bars have what they term a kicking-board, it being the custom with the people who live there, instead of touching glasses when they drink together, to kick sharply with the side of the foot against the board, and that, after this ceremony, you are sworn friends. I have had it mentioned to me by more than one person, therefore I presume it is the case. What the origin of it is I know not, unless it intends to imply, ‘I’m yours to the last kick.’* Before I finish this article on hotels, I may as well observe here that there is a custom in the United States, which I consider very demoralising to the women, which is that of taking up permanent residence in large hotels. There are several reasons for this: one is, that people marry so very early that they cannot afford to take a house with the attendant expenses, for in America it is cheaper to live in a large hotel than to keep a house of your own; another is the difficulty of obtaining servants, and, perhaps, the unwillingness of the women to have the fatigue and annoyance which is really occasioned by an establishment in that country; added to which is the want of society, arising from their husbands being from morning to night plodding at their various avocations. At

* “Every steam-boat has its bar. The theatres, all places of public amusement, and even the capitol itself, as I have observed in my Diary.”

* “It was not a bad idea of a man who, generally speaking, was very low spirited, on being asked the cause, replied, that he did not know, but he thought ‘that he had been born with three drinks too little in him.’”

* “In a chapter which follows this, I have said that the women of America are physically superior to the men. This may appear contradictory, as of course they could not be born so; nor are they, for I have often remarked how very fine the American male children are, especially those lads who have grown up to the age of fourteen or sixteen. One could hardly believe it possible that the men are the same youths advanced in life. How is this to be accounted for? I can only suppose that it is from their plunging too early into life as men, having thrown off parental control, and commencing the usual excesses of young men in every country at too tender an age. The constant stimulus of drink must, of course, be another powerful cause; not that the Americans often become intoxicated; on the contrary, you will see many more in this condition every day in this country than you will in America. But occasional intoxication is not so injurious to the constitution as that continual application of spirits, which must enfeeble the stomach, and, with the assistance of tobacco, destroy its energies. The Americans are a drinking, but not a drunken nation, and, as I have before observed, the climate operates upon them very powerfully.”

some of the principal hotels you will find the apartments of the lodgers so permanently taken, that the plate with their name engraved on it is fixed on the door. I could almost tell whether a lady in America kept her own establishment or lived at an hotel, the difference of manners was so marked; and, what is worse, it is chiefly the young married couples who are to be found there."

Of the Mint Julep so renowned as an American drink, Capt. M. informs us the Virginians have not, though they claim it, the merit of the invention; for,—

"In the times of Charles I. and II. it must have been known, for Milton expressly refers to it in his 'Comus':—

'Behold this cordial Julep here
Which flames and dances in its crystal bounds
With spirits of balm and fragrant syrups mixed.
Not that nepenthes, which the wife of Thome
In Egypt gave to Jove-born Helena,
Is of such power to stir up joy like this,
To life so friendly, or so cool to thirst.'

If that don't mean mint-julep, I don't know the English language."

The newspaper press of a country is always a subject of interest, and we copy a few of the author's opinions upon that of the United States:—

"Mr. Tocqueville observes, 'that not a single individual of the twelve millions who inhabit the territory of the United States has as yet dared to propose any restrictions upon the liberty of the press.' This is true, and all the respectable Americans acknowledge that this liberty has degenerated into a licentiousness which threatens the most alarming results; as it has assumed a power, which awes not only individuals, but the government itself. A due liberty allowed to the press may force a government to do right, but a licentiousness may compel it into error."

A witty but unprincipled statesman of our own times has said, that 'speech was bestowed on man to conceal his thoughts;' judging from its present condition, he might have added,—'the press in America to pervert truth.' But were I to quote the volumes of authority from American and English writers, they would tire the reader. The above are for the present quite sufficient to establish the fact, that the press in the United States is licentious to the highest possible degree, and defies control; my object is to point out the effect of this despotism upon society, and to shew how injurious it is in every way to the cause of morality and virtue. Of course, the newspaper press is the most mischievous, in consequence of its daily circulation, the violence of political animosity, and the want of respectability in a large proportion of the editors. The number of papers published and circulated in Great Britain, among a population of twenty-six millions, is calculated at about three hundred and seventy. The number published in the United States, among thirteen millions, are supposed to vary between nine and ten thousand. Now the value of newspapers may be fairly calculated by the capital expended upon them; and not only is not one quarter of the sum expended in England, upon three hundred and seventy newspapers, expended upon the nine or ten thousand in America; but I really believe that the expense of 'The Times' newspaper alone is equal to at least five thousand of the minor papers in the United States, which are edited by people of no literary pretension, and at an expense so trifling as would appear to us not only ridiculous, but impossible. As to the capabilities of the majority of the editors, let the Americans speak for themselves. 'Every wretch who can write

an English paragraph (and many who cannot), every pottfogger without practice, every one whose poverty or crimes have just left him cash or credit enough to procure a press and types, sets up a newspaper.' Again:—'If you be puzzled what to do with your son, if he be a born dunce, if reading and writing be all the accomplishments he can acquire, if he be horribly ignorant and depraved, if he be indolent and an incorrigible liar, lost to all shame and decency, and incurably dishonest, make a newspaper editor of him. Look around you, and see a thousand successful proofs that no excellence or acquirement, moral or intellectual, is requisite to conduct a press. The more defective an editor is, the better he succeeds. We could give a thousand instances.'—*Boston News*. These are the assertions of the Americans, not my own; that in many instances they are true, I have no doubt. In a country so chequered as the United States, such must be expected."

After mentioning some honourable exceptions, Capt. M. proceeds:—

"Still the majority are disgraceful, not only from their vulgarity, but from their odious personalities and disregard to truth. The bombast and ignorance shewn in some of these is very amusing. Here is an extract or two from the small newspapers, published in the less populous countries. An editor down East, speaking of his own merits, thus concludes: 'I'm a real catastrophe—a small creation; Mount Vesuvius at the top, with red-hot lava pouring out of the crater, and routing nations—my fists are rocky mountains—arms, whig liberty poles, with iron springs. Every step I take is an earthquake—every blow I strike is a clap of thunder—and every breath I breathe is a tornado. My disposition is Dupont's best, and goes off at a flash—when I blast there'll be nothing left but a hole three feet in circumference and no end to its depth.' Another writes the account of a storm as follows:—'On Monday afternoon, while the hay-makers were all out gathering in the hay, in anticipation of a shower from a small cloud that was seen hanging over the hilly regions towards the south-east, a tremendous storm suddenly burst upon them, and forced them to seek shelter from its violence. The wind whistled outrageously through the old elms, scattering the beautiful foliage, and then going down into the meadow, where the men had just abruptly left their work unfinished, and overturning the half-made ricks, whisked them into the air, and filled the whole afternoon full of hay.'"

But disgrace is not allied to the press alone, lying and defamation are, according to our author, most prevalent vices throughout the population of the Union.

A chapter on copyright and literary publication is a very important one; and the picture of manners not yet amended on the Mississippi is horrible; but we have no room for farther illustration, and so must say good-by to the first division of this review.

The Marine Officer; or, Sketches of Service.
By Sir Robert Steele, Knt. K.C.S. &c.
2 vols. 12mo. London, 1839. Colburn.

Pax Mars per Terram is the motto of the marine, to which he appears likely to add *Nec in armis prastantior quàm in toga*; for Sir Robert Steele's work now before us is the second which has emanated from a marine officer during the present year. Nor are we inclined to quarrel with our somewhat novel associates in the field of literature; it is only as they rest

on their swords that they write: for, since Alfred Burton produced his humorous "Johnny Newcome in the Navy," many years ago, there has been scarcely an author in the gallant corps until lately; and though we should be sorry to bid our marines wear their swords merely to mend their pens—of course we mean not here that the pen of Steele requires mending—it is pleasant to see the arts of peace cultivated even by professed belligerents. *The Marine Officer* is an autobiography. Our author, under the name of Rheuben Meerhay, evidently gives us an account of his own birth, parentage, and education; and if in this he may have erred, it is where the wisest of us are prone to err when making self the hero of our story—by attaching a general importance to scenes and incidents which, even in the mind of the narrator, owe their principal charm to an association of ideas which it is impossible to convey to listener or reader. But soon the *Marine Officer* comes fairly on the stage; and we have the particulars of a dinner at the George Inn, Portsmouth, where he, at that time belonging to the fleet, was honoured by an invitation to dine with four captains in the navy: his characteristic sketches of two of whom are amusing.

"Captain Joseph Sidney Yorke used to boast that he was in parliament when he was 'a reefer.' He was exceedingly vain of his birth; but, setting aside a certain impatience of control, even of self-control, which carried him into occasional excesses, as we shall hereafter see, he was a jovial and pleasant fellow, especially on shore. With young people he was extremely popular at first; he dazzled and captivated the inexperienced mind, and was a great favourite with the ladies. He made long speeches out of the House of Commons and laughable ones in, which, with the advantage of having one brother a secretary of state and subsequently first lord of the admiralty, and another viceroy of Ireland, enabled him to perform what soldiers call wonders and sailors miracles. As a proof of his ubiquity, he had his flag flying, and commanded a squadron at Lisbon, while he kept his seat as a junior lord of the admiralty. He, moreover, actually converted an island in the Cattegat into a fifty-gun ship; ultimately, he became a remarkable exception to the statutes laid down by the Prince Regent at the augmentation of 'the Bath' in 1815: for, at the close of the war, he was made a knight-commander of that most honourable order, although he had not appeared in the 'Gazette,' as required by the regulations. James Vashon, Esq. was captain of my ship, the Princess Royal. Jammy Vashon (his *sobriquet* between decks) was an out-and-outer of the old school; he would stamp and swear, and threaten to flog, till he was black in the face. 'Maintop, there! maintop, ahoy, I say! D—tion, I'll make you answer! I'll pick your ears, you precious rascal!' It blew great guns, and his voice was carried away like a feather. 'Give me a trumpet, sir!' (to his first lieutenant). 'A trumpet, Mr. Shed!' (to his second lieutenant). 'Not a trumpet on deck, by G—d! D—n you altogether!' and away he'd bolt into his cabin for his own, and come back as cool as an oyster. He was a compound of opposites,—sweet and sour, bitter and agreeable, weak and efficient, angry and forgiving. Take him in either of these veins separately, and he was repulsive or engaging, as the case might be: put his character together, take him all in all, and he was like a bowl of good punch,—you could regale with him when present, regret him when absent; you would like to bottle him up, and cork him

down, and conserve him to all time as a good fellow and a capital commander."

The Earl of Northesk and Captain Albemarle Bertie make up the quartette of post-captains, and, certainly, the table-talk is a fair sample of naval conversation. The glorious first of June is fought o'er again with considerable effect, even to the reading of Lord Howe's despatches. This may appear overdrawn to those who have not now and then mixed in naval society; but we have reason to believe that even the veteran soldier, who is a pretty good hand at shewing "how fields are won," has less of that exclusive partiality for professional topics in conversation than the "blue jacket." A naval officer will fight and sail his ship "a long hour by Shrewsbury clock;" or, during a "watch below" at sea, finding attentive auditors in his nautical companions; and no discourse is so acceptable in cockpit, wardroom, cabin, or naval club on shore, as that which makes the listener feel his foot upon the deck and the wide world of waters around him. Sir Robert Steele seems to have made good use of this peculiarity appertaining to his meannesses throughout his book, and many a well-told naval anecdote is introduced after such fashion. But, ere we award a further meed of praise, we must declare against an instance of bad taste which annoys us in the conclusion of a rather effective description of a military funeral. We were still dwelling on the striking remark, "the horse without its rider—what a type of death!" when we were startled by being carelessly informed that, after the ceremony, the late mourners marched off to the cadence of some lively air: the author suggests such as "Go to the devil and shake yourself!" The custom alluded to is incongruous enough, but this attempt at pleasantry more so. We are again well satisfied with our *Marine Officer* in a rapid sketch which he gives us of his ship on pay-day. A certain Jewess, whom he describes as more lovely than the imaginary Rebecca of "Ivanhoe," presents him with a letter when on shore, which the vain youth fancies must contain a love mission, as he is forbidden to peruse it in her presence. "Read it when you go home," said she; "you will do what we ask?" and then she looked up so beseechingly with those dark, dark eyes, forcing their beams through the deep-fringed silken lashes. "Yes, certainly," I said. And what was it about after all? why the ship was to be paid, and the Jew wanted a preference for his boat! "Dence take the old usurer!" said I, throwing away the letter. But the spirit of Rebecca presently came to the rescue, and the Jew's petition was preferred, and his boat was amongst the first permitted to come alongside the Victory the morning she was paid. It would be difficult to describe the scene on board a man-of-war on pay-day. If ever the rules of the strictest discipline are relaxed on board, it is upon this occasion. It is the only holiday, except a battle, in the monotonous life of a sailor. We have not space to continue the account of this said pay-day; we can only say, that if it is considered a holiday by "Jack," he must have a peculiar idea of one, for it appears to us very like a tumultuous meeting of his creditors. Lieut. Meerliay now shares in the glories of Trafalgar with Nelson; and he tells us that his corps gained only laurels on that occasion.

"Lord Byron said 'reality is stranger than fiction;' and certainly nobody could imagine the fact, that in this glorious battle above one hundred officers, and more than three thousand men of the marines, were actually engaged,

and their loss in killed and wounded was comparatively greater than that of the navy; and while the latter got peerages, pensions, baronetries, and general promotion, the marines had only one pitiful brevet majority given as their share of the spoil—as a reward amongst them all!"

The second volume contains some interesting matter respecting the Peninsular war, during a portion of which our soldier *per terram* served. As we have said before, his narrative is most excursive; so much so, that it is frequently difficult to make out how much or how little of that which is told came under the author's personal observation. We have here, too, some details of the siege of Acre incidentally introduced upon the authority of his brother-officers engaged, and of Sir Sidney Smith, with whom he was on terms of intimacy in after-life. An account of Djezzar (executioner) Pasha, who commanded at Acre, and well deserved the horrible title his former office under Ali Bey had conferred on him, shews us how often, for wise ends, good may come out of evil. The history of this strange ally of England is well known, as well the intrepidity of the hero of Acre, "in bending him to his purpose" during their memorable interview; but we have here several instances of this pasha's tyranny, which we can scarcely believe to have been perpetrated even among the Neros of Mahomedan despotism. Our author tells us, that upon one occasion Djezzar took a fancy into his head that his officers should arrest every passenger then in the streets near his palace, and bring them before him. On being informed that no more could be brought into his terrible presence for want of room, he coolly ordered those on his left hand to be hanged, and those on his right to be fed. In spite of the cries of the relatives of the condemned, who fill the air with lamentations, the work of murder goes on, while Djezzar appears at a window, and thus addresses the people: "What would ye of me? I am but the executioner of the will of God!" And yet this man, with a sort of brute courage and power of command, was made a valuable instrument in staying the march of Napoleon, to the disappointment of that insatiable ambition which, after having shaken Europe to its centre, sought a new world to conquer. We will not enter into questions as to the necessity of corporal punishment, imprisonment, and other points of military and naval discipline, which appear to us very fairly and dispassionately discussed throughout the volumes. Leaving such topics to readers of both services, who will be sure to become acquainted with the *Marine Officer*, we conclude by recommending this work as an entertaining miscellany, comprising a diversified range of subject, which renders our sea-soldier a very agreeable companion.

A Practical Treatise on Brewing, based on Chemical and Economical Principles; with Formula for Public Brewers, and Instructions for Private Families. By William Black. Second Edition, much enlarged and improved. Pp. 216. London, 1839. Smith, Elder, and Co.

As matters, literary, scientific, and artistical, work up, we endeavour to make our sheet for the week a mixture of the sweet and useful, agreeable to all palates, and beneficial to the health of all minds. The aim is a good brewage; such as it is the object of this volume, though in another sense and with other materials, to produce; since, instead of reviews,

there is malt; instead of criticism, mashing; instead of theatricals, hops; instead of poetry, fermentation; instead of literature, yeast; and, instead of arts and sciences, ale and porter. Never mind: it is but fair in making our *gyle* for No. 1196, so near Christmas, too, that we throw into it a cast of Mr. Black's ingredients.

When the first edition of his *Treatise* appeared, we paid due attention to a production of such general utility; but the quantity and quality of the new observations and improvements upon the old induce us to say a few words upon this second *coup*. Among the particulars thus brought forward, we would mention a mode of drying malt on the kiln, not generally practised, and yet, when tried, found to answer better than any other method. But the writer's investigation of the influence of electro-chemical action in the manufacture of beer is still more important. He points out its injurious effects on fermentation, and cites cases which put his opinions beyond the possibilities of doubt or contradiction. In this respect he has been the first to trace these effects to their causes, and thus make a new era in the art of brewing. In his chapter on mashing, the temperatures at which the finest extract can be obtained are so distinctly laid down as to do away with all the pretended mysteries in this pseudo secret; and some curious facts are also adduced with regard to the boiling of worts under high pressure.

A difficulty which has ever perplexed both the public and the private brewer, viz. the want of uniformity in fermentation, is very ably and practically discussed; and, as far as we can form a judgment, the causes of the irregularity are fully explained and accounted for—another great step towards the more perfect manufacture of the article.

In the appendix, the formulae of different brewings are so plain, that we, with no other instructions, and never having touched a tab or copper in our lives, would undertake to produce a very tolerable and wholesome tippie. Indeed the directions for private families are most simple, lucid, and excellent; and nothing is forgotten that can tend to make the good housewife mistress of the entire system by which she may cheer the hearts of her domestic circle with the blood of honest John Barley-corn. Hitherto that worthy has too often been a nugatory martyr and unsatisfactory sacrifice: now it will be our own faults (thanks to the *Black Art*!) if he is not wetted, dried, ground down, roasted, and resuscitated, till all rejoice in his metamorphosis. We shall only add that brewers, distillers, maltsters, licensed victuallers, and country gentlemen, farmers, and private families, will find this a very useful treatise to put them in the way of supplying a very generous and healthy beverage.

The author says (and every man likes to recommend his own doings), that some samples of ale brewed under his direction competed in India with Hodgson's Pale! but after what we read in Mrs. Postans' of the valiant Syud Abdoola's fondness for that gratifying draught, preferred to claret and champagne in tropical climates, we cannot but be slow in the belief of this boast. Nevertheless, we have no doubt of the commendable requisites in Mr. Black's malt liquors either for home or foreign consumption.

JESSE'S MEMOIRS OF THE STUARTS.

[Second notice.]

At this busy time, when literary and scientific reports claim so much of our space, and the publishing trade is brisk, we can only afford to refer once more, and slightly, to Mr. Jesse's

entertaining volumes. Lady Arabella Stuart, the Duke and Duchess of Richmond, the Countess of Buckingham, Lord Dorset, Lord Salisbury, the too famous Carr, and the too infamous Francis Howard, Earl and Countess of Somerset, Earl of Northampton, the Countess of Pembroke, her husband and sons, James Hay, Earl of Carlisle, Lord Bacon, Lord Herbert of Chertbury, and, Arctie, the king's particular fool, illustrate the rest of the first volume (beyond the long notice in our last number), and the reign of the first James. The second goes with equal talent and interesting research, so as to afford a familiar picture of the time of Charles I., his character and the characters of his queen and family, the Duke of Buckingham, Strafford, Laud, and others, concluding with the renowned dwarf, Sir Jeffrey Hudson, of whom we are told:—

"There is in the British Museum a little work entitled, 'The New Year's Gift, Presented at Court from the Lady Parvula to the Lord Minimus, commonly called Little Jeffery.' It was printed in London in 1636. The volume is one of remarkably small dimensions, with a view of adapting it to the subject. After a number of indifferent jokes and some wretched pedantry, it concludes with some slight humour:—'In short, who desireth not in debt to be as little as may be, and what a rare temper is it in men of descent not to be ambitious of greatness, even in the highest matters which men attempt, how commonly the most do come short, and in their greatest business effect but little. And, therefore, as it was said of Scipio, that he was *nunquam minus solus quam cum solus*,—never less alone than when alone; so it may be said of you, excellent abstract of greatness, that you are *nunquam minus parvus quam cum parvus*,—never less little than when little. I hope you will pardon me if in my style I have used a little boldness and familiarity, you knowing it to be so commendable, and that it is *nimia familiaritas*, great boldness only, which breedeth contempt; especially since you are no stranger, but of my own country; though some, judging by your stature, have taken you to be a low-countryman. Many merry new years are wished unto you by

"The sworn servant of your

"Honour's perfections,

"PARVULA."

In Newgate Street, over the entrance to a small court, on the north side of the street, may still be seen (1839), a small sculpture in stone, on which are engraved the figures of William Evans, the King's gigantic porter, and by his side the redoubtable Sir Jeffery. There is an engraving of the sculpture in Pennant's London, and, at Hampton Court, an original picture of Sir Jeffery by Mytens."

There is also a good marble statue of him in the garden of the Castle Inn at Richmond, in cavalier armour, and looking, as he was, most warlike. The Duke of Buckingham's love and patronage of the Arts might have furnished some agreeable matter; but we have no reason to find fault with our author, whose work is so executed as to convey to the reader a very lively picture of the times of which it treats. From being unmixed up with other subjects, the domestic and courtly history shines out clearly and in striking relief.

VOYAGE OF THE DOURGA.

[Second notice: conclusion.]

"THE following occurrence gives a remarkable proof of the mildness of their laws. An Arafura, who had gone out fishing, intending

to be absent eight days, did not return, and his wife, who had no more provisions at home than would last for this period, requested assistance from her neighbour. Hence arose a mutual friendship, which, however, at first only shewed itself in little attentions, the man drawing water, cutting wood, and providing fish for his fair neighbour, who could not avoid feeling grateful for the kindness; and no one will be surprised at their friendship at length ripening into love, when, conscious of their guilt, they took flight to one of the neighbouring islands. The husband, who had been detained by contrary winds, returned at the end of two months, and demanded his wife of her brothers, who were therefore necessitated to go in search of her, when the guilty couple were soon discovered and brought back to their village. The injured husband demanded an enormous fine from the seducer of his wife, which the latter refused to pay, stating that during his entire life he should not be able to collect a sufficient quantity of trepang to make up the sum. An appeal was therefore made to the elders, and, on the woman being questioned, she frankly stated the kindness of her neighbour in supplying her wants had called forth her gratitude, and this ripened into love—she had made the first advances. The elders considered this mode of proceeding on the part of the wife rather strange, and, taking it into consideration that it was very difficult for any one to withstand a declaration of love from a young woman, they lost sight of the severe laws respecting the conduct of men towards married women, and determined that the offender should only pay a small fine, and advised the husband never again to leave his wife at home without provisions. The lady returned home with her husband, who was wise enough never to mention the subject, following up the old proverb,

"Men moet geene aude
Koeijen uit de sloot halen."

"Among the Arafuras," continues the writer, "the treatment of their dead betrays, in the greatest degree, their uncivilised condition, and the uncertainty which exists among them as to their future state.* When a man dies, all his relations assemble and destroy all the goods he may have collected during his life; even the gongs are broken to pieces and thrown away. In their villages I met with several heaps of porcelain plates and basins,† the property of deceased individuals, the survivors entertaining an idea that they have no right to make use of them. After death the body is laid out on a small mat, and supported against a ladder until the relatives of the deceased assemble, which seldom takes place until four days have elapsed; and, as decomposition will have commenced before this, the parts where moisture has appeared are covered with lime. Fruitless endeavours to stop the progress of decay! In the meantime, damar, or resin, is continually burnt in the house; while the guests, who have already assembled, regale themselves with quantities of arrack, and of a spirit they themselves prepare from the juice of a fruit, amid violent raving, the discord being increased by the beating of gongs, and the howling and lamentation of the women. Food is offered to the deceased, and, when they find that he does

* "How much it is to be wished that these people, who are simple, not incredulous, should be converted to Christianity! The Mohammedans, who always have priests in these parts, make many proselytes. Yet religion is the chief bond by which the natives of India are attached to us."

† These articles, which are the manufacture of China, are brought hither from Singapore by the English traders.—Ed."

not partake of it, the month is filled with eatables, sirl, and arrack, until it runs down the body, and spreads over the floor. When the friends and relatives are all collected, the body is placed upon a bier, on which had been laid numerous pieces of cloth, the quantity being according to the ability of the deceased; and under the bier are placed large dishes of China porcelain, to catch any moisture that may fall from the body. The dishes which have been put to this purpose are afterwards much prized; and it is for this reason that dishes of an enormous size are so much prized by the Arafuras. A portion of the moisture that has exuded is mixed with arrack, and drunk by the guests, who think that they thus shew the true affection they bore to the deceased. During two or three days the house of the dead is constantly full of drunken and raving guests. The body is then brought out before the house, and supported against a post, when attempts are again made to induce it to eat. Lighted segars, arrack, rice, fruit, &c., are again stuffed into its mouth, and the bystanders, striking up a song, demand whether the sight of all his friends and fellow-villagers will not induce the deceased to awaken? At length, when they find all these endeavours to be fruitless, they place the body on a bier adorned with flags, and carry it out into the forest, where it is fixed upon the top of four posts. A tree, usually the *Pavetta Indica*, is then planted near it; and it is remarkable that at this last ceremony none but women, entirely naked, are present. This last ceremony is called by the Arafuras "Sudah Buang," by which they mean that the body is now cast away, and can listen to them no longer. The entire ceremony proves that the Arafuras are deprived of that consolation afforded by our religion; and that they only give expression to the grief they naturally feel at parting from one to whom they have been attached. The children, almost from their birth, are fed with boiled labu, or pumpkin, which renders it easy to wean them at a very early period. On the birth of a child, a coconut, with some fish, rice, and mango are hung up under the house, and permitted to drop off when they have decayed. They informed me that this was intended to prevent the child from ever being in want of any thing during his after-life."

To these interesting accounts we proceed to add a few other characteristics. In the Tenimber Isles, —

"The heaviest portion of the labour is performed by the women, the men devoting themselves to warlike pursuits, the chase, the fishery, and commerce. Early in the morning, the young unmarried women under the escort of three or four armed men, depart for the plantations in the interior, and at sunset in the evening they may be seen returning, laden with the produce of their labour, which they bear in baskets upon the head. The married and elderly women usually remain at home, where they employ themselves in household affairs, tending the stock, and preparing the meals. On the marriage of a young woman, she adorns her ankles with one or two copper rings, which make a ringing noise at every step, by no means disagreeable to the ear. These singular ornaments give them a peculiar halting gait, the rings being from two and a half to three pounds weight.† Some are carved

* "This term, together with those previously given as in use among the Arafuras, are all pure Malay; whence we may conclude that that language, if not their own, is at least familiar to them.—Ed."

† "The very young girls also wear a similar ornament, but it is much lighter, being made of thick brass wire."

with various figures. The natives of the lower class usually go entirely naked, only the chiefs and heads of families, with those who have visited foreign parts, wearing any clothing. Their warlike equipment is very singular. Like the Ceramese, and other Indian nations, they have their warriors or champions, who, when preparing for war, anoint their heads abundantly with cooca-nut oil, and mix large bunches of loose hair with their own, which they raise up in a towering manner by means of a large bamboo comb, adorned with cock's feathers of various colours, to give them a fear-inspiring appearance. Their hair is also confined by bands of coloured cloth, studded with red beads, and ornamented with hanging shells. Round the middle they wear a piece of dried buffalo's hide by way of armour, to which is suspended their knife and their klewang, or cutlass. Large golden rings are attached to the ears; the neck is protected by a thick collar, studded with white shells; the costume of the warrior being completed by bands of ivory, worked over with beads, worn on the arms. When they go to war with their neighbours all other occupations are neglected, and they employ themselves in wandering through the forest, watching for opportunities to carry off the enemy's women. Occasionally the warriors call each other out, when a skirmish takes place; but their warlike propensities are chiefly exercised in plundering and in way-laying the enemy, when employed in his plantations or at the fishery, but never coming to a regular open fight. More sagowee, or palm wine, is drunk at this time than at any other, the cooca-nut trees being put to no other use than to supply the ingredients. Before the tree bears fruit the blossom is enclosed in a case, the bottom of which is cut every day, and an earthen pot, or a piece of hollow bamboo, placed under to catch the sap, which, when fermented, acquires an intoxicating power."

After staying a while at many of the South-west, South-east, and Arru Islands, establishing generally a native officer with the baton and flag of Dutch rule, Kolff was ordered to proceed, by the Banda seas, to the south coast of New Guinea, and on his way he visited the Ceram-laut and Goram Islands; and he says:—

"According to the information I received from some inhabitants of Ceram-laut, the natives of New Guinea are divided into two tribes, mountaineers and dwellers on the coast, who are continually waging war with each. The people occupying the sea-coast form by far the smaller portion, but from their warlike habits they find no difficulty in maintaining a superiority. The captives taken by the latter from the inferior tribes are sold to the foreign traders, by whom they are held in great esteem; so much so that their price is higher even than that given for slaves of Bali, Lombok, or Sumbawa. The women from Kobay, Ay, and Karra, are considered the most attractive, and are often kept as inferior wives by the Ceramese; the Raja of Kilwari, among others, having a wife born in the Papuan village of Atti-Atti. The price given for a slave on the coast is usually two pieces of white calico, valued at from eight to ten Spanish dollars; from sixty to seventy rupees (five to six pounds sterling) being obtained by the traders for them at Bali, and other places in that direction. Natives worthy of belief have assured me, that if a Papua of the coast is struck by a desire to obtain any articles brought by the foreign trader, for which he has no productions to give in exchange, he will not

hesitate to barter one or two of his children for them; and if his own are not at hand, he will ask the loan of those of his neighbour, promising to give his own in exchange when they come to hand, this request being rarely refused. This appeared to me to be almost incredible, but the most trustworthy natives were unanimous evidence to its truth. The mountaineers themselves sometimes sell their children also. In other places, I have known parents sell their children when their maintenance became too heavy a burden for them to bear, without heeding whether they would ever see them again. Such a total absence of feeling certainly brings these savage people below the level of dumb animals."

We are told in the course of the voyage that "a number of birds usually came on board the brig towards evening, to roost, most of which appeared to me to be land-birds. The colours of some were very beautiful, and in many we could trace a resemblance to our small ducks, magpies, and larks."

Of New Guinea itself the lieutenant did not see much, and so we conclude with another notice of animal history at Timor-laut:—

"The wild cattle, with which the island abounds, are black, and have upright horns, their size being about the same as that of two-year-old cattle in Holland. The natives catch them with nooses of rattan, and also shoot them with arrows. Wild hogs are also to be met with in abundance. Monkeys do not exist on the island; and it is a singular thing, that throughout the Moluccan Archipelago they are only to be found on the island of Batchian, near the south end of Gilolo."

MISCELLANEOUS.

A Lexicon of the Greek Language, for the Use of Colleges and Schools. By the Rev. J. A. Giles, LL.D. 8vo. pp. 939. London, 1839. Longman and Co.

WHEN we lately reviewed the excellent Latin dictionary translated by Mr. Riddle, we felt that a good Greek lexicon was much wanted in our higher schools and colleges. This want has been most ably supplied by Mr. Giles, whose position, as head-master of the City of London School, was likely to indicate the best manner of performing his laborious task. The chief novelty of the present work is the great copiousness of its English-Greek division.

A Cyclopædia of Practical Husbandry, and Rural Affairs in general. By Martin Doyle, author of "Hints to Small Farmers," "Practical Gardening," &c. With Illustrations engraved on Wood. Pp. 507. Dublin, 1839. Curry, jun. and Co.

To practical experience, Mr. Doyle has joined care, assiduity, and research, in the compilation of this useful volume; which will be found serviceable to farmers and the rural community in general.

Treatises on Poetry, Modern Romance, and Rhetoric. By George Moir. Pp. 381. Edinburgh, 1839. Blacks.

THESE articles, originally contributed to the "Encyclopædia Britannica" by the learned Professor of Rhetoric in the University of Edinburgh, have asserted their claims upon the public by reaching a seventh edition. What rhetoric of ours could say more for them?

Goethe's Faust, Part II. with other Poems. Translated by L. J. Bernays. 8vo. pp. 268. London, 1839. Low; Carlsruhe, Biefeld. WE have of late declined entering at length into any of the interminable disquisitions about Goethe, and shall therefore have but little to

say of this publication. Mr. Bernays, an idolater of the poet, has rendered his extraordinary production partly into prose and partly into the original metres; and in both has displayed a knowledge of his principal, and a command of the two languages. His former volume established a reputation which this will not diminish.

As it however introduces the English reader to the *Second Part of the Faust*, which was published in 1833 after Goethe's death, and of which we are not aware that any translation into our language has yet appeared, we may add a few words on the subject. Although many competent critics were of opinion that the author could not have meant the drama to end with the prison-scene, but that in consequence with the "Prologue in Heaven," *Faust* must necessarily be saved, yet others, and particularly amongst ourselves, seemed pertinaciously to cling to the common error that the versions published by Lord F. Egerton, Hayward, Talbot, Blackie, Symes, Anster, Birch, and now by Hills,* constituted the entire poem of Goethe. The present work will show that such was not Goethe's intention; and at the same time convey to the reader that idea of the original, which a translation, as close as might well be, without causing it to be English unrecognisable to the foreign idiom and modes of expression, can communicate. Whether the poet has really finished his plan satisfactorily, or whether it would not have been better to have left it as a noble Torso, is a question which we shall not undertake to determine. At all events we are glad to see the opportunity given for those who are not German scholars,† to judge for themselves. We should also notice that the minor pieces, at the end of the volume, are not without interest and merit. Altogether, the performance is most creditable to the young translator.

Champ de Roses, &c. par Adolphe Dubaut-Pesset. Pp. 244. (London, Simpkin and Marshall; Jeffs; Pagn. Hamersmith.)—A nice selection from above a hundred contemporary French poets, with literary notes by the editor.

Gay Fancies, &c. by the Rev. T. Lathbury, M.A. Pp. 133. (London, Parker.)—The author has here collected into one view the particulars of the story of the Gunpowder Plot, endeavored to expound the motives and principles of the conspirators, and from the whole sounded an alarm to the present Protestant Church.

The Ladies' Flower-Garden of Ornamental Anemone. By Mrs. Loudon. Nos. XI. XII. (London, Smith.)—The Centaurea tribe of singular form, and in our eyes of great elegance and beauty, the lasting Xeranthemum, the gaudy Zinnia, the dashing Aster, and a superb variety of other flowers of similar character, embellish these two gay Nos., and carry Mrs. Loudon most successfully on with her charming task.

Every Lady her own Flower Gardener. by Louisa Johnson (pp. 96, London, Orr), is a fair adviser in the way of cultivating flowers cheaply and neatly.

Life of Sir Walter Scott, Vol. IX. (Edinburgh, Cadell; London, Whittaker.)—The Gothic-looking entrance-hall of Abbotsford is the frontispiece, and a singular view of the dining-room (with a bed and some person lying in it) is the vignette. They are both beautifully engraved by W. Douglas, as well as painted with great force and truth by Allan.

Historic Sites, and other Remarkable and Interesting Places in the County of Suffolk. by John Woddenhouse. Pp. 300. (London, Longman and Co.; Ipswich, Pagny.)—A considerable portion of these papers, we believe, have adorned the pages of the "Suffolk Literary Chronicle," for which they were peculiarly adapted; and the scenes which attended them in that locality having induced Mr. Woddenhouse to augment their number and collect the

* "Faust," a Tragedy by Goethe, translated in English verse by John Hills, Esq., small 4to., pp. 36, Whittaker and Co., which, after what we have said, calls for no particular remark.

† We observe, with pleasure, that the taste for acquiring this rich tongue, in which so many publications of the highest value are written, is gaining ground in England. At Cambridge, Mr. Egerton† (of whose ardent cultivation of "Klopstock," and other zealous works, we have frequently spoken in praise) has been delivering a course of lectures with much success. The same, we trust, will attend his efforts in London; for he is a very meritorious individual, and his life devoted to the pursuit of German literature.

whole into the present form, we have the pleasure to say that the volume is one of very agreeable character. Without going deeply into antiquarian research or historic doubts, the writer has skinned the surface agreeably to the most commonly received accounts and popular traditions; and thus produced a work, not only interesting to Suffolk, but acceptable to readers in other counties throughout broad England. The many castles, churches, ancient residences, ruined towns, and antiquarian remains, of every description of which he has treated, give great variety to his labours; and nine appropriate wood-engravings of the most curious add to their value.

A Comparative View of Ancient History, embracing a Sketch of the Contemporary History of the Nations of Antiquity: an Explanation of Chronological Eras, &c. by J. Toulmin Smith. Pp. 123. (London, Souter.)—On a good plan, and very fairly executed. We observe, however, some inaccuracies of expression; such, for instance, as saying that the "only reward" of Cain's fratricide was the perpetual stings of conscience—meaning thereby the only punishment.

The Courier of the Days of Charles II., with other Tales, by Mrs. Gore. 8vo. pp. 364. (Paris, Galligani and Co.)—When noticing the author's more recent publication in our No. 1191, we ought to have mentioned this Paris edition of *The Courier, &c.*—certainly not one of the least meritorious and clever of her productions. That we had not seen it in its London shape is one of the curiosities of publishing; a similar secrecy having been observed with regard to the "Flying Dutchman." Whether the latter feared criticism or not, we cannot tell; but the volume now before us undoubtedly needed not to entertain any apprehensions.

ARTS AND SCIENCES.

LINNEAN SOCIETY.

MR. FORSTER in the chair. — Mr. Cuming exhibited specimens of the *Lagurus onatus*, discovered by him about three years ago, two miles from Saffron Walden, Essex. Mr. Cuming has collected the plant in the same locality every year since, and he regards it as decidedly wild. The specimens exhibited were collected last summer; the station now mentioned is the only actual English locality for this elegant grass.—Read, 'Description of the *Curata*, a plant of the family of *Bambusae*, of the culm of which the Indians prepare their Sarbains, or Blowpipes,' by M. Schomburgk. The plant belongs to a new species of the genus *Arundinaria*, and has been named *Arundinaria Schomburgkii*. These reeds grow in dense tufts, or clusters, of 50 to 100; the full-grown stem is at the base one inch and a half in diameter, or nearly five inches in circumference, of a bright green colour, perfectly smooth and hollow inside, and rises to the height of forty or fifty feet. The great object of M. Schomburgk's last expedition led him to the Far West. Near the river Emakuni, at a settlement inhabited by Indians, the first object which struck the writer on entering the miserable huts which served as dwellings was a large bundle of these reeds, some of which were sixteen feet long; this naturally caused the inquiry whence they came. The Guinai Indians, called by the Spaniards *Maquiritares*, conducted M. Schomburgk and his party to that part of Marawaoca (a high mountain, which terminates in almost a perpendicular wall of sandstone) where the plant grows. It is much valued, and is given in exchange for the Wourali poison manufactured by other tribes.

ROYAL GEOGRAPHICAL SOCIETY.

DECEMBER 9. Mr. Greenough, F.R.S., President, in the chair.—Eight new members were elected.—Read extracts from the following papers:—1. 'An Outline of the Voyage of the French Ship-of-war *Astrolabe*, commanded by Captain Dumont d'Urville, in the Asiatic Archipelago, between February and June, 1839,' of which we had already abridged a notice from a Paris journal (see page 792).—2. 'Notes on a Tour through a Part of Kurdistan,' by James Brant, Esq. H.M. Consul at Erzurum. Quitting Erzurum on the 16th June, 1838, accompanied by Mr. A. G. Glascock,

R.N., and Dr. E. D. Dickson, Mr. Brant travelled in an eastern direction for about twenty miles, as far as Hassan Kaleb; thence, turning directly to the southward, the party continued, by Aghveran and Khinis Kaleb, to Mush. From this place they proceeded in a W.S.W. direction, to the southward of the valley of the Murad Chai, or Eastern Euphrates, by Nerjki and Piran, to the mines of Arganah, on the western bank of the upper Tigris; thence in a north-west direction to the town of Kharput, the western limit of their journey: returning to the northward of the valley of Murad, they passed through Palu and Cheveh, and again reached Mush. Turning thence to the south-east, they proceeded to Bitlis and to Tatvan, on the south-western point of the lake of Van; continued around its southern shore by Vastan and Artemid to the town of Van, and then in a northerly direction round the north-eastern extremity of the lake, and by Ardish and the foot of Supan Tagh, along its northern shore to Aklat: thus making the entire circuit of the lake within about fifteen miles. Proceeding hence in a north-eastern course, they passed the source of the Murad Chai, at an elevation of 6000 feet above the sea, and arrived at Bayazid at the south-western foot of Mount Ararat; thence, in a westerly direction, by Uch Kilissah, and the pass of Keusseh Tagh, and Hassan Kaleb, to Erzurum: thus completing a tour of about nine hundred miles, through a country imperfectly known and very incorrectly laid down on our maps; many important towns, as Mush, Bitlis, Palu, Kharput, &c., being placed from twelve to twenty miles in error in latitude. Throughout this journey the astronomical positions of all the principal places were determined, as well as their height barometrically above the sea, and the whole line of route correctly mapped by Mr. Glascock; shewing, among other changes, that the lake of Van must be extended nearly thirty miles to the north-east. "Mush," says Mr. Brant, "is a wretched town with a population of about 6000, of which 2500 are Armenians: it is situated on a fine plain, forty miles long by twelve broad; watered by numerous streams, yet in some parts stony and arid; it lies 4700 feet above the sea; and the climate is less severe than that of Erzurum. Kharput is situated on an eminence 1200 feet above the plain, which is one of the richest in the Turkish dominions. We found Hafiz Pasha here, who received us with every civility. This was the western limit of our journey. Returning to the eastward, we passed through Palu, a town of 5000 persons, chiefly employed in manufacturing cloth from native cotton. It is situated on the northern bank of the Murad Chai, 500 feet above the bed of the river, and 3500 above the sea. The valley of Bitlis runs north and south; a ravine opens into it from the west, another from the north-west, and a third from the east; and at their common point of junction the town is situated, at an elevation of 3150 feet above the sea. In its centre rises an abrupt rock to the height of sixty feet, on the summit of which are the ruins of a castle, the residence of the former beys of Bitlis. At its eastern base lie the bazars; while the streets, lining the banks of the stream which flows through the valley and the ravines, and extending up them, give an irregular form to the town, which covers a considerable area, on account of the gardens interspersed among the houses in the ravines. Bare limestone mountains rise on every side, about 2000 feet above the valley; and the bottoms of the ravines are

filled with orchards irrigated by numerous streams and springs. This antique-looking city, placed in so remarkable a situation, the severe character and great height of the mountains, and the cheerful vegetation of the valleys, viewed from the residence of Sherif Bey, combine to form a prospect as singular as interesting. The population consists of 15,000, one-third of which are Armenians. There are three mosques with minarets, and twelve chapels, belonging to Howling Dervishes; of which sect this city would appear to be the principal seat, from the number of its followers. The lake of Van covers a surface of about 900 square geographical miles; the water is salt; and it is situated 5470 feet above the level of the sea. We only observed six small trading craft upon it, chiefly employed in carrying cotton, grain, and timber. The town of Van, situated among orchards on the east side of the lake, contains about 35,000 inhabitants, nearly one-half of which are Armenians. The trade is inconsiderable. The lake abounds in fish; and we saw multitudes of cormorants, gulls, and other water-fowl. The rock on which the castle of Van is built is a long, narrow, isolated mass, rising three hundred feet above the plain; it extends about half a mile in a S.S.E. direction, and its south-western face is perpendicular; its breadth may be one hundred yards at the summit, on which stands the citadel. The whole is of hard compact limestone. By a special order from the pasha we were permitted to visit the castle, and examine its caves; but we could not discover either letters or paintings on the walls—they had probably been used as sepulchres. We visited the cuneiform inscriptions, well known to exist near Van; and the pasha expressed great anxiety to know if we could translate them.

"September 1.—Early this morning we commenced the ascent of the celebrated mountain of Supan Tagh, which rises on the northern shore of the lake full 4000 feet above its surface, and 9500 above the level of the sea. We rode up slowly for three and a half hours, till we reached the edge of the crater out of which the central cone rises. From this spot we proceeded on foot by the most difficult ascent I ever attempted, not only from its steepness, but from the oppression at the chest we all felt. We could not ascend more than five or six steps without stopping to take breath. At length, after four hours from leaving our horses, and seven hours and a half from the base, we reached one of the highest peaks overlooking the lake of Van, and planted our theodolite on its summit. The view from this spot was truly magnificent: at our feet the broad expanse of the lake of Van, more like a sea than a lake; in the distance we counted seven other small lakes; to the south were the ranges of Arjerash and Erdosh; to the south-east the rock and citadel of Van; to the north the range of Mingöl, and the cone-like peak of Keusseh Tagh, above Toprak Kaleb, in the plain of Arishkert; while, in the north-eastern horizon, the beautiful peaks of the Great and Lesser Ararat, at a distance of eighty miles, were distinctly visible, their summits rising into the regions of eternal snow." Mr. Brant's paper was illustrated by a map, constructed by Mr. Glascock, on the scale of six inches to a degree, shewing the whole of their route; also by a section of the highland of Armenia, between Trebizond on the Black Sea, and Mésul on the Tigris; a direct distance of three hundred and sixty geographical miles, shewing the remarkable features of that elevated plateau, which, for the greater part, preserves a level of 6000 feet above the sea, till towards its southern

end, when the mountains of Juwar Tagh, the strongholds of the Kurds and the Nestorian Christians, are said to reach an elevation of 15,000 feet, from whence the descent is almost abrupt to the low level of the plains of Mesopotamia.

GEOLOGICAL SOCIETY.

DECEMBER 4th. The Rev. Professor Buckland, D.D. President, in the chair. — A paper was first read, describing 'Some of the soft parts, and the shape of the hind fin of the Ichthyosaurus, as when recent,' by Richard Owen, Esq. — Mr. Owen commenced by observing that hitherto the exact shape and the nature of the soft parts of the paddle of the Ichthyosaurus have been matter of conjecture, the osseous frame-work having been alone the subject of direct observation. He then stated, that the deviation of these locomotive organs from the reptilian and mammalian types had been recognised, as well as their resemblance to the fins of fishes in the digits exceeding five; but it had been generally supposed, owing to the form of the digital ossicles, their breadth and flatness, and great size, as compared with the joints of the fin-rays of fishes, that they were enveloped in a smooth integument, which, as in the turtle and porpoise, had no other support than was afforded by the bones and ligaments within. The specimen which formed the subject of this communication, Mr. Owen considers to be the posterior fin of the *Ichthyosaurus communis*. It exhibits portions of six digits, and in a most distinct manner, the impression and a thin layer of the dark carbonised integument of the terminal half of the fin, the contour of which is thus most beautifully defined: — The anterior margin of the integument is formed by a smooth, unbroken, well-defined line, and appears to have been merely a duplication of the integument; but the whole of the posterior margin exhibits the remains or impressions of a series of rays, by which the fold was supported. Immediately posterior to the digital ossicles is a band of carbonaceous matter, varying from two to four lines in breadth, and extending in an obtusely pointed form for an inch and a half beyond the ossicles. This band Mr. Owen considers the remains of the dense ligamentous matter which immediately invested the bones of the paddle. Its fibrous structure is most distinctly displayed. The rays above-mentioned are continued from the posterior edge of the carbonised ligamentous matter to the edge of the tegumentary impression, the upper ones being directed more transversely, but the others gradually lie more in the direction of the axis of the fin as they approach its termination. The most interesting feature in these rays, Mr. Owen observed, is their bifurcating as they approach the edge of the fin. From the rarity of their preservation, their appearance and co-existence, in the present instance, with remains of the integument, it is evident that they were not osseous, but either cartilaginous, or of that albuminous hornlike tissue of which the marginal rays consist in the fins of the shark and other plagiostomous fishes. Besides the impression of the posterior marginal rays, the specimen exhibits a series of slightly projecting transverse lines, crossing the whole of the fin at intervals of about one-eighth of an inch; and Mr. Owen infers from their regularity, that the rigid integument was divided into scutiform compartments, analogous to those on the paddle of the turtle and webbed foot of the crocodile; but differing, in the absence of subdivision, by secondary longitudinal impressions. This character of the in-

tegument of the fin agrees, therefore, with the known reptilian structure of the Ichthyosaurus; and it might have been expected *a priori*, that the skin should agree in some respects with the integument of existing reptiles. In conclusion, Mr. Owen observed, that the other new points presented by the specimen under consideration equally accord with the affinities of the Ichthyosauri, afforded by its less perishable remains; and that all the deviations from the reptilian structure of the skeleton tend to the type of fishes, and not to that of the cetaceous mammalia; and, therefore, prepare us to receive with less surprise the evidence of a malacopterygian structure of the fin, afforded by the presence of a series of soft bifurcated rays in the posterior fold of the natatory integument. The interesting specimen which formed the subject of this communication was the property of Mr. Lee of Barrow-on-Soar; and its important peculiarities were detected by Sir Philip Egerton, during an examination of Mr. Lee's fossil saurian remains. — A paper was afterwards read, 'On as much of the great Grauwacke System as is comprised in the group of West Somerset, Devon, and Cornwall,' by the Rev. D. Williams. This communication is supplementary to one read in April last (see *Literary Gazette*, No. 1161), and gives the results of the author's latest investigations into the structure of Devonshire and Cornwall. In the previous paper, he stated that the sedimentary formations composing those counties consisted, in descending order, of No. 9, Floriferous slates (the culm measures of central Devon); No. 8, a series of beds, which he calls the Coddon Hill grits; and No. 7, Trilobite slates, forming the south of Devon and Cornwall. In the present communication, however, he states that he was wrong in considering the sedimentary mass of those districts as belonging to No. 7, recent observations having convinced him that it is composed of a separate formation more recent than No. 9; and which he proposes to range as No. 10, and to call Killas, or Cornish. According to this view, he considers the culm measures (No. 9) as a very old grauwacke system, and he places them below the limestones and slates of southern Devon and Cornwall, but above the newest strata of Exmoor. His reasons for proposing these changes are drawn from observations made at the following localities. Between Duddescombeigh and Chudleigh the posidonia limestones, part of No. 8, is stated to be exhibited underlying a long series of alternations of Coddon Hill grits and floriferous rocks (No. 9) with intercalated killas; and these are said to dip under the Chudleigh limestones, which pass beneath the ridge of Ugbrook, considered by Mr. Williams as a part of the floriferous series. A similar order of succession is stated to be traceable, foot by foot, on the road by Gregleigh and descending to Waddon Barton. At Meedfort Sands the author says, there is a strange association, yet in regular stratified order, of Cornish clay-slate, buff-coloured, finely arenaceous strata, containing fossils, true floriferous grit, slates with culm, volcanic ash, and coral limestones, forming an anticlinal axis, which throws off the great mass of the Torquay limestone. To the east of Dartmoor, Mr. Williams has little doubt that similar alternations occur; and to the west of it, he mentions a line of country between Greeston Bridge, on the Tamar, and Heathfield, the neighbourhood of Tavistock, the shaft sunk in the copper lode on the road from that town towards Callington; also the vicinity of Climsland to the north of Callington, and the country thence to

Saltaash, more particularly a section near Pen-ter's Cross, as exhibiting proofs of the floriferous series passing beneath the slates and limestones of southern Devon and Cornwall. Mr. Williams is further of opinion, that his uppermost group, or No. 10, is distinguished from the strata composing the Quantocks in North Devon, by certain peculiarities in its physical structure. In the latter range of hills, the angle of cleavage of the slates is 10° or less, and the direction east and west; while, according to his observations, the cleavage of the killas coincides nearly with the true magnetic meridian, and the angle of inclination approaches 90°. Finally, Mr. Williams objects to conclusions respecting the relative age of formations deduced from organic remains, preferring those drawn from mineral composition; and he protests against the attempt to prove the geological structure of Devonshire and Cornwall by reference to that of any other country.

ELECTRICAL SOCIETY.

TUESDAY, 17th December. — Read, 'Letters from D. Samo, Esq. Judge at Surinam, addressed to Mr. Hawkins, and to Mr. Cameron, Berbice, respecting the living specimens of *Gymnotus Electricus*, procured for Mr. Hawkins, to be presented to the Electrical Society.' Five of these singular animals had arrived at Berbice in a most lively and healthy state, and had been transhipped to England, where the vessel conveying them has come in safety; but up to Tuesday no account of the condition of her live freight had been received. No expense had been spared, every requisite for their sustenance, and instructions for their treatment, had been supplied. The liberal and praiseworthy conduct of Mr. Hawkins in this affair well deserves publicity and approval. When at Berbice, the cask in which the gymnoti lived was lifted to be conveyed ashore; so vigorous were its electrical occupants, that the shock given by them, being disturbed, knocked two men down. Many interesting results are expected to be derived, and data established, by the experiments to be conducted with Mr. Hawkins's valuable present. The natives and negroes of South America state that these animal wonders are excellent food. Mr. Samo expressed his intention of having one cooked, and tasting to the proof. — Read, also, 'An Account of some Experiments made with the view of repeating and extending those of the late Professor Nobili, on the Production, by Electro-Chemical Means, of coloured Films on the Surface of Metallic Plates,' by Mr. Gassiot. By the precipitation of the peroxide of lead on steel plates, placed in a solution of the acetate of that metal, and connected with the positive pole of a constant battery, the most beautiful effects were obtained. Every tint of Nobili's series of colours, or chromatic scale, was developed, comprising forty-four shades. It is scarcely necessary to remark that this great variety of colour depends upon the thickness of the film (metallic in this instance), which, in its gradation, transmits some, and reflects other rays of light. If it be supposed that the millionth of an inch is the unit, the first colour on the list, silver blond, will be four of these units, and the last, or thickest, but thirty of the same. Upon a similar course depends the diversity of colour in that philosophical plaything the soap-bubble, as also the phenomena known as Newton's rings. In the latter case the films are air, and the thinnest or central film which transmits all the rays of light is

black. The films of the peroxide were arranged by Mr. Gassiot in any form he pleased, exhibiting a variety of figures. The shape of the negative electrode altered the effect. When composed of a ring of platinum, or other metallic wire, the colours will radiate from the inner as well as the outer line. To obtain a clear and decided figure, it is advisable to use a thin piece of muslin to prevent actual contact; it may be placed on either electrode. The nearer the electrodes approximate, the more distinct will be the result and the lines more clearly defined. An almost instantaneous connexion with the battery is sufficient for the beautiful effect. It is impossible to describe the exceeding beauty of the appearance as the colours progressively start forth, the rapid succession of the most gorgeous tints. Whether the effects thus produced will be applied, as Mr. Gassiot observes, to ornamental cutlery, time will determine. Any patterns may be produced with ease by wire sewn with strong thread on a card, the whole forming the negative electrode of the battery. Those in which there is least interference in the lines will be the most clearly defined.

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

CAMBRIDGE, December 11th.—The Norrisian prize was adjudged to D. Moore, of Catherine Hall, for his essay on the following subject:—"The Divine Origin of the Holy Scriptures may be inferred from their perfect adaptation to the circumstances of Human Nature."

The following degrees were conferred:—
Doctor in Medicine.—R. W. Rothman, Fellow of Trinity College.

Masters of Arts.—H. H. Lewis, W. H. Rough, Trinity College; M. Hutton, G. S. Elwin, Catherine Hall; R. W. Beauchamp, R. M. Lingwood, Christ's College; W. S. Hore, J. Abbot, Queen's College.

Bachelor in the Civil Law.—J. H. Prowett, Trinity Hall.

ROYAL SOCIETY.*

The President's Address, continued from our last.

In drawing up the following notice of the losses which the Royal Society has sustained during the last year, in conformity with the practice of my predecessors, I have availed myself of the assistance of one of the fellows, whose acquaintance with the labours of men of science peculiarly qualified him for the execution of a task which I could not myself have ventured to undertake. I, therefore, will not longer occupy your time by any further remarks of my own, but will conclude by the expression of my present wishes for the prosperity of the Royal Society, and for its success in furthering the noble ends for which it was instituted.—The Rev. Martin Davy was originally a member of the medical profession, which he followed, during a great part of his life, with no inconsiderable reputation. He became a medical student of Caius College in 1787, and was elected to a fellowship in 1793, and to the mastership in 1803, the late illustrious Dr. Wollaston being one of his competitors. One of the first acts of his administration was to open his college to a more large and liberal competition, by the abolition of some mischievous and unstatutable restrictions, which had been sanctioned by long custom, and also by making academical merit and honours the sole avenue to college preferment: and he lived to witness the complete success of this wise and liberal measure, in the rapid increase of the number of high academical honours which were gained by members of his college, and by the subsequent advancement of many of them to the highest professional rank and eminence. Some years after his accession to the master-

ship he took holy orders, and commuted the degree of doctor in medicine for that of theology; and in later life he was collated to some considerable ecclesiastical preferments. Dr. Davy had no great acquaintance with the details of accurate science, but he was remarkable for the extent and variety of his attainments in classical and general literature. His conversation was eminently lively and original, and not less agreeable from its occasional tendency to somewhat paradoxical, though generally harmless, speculations. He died in May last, after a long illness, deeply lamented by a large circle of friends, to whom he was endeared by his many social and other virtues.

—Dr. Herbert Marsh, bishop of Peterborough, and one of the most acute and learned theologians of his age, became a member of St. John's College in the University of Cambridge in the year 1775, and took his B.A. degree in 1779, being second in the list of wranglers, which was headed by his friend and relation, Mr. Thomas Jones, a man whose intellectual powers were of the highest order, and who for many years filled the office of tutor of Trinity College with unequalled success and reputation. Soon after his election to a fellowship, he went to Germany, where he devoted himself during many years to theological and general studies, and first became known to the public as the translator and learned commentator of Michaelis's "Introduction to the New Testament." It was during his residence abroad that he published, in the German language, various tracts in defence of the policy of his own country in the continental wars, and more particularly a very elaborate "History of the Politics of Great Britain and France, from the time of the Conference at Pillnitz to the Declaration of War;" a work which produced a marked impression on the state of public opinion in Germany, and for which he received a very considerable pension on the recommendation of Mr. Pitt. In 1807, he was elected Lady Margaret's Professor of Divinity in the University of Cambridge; an appointment of great value and importance, which he retained for the remainder of his life. On the resumption of his residence in the university, he devoted himself with great diligence to the preparation of his lectures on various important branches of divinity, interposing a great number of occasional publications on the Catholic question, the Bible Society, and various other subjects of political and theological controversy. In 1816, he was appointed Bishop of Llandaff; and three years afterwards he was translated to the see of Peterborough. In the course of a few years from this time, his health, which had been already undermined by his sedentary habits and severe studies, began rapidly to decline, and he was compelled to abstain from the active duties of his professorship, and from the exciting labours of controversy; and though his infirmities continued to increase both in number and severity, yet his life was prolonged to a mature old age by the vigilant and anxious care and nursing of one of the most exemplary and affectionate of wives. Dr. Marsh was a man of great learning and very uncommon vigour of mind; and, as a writer, remarkable for the great precision of his language, and his singular clearness in the statement of his argument. His lectures on divinity are a most valuable contribution to the theological student, and his "Comparative View of the Churches of England and Rome," presents one of the most masterly views of the great principles which distinguish those

churches, which has ever appeared from the pen of a Protestant writer. His controversial writings, though generally full of acuteness and ability, must be expected to share the fate of all productions which are not kept from perishing by the permanent existence of the interests, of whatever nature, which gave rise to them: and we may justly lament that learning and powers of reasoning of so extraordinary a character were not more exclusively and steadily devoted to the completion of more durable and systematic theological labours.—The father of the late Professor Rigaud had the care of the King's Observatory at Kew, an appointment which probably influenced the early tastes and predilections of his son. He was admitted a member of Exeter College, Oxford, in 1791, at the early age of sixteen; and continued to reside there as fellow and tutor until 1810, when he was appointed Savilian Professor of Geometry. He afterwards succeeded to the care of the Radcliffe Observatory; and the noble suite of instruments by Bird, with which it is furnished, was augmented, on his recommendation, by a new transit and circle, so as to fit it for the most refined purposes of modern practical astronomy. And we venture to express a hope that it will shortly become equally efficient and useful with the similar establishment which exists in the sister university. Professor Rigaud published, in 1831, the miscellaneous works and correspondence of Bradley, to which he afterwards added a very interesting supplement on the astronomical papers of Harriott. In 1838, he published some curious notices of the first publication of the "Principia" of Newton; and he had also projected a life of Halley, with a view of rescuing the memory of that great man from much of the obloquy to which it has been exposed. He had made extensive collections for a new edition of the mathematical collections of Pappus; and he was the author of many valuable communications to the "Transactions of the Royal Astronomical Society," and to other scientific journals, on various subjects connected with physical and astronomical science. There was probably no other person of his age who was equally learned on all subjects connected with the history and literature of astronomy. Professor Rigaud was a man of most amiable character, and of singularly pleasing manners and person. The warmth of his affections, his modesty, gentleness, and love of truth, as well as the great variety of his acquirements and accomplishments, had secured him the love and the respect of a large circle of friends, not merely in his own university, but amongst men of science generally. He died in London in March last, after a short but painful illness, which he bore with a fortitude and resignation which might have been expected from his gentle, patient, and truly Christian character.—Mr. Wilkins, Professor of Architecture to the Royal Academy, became a member of Caius College, Cambridge, in 1796, and took the degree of B.A. in 1800, his name standing sixth on the mathematical tripos. He was soon afterwards nominated one of Wort's travelling bachelors, and also a fellow of his college, and passed four years in Greece and Italy, studying the architectural remains and monuments of those countries with great diligence, preparatory to the practice of his profession as an architect, which his father had followed with credit, and for which his great skill as a draughtsman particularly qualified him. The study of those matchless creations of ancient art would appear to have exercised a powerful

* There was a slight misprint in our report last week; Mr. Robertson, not Robertson, is the gentleman so justly lauded by the noble President.

influence on his taste, and to have led him to prefer the purer forms of Grecian architecture to the more varied imitations and adaptations of them which appeared in the works of the Romans or in those of the great masters of modern Italy and more particularly of Palladio; and the influence of these predilections was sufficiently visible in his designs for the East India College, at Haileybury, and for Downing College, Cambridge, and is more or less easily traceable in most of his subsequent works. In 1807, he published his "Antiquities of Magna Græcia," a magnificent work, containing descriptions, views, measurements, and restorations of the chief remains of Syracuse, Agrigento, Ægesta, and Paestum. At a subsequent period he published "Athenienasia; or, Remarks on the Buildings of Athens," in which he expressed opinions unfavourable to those commonly entertained respecting the rank which the Elgin marbles, which had been only recently purchased by the nation, should be considered to hold when viewed as works of art: he was likewise the author of a translation of the "Civil Architecture of Vitruvius," including those books which relate to the public and private edifices of the ancients, which was preceded by a learned introduction on the history of the rise and progress of Grecian Architecture,—a work which was chiefly designed to show that the precepts of Vitruvius referred to Grecian and not to Roman buildings. The publication of these works and of some essays in the "Archæologia," which shewed a profound knowledge of the principles both of Grecian and Gothic architecture, led to very extensive professional engagements, particularly in the University of Cambridge, where he rebuilt Corpus Christi and King's Colleges, and made extensive additions to Trinity College: he was likewise the author of the magnificent portico of London University College, the National Gallery, and of other important edifices in London. He was latterly compelled by the declining state of his health, and by repeated attacks of the gout, to retire from his professional engagements, though he did not abandon those studies which had formed his delight and occupation from his earliest years. In 1837, he published his "Prolusiones Architectonicæ; or, Essays on subjects connected with Grecian and Roman Architecture," which were designed, in some degree, as a substitute for those lectures, which, under other circumstances, he would have been called upon to deliver, as professor of architecture, to the students of the Royal Academy. During the last year of his life, though constantly confined to his bed, and extremely weakened and emaciated by disease, he still continued his favourite pursuits until within a few days of his death, which took place on the last day of August last.—The Rev. Archibald Alison, senior Minister of St. Paul's Chapel, Edinburgh, was born in 1757, became a member of the University of Glasgow in 1772, and of Balliol College, Oxford, in 1775, and took the degree of B.C.L. in 1784. He soon afterwards took holy orders in the English Church, and was presented to several ecclesiastical preferments by Sir William Pulteney, Lord Chancellor Loughborough, and Bishop Douglas of Salisbury. In 1784, he married the daughter of the celebrated Dr. John Gregory, of Edinburgh, with whom he lived in uninterrupted happiness for forty years of his life. His celebrated "Essay on the Nature and Principles of Taste" was first published in 1790, and speedily became incorporated into the standard literature of Great Britain. Towards the close of the last century, he became a permanent resident

in his native city as minister of the Episcopal Chapel, Cowgate, and afterwards of St. Paul's, where he was connected by congenial tastes and pursuits with Dugald Stewart, Playfair, Dr. Henry Mackenzie, Dr. Gregory, and the many other distinguished men who, during so many years, made that beautiful and picturesque city the metropolis of British literature. In 1814, he published two volumes of sermons; and at a later period, a very interesting memoir of his accomplished friend the Hon. Fraser Tytler, Lord Woodhouselee. Mr. Alison was a man of very pleasing and refined manners, of great cheerfulness and equanimity of temper, of a clear and temperate judgment, and possessing a very extensive knowledge of mankind. He was habitually pious and humble-minded, exhibiting, in the whole tenor of his life, the blessed influence of that Gospel of which he was the ordained minister. All his writings are characterised by that pure and correct taste, the principles of which he had illustrated with so much elegance and beauty.

(To be concluded next week.)

ROYAL ASIATIC SOCIETY.

DECEMBER 7th. Sir G. T. Staunton, in the chair.—Donations to the library and museum of the Society were presented, &c. The Honorary Secretary stated that he held in his hand the report of a meeting of the Bombay branch of the Royal Asiatic Society, which was attended by Sir James R. Carnac, Bart. the present patron of that branch. The Secretary then read the report, which comprised the address of Sir James in accepting the office of Patron; in the course of which he assured the Society of his conviction that the Bombay branch had essentially aided the Royal Asiatic Society in giving a stimulus to Asiatic literature in Europe, and in reviving a taste for investigations connected with the East. This was followed by an address from the President of the Institution, detailing its objects, the progress it had already made in carrying them into effect, and the full expectation it entertained, from the well-known character of the new patron, that those objects would now be more rapidly developed than at any past period of its existence.—Mr. E. Solly read a paper 'On East Indian Opium.' After adverting to the measures lately taken by the Chinese government to prevent the future importation of opium into that country, the author stated, that as the continuation of the prohibition would of necessity put an end to the opium trade in that quarter, endeavours would be made to find a market for it in other countries; and that, therefore, good East Indian opium would be probably brought to England. Not many years ago this opium was always considered, and described, as being the lowest and most inferior in quality of any in the market. Latterly, however, it had been increasing in reputation; and some sorts had been classed among the best kinds of opium. But the quality varied; and some sorts, from containing a very large proportion of impurities, were of comparatively little value. Great influence was also exerted on the quality of opium by the weather: the presence or absence of clouds, the quantity of dew, the time the juice is kept before being formed into cakes, and many other causes, greatly affected the goodness of the article. Mr. Solly observed, that the opium prepared for the Chinese market contained scarcely any earthy impurities or foreign matters, and suggested as one of the causes why the Chinese preferred Malwa to many other kinds of opium, was

that it contained less caoutchouc and gelatin; and therefore yielded a larger per-centage of the watery extract, which is used by the Chinese smokers, and called smokable extract. He then detailed a chemical examination he had recently made of some varieties of Indian opium, particularly that from Malwa, from which it appeared that it might enter into competition with some of the best varieties. Mr. Solly concluded with a sketch of the process adopted in Malwa for the cultivation of the poppy and the manufacture of opium.—A paper by Dr. Stevenson, of Bombay, 'On the Ante-Brahminical Worship of the Hindus,' was next read. This was the third paper of a series on the same subject, two of which have been already printed in the Society's "Journal." The author said, that in his former papers he had shewn his reasons for supposing that the worship of those objects, whom the Brahmins denominated demons, was anterior to Brahminism; and he now stated that he believed the festival of the Holi, and the worship of Mhasobâ, to belong to the same class. The festival of the Holi is celebrated about the opening of the year, and is attended with the most obscene orgies. Persons, who at other times are patters of propriety, now use the filthiest language, disgusting pictures and figures are paraded through the streets, dirt is thrown upon every body that passes; business is at a stand, and all is riot and confusion. For the worship of the goddess, a large hole is made in the ground, which is then filled with wood and covered with cow-dung. In this hole a tree is planted, generally a castor-oil tree, grass is heaped round it, offerings of cocoa-nut and other matters are made, prayers are recited, and the whole is then set fire to. An evident connexion existed between this and the May-pole of our ancestors, which was not quite discontinued in some remote parts of England. The mention of this suggested another coincidence between the religious customs of the Mahrattas and those of our ancestors. It was the practice of the former to bind up a quantity of new grain in harvest time, generally rice and bajry, to adorn it with leaves and flowers, and to put it up over the doors of their houses. The same was done by the English, with this only difference, that the grain was spread out on the lintels of the doors. The god Mhasobâ, who is much laughed at by the Brahmins, is a natural *linga*: it is any rounded stone of a large size, found in a field. This is painted over with red lead, and it then becomes a god, receiving offerings of cocoa-nuts, fowls, or goats, according to the ability of the worshipper. The writer strongly suspected the whole worship of the *linga* to be ante-Brahminical. The Lingayets hate, and are hated by, the Brahmins; they neglect their rules of purification, have priests of their own, and are called by the Brahmins "adherents of a false religion." In the worship of the five principal divinities, the person who dressed the image in the form of the *linga* is a Sudra, and not a Brahmin. These and several other circumstances, lead him to suppose this worship ante-Brahminical; although until the Linga-Purana has been fully investigated, he would not be positive on the point. The paper concluded with the names of several other gods worshipped in the Dekkan, not found in the Brahminical theology.—Two extracts from a journal by Capt. G. L. Jacob, of the Bombay army, were then read: the first, 'On the Process of Iron Smelting in the Mahabaleshwar Hills;' and the other, 'On the alleged Rise of a Sacred River in the same quarter.' The iron

smelting is conducted in the most primitive way imaginable. The ore is dug from pits twenty or thirty feet deep, and is in appearance like a rough gravel. The furnace is a hole in the earth lined with charcoal, and fitted with a clay oven: the bellows are two goatskins worked alternately by the hand, and terminating in a clay pipe which forms the nozzle. About three hours are required to smelt twelve seers of ore, producing about five seers and a half of a rough, drossy, impure iron, which loses about two seers more in being worked up to its destined form. This iron sells in the bazars for a quarter of a rupee (less than a penny) per pound; and better English iron finds its way to these hills at the same price, or even cheaper. The sacred river is the Bhagtri, which once in twelve years adds its waters to those of the Kristna, Yona, Koyna, Sawitri, and Gawitri—"for the edification of the multitude, and benefit of the Brahmans." Captain Jacob describes this as a clumsy trick: no one but the priest is admitted into the holy place whence the river is said to issue; but all are allowed to purify themselves with the united waters proceeding from the mouth of Mahadeva's Sacred Bull. The Captain, so far from testifying to the increase of the stream, avers that he has never seen it in former years so small as at this time (February 1839); "so easily," he says, "is this simple people led by priestcraft."—The last paper read was the translation of a Sanscrit inscription found near Palitana in Kattywar; and which had been deciphered and read by James Prinsep, Esq. It was a grant of land to a Brahmin, but bore no other date than that of the year of the grantor's reign.

SOCIETY OF ANTIQUARIES.

DECEMBER 19. Mr. Hudson Gurney, V.P. in the chair.—Mr. J. Gage Rokewood exhibited an exceedingly beautiful Psalter, now the property of Mr. Weld, of Luttworth, which was evidently formed for that eminent patron of the arts, John, duke of Bedford, regent of France. It is a rival in splendour to the celebrated Bedford Missal: the larger illuminations represent the principal events in the life of the Psalmist; and there is a great profusion of medallion heads occurring in almost every page, among which several portraits have been recognised.—Mr. Herbert Smith produced a series of drawings, most accurately finished, of ancient paintings lately discovered on the walls of the church of Barfreston, in Kent, and supposed to be coeval with the Norman architecture of that remarkable fabric, and of the age of Henry II.—The reading of Mr. Birch's 'Explanation of the Hieroglyphics on an Egyptian Tomb' was partially pursued, and the meetings of the Society were then adjourned to January.

LITERARY AND SCIENTIFIC MEETINGS
FOR THE ENSUING WEEK.

Tuesday.—Zoological, 8½ p.m.
Thursday.—Numismatic, 7 p.m.
Saturday.—Westminster Medical, 8 p.m.; Mathematical, 8 p.m.; Physical, 8 p.m.

FINE ARTS.

Curious Discovery.—A strange lesson has just been read to antiquaries and virtuosi, by a remarkable discovery in the British Museum. The famous Portland Vase, the pride of ancient, and wonder of modern art,—the theme of many an essay, and many a panegyric, has let in a new light upon the fictile representations of antiquity. A few weeks ago it was deemed necessary to wash this noble relic, in order to remove the accumulated dust of ages; when, lo! almost every figure was found to

be designated by an inscription, and the purport and procession of the whole vase (we believe) to be thereby explained! We have not yet had an opportunity of examining this memorable revelation, but can state that the theories of the late Mr. Payne Knight and Mr. Christie are utterly overturned by the facts now ascertained. When we consider how admirably these theories were made out, and how satisfactory they appeared to be, need we repeat that this is a strange lesson to antiquaries and virtuosi?

NEW PUBLICATIONS.

Findens' Female Aristocracy of Great Britain.
Nos. IX. and X.

Or the six beautiful, elegant, and dignified subjects which are the embellishments of these two numbers, our favourites are "Lady Ingeltrie," painted by H. Bostock, engraved by W. and T. Holl; "Lady Sarah Villiers" (very much resembling a well-known female head by Titian), engraved by W. H. Gliton, from a picture by Sir W. I. Newton; and the "Duchess of Beaufort," engraved by W. H. Mote, from a picture by A. E. Chalon, R.A.

Hound Hard Pressed. Painted by F. C. Turner; Engraved by E. and G. Trencher. Ackermann and Co.

A most spiritedly depicted animal, engraved in line, with a freedom, vigour, and taste, that do the artists the highest credit.

Elementary Drawing-Book of Landscapes and Buildings. By Samuel Prout, F.S.A. Tilt. A VOLUME full of excellent examples, well calculated to imbue a novice in the art with that firmness and precision of style for which Mr. Prout himself is so highly distinguished.

The Ornamental Designs of Watteau, Painter to Louis XIV. No. I. Collected from his Works, and Lithographed by W. Nichol. Edinburgh, Black; London, Ackermann and Co.

De gustibus non est disputandum. We confess that, notwithstanding the high name of Watteau, we see little beauty or elegance in these designs. They appear to us to be meagre, unmeaning, and in some instances absurd. Whoever visits "The National School of Design," will see that our young ornamental designers are imbibing the principles of a much richer, and, at the same time, purer taste.

SKETCHES.

*A Short account of the loss of His Majesty's ship the Royal George, by William Gill one of the Survivors at Spithead August 29th 1782 under the Command of Admiral Kempenfeldt and Capt Waghorne.**

SIR,—I can give you a short account how I came to be on Board the Royal George and the Occasion of her loss also the state in which I left her, — In the American war I was bound an apprentice to sea for five Years (in the coal and East country trade) before My time was near out they brok out from all Protections I was pressed and sent on board the Tender at the tower and next day sent down to Conquestadore at the Nore the reoving ship at that Time, In a few days I was drafted on board the Amazon Frigate of 32 guns the Hon-

* Of late we have seen several letters in the newspapers, inquiring about and specifying survivors from the wreck of the Royal George. As a literary and biographical curiosity, we have the pleasure to insert a letter (written at Haverham) from one of them, not previously heard of, a very worthy old man, whose account of the loss is of itself curious and interesting.—Ed. L. G.

orable William Clement Finch Captain laying a Sheariness We went first on a Cruise to the North sea, soon after on the West India Station when we met with Hurrican in Oct. 1780 we lost all our Masts and about 28 Men and 2 women being Obligated to heave all our lee guns overbord with a great deal of trouble we got into English Harbour Antigua where we Underwent Repairs, Captain Finch there changed Ships with Captain Bickerton late Admiral, who brought the Ship home when we Arrived at plymouth the Royal George was nearly ready to come out of dock I was then drafted on Board the R^d George and went on a Cruise of Brest & C^r — On board a Cestern Fixed under the Orlop deck for water to wash the two lower gun decks a hand pump was fixed In the Middle gun deck the pipe that let the water Through from the Ship side was stopped up for many weeks at the time we joined the Grand Fleet at Spithead of 36 sail of the line

— The Officers on board thought they could Careen her to Let the pipe come out of the water to clear it but having the Larboard lower deck guns run out and the ports being open the water came so fast that she Soon past her Bearings— My Humble opinion is that if the lower deck guns had run in and thrown Fore and aft and the ports barred in all would have been right,— I was on the Middle gun deck when she began to sink but was soon on the Main deck and went through a port hole under the Mainchains on the Starboard side I sat there untill she was almost full of water the people being so Crowded in that part it was impossible to make way, I being a good swimmer I and one of the Officers jumped of the Starbord quarter gallery and swam on Board the Victory Admiral Howe a few days afterwards I was drafted on board the Reuby 64 Sir John Collins Commander and sailed with the fleet To relive Gibraltar after that eight sail of Us was Drafted for the west Indies and Cruised untill the Packet of peace arrived, the later end of the Year 1783 from thence we came home and was Paid off at Portsmouth the day the ship was lost I was 19 years and three Months old—next Aug^r 76 and three &c. &c.

WILLIAM GILL.

THE DRAMA.

THE only dramatic novelty since our last has been the production of *Der Freischütz* at Drury Lane, with a well-judged adherence to the music of Weber. On Saturday, we found the theatre filled, and had but an indifferent position to judge critically of the opera: but we were consoled by the idea, that, though inconvenient for us, it was good for the management; and we were really pleased once more to see a bumper audience at Drury Lane. Taken altogether, the piece was more than respectably performed, and the general effect languished only in a few places. This arose partially from the *Caspar*, Mr. H. Phillips, appearing to be somewhat indisposed: and too much being thrown upon the shoulders of the young and yet unsustained powers of the heroine, Miss Delcy. Not that she did not exert herself, and acquit herself with great sweetness and talent; but such pieces as the long *scena* opening the second act, after her efforts in the first, were too much for her physical strength, and consequently weaker than could be desired in such a composition. This "long *scena*," by the by, was followed by another still longer, by *Anna*, Madame Pilati, which was most correctly given, and confirmed what we formerly noticed of the

perfect musical execution of this *petite* lady, whose voice, if not rich, is of extensive compass, and enabled her, not only to acquit herself well in this instance, but even more pleasingly in the duet of the first act, and the charming air "If a Youth should meet a Maiden." Perhaps we ought not to call any songstress a *petite* lady, but by the side of Mrs. Powell (we think) the contrast was amusing; and we thought of the wren, as well as the thrush, being a bird of song. *Marian* was very pretty, as Miss Pettifer always is; and Miss Delcy looked graceful and ladylike in the innocent *Agatha*. Mr. Frazer, as *Rudolf*, sang the part well throughout, and in several passages delighted us with the sweetness of his notes. *Kilian* was performed by Durusset, who, combining humour and musical talents together, was an excellent representative of the ranger's kinsman; and Mr. Howell put all the spirit requisite into the character of *Zamiel*. The stage appointments and supernatural phenomena (with the exception, perhaps, of a shower of red fire at the seventh bullet) were very indifferent; and we remark this the more pointedly because the bills assured the public they would be the reverse.

VARIETIES.

Progress of Science.—The Pasha of Egypt, at the request of the Royal Society, has ordered an Observatory to be erected on the Island of Boulac, under the superintendence of Mr. Lambert, the Director of the School of Engineers. This will co-operate with the meteorological and magnetical experiments recently undertaken on so extended a scale, and help to complete the series in so many quarters of the globe, for which our government has sent out the expedition under Capt. James Ross, as recommended by the British Association.

African Expedition to the Niger.—The details of this intended expedition not having been yet settled, we have abstained from any notice of it. We observe, however, that it is mentioned in the newspapers, and shall for the present merely state, that active preparations are in daily progress to provide for all that its scientific and commercial objects may render necessary; that the discoveries of the Brothers (we lament to add, the Martyrs) Richard and John Lander, are to be followed out; that Captain Allen, R.N., the friend and companion of Richard in his last voyage, and a gentleman of the highest attainments for such an enterprise, a beautiful draughtsman, with experience of the country, and well versed in the practical sciences, is appointed to the service; and that the vessels will proceed on their destination in the autumn of next year.

Scientific Honours.—Diplomas of corresponding members have been conferred on our countrymen, Faraday, R. Phillips (secretary to the British Association), and Dr. Golding Bird, by the celebrated Philosophical Institute of Basle.

Mr. Minasi's Pen and Ink Drawings.—We have frequently been called on to notice with much praise the copies of celebrated pictures by this most zealous votary of the fine arts, whose productions are unique, and as beautiful as they are curious. He has just finished a copy of Vandyke's admirable *Piper*, from the Cholsen collection, and in the possession of Miss Tate, of Grosvenor Place; and we were surprised to see a *chef-d'œuvre* of this great master transferred to a different substance, and represented through another medium, which so entirely preserved the character of the original. There is a breadth

in the portrait, and a keeping in all the parts, which it is difficult to believe could be effected by pen and ink, however artistically and skilfully employed. Mr. Minasi is, indeed, most deserving of the patronage of the friends of patient industry, combined with enthusiastic talent.

Antique Artillery.—Some curious relics of ancient English artillery and ammunition have recently been discovered upon the western shore of the Isle of Walney, Lancashire, buried in the sand and clay, at a place only accessible at low water. They consist of a gun, ten feet in length; the breech in the centre, so as to fire both ways; with two rings near the muzzles to sling it by. This piece is formed of thick plates of iron, hooped. Other guns, and stone balls of different sizes; a pair of bronze compasses of curious construction, some old swords, a buckle, and a number of other articles.

New Comet.—A new comet is announced to have been discovered in the constellation Virgo by M. Galle, assistant at the Berlin Observatory, on the morning of the 3d instant, on which day the observations were as follow:—

Sidereal Time, Berlin.	Right Ascension of Comet.	Declination of Comet.
h m s	h m s	
11 1 14	12 38 25.18	
11 9 42	12 38 23.86	-2° 16' 22"
11 21 45	12 38 38.38	-2 10 13.9
11 0 39	12 38 36.63	-3 9 57.3

Daily variation, + 12" 12"; declination, + 0° 19'.

In the year 1831 the King of Denmark had caused a gold medal to be cast, to be given to the first discoverer of a comet not visible to the naked eye; and it is somewhat singular that this discovery took place only three hours previously to the king's death.

Oxford Society for Promoting the Study of Gothic Architecture.—At a meeting of this Society, a paper 'On Stanton Harcourt Church, Oxfordshire,' was read by E. E. Estcourt, Esq. B.A. of Exeter College. This church is a very fine and interesting one, its plan cruciform, the nave in the Norman style of the twelfth century, the chancel and transepts in the early English style of the thirteenth century, and a good specimen of this style. Across the entrances to the chancel is a wooden screen, in the same style with this part of the building, of the thirteenth century, and believed to be almost unique. Unfortunately, it is painted sky-blue, which is probably the cause that it has not previously been noticed. On the north side of the chancel is a very curious structure, supposed to be a holy sepulchre, with a rich canopy of the fourteenth century. On it are the usual emblems, or representations, of the implements of the crucifixion; and at the four angles of the canopy, the four evangelists. The altar-screen is of Grecian woodwork, in detestably bad taste, which ought to be removed. It is hoped that the Archbishop of York, to whom the chancel belongs, will cause it to be restored to its original beauty. On the south side of the chancel is the Harcourt aisle or chapel, with several fine monuments of that family. The remains of the manor-house adjoining to the church are about the end of the fifteenth century. The kitchen, with its smoke-louvre, and without chimneys, is curious; somewhat resembling the celebrated abbot's kitchen at Glastonbury. These two are believed to be the only specimens of the kind now remaining. Several drawings, illustrative of this paper, were handed round. Books were presented, and new members elected. After the meeting, some very beautiful drawings of the rich Norman sculptures in Kilpeck church, Herefordshire, were shown by Mr.

Lewis, who gave some explanations of the symbolical language of these sculptures.—*Oxford Herald*.

LITERARY NOVELTIES.

Among interesting publications in progress, we observe one of a splendid class connected with the geology and natural products of a region yet little known to Europe, namely, — Twelve Views in the Interior of Guiana (and Woodcuts), with descriptive letterpress, by Robert H. Schomburgk, Esq., whose celebrity, extensive as it is, can hardly be said to be equal to his talents. The expedition which these views illustrate was carried on under the direction of the Royal Geographical Society, and partly at the expense of her majesty's government. It occupied the years 1835 to 1839; during which period, not only the colony of British Guiana, but also the adjacent territories of Venezuela, Brazil, and Surinam, were more or less explored. Towards its close, the author connected his researches with those of Von Humboldt, at Emeraude: Humboldt reached this point from the west, by ascending the river Orinoco, in the year 1800; Mr. Schomburgk from the east, by the Essequibo and the Sierra Pacaraima. The views were taken at the most picturesque spots, many of which were never before visited by any European; they have been drawn, from the original sketches, by Mr. Bentley, preparatory to being lithographed; and the specimens we have examined are not only beautiful, but give the best idea of tropical scenery, climate, and characteristics, we have ever seen. The work is announced in imperial folio, and by subscription, as it is rather too expensive for individual enterprise.

In the Press.

Manners and Customs of the New Zealanders, by J. S. Polack, Esq., with numerous woodcuts.—A new edition of the History of British India, by the late James Mill, Esq., with Notes and Illustrations, and a Continuation of the History, by H. H. Wilson, Esq. M.A. P.R.S. &c.—Major Sir William Lloyd's Narrative of a Journey from Caunpoor to the Booreend Pass, in the Himalaya Mountains, with Gwallor, Agra, Delhi, and Sirhind: with Captain Alexander Gerard's Account of an Attempt to penetrate by Bekhur to Garoo, and the Lake Manmora, &c. with large map. Edited by George Lloyd.—An Outline of a System of Natural History, by the Rev. George Crabbe, Vicar of Bredfield.

LIST OF NEW BOOKS.

The Works of the Rev. Sydney Smith, Vol. IV. 8vo. 12s.—First Lines of the Theory and Practice of Surgery, by S. Cooper, 7th edition, 8vo. 18s.—Baydon's Art of Valuing Rents and Tillages, 5th edition, rewritten and enlarged by J. Donaldson, 8vo. 10s. 6d.—Arago's Life of Watt, 3d edition, 12mo. 4s. 6d.—R. Middlemore's Introductory Lecture on the Eye, 8vo. 2s.—Introduction to a Course of Lectures on Colonisation and Colonies, by Herman Merivale, 8vo. 1s.—Considerations on the Law regarding Marriages with a Deceased Wife's Sister, 8vo. 1s.—The Missionary Repository for Youth, Vol. 1. 2s.—The Maiden Monarch; or, Island Queen, 2 vols. post 8vo. 14s.—The Hand-Book of Swindling, fcap. 2s. 6d.—The Protestant Exiles of Zillthal, from the German, translated by J. ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, Pall-Mall.—Notice to Exhibitors. All Pictures and other Works of Art, intended for Exhibition and Sale, must be sent to the Gallery on Monday, the 12th, and Tuesday, the 14th, of January next, between the hours of Ten in the Morning and Five in the Evening; after which no Picture or other Works of Art will be received. Portraits and Drawings in Water-colours are inadmissible. No picture will be received for sale that is not found the property of the artist. **WILLIAM BARNARD, Keeper.**

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY, founded A.D. 1815, on the Original Basis of the London Equitable.

Head Office, No. 5, St. Andrew Square, Edinburgh.
Present Accumulated Fund, upwards of £845,000. Annual Revenue, upwards of £150,000. Whole Profits belong to the Assured. Divisible every Seven Years.

The Right Honourable the Earl of Rosebery.
Vice-Presidents.
Sir Thomas Dick Lauder, Bart.
The Hon. Lord Moncreiff.
The Right Hon. the Lord Justice General.
The Right Hon. Lord Francis Egerton.
(All of whom, as well as the Directors, Ordinary and Extraordinary, are permanently connected with the Society by Assurance of more than three years standing.)
The Surplus Profits ascertained at 31st December last were sufficient to secure—

1. A Retrospective Bonus of Two per cent. per annum, or 14 per cent. for the Septennial Period, not only on the original sum assured, but likewise on the Bonus additions previously declared.
2. A Contingent Prospective Bonus of Two per cent. per annum, to be paid from and after 31st December last, on all Policies of five years' standing that may emerge before 31st December 1844, when the next investigation, and consequent Declaration of Bonus, takes place.

The Directors are authorized, by a by-law of the Society, passed in 1837, to grant Loans to Members on the security of their Policies (without any expense except the Stamp for a Premium Note), to the extent of nine-tenths of their calculated value at the time. They are likewise empowered to allow Members to commute their Bonus-Additions; i.e. to have their Bonus applied towards reduction of their future Annual Premiums.

Thus, for example,
A. in the year 1837, being then forty years of age, insured his life for £2000, paying an annual premium of £10 5 0
He is now fifty-nine years of age, and has an actually vested Bonus or Addition, declared and attached to his Policy, of 1035s. 12s., which, with the £2000, the original sum assured, shows the full amount of the sum presently contained in the Policy to be £4035 12 0
Were A. to die in 1845, after payment of his premium for that year, the sum payable under the Policy would be £4000 11 9
Or, if it were from any object to him to reduce his present Annual Contributions, he might, by giving up his Bonus, reduce his future premium from 5s. 6d. to £30 1 1
Or, if he preferred receiving immediately the present value of his Bonus, he would, by surrendering it, be entitled to a sum of £2653 10 8
If he were desirous at present of having a loan on his policy, he might borrow to the extent of £1480 0 0
The above example will probably be admitted to be perfectly sufficient to show, in a practical point of view, the great benefits to be derived by parties insuring with this office.

The Directors are at all times ready to entertain Proposals for Loans, either on Redemptible Annuities, or on heritable Security. Every information on this or any other subject connected with the Society may be obtained on application (if by letter, post paid) to the Head Office in Edinburgh, or to any of the Society's Agencies.

JOHN MACKENZIE, Manager.
Edinburgh, 5, St. Andrew Square.
N.B.—Tables of Rates and Forms of Proposals to meet any particular contingency, or effect any specific object, will be transmitted to parties desirous of obtaining them; and all official communications of this nature are considered as strictly confidential.

Agencies in England:—
London.—Hugh McKean, 7 Pall Mall West.
Bradford.—Geo. Rogers, Horton Road.
Huddersfield.—Hugh Watt, banker.
Leeds.—William W. Watkinson.
Liverpool.—Arthur Oughterson and Co. Exchange Street East.
Manchester.—The Bootman, Jun. Cross Street, King Street.
Newcastle.—Charles Bertram, 19 Sandhill.

MANUALS OF NATURAL HISTORY.
On the 1st of January will be published, in fcap 8vo. cleanly printed, illustrated with numerous Woodcuts, and a coloured Map, price 4s. 6d.

A MANUAL OF GEOLOGY.
By **WILLIAM MACGILLIVRAY, A.M. F.R.S.E. &c.**
The above is the first of a series of Manuals of Natural History, adapted for elementary instruction, which it is intended to publish at intervals of about three months. They will be written in easily intelligible language, and by a careful condensation of materials, the author trusts that each Manual will be found to convey as much knowledge of the several subjects as will suffice for general education.

The Manual of Physiological and Systematic Botany will be published on the 1st of April, and that of British Plants on the 15th of May.
London: Scott, Webster, and Geary; and Oliver and Boyd, Edinburgh.

Henry Colburn, Publisher, 15 Great Marlborough Street.
Orders received by all Booksellers.

THE SCHOOL-BOY. A Poem.

By **THOMAS MAUDE, M.A.**
"It is replete with the best feelings, expressed in very harmonious metre. It is divided into two parts, the country and the school, both of which are treated with that mild enthusiasm that is so pleasing. The frequent allusion of the author to the members of his family, and to his personal friends, is very graceful, and gives a stamp and a locality to his poem which we greatly admire."—*Metropolitan Magazine*.

"We have read this poem with unalloyed pleasure. It reflects the feelings natural to the subject, and carries on the interest of the season it describes with truth and pathos. The verse is very unaffected, and often recalls the melodious flow of Cowper and Thomson."—*Atlas*.

"This is a poem indeed full of the fresh breathings of tenderness, fondest, purest recollections, from a mind of high culture, an imagination of fine compass, and one whose taste for the nobler beauties of the muse cannot be shaken."—*Northampton Review*.

"These sketches of school-day scenes are given with much of the natural ardour and joyousness so characteristic of the morning of life, and which fling such a charm over its sunny landscapes in the imagination of the boy and the memory of the man."—*Northampton Review*.

"We are much pleased with the amiable feeling and pure and beautiful (one of this composition)."—*Tull's Edinburgh Magazine*.

"It is written in a style familiar, yet by no means vulgar; the sentiments are natural, and flow from the subject; the description is as true as the united dwellings upon with satisfaction and delight; it is, in fact, fresh with the morning dew of life."—*Gentleman's Magazine*.

"In a poem abounding with so many rich passages as this work contains, we are almost at a loss to transfer portions of it to our pages; for, when we have gathered a few flowers, so many are left behind, that they even appear lovelier, though remaining unplucked, than those which we have culled. We cannot do better than recommend our readers to take a survey of this delightful garden, and all gather to please their fancies." * * *

"The 'School-boy' contains some of the graphic touches of a Crabbe, the green stillness of a Clare, the religion of a Thomson, the perfect picturing of a Goldsmith, and the minute grouping of a Bloomfield."—*Lit. Gazette*.

London: Longman, Orme, Brown, Green, and Longmans; and to be had, by order, of every Bookseller in Town or Country.

HORNE TOOKE'S DIVERSIONS OF FURLEY. In 1 vol. 8vo. price 14s. cloth, boards.

SPLENDID ANNUALS FOR 1840.

Now ready, elegantly bound in morocco, 2s. 2s.

FINDENS' TABLEUX; PROSE, POETRY, AND ART, FOR 1840.

Embellished in a new and unique style.

Edited by MISS MITFORD.

Imperial 4to. India Proofs, 3s. 3s. A few Copies, coloured after the original Drawings, 3s. 3s.

"We know not in what terms to commend this magnificent work. It is the most splendid of all the Annuals. There is a novelty in the designs, the framework on which they are set being composed of smaller sketches from the story, prettily helping out the main idea."—*Athenaeum*.

"We have not seen more appropriate and characteristic accompaniments. The tableaux are worthy of the high names of the Findens."—*Literary Gazette*.

"The most attractive Annual of the season."—*United Service Gazette*.

II.

Price One Guinea, in morocco,

THE ORIENTAL ANNUAL; TALES, LEGENDS, AND ROMANCES.

By THOMAS BACON, Esq.

With Engravings by W. and E. Finden. A few India Proofs, royal 8vo. 2s. 12s. 6d.

"In addition to the usual sprinkling of Tales and Romances, glowing all over with Eastern images, enchantments, and picturesque costumes, there are several very close and accurate descriptions of scenery, little towns, mountains, and valleys, and as much topographical and roadside information as any one can reasonably demand."—*Athenaeum*.

"The engravings are greatly superior to any thing we have met with in this work."—*U. S. Gazette*.

"The embellishments are of the most exquisite kind."—*Herold*.

"Mr. Bacon has introduced more of life and interest into the literature, and the illustrations are more varied than usual."—*Athenaeum*.

**CYCLOPEDIA of PRACTICAL SUR-
GERY;** embracing a complete View of all the De-
partments in Operative Medicine.

Edited by W. H. COSTELLO, M.D.
Member of the several Learned Societies, English and Foreign.
The "Cyclopædia of Practical Surgery" has been undertaken
for the purpose of collecting into one copious and comprehensive
digest the Doctrines of Surgery, and the valuable stores of Expe-
rience, which either rest on individual experience, or are imbedded
in too isolated a manner for the general benefit. In our
studies upon this important undertaking, it became a duty to
in Medical Literature—that character of authority in which
aspires, care has been taken in the distribution of the sub-
jects to confide the execution of them to persons of acknow-
ledged ability and experience in the several departments, in
thus the most distinguished writers in Great Britain and in
Continent of Europe have been associated for the production of
work which, when complete, may fairly claim to be entitled
the most valuable publication of its kind extant in any language.
The Cyclopædia of Surgery will be issued in Parts, at a
very alternate month. The work is printed in double column
with a new type cast expressly for the purpose, on super-
fine paper, of the largest royal 8vo. size. The edition will be
issued in 12 Parts, with Woodcuts and other Engravings, a handsome set
required. The Fourth Part will appear on the 1st January.
*As Circumstances having for a time interrupted the regular
publication of this work, the Publishers are happy to now be
able to assure the Subscribers that, in future, the Parts will
be issued punctually at the periods above stated.
*Parts I. to III. are now on sale, 4s. each. Part IV. will come
on the 1st of January, 1840.
London: Sherwood, Gilbert, and Paget, 25 Paternoster Row.

**SPLENDIDLY ILLUSTRATED WORKS,
UNDER THE SUPERINTENDENCE OF MR. CHARLES HEATH.**

HEATH'S PICTURESQUE ANNUAL: A HISTORY AND DESCRIPTION OF WINDSOR CASTLE AND ITS ENVIRONS.

By LEITCH RITCHIE, Esq.

With Fifteen highly finished Illustrations, after Drawings by HARDING, MACKENZIE, and ALLOM, consisting of

THE QUEEN ON HORSEBACK.

A Series of VIEWS of the CASTLE, viz. from the Road between Datchett and Eton—from the Home Park—from the Clewer Meadow—from the Eton Playing Fields—from the Long Walk—from the Great Park;—INTERIORS of St. George's Hall, St. George's Chapel, and Waterloo Gallery;—the Eagle Tower—Views of ETON from Windsor Castle Terrace and from the Playing Fields—of the Virginia Water RUINS and FISHING TEMPLE.

Elegantly bound in green silk and gold, super-royal 8vo. 1l. 1s.; India Proofs, 2l. 2s.

"Precisely what such a book ought to be—a pleasant combination of history, chivalry, romance, legend, anecdote, description, &c. Take it altogether, this volume conveys more practical information relating to Windsor Castle than any other single work extant. Of the highly finished and beautiful style in which the engravings are executed, it can hardly be necessary to speak except in terms of warm and general praise."—*Court Journal*.

BOOK OF BEAUTY.

Edited by the COUNTESS of BLESSINGTON.

WITH TWELVE SPLENDID PORTRAITS OF THE FOLLOWING DISTINGUISHED LADIES:—

Painters.	Engravers.	Painters.	Engravers.
Countess Zavadousky	A. E. Chalon, R.A.	Marchioness of Aylesbury	A. E. Chalon, R.A.
Lady Bulkeley Phillips	Ditto.	Lady Williams Bulkeley	J. Bostock.
Lady Hume Campbell	Ditto.	Miss Rose Paynter	Fisher.
Lady Worsley	Mrs. J. Robertson.	Marchioness of Clanricarde	J. Lucas.
Lady Gardner	J. Bostock.	Hon. Mrs. George Anson	Holmes.
Hon. Mrs. William Ashley	Ditto.	Madame Van de Weyer	A. E. Chalon, R.A.
			Ditto.

Vignette Title.....D. Cox. Engraved by E. Radclyffe.

This splendid volume boasts of a long List of Contributors from eminent Literary and Fashionable Characters.

Elegantly bound, super-royal, 1l. 1s.; India Proofs, 2l. 12s. 6d.

"A few only of the engravings in this splendid volume are of themselves worth its entire cost."—*United Service Gazette*.

"For intellectual, artistic, and mechanical beauty, it surpasses, perhaps, all its contemporaries."—*Conservative Journal*.

THE KEEPSAKE.

Edited by the LADY EMMELINE STUART WORTLEY.

WITH BEAUTIFUL EMBELLISHMENTS

By CHALON, LESLIE, CATTERMOLLE, F. P. STEPHANOFF, EDW. CORBOULD, HARDING, CRESWICK, HERBERT, MISS SHARPE, and H. MONTAGUE.

LIST OF CONTRIBUTORS:—

Mrs. Abby	Miss A. Farrer	The Lady Charlotte St. Maur	His Grace the Duke of Rutland
The Countess of Blessington	Lord Gardner	Lord Viscount Maldstone	Miss Louisa Sheridan
The Hon. Granville Berkeley	Prince Rodolph Leichtenstein	R. M. Milnes, Esq. M.P.	Miss Lydia B. Smith

Baroness de Despensers.	Miss B. Egerton.

Royal 4to. each Series, 31s. 6d. silk; Proofs on India paper, in morocco, 3l. 3s.

LONDON: LONGMAN, ORME, BROWN, GREEN, AND LONGMANS.

ADDRESS.

Our last Number for another year, and opening upon another decade, calls for a very few words from us, as we must, probably, be nearing the close of these literary labours. We have to express our sense of the public favour we have received; our gratification that the influence of our writings continues unimpaired, if not increased, amid all the stir of the times; and our self-satisfaction in feeling that we have held steadfast by every pledge and promise we ever offered to the world, as our claim upon its confidence and support.

Economic as the age is, there are still large classes and numerous individuals, who should not deny themselves the benefit of our weekly sheet. All artists, and all lovers of art, ought to read it; all booksellers, and lovers of books, ought to read it; all authors, and lovers of literature, ought to read it; all scientific men, and lovers of science, ought to read it; in short, all people of intelligence, or possessed of a desire to be intelligent, ought to read it; and to these parties, and their friends, we recommend it, quite regardless of any wider list of Subscribers! Seriously, we only ask the public to glance over our index for the year; and if that does not speak for us, we will not say a syllable for ourselves.

REVIEW OF NEW BOOKS.

Visits to Remarkable Places: Old Halls, Battle-Fields, and Scenes illustrative of Striking Passages in English History and Poetry. By William Howitt, author of "The Rural Life of England," &c. 8vo. pp. 626. London, 1840. Longman and Co.

THERE is generally a healthful tone of feeling about this work which will render it acceptable to all whose minds are susceptible of kindly and refining influences. It is only when the author comes across aught aristocratic that his spleen gets the better of his moderation, and his dislike masters his judgment. He sets out with an advertisement, quoted from De Lamartine's "Pilgrimage," which he says represents exactly his feelings and ideas long before the French writer had thus penned them down, and whence this publication has sprung; but in so stating he seems to us to have done himself injustice, for his design is far superior to the description, which is either very badly translated or very little removed from nonsense. De Lamartine is made to say, in the verbiage of our days' authorship, that he always "loved to wander over the physical scenes inhabited by great men," &c. Now, what other kind of scenes are there but physical? And again, with absurd antithesis, he assures us that such scenes are "the surest and most speaking" relics; and "mute revelation" of portions of the souls inspired by them. Even with regard to the latter point, it is exaggerated. It is true that the aspects of the country in which genius dwells may associate with and aid its inspirations; but it is the genius which exalts the inanimate objects to this distinction, and not the objects which form or inspire the poetic or lofty mind. Your very fine writing will seldom bear the test of the Ithuriel spear of reason and truth. But come we to our own countryman, who, at Penshurst, the ancient residence of the great and memorable; at Culloden, where the fatal romance of the royal race of Stuart was finished; at Stratford-upon-Avon, where lived and died the most immortal of mankind; at Combe Abbey, of historical

interest; at Lindisfarne and Flodden, the tragic scenes of religious cruelty and national defeat; at Bolton Priory, dear to ancient recollections and the living muse; at Hampton Court, replete with memories of courts and the fine arts; at Compton-Winnyates, with its Tudor architecture and traces of the civil wars; at Tintagel, famous in Round-table legend; at Staffa and Iona, the wonders of nature, and the earliest of British Christian antiquities; at Edgely, with its anecdotes of conflict; at Stonyhurst, the most distinguished seminary of the Roman Catholic faith in England; at Winchester, with its church records; at Wotton, with its traditions of Rousseau; and, at Kilmorac, with its Highland sacrament, has evolved a train of reflections which do much credit to his taste and talents. A number of sweet and appropriate illustrations by Mr. Williams (and one excellent one, the title-page vignette, designed by the writer's daughter) embellish the volume; of which we may truly say that it has pleased us as much as any former production from the same quarter. Of the sources of this pleasure we must offer a few examples. At Stratford, Mr. Howitt was led to visit Shottry, the birth-place and abode of Ann Hathaway; and the following is with us a favourite passage relating thereto:—

"I hastened (he says) away to Shottry the very first moment that I could get out of the inn. It is but a short walk to it across some pleasant meadows, and I pleased myself with thinking, as I strode along, with what delight Shakspeare in his youth trod the same path, on his way to see his fair Ann Hathaway; and how often, in his latter years, when he had renounced public life, and she was his 'all-the-world,' they might, led by the sweet recollections of the past, often stroll that way together, and perhaps visit some of their kindred under the same rustic roof. The village is a real rustic village indeed, consisting of a few farm-houses, and of half-timbered cottages of the most primitive construction, standing apart, one from the other, in their old gardens and orchards. Nothing can exceed the simplicity and quiet of this rustic hamlet. It is the *beau idéal* of Goldsmith's Auburn. The village public-house is the 'Shakspeare Tavern,' a mere cottage, like the rest. No modern innovations, no improvements, seem to have come hither to disturb the image of the past times. The cottages stand apart from each other, in their gardens and orchard-crofts, and are just what the poets delight to describe. The country around is pleasant, though not very striking. Its great charm is its perfect rurality. Ann Hathaway's cottage stands at the further end of this scattered and secluded hamlet, at the feet of pleasant uplands, and from its rustic casements you catch glimpses of the fine breezy ranges of the Ilmington and Meon Hills, some miles southward; and of Stratford church spire eastward peeping over its trees. The cottage is a long tenement of the most primitive character; of timber framing, filled up with brick and plaster-work. Its doors are gray with age, and have the old-fashioned wooden latches, with a bit of wood nailed on the outside of the door to take hold of while you pull the string;

just such a latch as, no doubt, was on the door of Little Red Riding-Hood's grandmother, when the wolf said to the little girl, 'Pull the string, and you'll get in.' The antiquity of the house is testified by the heads of the wooden pins which fasten the framing, standing up some inches from the walls, according to the rude fashion of the age, never having been cut off. The end of the cottage comes to the village road; and the side which looks into the orchard is covered with vines, and roses, and rosemary. The orchard is a spot all knolls and hollows, where you might imagine the poet, when he came here a-wooing, or in the after-days of his renown, when he came hither to see his wife's friends, and to indulge in day-dreams of the past, as he represents the king of Denmark

—Sleeping within mine orchard,

My custom always of the afternoon—

lying on the mossy turf, and enjoying the pleasant sunshine, and the flickering shadows of the old apple-trees. The orchard extends up the slope a good way; then you come to the cottage garden, and then to another orchard. You walk up a little narrow path between hedges of box, and amongst long grass. All the homely herbs and flowers which grow about the real old English cottage, and which Shakspeare delighted to introduce into his poetry,—the rosemary, celandine, honeysuckle, marigold, mint, thyme, rue, sage, &c.—meeting your eye as you proceed."

He goes on to tell us that "dewberries" are plentiful here, which the commentators on "Midsummer Night's Dream" never discovered, and then speaks of other matters in a style which we cordially approve. *Ex. gr.* of the Jubilee:—

"It does not appear that Garrick and his fellow-worshippers troubled themselves at all about the descendants of the poet's sister. The object, in fact, seemed, at the moment, rather to worship Garrick even than Shakspeare. How, then, could any ray of sympathy diverge from two 'demi-gods' to the humble relatives of one of them? And why should it? I hear learned utilitarians asking—why? What should lead the ragged descendants of poets and philosophers to forsake self-dependence, and look to the admirers of their ancestors for benefit? What a shocking thing if they should, especially in a nation which ennobles whole lines for ever, and grants immense estates in perpetuity for the exploit of some man who has won a battle, which better never had been fought! What! shall such men, and shall whole troops of lawyers, who have truckled to the government of the day, and become the tools of despotism in a country dreaming that it is free—shall men who have merely piled up heaps of coin, and purchased large tracts of earth, by plodding in the city dens of gain, or dodging on the Stock Exchange,—shall such men be ennobled, and their line for ever, and shall the men who have left a legacy of immortal mind to their country, leave also to their families an exclusive poverty and neglect? Will our very philosophic utilitarians tell us why this should be? It might also be whispered that it would not be much more irrational to extend some of

that enthusiasm and money which is now wasted on empty rooms and spurious musty relics, on at least trying to benefit and raise in the scale of society beings who have the national honour to be relics and mementoes of the person worshipped, as well as old chairs, and whitewashed butchers' shops. Does it never occur to the votaries of Shakspeare, that these are the only sentient, conscious, and rational things connected with his memory, which can feel a living sense of the honour conferred on him, and possess a grateful knowledge that the mighty poet of their house has not sung for them in vain; and that they only, in a world overshadowed with his glory, are not unsoothed by its visitings? But the poetic veneration of the public need not yet be reduced to this severe trial—there are plenty of relics of Shakspeare (so called) for them to wonder and exclaim over."

The account of the Rival Houses for Shakspeare remains, &c., is both amusing and interesting; but the annexed touches still more nearly:—

"As I went to Shotton, I met with a little incident which interested me greatly by its unexpectedness. As I was about to pass over a stile at the end of Stratford into the fields leading to that village, I saw the master of the national school mustering his scholars to their tasks. I stopped, being pleased with the look of the old man, and said, 'You seem to have a considerable number of lads here; shall you raise another Shakspeare from amongst them, think you?' 'Why,' replied the master, 'I have a Shakspeare now in the school.' I knew that Shakspeare had no descendants beyond the second generation, and I was not aware that there was any of his family remaining. But it seems that the posterity of his sister Joan Hart, who is mentioned in his will, yet exist, part under her marriage name of Hart, at Tewkesbury, and a family in Stratford, of the name of Smith. 'I have a Shakspeare here,' said the master with evident pride and pleasure. 'Here, boys, here!' He quickly marshalled his laddish troop in a row, and said to me, 'There now, sir, can you tell which is a Shakspeare?' I glanced my eye along the line, and instantly fixing it on one boy, said, 'That is the Shakspeare.' 'You are right,' said the master; 'that is the Shakspeare: the Shakspeare cast of countenance is there. That is William Shakspeare Smith, a lineal descendant of the poet's sister.' The lad was a fine lad of, perhaps, ten years of age; and certainly the resemblance to the bust of Shakspeare, in the church at Stratford, is wonderful, considering he is not descended from Shakspeare himself, but from his sister, and that the seventh in descent. What is odd enough is, whether it be mere accident or not, that the colour of the lad's eyes, a light hazel, is the very same as that given to those of the Shakspeare bust, which it is well known was originally coloured, and of which exact copies remain. I gave the boy sixpence, telling him I hoped he would make as great a man as his ancestor (the best term I could lay hold of for the relationship, though not the true one), or at all events, a good man. The boy's eyes sparkled at the sight of the money, and the healthful joyous colour rushed into his cheeks; his fingers continued making acquaintance with so large a piece of money in his pocket, and the sensation created by so great an event in the school was evident. It sounded oddly enough, as I was passing along the street in the evening, to hear some of these same schoolboys say to one another, 'That is the gentleman who gave Bill Shakspeare sixpence.'

Which of all the host of admirers of Shakspeare, who has plenty of money, and does not know what to do with it, will think of giving that lad, one of the nearest living representatives of the great poet, a good education and a fair chance to raise himself in the world? The boy's father is a poor man,—if I be not fanciful, partaking somewhat of the Shakspeare physiognomy, but who keeps a small shop, and ekes out his profits by making his house a 'Tom-and-Jerry.' He has other children, and complained of misfortune. He said that some years ago Sir Richard Phillips had been there, and promised to interest the public about him, but that he never heard any more of it. Of the man's merits, or demerits, I know nothing; I only know that in the place of Shakspeare's birth, and where the town is full of 'signs' of his glory, and where Garrick made that pompous jubilee, hailing Shakspeare as a 'demi-god,' and calling him 'the god of our idolatry,' and where thousands and even millions flock to do homage to the shrine of this 'demi-god,' and pour out deluges of verse of the most extravagant and sentimental nature in the public albums; there, as is usual in such cases, the nearest of blood to the object of such vast enthusiasm are poor and despised: the flood of public admiration at its most towering height, in its most vehement current, never for a moment winds its course in the slightest degree to visit them with its refreshment; nor, of the thousands of pounds spent in the practice of this poetic devotion, does one bodle drop into their pockets."

We will only add the recollections of Rousseau at Wotton Hall, and leave this very agreeable miscellany to the popularity it so richly merits:—

"On inquiry after the remembrance of him in the village, I was more successful. I asked the first man I encountered whether he had heard of a Frenchman ever having lived at the Hall? 'A Frenchman? Ay, to be sure? yo meanen owd Ross Hall.' 'That is the man,' I replied; seeing how the simple people had converted his name into so odd a one. In their dialect, as in the Scotch, hall is pronounced ha'; Rousseau, would thus be, in their fathers' mouths, Ross Ha': but the present generation, something educated, would endeavour to give ha' the full sound to a stranger, which in their dialect it represents, and ha' would become hall. However, I found Rousseau here known to all the villagers as Ross Hall, except to one or two, who called him Dross Hall; having corrupted the name into this by the prefix of old, or owd, which they apply to almost every body and every thing. Owd Ross Hall thus became owd Dross Hall; the sound of the d in owd being carried on to Ross. 'And when,' I asked, 'did this gentleman live here?' 'O,' said the man, 'before my time; but there are owd people in the village who were children then, and they remeinbern him. He war mighty curious in yarba,* and ah've heered see, war skilled to cure welly any disease wi' em. Owd James Robinson a'th top o'th town, and Farmer Burton here, and owd Missis Saut,† of Ellaston, they know'd him, an' can tell ya au about him.' I walked up and found this James Robinson, a blithe old fellow of about ninety. When I asked if he knew the Frenchman who once lived at the Hall, he replied, 'What, owd Ross Hall? Ay, know him did I, well enough. Ah've seen him monny an' monny a time, every dee welly, coming and going in's comical cap an' ploddy; gown, a'gethering his yarba.'"

* "Herba."

† "Salt."

I asked him if he ever had any talk with him. 'No, he could na speak no English, nubbut a wod or two.' 'And was there any body here with him?' 'Yes, there war a lady; they cawd her Madam Zell, but whether how war his wife or not ah dunna know. Folks said how warra.' But this old man, as well as Farmer Burton and Mrs. Salt, described him as walking out almost every day, and coming back with great handfuls of plants. They described him, exactly as he describes himself, in his Armenian dress, only they called his striped caftan a plaid. Mademoiselle le Vasseur, they all called Madam Zell; and Mrs. Salt said how much afraid she and her brother, children of about ten years old, used to be when they met him in the lanes on their way to school. His long gown and belt, and his black velvet cap with its gold tassels and pendant top, made him a most awful figure to them, especially as they used to see him poring on the park wall for moss, or groping in some lonely nook after plants. As he could not address them in English to dissipate their fears, they used to run off, if possible, at the very first glimpse of the terrible outlandish man. They all agreed in saying that both Ross Hall and Madam Zell were very good folks—very kind to the poor; and one of them mentioned a fact which, as the villagers actually knew nothing of Rousseau's history, is very characteristic. 'The old man, who used to remain at the house during the absence of the family in town, one day beat his wife, the housekeeper; and Madam Zell, on some of the villagers flocking in at the outery, in a state of great excitement said, in her few words of English to some young women, 'Never marry! never marry! You see! you see!' Old Farmer Burton said, 'It was thought he was some king who had been driven from his dominions.' The fact that a gentleman was inquiring about old Ross Hall, roused the wonder of the whole village. The people turned out in groups from the top of the hamlet to the bottom, and when they saw the steward proceeding with me towards the Hall, their curiosity became intense. They could not have an idea that the mere gratification of my curiosity had led me there; there must, they thought, be something of high moment in agitation. Several of them came with very serious faces, and asked, 'What it was about? whether government was making inquiry about Ross Hall? or whether some property was consarned?' I learned that several caps and a handsome pipe belonging to Rousseau had been in the village till recently, and they believed Farmer Gallimore had a cap and pipe now. It was droll to see the caution of Farmer Gallimore when I went and asked about them. 'What is it about?' he asked; 'what's your object, sir?' 'O, merely curiosity!' He looked incredulous, shaking his head and smiling; and nothing could be got out of him but, 'It's an old affair, sir; it's quite an old affair now.' His wife, however, beckoned me into the next room, and said she should be obliged if I would tell her why it was that so many people came inquiring about Ross Hall? I told her it was because he had been a great writer. The woman, not having so enormous a bump of caution as her husband, then told me that there had been a black velvet cap, with gold tassels, in their house till a short time ago, as well as a pipe; but the cap being brought down from the shelf on which it used to lie, to shew it to some gentlemen who called to see it, it was soon afterwards mislaid, and they supposed that some workmen, who

were in the house when the gentlemen saw it, had stolen it. The pipe also was gone. She added, that a farmer at some distance, whose father was a servant at the Hall at that time, had a cup which Ross Hall gave him. To this farmer I proceeded, and there I saw it. It was of greyish drab woollen stuff, with silver braid and tassel. It had lain in a drawer of the kitchen dresser, however, till it was considerably moth-eaten. I offered to purchase it, but the man said 'Nay, I cannot part wth it, becos it's an owd keypeake o' my feyther's.' Such is the curious impression which Rousseau has left at Wotton; and, as Lord Byron said of himself, on hearing of some of the opinions of the Italians regarding him,—"Such is fame!" I know not whether there be any truth in the story, or on what authority it is given, that Dr. Darwin was very anxious to be introduced to Rousseau here, and that he would not see him, whereupon Darwin fixed himself in his way as he issued forth on one of his botanical excursions, intently gazing on a plant; on which Rousseau came up to him and asked, 'Etes-vous un botaniste, Monsieur?' to which replying in the affirmative, they walked on together, and botanised the whole day to their great mutual pleasure; but on parting at eve, Rousseau begged to know the name of his companion, and on hearing it, exclaimed, 'Ha! a concerted plan!' and never would see him again. It is the common report that Dove-dale was his favourite resort, and that there he sowed the seeds of various plants amongst the rocks, of which the meagre ones there yet to be seen are part of the results. The most amusing thing, however, is the awful character which his strange dress, his taciturnity, and his solitary wanderings on the moorlands and the hills, gave him. The simple people seem almost to imagine that he held communication with supernatural beings. One man gravely said, 'He had heard that he used to think nothing of going over Weaver when the *feeries** were out dauncing a nights; and to my thinking,' he added, '*feeries* can be nowt but lost sperrits.' I have since learned from the Rev. Walter Davenport Bromley, the present worthy proprietor of Wotton, that no memorial of Rousseau remains at the Hall, and that little is known of his acts or habits while there, more than has been made public; for, his father having been educated on Rousseau's system, and feeling the deficiencies of it, never liked to hear him mentioned. Mr. Granville, of Calwich, has, however, some of his letters, chiefly filled with complaints of the climate, and probably the originals of those already published."

Hungary and Transylvania; with Remarks on their Condition, Social, Political, and Economical. By John Paget, Esq. With numerous Illustrations, from Sketches by Mr. Hering. 2 vols. 8vo. London, 1839. Murray.

THERE is a great mass of matter in these volumes, and a great want of the *lucidus ordo* to point it with the best effect. Reading them is like wandering through a Transylvanian forest, and you are not sure whether you are getting on or retracing your steps among the same objects, in a sort of maze or labyrinth. The author, having at different times spent a year and a half in the country, has combined his observations in the narrative: but one portion, consisting of a "Travelling Journal," as various localities were visited, and the rest being made up of accounts of distinct occasions and remarks on persons and occurrences; the whole,

* *Fairies.*

as we have said, stands in need of arrangement, and is more diffuse on unimportant subjects than those whose time is not very much at their command can relish. From Vienna, the party of three Englishmen, including Mr. Hering (printed "Mr. H." throughout the work, and whose charming illustrations add much to its interest), proceeded to Presburg, and here we have details of the diet of 1835. Sundry tours follow to Esterházy, and the Valley of the Waag, interspersed with *historiettes* of Stibor and other bygone characters. Then a chapter "On the Constitution of the Hungarian Chambers," and then "A Journey along the Danube from Presburg to Pest." Then "A Memoir of Count Széchenyi," a reformer; "Politics and Steam Navigation;" "Buda-Horses;" "Schemnitz and the Mines;" "The Hungarian Nobles, and their Relations to Austria;" "The Carpathians;" "Persecutions of Caraffa;" and "The Wine of Tokay." As is the first, so is the second volume, commingled with country excursions, municipal questions, modes of life, taxation, Roman antiquities, inns and accommodations, history, posting, government, and festivities.

To give a minute analysis of such a performance would be both tedious and unsatisfactory; and we have therefore no choice but to select a few passages which relate to circumstances readily separable from the rest, and likely to please or inform the general reader. Several races, with different religions, occupy Hungary and Transylvania; the former consisting of Szeklers, Magyars, Wallacks, Saxons, and Slavacks, not to mention gipsies, Jews, and Armenians; and the latter of Greek Church, Roman Catholics, Protestants, and sects of every denomination. The Magyars are the conquering invaders of the tenth century; the Szeklers, descendants of some one of the savage nations previously settled there; the Slavacks, a branch of the great Slavish family, driven by the Magyars from the plains to the mountains; the Wallacks, Dacians, and the Saxons, as their name implies, immigrants of that widely extended race. Much difference exists in their cultivation and manners, but we can only (for reasons stated) adduce some miscellaneous traits as specimens of the author. Thus, Vorspann driving!—

"As is very often the case, the horses belonged to two different peasants, and had not only never run together, but one had never before drawn at all. The harness consisted of one thin rope round the neck, and two others attached to the carriage in the form of traces. One of the peasants was upon the box, while the other mounted the near wheeler, seated on his great coat instead of a saddle, and drove the four horses by means of his long whip and the string round the neck of the near leader. In stopping his horses, the gentleman *we!*—by the by, '*wo*' and '*gee*!' or something very like them, are used in Hungary, as with us—was sufficient for the purpose, but to guide them was another affair. The colt, which was the near leader, did not like drawing, and the others seemed to have different predilections as to the route they should take. As we started out of the village at full gallop—a Hungarian coachman always starts at a gallop—we first took off the corner of a cottage roof, then quarrelled with a heap of manure, next rushed up a steep bank; and at last, thanks to the self-willed colt, found ourselves safe in a peasant's court yard. After some time we regained the road; but it would not do; one would go this way, and

* A great favourite with Mr. Paget, who prefixes his portrait to the first volume.

another that. The only plan to keep them together was to continue the gallop; but the road was now in the dried-up bed of a river, and respect for the springs obliged us to go slowly: so that I, at last, made the other peasant mount the unruly leader, and we got on rather better for the rest of the stage."

English Literature in Hungary.—"While we were waiting for fresh horses before the little '*Juden knips*,'—for by this contemptuous epithet, answering to '*Jew's* pot-house,' Stephan always designated an inn kept by a Jew,—at the station next Tyerhova, one of the tribe of Israel came up and asked us if we would like to see some curious rocks, only a quarter of an hour from the village. As we followed him to the spot, he asked those questions, as to where we came from, what we were doing, and whither we were going, so common in most countries except our own, where they are avoided, as though every one was doing something of which he was ashamed, and which he desired to conceal. On hearing that we were English, he asked very earnestly if one Walter Scott was yet living, and expressed the greatest regret when he learnt his death. Surprised at such a sentiment from such a man, and suspecting some mistake, I inquired what he knew of Scott, when he pulled from his pocket a well-thumbed German translation of '*Ivanhoe*,'—the very romance of persecuted Judaism,—and assured me he had read that and many others of his works with great pleasure. I do not know that I ever felt more strongly the universal power of genius than when I found the bard of Scotland worshipped by a poor Jew in the mountains of Hungary. It is astonishing to an Englishman, who knows how ignorant even well-informed persons of his own country are of the literature and politics of a great part of the Continent, to find the names of the best authors of England familiar as household words among nations of whose very existence the greater part of that country is scarcely aware. In Hungary, this fact struck me with more force even than in Germany, though the taste for English literature is there immeasurably more advanced than in France or Italy. But the Hungarians, with very little literature of their own, and generally possessing a knowledge of several foreign languages, are not only entirely thrown on the resources of others for their mental food, but are thus eminently well provided with the means of enjoying it. In many cases I have found the originals in English, but in general they are read in excellent German translations. With what ecstatic pleasure have they told me of the new light which English literature opened to them! With what admiration have they spoken of the strong and vigorous train of thought which pervades our authors—of that scrupulous decency which they observe—of that warm love of nature they express—and of the universal respect in which religion is upheld by them! A great cause of this extension of English literature has been the judicious selection and the cheap form in which Galignani and other foreign booksellers have published the standard English works; and, however disadvantageous this traffic may have been to the pockets of British authors, I am quite sure it has been a very important means in establishing and diffusing their own and their country's reputation. Shakspeare, Byron, Scott, and Bulwer, are the names best known; and though it may startle the English reader to find the name of a living candidate for fame ranked so high among these immortal dead, yet it must be confessed that the reading

Continent has generally placed him there. Whether the English public will confirm the award when time shall have removed the clouds of party prejudice and personal pique which so often obscure our judgment of living genius, I dare not venture to conjecture."

At Várhely the party was entertained by the squire of the village; and we are told,—

"The Wallack's Dumnie (i. e. Dominus) was a Hungarian noble of the poorer class, possessing one-third of the village of Várhely, and living in the style of one of our smallest farmers. The family consisted of the young master, his mother, and two sisters, who, though they spoke only Hungarian and Wallack, came out to receive us, and assured us that we were heartily welcome. The house was a pretty building of one story, raised four feet above the ground, and was entered by a handsome portico. It consisted of the kitchen, which was half-filled with the high hearth, two rooms on each side, and below store-rooms and cow-houses; the whole being enclosed by a garden on one side, and by the large farm-yard and buildings on the other. We were shewn into the best rooms, usually occupied by the family as sleeping-rooms; and, in a very short time, the beds were covered with the whitest linen, while the table offered a hearty supper to console us for the cold dinner we had taken during the morning, and to satisfy the keen appetite the mountain air had blessed us with. Várhely, or Gradistie, in the language of the Wallacks, is a place of so much interest, that we thought ourselves singularly fortunate in obtaining our present shelter. Though now a miserable Wallack village, Várhely occupies the site of Sarmisegethusa, the former capital of the Dacians, the residence of Decebalus their king; and on the ruins of which, Ulpia Trajana was founded,—the imperial city which Trajan destined as the seat of government, for his conquests beyond the Danube! * * * If I am rightly informed (Mr. P. adds), once in 1545, and again about twenty years since, many thousand gold coins have been discovered in this neighbourhood, some of them bearing the name of Lysimachus, and others the word ΚΟΙΝΩΝ from the name of the town Κοινω in Thrace, where they were struck. I am in possession of some of these coins; and though many were melted down by the Jews, in Wallachia, to whom they were conveyed across the frontier in leaves of bread, they are still very common, and are frequently used by the Transylvanians for signet rings, and other ornaments.†

"The dyes which the Wallacks manage to give their cloths are celebrated for their brilliancy and durability. The mention of Scotch plaids reminds me that I have seen some author, I think Herodotus, quoted as an authority that the Agathyrae, said to have been the ancient inhabitants of Dacia, owned the same origin as the Picts of Scotland. Without entering into such a knotty discussion, I merely throw out for the consideration of Gælic antiquaries the facts, that the Wallacks wear the tartan, that the Wallacks love the bagpipe; and that the Wallacks drink an inordinate quantity of *slivowitz*, *alias* mountain-dew,—the which I hold to be strong marks of similarity of taste,

† "It has been said that Trajan, through the treachery of a Dacian, discovered the hidden treasures of Decebalus, which he had concealed in the bed of a brook, having turned its course to enable him to place them there. This story derives some confirmation from the column, on which, after the taking of the city, are seen several horses bearing to Trajan panniers filled with treasures, principally consisting of rich cups and vessels. The coins found in 1545 were actually discovered in the bed of this very brook."

if not of identity of origin. In appearance, the common Wallack presents a decided difference from either Magyar, Slave, or German. In height, I should say that he was below the medium, and generally rather slightly built and thin. His features are often fine, the nose arched, the eyes dark, the hair long, black, and wavy, but the expression too often one of fear and cunning to be agreeable. I seldom remember to have seen among them the dull heavy look of the Sclavack, but still more rarely the proud self-respecting carriage of the Magyar. Seventeen hundred years' subjection has done its work; and I can readily believe that many of the vices attributed to the Wallacks are possessed by them, for they are the vices of slaves. They are not, however, without their redeeming qualities. In examining the characteristics of the Wallack, if I appear somewhat as his apologist, it is because I did not find him so bad as he was described to me, and because it is natural to interest oneself rather in defending the weak than in strengthening the strong. The Wallack is generally considered treacherous, revengeful, and entirely deficient in gratitude. If once insulted, he is said to carry the recollection of it till opportunity favours his weakness and enables him to accomplish his revenge. This is rather his misfortune than his fault. If stronger, like other people, he would revenge himself without waiting. Cowardice is another fault very commonly attributed to the Wallack. I remember Count S— saying, he believed every other European, except the Neapolitan and Wallack, might be made to fight. It is certain that nothing depresses the courage so surely as subjection, and so long a period of it as these people have endured cannot have been without effect; yet the Wallack peasant is a bold and successful smuggler, and no one is more ready to attack a wolf or bear; but it is hard to persuade any, except very stupid men, to fight without a better object than that of adding to the glory of those they do not love. A long succession of ill treatment has rendered them timid and suspicious. A few years ago, a German count settled among the Wallacks; and, with the kindest intentions, endeavoured to excite them to industry by giving rewards to those who best cultivated their land. For this purpose, all the peasants of the village were assembled together with due solemnity, but no sooner did their seigneur appear among them than the whole assemblage, as though seized with a panic, started off, and could never be got together again. They were firmly persuaded that some trick was to be played upon them; as for any one doing them a service for their own sakes, experience had not taught them to think such a thing possible. The treatment of the peasantry, however, improves every year with the improved knowledge of their masters. I knew an old countess in Transylvania who used to lament that 'times were sadly changed,—peasants were no longer so respectful as they used to be;' she could remember walking to church on the backs of the peasants who knelt down in the mud to allow her to pass over them without soiling her shoes. She could also remember, though less partial to the recollection, a rising of the peasantry, when nothing but the kindness with which her mother had generally treated them saved her from the cruel death which many of her neighbours met with. The Magyar peasant holds the Wallacks in the most sovereign contempt. He calls them 'a people who let their shirts hang out,' from the manner in which they wear that article of clothing over

the lower part of their dress; and classes them with Jews and Gipsies. Even when living in the same village, the Magyar never intermarries with the Wallack. That the Wallack is idle and drunken it would be very difficult to deny. Even in the midst of harvest you will see him lying in the sun, sleeping all the more comfortably because he knows he ought to be working. His corn is always the last cut; and it is very often left to shell on the ground for want of timely gathering; yet scarcely a winter passes that he is not starving with hunger. If he has a wagon to drive, he is generally found asleep at the bottom of it; if he has a message to carry, ten to one but he gets drunk on the way, and sleeps over the time in which it should be executed. But if it be difficult to deny these faults, it is easy to find a palliation for them. The half-forced labour with which the Hungarian peasants pay their rent has the natural tendency to produce not only a disposition, but a determination to do as little as possible in any given time. Add to this, that at least a third of the year is occupied by feasts and fasts, when, by their religion, labour is forbidden them; that the double tithes of the church and landlord check improvement; that the injustice with which they have been treated has destroyed all confidence in justice and every sentiment of security; and it will not then be difficult to guess why they are idle. The weakness of body induced by bad nourishment, and still more by the fasts of the Greek church, which are maintained with an austerity of which Catholicism has no idea, and which often reduces them to the last degree of debility, and sometimes even causes death, is another very efficient cause. I have often heard this alluded to by landowners, who have declared, that with the best will the Wallack could not perform the same amount of labour as the well-fed German or Magyar. An English labourer, of that sturdy independent cast which is not yet, thank God, extinct among us, observed to his travelled master who was telling him with how much less food the poor on the Continent were contented, 'Look ye, sir, them foreign chaps may eat and drink less than we do, but I'll warrant they work less too. Them as does not live well can't work well.' Never did philosophy utter a more certain truth.

"The Wallacks, especially those of this neighbourhood, have a custom of which I never heard elsewhere. A party of idle young fellows sell themselves, as they say, to the devil, for a term of three, five, or seven years,—the number must be unequal, or the devil will not hold the bargain,—engaging to dance without ceasing during the whole of that period, except when they sleep; in consideration of which, they expect their infernal purchaser will supply them with food and wine liberally, and render them irresistible among the rustic belles. Accordingly, dressed in their gayest attire, these merry vagabonds start out from their native village, and literally dance through the country. Every where they are received with open arms; the men glad of an excuse for jollity, the women anxious, perhaps, to prove their power, all unite to feed and fete the devil's dancers; so that it is scarcely wonderful there should be willing slaves to so merry a servitude. When their time is up, they return home and become quiet peasants for the rest of their lives."

Some of their habits are rather too distinctly noticed.

So much for the Wallacks. Of Transylvania generally, it is stated:—

"A strange little country is this Transyl-

vania! Very likely the reader never heard its name before, and yet some hundred years ago it was in close alliance with England; and, long before religious liberty, annual parliaments, payment of members, and the election of magistrates were dreamed of, amongst us, they were granted to Transylvania, by a solemn charter of their prince, the Emperor of Austria. Here is this country on the very limits of European civilisation, yet possessing institutions and rights for which the most civilized have not been thought sufficiently advanced. The distinctions and differences among the population of Hungary have offered us a singular spectacle enough, but the Transylvanians far outpass them in these matters, as they vary among themselves, not only in language, race, and religion, but in civil laws and political institutions. The Magyar, the Szekler, the Saxon, and the Wallack, have all their rights, but differing most materially in nature and extent from each other. The whole population of the country does not amount to more than two millions, yet they have among them four established religions,—besides several others tolerated,—at least four languages, and I know not how many different national customs, prejudices, and modes of feeling. It is not my intention to enter upon these matters at any length. Suffice it to say, that there are three nations, the Magyar, the Szekler, and the Saxon, which have each a part in the government of the country. They inhabit different districts; the Magyars, the whole west and centre; the Szeklers, the east and north; and the Saxons the greater part of the south; and with these are mixed up a number of Wallacks, gipsies, Jews, Armenians, &c."

A few extracts, touching the Szeklers, and we must conclude: but, first, of a rich road:—

"I must not forget that in passing between the two Cestaties, we observed a peasant carefully scraping up the soil from the little path we followed, and depositing it in a basket beside him, much in the same way as we see the children collect manure on our high roads, but with this difference, that the Transylvanian obtained gold ready made to his hand, while our own countrymen only acquire a means of aiding industry in its acquisition. I dare say every body has heard of streets paved with gold; but I must confess I had always believed it a romance; here, however, it was a serious reality. In fact, the road was formed of stones from the nearest rock, which we already know contains gold, and as it had been raining during the night, it was no wonder that the water should have washed away the lighter particles which had been crushed to dust under the feet of the passers, and left the heavier ore glittering in the sun behind."

"I have already said that the Szeklers were found by the Magyars in the country which they now occupy on their first entrance, and, on account of similarity of language and origin, were granted favours refused to the original inhabitants of the country. They were allowed the full enjoyment of their freedom on condition of defending the eastern frontier. Even from this early period the Szeklers claim to have been all equal, all free, all noble; a privileged class and a servile class were alike unknown—the only difference among the richer of them being derived from the number of men each could bring into the field,—among the poorer, from the circumstance of their serving on horseback or on foot. Changes, however, have crept in amongst them in the lapse of so many centuries. The richer and more powerful have gradually introduced on their own

estates the system in operation in the rest of Transylvania, and the peasant and the seigneur are now found in the Szekler-land as elsewhere. Titles too, and letters of nobility, have been freely scattered through the country, and have gradually cast a slur on those who possess them not. Taxation also, and the forcible introduction of the border system, instead of the desultory service of former times, have made great changes in the position of the Szeklers. As almost all these changes, however, have been introduced without the consent of the people, and often by the employment of open force, they are still regarded as illegal by the Szeklers, who are consequently among the most discontented of any portion of the Transylvanians. It would be absurd in me to enter further into the question of their laws and institutions, for even the most learned among themselves confess that there is so much confusion in them, that even they cannot make them out. This I know, that every Szekler claims to be a noble born, and declares that if he had his right he should neither pay taxes, nor serve but when an insurrection of the whole nobility of the country took place. I know also that, in fact, there are among them counts and barons, who call themselves Magnates, nobles by letters patent, and free Szeklers without letters, besides borderers and peasants; and that the free Szeklers and nobles, who have not more than two peasants, pay taxes, just like the peasants, though in other respects they have rights like the nobles."

"The Szeklers inhabit a mountainous country, and are consequently poor; but it was easy to see they are far more industrious than any of the Transylvanians we had before visited. From all I heard of their character, they seem a good deal to resemble the Scotch. The same pride and poverty, the same industry and enterprise, and if they are not belied, the same sharp regard to their own interests. They speak a dialect of the Magyar, which differs but slightly from that used in other parts of the country, except in the peculiar sing-song intonation in which it is uttered. Like most mountaineers, they are but little distinguished for polished and refined manners; even the wealthier are commonly remarkable for a greater rudeness in their bearing than is seen in other parts of the country. This is more than made up, however, by a greater degree of information, and by a firm adherence to their political principles. Like the Scotch they seem to have advanced in education to an extraordinary degree, so that there are few villages without their schools, few of the humblest Szeklers who cannot read and write. They are of various religions, and each sect is said to be strongly attached to its own. The Unitarians are in greater proportion here than in any other part of the country; they have about one hundred churches in the Szekler-land. Excepting the Jews and Greeks, all religions enjoy equal rights."

"I really do not know what notion the inhabitants of the Szekler-land mean to express by the words, 'a comfortable inn;' but I am quite sure it is something very different from what all the rest of the world mean. Twice, to-day, have we found ourselves woefully mistaken in our calculations in consequence:—this morning we found a comfortable inn meant an empty room, and nothing to eat; to-night, it seemed to mean no room and nothing to eat either! Every body had agreed, that at Parayd we should be splendidly accommodated, and so we declined the dead man's bed and pushed on to this same Parayd

with the greatest confidence. Alas! we were doomed to be disappointed. There was only one spare room, and a little closet; and no sooner had we alighted, than they told us the room was taken, and nothing but the closet could we have. Seated at a table, in one corner, we found the happy occupant of the room, just finishing, as we supposed, his supper, with bread and ewe-milk cheese. After the first salutations, the stranger, who turned out to be an old officer of the Szekler Borderers, politely offered us the larger room, saying, the closet would be sufficient to contain him; but, when he heard us ask for supper, the old gentleman shook his head, and, pointing to the cheese and bread, and a bottle of pale sour-looking wine, exclaimed, despondingly, *szecris cum aceto!* and nothing else to be had!—So much for a comfortable inn in the Szekler-land. I am afraid that, with all their good qualities, the Szeklers are rather behind-hand in the comforts—perhaps they call them superfluous luxuries—of other parts of Europe. Even in their own houses, the gentry show but little taste for comfort or cleanliness. In many cases, this may be attributable to poverty—they I have not a word to say; but in others, I have seen an admixture of tawdry splendour with squalid neglect, which presented a contrast highly ridiculous."

As we left the village, we saw a mark of superstition which we should not have expected where education is said to be generally diffused. It was a small piece of coarse linen cloth cut into the shape of a pair of trousers, and suspended over the middle of the road by a string attached to a tree on either side. The peasants believe that in the Cave of Almás which we were about to visit, two fairies are imprisoned in a state of nudity, and that they weep and wail their unhappy captivity, without being able to escape. Their cries are said to be often heard, when the wind is high, proceeding from the dark valley of the Almás, and it is to the malice of these imprisoned fairies that the peasants attribute the visitation of the cholera. It appears that the received method of propitiating these gentry is to offer them clothing, and accordingly the trowers at this end of the village, and a shirt exhibited in a similar manner at the other, were intended to appease them, let them come which road they would."

These caves, by the by, are extensive and curious, but we have no space for further illustration.

CAPTAIN MARRYAT'S AMERICA.

[Second volume, second notice.]

THE shrewdness and good common sense which distinguish Captain Marryat's observations and reasoning, may not in many instances be palatable, but sure we are that they deserve the serious attention both of America and England. In this volume he treats of the American women, of whom he speaks in terms of much commendation; and then discusses the condition of society, public opinion, the government, the democracy, the (or want of effective) aristocracy, and other topics of importance. From these it is our duty to adduce some of the most striking statements. Captain Marryat ascribes to the violent and overwhelming pressure of the Majority a vast declension of American virtue and ability in public affairs. Thus:—

"Mr. Cooper observes, 'Monarchs have incurred more hazards from follies of their own, than have grown up under the adulation of parasites, than from the machinations of their

enemies; and in a democracy, the delusion that still would elsewhere be poured into the ears of the prince, is poured into those of the people.' The same system is pursued by all those who would arrive at, or remain in place and power: and what must be the consequence?—that the straightforward, honourable, upright man, is rejected by the people, while the parasite, the adulator, the demagogue, who flatters their opinions, asserts their supremacy, and yields to their arbitrary demands, is the one selected by them for place and power. Thus do they demoralise each other; and it is not until a man has, by his abject submission to their will, in contradiction to his own judgment and knowledge, proved that he is unworthy of the selection which he courts, that he is permitted to obtain it. Thus it is that the most able and conscientious men in the States are almost unanimously rejected. M. Tocqueville says, 'It is a well-authenticated fact, that at the present day the most talented men in the United States are very rarely placed at the head of affairs; and it must be acknowledged that such has been the result in proportion as democracy has outstepped all its former limits: the race of American statesmen has evidently dwindled most remarkably in the course of the last fifty years.' Indeed, no high-minded consistent man will now offer himself, and this is one cause among many why Englishmen and foreigners have not done real justice to the people of the United States. The scum is uppermost, and they do not see below it. The prudent, the enlightened, the wise, and the good, have all retired into the shade, preferring to pass a life of quiet retirement, rather than submit to the insolence and dictation of a mob. M. Tocqueville says, 'Whilst the natural propensities of democracy induce the people to reject the most distinguished citizens as its rulers, these individuals are no less apt to retire from a political career, in which it is almost impossible to retain their independence, or to advance without degrading themselves.'

"It appears, then (continues our author), that the more respectable portion of its citizens have retired, leaving the arena open to those who are least worthy: that the majority dictate, and scarcely any one ventures to oppose them; if any one does, he is immediately sacrificed; the press, obedient to its masters, pours out its virulence, and it is incredible how rapidly a man, unless he be of a superior mind, falls into nothingness in the United States, when once he has dared to oppose the popular will. He is morally bemired, bespattered, and trod under foot, until he remains a lifeless carcass. He falls, never to rise again, unhonoured and unremembered."

Of the national feeling, as regards Great Britain, Captain M. says:—

"Captain Hamilton has, in his work, expressed his opinion that the Americans have no feeling of ill-will against this country. If Captain Hamilton had stated that the gentlemen and more respectable portion of the Americans, such as the New York merchants, &c. had no feeling against this country, and were most anxious to keep on good terms with us, he would have been much more correct. You will find all the respectable portion of the daily press using their best endeavours to reconcile any animosities, and there is nothing which an American gentleman is more eloquent upon, when he falls in with an Englishman, than in trying to convince him that there is no hostile feeling against this country. I had not been a week at New York before I had this assurance given me at least twenty times, and

I felt inclined at first to believe it; but I soon discovered that this feeling was only confined to a small minority, and that the feelings towards England of the majority, or democratic party, were of deep irreconcilable hatred. I am sorry to assert this; but it is better that it should be known, than we may not be misled by any pretended good-will on the part of the government, or the partial good-will of a few enlightened individuals. Even those who have a feeling of regard and admiration for our country do not venture to make it known; and it would place them in so very unpleasant a situation, that they can scarcely be blamed for keeping their opinions to themselves. With the English they express it warmly, and I believe them to be sincere; but not being openly avowed by a few, it is not communicated or spread by kindling similar warmth in the hearts of others. Indeed, it is not surprising, when we consider the national character, that there should be an ill feeling towards England; it would be much more strange if the feeling did not exist.

"There are many reasons why the Americans have an inveterate dislike to this country. In the first place, they are educated to dislike us and our monarchical institutions; their short history points out to them that we have been their only oppressor in the first instance, and their opponent ever since. Their annual celebration of the independence is an opportunity for vituperation of this country, which is never lost sight of. Their national vanity is hurt by feeling what they would fain believe, that they are not the 'greatest nation on earth'; that they are indebted to us, and the credit we give them, for their prosperity and rapid advance; that they must still look to us for their literature and the fine arts; and that, in short, they are still dependant upon England. I have before observed, that this hostile spirit against us is fanned by discontented emigrants, and by those authors who, to become popular with the majority, laud their own country and defame England; but the great cause of this increase of hostility against us is the democratic party having come into power, and who consider it necessary to excite animosity against this country. Whenever it is requisite to throw a tub to the whale, the press is immediately full of abuse; every thing is attributed to England, and the machinations of England; she is, by their accounts, here, there, and everywhere, plotting mischief and injury, from the Gulf of Florida to the Rocky Mountains. If we are to believe the democratic press, England is the cause of every thing offensive to the majority: if money is scarce, it is England that has occasioned it—if credit is bad, it is England—if eggs are not fresh or beef is tough, it is, it must be, England. They remind you of the parody upon Fitzgerald in Smith's humorous and witty 'Rejected Addresses,' when he is supposed to write against Buonaparte:—

Who made the quatern loaf and Luddites rise,
Who fills the butchers' shops with large blue flies;
With a foul earthquake ravaged the Carracas,
And raised the price of dry goods and tobaccos;

Why, England. And all this the majority do steadfastly believe, because they wish to believe it."

From this international view we pass to an internal one, the character of society:—

"The character of the Americans is that of a restless, uneasy people; they cannot sit still, they cannot listen attentively, unless the theme be politics or dollars; they must do something, and, like children, if they cannot do any thing

else, they will do mischief; their curiosity is unbounded, and they are very capricious. Acting upon impulse, they are very generous at one moment, and without a spark of charity the next. They are good-tempered, and possess great energy, ingenuity, bravery, and presence of mind. Such is the estimate I have formed of their general character, independent of the demoralising effects of their institutions, which renders it so anomalous. The American author, Mr. Sanderson, very truly observes of his countrymen, that 'they have grown vicious without the refinements and distractions of the fine arts and liberal amusements.' The Americans have few amusements; they are too busy. Athletic sports they are indifferent to; they look only to those entertainments which feed their passion for excitement. The theatre is almost their only resort, and even that is not so well attended as it might be, considering their means.

"The love of excitement must, of course, produce a love of gambling, which may be considered as one of the American amusements: it is, however, carried on very quietly in the cities. In the South, and on the Mississippi, it is as open as the noon day; and the gamblers may be said to have there become a professional people. I have already mentioned them, and the attempts which have been made to get rid of them. Indeed, they are not only gamblers who practise on the unwary, but they combine with gambling the professions of forgery and uttering of base money. If they lose, they only lose forged notes. There is no part of the world where forgery is carried on to such an extent as it is in the United States; chiefly in the Western country. The American banks are particularly careful to guard against this evil; but the ingenuity of these miscreants is surprising, and they will imitate so closely as almost to escape detection at the banks themselves. Bank-note engraving is certainly carried to the highest state of perfection in the United States, but almost in vain. I have myself read a notice, posted up at Boston, which may appear strange to us: 'Bank-notes made here to any pattern.' But the Eastern banks are seldom forged upon. Counterfeit money is also very plentiful. When I was in the West, I had occasion to pay a few dollars to a friend: when I saw him a day or two afterwards, he said to me, 'Do you know that three dollars you gave me were counterfeits?' I apologised, and offered to replace them: 'Oh! no,' replied he; 'it's of no consequence. I gave them in payment to my people, who told me that they were counterfeit; but they said it was of no consequence, as they could easily pass them.' In some of the States, lotteries have been abolished; in others, they are still permitted. They are upon the French principle, and are very popular. There is one very remarkable point in the American character, which is, that they constantly change their professions. I know not whether it proceeds simply from their love of change, or from their embracing professions at so early a period, that they have not discovered the line in which, from natural talents, they are best calculated to succeed. I have heard it said, that it is seldom that an American succeeds in the profession which he had first taken up at the commencement of his career. An American will set up as a lawyer; quit, and go to sea for a year or two; come back, set up in another profession; get tired again, go as clerk or steward in a steam-boat, merely because he wishes to travel; then apply himself to something else, and begin to amass money. It is of

very little consequence what he does; the American is really a jack of all trades, and master of any to which he feels at last inclined to apply himself."

These traits must suffice for our illustration of this branch of the subject. The remarks of the want of an active and respected aristocracy, and on the dishonesty of the government, are very strong. Thus of the former:—

"I say at this present time, for it was not so even twenty years ago, and possibly may not be so twenty years hence. There is a change constantly going on in every thing below, and I believe, for many reasons, that a change for the better will soon take place in America. There are even now many thousands of virtuous, honourable, and enlightened people in the United States; but at present virtue is passive, while vice is active. The Americans possess courage, presence of mind, perseverance, and energy, but these may be considered rather as endowments than as virtues. They are propelling powers which will advance them as a people, and were they regulated and tempered by religious and moral feeling, would make them great and good, but without these adjuncts, they can only become great and vicious. I have observed in my preface that the virtues and vices of a nation are to be traced to the form of government, the climate, and circumstances, and it will be easy to shew that to the above may be ascribed much of the merit as well as the demerits of the people of the United States. In the first place, I consider the example set by the government as most injurious: as I shall hereafter prove, it is insatiable in its ambition, regardless of its faith, and corrupt to the highest degree. This example I consider as the first cause of the demoralisation of the Americans. The errors incident to the voluntary system of religion are the second: the power of the clergy is destroyed, and the tyranny of the laity has produced the effect of the outward form having been substituted for the real feeling, and hypocrisy has been but too often substituted for religion. To the evil of bad example from the government is superadded the natural tendency of a democratic form of government, to excite ambition without having the power to gratify it morally or virtuously; and the debasing influence of the pursuit of gain is everywhere apparent. It shews itself in the fact that money is in America every thing, and every thing else nothing; it is the only sure possession, for character can at any time be taken from you, and therefore becomes less valuable than in other countries, except so far as mercantile transactions are concerned. Mr. Cooper says—not once, but many times—that in America all the local affections, indeed everything, is sacrificed to the spirit of gain. Dr. Channing constantly laments it, and he very truly asserts, 'A people that deems the possession of riches its highest source of distinction, admits one of the most degrading of all influences to preside over its opinions. At no time should money be ever ranked as more than a means, and he who lives as if the acquisition of property were the sole end of his existence, betrays the dominion of the most sordid, base, and grovelling motive that life offers;' and ascribing it to the institutions, he says, 'In one respect our institutions have disappointed us all: they have not wrought out for us that elevation of character which is the most precious, and, in truth, the only substantial blessing of liberty.'"

Of the government particularly, Captain M. says:—

"The Americans may be said to have had,

till within the last twenty years, little or no relation with other countries. They have had few treaties to make, and very little diplomatic arrangements with the old Continent. But even if they had had, they must not be judged by them; a certain degree of national honour is necessary to every nation, if they would have the respect of others, and a dread of the consequences would always compel them to adhere to any treaty made with great and powerful countries. The question is, has the Federal Government adhered to its treaties and promises made with and to those who have been too weak to defend themselves? Has it not repeatedly, in the short period of their existence as a nation, violated the national honour whenever, without being in fear of retaliation or exposure, it has been able to do so? Let this question be answered by an examination into their conduct towards the unhappy Indians, who, to use their own expression, are 'now melting away like snow before the white men.' We are not to estimate the morality of a government by its strict adherence to its compact with the powerful, but by its strict moral sense of justice towards the weak and defenceless; and it should be borne in mind, that one example of a breach of faith on the part of a democratic government, is more injurious to the morals of the people under that government than a thousand instances of breach of faith which may occur in society; for a people who have no aristocracy to set the example, must naturally look to the conduct of their rulers and to their decisions, as a standard for their guidance. To enumerate the multiplied breaches of faith towards the Indians would swell out this work to an extra volume. It was a bitter sarcasm of the Seminole chief, who, referring to the terms used in the treaties, told the Indian agents that the white man's 'for ever' did not last long enough. Even in its payment of the trifling sums for the lands sold by the Indians and resold at an enormous profit, the American government has not been willing to adhere to its agreement; and two years ago, when the Indians came for their money, the American government told them, like an Israelite dealer, that they must take half money and half goods. The Indians remonstrated; the chiefs replied, 'Our young men have purchased upon credit as they are wont to do; they require the dollars to pay honestly what they owe.' 'Is our great father so poor?' said one chief to the Indian agent; 'I will lend him some money; and he ordered several thousand dollars to be brought, and offered them to the agent. In the Florida war, to which I shall again refer, the same want of faith has been exercised. Unable to drive the Indians out of their swamps and morasses, they have persuaded them to come into a council under a flag of truce. This flag of truce has been violated, and the Indians have been thrown into prison until they could be sent away to the Far West; that is, if they survived their captivity, which the gallant Osceola could not. Let it not be supposed that the officers employed are the parties to blame in these acts; it is, generally speaking, the Indian agents who are employed in these nefarious transactions. Among these agents there are many honourable men, but a corrupt government will always find people corrupt enough to do anything it may wish. But any language that I can use as to the conduct of the American government towards the Indians would be light compared to the comments made in my presence by the officers and other American gentlemen upon this subject. Indeed, the indignation expressed is so general, that it proves

there is less morality in the government than there is in the nation."

And to conclude:—

"Fifty years have passed away, and the present state of America I have already shown. From purity of manners her moral code has sunk below that of most other nations. She has attempted to govern herself—she is dictated to by the worst of tyrannies. She has planted the tree of liberty; instead of its flourishing, she has neither freedom of speech nor of action. She has railed against the vices of monarchical forms of government, and every vice against which she has raised up her voice is still more prevalent under her own. She has cried out against corruption—she is still more corrupt: against bribery—her people are to be bought and sold: against tyranny—she is in fetters. She has proved to the world that, with every advantage on her side, the attempt at a republic has been a miserable failure, and that the time is not yet come when mankind can govern themselves. Will it ever come? In my opinion, never!"

TOWNSHEND'S SPORTING IN THE ROCKY MOUNTAINS.

[Second notice: conclusion.]

WE now turn to a story told by Richardson (the great hunter of the party) of a meeting he "once had with three Blackfeet Indians. He had been out alone hunting buffalo, and towards the end of the day was returning to the camp with his meat, when he heard the clattering of hoofs in the rear, and, upon looking back, observed three Indians in hot pursuit of him. He immediately discharged his cargo of meat to lighten his horse, and then urged the animal to his utmost speed, in an attempt to distance his pursuers. He soon discovered, however, that the enemy was rapidly gaining upon him, and that in a few minutes more he would be completely at their mercy, when he hit upon an expedient, as singular as it was bold and courageous. Drawing his long scalping knife from the sheath at his side, he plunged the keen weapon through his horse's neck, and severed the spine. The animal dropped instantly dead, and the determined hunter, throwing himself behind the fallen carcass, waited calmly the approach of his sanguinary pursuers. In a few moments, one Indian was within range of the fatal rifle, and at its report, his horse galloped riderless over the plain. The remaining two then thought to take him at advantage by approaching simultaneously on both sides of his rampart; but one of them, happening to venture too near in order to be sure of his aim, was shot to the heart by the long pistol of the white man, at the very instant that the ball from the Indian's gun whistled harmless by. The third savage, being wearied of the dangerous game, applied the whip vigorously to the flanks of his horse, and was soon out of sight, while Richardson set about collecting the trophies of his singular victory. He caught the two Indians' horses; mounted one, and loaded the other with the meat which he had discarded, and returned to his camp with two spare rifles, and a good stock of ammunition."

This was a recollection, but the success of this individual throughout the expedition seems to entitle him to credit. For instance:—

"On the following day, Richardson killed two buffaloes, and brought his horse heavily laden with meat to the camp. Our good hunter walked himself, that the animal might be able to bear the greater burthen. After depositing the meat in the camp, he took a fresh horse, and, accompanied by three men, returned to the

spot where the game had been killed, about four miles distant, and in the evening brought in every pound of it, leaving only the heavier bones. The wolves will be disappointed this evening; they are accustomed to dainty pickings when they glean after the hunters, but we have now abandoned the 'wasty ways' which so disgraced us when game was abundant; the despised leg bone, which was wont to be thrown aside with such contempt, is now polished of every tandon of its covering, and the savoury hump is used as a kind of dessert after a meal of coarser meat. Speaking of wolves, I have often been surprised at the perseverance and tenacity with which these animals will sometimes follow the hunter for a whole day, to feed upon the carcass he may leave behind him. When an animal is killed, they seem to mark the operation, and stand still at a most respectful distance, with drooping tail and ears, as though perfectly indifferent to the matter in progress. Thus will they stand until the game is butchered, the meat placed upon the saddle, and the hunter is mounted and on his way; then, if he glances behind him, he will see the wily foragers stealthily crawling and prowling along towards the smoking remains, and immediately as he gets out of reach pouncing upon it and tearing it with tooth and nail. During the day the wolves are shy, and rarely permit an approach to within gun-shot; but at night, where game is abundant, they are so fearless as to come quite within the purlieus of the camp, and there sit, a dozen together, and howl hideously for hours. This kind of serenading, it may be supposed, is not the most agreeable; and many a time, when on guard, have I observed the unquiet tossing of the bundles of blankets near me, and heard issue from them the low, husky voice of some disturbed sleeper, denouncing heavy anathemas on the unseasonable music."

The following characteristic examples are also from the first volume:—

"September 1st.—Last evening, as we were about retiring to our beds, we heard, distinctly, as we thought, a loud halloo, several times repeated, and in a tone like that of a man in great distress. Supposing it to be a person who had lost his way in the darkness, and was searching for us, we fired several guns at regular intervals, but as they elicited no reply, after waiting a considerable time, we built a large fire, as a guide, and lay down to sleep. Early this morning, a large panther was seen prowling around our camp, and the hallooing of last night was explained. It was the dismal distressing yell by which this animal entices its prey, until pity or curiosity induces it to approach to its destruction. The panther is said to inhabit these forests in considerable numbers, and has not unfrequently been known to kill the horses of a camp. He has seldom the temerity to attack a man, unless sorely pressed by hunger or infuriated by wounds."

Having nothing prepared for dinner to-day, I strolled along the stream above the camp, and made a meal on rose-buds, of which I collected an abundance; and on returning, I was surprised to find Mr. N. and Captain T. picking the last bones of a bird which they had cooked. Upon inquiry, I ascertained that the subject was an unfortunate owl which I had killed in the morning, and had intended to preserve as a specimen. The temptation was too great to be resisted by the hungry captain and naturalist, and the bird of wisdom lost the immortality which he might otherwise have acquired."

We have passed four months through a country swarming with

Indians who thirsted for our blood, and whose greatest pride consisted in scouring the scalp of a white man. Enemies, sworn, determined enemies to all, both white and red, who intrude upon their hunting grounds, the Blackfeet roam the prairie like wolves seeking their prey, and springing upon it when unprepared, and at the moment when it supposes itself most secure. To those who have always enjoyed the comforts and security of civilised life, it may seem strange that persons who know themselves to be constantly exposed to such dangers—who never lie down at night without the weapons of death firmly grasped in their hands, and who are in hourly expectation of hearing the terrific war-whoop of the savage, should yet sleep soundly and refreshingly, and feel themselves at ease; such, however, is the fact. I never in my life enjoyed rest more than when travelling through the country of which I speak. I had become accustomed to it: I felt constant apprehension certainly, but not to such an extent as to deprive me of any of the few comforts which I could command in such an uncomfortable country. The guard might pass our tent, and cry, 'All's well,' in his loudest key, without disturbing my slumbers; but if the slightest unusual noise occurred, I was awake in an instant, and listening painfully for a repetition of it."

In the second volume we have an account of the founding of an American colony on the Columbia, which, though beset with difficulties at first, bids fair to fix, extend the territories and influence of the United States in a most important quarter. Mr. Townshend having some wet winter-time to spare, visited the Sandwich Islands; and gives a curious notice of the Islanders:—

"The dress of the men not in the employment of the whites consists of a large piece of native cloth, called a tapa, or a robe of calico thrown loosely round the body, somewhat like the Roman toga, and knotted on the left shoulder. The women wear a loose gown of calico or native cloth fastened tightly round the neck, but not bound at the waist, and often with the addition of several yards of cotton cloth tied round above the hips. Their hair is generally of a beautiful glossy black, and of unusual fineness; it is folded around the back part of the head, very much in the manner common to our ladies at home; and splendid tortoise-shell combs, of their own manufacture, are used to confine it. They display much taste in the arrangement of wild flowers amongst their hair; and a common ornament for the forehead is the Ro of beautiful yellow feathers which is bound upon it. I have repeatedly seen women with hair of two, and in some instances, of three distinct colours. Deep black and chestnut brown; not promiscuously mingled throughout, but lying in separate masses; and in the rare instances of which I have spoken, they were black, brown, and a kind of ash colour, giving to the head a most singular appearance. I had supposed that this party-coloured character of the hair was the effect of art, but was soon informed to the contrary, and perceived that by the natives themselves it was considered a deformity."

But the description of the Indians on the Columbia is more germane to our purpose:—

"The Indians of the Columbia were once a numerous and powerful people; the shore of the river, for scores of miles, was lined with their villages; the council fire was frequently lighted, the pipes passed round, and the destinies of the nation deliberated upon. War was declared against neighbouring tribes; the

deadly tomahawk was lifted, and not buried until it was red with the blood of the savage; the bounding deer was hunted, killed, and his antlers ornamented the wigwam of the red man; the scalps of his enemies hung drying in the smoke of his lodge, and the Indian was happy. Now, alas! where is he?—gone—gathered to his fathers and to his happy hunting grounds—his place knows him no more. The spot where once stood the thickly peopled village, the smoke curling and wreathing above the closely packed lodges, the lively children playing in the front, and their indolent parents lounging on their mats, is now only indicated by a heap of undistinguishable ruins. The depopulation has been truly fearful. A gentleman told me, that only four years ago, as he wandered near what had formerly been a thickly peopled village, he counted no less than sixteen dead, men and women, lying unburied and festering in the sun in front of their habitations. Within the houses all were sick; not one had escaped the contagion; upwards of a hundred individuals, men, women, and children, were writhing in agony on the floors of the houses, with no one to render them any assistance. Some were in the dying struggle, and clenching with the convulsive grasp of death their disease-worn companions, shrieked and howled in the last sharp agony. Probably there does not now exist one, where, five years ago, there were a hundred Indians; and in sailing up the river, from the cape to the cascades, the only evidence of the existence of the Indian is an occasional miserable wigwam, with a few wretched, half-starved occupants. In some other places they are rather more numerous; but the thoughtful observer cannot avoid perceiving that in a very few years the race must, in the nature of things, become extinct, and the time is probably not far distant, when the little trinkets and toys of this people will be picked up by the curious, and valued as mementoes of a nation passed away for ever from the face of the earth. The aspect of things is very melancholy. It seems as if the fiat of the Creator had gone forth, that these poor denizens of the forest and the stream should go hence, and be seen of men no more. In former years, when the Indians were numerous, long after the establishment of this fort, it was not safe for the white men attached to it to venture beyond the protection of its guns without being fully armed. Such was the jealousy of the natives towards them, that various deep-laid schemes were practised to obtain possession of the post, and massacre all whom it had harboured:—now, however, they are as submissive as children. Some have even entered into the service of the whites, and when once the natural and persevering indolence of the man is worn off, he will work well and make himself useful. About two hundred miles southward, the Indians are said to be in a much more flourishing condition, and their hostility to the white people to be most deadly. They believe that we brought with us the fatal fever which has ravaged this portion of the country, and the consequence is, that they kill without mercy every white man who trusts himself amongst them."

On his journey homewards from the shores of the Pacific, Mr. T. relates:—

"Mr. M'Leod and myself embarked in a large batteau, with six men, and bidding farewell to Mr. Pambrun and the missionaries, were soon gliding down the river. We ran to-day several rapids, and in the evening encamped about fifteen miles below the mouth of

the Ucalla river. This running of rapids appears rather a dangerous business to those unaccustomed to it, and it is in reality sufficiently hazardous, except when performed by old and skilful hands. Every thing depends upon the men who manage the bow and stern of the boat. The moment she enters the rapid, the two guides lay aside their oars, taking in their stead paddles, such as are used in the management of a canoe. The middle-men ply their oars; the guides brace themselves against the gunwale of the boat, placing their paddles edgewise down her sides, and away she goes over the curling, foaming, and hissing waters, like a race-horse. We passed to-day several large lodges of Indians, from whom we wished to have purchased fish, but they had none, or were not willing to spare any, so that we were compelled to purchase a dog for supper. I have said we, but I beg leave to correct myself, as I was utterly averse to the proceeding; not, however, from any particular dislike to the quality of the food; I have eaten it repeatedly, and relished it; but I am always unwilling, unless when suffering absolute want, to take the life of so noble and faithful an animal. Our hungry oarsmen, however, appeared to have no such scruples. The Indian called his dog, and he came to him, wagging his tail! He sold his companion for ten balls and powder! One of our men approached the poor animal with an axe. I turned away my head to avoid the sight, but I heard the dull, sodden sound of the blow. The tried friend and faithful companion lay quivering in the agonies of death at its master's feet. We are enjoying a most magnificent sight at our camp this evening. On the opposite side of the river the Indians have fired the prairie, and the whole country for miles around is most brilliantly illuminated. Here am I sitting cross-legged on the ground, scribbling by the light of the vast conflagration with as much ease as if I had a ton of oil burning by my side; but my eyes are every moment involuntarily wandering from the paper before me, to contemplate and admire the grandeur of the distant scene. The very heavens themselves appear ignited, and the fragments of ashes and burning grass-blades, ascending and careering about through the glowing firmament, look like brilliant and glorious birds let loose to roam and revel amid this splendid scene. It is past midnight: every one in the camp is asleep, and I am this moment visited by half a dozen Indian fishermen, who are peering over my shoulders, and soliciting a smoke, so that I shall have to stop, and fill my calumet. * * * We observe on the breasts and bellies of many of the Indians here a number of large red marks, mostly of an oval form, sometimes twenty or thirty grouped together. These are wounds made by their own hands, to display to their people the unwavering and stoical resolution with which they can endure pain. A large fold of the skin is taken up with the fingers, and sliced off with a knife; the surrounding fibre then retreats, and a large and ghastly looking wound remains. Many that I saw to-day are yet scarcely cicatrised. There is a chief here, who obtained the dignity which he now enjoys solely by his numerous and hardy feats of this kind. He was originally a common man, and possessed but one wife; he has now six: and any of the tribe would think themselves honoured by his alliance. He is a most gigantic fellow, about six feet four inches in height, and remarkably stout and powerful. The whole front of his person is covered with the red marks of which I have spoken, and he displays with considerable pride

the two scars of a bullet, which entered the left breast, and passed out below the shoulder-blade. This wound he also made with his own hand, by placing the muzzle of his gun against his breast, and pressing the trigger with his toe; and by this last, and most daring act, he was raised to the chief command of all the Indians on the north side of the river. Now that Tilki is no more, he will probably be chosen chief of all the country from the cascades to Walla-walla. I asked him if he felt no fear of death from the wound in his chest, at the time it was inflicted? He said, no; that his heart was strong, and that a bullet would never kill him. He told me that he was entirely well in a week after this occurrence, but that for two days he vomited blood constantly. He is named by the Indians 'Skookoom,' the strong."

Chill was hastily visited; but this, and an interesting catalogue of natural history, containing many new discoveries in Oregon, we must leave to the readers of the work.

MISCELLANEOUS.

Flowers of Infancy; or, Scenes of our Early Years, in a Series of Engravings, accompanied by Metrical Illustrations, &c. By T. Woolnoth, Historical Engraver in Ordinary to the Queen, &c. 4to. London, 1839. Woolnoth.

WHO ever saw the delightful infantile paintings of Reynolds without feeling that no class of subjects to which the art could be devoted possessed greater powers or influence over the human heart than such exquisite and natural representations of childhood, where every attitude and motion are grace, and every expression truth and innocence? Objects upon which every human hope may be built; beings to care, and fear for, and love; blossoms of promise endeared to the imagination by the veil which hangs over the season of fruitage; and creatures entwined round the affections by their beauty, their dependency, their helplessness, their purity, and their gratitude. It is not parents alone, nor near relatives, nor friends, who are charmed with well-depicted scenes of early years—no emotion is more universal. Here, then, is a pictorial production which has very extended claims upon admiration and sympathy. The groups are of Sleeping, Waking, Playing, Weeping, Loving, Learning, Parting, and Meeting; and they are all sweet and touching performances. Waking is deliciously expressed; and Weeping, with her dead bird and felon cat, is another pretty and tender theme, cleverly executed. In Loving we are at a loss to make out the reflections from the glass, it seems to us that they are not all correct. The mother in Learning is a captivating portrait, and both Parting and Meeting are full of intelligence and sentiment. Of the varification we are sorry to say, it is most lame and indifferently; the rhymes being against all rule throughout. The handsome volume must therefore be chosen for its engravings, not for its poetry; and these engravings are enough to recommend it to every polished home in Britain, where there are fathers and mothers to be found, and darling children to be pleased with such refined and refining studies.

Indian Hours. By R. N. Dunbar, author of "The Cruise," "The Carquin," &c. 12mo. pp. 188. London, 1839. Bull.

THIS is a volume of considerable merit; and as it is chiefly occupied with Indian subjects, has some claim to originality. The style is, for

the most part, light, graceful, and pleasing, with here and there a few strong strokes of description, that serve to shew the author is in earnest with his subject. We give the following specimen from the second part, entitled "The Musio-Shell;" the subject, "The Fly-bird"—

"Syll of sunshine! bowered sprits!
Darting round perfume and light;
Humming thy rodo to the bud,
While sucking its ethereal blood;
Flower-dweller! where, supremely blest,
By day you feast, by night you rest,
Exalting all your heavenly hues
By living on the rainbow's dews.
What words, what spells, can I employ,
To lure thee from thy race of joy,
And win awhile thy jewelled plume
My latticed casement to illumine?
The lute, that would thy splendours sing,
Boon mourns its impotence of string:
What if I said thy tint outshone
The costly glories of the mine,
Or blush of flowers, or fish's mail,
Or bird-of-Juno's starry tail,
Or web of virgin bullion spun,
Or beams, or tresses of the sun?
I should but prove all language weak
To picture dyes, themselves that speak;
For mortals have not names for hues
The Genii o'er their works diffuse.

But see! the sweet need, for thy use,
In bright cups sheds its nectar's juice!
And flowers frill curl'd, and dew-beaprent,
Ambrosial beverage present;
And bees, with whom you love to roam,
Spread virgin honey in the comb.
Then come! Delight-inspiring bird,
Waking the graceful thought and word;
Awhile with me, balm-breather, stay!
And teach me how to frame the lay,
Whose tones may fall on Beauty's ear
As softly—delicately clear,
As thine own murmur'd music swells
Within the flower's velvet cells.

The Indian with thy plummy plaid
Bedeck'd his idol or his bride;
But my idolatry shall be
To make a deity of thee;
And worship thee with rites divine,
If here thou'lt fix thy fairy shrine,
And, quitting the unshelter'd grove,
Shed radiance through my bowerd alcove,
And charm my sight, and prompt my lay,
And shine and sing the hours away."

The Theory, Practice, and Architecture of Bridges.—The Theory by James Ryan, of King's College; and the Practical and Architectural Treatises by William Hockings, F.S.A. Parts V. and VI. 8vo. London, 1839. Weale.

WE have noticed this truly national work in terms of the highest praise during its progress, and have now only to repeat our commendations of it for the spirit in which the first volume is concluded. The earlier numbers of the second volume will commence with Mr. Hockings' treatises. We need not recommend it to the public, for its practical utility to all engaged in the works of railroads, bridges, &c., must be a sufficient passport to universal favour.

Life and Adventures of Michael Armstrong the Factory Boy. By Frances Trollope. 3 vols. 12mo. London, 1839. Colburn.

THERE is but one way to produce an effect on the public in works of this kind: it is by devoting the most minute examination to the system which is to be exposed to objection and obloquy, in order to amend it; and, as another requisite, possessing the talents to exhibit its wrongs and errors in the most powerful light. Dickens's Parish Workhouses and Yorkshire School are splendid examples of this class; their details came home to the understanding and the heart, because they were founded on actual observation,—facts, truths, pointed with all the force of the most acute perception of individualities and generalities, and realised by traits of such accurate nature, and touches of such exquisite feeling, that none ever doubted the existence and the sufferings of a persecuted

Oliver Twist or a miserable Smike. Mrs. Trollope has relied on invention in this imitation of a brilliant model: her circumstances are not British; her characters are not living; her adventures are romance; and, in short, her *Factory* is a very *unsatis-Factory* Boy.

The Works of the Rev. Sydney Smith.
Vol. IV. 8vo. pp. 411. London, 1839.
Longman and Co.

THE fourth and concluding volume of this collection of the writings of one of the cleverest of clever men, contains many of his articles from the "Edinburgh Review," and five speeches on the Catholic claims and Parliamentary Reform, the writer's opinions upon some of the subjects of which he treats having since been considerably modified. The whole, however, affords a very high idea of his literary talents, and of the powers of his mind, richly informed, versatile, and pungent. It is a pleasure to look back on such discussions, after the glare and fury of conflicting politics have left them as retrospects of the past. We can appreciate their worth and weight, and see where they fail and are mistaken. The judgment is improved, and a useful lesson against dogmatism is strongly inculcated. Without comparing these volumes with previous isolated publications of the reverend author, it seems to us, if we remember rightly, that he has omitted some of his productions. Quere, for instance, a Preface to Sermons?

The Manners and Trials of the Primitive Christians. By the Rev. Robert Jamieson, Minister of Currie. 12mo. pp. 452. 1839. Edinburgh, Johnson: London, Whittaker and Co.; Nisbet and Co.

THIS is a volume which we would earnestly recommend, for it is full of information and interest, on a subject the most memorable and important in the world's history. The whole Christian community are especially concerned in becoming acquainted with the domestic lives and manners of the earliest converts to their faith, and the cruel persecutions which they endured with wonderful and unflinching constancy, during the first three centuries in which the religion of the Gospel grew from a mustard-seed to a mighty tree to overshadow the earth. Mr. Jamieson has consulted the authorities necessary to have enabled him to perform this task in an efficient way, and his work is one well calculated for a course as popular as "Pilgrim's Progress," or "Robinson Crusoe." The extraordinary nature of the facts, the extent and variety of the matter, cannot fail to make a deep impression on the minds of every class of readers, and his volume a fireside and family favourite.

Lunar Observations. 12mo. pp. 377. London, 1839. Wright; Simpkin, Marshall, and Co.

AFTER the fashion of "Gulliver's Travels," our author mounts in a balloon, and is deposited in a strange region, where he introduces many personages well known amongst ourselves, and satirizes the vices and follies of the day. There is some talent in the performance, but it is difficult to follow in the wake of such a writer as Swift, and the burlesque is not very amusing.

A Letter to A. Panissi, Esq. on the Reputed Earliest Printed Newspaper, "The English Mercurie, 1588." By Thomas Watts, of the British Museum. Pp. 16. London, 1839. Pickering.

IN this little brochure Mr. Watts demolishes the dictum of Chalmers (repeated since by hundreds of the imitators *servum pecus* who make dictionaries, cyclopædias, books of selections, and all other sorts of compilations),

that the first known newspaper was the above *Mercurie*, devised by the extraordinary wisdom of Burleigh to inform the people about the Spanish Armada! According to the author, and we should think (without seeing the documents), according to truth, these famous journals are more recent forgeries.

Bunyan's Pilgrim's Progress. With Original Notes, by the Rev. T. Scott. 8vo. pp. 408. London, 1839. Seeleys.

AN eighth edition with the beautiful illustrations of Stothard, so well known and so highly appreciated that we need not add a word in its favour.

The Court Favourite. By Jane Roberts, author of "Two Years at Sea." 3 vols. 12mo. London, 1839. Southgate.

A MIXTURE of facts and fiction, connected with or invented from the Courts of George III. and the Regent, and of that level character which offers nothing for censure and little for praise. The incidents are all likely enough to have happened; so likely, that they do not possess much interest. The characters are drawn naturally and with fidelity.

The Poetical Works of Thomas Campbell. 8vo. double cols. pp. 71. London, 1839. Moxon.

The Last Essays of "Ella." First Series. 8vo. double cols. pp. 94. London, 1839. Moxon.

WE presume that these popular works, well printed on good paper, at the cost of half-a-crown each, do not require any recommendation from us.

The Spitfire, a Tale of the Sea. By Captain Chamier, R.N. author of "The Life of a Sailor," "Jack Adams," &c. 3 vols. London, 1839. Colburn.

A MOST guilty and mysterious home story, in which a villanous attorney and his equally villanous daughter, in complot with a wealthy baronet, one of the "stern" gentry of the Novel School, guilty of hanging crimes, and in the power of his accomplices, is varied by the adventures of the aforesaid baronet's younger brother, who runs away, and gets to be a famous pirate, Captain of the Spitfire. Of the oaths, battles, robberies, murders, and other horrors belonging to the latter, we are no judges, and confess that we take no interest in them; and with regard to the characters and acts of the people who figure in the former divisions, together with the extravagant incidents in the midst of which they play their parts, they are neither natural nor credible. An old serving-man discourses in all the high-flown phraseology of romance writing; and, in short, almost every body is so extraordinary, that the Tale, whatever it may be, of the Sea, is very unlike aught we can imagine on land.

Observations upon the Handwriting of Philip Melancthon. Illustrated with Facsimiles from his Marginal Annotations, his commonplace Book, and his Epistolary Correspondence. Also a few Specimens of the Autograph of Martin Luther, with Explanatory Remarks. By S. Leigh Sotheby. Imp. 4to.

THIS volume reminds us of the good old times when no pains were spared to elucidate a favourite subject, and the zeal of the investigator knew no bound but such as was imposed by the mechanical means of illustrating it. Mr. Sotheby's work does him infinite credit. Nothing that type, paper, and engraving could do for his interesting inquiry has been omitted; and the result is a production not only of great industry and accuracy, but of very curious embellishment and research: It is such a book, indeed, as must have been most acceptable and gratifying to the eminent scholar and protestant divine to whom it is dedicated; but,

alas for human stability! the Bishop of Lichfield has been removed from his Christian labours since this dedication was inscribed to him. The loss of such a friend and patron must be severely felt by the author.

The data here so ably set forth by him were discovered in the library of Dr. Kloss of Frankfurt, when consigned to this country for sale four years ago; and Mr. S. is of opinion, that the MSS. and printed works in which they are found must have been portions of Melancthon's own collection. It is not in our power to convey to the reader any idea of the facsimiles, portrait, and other remarkable components of the volume. We can merely state, that the materials so exhibited are of much value and importance; that they must ever command attention and respect in a literary point of view; and that the light they throw on the character of an individual who has exercised so great an influence over the religious world, entitles them to the best consideration of the intelligent, the learned, and the pious.

A Treatise on the Medical Jurisprudence of Insanity. By J. Ray, M.D. With an Introductory Essay, by D. Spillan, M.D. Pp. 436. London, 1839. Henderson.

THERE is a vast mass of remarkable matter in this volume, bearing upon questions of high human importance. The many forms of insanity which it describes are really so frightful, that at coming to the end we also came to the conclusion that every living soul is mad; some more, and some less, to be sure, but all mad. What with idiocy, imbecility, intellectual mania, moral mania, dementia, febrile delirium, and sheer madness, there is not a ray of hope left for one of us in Dr. Ray's darkly clouded pages.

Poems. By Mrs. Boddington, author of "Slight Reminiscences of the Rhine," "The Gossip's Week," and "Sketches of the Pyrenees." 8vo. pp. 412. London, 1839. Longman and Co.

TO Mrs. Boddington's preceding productions we have done due honour, and it only demands repetition from us to say that the present volume possesses the same qualities which graced its predecessors. Taste and feeling are its attributes, the elegant cultivation of the female mind, and the pleasing exercise of feminine talent. This is apparent in the illustrations of a love of art, as well as in the examples of a love of literature. The little wood etchings are extremely pretty, and, indeed, the paper and general appearance of the work belong to the luxuries of typography. The versification is easy, often careless, but many fine thoughts are scattered throughout these outpourings on many subjects. We will only quote the last lines of the last poem—"Excursion from Naples," which will fairly indicate the character of the whole, and give an idea of the playful, yet reflective, passages to which we have alluded:—

"Another night
We passed in joy at Ischia; then 'once more
Upon the waters,'—thinking that the sea
Should from the sea be viewed. A level eye
Sees it o'erbrimming fulness, feels it buoyant,
Looks down into its depths; but from above
The tranquil sea looks like a metal plate
That cleaves to earth.

And so, thus reasoning,
Scolding the sun, and dosing as those do
Who rise at four,—we found ourselves at Naples."
The Journal of the English Agricultural Society. Vol. I. Part II. London, 1839. Murray.

WE rejoice to see that the southern part of our island is doing something effectually to redeem itself from the reproach of having been

so long behind the north in diffusing throughout the classes engaged in it useful information and instruction on that all-important subject—the cultivation of the soil. This valuable publication is of the right kind to supply the necessary intelligence. The papers are full of practical interest; and there is hardly a branch of farming in respect to which it will not furnish advice well calculated to improve the land, and increase the profits of landlord and tenant. To them we recommend it, in the certainty that it will, in most cases, promote the desired end of making two blades grow where only one grew before.

Gilbert's Illustrated Map of the World, with a Companion. By R. Mudie. London, 1839. Grattan and Gilbert.

THIS is a most comprehensive and useful publication: a geographical library in two moderate sized volumes, the map folding into a thin octavo, and the companion forming only a small duodecimo. When we say that nearly all the information the student can need on the subject of the earth which we inhabit is to be found within this compass, we have said enough to recommend the work to general acceptance; and it is quite unnecessary for us to enter into the details of rivers, mountains, physical features, &c. &c., nor to state that Mr. Mudie has executed the task entrusted to him with great ability and judgment.

Italy, Spain, and Portugal, &c. By the Author of "Vathek." London, 1839. Bentley.

As a volume of Bentley's Library, this most pleasing work is happily reprinted. Taste and refinement are its ornaments in every portion; but as we have, in the course of our critical duties, already done honour to these recollections of a richly stored mind, we will not say more, but congratulate readers on having them again in a new edition, with a fine spirited portrait of their accomplished author, after Sir Joshua Reynolds.

Hints on Etiquette. London, 1839. Longman and Co.

A NINETEENTH edition!—why the world has gone mad after good manners and polite behaviour! It seems that there are some additions and alterations by a competent lady, and made in consequence of our changes since we had a queen to reign over us and give a new tone to society. We have not, however, time to undertake the important task of picking them out; and for ourselves are free to confess, that we see little difference within the last two years, except that more ladies gallop about on horseback.

Letters from Palestine; Written during a Residence there in 1836, 7, 8. By the Rev. J. D. Paxton. Pp. 262. London, 1839. Tilt.

OF a missionary character, Mr. Paxton has taken a plain and religious view of the many places and circumstances presented to his notice in Palestine. The volume is unambitious, and so far interesting; but there is nothing in it of novelty to require further notice from us, nor of superior observation to fix the attention of the well-informed public.

Cabinet Colloquies; or, Ministerial Manœuvres, &c. &c. 8vo. (London, Southgate.) A collection of political squibs against the Ministry, which seem to have been published weekly, and are now collected into one volume.

Practical Conservatism, &c. by R. Thorpe, Esq. Pp. 50. —An able and moderate pamphlet on the Conservative side.

Walker's Manly Exercises. Pp. 264. —A sixth edition shows how much these directions for cultivating healthful manly exercises are prized.

The Excitements of a Book to Induce Young People to Read. 1840. Edited by the Rev. Robert Jamieson. (Edinburgh, Johnson; London, Whittaker and Co.; Dublin, Curry and Co.) —This is the eleventh of the series, and a very various and judicious selection of strange tales,

adventures, anecdotes of men and animals, natural history, extracts from foreign travels, &c. &c. all well calculated for the intended purpose. A young person would have little or no taste for reading, who would not be induced to do so by many of these pieces. Four nice engravings also embellish this neat and pleasing Annual.

ARTS AND SCIENCES. ENTOMOLOGICAL SOCIETY.

NOVEMBER 4. G. R. Waterhouse, Esq. V.P. in the chair.—A very extensive and valuable collection of works, relative to bee-culture and the honey-bee, was presented to the Society by the Rev. F. W. Hope; and other works were also presented, and members elected. Mr. Trenchard exhibited a singular variety of *Vanessa urtica*, and Mr. Hope a collection of insects from Sierra Leone, forwarded to him by Mr. Strachan, including specimens of two extremely rare Goliath beetles, *G. Togguatus* and *G. (Eudacilla) Morgani*. Mr. Newport exhibited, and made some observations upon, a specimen of *Scolopendra moritans*, one leg of which was of very small size, and had apparently been reproduced; upon which fact, interesting as being the first instance of such a circumstance amongst the *Myriapoda*, a discussion ensued amongst the members.—A paper, by Dr. Imhoff, of Basle, was read, consisting of critical observations upon Mr. Kirby's "Monographia Apum Angliæ;" and Mr. A. White communicated an extract relative to some extensive migrations of dragon-flies.

December 2. George Newport, Esq. V.P. in the chair.—Numerous works on entomology were presented by different members. Mr. Waterhouse exhibited the larva of one of the lamellicorn beetles, from the body of which a vegetable excrescence (*Sphaeria*?) of considerable size had grown. Other instances were also mentioned of a similar circumstance, especially that of a caterpillar common in New Zealand, which is often similarly infested, as well as specimens of North American *Cicada*. Dr. G. W. Calvert noticed the attacks to which his fields of standing corn had been subjected by a caterpillar, evidently that of one of the *Noctuidæ*, which fed upon the grains of wheat in the ears whilst standing in the field. He also exhibited the cocoon of a moth, within which a great number of the cocoons of a minute Ichneumonidous parasite were beautifully arranged in close connexion. Mr. Westwood also exhibited the nests of various species of social insects, in which they had either availed themselves of a common covering, or had arranged their cocoons in close contact together.—A memoir was read by W. W. Saunders, Esq. F.L.S. containing descriptions of new exotic *Diptera*, chiefly from East India. A further discussion took place relative to the reproduction of the limbs of the *Myriapoda*, in which Mr. Ashton drew the distinction between the reproduction of the limbs of the *Annulosa*, which only occurs at the period of moulting, and previous to the animals arriving at perfection, and that which is constantly going forward throughout the entire life of the higher animals.

BOTANICAL SOCIETY.

DEC. 20. Dr. Macraight, V.P. in the chair.—A donation of British plants by Mr. E. Lees was announced. Dr. Willshire communicated to the Society 'The present state of Knowledge in regard to the Evolution of Light from Plants.' This subject has of late years attracted attention on the Continent; but the phenomenon was first observed by the family of Linnaeus in *Tropœum majus*. Dead and living vegetable

structures emit light. Wood rotted in the air never shines; but only when buried in the earth, with the sap contained in it, is this curious property evidenced. This effect, moreover, Dr. Willshire observed, takes place only during the months of July and August, in warm, dry weather. Mushrooms, potatoes, &c. &c. were mentioned as evolving light during the putrefactive stage.

STATISTICAL SOCIETY.

T. R. EDMONDS, Esq. in the chair.—There was brought before the notice of the meeting a paper entitled 'An Outline of the Commercial Statistics of Ceylon,' by John Capper, Esq. From tables given by the writer, it appears that the imports of Ceylon have increased 70 per cent between 1833 and 1837. Of this the greater portion is in the trade with Great Britain, which shows an increase of 10 per cent from 1833 to 1835, and from that period to 1837, the enormous increase of 230 per cent. Of the articles imported, those which shew the greatest improvement are sugar, cotton, cloth, and millinery. Beer, tea, and wheat, have remained almost stationary; while there has been a decided falling off in the annual consumption of opium and spirits.—a most gratifying circumstance to the well-wishers of a labouring population. Out of 1,250,000, which is the present population of Ceylon, not 1000 are Europeans; and about 5000 or 6000 are of Portuguese extraction. Of the natives, there are about 200 headmen, or petty princes, and, perhaps, 4000 middlemen, of some property and influence. These being deducted, there are 1,244,800, of whom we may say the 44,800 are of a superior class, being servants in families, warehousekeepers, and messengers; and there then remain 1,200,000 of the very lowest order. As the reading of the paper was not concluded, we cannot proceed further with its details.—Mr. Baker (of Leeds, we believe) gave an oral account of the statistics of that large manufacturing town, founded on a report of that gentleman, inserted in the "Leeds Mercury." To that journal we therefore refer those of our readers much interested in the local statistics of Leeds.—Another paper was brought under observation; it was 'On the Social and Moral Statistics of Criminal Offenders, in reference to Preston and Lewes,' drawn up by Mr. Rawson, from two printed reports made to the government by the prison inspectors.

INSTITUTE OF BRITISH ARCHITECTS.

AN ordinary meeting of this Society (the second of the present session), was held on Monday evening last, Mr. G. Basevi in the chair.—The Council having announced, at the preceding meeting, their desire to form a collection of drawings, &c., illustrative of the works of Inigo Jones, several were presented and others promised. Mr. Britton exhibited a curious *facsimile* of a sketch-book which had belonged to Jones, and is now in the possession of the Duke of Devonshire. It is somewhat singular that this book does not contain a single architectural subject, but consists wholly of sketches from pictures and statues, with various MS. notes.—Mr. Cottam delivered a discourse on brickmaking by machinery, elucidatory of Lord Tweeddale's invention for the manufacture of bricks and drain-tiles. The clay is drawn out on a continuous web, and cut off at regular intervals. Bricks thus made are much more ponderous than those made by hand, being as eight to five. Mr. Godwin, jun., described a patent system of brickwork, in which the bricks are all rebated

together, and illustrated it by *extempore* diagrams.

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, Dec. 17.—The following degrees were conferred:

Bachelor in Civil Law.—F. Henney, Fellow of St. John's College.

Masters of Arts.—Rev. J. D. Day, Brasenose College, Grand Compounder; Rev. W. S. Crowdy, Lincoln College; Rev. N. Oxenham, W. D. Ryder, W. Hawkins, Exeter College; Rev. P. Scholfield, University College; Rev. T. B. Ferries, Trinity College.

Bachelors of Arts.—F. H. Bennett, Christ Church; R. M. Coley, Queen's College; G. B. Lee, J. Price, Fellows of New College; J. B. Hughes, Demy of Magdalen College; Rev. D. Jones, Jesus College; W. Twining, Balliol College; P. Sankey, St. John's College.

The subject for the Sesonian Prize Poem for the ensuing year is—"The Ministry of Angels."

CAMBRIDGE.—*Prize Subjects*.—I. The Chancellor's third gold medal for the encouragement of English Poetry for the best Ode, or the best Poem in heroic verse. The subject for the present year is—"Richard the First in Palestine."

II. The Representatives in Parliament.—Two Prizes of fifteen guineas each, for the encouragement of Latin Prose Composition, and two other Prizes of fifteen guineas each.

The subjects for the present year are—1. For the Bachelors, "In illa Philosophia, in qua de vita hominum et moribus disputatur, tractanda quibus principiis quasi fundamento inniti, quibusque potissimum ex fontibus recte vivendi precepta haurire oporteat." 2. For the Undergraduates, "Quid censes plausus et amici dona Quiritis?"

III. Sir William Browne's three gold medals, of the value of five guineas each, to such resident Undergraduates as shall compose—1. The best Greek Ode in imitation of Sappho; 2. The best Latin Ode in imitation of Horace; 3. The best Greek Epigram after the model of the Anthologia, and the best Latin Epigram after the model of Martial.

The subjects for the present year are—1. For the Greek Ode, "Eleusis;" 2. For the Latin Ode, "Illo Virgilium me tempore duce alectat Parthenope, studiis florentem ignobilis otii;" 3. For the Greek Epigram, "Dulce periculum;" 4. For the Latin Epigram, "Se sequiturque fugitque."

The Greek Ode may be accompanied by a literal Latin Prose Version.

IV. The Porson Prize (the interest of 400*l.* stock, to be annually employed in the purchase of one or more Greek books), the best translation of a proposed passage in Shakspeare, Ben Jonson, Massinger, or Beaumont and Fletcher, into Greek verse.

The subject for the present year is—Shakspeare, *Titulus and Cressida*, act I. scene 3, beginning

"The ample proposition that hope makes,"

and ending

"Made a toast for Neptune."

ROYAL SOCIETY.

The President's Address, concluded from our last.

EDMUND LAW LUSHINGTON was born in 1766, at the lodge of St. Peter's College, Cambridge, of which his grandfather, Bishop Law, was master. He became a student, and afterwards a fellow of Queen's College in that university, and attained the fourth place on the mathematical tripos in 1787. After practising for some years at the bar, he was appointed Chief Justice of Ceylon, a station which he filled for several years with great advantage to that colony. On his return from the East, he was made Auditor of the Exchequer, and also received from his uncle, Lord Ellenborough, the appointment of Master of the Crown Office. He was an intimate friend of Wollaston and Tennant; and though withdrawn by his pursuits from the active cultivation of science, he continued throughout his life to feel a deep interest in its progress. His acquaintance with classical and general literature was unusually extensive and varied, and he had the happiness of witnessing in his sons the successful cultivation of those studies which other and more absorbing duties had compelled him to abandon. Mr. Lushington was a man of a cheerful temper, of very courteous and pleasing manners, temperate and tolerant in all his opinions, and exemplary in the discharge both of his public and private duties: few per-

sons have ever been more sincerely beloved either by their friends or by the members of their families. Mr. George Saunders was formerly architect to the British Museum, where he built the Townley Gallery: he was also a diligent and learned antiquary, and the author of a very interesting and valuable paper in the twenty-sixth volume of the "Archæologia," containing the results of an inquiry concerning the condition and extent of the city of Westminster at various periods of our history.—The only foreign members whom the Royal Society has lost during the last year are the Baron de Prony, one of the most distinguished engineers and mathematicians of the age; and the venerable Pierre Prevost, formerly Professor of Natural Philosophy in the University of Geneva.

—Gaspard Clair Francois Marie Riche de Prony, was born in the department of the Rhone in 1775, and became a pupil, at an early age, of the Ecole des Ponts et Chaussées, where he pursued his mathematical and other studies with great application, and with more than common success. He was subsequently employed, as an adjunct of M. Perronet, the chief of that school, in many important works, and particularly in the restoration of the Port of Dunkirk; and in 1786, he drew up the engineering plan for the erection of the Pont Louis XVI., and was employed in superintending its execution. M. de Prony had already appeared before the public, first as the translator of General Roy's "Account of the Methods employed for the Measurement of the Base on Hounslow Heath," which was the basis of the most considerable geodesical operation which had at that time been undertaken; and subsequently, as the author of an essay of considerable merit, "On the Construction of Indeterminate Equations of the Second Degree." In 1790 and 1797, appeared his great work, in two large volumes, entitled "Nouvelle Architecture Hydraulique," which is a very complete and systematic treatise on mechanics, hydrostatics, and hydraulics, and more particularly on the principles of the steam-engine and hydraulical engineering. In 1792, he was appointed to superintend the execution of the Cadastre, or great territorial and numerical survey of France, —a gigantic undertaking, the subsequent execution of which, during the revolutionary government, combined with the establishment of the bases of the decimal metrical system, gave employment and development to so many and such important scientific labours and discoveries: among many other laborious duties, the formation of the extensive tables devolved upon M. de Prony, who, in the course of two years, organised and instructed a numerous body of calculators, and completed the immense "Tables du Cadastre," which are still preserved in MSS. at the library of the observatory in seventeen enormous folio volumes. M. de Prony became Directeur-Général des Ponts et Chaussées in 1794, and was nominated the first professor of mechanics to the Ecole Polytechnique; —an appointment which led to the publication of many very important memoirs on mechanical and hydraulical subjects, and on various problems of engineering, which appeared in the Journal of that celebrated school. He declined the invitation of Napoleon to become a member of the Institute of Egypt, —a refusal which was never entirely forgotten or pardoned. In the beginning of the present century, he was engaged in the execution of very extensive works connected with the embankments towards the embouchure of the Po, and in the ports of Genoa, Ancona, Pola, Venice, and the Gulf of Spezia; and in 1810, he was

appointed, in conjunction with the celebrated Count Fossombroni of Florence, the head of the Commissionne de l'Agro Romano, for the more effectual drainage and improvement of the Pontine Marshes. The result of his labours in this very important task, which he prosecuted with extraordinary zeal and success, was embodied in his "Description Hydrographique et Historique des Marais Pontins," which appeared in 1822, which contains a very detailed description of the past, present, and prospective condition of these pestilential regions, and a very elaborate scientific discussion of the general principles which should guide us, in this and all similar cases, in effecting their permanent restoration to healthiness and fertility. After the return of the Bourbons, M. de Prony continued to be employed in various important works, and more particularly in the formation of some extensive embankments towards the mouth of the Rhone. In 1817, he was made a member of the Bureau des Longitudes; and in the following year he was elected one of the fifty foreign members of the Royal Society. In 1823, he was created a baron by Charles X., and was made a peer of France in 1836. He died in great tranquillity at Aonieres near Paris, in July last, in the eighty-fourth year of his age. The Baron de Prony was a man of singularly pleasing manners, of very lively conversation, and of great evenness of temper. He was one of the most voluminous writers of his age, generally upon mathematical and other subjects connected with his professional pursuits; and though we should not be justified in placing him on the same level with some of the great men with whom he was associated for so many years of his life, yet he is one of those of whom his country may justly be proud, whether we consider the extent and character of his scientific attainments, or the great variety of important, practical, and useful labours in which his life was spent.—Pierre Prevost was born in 1751, and was originally destined to follow the profession of his father, who was one of the pastors of Geneva: at the age of twenty, however, he abandoned the study of theology for that of the law, the steady pursuit of which, in time, gave way to his ardent passion for literature and philosophy: at the age of twenty-two, he became private tutor in a Dutch family, and afterwards accepted a similar situation in the family of M. Delessert, first at Lyons, and afterwards at Paris. It was in this latter city that he commenced the publication of the translation of Euripides, beginning with the tragedy of "Orestes;" —a work which made him advantageously known to some of the leading men in that great metropolis of literature, and led to his appointment, in 1780, to the professorship of philosophy in the College of Nobles, and also to a place in the Academy of Berlin, on the invitation of Frederick the Great. Being thus established in a position where the cultivation of literature and philosophy became as much a professional duty as the natural accomplishment of his own wishes and tastes, he commenced a life of more than ordinary literary activity and productiveness. In the course of four years which he passed at Berlin, he published "Observations sur les Méthodes employées pour enseigner la Morale; sur la Théorie des Gains Fortuits; sur le Mouvement Progressif du Centre de Gravité de tout le Système Solaire; sur l'Origine des Vitesses Projectiles; sur l'Economie des Audiens Gouvernements; sur l'Etat des Finances d'Angleterre;" and he also completed the three first volumes of his translation of Euripides. There were, in fact, few departments of liter-

ature or philosophy which were not comprehended in the extensive range of his studies and publications. In the year 1784, he returned to Geneva to attend the death-bed of his father, when he was induced to accept the chair of belles-lettres in the University,—an appointment which he found on trial little suited to his taste, and which he shortly afterwards resigned. For some years after this period he was compelled, more by circumstances than by inclination, to partake largely in those political discussions which for some years agitated his native city, and which afterwards, resumed upon a wider theatre, shook to its centre the whole framework of European society; but he gradually withdrew himself from political life on his appointment to the chair of natural philosophy in 1792; and devoted himself from thenceforth, with renewed activity and ardour, to pursuits which were most congenial to his tastes. In 1790, M. Prevost published his "Mémoire sur l'Equilibre du Feu;" and in the following year, his "Recherches sur la Chaleur." These important memoirs were followed by many others on the same subject, in various scientific journals; and the general results of all his researches and discoveries were exhibited, in a systematic form, in his well-known work, "Sur le Calorique Rayonnant," which was published in 1806, and in which he fully developed his theory of exchanges, and was enabled to give a consistent explanation of the principal facts which were at that time known respecting the nature and propagation of heat. It would be impossible, in the very short compass within which this notice is necessarily confined, to enumerate even a small part of the publications of an author whose pursuits were so various, and whose labours were so unremitting. He contributed papers to our "Transactions" in 1797 and 1803; the first containing an explanation of some optical experiments of Lord Brougham; and the second, some remarks on heat and on the action of bodies which intercept it, with reference to a paper by Dr. Herschel; and in 1806, he became one of the foreign members of our body. In 1799, he obtained the first accessit for an essay, "Sur l'Influence des Signes Relativement à la Formation des Idées," which was written for a prize, adjudged to the celebrated Degerando, proposed by the Institute of France; and he was shortly afterwards elected a corresponding member of that body. His "Essais de Philosophie, et Etudes de l'Esprit Humain," appeared in 1804, to which were appended some very remarkable essays of his friend and ancient preceptor Le Sage, of whom he published a most interesting life in the following year. He likewise published, in very rapid succession, translations of the "Rhetoric" of Blair; the essays and posthumous works of Adam Smith; the "Elements of Philosophy" of Dugald Stewart; the "Essay on Population," by Malthus; "Salt's Travels in Abyssinia;" the "Conversations on Political Economy," of his wife's sister-in-law, Mrs. Marcet; and many other works of less importance and interest. In 1823, at the age of seventy-two, though still vigorous and active, both in body and mind, he resigned the professorship of natural philosophy, in wise anticipation of the approach of that period of life when men naturally feel reluctant to acknowledge the decline of their faculties, or incompetent to perceive it. From this time, though still consulted by his colleagues and fellow-citizens on every important subject connected with the Academy or the state, he retired into the bosom of his

family which contained within itself, in a very uncommon degree, every element of tranquillity, contentment, and happiness. His own temper was singularly equable and tranquil; and his tastes and pursuits, which rarely left his time unoccupied, saved him from that *lædium vite* which sometimes renders old age querulous and discontented. Thus happily disposed and happily circumstanced, it is not wonderful that his life should have been prolonged beyond the ordinary limits of humanity. He died on the eighth of April, in the eighty-eighth year of his age, surrounded by his family, and deeply regretted by all who knew him. The philosophical character of M. Prevost had been greatly influenced by that of his master Le Sage, a man of great originality and profundity of thought, but whose speculations, particularly those which attempted the explanation of the cause of gravity, trespassed somewhat beyond the proper limits of philosophy. We consequently find him disposed to explain the laws of the propagation of heat and light on the most simple mechanical principles, and to trace their origin and progress much further than the experiments or facts will properly warrant; thus giving to his conclusions, in many cases, a much more hypothetical character than would otherwise have attached to them. M. Prevost had little acquaintance with the more refined resources of modern analysis; and his researches on many important branches of experimental and philosophical inquiry were consequently limited to reasonings which could be carried on by the most simple algebraical or geometrical processes. But, notwithstanding the restrictions which were thus imposed on his progress, the range of his philosophical researches was unusually extensive and various, and his discoveries on heat must always be considered as constituting a most important epoch in a branch of science which has recently received so extraordinary a developement in the hands of Fourier, Forbes, Melloni, and other philosophers.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Thursday.—Zoological, 3 P.M.
Friday.—Botanical, 8 P.M.
Saturday.—Asiatic, 2 P.M.; Westminster Medical, 8 P.M.

FINE ARTS.

VASE IN THE BRITISH MUSEUM.
To the Editor of the *Literary Gazette*.

DEAR SIR,—Having seen in your Journal for last week an account of a discovery of certain inscriptions found upon the Portland Vase, you will allow me to correct the error into which your informant has led you. The vase referred to is that commonly known as the Hamilton Vase, it being by far the best of that collection; and, indeed, scarcely a doubt can exist as to its being, up to the present moment, the very best specimen of Greek fictile art in the National Collection. I am not aware of the locality where this magnificent piece of design was found, but it is of the style of art which is generally supposed to have issued from the manufactories of Nola in Campania; which are secondary in point of age to those made at Vulci, but are unrivalled in the deep black, or metallic tint approaching an invisible green, of their back-grounds, and the deep red or orange material which is seen upon the surface in the parts indicative of the figures, and in their execution and elegance. The vase is large, approaching a couple of feet in height, and its shape nearly approaches those we see on the

heads of the *Idæiques*, or female water-drawers, on several efforts of the Vulcian artists. M. Panofka has termed the shape *calpé*; in which he has been followed by M. Edward Gerhard; which will be sufficient to direct any inquirer as to its form, although I suspend giving any opinion as to the propriety of conferring it on any particular vase. That the vase has always been of the highest estimation, I need only point out that it appears in the portrait of Sir W. Hamilton, in the Print-room, at his side, and it has obtained the highest encomiums of all true judges of ancient art. M. Gerhard, in examining this vase during his stay in England this year, found out a name over the head of one of the personages; another was pointed out, and all the inscriptions subsequently discovered. From this it appears that the myth, or story, is totally distinct from that assigned to it by M. d'Hancarville, in his publication of the vases of the Hamilton Collection. The names of almost every figure are inscribed upon the vase, with the addition of that of the maker; but justice requires they should await the explanation of M. Gerhard, who is on the eve of publishing them, having had drawings made of the vase for that purpose. This explanation is necessary, because the vase called the Portland Vase is fabricated of glass, consequently not fictile, and is never, under any circumstances, removed from the position where it is deposited by its noble proprietor.

A CORRESPONDENT.

London, 23d December, 1839.

GRECIAN ANTIQUITIES.

THE British Museum has recently acquired, by purchase from the Rev. Mr. Arundale, a funeral monument executed in Asia Minor. It is in form of a stoa, or porch, and represents in the highest relief a youth who has apparently just issued from a bath: he is naked, standing with his peplon gracefully thrown upon his shoulder, and twisted round his left arm. In his right hand he holds a xytra, or strigil, and in his other some object of the toilet. On the upper part of the monument is inscribed ΤΡΥΦΩΝ ΕΤΤΥΧΟΥ . . . "Tryphon, the son of Eutyclus" . . . and the lacune, according to the ordinary form of sepulchral monuments, has probably contained his birth-place. The name of Tryphon is familiar to archaeologists during the epoch of the Seleucids, as an usurper so called possessed the Syrian crown for three years after the death of Antiochus the Sixth. A grammarian of Alexandria, of the reign of Augustus, and a slave, are known of the same name. The name of Eutyclus also appears in the New Testament. The monument in question does not, in point of style, belong to the excellent character of work which characterised the second century previous to the Christian era, and more probably approaches the period of Augustus. It is of white marble, much stained and corroded with exposure to the weather; and has, to all appearance, been attached by iron rivets, or stanchions, to its place of destination.

NEW PUBLICATIONS.

Sketches in the Basque Provinces of Spain.
Drawn and Lithographed by Sydney Crocker and Bligh Barker. M'Lean.

ALTHOUGH the spirited and masterly works of Roberts and Lewis have in some degree satisfied the public curiosity with respect to the picturesque scenery of Spain, and the no less picturesque character, costume, and manners of the Spanish people, the publication before us tends very agreeably to fill up the bold outline

sketched by the able artists to whom we have alluded; the more especially, as it relates exclusively to that portion of Spain which ancient and modern history, and the political convulsions which, to the disgrace of the other states of Europe, are still allowed to agitate it, combine to render peculiarly interesting. Of the twenty-three compositions which form the volume, we would point out as among the most pleasing,—"Oyarzun," "Chapel Gorris," "Prado de San Sebastian," "El Fandango," "El Muleteir," "Hernani," "El Padre Cura," "Bizcaino," "La Señorita," "Vittoria," "Los Frayles," and "Lago de Pasages."

Stothard's Illustrations of Bunyan's Pilgrim's Progress. Seeleys.

A REPUBLICATION of the lamented Stothard's charming and characteristic designs from Bunyan's immortal work.—(See also Review.)

GRAPHIC SOCIETY.

THE meetings have commenced in December, instead of January; and the last will be in May instead of June,—an improvement in the regulations of this interesting association, since it will cut off one of the least agreeable, owing to the heat of summer, in which it was heretofore held. The first meeting was very well attended by members and their friends, and many objects of interest were placed on the tables. One was a woven portrait of Jaquard, the celebrated improver of the loom in France. It is woven by a process of his own invention, was executed to honour his memory, and is every way worthy of its object. So beautiful is the work, that the eminent engravers present at the meeting were deceived as to the style of the engraving. This work was sent to Mr. Morrison by the Committee of Manufactures of Lyons. Some fine specimens of still life by Daguerre were shewn, and they are exquisite representations in chiaro-scuro, but requiring to be examined in a particular light, and close. They are useless for the decoration of our walls, and are, from their being necessarily glazed, unfit for portfolios. The art is, hitherto, more curious than useful. Among the architects' drawings were Mr. Barry's plans and elevations for the houses of parliament: they were exquisitely drawn, and very interesting as representations of what will be the finest structure in the world. Mr. Brockedon contributed a folio of drawings for a forthcoming work of selected Italian scenes. Mr. Arundale, some very interesting drawings of Colonel Vyse's researches in the Pyramids of Egypt. Mr. Bell's books of sketches and studies, and many other works, were shewn; and the commencement of these gratifying meetings not only promised well for the season, but is evidence of the spirit with which the Graphic Society is sustained.

ORIGINAL POETRY.

WHY DID I LOVE!

WHY did I love! If only to be parted
From the dear form I once deemed all mine own?
Broken in health and spirits,—broken-hearted,
Where is the sorrow that I have not known?

Why did I love!

WHY did I love! I reckon not; 't was a gladness
On her fair face to look, and kiss her brow;
And then she'd smile, and then away went Sadness—
Sadness and she each other could not know.

Why did I love!

WHY did I love! It could not be her beauty,—
'T was not her beauty held in thrall my heart;
Minstrels may sing, "Love is man's sweetest duty;"
Ay, but 't is one not all without a smart!

Why did I love!

I have not blamed her—I could blame her never;
Both have been wronged, the lover and the loved;

As flows the stream, so true-love loves for ever—
Sorrow and sighs my passion's strength have proved.
Why did I love!

Why am I left alone, while all around me
Find some fond mate their lot in life to share?
Fetters, I may not, cannot break, have bound me—
Else would I soar, free denizen of air!

Why did I love!

'T is a dark thralldom, when a dungeon prison
Sees some proud, eagle spirit, there confined;
Yet 't is a darker, when Hope's star, scarce risen,
Sets, all at once, upon the prison'd mind.

Why did I love!

Norfolk Street, Dec. 20th.

H. B.

STANZAS FOR NEW-YEAR'S EVE.

No single trace of grief to-day—
The world has banished sorrow;
Every living soul is gay,
A year begins to-morrow.

A thousand years are past and gone,
And yet a thousand times
Men have united every one,
To welcome in their chimes;

Forgetting that they older grow,
The more of years are sped,
And that the one they welcome now
May close upon them dead.

Next year will be no fairer year
Than any that are past;
Though time may dry the fallen tear,
It makes it not the last.

Desire may be the merrier guide,
But Memory is more true;
And better knowledge has, beside,
To teach us how to do.

When Hope exceeds reality,
It calls the treasured joy;
Its own reward—calm memory—
Unpromised, cannot cloy.

Poor are the noblest aims of man,
Weak his most daring scheme;
Then, for the conduct of his plan,
Better reflect than dream.

For counsel, turn your gaze upon
The past, an open book;
The future will be sometime gone,
Then fitter for our look.

But, hark! from every church I hear
That animating chime—
A farewell to the parting year,
A challenge to old Time.

Now hundreds, that have cheated Sleep
To see the new year in,
Will to their beds contented creep,
And laugh as though they win!

Come on, New Year! and though I greet
Thee not when now begun,
The next I shall no kinder meet,
When thy brief sand is run.

J. N. O.

ANACREONTICA.

I.

Σὺ μὲν λίγυς τὰ Θέβης, κ. τ. λ.

SING who will of Troy divine,
Or of Thebes and Cadmus' line;
To me such themes no rapture bring,—
My fettered heart alone I sing.
Nor warrior on the tented plain,
Nor galley on the heaving main,
Me captive led:—ah, no! my hapless heart,
'T was Beauty's eyes that shot the fatal dart.

R. B. S.

II.

Μὰ μὲ φῶγος ὦψα
Τὴν πάλιν, κ. τ. λ.

Fly me not, although my tresses
Now, alas! with years are gray;

Nor deem my fond caresses,
Brightest bud of blooming May!
See! how fair yon garlands shine,
Where with roses lilies twine!

R. B. S.

ON LUCY SINGING.

AGAIN, fair Siren, sing that lay;—
Sweet was its melting close,
As when at dawn the breath of May
O'er new-waked violets blows.

Saint Cecily, as legends feign,
Drew angels from the sky;
And thou, with thy prevailing strain,
Dost lift my soul on high.

For seraph hymns let others long,
Or music of the spheres;
While Lucy sings her witching song
All heaven is in my ears.

R. B. S.

BIOGRAPHY.

JAMES SMITH, ESQ.

ON Tuesday, died at his residence, in Craven Street, James Smith, Esq., in his sixty-fifth year. His life had been a pleasant one, and his death was calm and tranquil, though he had for many years suffered severely from gout. Of an associate and friend, to whom we were sincerely attached,—in whose company we have enjoyed so many gay and happy hours, the loss is yet too recent to allow us to say what our feelings would prompt. In society, good-humour, a vast fund of anecdote, the fruits of a memory of such extraordinary tenacity that it seemed to forget nothing he had ever seen, heard, or read; a playfulness of wit, a readiness to oblige, a total abstinence from every thing that could pain or offend; in short, all the best qualities of a most agreeable, entertaining, and instructive member of social and intelligent circles, were combined in James Smith. No wonder that he was courted by them, and that the more intimately he was known the more highly was he esteemed and beloved. As one of the authors (with his brother, Horatio) of the "Rejected Addresses," the best *jeu d'esprit* of the kind ever produced; the popular appreciation of his talents ranked him among the most successful writers of our time: but the infinite number of his contributions to the *facétie* of the day, and the polite literature which floats about without taking a separate and substantial form, would, if collected together, stamp him as one of the most voluminous as well as most delightful ornaments of the press. Gentlemanly mirth and good fellowship have had an eclipse by his death; and many, very many a cheerful party, will have a cast of sorrow thrown over it when his name is named and his excellences remembered.

DAVIES GILBERT, ESQ.

SCIENCE has also, and on the same day, suffered a heavy loss by the decease of Mr. Davies Gilbert, at Eastbourne, aged seventy-three. Mr. Gilbert was long a distinguished member of parliament, and for a while President of the Royal Society. To write a memoir or character of him, whose long life was so devoted to important objects, would require many sheets, and we have but a small space to allow. Suffice it, therefore, to notice, that he was a man of extraordinary attainments, one of the first mathematicians of the age, much attached to literary pursuits, particularly of an antiquarian description, of a very amiable disposition, and of the most simple habits and manners. Universal respect attended him

throughout his career; and many attached friends will deplore his departure, even at the patriarchal period, beyond threescore and ten years.

JOSEPH ALLEN, ESQ.

It is with great regret we announce the death of this able artist and excellent man. Mr. Allen was the son of an intelligent and respectable mathematical and optical instrument-maker in Birmingham. At the period of his boyhood, Birmingham was "the great toy-shop of Europe." Among the fashionable productions of that day were large teaboards, trays, &c., on which were painted elaborate copies, many of them executed with extraordinary skill, of "The Death of Wolfe," "The Battle of La Hogue," "The Loss of the Halsewell, East Indian," and similar subjects. Young Allen was engaged for some years in a manufactory of those articles; anxious, however, to devote himself to a more legitimate pursuit of the fine arts, he repaired to London, and became a student at the Royal Academy, where he was distinguished by the correctness of his eye and the facility of his hand, and obtained the silver medal for the best drawing of a figure from the life. Having thus laid the only sound foundation of eminence in his profession, he endeavoured to obtain employment as an historical painter; but, like many other young artists of talent, was soon compelled to descend to portrait-painting, in which department of the arts he laboured for a considerable time with but scanty encouragement. At length, a gentleman from North Wales happening to sit to him, was so pleased with the result, that he persuaded him to visit Wrexham; and, being introduced to the principal families in that town and neighbourhood, Mr. Allen speedily found himself in extensive and lucrative practice. In this vicinity, occasionally making excursions to Manchester, Preston, Lancaster, Kendal, and other places in the north of England, he lived for several years respected and happy. Ambition, however, "that last infirmity of noble minds," seduced him to try his fortune again in the metropolis; and he took the house in Caroline Street, Bedford Square, which had been formerly occupied by Mr. Abbot. The experiment proved a failure. In the country Mr. Allen had no equal, in London he had several superiors; added to which, he was much too modest and honourable a man to have recourse to any of those petty artifices which are frequent ingredients in professional success. During this arduous struggle, Mr. Allen produced several works which did him high credit, especially a study from an old woman's head; which, under the title of "Resignation," was exhibited at Somerset House, and excited universal admiration.* Even his most ordinary portrait had that in it which shewed that it was the performance of no vulgar pencil. Finding, however, that he could not cope with such powerful competitors as Lawrence, Beechey, Phillips, Shee, Owen, &c., he wisely broke up his town establishment, and returned to that provincial district in which he was lord of the ascendant. As old age advanced, Mr. Allen moderated his professional exertions; until, eventually, being in easy, although not in affluent circumstances, he retired to Erdington, a small village near Birmingham, and there, in a cottage which he inhabited jointly with his two sisters, spent the remainder of his days in a truly philosophical and Christian spirit and manner. His death

took place on the 19th of November, 1839, in the seventy-first year of his age. For above twenty years his health had been gradually decaying, his head reclined on one side, and his speech was not easily intelligible, but his mind was perfectly clear until within a short period of his decease. His whole appearance was that of one ripe for the great change which the course of his reading, and the frame of his disposition, had led him patiently and humbly to contemplate. The day before his death was a day of severe suffering, but he expired in the arms of his sister, Miss Allen, without a sigh. His remains were interred in the burying-ground of a neighbouring chapel, to the erection of which he had been a liberal contributor; and never did the grave close over a man of greater kindness, firmness, independence, and integrity.

W. H. W.

THE DRAMA.

PANTOMIMES every where on Friday night! We fear from our reports, however, that the Genius of the Scene has departed. That broad humour and laughter-moving fun have almost made their final *exeat omnes* from this species of entertainment, and that the introduction of the letters I O into its drama (converting it into *D(rama)*) is very far from being an improvement. At *Drury Lane*, *Jack Sheppard* was the framework, and little of merriment could be expected from that theme. The masks were grotesque enough; but, in truth, the announcements in the bill of fare were superior to their fulfilment in representation. A cocoa-nut dance was the most successful hit in the piece. The *Columbine* is rather thin, but danced well; and the *Harlequin*, very agile. The *Clown* and *Pantaloon* forgot that their parts required silence. The intolerable nuisance of their speaking was destructive of the pantomime, not only here but at *Covent Garden*, and other theatres.

At *Covent Garden* the Introduction, with the *Great Bed of Ware*, was well done and amusing; but the rest fell off, with the exception of three or four changes. The most laughable incident was an extempore one. A pig, engaged to come from a hog in armour, displayed singular talent, and leapt among the fiddlers with a squeak of most musical character. We were not sure if an *encore* took place, but the performer reappeared on the stage, played at bo-peep with *Harlequin*, and again descended into the orchestra, breaking a lamp in his course—the managers must double his *celery*. The chief fault of the whole was the perpetual going on of a double action, whilst the spectators could only attend to one. Thus *Harlequin*, *Columbine*, and the *Merrie Devil*, were working away on one side; and the *Clown* and *Pantaloon* getting up tricks and postures on the other. The scenery and dresses were very good. When abridged, perhaps, these entertainments, at both theatres, will tell more effectually. We have not time to criticise the pictures.

Adelphi.—Under the regular fairy-tale-like title of *Harlequin and Mother Red Cap*; or, *Merlin and the Fairy Snowdrop*, a pleasant pantomime is provided for our holiday friends at this theatre. We shall refrain from any remarks on it this week, as, from a small part of the stage having given way, the action of the tricks and transformations was considerably impeded. Still a few of the scenes, and one especially, in which the bold pantomimist ventured to shew off a little Prince Albert, a little Queen, and many little political characters,

were loudly applauded. Still, under circumstances, it would not be fair to give a decided opinion of the merits, but we may add that there is a splendid *Oramamimekamousika* (a capital word, if our readers can understand what it means), consisting of some very beautiful scenery, painted by that promising artist, Mr. W. Jelbin.

SHAKSPEARE IN A NEW LIGHT.

WE are favoured with a few specimens of a new selection of the Beauties of "Shakspeare, alias the Immortal Bard, alias the Swan of Avon." These are the words of our obliging correspondent. Who that correspondent may be we are uncertain; but his communication being dated Little Pedlington, we incline to think him either the elegant Hoppy, or the tuneful Jubb. Had the learned Rummings been still living, we should undoubtedly have named him.

It may be known to most of our readers that Dr. Dodd published a volume of "Beauties," collected from the same inexhaustible source; and Dr. Dodd was hanged. We do not assert that he suffered for that particular offence; nor shall we consider what fate our readers may think due to the perpetrator of the present: for giving publicity to it we excuse ourselves by pleading the holiday season, which permits the indulgence in a little Tom-foolery.

Questions, Replies, and Observations, selected for their Wisdom or their Wit.

"King John. Is this Ascension-day?"

King John, Act V. Scene 1.

"Prince. What say'st thou, Jack?"

To which the witty Falstaff replies,

"The other night I fell asleep here behind the arras."

Henry IV. Act III. Scene 2.

"Anne. I pray you, sir, walk in."

Shander. I had rather walk here, I thank you."

Merry Wives, Act I. Scene 1.

"Ford. 'Tis past eight already, sir."

Falstaff. Is it?"

Ibid. Act III. Scene 5.

"Olivio. Let the garden door be shut."

Twelfth Night, Act III. Scene 2.

"Duke. I pray you, tell me, hath any body inquired for me here to-day?"

Marianna. You have not been inquired after: I have sat here all day."

Measure for Measure, Act IV. Scene 1.

"Shylock. Antonio is a good man."

Basanio. Have you heard any imputation to the contrary?"

Shylock. No, no, no, no."

Merchant of Venice, Act I. Scene 2.

"Macbeth. Ride you this afternoon?"

Banquo. Ay, my good lord."

Macbeth, Act III. Scene 1.

"Macb. Ring the alarm bell."

Ibid. Act V. Scene 5.

"Othello. Lend me thy handkerchief."

Ishem. I have it not about me."

Othello, Act III. Scene 4.

"Bardolph. Well met, Corporal Nym."

Nym. Good morrow, Lieutenant Bardolph."

Henry V. Act II. Scene 1.

"Gloster. Go, Lovel, with all speed to Doctor Shaw."

Richard III. Act III. Scene 5.

"King. Is ink and paper ready?"

Ratcliffe. It is, my lord."

Ibid. Act V. Scene 2.

"Juliet. At what o'clock to-morrow shall I send to thee?"

Romeo. At the hour of nine."

Romeo and Juliet, Act II. Scene 2.

"Revalind. Are you not good?"

Orlando. I hope so."

As You Like It, Act IV. Scene 1.

"Jaques. Which is he that killed the deer?"

1st Lord. Sir, it was I."

Ibid. Act IV. Scene 4.

"Bernardo. Long live the king!"

Hamlet, Act I. Scene 1.

"Hamlet. Where's your father?"

Ophelia. At home, my lord."

Ibid. Act III. Scene 1.

"Owls. Your lordship is right welcome back to Denmark."

Hamlet. I humbly thank you, sir."

Ibid. Act V. Scene 2.

* This fine picture is, we believe, in the possession of Mr. Cooke, of Houston, in Yorkshire.

Kingly Divinity.
 "Crier. Henry, king of England, come into the court.
 King. Here!" *Henry VIII.* Act III. Scene 2.
 "Lear. Let me not stay a jot for dinner; go, get it ready."
King Lear, Act I. Scene 1.
Patrician Condescension.
 "Cortolienus. Mother, I am going to the market-place."
Cortolienus, Act III. Scene 2.
Impressive Roman Leave-taking.
 "Cassius. Good night, my lord.
 Brutus. Good night, good brother.
 Titinius. Good night, Lord Brutus.
 Brutus. Good night, every one."
Julius Caesar, Act IV. Scene 3.
Caliban, a Teetotaler.
 "Caliban. Take his bottle from him."
Tempest, Act III. Scene 2.

With this, which throws an entirely new light upon the character of the monster, we conclude; so, commending these beauties to the admiration of our readers, we wish them a happy new year.

VARIETIES.

Jeu d'Esprit.—The following piece of drolery was the return of a humorous friend of ours (whose name might readily be guessed even if we refrained from alluding to the author of "Paul Pry," and historiographer of "Little Pedlington,") to an invitation for an evening party; which not only insisted on his company, but required to know what he could do for the entertainment of the company. In answer, he transmitted this laughable

"Programme of Mr. P.—'s performances, at Mrs. A.—'s Ball and Concert, on Tuesday evening, ———, 1839.

Part the First.

Overture, 'Freyschütz' Whistled by Mr. P.—
 Scena ed Aria, 'Dove Sono' by Mr. P.—
 Concerto on three Violins (Paganini), in C minor by Mr. P.—
 Chorus, 'He gave them hall-stones' Sung by Mr. P.—
 Duet, 'Cruel Perche' Sung by Mr. P.—
 Grand Quartette, two Violins, Tenor and Violoncello (Beethoven) by Mr. P.—
 Grand Scena ed Aria, 'Misera Pargolitti' (Medea) with two live Children by Mr. P.—
 Grand Symphony (Haydn), No. 10 by Mr. P.—
 At the end of Part the First the Cachucha will be danced by Mr. P.—, who will also exhibit his wonderful performances on One Tight Rope and a Half!

Part the Second.

Sinfonia Pastorale (Beethoven), in order to give the fullest effect to which he will 'numerously augment himself' by Mr. P.—
 Comic Song, 'Angels ever bright and fair' (Handel) by Mr. P.—
 Grand Concertante, Piano-forte, Harp, Clarinet, French Horn, and Double Drums by Mr. P.—
 Coronation Anthem, (Handel) Sung by Mr. P.—
 'O Nume Benefico,' (Rossini) arranged for six voices, and Sung by Mr. P.—
 Glee, 'Glorious Apollo' Sung by Mr. P.—
 Fantasia, Flute and Oboe Composed and executed by Mr. P.—
 Finale, 'Dead March in Saul,' (Handel) performed on the Castanets by Mr. P.—

* * In the course of the evening Mr. P.— will have the honour of Jumping out of the Front Attic Window and in again; and the whole will be concluded by his unparalleled feat of eating Seventeen Strawberry Ices and Three Wings of One Chicken! 12

The Comet.—The comet, it appears, from letters in "The Times," was seen on Thursday morning by Sir J. South, at Kenaington, and its daily position for the remainder of the year calculated from the Altona observations by Mr. W. S. B. Woolhouse. Sir James states that it was near *Sigma* in the constellation *Serpens*, and just entering that of *Ophiuchus*. It will reach its perihelion this day week.

Literary Property in France.—In the king's speech, his majesty states to the Chambers that they will have to legislate on the condition of literary property and public instruction,—two most important subjects.

The Post-Office Almanack, on a broad sheet, is valuable for giving us all the details of the new Post-Office Regulations, the sailing of

packets, charges, &c. &c.; in fact, all that one needs of information on the subject of epistolary correspondence. We observe that a notice has been officially issued from the Post-Office, charging this sheet as a *piracy*, and forbidding its sale.

The Metropolitan Bills of Mortality for the year ending December 10th:—

Males christened	9455
Females	9564
	19019
Males buried	9405
Females	9379
	18683

Besides 832 still-born children (a large proportion). Consumption is the most fatal disease, the deaths from that cause alone amounting to 1974; the next in order are convulsions, 1218; inflammation, 677; fever, 530; measles, 478; droopy, 451; and casualties, 375. We lament to see smallpox at the figure of 230.

Railroad Carriages.—The "Prussian State Gazette" informs us, that a M. Kalkenheimer has invented a new kind of carriage for railways, which will cost only 2500 francs each, and which may be moved at the rate of six French leagues in an hour, without steam or horse-power. It states that a carriage, containing twenty-four persons, may be moved with the force of a single man.

Gilbert's Modern Atlas.—We have to acknowledge the first and second numbers of this pretty and cheap atlas. The principal novelty is, that the maps are accompanied by very elaborate letterpress from the popular pen of Mr. Robert Mudie.

Amplified provided for.—Two sailors were one day sitting on the gunwale of their ship, drinking grog, when one said to the other, "This is meat and drink, Jack;" he happened at that moment to fall overboard, when his facetious companion coolly said, "And now you've got washing and lodging, Tom."

The Periodical Press in Germany is about to be regulated by the promulgation of a general law.

EPICRAM.

A Gentleman Presents a Lady with a Ring.

"ACCEPT sweet maid, this golden pledge,
 Nor let my gift offend;
 An emblem of my love for you,
 This circle has no end."

"Sweet youth," I do accept thy gift,
 Nor do I think *Mr* shining;
 'Tis also like my love for you,
 As it has no beginning."—*L. Srv.*

LITERARY NOVELTIES.

Nearly ready, an Appendix (uniformly printed), to the London Catalogue of Books, containing the New Publications, and the New Editions of such Works as have been altered in price, &c. during the year 1839.

No. I. of the "Colonial Magazine, and Commercial-Maritime Journal," a new monthly periodical edited by R. Montgomery Martin, Esq., is announced to begin the year. A periodical to make known the state of our colonies has long been a desideratum; and in such hands, we trust, this will fulfil every public expectation.

In the Press.

The Life and Services of General Lord Harris, by the Right Hon. S. R. Lushington, his private secretary, and late Governor of Madras. With an Original Portrait.—The Philosophy of the Inductive Sciences, by Professor Whewell, Author of "A History of the Inductive Sciences."—A new edition of "Dr. D'Oyly's Life of Archbishop Sancho."—A History of Literature, by Dr. W. C. Taylor.—The Victory of Faith, and other Sermons, by Julius Charles Hare, M.A.—A new edition of "Fuller's

* Besides the general head inflammation, there are inflammation of the bowels, 160; of the brain, 134; and of the lungs, 315.

† Also intermittent fever or ague, 6; scarlet, 471; typhus, 132.

‡ Also droopy on the brain, 299; on the chest, 36.

History of the University of Cambridge," with Notes by Rev. M. Prichett, and P. Wright, Esq. M.A.—Elements of Statistical Science, by Dr. Taylor.—Meteorology, by John Strevell, Professor of Natural Philosophy in Belfast College.—Practical Geology and Mineralogy, by Joshua Trimmer, F.G.S.—The District Visitor's Manual, with a Preface, by Rev. T. Dale, M.A.—Recreations in the Sciences, Vol. II. Recreations in Astronomy, by Rev. Lewis Tomlinson.—A Narrative of a Voyage to Madeira, and along the Shores of the Mediterranean; including a Visit to Algiers, Tyre, Tennesmus, Cyprus, &c. With Observations on the Present State and Prospects of the East, by W. R. Wilde, M.R.I.A.

CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

* * Sunday Publication of Newspapers.—A memorial, signed in a highly respectable manner by most of the principal newsmen in the metropolis, sets forth the indecorum and hardship of their being obliged to desecrate the Sabbath by the very busy publication of journals with which the readers might be equally well supplied on Saturdays and Mondays. At a time when many reforms have been effected in this respect, as regards other tradesmen of every description, it does seem a pity, if any remedy can be adopted, that these persons, whose occupations throughout the week are so onerous, and require such active exertion, should be compelled to labour when all their fellow-men may enjoy rest of body and repose of mind. We speak not of the higher claims of morality and religion, but simply on the ground that no class of the community ought to be condemned, if possible to be avoided, to incessant fatigue, without a holiday to refresh their efforts: we earnestly desire that this reasonable proposition should meet with the most speedy and indulgent consideration from all the proprietors of newspapers whom it so much concerns.

Poor Jack, by Captain Marryat, illustrated by Stanfield (No. I.), begins in an original style which we like much. The parentage of Jack is well worthy of the author of "Peter Simple," and the whole promises fairly to be one of the author's best and most characteristic naval fictions.

The "Christmas Sonnets" were too long for us. Many thanks.

ADVERTISEMENT,

Connected with Literature and the Arts.

TITLE TO ORDERS.—A Graduate of either University may obtain a Carvey, with Title to Orders, upon giving satisfactory references to the Rev. John Thomas, 15 Parliament Street.

KING'S COLLEGE, London.—SENIOR

On the 1st of January, 1890, and to be continued Monthly, price 2s. 6d. No. 1. of

THE COLONIAL MAGAZINE, and

Commercial-Maritime Journal of the British Empire. Including our Possessions in the East and West Indies, North and South America, Asia, Australasia, Africa, and Europe. Edited by ROBERT MONTGOMERY MARTIN, Esq. A Author of "The History of the British Colonies," &c. England, possessed of Colonies in every part of the globe, has no Magazine devoted to their peculiar and nationally momentous interests.

Relying, therefore, on the obvious want of such a work, on the high reputation of its Editor, and his personal acquaintance with our Colonies, the Proprietors look with confidence for the support of every individual who reflects on the intimate connexion between colonial legislation and the prosperity of manufactures and commerce in England.

Colonists of every class, at home and abroad; emigrants, rich and poor; merchants, ship-owners, and traders; all who possess friends or relatives in the Colonies, will find ample and authentic intelligence, arranged and classified under distinct departments. Detailed Prospectus may be had of all Booksellers and Newsvendors.

Contents of No. 1.

1. Present State and Future Prospects of England.—2. Colonization, Ancient and Modern.—3. The Naval Power and Shipping of England.—4. Canada.—5. Commerce of India.—6. Colonial Government, &c.—7. Emigration.—8. French Colonies.—9. Opium Trade.—10. Condensed Information.—Obituary, &c. Published for the Proprietors, by Fisher, Son, and Co. Newgate Street, London (to whom Communications for the Editor, post-paid, are to be addressed); John Cumming, Dublin; Johnson, and White and Co. Edinburgh.

MR. AINSWORTH'S NEW ROMANCE, ILLUSTRATED BY GEORGE CRUIKSHANK.

On January 1st, with the Magazine, will be published, price 1s. handsomely printed in 8vo. the 1st Number of

THE TOWER OF LONDON; an Historical Romance.

By W. HARRISON AINSWORTH, Esq. Author of "The Black Knight," "Jack Sheld," &c. With Three Illustrations on Steel in each Number, and Woodcuts by George Cruikshank.

* * * This work, to be completed in Thirteen Numbers, will be the only monthly publication illustrated by George Cruikshank, with the exception of a new edition of the Pilgrim's Progress, and Bentley's Miscellany.

Richard Bentley, New Burlington Street.

* * * Orders received by all Booksellers.

13 Great Marlborough Street.

MR. THEODORE HOOK'S NEW WORK.

In the January Number for 1890 of "Colburn's New Monthly Magazine and Miscellany," will be commenced a New Story, by Mr. Theodore Hook, entitled

FATHERS AND SONS.

To be continued monthly.

The January Number of this popular Periodical will also contain Articles by Lady Bessington, Mrs. Trollope, John Peole, Esq., Nimrod, Douglas Jerrold, Esq., and other distinguished writers.

The new year being a favourable opportunity for commencing a Periodical, those who may now desire to become Subscribers are requested to send their orders immediately to their respective Booksellers.

Henry Colburn, Publisher, 13 Great Marlborough Street.

On the 1st of January will be published, price 12s. in boards,

INNISFOYLE ABBEY; a Tale of Modern Times.

By DENIS IGNATIUS MORIARTY, Esq. Author of "The Wife Hunter," "The Husband Hunter," &c. London: C. Dalman, 61 New Bond Street.

THE JOURNAL OF THE STATISTICAL SOCIETY LONDON, Part VI. Vol. II. will be published on the 1st of January, 1890.

London: Charles Knight and Co. 25 Ludgate Street.

THE ASIATIC JOURNAL for January,

1890, will contain the Arrangements, Distributions, Removals, and Appointments in India, consequent upon the recent addition to the Indian Army. A very full account of the Movements of the Army of the Indies will likewise be given, including General Orders, Casualties, &c. &c. The usual digest of local intelligence from the three Presidencies, Poona, Bombay, Calcutta, Australia, South Africa, &c. &c. will likewise be copious. The literary department will comprehend papers of much interest. W. H. Allen and Co. 7 Leadenhall Street.

In the first week of January will be published, in 3 vols. post 8vo. price 14s. cloth binding, by Samuel Bagster and Sons, Paternoster Row,

GLIMPSES OF THE OLD WORLD; or,

Excursions on the Continent (of Europe) and in the Island of Great Britain.

London: Longman, Orme, and Co.

NEW PERIODICAL.
Price 1s. illustrated with two fine Steel Engravings, Part I. of
THE JUVENILE
HISTORICAL LIBRARY, for Youth,
Schools, and Families.

By Miss JULIA CORNER,
Author of "Questions on the History of Europe, a Sequel to
Mandell's History of Europe," &c. &c.
Being the commencement of a Series of Histories for the en-
lightenment and instruction of Youth and Families; in which will
be contained, not only the historical events of every civilized na-
tion in the world, but a description of their people; their pro-
gress in civilization; their customs and manners; and the causes of
their arts, commerce, and manufactures, at various periods.
In the execution of this arduous undertaking, two material
points will be observed: the one, not to pervert as has been
stated, what is not well authenticated; the other, to avoid all
that has hitherto made historical reading objectionable to fami-
lies, or unattractive to youth.

The history of any one country will extend beyond two
parts: several will occupy only one; each country will be
complete in itself; and every three or four parts will form one
handsome volume, containing from six to eight highly-embellished
steel engravings.

The Juvenile Historical Library will therefore, it is presumed,
be well adapted for School and Family reading, on account of its
brevity, its simplicity, its propriety of language, and its truth.

The first Six Parts will appear in the following order:—
France. 5 Parts. 5s. 6d.
Spain and Portugal. 3 Parts. 3s. 6d.
England. 4 Parts. 4s. 6d.
London: Published by Dean and Munday, Threadneedle Street,
and may be obtained, by order, from every Bookseller and News-
man in the United Kingdom.
Agents for Ireland, Macdon and Co. Dublin; and
Scotland, J. Macdon, Princes Street, Edinburgh.

BEALE'S SOUTH SEA VOYAGE.
 In part 8vo. price 12s. cloth,
THE NATURAL HISTORY of the SPERM WHALE, and a Sketch of a South Sea Whaling Voyage.
 By THOMAS BEALE.
 "The description of the anatomy, physiology, food, and habits of the sperm whale, as well as the modes of attacking and taking it, are the fullest published. The narrative of the voyage tells of hairbreadth 'scapes, and affords some curious pictures of savage life, especially amongst that extensive and rarely visited archipelago which spreads from Australia to the Philippine Islands."—*Spectator*.
 John Van Voorst, 1 Paternoster Row.

A HISTORY OF BRITISH REPTILES.
 By THOMAS BELL, F.R.S. F.L.S. V.P.Z.S.
 Professor of Zoology in King's College, London.
 This volume contains a description of each species and variety formed in the British Isles, and an Engraving of each, with each other pictorial or anatomical Vignettes as were considered desirable the more fully to illustrate the text. Price 3s. 6d. demy 8vo. cloth.
 A few copies have been printed in royal and imperial 8vo.
 "These remarks apply to each of the subjects which are contained in this very desirable volume, and place it upon a footing which will justify its admission, not only into the library of the naturalist, but into that of all who are attached to the fine arts. The production of works like this will create a new era in publication."—*Morning Herald*.
 John Van Voorst, 1 Paternoster Row.

In fcap 8vo. with a Portrait, engraved on Steel by Robinson, a new edition, being the 16th, of

THE HISTORY OF EUROPE, from the Commencement of the French Revolution to the Restoration of the Bourbons.
 By ARCHIBALD ALISON, F.R.S.E.
 Seven Volumes are published.
 The Eighth, which completes the Work, is in the press.
 "No work could have made such progress in national opinion without substantial qualities. Its vigour of research and its soundness of principle, its accurate knowledge and its animation of style, have been the grounds of its remarkable public favour, as they are the guarantees for its permanent popularity."—*Blackwood*.
 "The History of Europe during the French Revolution is indispensable to all those who are forming collections on this subject. It is the completion of them all."—*Preface to the French Translation*, by M. Faguet.
 "The History of Europe during the French Revolution is by far the most remarkable historical work of the last century."—*Foreign Quarterly Review*.

DIGEST OF THE LAWS OF ENGLAND.
Fest 8vo. 10s. 6d. neatly bound, in a closely-printed vol., an enlarged, corrected, and greatly improved edition, being the Twelfth, of

THE CABINET LAWYER; OR, A POPULAR DIGEST OF THE LAWS OF ENGLAND: with a Dictionary of Law Terms, Maxims, Acts of Parliament, and Judicial Antiquities; Correct Tables of Taxes, Duties, Licenses, &c.
This edition of the "Cabinet Lawyer" has been carefully revised, and corrections or additions made in almost every part. The important alterations made in the law of Arrest for Debt, in Bankruptcy and Insolvency; in Prescriptive Rights; in Wills, Deeds, and Inheritance; in the laws of Literary Property, Joint-Stock Companies, and Municipal Corporations; in those relative to the Clergy, Tithes, Marriages, and Registrations; and in the Practice of the Courts, and in the Fees of Public Officers, have been carefully noticed and incorporated. "By the alteration and consolidation of statutes, Criminal Law has been almost revolutionized, and especial attention has been paid to the late changes: the law of Theft, Robbery, Embezzlement, and Cheating; and that Relative to Riots, Sedition, Political Associations, and Police, has also been more distinctly and correctly laid down, in the Dictionary many new articles have been inserted; and the entire work is brought down to the present time, including the Public Statutes and Legal Decisions to the close of 1839."
London: H. Johnson, 40 Paternoster Row.

Professor of Modern History in the University of Cambridge.
William Pickering, London: and J. and J. J. Dalton, Cambridge.

In post 8vo. with 23 Illustrations, 12s. cloth.
RURAL SKETCHES.
By THOMAS MILLER.
It is long since we have had the good fortune to peruse a pleasant book than the "Rural Sketches" of Thomas Miller. "St. James's Chronicle."
"This is the book of a clever and earnest man, who thoroughly understands the subject he writes about, and a pleasant book accordingly he writes. It presents a healthy and fresh-blowing picture of life in the country."
—*Review*.
John Van Voorst, 1 Paternoster Row.

INDEX.
